VII.21.2: In the *-āya*-book (Jamison 1983: 50), I take *vipāyanti* as intransitive, in keeping with its vocalism, supplying a form of \sqrt{sad} , which is extraordinarily common with *barhís*:- “(Sitting on) the barhis, they become inspired.” However, the publ. tr. takes *vipāyanti* as transitive, despite the vocalism, both to avoid supplying extraneous matter and because I did not think the pressing stones that are the verb’s unexpressed subj. should sit on the barhis. I failed to note that in V.31.12, adduced by Ge, the pressing stone “will be brought down to the vedi” (*āva védīm bhriyāte*). Since the vedi is where the barhis is strewn, the passage seems to put the stone in a position actually to “sit on the barhis.” See also VIII.27.1 *agnír ukthé puróhito grāvāṇo barhír adhvaré* “Agni has been set in front while the solemn speech (is being recited), as have the pressing stones and the ritual grass while the ceremony (is going forth),” which has the stones and the barhis set out together, and III.42.2, which describes soma as *barhiṣṭhām grāvabhiḥ sutām* “stationed on the ritual grass, pressed by stones.” The transitive interpr. found in the publ. tr. has the merit of not requiring an extra verb to be supplied, but what ritual event it might depict is unclear. I suppose that the vigorous activity that pressing required would make the material on which the pressing apparatus was placed (presumably the barhis) tremble. But I now tentatively favor my old 1983 intransitive interpr., which takes better account of the vocalism. Moreover, since what is most often emphasized about the pressing stones is the noise they make, “become inspired” (like *vípras* ‘inspired poets’) would express this well-known characteristic of theirs. Note in the next hymn, VII.22.4ab, where the call of the pressing stone (*hávam ... ádreḥ*) is parallel to the thought of the inspired poet (*víprasya ... manīṣām*). Indeed in that passage the *vípra* might refer to the pressing stone itself. On the vedi as the place where the soma pressing apparatus is placed, see Oberlies, *Der Rigveda und seine Religion*, 254.

Ge takes *grbhād ā* as “bis zur Handhabung,” but in that use of the ablative with *ā* (“all the way to”) the noun follows the *ā* (see Gr s.v. *ā*). Better to interpret it as a standard ablative expressing the place/person from which the pressing stones are being brought to the ritual ground for use (so, e.g., Scar 591). Old argues persuasively that *grbhā-* is an agent noun. For \sqrt{grabh} with the pressing stones, see *grāva-grābhā-* (I.162.5), the title of a functionary, “Handler of the Pressing Stones.”

dūrāüpabdaḥ must be nominative plural, so, although the stem is universally (Gr, EWA, AiG II.2.75) given as thematic, this form (versus *upabdaīḥ* VII.104.17) must belong to a root noun. Gr suggests instead reading *-upabdās*, an emendation Old rejects as unnecessary without commenting on the stem.

VII.21.4: Ge supplies a second, accusative, form of *āyudha-* as object of *viveṣa* and supplies “enemies” as the referent of *eṣām* ‘of them’, while making the accusative phrase in b the object of *vidvān* ‘knowing’: “Der Fürchtbare hat mit den Waffen ihre (Waffen) abgetan, der aller mannhaften Werke kundig ist.” But there are several reasons to reject this interpretation in addition to the necessity of supplying a significant word. The root $\sqrt{viṣ}$ ‘labor, bring to fulfillment’ does not mean ‘abtun’ (dismiss, brush aside). Moreover it regularly takes *āpas-* ‘work’, a form of which appears in pāda b, as object; see esp. IV.19.10 *āpāmsi ... nāryāviveṣīḥ*. By contrast, the participle *vidvān* is usually used absolutely, without object. As for the referent of *eṣām* it would of course possible to supply “enemies,” although they are not mentioned previously in the hymn: the only

preceding masc. or neut. plurals are the pressing stones (subject of the whole of vs. 2), the “finely made (fortifications)” of 3d, and, in a simile, the charioteers in 3c. Because the pressing stones are extravagantly celebrated in vs. 2 and called Indra’s “companions,” I think it likely that they are the referents here: the soma they produce is their weapon, and this soma fuels Indra’s labors. This is also Caland-Henry’s solution (*L’Agniṣṭoma*, p. 285 and n. 3).

I supply “fortifications” (*púraḥ*) from c as the obj. of *jaghāna* in d. It is possible that we are meant to think instead (or in addition) of the archetypal obj. of this verb, the serpent Vṛtra, who is concealed in the instr. (*m*)*ahi(nā)* directly before the verb. Cf. *áhinā* in 3b.

The first word of the verse, *bhīmáḥ*, picks up the last word of vs. 3, *bhīṣā*.

VII.21.5: A verse with several rare words. The neut. pl. *vāndanā* in b is unclear; the neut. sg. *vāndanam* in VII.50.2 appears to be some medical condition, and in AV VII.115.2 it refers to some sort of negatively viewed plant (a parasitic plant, acdg. to Gr; see also EWA s.v.), neither of which is helpful here. I think it better to start with the root \sqrt{vand} ‘praise, extol’ and give it a negative twist appropriate to the context, hence my ‘sycophant’: praise gone wrong. A similar negative interpretation is needed for the usually positive term *vedyā-* in the same phrase. Why *vāndanā* is neuter and not masculine isn’t clear to me; perhaps a better tr. would be “sycophancy, sycophantic (words).” With sorcerers and flatterers in this first hemistich we then have two different ways in which *ṛtá* can be undermined within our own community, while the *arí-* ‘stranger’ whose ways are contrary to ours and the phallus-worshippers in the second hemistich represent external threats to *ṛtá*.

In c *vīṣuṇa-* ordinarily means ‘variable, various’, which here shades into ‘variant’ and, with the negative reading prevailing in this verse, ‘contrary’.

The lexeme *ápi* \sqrt{gam} occurs in the RV only here, but *ápi* \sqrt{gam} can have a sexual sense (“inire feminam” as Gr chastely phrases it), and that image would be appropriate here, given the grammatical subject.

VII.21.6: I take the injunc. *bhūḥ* in the first pāda as imperatival, although Ge’s preterital value is also possible.

The particle *ádha* is once again oddly positioned; cf. VII.20.5. In this case, however, it seems a mistake for (or a play on?) *ádhi*, which regularly appears with locatives (esp. cosmological locatives) in just this metrical position – including a number of times with the phonological variant of the endingless loc. *jmán* here, namely the *i*-loc. *kṣámi*: ... *ádhi kṣám*# (5x, e.g., I.25.18). See also nearby pāda-initial *ádhi kṣámi* in VII.27.3b.

Pāda b contains one of the standardly cited examples of neut. pl. subject with singular verb: ... *vīvyak* ... *rājāmsi*.

The verb in d, *vīvidat*, is morphologically slightly problematic. Following Gr I interpret it as a subjunctive to the act. pf. of \sqrt{vid} ‘find’, but we ought then to have full-gr. root syllable **vīvedat*. Kü (493) takes it as an injunctive “in komprehensivem Gebrauch,” but the perfect injunctive ought not to be thematic, but rather **vīvet* (like *vīvyak* in b). In the end I take it as a wrongly formed subjunctive.

Ge. construes the enclitic *te* with *ántam*: “... dein Ende finden,” but the enclitic seems wrongly positioned for this interpretation (insofar as we understand the positioning of adnominal enclitics – but see *te asuryāya* in 7a), and at least one parallel passage suggests that it is the end of his *śávas-* that is at issue: I.100.15 *ná ... śávaso ántam āpuḥ*.

VII.21.7: Note the juxtaposition of the gods (*devāḥ*) and Indra’s “lordship” (*asuryāya*).

For the meaning of the idiom *ánu √ mā*, see Kü (279). It parallels the concessive sense of *ánu √ dā* ‘concede’ and *ánu √ dhā* ‘id.’

VII.21.8–9: Final *varūtā* of 8d is matched by final *tarutra* in 9b.

VII.21.8: The “man like you” (*tvāvataḥ*) is the human patron because he, too, distributes largesse. So also Ge (n. 8d).

VII.21.9: *vanvántu* ‘let them combat’ and *vanúṣām* ‘rapacious ones’ are presumably derived from the originally separate roots *van* ‘win, vanquish’ and *vaní* ‘love, desire’, but since these roots have become synchronically entangled, the pair presents itself like an etymological figure, like I.132.1=VIII.40.7 *vanuyāma vanuṣyātaḥ* “may we win against those who seek to win.”

VII.21.10: This verse is identical to the final verse of the last hymn (VII.20.10), but in this case *maghāvāno junānti* “the bounteous ones incite (us)” is the positive equivalent of the negative *ná ... jūjuvur naḥ* “They do not incite us” in vs. 5, where the internal enemies served as subject.

VII.22 Indra

VII.22.2: I tr. *ásti* as an existential (“exists to be yoked”) rather than simply a copula with the predicated gerundive *yújyaḥ* (“is to be yoked”) because the 3rd sg. pres. of *√ as* is almost always an existential, given that the copula is almost always gapped. However, this may be too emphatic a tr., and it is the case that a surface copula is more likely to be found in subordinate clauses than main clauses. See Jamison 1990 (“Tense of the Predicated Past Participle ...,” IJ 33: 1–19) pp. 4–5. The gerundive + *asi* in 7c (*hávyaḥ ... asi* “you are to be invoked”) supports a simple copula interpr. here.

VII.22.3: The position of *ā* in the middle of the NP *vācam ... imām* is worth noting. Gr takes it as a preverb with *bódhā*, but *√ budh* does not otherwise occur with *ā*, and its position would not be normal for a preverb in tmesis. Note also that *bódhā* + SPEECH is found in the next vs. (*bódhā ... manīṣām*) and in the preceding hymn (VII.21.1d *bódhā ... stómam*), both times without preverb. I am tempted to assume that the poet inserted an unnecessary adverbial *ā* ‘here’ to produce a proper cadence. Pāda-final *vācam émām* is also found in IX.97.13, a verse attributed to Upamanyu Vāsiṣṭha, again without obvious function.

VII.22.4: The lexeme *ví√pā* in later Vedic is regularly found in specialized sense in the Sautrāmaṇī ritual, and there it refers to the feat of separating the *surā* from the other

liquid (milk or soma). This sense and context are already found in the late RVic hymn X.131.4 in the med. part. *vipipānā*. See Old ad loc. (and NGGW 1893, 348–49). Though it has been suggested that this usage belongs to a separate root $\sqrt{pā}$ ‘go’ (see, e.g., EWA s.v. *PĀ*³), this seems unnecessary and somewhat perverse. Although the other $\sqrt{pā}$ passages (all medial) don’t have a Sautrāmaṇī association, I think they (or most of them) belong to this same lexeme, though Old is less certain. Here the stones are separating the soma juice from the stalk. In IV.16.3 the pressing stone is also the subj., and there is a pressing stone association in III.53.10. However, I.112.15 is more enigmatic. The subj. there is an ant (or someone called “ant”), *vamrā-*, and the vignette occupies half a pāda in a list of the Aśvins’ helpful deeds. For further on that passage, see disc. ad loc.

VII.22.5: A nice example of the potential iterative-repetitive value of a reduplicated present (*vivakmi*) reinforced by an adverb (*sādā* ‘always’).

VII.22.7: The first pāda could also be another obj. of *kṛṇomi* in b.

VII.22.8: Ge seems to take the participle *mānyamānasya* as a functional reflexive ‘think oneself to be’, with the added sense of self-conceit (“der du dir darauf etwas einbildest”). Although I would certainly not ascribe to Indra excessive modesty, in this context, where the poet is emphasizing the poets’ inability to capture all of Indra’s greatness, I think it unlikely that he is focusing on Indra’s egotism. I instead take the participle in a passive sense ‘be thought to be’, as sometimes elsewhere – *pace* Kulikov (339–40), who follows Gotō.

VII.22.8–9: The subject of the verb in 8b, *úd aśnuvanti*, is not specified. In my view the subject is postponed to 9ab: neither the older nor the younger poets are capable of expressing all of Indra’s powers in their formulations. Although this interpretation requires enjambment over a verse boundary, the main clause in 9c to which 9ab is supposedly subordinate has no appropriate referent for the relative pronoun (*asmé* works awkwardly at best), whereas 9ab neatly completes the thought of vs. 8.

VII.22.9: The publ. tr. interpr. *asmé* as a dat. But the parallel in IV.10.8 *śivā naḥ sakhyā sántu ... devēṣu yuṣmé*, where the *-mé* pronominal form is anchored as a loc. by *devēṣu*, makes a loc. reading more likely. Cf. also VI.18.5 *tán naḥ pratnáṁ sakhyám astu yuṣmé*. I would therefore change the tr. to “Let there be friendly fellowship of you among [or, with] us.”

VII.23 Indra

VII.23.1: I follow Ge in taking *upaśrotā* as a periphrastic future (contra Tichy, 189, 364).

VII.23.2: Note the echoes at the beginning and end of the first pāda: *áyāmi ... (dev)ájāmi(r)*. As often, the local patterns created by the use of hapaxes (as *devájāmi-* is in the RV) may help account for their deployment.

I don’t understand Ge’s rendering of pāda b, where he seems to take singular *ghóṣa(h)* of pāda a as the implied subject of plural *irajyánta*. I take the verb as a

contrastive passive/reflexive to the otherwise active stem, more or less following Old's interpretation, with *śurúdhah* as subject.

The root noun cmpd *vívāc*- echoes the redupl. pres. *vívakmi* in the preceding hymn, VII.22.5, though of course the *ví*'s have nothing to do with each, being the preverb and the reduplicating syllable respectively.

VII.23.4: 'Teams' (*niyút*-) often appear in context with Vāyu and his driving. Often, of course, they are his teams, but here and frequently elsewhere the 'teams' clearly stand for our poetic thoughts. Cf., e.g., I.135.2, VI.47.14, X.26.1. Therefore, it is unnecessary to supply, with Ge, a verb of guiding or yoking to make the teams into Vāyu's.

The instr. *dhībhiḥ* is taken in the publ. tr. as an instr. of accompaniment, but it could also be an instr. of price/exchange: "in exchange for (our) visionary thoughts."

VII.23.5: The syntactic frame of *dáyase* here is wrong: it ordinarily takes an accusative of the material distributed and a dative of recipient on the rare occasions on which the recipient is made explicit. A clear example is found in the preceding verse, 4d ... *dáyase ví vājān*, also nearby VII.21.7 *maghāni dayate*. The position of *hí* is also anomalous, though note that it exactly replicates the position of *ví* in the phrase in the preceding verse just cited and may well owe its position to this rhyme. Despite the syntactic aberrancy I think that *mártān* must represent the recipient, and the parallelism of the *dáyase* phrases in the adjacent verses has imposed the accusative recipient. (There is also an apparent double accusative, of goods and recipient, in one other passage: VI.37.4 *maghā ... dáyase ví sūrīn* "you apportion bounties to our patrons.")

VII.24 Indra

VII.24.1: The conjoined phrase *avitā vṛdhé ca* is not syntactically parallel in the strict sense, but both the agent noun *avitār*- and the purpose dative *vṛdhé* are properly construed with the 2nd sg. copula, subjunctive *ásah*. For the latter, cf., e.g., I.89.5 ... *yáthā ... ásad vṛdhé*, and for the cooccurrence of the two terms VI.33.4 ... *avitā vṛdhé bhūḥ*.

VII.24.2: The striking expression "your mind ... has been captured" presumably indicates that our successful preparations for the ritual have forcibly brought Indra to the soma sacrifice, with the implication that he is prevented from going to the sacrifices of others.

In pāda a *dvibárhāḥ* appears to be a masc. nom. sg., though I take it (as Ge does) as modifying neut. *mánaḥ*. Gr, by contrast, suggests that it belongs with masc. *sutáh sómaḥ* in the following pāda. Although Gr's solution might seem to be grammatically more satisfactory, on several occasions *dvibárhā(h)* does seem to modify a neut.: I.114.10, VII.8.6, possibly IV.5.3, and AIG III.288 allows neut. sg. to -*as*-stem adj. in -*āḥ*. In most instances, as here, the -*āḥ* is pāda-final, and so the long vowel isn't metrically guaranteed. See on this phenomenon also comm. ad II.31.5.

Gotō (1st Cl., 226 n. 483) interprets *bharate* in c not as a passive (with Gr, Ge, and me; also H-P Schmidt, Fs. Nyberg), but as a self-involved middle: "Lobpreisung, deren Milchstrom losgelassen ist, bringt [ihre Milch] dar," on the basis of his principle that medial Class I presents cannot be used passively. But in my opinion at least, this principle cannot be maintained in general, and certainly in this context, with passive

expressions dominating the first hemistich, a passive reading is most natural and the image of the praise hymn bringing its own milk borders on the comic.

With others I take pāda d as an extension of c, with *īyám ... manīṣā* an appositive to *suṁvṛktīḥ*. However, it would be possible to take it independently: “this inspired thought is constantly invoking Indra,” since, though fairly rare, predicated present participles do exist, and the short staccato clauses of the earlier part of the hymn may invite an independent reading here.

VII.24.3: Despite its position, *tavāsam* should not modify *āṅgūśām*, though that is grammatically possible, but *tvā*, since the adjective is a regular epithet of Indra.

VII.24.4: The intens. part. *vārīvr̥jat* can only be intransitive here, as there is nothing overt or latent that could serve as object (so also Ge “zu uns einbiegend,” Schaeffer [191] “immer wieder (zu uns) einbiegend” -- though with a different nuance from my tr.). However, forms to the root $\sqrt{vr̥j}$ ‘twist’ are otherwise always transitive, including the other ex. of the intens. part. (VI.58.2). I do not have an explanation.

VII.24.5: Uncompounded $\sqrt{vāh}$ to \sqrt{vah} ‘convey’ is attested only here, but it is common in compounds, e.g., *indra-vāh-* (4x). See Scar (473-80; for the grade of the root, esp. 479).

The two different simile markers in b (*iva ... nā*) may be highlighting two different aspects of the complex simile.

The genitive of goods with $\sqrt{īd}$ ‘invoke’ is somewhat aberrant. Although for this root Gr allows acc., dat., or gen. of the material desired, the only other genitive passage he cites is VIII.31.14, where the genitive is otherwise to be construed. However, there seems nothing else to do with *vāsūnām*, and the construction is reminiscent of nearby VII.32.5 ... *śrútkarṇa īyate vāsūnām* “he of listening ears is implored for goods.” Moreover, in X.20.2 *agnīm īle bhujām*, the gen. pl. *bhujām* is best interpr. this way (“I invoke Agni for delights”), contra the standard interpr. Alternatively we could assume the gapping of a noun like *sambhāraṇam* ‘assemblage’ as in the next hymn, VII.25.2d *sambhāraṇam vāsūnām*, but this seems less likely.

In d the *śrómatam* is presumably the ‘hearing’ that gods extend to men’s hymns. See VII.32.5 just cited for a similar sentiment.

The simile *divīva dyām* is opaque to me. Ge tr. “Wie Tag auf Tag,” but neither of these case forms of *div-/dyu-* is used temporally, but only spatially of ‘heaven’. Placing “heaven upon heaven” must refer to Indra’s cosmogonic deeds, but the connection with Indra’s activity in the frame is vague. Old believes that setting heaven on heaven means that Indra is fixing heaven in its proper place.

VII.24.6: For *pūrdhi* see EWA s.v. *PAR*¹⁷² ‘give’.

VII.25 Indra

VII.25.1: Although *mahá(h)* in the first pāda is a genitive, I have tr. it in the vocative phrase to avoid the awkward “(Be) here with the help of you, the great one, o strong Indra.”

Ge supplies ‘mind’ from *d* as the subject of the first pāda, but this seems unnecessary.

I take pāda *c* as a clause parallel to *b*, with the *yád* in *b* having domain over both, hence accented *pātāti* in *c*. By contrast, Ge (see also Old) takes it as a circumstantial clause dependent on *d* and supplies “(Wenn).” This is certainly possible, but my solution seems simpler.

The threatened possibility of Indra’s wandering mind may account for the capturing of his mind in the previous hymn, VII.24.2.

VII.25.4: The prohibitive clause *ná mardhīh* is of course grammatically incorrect. We expect *mā* with the injunctive in prohibitives, and in fact find it with this same stem several times: *mā no mardhīh* IV.20.10, *mā no mardhiṣtam* VII.73.4, 74.3, always with the 1st pl. enclitic following the *mā*. Non-prohibitive forms of \sqrt{mrdh} almost always occur with the negative *ná*, e.g., *ná mardhanti* (I.166.2, III.54.14); there are no positive attestations of this verb. Our passage must be an odd conflation of the prohibitive passages with enclitic *no* and the non-prohibitive passages with negative *ná*. Or alternatively, and in my opinion less likely, this is a non-prohibitive use of the injunctive: “you do/did not neglect.” That, however, is Hoffmann’s solution (Injunk., 101), taking it “als allgemeine Eigenschaft” of Indra’s: “du lässt nicht im Stich.” See his discussion, where he also points out that that **mā mardhīh* would be metrically bad.

VII.25.5: The opening of my tr. of this verse is meant to capture the odd order of noun and demonstrative, *kútsā eté* ...

With Ge I supply a form of \sqrt{rc} ‘chant’ as the main verb of the first hemistich, since this verb takes *sūśám* as object in a number of passages (e.g., I.9.10, X.96.2). Cf. nearby VII.23.6 *vásiṣṭhāso abhí arcanty arkaīh*, with the nom. pl. subj. of a group of contemporary singers and the verb \sqrt{rc} in the last vs. of the hymn (VII.25.6 is repeated from VII.24.6).

VII.26 Indra

VII.26.1: *nṛvāt* in *d* may, as frequently, be adverbial (“I manfully beget...”) or, as in the publ. tr., a neuter acc. sg. modifying *ukthám*.

VII.26.3: On *ní√mrj* see comm. ad II.38.3. The idiomatic sense ‘drag down forcefully’ (as in I.140.2, where Agni drags down trees like an elephant) allows the idiom to develop a sense not only of coercion (on the part of the agent) but of submission (on the part of the object), which is probably responsible for its use of a husband’s action towards his wives.

The use of *sárva-* rather than *vísva-* for ‘all’ may be a sign of lateness.

VII.26.4: The *utá* of pāda *a* is echoed by *ūtáyo* in *c*, which in turn is picked up by *ūtáye* in 5a.

Pāda *b* opens with *ékaḥ* ‘one, single’ and *c* ends with *pūrvīh* ‘many’, a contrast that appears to be highlighted.

The verb *saścata* in d is morphologically ambiguous. My publ. tr. follows Ge in rendering it as a modal (Ge “... sollen ... zufallen,” SWJ “will be companions”). Ge does not, however, comment on the form. Gr identifies it as a 3rd pl. to an athematic redupl. stem *saśc-*; since this stem precedes and is distinct from his “schwaches Perf. *saśc-*,” he must consider it a redupl. pres., as Whitney and Macdonell (VGS) do; Hoffmann (Injunc. 260) likewise calls our form an injunctive. A 3rd pl. mid. injunc. is certainly possible here, but if we wish to maintain the modal value (which, in fact, is not actually necessary), the injunctive is a small embarrassment, since modal value for the injunctive is fairly rare and generally limited to particular forms like *dhāś*. An alternative would be to take it as a 3rd singular subjunctive, possibly built to the perfect stem. The neut. pl. *bhadrāṇi* ... *priyāṇi* could serve as subject to the singular verb in the well-known inherited construction, though it is not overwhelmingly common in the RV. Of course, we would far prefer a primary *-te* ending for the middle subj., but I do not think secondary *-ta* is impossible. Alternatively, with an analysis as 3rd plural injunctive, the tr. could be changed to “... are companions to us.”

VII.27 Indra

VII.27.2: The relative clause in the first pāda has no overt referent in the main clause of b, but I supply an instr. *tēna* (see also Ge’s n.; his first alternative, to supply *tām*, is less attractive because *śikṣa-* doesn’t ordinarily take an acc.).

I interpret c as containing an implicit pun. The form *vīcetā(h)*, masc. nom. sg. of *vīcetas-*, derived from the root *√cit* ‘perceive’, means ‘discriminating’, hence my ‘tell things apart’, and is regularly applied to Indra (and other gods). But this leaves *dr̥ḷhā* with no verb to govern it. (It cannot be object of *āpa vṛdhi* in d, because the *hī* in c should trigger verbal accent.) I suggest that *vīcetā* (in sandhi) might also be secondarily construed as the agent noun of *vī√ci* ‘pile apart, pull apart’, governing *dr̥ḷhā*. Of course we would expect the Saṃhitā text to show coalescence of the final vowel of the agent noun and the initial vowel of the next pāda, but the recitational text would not reflect that. Although most agent nouns compounded with preverbs take suffix accent, compare *nīcetar-* (I.184.2) to a different root *√ci* ‘perceive’. If this suggestion seems too radical, it would also be possible to detach the preverb *vī* from *vīcetā(h)* and supply a form of *√vṛ* ‘cover’ (found in *āpa vṛdhi* in d), producing the familiar lexeme *vī√vṛ* ‘uncover’.

VII.27.3: The *yād* in b is rather deeper in the clause than I would like, following the prep. phrase as well as its nominative referent.

The *cid* in d is somewhat surprising: *cid* generally means ‘even’, but “even when praised” (*ūpastutaś cid*) is the opposite of what we should expect. Both Ge and I have avoided this problem by tr. *cid* almost as a subordinator or at least a circumstantial (Ge “zumal da ...,” SWJ “just when”). I now wonder if it expresses anticipatory polarity with *nū cid* in the following pāda (4a). Since *nū cid* means ‘never’, *cid* in 3d could mean ‘always’.

VII.27.4: Note the rhyming pāda-final ... (*sáh*)*ūtī*(a), ... *ūtī*(b).

In b Ge takes *dānāḥ* as gen. sg. of *dāmān-*, dependent on *vājān*: “... den Lohn der Gabe.” This is possible, though it would be more natural to have *vājān* as object of some

form of $\sqrt{dā}$ (esp. given the parallel he cites, VI.45.23 *dānām vājasya*, with *vājasya* dependent on *dānām*). I therefore prefer to take *dānāḥ* as the ablative singular of the *mān*-stem, with verbal rection, or, possibly (but somewhat farfetched) the nom. sg. of an otherwise unattested medial root aorist participle of $\sqrt{dā}$.

The combination of *abhí* with $\sqrt{vī}$ ‘pursue’ would occur only here in the RV (and the other saṃhitās); Ge renders it as ‘willkommen’. I suggest that it belongs rather to $\sqrt{vyā}$ ‘envelop’ and continues the theme of confinement found in 1d and 2d. The idea here is that the cow was once enwrapped or enclosed but freed by Indra to swell for us. It is possible that *abhí**vītā* is actually a pun on both those roots, and the tr. should reflect this ambiguity: “... gift-cow swells ..., (previously) enclosed, (now to be) pursued by his comrades,” vel sim. The presence of *vyāntaḥ* ‘pursuing’ in 5c supports this possibility.

VII.28 Indra

VII.28.1: The 2nd hemistich begins and ends with a form of *vísva*- ‘all’: #*vísve ... vísam(-inva)*##.

VII.28.2: Pāda a continues the theme of competitive invocations embodied in the lexeme *ví* $\sqrt{hvā}$ in 1c *vihāvanta* with *hávam ... ví*, even though the two words are not to be construed together.

“Your greatness” as an agent may seem odd, but consider “your majesty, your highness,” which pose no such problems in English.

I interpret *bráhma* in b as plural rather than singular because of pl. *bráhmā* in 1a and because there are multiple seers in 2b.

I take c with ab, contrary to Ge, who takes it with d. His is technically possible, but it seems to imply a backwards sequence of events: Indra is born only when he has taken the mace in his hand. Ge avoids the problem by radically bleaching the meaning of *janīsthāḥ* to make it an auxiliary or copula substitute (“wardst”) with *āsālhaḥ*: “so wardst du unbezwinglich.” This seems too high a price, esp. as *ajāñé* appears in the next verse, where Ge gives it its full lexical value (“er ist ... geboren”).

With *janīsthā āsālhaḥ* compare VII.20.3 *janúṣem āsālhaḥ*.

Although nominative forms of the pres. part. to \sqrt{as} ‘be’, particularly *sán*, are ordinarily concessive, I cannot see a concessive force here. Perhaps it is here almost as a place-holder, to match the *yád* forms in the same position in surrounding pādas (2b, c, 3b [whose *yán* in sandhi rhymes with *sán*]).

VII.28.3: I take ab as dependent on the previous verse, 2d, describing Indra’s cosmogonic deeds right after birth. For a novel, but not ultimately persuasive interpretation of this hemistich, see Old. Note that forms of $\sqrt{nī}$ open and close this half-verse: #*táva prañīti ... nínétha*##.

The position of *yád* in this dependent clause is somewhat disturbing. It occurs in Wackernagel’s position in the second pāda (b), but the a-pāda is part of this same clause and is intimately interwoven with the elements in pāda b: note esp. the acc. pl. *jóhuvānān*, which modifies *nīñ*, the third word in b. Although superficially late position of subordinating elements is not uncommon in the RV (see, e.g., *hí* in pāda c), what

precedes is generally syntactically unified, belonging to a single constituent (as in pāda c), but this is not true of the assorted material found in pāda a. I have no explanation.

For the oppositional pun in *sám ... ninétha*, standing for *ví (... ninétha)*, see the publ. intro. As I explained there, since *sám* and *ví* are preverbs of opposite meaning that frequently pattern together, the *sám* here evokes the *ví* of the lexeme *ví√hvā* earlier in the hymn (with *√hvā* present here in the intensive part. *jóhuvānān*) and the various expressions of Indra's pushing *apart* the two world-halves. E.g., nearby VII.23.3c *ví bādhiṣṭa syá ródasī mahitvā* (I.51.10, VI.29.5, etc.). These associations would prompt the audience to take "bring together" as standing for "push apart," in the standard mythology of Indra.

After the 2nd ps. description of Indra's mythological activity in 2d–3ab, the second half of vs. 3 summarizes the birth in the 3rd person. Ge's interpretation, which makes c parenthetical and connects ab with d despite an awkward change of person, seems clumsy.

VII.28.4: A curious verse. It begins conventionally enough, with a plea to Indra to favor us "though these days" (*ebhīḥ ... áhabhiḥ*). Which days is not clear, but I assume it means "now." The verse then turns towards the moral sphere: the peoples (*kṣitáyah*) who are *durmitrá*- 'having bad allies/alliances' (or possibly 'bad allies') are purifying themselves (*pávante*). This pāda presents a number of problems: not only whether *durmitrá*- is a bahuvrīhi or tatpuruṣa (opinion is divided; I take it as the former; see also comm. ad VII.18.15), but also whether the *kṣitáyah* are intrinsically our enemies or are members of our larger community who have fallen into an evil state. *kṣitáyah* are ordinarily presented either positively or neutrally, but see III.18.1, where they are *purudrúhaḥ* 'possessing many deceptions', so an intrinsically hostile reading is possible (if, in my opinion, less likely). If here they are intrinsically hostile, the point may be that if they're sprucing themselves up, we had better get to work on it as well, to meet the challenge of our enemies. If they are not our sworn enemies but peoples with whom we have dealings (or who we ourselves actually are), is it that they are purifying themselves *of* their bad allies/alliances, and therefore are worthy of Indra's aid? Varuṇa, as if evoked by his partner Mitra in *durmitrá*-, then makes his appearance, noting untruth and releasing us from it. As was stated in the intro., Varuṇa's presence is unexpected here. I now wonder if the hymn is specialized for a particular ritual context (signaled by "these days"), perhaps the Varuṇapraghāsa. A purificatory period (like that described in pāda b) might be appropriate then. For this reason I favor an interpretation of pāda b in which the *kṣitáyah* are identified with, or associated with, us.

VII.28.5: As noted in the publ. intro., this verse serves as refrain for VII.28–30, so that it does not respond to (or at least need not respond to) the immediately preceding Varuṇa verse.

In b the genitives *mahó rāyáḥ* and *rādhasaḥ* may either be parallel or one dependent on the other. I follow the latter interpr., with the *rāyáḥ* phrase dependent on *rādhas*-. Although I have not found absolutely diagnostic passages, *rādhas*- is regularly modified by adjectives (like 'bovine') that specify the type of *rādhas*-, and *mahó rāyáḥ* may be a defining genitive of the same type.

VII.29 Indra

VII.29.1: Pāda d (*dādo maghāni maghavann iyānāḥ*) is almost a rewrite of V.28.5ab *vocéma ... maghāvānam ...*, ... *rādhaso yād dādan naḥ*, with *iyānāḥ* ‘being implored’ substituting for *vocéma* and *rādhaḥ* for *maghāni*.

VII.29.2: The pāda-initial voc. *bráhmaṇ* shows the accent of the neut. *bráhmaṇ-* ‘formulation’, though it clearly belongs to the m. *brahmán-* ‘formulator’. The confusion is probably deliberate; the first word after the voc. phrase is *bráhmaḥṛīm* with the neut. 1st cmpd member, neut. pl. *bráhmāṇi* is found in pāda d, and note that the preceding hymn begins *bráhmā* (V.29.1a), with the neut. (see also V.29.2b).

Just as 1d is a variant of V.28.5ab, so also does 2b (*arvācīnó háribhiḥ yāhi tūyam*) appear to play on V.28.1ab ... *úpa yāhi ...*, *arvāñcas te hárayaḥ ...*, as well as echoing the immediately preceding vs. (29.1b *ā tu prá yāhi harivaḥ ...*) with *háribhir yāhi tūyam*.

VII.29.3: Ge takes *tatane* as a preterite (“... habe ich ... gespannt”), but the full-grade root syllable should signal a subjunctive, which also fits the context better (opt. *dāsema* [b], subj. *śṛṇavaḥ* [d]). In contrast Kü (210) considers the form a properly formed indicative and a relic, the regularly developed product of **ta-tṇ-h₂aṇ*; although this could be possible, it seems unnecessary, given that the context favors a modal form.

Note that the hemistich finals *dāsema* (b) and *hávemā* (d) rhyme, though they are morphologically entirely distinct.

VII.30 Indra

VII.30.1: Although tr. as if parallel, *māhi* in d is an adverbial neuter, whereas *mahé* in c is a dative modifying *nṛmnāya*. However, “greatly for dominion” seemed overly fussy in English.

VII.30.2: The first hemistich is characterized by alliteration, *v*-s in a, *u*-s and sibilants in b: *hávanta u tvā hávyaṃ vīvāci / tanūṣu sūrāḥ sūryasya sātaú*.

suhántu in d is a nice example of a proleptic adjective: “weaken the obstacles (so that they are) easily smashed.”

VII.31 Indra

VII.31.2: Unlike other interpreters, I take *utá* as marking a new clause, summing up the actions of the poet (who addresses himself in 2a) and his ritual companions (whom he addresses in vs. 1) and comparing them to the actions of the Maruts (*yáthā nárah*). Klein (I.409) takes *utá* as connecting vss. 1 and 2, but the position of *utá* in 2b makes that interpretation awkward. Ge takes it as connecting *ukthám* and *dyukṣám* (“... ein Loblied ... und zwar ein himmlisches”). His interpretation assumes a new clause beginning with *yáthā* in the middle of b and also takes *cakṛmā* in c as a sort of dummy verb substituting for a verb of poetic speech (“wie wir Männer es ... gedichtet haben”). But, although “just as we have done” works fine in English as a dummy verb, I am not sure that *√kṛ* can be bleached in the same manner in Sanskrit – though I notice, with some chagrin, that I

suggest just such an explanation for *kṛṇóti* in I.77.1. Since the Maruts as Indra's singers are mentioned elsewhere in the hymn (explicitly vs. 8, implicitly vs. 12) and are often called *náraḥ*, my interpretation of b has some support. The position of *yáthā* as a simile marker might be problematic, however; it can be ameliorated by assuming that *dyukṣám* forms part of the simile "as the superior men (made/make) a heavenly (speech), we have made ..." For *dyukṣá-* qualifying 'speech', cf. the compound *dyukṣá-vacas-* (VI.15.4).

VII.31.3–4: Although these verses straddle a *ṛca* boundary, they are neatly responsive. The repeated *tvám* of vs. 3 is matched by the initial *vayám* of vs. 4, and the repeated *-yú-* ('seeking X') adjectives of 3 are again matched by the *tvāyú-* 'seeking you' of 4a. The final word of both verses is the voc. *vaso*. Even the *gavyú-* 'seeking cows' of 3b has its complement in 4b *vṛṣan* 'o bull'.

There is no obvious noun to supply with *asyá* 'of this' in c. Ge supplies "Schrei," and my "cry" follow him; Klein (I.175) instead "act." The phraseology reminds us of the refrain of I.105 *vittám me asyá rodasī*, which I tr. "Take heed of this (speech) of mine, you two world-halves."

VII.31.5: Contra Ge (and Klein DGRV I.175), I take *váktave* with *nidé*, not with *árāṇve*, which respects the *pāda* boundary and also conforms better to the semantic domain of the two nouns: *níd-* 'scorn' is verbal, whereas *árāvan-* is more general. In either interpretation the position of *ca* is a problem, since it appears with the first member of a conjoined NP, not the second. In my interpretation the configuration is X *ca* X' ... Y, in the Ge/Klein interpretation X *ca* Y...Y'.

VIII.31.6: On the basis of VIII.92.32 *tváyéd indra yujā vayám, prāti bruvīmahi spṛdhaḥ* "With you as yokemate, we would respond to the challengers," I supply 'challenger' here.

VII.31.6–7: Again there is responsion across the *ṛca* boundary: 7a *mahāṁ utāsi* echoes 6a *tvám vármāsi*.

VII.31.7–8: Echo between 7b *svadhāvarī* and 8b *sayāvarī*, though they occupy different metrical positions.

VII.31.10: Much phonetic and morphological play, with the repeated *prá*s, the repetition of *mahé mahi-* (note that this replicates the *mahé ... máhi* of VII.30.1cd), and, especially, the chiastic finale: *prá carā carṣaṇiprāḥ*, where the last element, the root noun *-prāḥ*, is of course unrelated to the first one, the preverb *prá*.

VII.31.12: Because the *vāṇī* 'choir' in vs. 8 was qualified as *marútvatī* 'composed of Maruts', I supply Maruts here with pl. *vāṇīḥ*. It is also possible, and perhaps preferable, to assume that the plural indicates that several choirs are involved: both the Maruts and (we) the human singers.

In c *barhayā* could also be 1st sg. subjunctive, as Ge takes it. Either interpretation fits the context fine; I slightly prefer the 2nd sg. imperative, because it returns us to the imperatives of vss. 1–2.

VII.32 Indra

VII.32.2: It is tempting to take *suté* as parallel to *mádhau* in the simile and *sácā* with *ásate*, rather than taking *suté sácā* as a formulaic phrase with semi-pleonastic *sácā* as the publ. tr. does. The former interpr. would yield “because these who craft sacred formulations for you sit together at [=by/around] the soma like flies on honey when (the soma) is pressed,” an interpr. also suggested to me by Dieter Gunkel (p.c., 11/5/15). I chose the latter path because of the parallel cited by Ge, X.50.7 ... *brahmakṛtaḥ suté sácā* # However, it could be argued that X.50 is presumably a later composition than VII.32 and need not provide unassailable evidence for how VII.32.2 should be interpreted.

VII.32.3: *sudákṣiṇa-* is a triple pun. In its only other RVic occurrence (VIII.33.5) it means ‘having a good right (horse)’, but it could equally mean ‘having a good right (hand)’, alluding to the immediately preceding *vájrahasta-* ‘having the mace in his hand’. And, in keeping with the theme of giving, it can refer to the *dákṣiṇā-*, the priestly gift distributed at the dawn sacrifice. This would respond to the *rāyáskāma-* ‘desirous of wealth’, which opens the verse.

VII.32.5: Ge joins c with b, rather than d as I do. This is possible, but the topic of giving in both c and d connects them thematically.

VII.32.8: *ávase kṛṇudhvam* is close to a periphrastic causative, since “make [=create] (him) for help” is unlikely to take the long-created Indra as object. Zehnder (p. 7 and passim) takes it as such.

VII.32.9: *kṛṇudhvám ... ātúje* similarly functions as a periphrastic causative. So also Zehnder (p. 20 and passim).

VII.32.11: Although ‘seeking the prize’ is ordinarily accented as a denominative (*vājayánt-*), as opposed to ‘incite’ (*vājáyā-*) with causative accent, in this context, the denominative sense seems clear. See comm. on 14d below.

VII.32.14: *śraddhā* is most likely instrumental, but its lack of contraction with the following vowel in the Saṃhitā text gives pause. See Old on this problem.

vājī vājam siṣāsati seems like a variant of *gámad vājam vājáyan* in 11a with different emphasis. See also 20a below.

VII.32.17: The relative clause of b, *yá īm bhávanti ājáyah*, is very peculiar. There is no possible referent for the *yé* in either the preceding or the following main clause, and in addition the *īm* lacks function. It seems like a mangled paraphrase of I.81.3 *yád udīrata ājáyah* “when (battle-)drives arise/happen,” but what caused the mangling is unclear to me. The *yé* can be by “attraction” to the m. nom. pl. *ājáyah* from putative **yád*, and this set of Indra hymns has several examples of functionless *īm* (VII.20.3, 21.1). But it still lacks motivation.

The VP *nāma bhikṣate* “desires a share in your name” is striking and a little puzzling. The same phrase *nāma √bhaj* is found in V.57.5, but there it means that the Maruts, the subjects of the verb, all share the same name. Here, by contrast, it must be a clever way of saying that everyone calls Indra’s name, a novel paraphrase of the common epithet of Indra *puruhūtā* ‘called upon by many’, found in this verse and vss. 20 and 26. (The English slang equivalent would be “wants a piece of you.”) Ge renders *nāma bhikṣate* as “Deinen Namen fleht ... an” (implores), robbing the expression of its vividness.

VII.32.18: The root $\sqrt{īś}$ overwhelmingly takes the gen.; the construction here is identified by Gr (s.v. *īś*, col. 236: #8 mit dem Acc.) as mixed: the gen. *yāvataḥ* is construed with the implied 2nd ps. “as much as you are lord over” (*yāvatas tvám [īśiṣe]*) in pāda a, which is picked up by the acc. *etāvad* in the contrary-to-fact “if I were lord over so much” (*yád ... etāvad ahám īśiya*). I think it more likely that *etāvad* here is a quasi-adverbial summing up of the dependent clause; a more literal tr. would be “if I were lord to such an extent as” or the like. The other passages assembled under Gr’s #8 can be variously explained and do not provide strong evidence for an alternative case frame with $\sqrt{īś}$. In III.18.3 *yāvad* is again adverbial; see the publ. tr. “inasmuch as I am master ...” In VIII.68.7 *īśe* is properly construed with a gen. (*kṛṣṭīnām*) in its own pāda; the acc. cited by Gr, *pūrvyām ānuṣṭutim* in the previous pāda, is probably an acc. of respect (see comm. ad loc.) For nearby VII.37.7 as well as III.51.4, the latter cited only as a possibility by Gr., see comm. ad locc.

The cmpd. *radā-vasu-* ‘excavating goods’ is analyzed by the Pp. with short 2nd vowel: *rada-vasu-*. Though Gr. suggests the correct reading is **radad-vasu-* (like *kṛtqḍ-vasu-* VIII.31.9), Wackernagel (AiG II.1.316) compares it to the *trasá-dasyu-*, with -a-final first member.

VII.32.22: Despite Ge’s easy “dessen Auge die Sonne ist,” I cannot accept this for *svarḍṣam*. First, *ḍṣ-* is never an ‘eye’, but rather ‘seeing’ or ‘having the appearance of’, and furthermore, it’s Varuṇa who has the sun as his eye (that is, as his spy). Here I think the point is rather that Indra, like the sun, sees everything in the world, here expressed by the merism “the moving and the still.”

VII.32.24: There are two word plays in this verse. The simpler one is between the impv. *bhara* ‘bring’ in pāda a and the āmreḍita *bhāre-bhare* ‘at every raid’, where the noun *bhāra-* has been specialized from ‘(an occasion for) bearing away’ to ‘raid’.

The more complex one involves the creation and disappointment of expectations. The verse begins with *abhī śatāḥ*. The juxtaposition of these two forms (the latter being the pres. part. to \sqrt{as} ‘be’ in either gen.-abl. sg. or acc. pl.) and their close sandhi, with retroflex initial *ṣ*, invites the audience to fill in the semantics of the lexeme *abhī √as* ‘be superior’. But to our surprise, at the end of this hemistich we find the semantic opposite, *kānīyasaḥ* ‘the lesser ones’, requiring us to revise our analysis of the opening, dissolving the presumed lexeme into the directional preverb/preposition *abhī* and the independent pres. participle modifying *kānīyasaḥ* much later in the line. For extensive discussion see Old.

I cannot follow Gr, Old in interpreting *jyāyah* as voc., but take it, with Ge, as neut. sg. with *tād*. Among other things, AiG III.296 notes only two masc. vocatives in -*īyas* in the RV, this one and *ōjīyah* in X.120.4, which is also better taken as a neut.

VII.33 Vasiṣṭha and the Vasiṣṭhids

On the structure and thematics of this famous hymn see the publ. intro., as well as the introductory remarks of both Old and Ge. With VII.18, the account of the Battle of the Ten Kings, it bookends the Indra hymns of VII and contributes its own background to the (fragmentary) narrative of King Sudās and the Ten Kings Battle.

The name *vāsiṣṭha*- appears in every vs. of this hymn, primarily at the end of the d pāda: vss. 1, 2, 3, 4, (not 5, 6, though *vāsiṣṭha*- appears in both c pādas,) 7, (not 8, though it's in middle of d,) 9, (not 10 though in c, nor 11 though in a,) 12, 13, 14.

VII.33.1: By most accounts this vs. is spoken by Indra, who is the referent of the 1st ps. enclitics *mā* and *me* in pādas a and d and the subj. of 1st ps. *voce* in c.

As noted already ad VII.18.21, Ge has a peculiar interpr. of the verbal lexeme (*abhī*) *prā* √ *mad* as 'go on a pilgrimage', for which there is no support that I can see. Old also rejects this interpr. I follow Old's view that Indra is present at a competing sacrifice - a constant preoccupation of the Indra hymns of VII -- and recalling the Vasiṣṭhas' ritual service to him, he gets up to leave the sacrifice where he is present to go to theirs. Pāda d is the embedded self-quotation of Indra, providing the reason for his departure for the Vasiṣṭhas.

The descriptors of the Vasiṣṭhas *śvityāñcaḥ ... dakṣiṇatāskapsardāḥ* are found almost identically in VII.83.8 *śvityāñcaḥ ... kapardīnaḥ*, where they modify the Tṛtsus, Sudās's fighting force in the Ten Kings Battle, in a hymn much concerned with that battle. Vasiṣṭha was at least an adoptive member of the Tṛtsu clan. See Ge's n. 1a and esp. vss. 5, 6, and 15 in this hymn.

Despite the position of the generally sentential, Wackernagel's Law particle *hī* far to the right in b, the verb complex *abhī hī pramandūḥ* must have domain over the entire hemistich, with *mā* in 2nd pos. in pāda a serving as its object. As often, when a preverb stays with its verb at the end of a clause rather than moving to the front of its clause, *hī* is inserted, between preverb and verb (or here preverb₁ and preverb₂ verb).

VII.33.2: In this vs. the perspective and location shifts from Indra, at the competing sacrifice announcing his intention to go to the Vasiṣṭhas, to the Vasiṣṭhas at their place of sacrifice "leading" Indra to them. The vss. are linked by *dūrāt* 'from a distance' (1d, 2a), in 1d referring to the distant location of the Vasiṣṭha from Indra's point of view, in 2a the distant location of Indra from that of the Vasiṣṭhas.

With Old, I consider Pāśadyumna Vāyata the hapless sacrificer whom Indra deserted in favor of the Vasiṣṭhas. But I do not follow Old in thinking that b describes an intermediate place on Indra's journey from PV to the Vasiṣṭhas.

VII.33.3: With this vs. we pass to the Ten Kings Battle and the Vasiṣṭhas' crucial efforts in securing Indra's aid for Sudās. The emphatic repeated opening of the first three pādas *evén nū kam* highlights the critical incidents. The two sequences *evéd* and *nū kam* are

both found fairly frequently elsewhere, but never elsewhere together, so it's difficult to judge the force of their combination.

VII.33.4: Ge appears to be right that this vs. is also Indra's speech. He picks up the *bráhmanā vah* from 3d in pāda a and also addresses them as 'superior men' (voc. *narah*), just as he spoke about the superior men (acc. *nṛṇ*) in 1c.

Ge takes *pitṛṇām* with both *júṣṭī* and *bráhmanā*; I doubt the first, as does Old. Since I think Indra is addressing the Vasiṣṭhas at the time of the battle, not a younger generation of Vasiṣṭhas long after the battle, his "by reason of your fathers' sacred formulation" (*bráhmanā vo pitṛṇām*) must refer to the formulation they inherited from their own poetic forebears and are putting to use in enlisting Indra's help.

The action Indra performs in response to the Vasiṣṭhas' employment of the *bráhman*- is not altogether clear. (Old, after some speculation, concludes "'ich komme hier nicht zur Klarheit.") The bare phrasing *ákṣam avyayam* must mean literally "I enveloped the/an axle," but whose axle it is and whether the enveloping is a help or a hindrance aren't recoverable from context. However, as Old points out, III.53.19 may provide some guidance. That vs. is addressed to an axle (voc. *ákṣa*) in a series of vss. (17–20) mean to avert possible disasters that might afflict a team of oxen and the vehicle they are pulling. In vs. 19 the axle is urged *abhí vyayasva khadirásya sām* "Engird yourself in the hardwood of the Acacia tree," before being told to be and stay firm (*vīlāyasva*). The first instruction to the axle contains the verb (*abhí*) √ *vyā* 'envelop, engird', which I take as referring to fixing the ends of the axle firmly in the wheel hubs till the ends are literally surrounded with / enveloped in the wood of the wheel hub. If the same type of action is referred to here, Indra is performing a positive action, presumably securing the axle of the Vasiṣṭhas or their allies in position, to protect them and their chariot from harm, as Indra promises with *ná kílā riṣātha*.

As Ge points out (n. 4c), *śákvarī*- is the name of a meter with martial associations. As he also points out, this fairly rare meter is found in the first three vss. of X.133, a hymn to Indra attributed to Sudās Paijavana, that is, the royal hero of the Ten Kings Battle, though there is no particular ref. to that battle in X.133. Since *śákvarīṣu* is plural here, it would be better tr. "in Sakvarī (verses)" than "in Śakvarī (meter)," as in the publ. tr.

VII.33.5: For the very compressed simile of the thirsty and heaven, cf. V.57.1 *trṣṇáje ná divá útsā udanyáve* "like the well-spring of heaven for a thirsty man seeking water," where the "water" part is made clear.

VII.33.6: It is a curious, but perhaps coincidental, fact that the sole occurrence of *daṇḍá-* in the RV is found in the same hymn with the only occurrence of the vṛddhi deriv. *maitrāvaruṇá-* (vs. 11), given that the *daṇḍa*- 'staff' is the emblem of office associated with the Maitrāvaruṇa priest in śrauta ritual. See Minkowski, *Priesthood in Ancient India*, pp. 141–54 and passim. The conjunction in our hymn was pointed out to me by Elizabeth Tucker.

The addition of the pejorative and sometimes diminutive suffix *-ka-* on a word already meaning 'small' -- *arbha-ká-* -- is a nice slangy touch.

In c the *ca* appears to be subordinating (so also Klein, DGRV I.242–43), though because *ābhavat* is pāda-initial, its accent need not be due to subordination.

VII.33.7: For the riddles here, see publ. intro. I make no effort at a definitive solution (or even any solution at all). In this abstention I follow the good example of Old.

VII.33.9: On the weaving, see publ. intro. and vs. 12c, as well as comm. ad vs. 14.

VII.33.10–13: Old discusses Vasiṣṭha’s two births and suggests that they are presented in reverse chronological order. The birth depicted in vs. 10 is the second birth, while 11–13 treat the first. In the first birth Mitra and Varuṇa emit semen at a Sattrā, which falls into a pot and ultimately gives rise to the seer Agastya. But a drop of this semen is taken into a lotus, somehow comes to the Apsaras Urvaśī, who somehow conceives and gives birth to Vasiṣṭha “from mind.” In the second birth the wondrously conceived divine being of the 1st birth is received into a human Gotra. Old is uncertain about the details; I am even more uncertain.

VII.33.10: In III.51.4 I take *sām* √ *hā* as ‘compact oneself together’, that is, ‘concentrate one’s essence’, and that seems the image here, of the embryonic Vasiṣṭha taking shape from concentrated lightning. Ge (n. 10a) suggests rather that it refers to semen suddenly poured out. I do not see this, and his suggested parallel in X.95.10 seems irrelevant, esp. since the lightning there is Urvaśī.

Old’s argument that vs. 10 depicts one birth and the following vss. another depends in part on taking the two *utā*s of 10c and 11a as marking the two births. This would be more convincing if the first *utā* were not in the middle of the pāda. This position seems better accounted for by assuming that 10c refers to both births, with *utā* conjoining *tāt te jānma* and *ēkam*, as Ge takes it (“das war deine (eine) Geburt und eine ...”). So also Klein (DGRV I.368). The double *yād* in b and d support this interpr., with each *yād* introducing one of the births. I follow this general interpr.

The *yād* in b is very deep in its clause, with both subj. and obj. preceding it, if pādas ab form a single clause as in the standard tr. (incl. Ge and the publ. tr.). It would, however, be possible to take pāda a as the main clause on which b is dependent: “light was compacting out of lightning when M+V looked upon you.” This would solve the problem, but the unusual position of *yād* could also be attributed to an attempt to make b and d parallel, each recounting one of the births and opening with the putative father (or fathers) followed by *yād*, with a preterital verb and the obj. *tvā* (the latter in different orders): b *mītrāvāruṇā yād āpaśyatām tvā* and d *agāstyo yāt tvā viśā ājabhāra*. In this scenario, pāda a, which is a single NP, would have been fronted around the core clause.

With Old (fld. by Ge), I read dat. *viśé* contra Pp. *viśāḥ*. The clan in question is supposed to be the Tṛtsus.

VII.33.11: The pub. tr. reads “born from her mind,” but given the uncertainties of this birth story, the mind need not be Urvaśī’s, but someone else’s, or even pure mind. So it might be better rendered as “born from mind.”

On the semen (if that’s what the drop is) and the lotus, see disc. ad vss. 10–13. If the underlying narrative really does involve transporting spilled semen in a leaf and long-

distance conception therefrom, it anticipates the MBh narrative in which the king Vasu ejaculates while hunting, catches the semen in a leaf, and tries to send it home to his wife Girikā by enlisting a bird, though the bird and the semen meet with a disaster over water that leads to the semen impregnating a fish (MBh I.57.35ff.).

I take *drapsām skannām* as a nominal clause, rather than taking *cd* as a single clause with *drapsām skannām* coreferential with *tvā*.

VII.33.12: As Ge points out (n. 12a), *praketā-* is otherwise only a noun, and so it is best to go against the Pp's reading *praketāḥ* in favor of the loc. *praketé*. (Ge also entertains the possibility of reading **sapraketāḥ*.)

The "both" are presumably both births; so Ge.

The weaving in pāda c is repeated almost verbatim from 9c, but with the single Vasiṣṭha, not the pl. Vasiṣṭhas as subject. As noted in the publ. intro., I assume that this refers to the production of the sacrifice. See comm. ad vs. 14 below.

The hapax *sādāna-* is not entirely clear. Ge suggests that it stands for **sādādāna-* by haplology and tr. "der ... immerdar Geschenke hat." He does not render the *utā vā*, implicitly taking *sahásradānaḥ ... sādānaḥ* as appositive adjectives. Klein (DGRV II.169) follows Ge's interpr. of *sādānaḥ* without mentioning the possible haplology and states that the conjoined terms in the phrase *sahásradana utā vā sādānaḥ* "come close to being synonymous." His tr. "having a thousand gifts or having constant gifts" both illustrates this suggestion and shows how flat-footed such a phrase would be. Old discusses without coming to a conclusion, though he does reject the haplology explan., which goes back to Ludwig. My own interpr. takes the text as given and interprets the second adj. as additive "and one gift (more)," with *sādāna-* 'with (a) gift' standing for 'with one gift'. If the *utā vā* should be read as disjunctive 'or' (as I admit it should), perhaps this is instead a version of the Archilochus fox-and-hedgehog dichotomy ("the fox knows many things, but the hedgehog one big one") -- hence "having a thousand gifts -- or one (big) gift." This in fact is now my preferred tr. What the gifts refer to I have no idea.

VII.33.13: This vs. is the basis of Old's (and others') reconstruction of the 1st birth of Vasiṣṭha (see comm. add vss. 10–13), with Mitra and Varuṇa at a Sattrā emitting semen into a pot, which then gave rise to both Agastya and Vasiṣṭha. Unfortunately the details of this vs. are far from clear, though pāda b does (fairly) straightforwardly depict a dual entity pouring semen into a pot.

The gravest problems are in pāda a. The opening *satré ha* is interpr. by Sāy, fld. by Ge., as standing for *sattré* 'at a Sattrā'. The single *-t-* versus double *-tt-* before *-r-* is of course not a problem [Max Müller's ed. in fact prints *sattré*], but it *is* the case that, though the word *sat(t)rá-* and its ritual complex are well attested already in Saṃhitā prose, the word is not found elsewhere in the RV. (However, the ritual almost surely already existed; there seems a clear reference to it in vs. 9 of the Indra hymn III.31, where the Aṅgirasas "sit a sitting" [*sādanam* √ *sad*, though with the words not in the same VP] to open the Vala cave. See comm. ad loc.) However, Gr suggests reading **satréhá* instead, to be analyzed as the adv. *satrā* 'entirely' and *ihá* 'here'; the only change required would be accenting the second word. Old sits on the fence, but seems weakly to favor the Sattrā interpr., as do I, since it at least provides richer semantics and a ritual context for the

actions. Moreover the particle *ha* would exactly match the same particle in the same location in pāda c.

The next problem is *jātaú*. If it is a dual ppl. (rather than a loc. sg. to the putative stem *jāti-*, which, however, is not found in the RV), it can of course modify the dual subjects of the verb *siṣicathuḥ*, and it is also quite possible that that dual subject is Mitra and Varuṇa, as Old and Ge interpr. it. The problem is thus not syntactic but semantic. In what way would M+V be “born” at a Sattrā? Ge elides the problem by (as far as I can see) folding it into an anodyne phrase with *iṣitā*, rendered as “erregt geworden,” where I assume the ‘geworden’ is a bleached, auxiliary-like version of *jātaú*. Sāy glosses it as *dīkṣitau*, and this might nicely reflect the middle Vedic configuration of the *dīkṣā* of a soma sacrificer as tantamount to a second birth. No forms of the (secondary) root $\sqrt{dīkṣ}$ are found in the RV; however, both *dīkṣā-* and *dīkṣitā-* are attested in the AV, with the former fairly common. I therefore am inclined to follow Sāy’s interpr. -- or what I assume Sāy’s interpr. rests on -- that *jātaú* refers to the conceptual rebirth of a consecrated sacrificer. This rebirth would be somewhat comparable to the two births of Vasiṣṭha himself. This interpr. of *jātaú* would be more clearly expressed than in the publ. tr. by rendering it “(re)born [=consecrated] at a (ritual) Session.”

Pāda c appears to describe the creation of Agastya (see comm. above ad vss. 10–13). Māna is the name of Agastya’s father and family or indeed of Agastya himself. See Mayrhofer PN s.v. for reff.

Kü (99, 570) has a very diff. interpr. of the vs. In the first hemistich he takes *kumbhé* as a dual, modified by the dual ppl. in pāda a and subject of the dual verb in b: “Beim Somaopfer geboren, angetrieben durch Verehrungen haben die beiden Krüge den gemeinsamen Samen ergossen” (99). This is grammatically impossible, because *kumbhá-* is masc., as the two occurrences of the acc. pl. *kumbhān* show, and so its dual should be **kumbhā(u)*. In c he takes *mānaḥ* as ‘house’: “Mitten daraus ist ein Haus hervorgegangen” (99=570). He does not comment on the mythological content of the vs., but though *māna-* ‘building, house’ is at least marginally attested in the RV (clearest in VII.88.5), the creation of a house from semen would be such an outlandish feat that the creation of a seer seems positively plausible.

In b the pf. *siṣicatuḥ* has a retroflexed root init., as we would expect. But the other two forms of the pf. in the RV (*sisicuḥ* II.24.4 and *sisice* III.32.15) do not. I have no explanation for the discrepancy.

VII.33.14: As Ge (n. 14) points out, this vs. seems to pick up 10d, describing the second “birth” of Vasiṣṭha, when Agastya presents him to the clan, and it seems to consist of Agastya’s direct speech. As Old points out, the first hemistich seems to identify the three priests of śrauta ritual, though not by title: the Hotar, supporter of the *ukthā-*; the Udgātar, supporter of the *sāman-*; and the Adhvaryu, supporter of the pressing stone, i.e., the one who performs the physical actions. Assuming this is the case makes it reasonably likely that the weaving of “the covering stretched by Yama” (9c, 12c) does indeed refer to the production of the sacrifice. Vasiṣṭha is thus presented as responsible for the whole of the sacrifice, not just a portion of it.

VII.34 All Gods

Re characterizes this hymn as “invitation without praise.”

The first 21 (or actually 20 and a half) vss. of this 25-vs. hymn are in Dvipadā meter. Despite its name, this meter should be considered to consist of *four* pādas of 5 syllables each, since verbs located in the 6th syllable of a putative 10-syl. pāda are generally accented (see 3b, d, 4b, 6b, 20d); however, consider 14d, 17d, where verbs in that position are unaccented. Those two violations fall in the latter part of the Dvipadā portion and may be beginning the transition to Triṣṭubh, which takes over in the 2nd half of vs. 21. On the meter see Old, Prol. 95–98.

VII.34.1: HvN’s resolution of the sandhi and accentuation of Saṃhitā *śukraítu* in pāda a as *śukra étu* is incorrect: the Pp rightly reads *śukrá etu*.

The reference to the departure of our well-crafted *manīṣā* is a fitting beginning to a hymn, as describing the dispatch of the praise hymn to the targeted divinities.

VII.34.2: Ge (n. 2a), flg. Sāy., takes the waters as subj. of *vidúh* and suggests that the point is that the waters are older even than Heaven and Earth: they are the Urelement. They therefore were around for the creation of H+E and know all about it. In the absence of any other obvious subject, this seems reasonable.

In the 2nd hemistich the function and position of *ádha* are somewhat puzzling. Klein (DGRV II.96 n. 23) lists it with passages with the “logical conjunctive value” ‘therefore’. But he does not tr. it or comment on its non-clause-init. position, and I find it difficult to wring a ‘therefore’ sense out of it. In the Prol. (369 n. 1) Old suggests that the PB parallel (I.2.9, VI.6.17) with the reading *adhah* ‘below’ is correct and the RV should be emended, but he essentially drops that idea in the Noten, remarking that RV *ádha* is “tadellos” and that the emendation would also require altering the accent (to *adháh*). Our passage is reminiscent of IV.17.10 *ayám śṛṇve ádha jáyann utá ghnán*, which I tr. “this one is famed for conquering and smiting.” Both passages have a mid-clause *ádha* that introduces a pres. participle or participles and both contain a form of *śru*. See comm. ad IV.17.10. In both cases I think *ádha* opens a mini-clause that modifies or expands on the main verb. In our passage I think the point is that, though rivers are very noisy when they flow (as is often emphasized in Vedic texts), these waters also know how to listen. Note also that in our case *ádha* is pāda-initial, though not clause-initial.

VII.34.3: As noted in the introductory remarks above, both *pínvanta* and *mám̐sante* are accented because they open 5-syl. pādas.

Both Ge and Re take the (soma) sacrifice as the referent of *asmaí*, contra both Sāy. and Old, who supply Indra instead. I definitely side with the latter. Like many All God hymns, the separate vss. can serve as little riddles, each pointing to a different god,, and the mention of *vṛtréṣu* ‘(battles against) obstacles’, even in the plural, seems a tip-off that Indra is lurking.

I’m not quite sure what the subjunctive *mám̐sante* is meant to convey -- perhaps that in times to come poets will talk about them that way in the accounts of the Vṛtra-slaying?

VII.34.4–6: Note the chiasmic verb sequence 4b *dádhāta* [... 5a *sthāta*] ... 5d *tmánā hinota* ... 6ab *tmánā* ... *hinóta* ... 6c *dádhāta*, with one interruption.

VII.34.4: The 2nd pl. subj. of *dád dhāta* is unspecified, but is probably the priests / poets associated with the current sacrifice, who were referred to in the 1st pl. *asmāt* in vs. 1. See vss. 5–6, where this identification is more explicit.

Once again both Ge and Re take *asmai* as referring to the sacrifice. They also take the nominative(s) of the 2nd hemistich as coreferential with the subj. of the impv. *dád dhāta* in a: in other words, “put the horses to the chariot pole, as Indra (does/did).” This seems unnec. Old’s view that the *asmai* refers to Savitar, who is then the subj. of the 2nd hemistich, is far more plausible. Although *hīraṇya-bāhu-* is found only here in the RV, the very similar *hīraṇya-pāṇi-* ‘having gold hands’ is used a number of times of Savitar, and the uncompounded phrase *bāhū ... hīraṇyāyā* is used of Savitar’s arms in nearby VII.45.2 (also VI.71.1, 5), as Old points out. Since Tvaṣṭar fashions the mace for Indra in I.32.2, calling him *vajrín-* here is perfectly sensible.

VII.34.5–6: The 2nd pl. impvs. in these two vss., 5a *abhí prá sthāta*, 5d *hinota*, 6b *hinóta*, 6c *dád dhāta*, all take the sacrifice (*yajñám*, explicitly 5b, 6b) as object and make the identification of the subject as the priests/poets, suggested ad vs. 4, more likely.

VII.34.5: The simile *āheva*, despite Pp *āha iva*, is surely to be analyzed as *āhā iva*, as Old indicates, pointing out that in other places where it occurs (e.g., IV.33.6) the Pp. gives the long vowel form. Both Old and Ge take *āhā* as nom.: “set out on the sacrifice, as the days (do [=follow one after the other]).” Re takes it as acc., supplying “as (the sun) does the days,” which requires that he make the verb *abhí prá sthāta* transitive (“mettez en marche”), which is unlikely. I prefer to take it as acc. extent of time, meaning something like “keep going in the performance of sacrifice, as one keeps going day after day.”

VII.34.7: Like vss. 3 and 4, this contains an unaccented oblique form of *ayām*, in this case *asya*, and as with those vss., I think it likely that *asya* is the sign of a riddling mention of a god -- in this case likely Agni, as Old tentatively suggests. Ge and Re also see a reference to the offering fire.

I do not understand the simile in the 2nd hemistich. If the *bhūma* that the earth bears is its surface, what would an equivalent burden be for the offering fire?

In order to get 2 Dvipadā pādas in the 2nd hemistich, we must read **pr̥thivī* for *pr̥thivī*, as Old points out. Otherwise we have a Triṣṭubh anticipating the switch to Triṣṭubh that happens much later in the hymn.

VII.34.8: Old asserts that *āyātu-* is a determin. compd., not a bahuvrīhi, thus ‘non-sorcerer’ rather than ‘not having sorcery/sorcerer’. The publ. tr. reflects -- and indeed reflects somewhat loosely -- a bahuvrīhi interpr., though I think the difference is minor. Re also takes it as a b.v.: “sans (user de) sorcellerie” (tr. EVP V), “sans user de procédés magiques” (comm., EVP IV); see also Wh n. ad AV tr. VIII.4.16. Nonetheless, a determin. interpr. is a reasonable alternative: “I -- no sorcerer -- invoke the gods.” A 2nd RVic occurrence of this stem, acc. *āyātum* in VII.104.16, with AVŚ+P repetitions, is not registered in Gr., which omission is probably responsible for Re’s erroneously calling our occurrence a hapax in his comm. Unfortunately this other occurrence does not resolve the question of compd type. The compd. is not disc. in AiG.

Presumably the implied opposition in this vs. is between sorcery in the 1st half-vs. and truth (*ṛtā-*) of the 2nd half. So also Re (comm.).

VII.34.9: Once again the unspecified 2nd pl. subj. should be the priests/poets.

Note the extreme alliteration of ... *devīm dhīyaṃ dadhidhvam*.

The morphological identity of this last form, *dadhidhvam*, can be queried. The three occurrences of this form are normally assigned to the perfect rather than the redupl. pres. (see esp. Kü 275), on the grounds that the *-i-*liaison is proper to the perfect. Yet no corresponding med. 2nd pl. impv. is built to the pres. stem; indeed, the posited correspondent (cf. Whitney, Gr. §668), the monstrous **dhaddhvam*, is not attested in Vedic (as imperative, injunctive, or augmented imperfect). It is likely, therefore, that *dadhidhvam* serves as impv. to both pf. and redupl. pres., neutralizing the distinction between those T/A stems. In fact, given that in this passage it is parallel to the present impv. *kṛṇudhvam* in the same vs. and immediately follows on an unambiguous redupl. pres. form to the same root and with the same obj. (8d *dhīyaṃ dadhāmi*, 9b *dhīyaṃ dadhidhvam*), a present-stem interpr. is favored. On ambig. pf. impvs. see my 2018 “The Vedic Perfect Imperative” (Fs. Lubotsky).

VII.34.10–11: After several vss. with a ritual, priestly focus, we return to the semi-riddling listing of gods, with these two vss. devoted to Varuṇa. In 10 the subj. Varuṇa is withheld till the 2nd half, thereby producing a quickly solved riddle. Vs. 11 does not name him at all, but the referent is clear from the phraseology, as well as the previous vs.

VII.34.10: The easiest thing to do with fem. gen. pl. *āsām* is to have it modify fem. gen. pl. *nadīnām*, as Ge and Re do (e.g., “de ces rivières”). But it is unaccented and therefore should be a pronominal demonstrative, rather than an adjectival one. I therefore assume that it picks up the waters (*āpaḥ*) earlier in the hymn (2c, 3a); the connection of Varuṇa with the waters, though not as firm in the RV as it is later, would evoke them. The rivers are then in apposition to these unnamed waters. Re in his comm. notes the “lien” of *āsām* with *āpaḥ* earlier in the hymn but seems to stop short of syntactically separating *āsām* from the rivers in this vs. For further disc. see comm. ad I.68.7.

VII.34.12–13: The 2nd pl. subjects of all the verbs but *vy ètu* in 13a must be the gods in general. The priests/poets who were previously unspecified 2nd pl. subjects do not command the powers to carry out the desires specified.

VII.34.12: The hapax *ādyu-* has been variously analyzed and rendered: e.g., Sāy. *adīpti-* ‘non-shining’, reflected in Gr’s ‘glanzlos’ and probably Re’s ‘sans éclat’; Old ‘excluded from heaven’. But Ge’s (n. 12b) comparison of Old Avestan *aidiiu-* (YH 2x, plus a YA rep.) ‘harmless’ is surely correct and is accepted by EWA, etc. For disc., with earlier lit., see Narten, YH 280–81.

Our half-verse *ādyuṃ kṛṇota śāmsaṃ ninitsóḥ* is nearly identical to VII.25.2c *āré tām śāmsaṃ kṛṇuhi ninitsóḥ*, though in a different meter (our two 5-syl. pādas of Dvipadā versus Triṣṭubh). To accommodate the meter the verb and object had to be flipped and a different predicate supplied. This metrically driven modification procedure is instructive.

VII.34.14: Initial injunc. 3rd sg. -iṣ-aor. *āvīn* (for *āvīt*) matches the init. *āviṣṭa* (+u) of 12a, which I (and the standard tr.) take as a 2nd pl. -iṣ-aor. impv. Re. takes *āvīt* here as hortatory/imperative (“Qu’Agni favorise ...”), but I see no problem in having a preterital (or perhaps general present “Agni aids ...”) injunc. form in this vs. characterizing an individual god. The 2nd pl. is found in the hortatory address to the gods in general, parallel to impv. *kṛṇota* in 12c, whereas *āvīt* is followed by an augmented pass. aor. *adhāyi*, expressing the reciprocal human action in response to the god’s help.

The first half-vs. contains two exx. of -*l d* → -*n* sandhi before nasal: (*āvīt* →) *āvīn no* and (*havyād* →) *havyān nāmobhiḥ*. Re renders the latter as if it were an acc. pl. to *havyā-* (“... favorise nos oblations”), but this must be an example of a hasty Homeric nod, since *havyā-* ‘oblation’ is always neut.

Whose *nāmobhiḥ*? Ge takes them as Agni’s, which he offers to the gods. I think it more likely that it refers to *our* acts of reverence to Agni, to which he reciprocates by aiding us. So also Scar (40: “durch {unsere} Ehrerbietungen”). Re takes *nāmobhiḥ* with the following clause: “Avec hommages a été déposée ... la louange ...”). This avoids the problem and works well semantically, but in this hymn verses regularly fall into two clauses separated by the half-vs. boundary, and there are no examples of a portion of b adjoined to the clause of cd.

VII.34.15: Here the 2nd pl. address appears to be to the priests/poets.

This is the one of the few vss. in which the half-vs. break does not coincide with a major syntactic break, and this is made more noticeable by the fact that there is a clause break between pādas c and d.

VII.34.16: Assuming that it is the serpent that is sitting in the depths, that is, that the referent is Ahi Budhnya, who is found explicitly in vs. 17, I see no alternative to taking the nom. sg. pres. part. *śīdan* as the predicate of a nominal sentence in cd, picking up the acc. obj. *abjām ... āhim* in ab. Sāy. simply indicates that *śīdan* is for acc. *śīdantam*, and Ge and Re tr. cd as if it were a rel. cl. (e.g., “qui siège ...”), a translational choice that blurs the Sanskrit. The alternative, which unifies the syntax at the expense of the sense, is to take *śīdan* as implicitly modifying the 1st sg. subj. of *gṛṇīṣe* ‘I will sing’ in the first hemistich. So Scar (134): “... Den wassergeborenen Drachen preise ich ..., {ihn}, der auf dem Grund der Flüsse weilt, wenn ich im Finstern sitze,” construing c (*budhné naḍṇām*) with the acc. serpent of ab and d (*rājassu śīdan*) with the 1st sg. subj. This interpr. seems highly unlikely: why would the poet “I” be sitting in the darkness? and where does Scar get the “weilt” for the serpent?

I do not understand the reason for the close sandhi of *rājassu śīdan*.

VII.34.17: The first half vs. is also found in V.41.16, and in both places it is metrically anomalous. Here it has the requisite 10 syllables for Dvipadā, but the caesura/pāda break comes after the 4th syllable, so that it does not fall into two 5-syl pādas. In V.41.16 (which, with the following vs. 17, is metrically different from the Triṣṭubhs that make up the bulk of that hymn) it has 10 syllables, rather than the expected 11. It is also somewhat striking that two vss. in our hymn are devoted to the very minor divinity Ahi Budhnya, when far more important gods receive only one, and I wonder if 17 hasn’t been inserted to make the identification of this divinity clearer, since vs. 16 does not give him his full

title. It is worth noting that our 17cd was already flagged above as one of the few places in the hymn in which a verb beginning the d pāda is not accented. This may provide further support for the idea that the vs. is a later insertion.

VII.34.18: The nom. pl. subjects of the two half vss. are different, in my opinion. The loc. ‘men’, recipients of the fame bestowed on them by (presumably) gods in ab, are the ones who go forth for wealth in cd.

The phrase *śārdhanto aryāḥ* has an almost identical correspondent in nearby VII.21.5 *śā śardhad aryó viṣuṇasya jantóḥ*, where the second phrase shows (or at least strongly suggests) that *aryāḥ* is gen. sg. On the phrase see Thieme (Fremdling 54–55).

VII.34.19: My tr. “the worlds” assumes that *bhūmā* is pl., contrary to the standard, who tr. “the earth.” I would be happy with the latter.

I have taken *-senā-* as ‘weapon’ here, but it could as well be ‘army’, with Ge, Re, etc. It does not affect the sense appreciably.

VII.34.20: The pl. “wives” (*pātnīḥ*), as often in the RV, must refer to the Wives of the Gods. As I have argued elsewhere (“‘Sacrificer’s Wife’ in the Rig Veda: Ritual Innovation?” 2018 in Proceedings of the 13th World Skt. Conf., 2006), one of the models for the introduction of the Sacrificer’s Wife (*pātnī*) in Vedic ritual, beginning in the late RV, is the presence of the Wives of the Gods on the ritual ground, as here. Tvaṣṭar is their usual companion and chaperone. He is also associated with the shaping of the embryo in the womb, as in the pregnancy charm X.184.1. The request that he confer heroes on us here must be a prayer for sons (who will become) heroes.

The 3rd pl. verb *gāmanti* is classified by Wh (Roots) as a them. present, to a stem not otherwise found (at least in the RV). Macd’s identification (VGS, verb list) as a root aor. subjunctive is surely correct. Although grammars give the 3rd pl. act. subj. ending only as sec. *-an*, it does not seem to me that the Sprachgefühl for this part of the paradigm is terribly strong, and it is easy to imagine extending the 3rd *singular* choice between sec. *-at* and prim. *-atī* to the 3rd pl. For a similar case see *karanti* in X.48.7, which Wh identifies as a root pres. form.

VII.34.21: As noted above, the first hemistich contains 10 syllables falling into two 5-syllable pādas, but the second half is a straight Triṣṭubh, anticipating the Triṣṭubhs of the rest of the hymn.

The stem *vasūyú-* can modify both masc. and, as here, fem. nouns. This exact phrase, *arāmatir vasūyúḥ* is also found at VII.1.6.

VII.34.23: Both Ge and Re take *rāyaḥ* here as nom. sg., parallel to the other entities like mountains and waters, but I do not see why the construction that ends vs. 22, *ví dadhātu rāyaḥ* “let him apportion wealth,” is not simply continued here. There *rāyaḥ* must be the obj. of the verb, whether acc. pl. or partitive gen. sg.; in either case the preferred accent would be *rāyāḥ*, but there are enough forms with the opposite accent that we need not be too troubled. If we can accept the wrong accent in 22d, I see no reason not to do so in 23a. Re gestures towards my interpr. in his n.

VII.34.24: Note the izafe-like *yé sahāsaḥ* nominal relative clause.

Correctly accented gen. sg. *rāyāḥ* appears here; see comm. on vss. 22–23.

On the infinitive construction here, see Keydana, Infinitive im Ṛgveda, 70, 159.

VII.34.25: I do not understand why Ge and Re render the *juṣanta*, to the common and well-understood medial stem *juṣáte* ‘enjoys’, as ‘grant’ (zibilligen) and ‘agree’ respectively. Although it is true that the final vss. of hymns frequently ask gods for things, it is also true that we commend our praises to them -- and surely that’s what’s going on here: we want the gods to take pleasure in the hymn, or the ritual in general, that we have just offered them.

VII.35 All Gods

As indicated in the publ. intro., this hymn is remarkably monotonous and has no real content -- simply the unbroken repetition of the wish that various gods or natural elements “be luck” (*śám*) for us. It therefore needs and deserves very little comment. Besides the deities mentioned in each vs., what variety there is in the hymn is found in the adjuncts associated with each one, often a characterizing adjective (e.g., 1b) or an oblique case form expressing accompaniment (e.g., 1a) or circumstance (e.g., 1d). The 1st 13 vss. follow a fairly rigid template: # *śám* (*naḥ*) GOD NAME (ADJUNCT) (“BE”) (with the latter expressed by a 3rd ps. impv. of $\sqrt{bhū}$ or \sqrt{as} , or gapped; there seems no functional difference between \sqrt{as} and $\sqrt{bhū}$ in this hymn). The order of adjunct and “be” can be flipped. Sometimes a single god (or god pair) occupies a pāda; sometimes two separate *śám* clauses are found in a pāda. In the former case, the adjuncts fill the extra space, while in the latter case the god/power name is all there is room for. In a few cases, noted below, the pattern is broken by the substitution of a verb other than ‘be’.

VII.35.1: This gods listed in this vs. are dual divinities, each with Indra as the first part of the pair and all expressed in dual dvandvas. All have the expected double accent except *indrāgnī* in pāda a, which always lacks an accent on the first member in its numerous occurrences. Re suggests this is because the putative dual ending on **indrā-* is not perceived because of its coalescence with the initial vowel of *agnī*. This is fairly plausible, though there are a number of instances where the word must be read with four syllables and there the dual ending of the 1st member should have been recoverable. For further on the distracted reading, see comm. ad X.65.2.

VII.35.2: In a and c the provider of luck is *śāmsaḥ* ‘Laud’, a clear play on the ubiquitous *śám*. In c *śāmsaḥ* is the head of a NP with dependent gen.: *satyāsya suyāmasya*.

In d Ge renders *purujātāḥ* as “der viele Nachkommen hat,” but given the form of this cmpd., this can hardly be correct. Cmpds. of the shape *puru*-PAST PPL (+ACCENT), like frequent *puru-ṣutá-*, *puru-hutá-*, mean ‘much Xed’ or ‘Xed by many’, and in cmpds. with *jāta-* as 2nd member, *-jāta-* means ‘born, generated’ not ‘offspring’. Re, who tr. “aux nombreuses naissances,” suggests that Aryaman is so qualified because of his association with marriage.

VII.35.3: Although sg. fem. *urūcī* is not otherwise used of the earth in its 5 other occurrences, the du. modifies *ródasī* in VI.11.4 (and at some distance in IV.56.4), which supports Ge's supplying of Earth here.

The well-attested adj. *suháva-* almost always modifies a god or gods and means 'easy to invoke'. Ge supplies 'names' here, and I follow him: "god X, easy to invoke" and "the name of god X, easy to invoke" are functionally nearly identical. And in X.39.1 *pitúr ná nāma suhávam* "(the chariot), easy to invoke like the name of one's father," we have the posited phrase, though "name" is in a simile. Re rejects this interpr. in favor of a nominalized *suháva-* "les appels propices (faits) aux dieux," with, in my opinion, insufficient reason.

VII.35.4: The relentless pattern "luck be" is briefly broken here in pāda d, with *śám* the object of the verb 'blow' (*śám ... abhí vātu*).

VII.35.5: Ge takes b as another break in the pattern: "Das Luftreich soll uns Glück sehen lassen," with *śám* the object of the inf. *drśáye*. But this seems unlikely: the clause is easy to interpret within the template, and furthermore the periphrastic causative assumed by his tr. would be awkwardly or impossibly expressed (lit. "let the Midspace be for us to see luck"); to express such a meaning we would expect rather a form of $\sqrt{kṛ}$ ("let the Midspace make us to see luck").

VII.35.6: The last pāda here again has a real verb 'let hear' (*śṛṇotu*), not simply 'be', and *śám* is thus displaced from predicated nominative ("X be luck") to adverbial usage ("for luck"), with *naḥ* correspondingly promoted from dative ("for us") to acc. obj. of the verb ("hear us"). Note that this same construction might be found in pāda b and c, which lack verbs, while pāda a must follow the usual pattern because of its *astu*. Thus bc possibly, "let Varuṇa ... (hear us); let Rudra ... (hear) us." However, I think it likely that b+c simply follow a. In any case it's striking (or at least striking in a hymn that otherwise has so little variation) that the verbal construction changes within the vs., while the pattern of personnel is rigidly fixed: each pāda contains a single god as subject with an instr. pl. of his entourage.

VII.35.8: The first pāda again has a verb with content, *úd etu* 'let go up', and as in 6d this slots *śám* into an adverbial role.

VII.35.8: *bhavitra-* is found only here in the RV. My "(the means of) Creation" gives full functional value to the instrument suffix *-tra-*. Gr "die Welt," Ge "Creatur (?)," Re "le séjour-des-existences"; see Re's n. for further, though inconclusive, disc. The immed. preceding hymn contains *janitra-* (VII.34.2), which seems to mean something similar, insofar as it's possible to tell.

VII.35.14–15: These last two vss. stand apart from the 13 monotonous vss. that precede them, though they hardly have more content.

VII.35.14: The first hemistich refers, as often, to the hymn just concluding, with particular insistence on its absolute currency in the present moment, as shown by the

pres. participle and the comparative adj. ‘newer’: *idám bráhma kriyámānaṃ nāvīyaḥ* “this sacred formulation being made anew.”

Who the “cow-born ones” are is debated (see, e.g., Ge, Re, and the long n. by BI [RV Rep. 316–17]), a question I confess to finding not very interesting, perhaps because the longueurs of this hymn have dulled my senses.

The last phrase of 14, the afterthought nominal rel. cl. *utá yé yajñíyāsaḥ*, is probably meant to include all stray divinities and cosmic or natural elements that don’t fall under the first three categories (heavenly, earthly, cow-born) but might deserve worship. It might be better rendered “and those (others) who are worthy of the sacrifice.”

VII.35.15: The just discussed phrase in 14d *yé yajñíyāsaḥ* is picked up by 15a *yé devānāṃ yajñíyā yajñíyānām*. I assume that this phrase doesn’t introduce another group of worthies, but is simply an intensive elaboration of the original phrase. The next pāda qualifies them with another derivative of √*yaj*, the *-tra*-stem *yájatra-*, which I interpr., somewhat capaciously, as meaning that they provide the occasion or reason for Manu’s sacrifice.

VII.36 All Gods

As noted in the publ. intro., this hymn can be read as a progress through a sacrifice. Re (EVP IV.97) follows Hillebrandt in seeing it as a “*récitation du pressurage vespéral*.” Hillebrandt (Myth. II.128 n. 3) in fact considers it as forming, with VII.37.1–7 and VII.38, an old śāstra for the Evening (or Third) Pressing. Although the focus on Indra and the Ṛbhus in VII.37 does identify *that* hymn as associated with the Third Pressing, I do not see that association here. The kindling of the ritual fire that climaxes our vs. 1 (d) suggests rather the Morning Pressing, as does the sun’s sending out the cows in 1b (so also Ge n. 1b). Moreover, most of the gods named in our hymn are not Third Pressing gods; for example, the Maruts, mentioned twice (vss. 7 and 9) are primarily associated with the Midday Pressing, and though the Third Pressing begins with an Āditya cup (which could subsume Mitra and Varuṇa), that pair is prominent in the Morning Pressing and are found here in vs. 2; Sūrya (vs. 1) is certainly not appropriate to the Evening Pressing. As far as I can, VII.36 and VII.37 are ritually independent.

VII.36.1: As Ge (n. 1a) and Re indicate, the opening of this hymn, with *prá bráhmaitu* (that is, *bráhma etu*), is very like the opening of nearby VII.34.1 *prá śukraítu* (= *śukrá etu*) ... *manīṣā*, with both referring to the beginning of the ritual day with the dispatch of the poets’ verbal offering to the gods.

Note the figure *ví ... sasṛje* (b) / *ví ... sasre* (c), both with 3rd sg. mid. perfects built to phonologically similar roots and compounded (in tmesis) with the same preverb.

Narten (1969 “Ai. *sṛ* in synchronischer und diachronischer Sicht” = Kl. Sch. 135–41) recognizes two synchronically distinct roots √*sṛ*, primarily act. ‘loslaufen, eilen’ and primarily med. ‘sich ausstrecken’. The two forms of the med. pf. *ví sasre* (here and X.71.4) belong to the latter root; see also Kü (553). The instr. *sānūnā* I take as idiomatic for “on her back,” rather than expressing something like “along the back (of something else).” The other occurrence of the pf. *ví sasre* in X.71.4 contains an explicitly sexual image *utó tvasmai tanvām vísasre, jāyeva pátye úsatī suvāsāḥ* “And for another she

[=Speech] has stretched out her body, like an eager well-dressed wife to her husband,” and the same picture of feminine yielding is presumably meant here.

Re curiously takes *pr̥thú prátīkam* as a “pre-compound” modifying Agni, but I follow Ge in taking it as an acc. construed with *ádhi*, a reference to the part of the earth on which the ritual fire is kindled.

VII.36.2: My tr. of *bruvānāḥ* “when called upon” follows Thieme’s (Mitra and Aryaman, p. 69), which in turn follows Meillet’s ([1907] “quand il est invoqué”; see Thieme p. 40). Ge and Re both take *bruvānāḥ* as pass./reflex. ‘be called, call oneself’ with *mītrāḥ* as predicate (e.g., “der Mitra (Freund) heisst”). I now think something halfway between is probably correct. When $\sqrt{brū}$ is not cmprded with a preverb, it does not seem to take an acc. of addressee, so my passive version with addressee as subj., “when called upon,” is probably wrong. However, I don’t think it’s a mere naming construction. Rather, Thieme’s 1st tr. (p. 40) “Contract, when named ...” conveys the intent better: that, when the word -- and god -- alliance/Alliance is spoken at the concluding of a pact, the pact acquires its efficacy. JPB’s tr. of the almost identical III.59.1 “Mitra arranges the peoples when (Alliance) is declared” cleverly plays on the ambiguity of the word *mītrā-*, and I would substitute something like that here.

VII.36.3: The general consensus, beginning with Sāy. (see also Ge, Re [by implication], Lüders 395, Oberlies RdRV II.213), is that this vs. describes the rainy season, with Parjanya as the divinity. But in a hymn with such a strong ritual focus, such a detour into meteorology would seem out of place. I think that it instead concerns soma/Soma, but, as so often, with a cosmic nimbus surrounding this ritual substance. It is, of course, a commonplace that Soma in the IXth Maṇḍala is regularly called a bull; cf. one of the many passages, with the same verb of roaring as here: IX.82.1ab ... *sómaḥ* ... *vṛṣā* ... *acikradat*. The association of Soma with heaven in IX is also too ubiquitous to need demonstration, as consultation (passim) of the 2nd vol. of Oberlies’s *Relig. Ṛgveda*, devoted to the Soma hymns (e.g., “Der Himmel als Heimat des Soma” [14–16]), amply demonstrates. For Soma circling “a great heavenly seat” (*máhi sádma daívyam*) see IX.83.5. That Soma as cosmic bull *evokes* the concept of the thunderstorm, as I think this vs. does, is quite different from declaring that the vs. directly depicts the storm.

Under my interpr., the *sūdāḥ* (for further on this word see below) that swell like milk-cows would be the soma stalks after their soaking or even the cows that provide the milk to mix with the just-pressed soma. Pāda a is more difficult to fit into this scenario. The quieting of the wind does not have an unambiguous analogue in the soma sacrifice. It could refer to the common dying of wind at evening, but this would require following Hillebrandt’s view that this is an Evening Pressing hymn, a suggestion rejected above. In IX.22.2 the surging of the soma juices is compared to that of the wind, and so our passage might refer to arresting the flow of the soma when it is mixed with milk. But I do not consider this a strong suggestion and remain uncertain how to fit pāda a into the overall ritual focus.

I assign *rante* (so Pp.) to $\sqrt{rā}$ ‘(come to) rest’ (so also Lub), along with *ranta* in I.61.11 and nearby VII.39.3, contra the various other interpr. to be found in the lit. I see no reason not to read the prim. ending *-ante* indicated by its sandhi situation and restored by the Pp., despite Lub’s entry “*ranta!*,” suggesting a sec. ending and injunctive form. As

far as I can see this isolated stem can be as easily a root present as the root aorist identified by Lub.

The meaning of the word *sūda-* is much disputed. It occurs three times uncompounded in the RV (here and in IX.97.44 and X.61.2), as well as once in a compd. *sūda-dohas-* (VIII.69.3). Gr's 'Süssigkeit, süßer Trank', which I essentially follow, has been rejected by most comm. and tr. since, starting with Pischel, who interprets it as 'Somabeisatz', referring to the extras added to the soma. Another strain of interpr., in part dependent on post-RVic passages, takes it as referring to small bodies of standing water. For disc. and various alternate tr., see, e.g., Old, *Noten* II.263–64; Bloomfield, *RR* 101; KEWA III.493 (with fuller disc. than EWA II.740); Gotō (1st class, 342–43); Re comm. ad loc. The general opinion is that there are at two distinct words *sūda-*. In our passage Ge renders it as 'die Lachen' (pools) and Re as 'les mares' (ponds). While I have not investigated the post-RVic ritual passages, which may belong elsewhere, I see no reason that the RVic occurrences can't be united under one rubric. The passage in IX.97.44 refers to the preparation of soma and in fact seems almost to gloss the phrase *mādhvaḥ sūdām pavasva* "Purify yourself into the sweetness of honey" in its pāda a by *svādasva ... pāvamānaḥ* "sweeten yourself as you purify yourself." X.61.2 is an obscure mythological snippet in a hymn bristling with difficulties; I argue there (comm. ad loc.) that *sūda-* refers to the sweet admixtures to soma, in contrast to the soma itself. The compd *sūda-dohas-* in VIII.69.3 modifies cows in a passage that also treats the preparation of soma and seems to mean something like "milking out the sweetness / giving the sweetening milk"; we can compare the root-noun compd *havya-sūd-* 'sweetening/preparing the oblation' (I.93.12, IV.50.5), also containing a form of *sūd* and also modifying cows, in soma-preparation context. It is esp. telling that in I.93.12 the cows are urged to 'swell' (*ā pyāyantām*), just as the *sūdaḥ* in our passage are compared to cows and they 'swell' (*āpīpayanta*). The only passage in the RV that might favor a 'puddle / pool / pond' interpr. is the one under disc. here, and that is because the vs. has been interpr. (wrongly in my view; see above) as referring to the thunderstorm, whereas I think it is clear that soma preparation is at issue here as well as in the other *sūda-* passages. Though I still believe that the word is related to the 'sweet' root, my interpr. of *sūda-* is otherwise in line with Pischel's -- I think it likely refers to the sweetness(es) / sweet admixtures that are added to the pressed soma -- though I have not arrived at this interpr. by the same route as Pischel. Since *sūda-* is elsewhere a noun, I would slightly alter my tr. here to "the sweetness(es) have swelled like milk-cows," though the barbarity of the plural 'sweetnesses' would preclude allowing it in the publ. tr.

VII.36.4: The construction of this vs. is skewed: the first hemistich contains a typical generalizing rel. cl. referring to proper ritual performance ("who[ever] will yoke ..."). It is couched in the 3rd sg. and contains a pres. subjunctive (*yunājat*). In the 2nd hemistich, pāda c contains another 3rd sg. rel. cl., this time with a pres. indic. (or possibly subj.) (*mināti*), but without a ritual focus, and pāda d contains a 1st sg. optative that does relate to the ritual (*vavṛtyām*). This ill-assorted trio of clauses has been variously treated. Ge thinks that both rel. clauses have gods as subject, though not necessarily the same god (see n. 4), and that at least the rel. cl. of c has *aryamānam* in d as referent of the rel. prn. Re, mostly flg. Sāy., takes a pious human as subject of ab and supplies a main cl. with it. I think rather that d provides the main cl. for ab, with c a distinct rel. cl. dependent on d,

and that there is a switch of reference between the 3rd sg. *yāḥ ... yunājat* of the first hemistich and 1st ps. *vavṛtyām* of d: “I” am the embodiment of the proper ritual actor as defined in ab. The rel. cl. of c is quite distinct and does indeed depend on *aryáman-* in d; the god I wish to bring here to my ritual is the one who can neutralize the battle fury of my (and his) enemy. Switch of reference between 3rd ps. and 2nd ps., even within a single vs., is extremely common when referring to gods, and I see no reason why a similar switch between 3rd and 1st would not be possible when referring to the poet/ritual officiant. For a 1st ps. version of the 1st pāda, cf. I.82.6 *yunājmi te bráhmanā keśínā hárī* (also III.35.4, VII.19.6).

dhāyú- is a hapax. Gr glosses ‘durstig’, connecting it to $\sqrt{dhā}$ ‘suckle’. Old suggests, quite doubtfully, that it belongs rather to $\sqrt{dhāv}$ ‘run’, and this suggestion underlies Ge’s ‘rennlustig’; see also AiG II.2.470, where it is explained as showing an exchange between -v- and -y-. EWA s.v. (rightly) rejects this root affiliation, in favor of one suggested by Gotō (1st Kl. 179 n. 311) to \sqrt{dhan} ‘id.’. Re tr. ‘riches en dons’, but suggests an association with *dhāyas-* ‘nourishment, sustenance’, bringing us back to Gr’s and indeed Whitney’s (Roots) root etym. to $\sqrt{dhā}$ ‘suckle’. My ‘seeking fodder’ reflects the same association.

Note the faint phonological figure of (b) *suráthā sūra dhā(yu) / d su(k)rát(um)*.

I follow JPB (Ādityas, 171–72) in taking *aryáman-* here as a descriptor of Indra. As Brereton points out, it makes no sense for Aryaman to appear when the poet is seeking to attract Indra. Moreover, the action of pāda c, confounding battle fury, is much more appropriate for Indra (cf., e.g., nearby VII.18.16 *índro manyúm manyumyò mimāya*), who is also the most common referent for the adj. *sukrátu-* ‘very resolute’.

VII.36.5: Ge and Re in their different ways attempt to wring a more palatable tr. from *yajante* than the VP should allow. The problem is that the acc. with this verb here is not a god, the usual object, but two desirable qualities of a god, namely fellowship/companionship and vitality/vigor. In Ge’s rendering the reverent ones “request” these qualities (erbitten); in Re’s they “obtain them by sacrifice.” But though Re claims that this is the meaning of medial forms of \sqrt{yaj} , in fact uncompounded middles take the god sacrificed to, just like active forms; cf. nearby VII.42.3 *yájasva ... devān*. It is forms (both act. and mid.) compounded with *ā* that acquire the meaning ‘obtain by sacrifice’. I therefore think the abstract qualities fellowship and vitality must be the objects of our sacrifice/worship, standing in for their divine possessor.

I take *ṛtásya dhāman* “domain of truth” as referring to the ritual ground (as does Sāy.).

Ge’s tr. of *bābadhe* tentatively connects it with \sqrt{bandh} ‘bind’ (flg. Sāy.), not $\sqrt{bādh}$ ‘(op)press’ (see his n. 5c). But \sqrt{bandh} otherwise lacks a pf. in the RV and beginning in the AV its weak forms have a base *bedh-*. The standard weak 3rd sg. pf. to $\sqrt{bādh}$ is *babādhé*; see Kü 330–31. Schaeffer (156) takes *bābadhe* as an intens. pres., parallel to *badbadhé* with both following the standard perfect in function, and Kü (331; cf. also 488) seems to follow, though he takes *badbadhé* as an intensive perfect, distinguished from the present *bābadhe*. Since all these stems have a 3rd sg. ending characteristic of the perfect, I consider at least *bābadhe* to be a straight perfect, with adjustment of the vowel length of redupl. and root syllable to conform better to such distribution elsewhere in the perfect system; cf. esp. *vāvṛdhé* versus *vavārdha*. The intens.

badbadhé then adopted the inflectional patterns of the other two redupl. stems. As for what the verb means here, although *ví√bādh* generally has a negative sense ‘thrust away (undesirable things)’, here I think the same literal sense refers to the god’s pushing out towards us the *pr̥kṣaḥ* ‘fortifying nourishments’ we want in exchange for praise. Re (comm.) suggests a slightly different semantic pathway.

VII.36.6: According to Old and Ge, this vs. consists only of dependent clauses, and this is certainly true descriptively: there are two subordinate clauses marked by the subordinating conj. *yád* ‘when’ (a) and the rel. prn. *yāḥ* (c), one accented verb (*susváyanta*) in the rel. cl. of c, and no main verbs. In the publ. tr. I take d as a covert main clause, signalled only by the preverb *abhí*, with which I supply a verb of motion. However, it is perfectly possible that d is simply a continuation of the rel. cl. of c, though I do not then know what to do with the *abhí* init. in d. Under the interpr. with cd as rel. clause the 2nd hemistich would simply be “who are richly fertile, rich in milk, rich in streams, swelling with their own milk.” In any case, if it lacks a main clause, the vs. cannot be attached either to preceding vs. 5 or following vs. 7; it would have to be an independent if incomplete structure.

The first hemistich lacks a finite verb, and in my view the participle *vāvasānāḥ* (whether pf. or intens.; Kü 488 [and Schaeffer by omission] favor the former) serves as predicate. However, both Ge and Re supply a verb of motion, presumably on the basis of initial *ā*: “her(kommen)” and “ar(rivent).” This is of course possible. Both Ge and Re also take the part. *vāvasānāḥ* as belonging to the pf. of *√vas* ‘desire’, whose participle is homonymous with that of *√vās*: “zusammenverlangend” and “riches en désirs” respectively. Although this cannot be faulted formally, the well-known noise-making quality of rivers (embodied in the very word *nadī-*) provides a more vivid image and, on the other hand, it is not clear what the rivers would be eager for.

On the near-hapax *susváyanta* see my *-áya-Formations* (52–53), where I argue that the other occurrence of the stem, act. part. *susváyantī* (X.110.6=AV V.27.8) is founded upon this passage and that the form here has been generated in the playful and alliterative context of this vs. (see esp. the following *su-* adjectives *sudúghāḥ sudhārāḥ*) loosely to *susū-* ‘well-bearing’, a connection already suggested by Weber (see Old). Such a derivation matches the theme of the rivers’ burgeoning fertility that dominates the vs.

VII.36.7: HvN’s restoration of the pausal form at the end of c as *caránti* is incorrect; it must be *carántī*, as the Pp. has it.

Ge suggests that the ‘imperishable’ (*ākṣarā*), an esoteric designation for ‘cow’, is the Dakṣiṇā, while Sāy. thinks rather of Vāc. In this Marut vs. I wonder if it doesn’t refer to their mother Pr̥śni.

For the phrase *yújyam ... rayím* see VIII.46.19.

The nom. pl. *té* is very oddly positioned, in the middle of both clause and pāda, breaking up the NP *yújyam ... rayím*, and not even adjoining the caesura. I have no explanation.

VII.36.8: The NP *dhiyó avitāram*, characterizing Bhaga, reprises the VP *dhíyam ... avantu* in 7b, where the Maruts were the subject.

The phrase *sātaú vājam* in d is somewhat problematic. Ge takes it, without comment, as equivalent to the common *vājasya sātaú* (e.g., VII.21.7) with a genitive: “bei dem Gewinnen des Preises.” Re follows, commenting “seul exemple de *sāti-* avec régime Acc.” But this is the problem: although the dative inf. *sātāye* regularly takes the acc. (e.g., IX.8.2 *sātāye vāsūni*), the loc. to the same stem never does. And in fact even the dative, when construed with *vāja-*, takes the gen.: *vājasya sātāye* (V.9.7, VI.60.13, IX.7.9, X.93.10). In the one apparent exception, IX.68.7 *vājam ā darṣi sātāye*, the acc. is actually object of the main verb. I therefore think that *vājam* here has to be an obj. of *prá ... kṛṇudhvam*, parallel to the divinities and semi-divinities in the vs.

VII.36.9: On *niṣikta-pā-* see Old and now Scar (306).

I take *prajāyāi* as a quasi-infinitive. See also X.73.5.

VII.37 All Gods

As noted in the publ. intro., this hymn is primarily devoted to the Ṛbhus (vss. 1–2) and Indra (vss. 3–7), which associates the hymn with the Third Pressing.

VII.37.1: The function of *abhí*, initial in c, is unclear; the verb of this hemistich, *prṇadhvam*, final in d, does not appear with *abhí* elsewhere.

On the triple-backed (*tripṛsthā-*) soma, see Ge’s n. 1c, where he suggests among other possibilities that it refers to the three ingredients making up the soma drink (soma juice, water, and milk).

VII.37.1–2: The stationing of the adj. *ámṛkta-* ‘indestructible’ at the end of the b pādas of both vss., in each case some distance from its noun, is clearly deliberate, but I’m not sure what it’s signaling.

VII.37.3: There is some lexical chaining here: in pāda a the standing epithet of Indra, *maghavan*, picks up the pl. *maghāvatsu* in 2a (in the same metrical position), thus implicitly asserting an identification of the human patrons of 2 with Indra. The quasi-inf. *deṣṇām* (trisyllabic, to be read *dayiṣṇām*), also in pāda a, echoes *dayadhvam* at the end of vs. 2. Although *deṣṇā-* is standardly taken as a deriv. of √*dā* ‘give’ (so already Gr., also AiG II.2.927–28, EWA s.v. *DĀ*, II.714), it is at least secondarily associated with √*day* ‘distribute’ here. A more distant, and less telling, lexical echo is *pūrṇā* ‘full’ with 1d *prṇadhvam* ‘fill!’.

Note the abundance of *vāsu-* forms (*vāsunaḥ* b, *vāsunā* c, *vasavyā* d).

For d Ge (n. 3d) appositely cites VIII.32.15 *nákir asya ... niyantā sūñtānām*, which he tr. ad loc. as “Keiner tut ... seinen Gnadegaben Einhalt,” with *sūñtānām* an objective gen. with *niyantā*. I am therefore puzzled as to why he does not take *sūñtā* here as standing for acc. pl. *sūñtāḥ* in sandhi, as the obj. of *ní yamate*, the same lexeme as in VIII.32.15. Instead he follows the Pp. in taking it as nom. sg. *sūñtā*, subj. of the verb: “Deine Grossmut hält die Schätze nicht zurück” (sim. Re). My tr. takes account of VIII.32.15 and goes against the Pp.

VII.37.4: The connection of the first two vss., dedicated to the Ṛbhus, and the subsequent Indra vss. is made clear here: Indra is called *ṛbhukṣán-* (cf. the pl. applied to the Ṛbhus in

1b, 2b) in pāda a and compared with *vāja-* in b. Vāja is of course the name of one of the Ṛbhus, and they are all addressed as *vājāḥ* in 1b. Both Ge and Re take the simile *vājo ná* as containing the PN (e.g., “comme un Vāja”), though Ge allows the common noun sense as an alternate (“wie der gute Vāja [die gute Beute]”), but I think the comparison is stronger if the ‘prize’ sense is more prominent and the relationship to the Ṛbhu name is backgrounded. However, I would now emend the tr. to recognize the PN explicitly: “Like a prize [/like (the Ṛbhu) Vāja] ...”

Pāda b, with its description of Indra going home, is reminiscent of the envoi in the fallow-bay-yoking oblation at the end of the soma sacrifice (cf., e.g., I.82a, III.53.4-6) and is therefore appropriate to the Third Pressing context.

VII.37.5: This vs. presents minor problems of syntax and the uncertain fit of certain lexical items. In the first pāda it is not clear what the *pravātaḥ* are that Indra regularly gains for his devotee. The stem *pravát-* generally refers to a slope or sloping course. Ge takes it as an abstract Vorsprung (lead or advantage), Re as a course, Tichy (Nom.ag. 307) as “die schnellen Wege” (with !). I think the clue is found in nearby VII.32.27 *tvāyā vayām pravātaḥ śásvatīr apò ’ti śúra tarāmasi* “with you let us cross over the (river-)courses one after another, cross over the waters, o champion.” Here as well the reference seems to be to Indra’s aiding us in gaining new lands by crossing river after river.

As for pāda b, all three just-named scholars take *dhībhiḥ* as part of the main clause found in pāda a and embed the first part of b within this frame. Cf., e.g., Ge’s “Du gewinnst selbst ... den Vorsprung ab nach den Absichten, mit denen du (etwas) unternimmst.” But, though convenient, this kind of embedding is foreign to RVic sentence structure. Instead I think we must take the rel. prn. *yābhiḥ* as coreferential with *pravātaḥ* in the main cl. (*pravát-* being, of course, fem.). The instr. of *pravát-* generally expresses extent: ‘along the slope (etc.)’ (e.g., VIII.5.37=13.8=IX.24.2 *āpo ná pravātā yatīḥ* “like waters going along a slope”), and so here I assume that Indra accomplishes his work (*víveśaḥ*), that is, assures victory for us, along the river-courses that are being fought for. The other instr. fem. in this hemistich, *dhībhiḥ*, is then independent of *yābhiḥ* and part of the rel. cl. that *yābhiḥ* introduces, and I take it in the same sense as the instr. *matībhiḥ* in 2d and *dhiyā* in 6c: “in accord with [thought/vision].”

The success of Indra’s activities on our behalf is announced in c and his help duly noted. The number mismatch in the instr. phrase *yújyābhir ūtī* is common in Triṣṭubh cadences containing instr. *ūtī-*, truncated from iambic cadences (dimeter / Jagatī) of the type ... *viśvābhir ūtībhiḥ* (I.23.6 etc., etc.). See further disc. ad VI.10.5.

VII.37.6: The trans./caus. *vāsáyasi* is here used in a curious idiomatic sense. The other two occurrences of this stem, nearby each other in III.1.17, 7.3, are straightforward in function: ‘cause to dwell / settle down’. But here the verb is used in a complaint: ‘cause to wait, cool one’s heels, hang around, bide one’s time’. The idiom is reinforced by the very rare use of the simile particle *iva* with a verb. My “seem to be ...” is meant to capture this *iva*; it could also be rendered ‘as it were’. Ge (n. 6) suggests that this is a hint to the poet’s patron that he (the poet) has been waiting too long for his dakṣiṇā.

The adj. *tātyā-* is a transparent deriv. of the familiar word for father, *tatā-* ‘daddy, papa’. I therefore think the rather formal register of Ge’s *väterlich* and Re’s *paternel* strike the wrong note; surely the idea is that Indra’s *dhī-* is affectionate and indulgent.

VII.37.7: The sense and syntax of this vs. are extremely challenging. My interpr. differs from those of the other standard tr. I will not treat these in detail, but will note two important points of difference. I do not think that Indra is the referent of *yām* in pāda a (as, e.g., Old does), and I do not think that *tribandhū-* in c is a PN, much less a reference to Vasiṣṭha (see, e.g., Ge, Mayr PN s.v.).

My sense of the structure of the vs. is that the two outer pādas (a, d), which match by virtue of being relative clauses introduced by *yām*, go together, with the referent of the *yām* the same in each: a mortal man beset by difficulties. These relative clauses depict the same unfortunate situation, the dissolution and isolation of this man. The two inner pādas (b, c) are the main clause (or a subordinate and a main clause in b and c respectively) and present Indra as the antidote and refuge for the unfortunate mortal. This complicates the clause relations but has the virtue of making sense (some sense, anyway). Many details remain to be discussed, however.

In pāda a the VP (*abhī yām ... īse*) is puzzling: $\sqrt{īś}$ does not otherwise occur with *abhī*, and it is found overwhelmingly with a genitive, not an accusative complement. (For disc. of other possible acc. exx. cited by Gr., see comm. ad VII.32.18. Commenting on this passage, Re suggests that $\sqrt{īś}$ appears with the acc. only when it is a pronoun, but this is not borne out by the distribution; among other things, there are plenty of pronominal genitives with $\sqrt{īś}$.) Here the clue to the usage is provided by a passage in the next hymn (cited by Old), VII.38.4 *abhī yām devy āditīr gṛṇāti*, which has the identical structure, save for a different named goddess (also a *-ti*-abstract) and a different verb, *gṛṇāti* (against our *abhī yām devy nīrtīś cid īse*). The root $\sqrt{gṛ}$ regularly takes both *abhī* and the acc. In VII.38.4 the one referred to by *yām* is benevolently greeted by the benevolent goddess Aditi; our passage seems to have been constructed as a deliberate contrast to this happy scene, with the malevolent goddess Nirṛti extending her sway to an unfortunate mortal. (The passages differ in one notable way, however: in VII.38.4 the referent of *yām* is the god Savitar.) The pairing of the two passages accounts for the unexpected preverb and unexpected accusative with *īse* in our passage.

The middle pādas referring to Indra (in my view) present the god as a sort of venerable figure with whom the beleaguered man of pāda a (and d) can take refuge. Indra’s venerable status results from the years that have accumulated for him, as pāda b indicates, and in c the subject (who, in my opinion, is the mortal man referred to by the rel. pronouns in a and d) approaches Indra because of the god’s attainment of age. That old age is presented as a positive feature of Indra also gives the mortal reassurance that his own aging can likewise be positive.

As already noted, I do not follow the almost universal interpr. of the hapax *tribandhū-* as a PN nor the further identification of that PN with Vasiṣṭha. Instead I take it as the bahuvrīhi it is in full lexical value: ‘having three bonds’, with the bonds referring to kinship as *bāndhu-* does so often. I further think that this is a reference to the three-generations model so prevalent later: a man with both father and son (or perhaps, as later, father, grandfather, and great-grandfather), ensuring the continuity of the male line and, esp. later, the śrāddha offerings to the ancestors. Although this theme is not prominent in

the RV, it can be discerned indirectly in several passages; see X.135 (and my article “The Earliest Evidence for the Inborn Debts of a Brahmin: A New Interpretation of R̥gveda X.135,” *Journal asiatique* 302.2 [2014]: 245–57) and VI.20.11 (also discussed in that article, as well as comm. ad loc.). A man who had achieved the *tribandhú* state would be well along in years, and his approach to a similarly aging Indra would be appropriate. In fact, the depiction of Indra at this stage of life in this vs. contrasts strongly with the usual representation of Indra as young and virile. Note that *tribandhú*- may form a faint ring with *tripṛsthá*- ‘three-backed’ in 1c.

In d we return to the afflictions visited on our unhappy man -- this time by (other) mortals. Thus a and d show him as the target of a divinity (the *devī* Nirṛti, a) and men (*mārtāḥ*, d), with Indra as the literal intercessor. Both Ge and Re tr. the clear subjunctive *kṛṇávanta* in d as a preterite (“beraubt haben,” “ont rendu”), but there is no justification for this and neither provides one. Exactly what the other mortals will or would do isn’t entirely clear to me, and it depends in great part on how we interpret -*veśa*- in the compd *āsvaveśa*-. In V.85.7, containing an array of apparently non-kin relationships, JPB tr. ‘neighbor’; in IV.3.13, again in a set of calibrated relationships, I do so as well, though in X.49.5 the publ. tr. renders it as ‘vassal’ (but see now comm. ad loc.). Here, if I am correct about the sense of *tribandhú*-, -*veśa*- should refer to a relationship outside the close family line. The sense would be: when mortals deprive him of his non-blood (or less closely related) associates (pāda d), he still has his tight paternal lineage (*tribandhú*-pāda c). My ‘clansmen’ could be correct (based on the usual sense of *vís*-), but ‘neighbor’ or even ‘vassal’ (or Re’s ‘clientèle’) could, too. I do not think Ge’s Anhang fits, however. I now wonder, however, if Gr’s “kein eigenes Haus habend, heimatlos” might be correct. In my general disc. of *veśá*- ad X.49.5 (q.v.), I take *veśá*- ‘neighbor’ as backformed to *prátiveśa*- ‘neighbor’, lit. ‘having one’s house facing/opposite’, with an underlying *veśa*- ‘house’ (perhaps accented *véśa*- and the equivalent of Grk. φοῖκος, etc.). Our compd could contain this same ‘house’; the pont then would be that even if mortals deprive him of his dwelling, he will still have his kin. So I offer an alt. tr. here: “... bereft of his own house.”

VII.37.8: The first pāda of this vs., *ā no ... stavádhyai*, is reminiscent of 1a *ā vo ... stavádhyai*, and thus forms a ring, already anticipated by the echo of 1c *tripṛsthāḥ* in 7c *tribandhúḥ*. However, it also makes an appeal to Savitar, who does not figure otherwise in the hymn, and thus seems to anticipate the first two vss. of the next hymn, VII.38, which are dedicated to that god. Indeed the Anukr. identifies that whole hymn as dedicated to Savitar, but see publ. intro. to VII.38 for the view that it really is an All God hymn.

VII.38 Savitar [/All Gods]

On the likelihood that this is actually an All God hymn, despite the Anukr.’s ascription to Savitar and the domination of Savitar in the first vss., see publ. intro.

VII.38.1: On the presential value of the pf. of \sqrt{yam} and of this passage in particular, see Kü 395.

VII.38.3: Ge takes *āpi ... astu* as “...soll Anteil (an Opfer) haben,” but this isn’t necessary in the passage, and I know of no parallels with that sense.

VII.38.4: On the close parallel to our pāda a in the previous hymn, see comm. ad VII.37.7.

The sequence *vāruṇaḥ ... mitrāso aryamā* presents a twist on the usual trio of the principal Ādityas, Varuṇa, Mitra, and Aryaman, since *mitrāsaḥ* is plural and, as Ge suggests (n. 4d), must be a word play, referring to the common noun *mitrá-* ‘ally’. Obviously the god Mitra must also be referenced, with *mitrāsaḥ* found in Mitra’s usual place in the sequence of names.

VII.38.5: On this assortment of minor divinities, see publ. intro. In particular, *ékadhenu-* ‘having one milk-cow’ is a hapax, and who these beings are is otherwise unknown.

The structure of the vs. is quite loose. The initial *abhí* invites us to group the vs. with the preceding one, where *abhí* opens three of the four pādas (a, c, d) as the preverb with two forms of the root $\sqrt{gṛ}$ (*gṛṇāti* a, *gṛṇanti* c). This is indeed how I construe it, with the main cl. represented only by *abhí* and a gapped **gṛṇanti* (hence my “(as do) those”), and the rest of the first hemistich occupied by the rel. cl. introduced by *yé*. In other words, the Gift Escorts, described in the relative clause, also greet Savitar. The root \sqrt{sap} does not otherwise appear with *abhí* (anywhere in Skt. as far as I know; *pace* Gr). Therefore taking the whole of the 1st hemistich, beginning with *abhí*, as a single rel. cl. (as Ge seems to) is not a favored option, esp. since there is no corresponding main clause in the vs.: the 2nd hemistich has a set of new sg. subjects and singular verbs. Ge is forced to take it as a syntactic truncation; see his —. Re gets out of this difficulty by supplying a pl. impv. to $\sqrt{śru}$ for ab “(qu’ils nous écoutent),” parallel to *śṛnotu* in c, but the *abhí* of pāda a seems to me to point to a connection with the previous vs. as just argued.

I do not understand what *mithó vanúsaḥ* is meant to convey -- perhaps that the Gift Escorts avidly compete with each other to provide the best service? IX.97.37 *sápani yám mithunāso níkāmaḥ, adhvaryávaḥ ...* is similar, with both \sqrt{sap} and a form of \sqrt{mith} and with *níkāma-* ‘eager’ semantically matching our *vanús-*; there the sense seems to be that the Adhvaryus of various sacrifices compete with each other to be best at serving Soma (“whom they serve, eager in rivalry -- the Adhvaryus ...”).

The VP *rātím* \sqrt{sap} seems almost to be a gloss of the root-noun compd. *rāti-śāc-* and might help us determine the function of this enigmatic group of divinities or semi-divinities. The use of a transitive VP as apparent gloss makes it unlikely (at least to me) that *-śāc-* has a passive / intransitive sense in the compd (Scar’s ‘von Gaben begleitet’ [593, Ge sim.], Re’s ‘qui ont le don pour attribut’). Gr’s transitive ‘Gabe gewährend, Spende betreibend’ is closer to the mark, though muddling the sense of the root \sqrt{sac} .

The conj. *utá* is oddly positioned in the middle of its pāda, and it is not clear what it’s conjoining. Klein (DGRV I.380) follows Re in positing an ellipsed **śṛmvantu* in the 1st hemistich, with the *utá* conjoining that clause with the *śṛnotu* clause here. But even were we to supply that verb (see above for reasons not to), *utá* would still be out of position: we would expect it pāda-initial. I think that the *utá* is loosely conjoining this clause with what precedes, but that this does not require matching verbs. I further think that it has been postponed in order to allow *áhiḥ* to take initial position, in order to echo the *abhí*’s that open this vs. (5a) and three of the pādas in the preceding vs. (4a, c, d). Notably, two of the twelve pādas containing *áhir budhnyàḥ* elsewhere in the RV are opened by *utá* (I.186.5, VI.50.14), with the latter almost identical to ours except for the

order of *utá* and the divine name: VI.50.14 *utá nó 'hir budhnyàḥ śṛnotu*. This would give support to my view that the ordinary order was disrupted to allow the semi-rhyme of #*abhí*/ #*áhi*(*ḥ*). (Note that when *utá* was moved to mid-pāda, it took the Wackernagel-positioned *naḥ* along with it.)

VII.38.6: The presence of *yāti* ‘begs’ in d solidifies the affiliation to the same root of the mid. part. *iyānāḥ* in b. I follow Re in taking the part. as a passive, though this interpr. is somewhat problematic. The pāda also appears identically in VII.52.3b, where the participle has transitive, though self-beneficial, usage. Ge takes it that way here as well (“darum bittend”), and Bl (RR, ad our passage) claims that there is “no good reason” to take *iyānāḥ* passively here. However, the context favors a passive interpr.: Bhaga gives the treasure away when we (or the powerless one of d) beg for it; I do not think Bhaga is himself begging it from Savitar, as an intermediate step before giving it away himself. Moreover, the same mid. part. is regularly used in the passive; cf., e.g., VII.17.7, 29.1 also in VII. Although I am reluctant to give identical pādas, esp. in the same maṇḍala, different interpretations, in this case the multivalence of the medial voice of this root (finite *īmahe* is regularly transitive, e.g.) allows the same sequence to be used in two different ways.

VII.38.7–8: These last two vss. concern the *vājínāḥ* ‘prize-winners’. As indicated in the publ. intro., although most (in addition to the usual tr., see Oberlies RdV II.240) take these to be horses, as so often, I instead take the referent of *vājín-* to be the Maruts. In an All God hymn the default expectation is that gods are the dedicands. And there are numerous phraseological parallels that support the identification. See esp. nearby VII.36.7, where the Maruts are called *vājínāḥ*, as well as in the immediately preceding hymn, where VII.35.9 *śám no bhavantu marútaḥ svarkāḥ* is almost identical, save for the expressed subj., to our 7ab *śám no bhavantu vājínāḥ ... svarkāḥ*. The stem *svarká-* occurs only 3 times; besides these two occurrences, the third, in I.88.1, refers to the Maruts’ chariots. The voc. phrase *amṛtā ṛtājāḥ* in our 8b is found also, addressed to the Maruts, in V.57.8 *ámṛtā ṛtājāḥ* (accented).

VII.38.7: On *jambháya-* ‘crush’, see comm. ad II.23.9 and my *-áya-*Formations, p. 93.

The cmpd. *sanemí-* lit. means ‘along with its/the felly’ (see, e.g., AiG III.75, EWA s.v. *némi-*), but is a way to express ‘entirely’ (“felly and all”): “with all its gear,” “bag and baggage,” “lock, stock, and barrel” are idiomatic English equivalents.

VII.38.8: It is appropriate that the *vājíns* should be the topic in a clause with the āmṛḍita loc. absol. *vāje-vāje*. The etym. figure would be clearer if the loc. had been tr. “whenever prizes (are at stake)” vel sim.

VII.39 All Gods

VII.39.1: The first pāda somewhat echoes the first hemistich of the preceding hymn (VII.38.1ab), with the final verb *asret* mimicking likewise final *ásísret* in 38.1b and the verb’s object *sumatím* resembling *amatím* in 38.1b and in the same metrical position. This is perhaps an additional reason to consider VII.38 to be fundamentally an All God

hymn properly situated in the All God cycle, rather than an intrusive hymn to Savitar. See disc. in the publ. intro. to VII.38.

I do not know the referent of *vāsavaḥ*. Perhaps, given the connections with VII.38.1, it is Savitar. The same phrase *sumatīm (...) vāsavaḥ* is found in III.4.1 (an Āprī hymn), but the referent is no clearer there. Ge suggests that the referent is Agni himself. This would work in both passages and may be correct; inter alia Agni is frequently the referent of *vāsu-*, but the non-signalling of coreference with the subject still seems a little odd. The pl. *vāsavaḥ* appears in vs. 3 modifying the gods.

On the idiom PATH √ *bhāj* see comm. ad VII.18.16.

The publ. tr. fails to render *naḥ* in d. I would emend to “will offer our true (hymn)” or “will offer for us ...”

Both Ge and Re avoid making *ṛtām* obj. of *yajāti*, both by making it an adverbially used acc. of respect (vel sim.): “... möge er ... das Opfer *richtig* [my italics] vollziehen” and “(selon) l’Ordre.” I follow Lü (436–39, esp. 439) in considering *ṛtām* ‘truth’ here a representation of ‘hymn’: “... möge ... ein Lied darbringen.”

VII.39.2: This vs. presents a number of minor problems. The first is the usage of the verb in pāda a, med. pf. *prā vāvṛje*. Ge and Re interpr. it as passive, e.g. “Das Barhis ist ... gelegt,” as does Kü (461). Since this is the only med. form of the pf., against several act. transitive ones, this is possible, but it should be noted that med. forms of the present are generally transitive. Cf. very similar VII.18.4 *prā vṛñjate ... barhīḥ*, where the 3rd pl. form of the verb precludes a passive reading. Moreover, the passive reading would require the adj. *suprayā(h)* to modify neut. *barhīḥ*; in my opinion (contra Gr and possibly Ge, Re; see also Old’s somewhat cryptic n. to II.3.5), this form belongs to the *s*-stem *suprayās-* and is a nom. sg. masc., but even if this grammatical analysis is incorrect, I do not see any way to get a properly inflected neut. sg. in *-ā(h)* out of any possible stem. The difficulty disappears if we take *vāvṛje* as transitive, supplying Agni from vs. 1 as subject. Undoubted acc. forms of the *s*-stem adj. (*suprayāsam*) modify Agni 3 times out of the 4 clear occurrences of the stem (II.2.1, 4.1, VI.11.4). Although Agni in his physical form as fire is not a likely twister of barhis, of course, he has just been identified as a Hotar in 1d and in his priestly role could perform other priestly actions.

I take *eṣām* as gen. for dat., as often, and referring to the gods (so also Ge, Re).

As noted in the publ. intro., the hapax *bīṛīṭa* (in sandhi; Pp. *bīṛīṭe*) in b is completely opaque. See EWA s.v. The only thing that is clear is that it has aberrant, non-Indo-Aryan phonology, with plain *b* and unmotivated retroflex *ṭ*. It is not even evident what grammatical form it might be: standing next to dual *viśpatī*, it might be expected to be a dual as well. Indeed a pragrahya *bīṛīṭe* would be better metrically, as Old points out. If the sandhi represented in the Saṃhitā text is correct, however, it could be a loc. in *-e*. Both Ge and Re take it as such, following in their tr. Yāska’s gloss *gaṇa-* (see also Kuiper, Aryans 31 and Kü 461), and both construe *viśām* in the next pāda with it (“in der Gefolgschaft ihre Clanleute” and “dans l’arroi des clans” respectively). A hemistich boundary between a locative and its dependent genitive seems highly unlikely to me, esp. when it is not a well-known standard expression. In the publ. tr. I take it as a loc., but decline to translate; I would now be inclined to take it as a nom. dual, but also decline to tr., hence “like two ? clan-lords.” Unlike many problematic hapaxes, this one does not seem to be phonologically generated.

With Ge and Re, I interpr. the verb in b, *ā ... iyāte*, as ‘hasten here’. Lub classifies it with *√yā* ‘beseech, beg’, and the morphology supports him: the form cannot belong with well-attested *īyate* ‘hastens’ both because of its short root syllable and because of its athematic ending, whereas it could easily belong to the medial root pres. of ‘beg’ (cf. part. *iyānā-*). But ‘beg’ does not fit the context, and esp. with Vāyu forming one of the paired subjects and with the time specified as dawn and the occasion the Early Invocation, the common formulaic *vāyav ā yāhi* (I.2.1, etc.) and its variants, calling Vāyu to the first pressing, imposes itself here. I don’t understand the morphology, but a poet who could inflict *bīriṭe* on us is capable of confecting a nonce verb form in the same pāda.

If *viśām* is not dependent on *bīriṭe*, what is it doing? A survey of the occurrences of this gen. pl. reveals that it is often pāda-initial (as here) and dependent on *viśpāti-* (e.g., III.2.10, 13.5, V.4.3), *pāti-* (e.g., I.127.8, VI.15.1), or a similar authority figure. I therefore loosely construe it with *viśpatī* in b, though I resupply that word in c. Alternatively, II.4.1 *viśām agnīm ātithimṣu suprayāsam* ‘Agni, the guest of the clans, who receives very pleasurable offerings’ is suggestive, since it contains a form of *suprayās-* modifying Agni. But ‘guest’ is missing in our passage, and in any case the *suprayās-* form is in a different clause.

As for the *aktór uśasaḥ* phrase, Ge. (n. 2c) has convinced me that it’s an abbreviated version of *uśaso yāman aktóḥ* ‘at the coming of dawn from night’ (III.30.13, VI.38.4). Perhaps the loc. *yāman* was gapped because of the presence of the loc. *pūrvāhūtau*, although the latter is not part of the same phrase.

The epithet *niyútvān-* ‘possessing a team’ is primarily used of Vāyu, and therefore, although Pūṣan intervenes between *vāyúḥ* and *niyútvān*, it must modify Vāyu, with the name and the epithet polarized at the edges of the pāda.

Vāyu and Pūṣan do not generally appear together and do not form a natural pair; I don’t know the reason for their joint appearance here. As far as I know, Pūṣan has no part in the Morning Pressing.

VII.39.3: There is almost universal agreement that *jmayā* represents an adverbial instr. of exactly that shape, despite the hiatus, rather than Pp. *jmayāḥ*. See, e.g., Old, Re, Scar 421, with lit.

With Sāy., cited by Ge, the Maruts must be the referents of *śubhrāḥ* in b: pl. forms of this adj. generally modify the Maruts, and the midspace is especially associated with them.

Note that *marjayanta* must be reflexive, with real medial value, rather than being a straight transitive -*anta* replacement of the type commonly found with -*āya*-formations.

On *urujrayaḥ* see comm. ad V.54.2.

Assuming the Agni is the messenger in d (so, e.g., Ge), this vs. contains both standard models of the sacrifice: “the gods come to the sacrifice” and “the sacrifice goes to the gods.”

VII.39.4: Pāda b contains *viśve ... devāḥ*, though distracted. Since this is the middle vs. of the hymn, this specification of the dedicands of the hymn may constitute a not very noteworthy omphalos. It also introduces a brief flood of named gods (4d, 5).

VII.39.5: In the first hemistich Agni appears to be playing on both sides, as it were: he is commanded (voc. *agne*) to bring (*ā ... vaha*) a series of gods here, including Agni (acc. *agním*) at the end of pāda b. This seems conceptually odd: Agni the god does not need to be brought to the sacrifice -- he's already there -- and it is also hard to see how he would bring himself. Ge's (n. 5b) explanation that including Agni in the list serves for "Vervollständigung der Götterversammlung" seems weak. In that case we might expect Agni to come at the end of the list, and in any case too many gods are missing from the list to consider it a complete collection. It might be possible to consider the Agni to be brought as the celestial Agni, i.e., the sun. But I think it more likely that *agním* is parallel to *gírah* in pāda a, and both are acc. of goal, expressing the ritual elements the gods will encounter at the ritual: hymns and the ritual fire. The standard tr. take *gírah* in this way, and I see no reason why *agním* can't have the same function.

In c *eṣām* is hard to construe. I follow Old in accepting the BR emendation to **eṣām* 'quick'. Old cites the parallel in the very next hymn VII.40.5 *viṣṇor eṣāsya*. As Old points out, the corruption can have arisen on the basis of likewise pāda-final *eṣām* in 2a. There are of course no metrical consequences. The emendation was not explicitly signaled in the publ. tr., which should read "... Viṣṇu, *the quick." Neither Ge nor Re accepts (or even takes note of) this emendation.

VII.39.6: I take *yajñīyānām* as gen. for dat., as in 2a.

In b I assume that Agni obtains from the gods, and then gives to mortals, what the latter wish. Cf. a fuller expression in VI.5.7 *aśyāma tām kāmam agne tāvotī* "May we attain this desire, Agni, through your help." On the basis of that passage, as well as X.96.7 *só asya kāmam ... ānaśe*, both with *kāmam* √(n)as, I also take *nākṣat* as an *s*-aor. subjunctive to √(n)as, rather than as an injunc. to √nakṣ, *pace* Narten (*s*-aor. 160) and Gotō (1st Kl. 192), who assert that no such subj. exists to √(n)as.

In d I take the position of *nú* within the instr. phrase *yújyebhir nú devaīḥ* seriously, indicating that the gods are *now* to be our yokemates, now that we have made successful sacrifice to them.

VII.39.7: A fine meta-summary vs., which is also the final vs. of the next hymn (VII.40.7).

VII.40 All Gods

VII.40.1: The standard interpr. take *vidathyā* as nom. sg. fem. modifying *śruṣṭīḥ* (e.g., Thieme [Unters. 48] "die zur Verteilung führende Erhörung"), and this is certainly the default reading. However, it leaves the *sám* in the VP *sám etu* with little to do, and I wonder if *vidathyā* is not instead an instr. sg. fem., which would justify the lexeme *sám* √i 'come together'. This adj. modifies *vāc*- in I.167.3, and "hearing" and "ceremonial (speech)" would make a nice pair. The speech would also stimulate the praise (*stómam*) we aim at the gods in the next pāda.

In b I take *práti ... dadhīmahi* in its idiomatic sense, 'to fix an arrow (on a bowstring), to aim', though a more generic one (Ge 'anheben', Re 'commencer') is hardly out of the question.

In d *ratnínah* ‘possessing treasure’ is perfectly ambiguous: it can be a gen. sg. and modify *asya* (standing for Bhaga) or a nom. pl. modifying the 1st pl. subj. of *syāma*. In the publ. tr. I take it as the former (as does Thieme loc. cit.), while Ge and Re take it as the latter (though Re recants in his notes, deciding that the gen. sg. is better, on the basis of *ratna-bhāj*- VII.81.4). In fact, I think it’s probably meant to be both, with the nom. pl. a proleptic use, and would now emend the tr. to “may we, possessing [=acquiring] treasure, be at the apportioning of him who possesses treasures.”

Gr (s.v. *ratnín-*), Ge, Re, and Thieme (loc. cit.) all take the referent of *asya* to be Savitar, and the presence of unaccented *asya*, which should refer to someone/-thing already in the discourse, supports this interpr. However, since the next hymn (VII.41) is entirely devoted to Bhaga as distributor of goods and since *vibhāgé* appears to be a pun on his name, I think Bhaga is equally plausible. The lack of accent on *asya* could be accounted for by this pun.

VII.40.2: A series of four singular nouns are the subject of *dadātu*, a singular verb.

The verb *niyuvaíte* is esp. appropriate for Vāyu, who is regularly called *niyútvant-* ‘having a team’. Note the use of this adj. in the immed. preceding hymn, VII.39.2, where it must qualify Vāyu rather than Pūṣan, despite the word order (see comm. ad loc.).

VII.40.3: The pl. verb *junánti* in c has two singular subjects, Agni and Sarasvatī, which should trigger a dual verb, or else a singular one as in 2ab. Since Agni and Sarasvatī do not form a stable set of gods (as, e.g., Varuṇa, Mitra, and Aryaman do), it is not clear what god or gods should be supplied to justify the plural verb. Re adds a parenthetical “(et autres)”; possibly the Maruts addressed in the first hemistich?

With Ge and Re, I take *tāsya* as a dependent genitive limiting *rāyāḥ* and referring to the man whom the Maruts, Agni, and Sarasvatī help -- not as a demonstrative adjective with *rāyāḥ*, which would be grammatically possible.

VII.40.4: Contrary to Ge and Re, I take pādas a-c as a clause subordinate to the main cl. of d.

On *anarvā* as the nom. sg. of a fem. *n*-stem, see JPB (Ādityas 218)

VII.40.5: Flg. Old, I emend *vayā* to ‘*vayā* (= *avayā*)’ ‘propitiation’, which only requires the insertion of an avagraha but no emendation. Ge and Re also accept this suggestion. The word should have been marked with an asterisk in the publ. tr.

VII.41 Bhaga (or All Gods)

Like VII.38, which is essentially an All Gods hymn though ascribed by the Anukramaṇī to Savitar, this hymn is properly located within the All Gods sequence, the last of three 7-verse hymns in Triṣṭubh (save for our vs. 1 in Jagatī), followed by an All Gods hymn of 6 vss. Nonetheless, the Anukramaṇī assigns most of it (vss. 2–6) to Bhaga, with vs. 1 to the Liṅgoktadevatāḥ and vs. 7, an extrahymnic vs. (see publ. intro.) to Uṣas. The 1st vs. calls on a range of gods, including Bhaga (pāda c), in monotonous fashion, before settling down to exclusive focus on Bhaga beginning with vs. 2, and it was surely meant as an All God hymn and positioned in the All God collection for that reason. The hymn is also found in AV (Ś III.16, P IV.31)

VII.41.1: As was just noted, this vs. is in Jagatī in an otherwise Triṣṭubh hymn (and hymn sequence) -- or rather its first three quarters are. The final pāda is in Triṣṭubh and ends with the verb 1st pl. opt. *huvema*, which gives a Triṣṭubh cadence and also ends the first pāda of the next vs. (2a), contrasting with its semantic match 1st pl. pres. indic. *havāmahe* in the first pāda (1a), which provides a Jagatī cadence. The switch in meter at the end of the vs., cleverly accomplished while holding the verb essentially constant, and the variant repetition of the opening of the 2nd hemistich, *prātār bhāgam*, at the opening of vs. 2, *prātar(-jītam) bhāgam*, knit the 1st vss. together despite the metrical difference and the range of gods in vs. 1.

VII.41.2: On the first pāda of this vs. see comm. immediately above.

The referent of the repeated rel. prn. *yā-* (b, c, d) is Bhaga, and we therefore might expect that in the sequence in d *yām bhāgam* the latter word refers to the god (as the same acc. does in pāda a and in 1c). But instead it is almost surely merely a pun on the divine name and its first reading is as the homonymous (and of course etymologically identical) common noun ‘portion’ -- though the more usual word for ‘portion’ is *bhāgā-*. At best it could be read twice, once as the name, once the common noun (“which Bhaga ... portion ...”). If we follow the Pp., *bhāgam* must be part of the quotation ended by *īti*, because the other word in the quotation, *bhakṣi*, is read by the Pp. as unaccented and cannot therefore be initial in the quotation/clause. In principle, however, the sandhi form *bhakṣīti* could contain both an accented particle *īti* and an accented *bhakṣi*, contra the Pp. which could -- and should -- then be the only word in the quotation.

Part -- but only part -- of the solution depends on how we analyze the verb form. Old and Ge inter alia (e.g., Scar 157) take it as a 1st sg. middle, which could therefore be accented, since medial *s*-aor. forms take accent on the ending (cf. *bhakṣīyā*, *bhakṣīmahi*) -- though it need not be. (Indeed no one, as far as I know, rejects the unaccented Pp reading in favor of **bhakṣi*.) I follow the view of Sāy. (also Gr, Wh. [AV tr. III.16.2], Narten [p. 179 n. 512] inter alia [see Old’s reff.]), that it is a 2nd sg. act., that is, a *-si* impv. (ultimately derived from the act. *s*-aor. subjunctive; cf. *bhakṣat*), where we should expect root accent (**bhákṣi*) if the form were to be accented. Because there seems to be universal agreement that *bhakṣi* is unaccented, the divergent interpretations of the morphology do not affect the interpr. of where the quotation begins, but it seems worthwhile to point out the possible interpr. not taken.

One reason I prefer the *-si* impv. interpr. is that the 1st sg. interpr. might impose more modality on an injunctive than we might expect: cf. Ge’s “ich möchte ... teilhaft werden” (though Scar’s “ich bekomme ...” avoids modality). The context favors a request, rather than a statement of accomplishment.

VII.41.3: Although the *prātār* of vs. 1 and 2a has disappeared, this vs. seems to contain a reminiscence of it: 1c *#prātār bhāgam* is echoed by 3a *#bhāga prā(ne)tar* (in opposite order), and pādas c and d then pick up *prā ṇ(etar)* of 3a in *#bhāga prā ṇo* and *#bhāga prā ṇībhiḥ* (latter without retroflexion). This is hardly the most sophisticated effect in Rigvedic poetry, but it is an illustration of the subtle concatenative effects that can provide unity and a throughline in even the most banal (as this hymn mostly is) composition.

VII.41.3–5: The concatenation continues in the next vss. The ending of vs. 3, ... *nṛvántaḥ syāma*, echoes in the following two vss. The 1st pl. opt. *syāma* is repeated at the end of 4a and d and 5b, while the *-vant*-stem adj. shifts from *nṛvántaḥ* (3d) to another punning *bhágavantāḥ* (both ‘possessing a portion’ and ‘accompanied by Bhaga’) in *bhágavantāḥ syāma* (4a, 5b; cf. *bhágavān* 5a). And *bhágavān* in 5a matches *maghavan* in the same metrical position in 4c.

VII.41.4: On the structural relationship of the various *utá*-s here, see Klein DGRV I.355–56.

VI.41.5: The punning continues here with a clever twist: even Bhaga himself should become possessed of a portion (*bhágavant-*) (a); (only) in this way (*téna*) will we become *bhágavant-* (b). In other words, Bhaga needs to get his own portion before he can pass it on to us.

This vs. forms a slight ring with vs. 1: the intensive verb *johavīti* provides one additional stem to the two forms of $\sqrt{hū}$ in vs. 1, *havāmahe* and *huvema*.

VI.41.6: This vs., bringing the Dawns into the picture, forms the transition to the extra-hymnic vs. 7 (see publ. intro.). Note that we have the newer nom. pl. form *uśāsaḥ* in 6, whereas 7, a repeated vs. (=VII.80.3), has the inherited *uśāsaḥ*.

The racehorse Dadhikrā(van) seems intrusive in this vs., but he is the subject of the nearby hymn VII.44. Here as there he is associated with dawn and the Dawns. As suggested in the publ. intro. to that hymn, the association may be with the dakṣiṇā, which is distributed at the morning pressing and which often consists at least partly of horses.

VII.41.7: Though this vs. is also found, better situated, in a Dawn hymn (VII.80.3) and is quite possibly extrahymnic here, the emphasis on the valuable goods, esp. livestock, that the Dawns bring, to distribute as dakṣiṇā, well fits the hope for a good portion that characterizes the rest of the hymn. Note esp. that in 3cd we hope to be propagated with cows and horses (*góbhir áśvaiḥ*) and to become possessed of men (*nṛvántaḥ*), matched here by the entities by which the Dawns are accompanied: *áśvāvatīr gómatīḥ ... vīrávatīḥ*.

VII.42–43: All Gods

These two hymns are in some ways companion pieces, progressing similarly through the ritual and sharing means of expression and images. For details see individual discussions below.

VII.42 All Gods

VII.42.1: The first three pādas of this vs. begin with *prá* ‘forth’ and seem to express the dynamic beginning of the sacrifice. None of the three verbs ($\sqrt{nakṣ}$, $\sqrt{vī}$, $\sqrt{nū}$) is commonly found with *prá*, so the use of the preverb here seems situational -- that is, the three *prá* \sqrt{X} are not standard lexemes; rather, the poet has attached *prá* to all three to emphasize that all parts of the sacrifice are setting out at once.

krandanú- is a hapax, built with the rare suffix *-anú-* (AiG II.2.210). Of the very few other such stems, one -- *nadanú-* ‘roar’ (1x, also *nadanú-mant-* 1x) -- belongs to the same semantic field, and another -- *nabhanú-* ‘spurting’ (1x, also *nabhanũ-* 1x) -- belongs to the same root as the genitive qualifier of our form *nabhanyà-* ‘inclined to / about to burst out’. I think it likely that this roar refers to all the sonic parts of the sacrifice: the just kindled fire (for *agní-* as subject of \sqrt{krand} , cf. e.g., X.45.4), the soma (often the subject of \sqrt{krand} in IX), the hymns (cf. VII.20.9, with *stóma-* as subj.), and most likely also the pressing stones that appear in d.

The cows “swimming in water” in c presumably stand in for the milk to mix with the soma, though the exact ritual reference is unclear. In the soma sacrifice it is the soma that undergoes a water bath (see IX.106.8 where *udaprút-* modifies the soma drops), not the milk.

The verb *yujyātām* in d requires some discussion. On the surface, the form is a 3rd du. act. opt. root aor., and this is how Ge and Re render it and how Gr and Lub classify it. Old, however, points out that the pressing stones are usually yoked (in the passive) rather than yoking something else (in the active). He wishes to take it instead as built to the passive stem *yujyá-*, but the question then is what the form is meant to be. Old himself favors a passive injunctive: though this should have the form **yujyetām*, he suggests that the rarity of such forms might have generated the “wrong” form on the analogy of athematic 3rd du. med. injunctives/imperfects in *-ātām*. He also floats the possibility of a subjunctive, though that should have the primary ending (expect **yujyāte*, I suppose, not at this period the **yujyaite* of the grammars). Although the publ. tr. reflects Old’s view that the context favors a passive, I now believe that the act. opt. analysis of Ge/Re, etc., with *pésah* ‘ornament’, referring to the soma, as object, is correct. The passage, and the verb, would play with the standard passive expression (pressing stones are yoked), but take them as agents of the yoking. I would therefore now emend the tr. to “The two pressing stones should yoke the ornament of the ceremony.”

VII.42.2: The ‘road’ of Agni, *ádhvān-*, in pāda a picks up its etymological relative *adhvarā-* ‘ceremony, lit. ritual cursus’ in 1d, a relationship unfortunately difficult to convey without awkwardness in tr.

Sāy. reads **sú te* for *suté*, and Old favors this reading on the grounds that *suté* is rare in Agni context. But since the last hemistich of the preceding vs. (and possibly pāda b as well) concerns the soma, this does not seem a cogent enough objection to change the text. Sāy. likewise reads **jánimā nīṣattaḥ* rather than *jānimāni sattāḥ*. This would make fine sense -- and *ní√sad* is a very common idiom for Agni’s seating at the ritual when acting as Hotar -- but it again requires emending a text that makes sense on its own.

As indicated in the publ. intro., the varicolored horses in bc are Agni’s flames. The “I” of d is presumably the poet impersonating Agni as Hotar.

VII.42.3: The pl. subj. of *mahayan* in pāda is unclear; the most likely referent would be the priestly colleagues of the 1st ps. sg. poet subj. of *huvé* in 2d; in this spirit Ge supplies “die Sänger,” Re “les chanteurs.” However, Old adduces the almost identical passage VII.61.6 *sám u vāṃ yajñám mahayam námobhiḥ* with 1st sg. *mahayam*. Noting that small differences between otherwise identical passages are common, he does not insist on the 1st sg. interpr. However, given the 1st sg. of 2d, I am now inclined to consider this a

strong possibility, and would emend the translation (or at least provide as an alternative): “I magnify the sacrifice for you all ...” This makes the interpr. of *vaḥ* easier: as is common with such enclitics in ritual context, *vaḥ* should refer to the rest of the officiants, but if they are also the 3rd ps. subjects of *mahayan*, this produces a clash. The emendation of *-n* to *-ṁ* is of course trivial.

The *prá* of vs. 1 returns in d, though in the common idiom *prá √ ric* ‘project, extend beyond, surpass’. The medial pf. of this root, acdg. to Kü (426–27), is always presential and has the stative sense “hervorhinausragen über *Abl.*” The ablative is of course missing here. In our passage I think the sense is primarily physical: the ritual fire is gaining strength and its flames project outward on the ritual ground (“in the nearness” *upāké*), though the fire’s surpassing superiority may also be referenced. The physical image is found, differently expressed, in the companion hymn VII.42 in vs. 2d *ūrdhvā śocīṁṣi ... astuḥ* “The flames have stood up erect.” Given the *prá* here, this *might* be taken as a reference to the movement of the ritual fire to the east, but the fire seems to me to be already established in its location.

Both Ge and Re supply a ‘speech’ element to their interpr. of *mandrá-*, “wohlfredende” and “à la voix-harmonieuse” respectively, but its derivation from *√ ma(n)d* ‘exhilarate/be exhilarated / gladden/be glad’ does not suggest or require such a semantic extension. It is true that the adj. regularly modifies *jihvā-* / *juhū-* ‘tongue’ and is also found in the bahuvrīhi *mandrá-jihva-* ‘having *mandrá* tongue(s)’. But generally when Agni’s tongue is mentioned, it is as the instrument for eating the oblation and conveying it to the gods, not as a speech organ. His tongue is gladdening because it gives the gods pleasing nourishment. Agni himself is very often *mandrá-* as well, as in our passage -- probably for at least two reasons: 1) like his tongue, he is the conveyor of the oblation to the gods, 2) he produces general gladness by his presence and role in the sacrifice. Both factors are probably at issue here: in c he is commanded to sacrifice to the gods (thus conveying the oblation to them); in vs. 4, esp. d, he gives “a desirable reward” to the mortals whose dwelling he is established in.

VII.42.4: For *dāti* see comm. ad IV.8.3.

VII.42.5: The *adhvarám* of pāda a echoes *adhvarasya* in 1d and provides a faint ring, since the last vs. (6) is extra-hymnic.

In the publ. tr. in c the verb *sadatām* is taken as a sg. impv. with Agni as subject. At best, this would be a middle 3rd sg. (though tr. as a 2nd ps.), to a stem, and indeed a root, that is otherwise relentlessly active. This is just an error on my part. The form must be a 3rd du. act. impv., with Night and Dawn (the decoupled dual dvandva *nāktā ... uṣāśā*) as subj. -- as is the standard interpr. (Gr, Ge, Re). The tr. should be emended to “Let Night and Dawn sit here on the ritual grass.” Although this may be conceptually difficult to interpret -- times of day do not usually have a physical presence at the ritual and it is hard to conceive Night and Dawn sitting on the barhis – it is in fact a standard trope in the Āprī hymns; see, e.g., I.142.7, 188.6; VII.2.6; X.70.6, 110.6). For the “repair” of this image in the next hymn, see comm. ad VII.43.3. The ultimate reference is probably to the daily offering to Agni at the two twilights (later called the Agnihotra), though the immediate source must be the Āprī litanies.

VII.42.6: As just indicated, this vs. belongs to the class of “meta” final vss., commenting on the hymn just completed. I would now be inclined to tr. the root pres. injunc. *staut* as “has just praised.”

The second pāda is interesting for the interaction between analytic phrases and compounds. That is, the first member of the bahuvrīhi *rāyās-kāma*- ‘having desire for wealth’, *rāyāḥ*, itself a gen. case form rather than stem form in composition, is modified by / compared to an independent gen. *viśvápsnyasya*, as already disc. by Wack, AiG II.1.33. The connection of this adj. with ‘wealth’ is clear from VIII.97.15, where the independent gen. *rāyāḥ* is modified by *viśvápsnyasya*: *kadā ... rāyā ā daśasyer, viśvápsnyasya ...* On the sense of the adj., see comm. ad VIII.97.15.

VII.43 All Gods

VII.43.1–2: The 1st two vss. of this hymn begin with *prā*, recalling the insistent *prā* in the 1st vs. of the preceding hymn (VII.42.1) and presumably fulfilling the same function: to express the energetic initiation of the ritual. However, both *prā* √*rc* (1a) and *prā* √*i* (2a) are standard lexemes, unlike those in 42.1.

VII.43.1: The inf. *iṣádhyai* is a hapax and variously interpr.: e.g., Ge “dass sie gern kommen,” Re “en sorte que (nous) en tirions profit.” The root affiliation is also not entirely clear; e.g., Lub classifies it with √*iṣ* ‘send’, though we do not of course know how he would tr. it. Both Re’s disc. and his tr. seem to me plausible: he takes it as “un doublet isolé d’*iṣayádhyai*” and cites Burrow’s (1955) interpr. “pour que nous soyons prospères.” It is worth noting that the few instances of *iṣayádhyai* (I.183.3=VI.49.5, VI.64.4) also occur in a Triṣṭubh cadence *and* that that form in isolation is ill-formed for such a cadence, since the root syllable should be heavy in such a cadence. In I.183.3=VI.49.5 this problem is avoided because the root syllable amalgamates with a preceding final vowel: *yéna narā nāsaťyeṣayádhyai*. But in VI.64.4 *rayīm divo duhitar iṣayádhyai* the cadence is simply bad (and in fact produces an uninterrupted run of 5 light syllables). Haplology of the suffix *-ayá-* to our form *iṣádhyai* here fixes this metrical problem.

vīprā in c, modifying *brāhmāṇi*, is the only neut. N/A form of this stem, but the stem does modify a different word for thought/poetic formulation, *matí-*, as fem. *vīprā* (VII.66.8, VIII.25.24). The Pp. analyzes it instead as nom. pl. m. *vīprāḥ*, which is of course a possible form underlying the sandhi, but which cannot be easily fitted into the sentence. Sāy. does it by sleight of hand: he glosses the first part of pāda c as *yeṣāṃ vīprāṇāṃ medhāvināṃ brahmāṇi*, converting the supposed nom. pl. *vīprāḥ* into a gen. pl., and then supplies *vīprāḥ* as subj. of *pra ... arcan* in the main clause in a: *te vīprāḥ prārcann pūrveṇa sambandhaḥ*, an attempt to justify the nom. in the rel. cl. Needless to say, this doesn’t work.

The verb *viyānti* in d is ambiguous. With the Pp., Gr., etc., it may be taken as belonging to *vi* √*i* ‘go apart, spread out’, but it could also belong to the root pres. of √*vī* ‘pursue, go in quest’. In a rel. cl. the accent would be the same for either analysis. Because of the connections between the preceding hymn VII.42 and this one, I favor the latter affiliation on the basis of (*prā*) *vetu* in VII.42.1b, but *vi* √*i* is certainly not excluded -- and might make slightly better sense with the simile. The tr. might then alternatively

read “go apart” for “go questing.” On the other hand, I like the idea of formulations going in quest of divine response and rewards, an interpr. encouraged by the *prá* lexemes (like *prá ... etu* in the next pāda, 2a).

VII.43.2: In c I construe dat. *adhvarāya* with *sādhú*, giving the latter richer semantics than the mere adverbial “richtig” of Ge or even Re’s “correctement.” Found twice in 42 (1d, 5a), *adhvará*-reappears here, though the word is too common to make much of this.

As noted above ad 42.3, our pāda d seems to be a clearer expression of the image of the increasing flames of the ritual fire found also in 42.3b.

VII.43.3: In two of its four occurrences *vībhṛtra*- means something like ‘dispersed’, but that makes no sense here. The third occurrence is similar to ours, however: I.95.2 ... *janayanta gárbbham ... vībhṛtram*. In both these instances it seems to be an idiomatic expression for children of an age to be carried around, in I.95.2 of the new-born fire. In our passage both Ge’s “die Tragekinder” and Re’s “des fils (en âge) d’être portés” seem on the money. Since Eng. lacks a useful expression (or means to make one) like Tragekind, my tr. is an attempt to convey the sense in brief and also to capture the implied locus of the children in our passage. In the simile they are said to be sitting on their mother (acc. *mātáram*), but in the frame the corresponding term is loc. *sānu* ‘on the back’, and I suggest that the mother’s back is implied in the simile as well. The difference between acc. *mātáram* and loc. *sānu* is a fairly trivial example of the “case disharmony in similes” discussed in detail in my 1982 IJ article of the same name.

In b the gods are urged to take their seats (*devāsah ... sadantu*) on the barhis. The action ordered is of course unremarkable and repeated numerous times in the RV, but in the context of this sequence of hymns it can be considered a “repair.” In the preceding hymn, in VII.42.5, Night and Dawn are given the same command, also in the 3rd ps., also in the thematic aor. (*náktā ... sadatām uṣāśā*). As was noted there, this produces an unusual image, though interpretable in an Āprī context; 43.3 replaces and thus repairs it with the familiar one.

In c the problem is that neither of the fem. adjectives -- nom. *viśvācī* or acc. *vidathyā* -- modifies an expressed noun, and the referential possibilities are wide open. Ge follows Sāy. by taking the nom. as the sacrificial ladle and the acc. as the flame, though in his n. (3c) he suggests that ‘speech’ would be possible for both. Re follows Th. (Unters. 49) in taking over *devātāt*- from d as the acc., tr. “(la troupe des dieux) arrivant au sacrifice,” while maintaining the ladle as the nom. (One might think that the gods might find this an odd and messy welcome!) Old thinks the nom. is definitely the ladle, but suggests various possibilities for the acc. On the basis of I.167.3 *vidathyā ... vāk*, I take the acc. as speech, with the anointing metaphorical: the ladle pours the butter offering into the ritual fire as ritual speech is recited. There is precedent for this metaphor: cf. I.61.5 *arkām ... sám añje* and I.64.1 *gírah sám añje* with ‘chant’ and ‘hymns’, respectively, as object of ‘anoint’.

VII.43.4: The isolated form *sīṣapanta* is hard to assess. By form it appears to belong to a redupl. aor., but no other forms to such a stem are attested and, more to the point, there is no securely attested -āya-transitive. I cannot evaluate *sāpáyant*- in TB II.4.6.5, which is evidently the Brāhmaṇa form Whitney lists, with ?, in Roots s.v. $\sqrt{\text{sap}}$, but even if it

belongs to the same root, it is attested too late to provide a basis on which to generate an associated redupl. aor. in the RV. Nonetheless, I see no choice but to take *sīṣapanta* as a redupl. aor. and to assume an unattested **sāpáyati* for early Vedic. What then does *sīṣapanta* mean? In my 1983 -*āya*- monograph (p. 219) I assert that it has intrans./reflex. sense, is not connected with a causative, and that it is based on nearby *sāpante* (VII.38.5) (without specifying how), but I no longer believe that. Nor, despite the temptation of the -*anta* ending, do I believe it's an -*anta* replacement. Rather I would now take it as a reflexive transitive 'serve themselves' (or, since that English idiom is too colloquial, 'do service to themselves'). The basis for this is expressed in the next pāda: the gods do their own milking (*dúhānāḥ*), producing the "streams of truth," presumably the praise hymns, by their own actions -- thus serving themselves. See Lüders (473, 475), who argues for "stream of truth" as Kultlied and (475) interprets this hemistich essentially as I do. This may be a variant on the notion that the gods are the ultimate source of the hymns that praise them because they provide the inspired thoughts to the poets, or it may be that the sheer arrival of the gods at the ritual ground provides the impetus for the "milking" of the hymns.

On the phrase *ṛtasya ... sudúghā(h)* see comm. ad X.43.9.

Both Ge and Re take the 2nd hemistich as a single cl., with *māhaḥ* as goal of *āgantana*. Ge further takes *māhas-* as "Feier" (celebration), while Re's "manifestation-de-grandeur" is closer to the root sense of the word. But I see no reason not to take this neut. *s*-stem in the standard sense 'greatness' and construe pāda c as an independent nominal cl., as in the publ. tr.

In d *sámanasaḥ* 'of the same mind' replicates the same word in 2b and provides a bit of a ring. Note that in 2 the referents are the human officiants, whereas here it is the gods, with the two groups thus implicitly equated -- an equation facilitated by the similar structures: the two words are in identical metrical positions and both follow a 2nd pl. impv., with *sámanasaḥ* modifying the 2nd ps. subj. Although 'of the same mind' in the first instance means that all members of each group have the same mind, the repetition may imply that the human officiants of vs. 2 and the attending gods of vs. 4 also share the same thoughts.

VII.44 Dadhikrā

Both by number of vss. and by its listing style, this hymn fits the sequence of All Gods hymns in which it is found, though the presence of Dadhikrā among these deities is somewhat puzzling. As noted in the publ. intro., most of the divinities named have associations with the Dawn ritual.

VII.44.3: As discussed in the publ. intro., in the middle of a hymn of utmost simplicity and banality, this vs. -- or a single pāda, c -- is utterly baffling and has given rise to competing interpr. This pāda contains two color terms, *bradhná-* 'coppery' and *babhrú-* 'brown', and a hapax *māmścatóḥ* (or better *maṁścatóḥ*; see Old): *bradhnám māmścatóḥ várūṇasya babhrúm*. Most comm. assume that the two color terms refer to horses (see, e.g., Ge n. 3c, also Old), because of the presence of Dadhikrā and because color terms often designate horses. (Cf., e.g., Re "au (coursier) couleur-fauve de Mitra, au (coursier) brun de Varuṇa.") But the introduction of two extraneous horses seems unlikely to me, in a hymn that barely strays from the dawn ritual context.

The old and once widespread interpr. of *māṁścatú-/ māṁścatóḥ* is as a cmpd. ‘chasing/hiding the moon’, with a form of ‘moon’ still containing an internal nasal and the 2nd member built to \sqrt{cat} ‘hide’ (for lit. see, e.g., AiG III.250, EWA s.v. *māṁścatú-*) - though this interpr. has generally been replaced by agnosticism about both meaning and deriv. because of the problematic details of the derivation and the uncertainty of the passages containing this form and the related ones (see below). The form in our passage is generally assumed to be a gen. sg. to a *-u*-stem. The identification of the supposed referent given in Re’s tr., “Mitra,” also has a long history (see, e.g., Old, Ge’s n. 3c with lit.) and is due in part to the presence of apparently parallel gen. *váruṇasya* and in part to a chain of semantic assumptions: if *māṁścatú-* means ‘chasing the moon’, then it can refer to the sun, and the sun in turn can stand for Mitra (see EWA s.v.). But this chain, esp. the last link, is not strong, though the apparent parallelism with *váruṇasya* is admittedly stronger.

Assessing the cmpd is somewhat aided (but not all that much) by the existence of two related words *māṁścatvá-* and *māṁścatva-*, in two nearby vss. in the Soma Maṇḍala, IX.97.52, 54 in the same *ṛca*. Vs. 52 also contains *bradhná-*. Though the exact sense of the two vss. is obscure, the context is the usual self-purification of soma, with the soma drop in 52 addressed directly and the *bradhná-* “also there, sped like the wind” (*bradhnás cid átra vāto ná jūtáh*). I tentatively identify *bradhnáh* there as the sun or the ritual fire at the dawn sacrifice, and take *māṁścatvé* in the same vs. as a temporal loc. If *bradhná-* is the sun, that body is copper-colored only at dawn and at sunset; a temporal loc. of *māṁścatvá-*, if it means ‘hiding/chasing the moon’, would mean ‘at the time of the hiding of the moon, viz. dawn’, a time appropriate to the ritual content of the vs. Returning to VII.44.3 with this ritual context in mind, I suggest that the same elements of the ritual are represented here: the coppery *bradhná-* is the sun, or perhaps the fire (I favor the sun, because the sun is well known as Varuṇa’s spy); the brown *babhrú-* is the soma, as often (IX.11.4, 31.5, etc.). And in my analysis *māṁścatóḥ* is not a gen. to a *-u*-stem, but rather a loc. du. to a root noun **māṁś-cát-* and, as in my interpr. of IX.97.52, is a temporal loc. “at the two twilights.” Of course, we should expect this loc. du. to be accented **māṁś-cátóḥ*, but the non-transparency of the stem could have led it to be reanalysed as a *-u*-stem gen. parallel to *váruṇasya*. Although the cmpd in its literal meaning would only be appropriate to morning twilight, it came to be applied to both. As for *māṁścatvá-/ māṁścatva-*, I suggest that they are *-tva*-stem derivatives of this root noun, with simplification of the geminate **māṁścat-tva-*.

Riccardo Ginevra has recently called my belated attention to Pinault’s 2008 treatment of this same word (“About the Slaying of Soma: Uncovering the Rigvedic Witness,” *Ged. Elizarenkova*, 353–88). In this extensive and exceedingly careful treatment with comprehensive treatment of the earlier lit., Pinault seriously disputes all previous analyses of the cmpd (esp. 360–64), including the one I maintain above. His most telling objection to that analysis is that the Indo-Iranian paradigm of the ‘moon’ word has no trace of the nasal found in other IE languages, since it has been vocalized in the weak forms of the paradigm and generalized from there (362–63). In order to connect *māṁś-* with the ‘moon’ word, we must assume that the nasal was preserved in just this form under exceptional phonological circumstances because of the obscurity of the formation. Although I recognize the hazards in this assumption, I am still willing to take the risk. I cannot endorse Pinault’s own suggestion, that the first member is the ‘flesh’

word, the second member was borrowed from a non-Indo-Aryan language “of the Nūristāni type” (383), and the cmpd means ‘flesh-cutting’ and refers to a disguised myth of the killing of soma. The first hypothesis (‘flesh’) is certainly possible, but the other two, esp. the second (inter alia, he gives no etymon or even source language for this borrowing), seem significantly less plausible than the isolated preservation of the nasal in ‘moon’.

Although I would hardly claim that my analysis of the cmpd or of the passage in general is airtight, it does provide an interpr. of the pāda that better fits the hymn: two more divinities (Sūrya and Soma) that the poet is calling upon (*úpa bruve* pāda b), rather than a couple of irrelevant race horses.

VII.45 Savitar

VII.45.1–2: Although Savitar’s role as god of evening, causing the world and its activities to settle down, is alluded to in 1d, his role as rouser of the world at dawn is given equal billing in that pāda (... *ca* ... *ca*). The more oblique expression in 2d must also refer to this latter role. The sun “cedes his task” of waking and rousing the world to Savitar.

VII.45.2: Both Ge and Re take the aor. injunc. *paniṣta* in c as modal, but the aor. injunc. *ānu dāt* in d as general pres. (e.g., “Jetzt sei ... gepriesen; ... ordnet ...”). But there is no reason that the first needs to be assigned modal value: the temporal adv. *nūnām* can instead draw attention to an immediate past action (“has [just] been wondered at”). And it seems preferable, if contextually possible, to take the two adjacent aor. injunctives in the same value.

VII.45.3: Klein (DGRV II.102) asserts that *ádha* in d “conjoins the second distich with the first, following an intervening participial phrase” (that is, conjoins ab with cd, the participial phrase occupying c); Klein tr. “And propping apart his broadly encompassing sunbeam he shall give mortal’s nourishment to us.” Although this seems roughly correct, the dislocated position of *ádha*, not only after the participial phrase of c but after the first, heavy word of d, *martabhójanam*, might have called for more comment. It would be possible to take c with ab -- there are no syntactic obstacles to this: the participial phrase can attach to the nom. subject of ab -- which would situation *ádha* closer to the beginning of the clause it’s conjoining (after only one word). But I favor a slightly richer semantics for *ádha* than Klein does: often ‘then’ rather than just ‘and’. And I think it likely here that positioning *ádha* in the last clause of the vs. and in fact in the last clause of the hymn proper) since vs. 4 is a meta-verse), is meant to emphasize Savitar’s last and most significant action, the actual delivery of his bounty to us mortals. The particle is found directly before the verb to stress the *action* of granting. With this analysis there is no need to attach c to ab.

VII.45.4: As just noted, this is a meta-summary final vs., referring to the very hymns (*imā gírah*) invoking Savitar at the present moment. The 2nd pāda focuses on his hands: *pūrṇágabhastim ... supānīm* “having full fists [that is, fists full of goods] and good palms.” This provides a semantic, but not lexical ring with the beginning of the hymn, where many good things are in Savitar’s hand (*háste* 1c). (I would in fact have tr. 4b -

pāñi- as ‘hand’ but used ‘palm’ instead to make the lexical difference clear in English.) The ‘hand’ focus is also continued in the two arms (*bāhū*) in 2ab, though that is so standard an image of Savitar that it may be independent here.

VII.46 Rudra

VII.46.1: This hymn begins with the NP *imā(h) ... gīrah* “these hymns,” the same phrase that opened the last vs. of the preceding hymn (VII.45.4). In that hymn it was a nom. pl.; here it is an acc. pl., but its grammatical identity does not become clear until almost the end of the vs., when the transitive verb *bharatā* ‘bring’ is found in the middle of d, right before the final brief cl. *śṛṇotu naḥ*. The ambiguity of case between the identical phrases in 45.4a and our 1a makes the connection seem closer.

VII.46.2–3: The final pādas of both vss. are semantic variants of each other: “don’t hurt our children.” In 2d the negative is expressed by the privative on the adj. *anamīvāḥ* (... *bhava*) “be without affliction,” while 3d contains the stronger and more conventional prohibitive *mā ... rīṣaḥ* “do not harm.” The word for ‘children’ is the fairly rare uncompounded root noun *jā-* in 2d, replaced by the fuller and more familiar bipartite phrase *tokā- tātaya-* “offspring (and) descendents.”

VII.46.2: The complementary etymological and morphological figure *āvann āvantīḥ* is noteworthy, but I have no idea what “helping/helpful doors” (*āvantīr dūrah*) are or do. Perhaps it is an indirect way to refer to the sacrificial offerings humans make to help the gods, in return for the help (etc.) they receive from the gods, in this case Rudra. As Re suggests ad loc. (EVP XV.161), “*dūrah* ... s’oriente vers «maison»” and the emphasis in this vs. and the next on the protection of our children and offspring may have invited this allusion to the house.

VII.46.3: The first hemistich contains two occurrences of *pāri*, but in fact it should technically have three: the first *pāri* at the end of pāda a governs the preceding abl. *divās* in the sense of ‘from’ (note the close sandhi *divās pāri*); the second, in the middle of b, should be construed with both preceding *cāraṭi* and following *vṛṇaktu* and is positioned exactly between the two clauses that contain those two verbs.

I take the hapax voc. *svapivāta* to the lexeme *āpi √ vat*, which I interpr. after the manner of Tichy. See comm. ad I.128.2. The intimacy implied by this lexeme (‘be/make familiar/intimate’) is appropriate to the focus on the household disc. above. My tr. “o you who are our familiar” does not represent the *su-*, but it is difficult to incorporate it without making an already heavy tr. even more so.

VII.46.4: The prohibitive *mā*, introduced in 3d as a variant of 2d, dominates the first hemistich of this final vs.

VII.47 Waters

VII.47.1: I have deliberately omitted to tr. the 2nd enclitic *vah*, found in c.

VII.47.1–2: *devayántaḥ* in 1ab with 3rd ps. referent (see the 3rd pl. verb *ákr̥nvata*) modulates to 1st ps. reference in 2b, also signalled by the verb (*aśyāma*).

VII.47.3: On *svadháyā mādantīḥ* see also I.124.8.

[VII.48 JPB]

VII.49 Waters

VII.49.2–3: Pādas 2c and 3c contain the same three words after the caesura, but with the first two flipped: 2c *yāḥ śúcayaḥ pāvakāḥ* and 3c *śúcayo yāḥ pāvakāḥ* (with the last word to be read **pavākāḥ* in both instances, of course). I do not understand the motivation for the permutation, although each order has a positive and negative feature: 2c puts the rel. prn. in the more usual 2nd position in the pāda, as opposed to 3c, where it is 3rd (though both positions are syntactically acceptable), but the break in 2c (–~) is decidedly less common than the one in 3c (~–)(see Arnold, *Vedic Metre*, 188).

[VII.50–52 JPB]

VII.53 Heaven and Earth

VII.53.1: The *té* that opens the 2nd hemistich is ambiguous: it can be nom. pl. m., modifying *kaváyaḥ*, or acc. du. f., providing the object of *puráḥ ... dadhiré*.

VII.53.2: Unusually, this vs. requests and depicts physical movement of Heaven and Earth, which is conceptually awkward, given that Heaven at least has a fixed position at a great distance from our ritual ground. I have argued elsewhere (“The Divine Revolution of Ṛgveda X.124: A New Interpretation. Beyond Asuras and Devas,” Staal Ged., 2016) that one of the likely reasons for the eclipse of the inherited divinity and original head of the pantheon Dyaus Pitar “Father Heaven” is his inability to move about the cosmos and esp., in conformity with the newer ritual model, to come *to* our sacrifice rather than having the oblations of that sacrifice filter up to heaven. This is one of the few passages in the RV where his presence at the sacrifice is urged, and only a little thought is required to reveal it as odd.

Ge takes *sádane* as du (“den beiden Sitzen der Wahrheit”), and in favor of this interpr. is the fact that its final vowel is pragrhya in the Saṃhitā text (*sádane ṛtásya*, not **sádana ṛtásya*, as in IV.42.4), as Old points out. However, I take it, with Re and Lü (607–8)(and Gr implicitly) as a loc. sg. in the usual phrase. As Lü points out (608), gods are never themselves “seats of truth” but are located in such seats.

VII.54 Lord of the Dwelling Place

VII.54.1: On *práti √jñā* see comm. ad III.45.4.

VII.54.1–2: On *práti √juṣ* see comm. ad IX.92.1.

VII.54.2: The voc. *indo* ‘o drop’ in b is incongruous in this context, and as Ge points out, the 1st hemistich seems to have been adapted from a Soma hymn, where ‘drop’ would be appropriate. He adduces I.91.19 (c: *gayasphāṇaḥ pratāraṇaḥ* ...) and 12, whose 1st pāda also contains *gayasphāṇaḥ*, though the matches are not exact and neither of the cited pādas contains *indo*. However, *gayasphāṇa-* is found only in those two passages and in our vs.

VII.55 Sleep

As noted in the publ. intro., the first vs. does not belong with the rest of the hymn but rather with the preceding one, VII.54, to Vāstoṣpati, the Lord of the Dwelling Place. However, as also noted there, this is not just a product of wrong division of hymns: VII.55.1 is in a different meter from VII.54, and VII.54 ends with the Vasiṣṭha clan refrain, which is always the final pāda of a hymn. Moreover, as Old points out, VII.54 has three vss. and follows correctly on the three-vs. hymns VII.51–53, while an additional vs. would break that sequence. Old suggests that the single vs. VII.55.1 originally formed its own hymn and that the rest of VII.55, with 7 vss., is an addition to the original collection (Anhangslied).

VII.55.1: In addition to the voc. *vāstoṣ pate* that repeats the three vs.-initial vocc. *vāstoṣ pate* in VII.54, this vs. has other similarities to VII.54, esp. VII.54.1: *amīvahā* ‘destroying affliction’ echoes 54.1 *anamīvāḥ* ‘without affliction’, as *āviśān* ‘entering’ does 54.1 *svāveśāḥ* ‘easy to enter’; sim. *sākhā* ‘companion’ and 54.2 *sakhyé* ‘companionship’. Note also that pāda c *sākhā suśéva edhi naḥ* is identical to I.91.15; I.91 is the Soma hymn that VII.54.2ab seems to have been partially based on. In addition, pāda b is identical to VIII.15.13b and IX.25.4a, both of which are addressed to Soma (on Soma as the addressee in the former, see comm. ad loc.). I do not quite understand the Soma/Vāstoṣpati connection.

VII.55.2: The target of the simile in pāda b, ‘spears’, does not precede the simile marker *iva* and in fact is as far as it can be from it in a pāda of only 8 syllables: *vīva bhrājanta ṛṣṭāyaḥ*. This arrangement may have resulted from an attempt to keep metrically unfavorable *bhrājante* out of the cadence.

On the refrain *nī śú svapa* and the present stem *svāpa-* see my “Sleep in Vedic and Indo-European” (KZ 96 [1982/83], esp. 8 n. 3).

VII.55.3: The hapax voc. *punaḥsara* may be a word play with *sārameya*. Bollée (*Gone to the Dogs in Ancient India*, 43) tr. “recessive one,” indicating that the dog is in retreat. But the rest of the context suggests an aggressive dog on the attack.

On the intens. *dardar-* here, see Schaeffer (136), who cites a very similar Avestan passage.

VII.55.4: On *√sas*, again see my ‘sleep’ art. cited ad vs. 2.

VII.55.8: Note the two hapax cmpds with loc. 1st member, *proṣṭhe-śayá-* and *vahye-śayá-* versus *talpa-śīvan-* (*-śīvarī-*), with stem form in 1st member and a different 2nd member belonging to the same root *√sí* ‘lie’. On *proṣṭha-* see KH (StII 13/14 [1987]: 129–34 =

Aufs. III.855–63), who analyzes it as *pra-ús-tha-* from the lexeme *prá √ vas* ‘spend the night away from home’, with the developed meaning ‘camp bed’ – perhaps ‘cot’ would work better here. As for *vahyá-* he sees it as something “to be conveyed”, a place of rest that can be carried or pulled; hence the standard tr. ‘litter’ works well.

VII.56 Maruts

VII.56.1: Ge takes *cd* to be the answer to the question in *ab*, but since *vs. 2* seems more directly responsive to the question, I take *cd* here as simply further specification of the subject of the question.

Unusually, *īm* has no acc. function; there is no possible accusative role it could fill.

I consider *vyàktā(s)* to be at least an implied pun. The first reading is as the nom. pl. m. of the ppl. of *ví √ añj* ‘anoint, ornament’, referring presumably to the Maruts’ characteristic adornments and their glistening appearance as (wet) bearers of rain. This interpr. is reflected in all the standard tr. However, I think it also is meant to contrast with *sánīlāḥ* ‘of the same nest’, as an indication that the Maruts are also separate individuals, and employing the common *ví/ sá(m)* polarization. The problem is to identify a morphological form that could be represented by *vyàktā(s)* and express the sense ‘separate, individual’ vel sim. I hesitantly suggest that we start with the *-āñc*-stem, *vy-āñc-*, found only in the cmpd. *uru-vyāñc-* ‘wide-spreading’. (The rarity of this stem may be accounted for by competition with the well-attested stem *viśvañc-* of almost the same meaning [‘facing in opposite directions, divergent’], which looks like a more substantial version of *vyāñc-* and is built to the extended form *viśu* of the same preverb *ví*.) If *vyāñc-* made a collective abstract in *-tā-*, **vyáktā-* ‘individuality, separateness’, the form in our passage could be its instr. sg. in adverbial usage. There are obviously weaknesses in every link in this chain of reasoning. First, the stem *vyāñc-* is very rare and limited in distribution; second, I know of no other such abstracts to *-āñc*-stems and in fact *-tā*-stems are relatively rare in early Vedic (AiG II.2.617); third, it should be accented **vyāñc-* (AiG II.2.619). However, a poet intent on packing a pun into *vyàktā(s)* might not scruple to use unusual forms to achieve it, and elsewhere in the RV puns sometimes ignore accentuation for their 2nd reading. In slight support of the suggestion, we might note that this set of hymns has one other ex. of the instr. of such a stem in adverbial usage: VII.57.4 *puruṣátā* ‘in human fashion’, as well as an instr. to a *-tāt*-abstract in the same usage: VII.57.7 *sarvátātā* ‘in your totality’, referring to the Maruts -- the exact opposite of my suggested *vyàktā* ‘in their individuality, separately’, also of the Maruts. If my suggestion is correct (by no means certain!), it would also be a pun facilitated by sandhi, since the first reading as ppl. should have underlying *-ās* and the other one as instr. simply *-ā*, but both would show up as *-ā* in this sandhi position.

Because this *vs.* is in Dvipadā Virāj (which, despite its name, consists of *four* pādas of five syllables apiece), *ádha* opens the d pāda and is therefore less oddly placed than might appear. Klein (DGRV II.128) characterizes the *ádha* as “conjoining the second [term] with the first” and tr. “the young men of Rudra and the ones having good horses.” But since the two terms are coreferential, the *ádha* (/ Engl. ‘and’) seems unnec. or even misleading.

VII.56.2: This vs. seems a response, if an indirect one, to the question posed in vs. 1. The *hí*, as often, has a higher discourse function: it gives the reason for asking the question in the first place. We could tr. “(I ask) because ...” I also consider this vs. a further expression of the “individual/collective” theme I tentatively identified in vs. 1, here conveyed by the pl. *janūṃṣi* ‘births’ in the first clause, contrasted with the sg. *janítram* ‘means of begetting’ in the 2nd. If 1ab asks “who are they *individually*?” 2ab states that the question needs to be asked because no one knows their *individual* births, even though (cd) *they* [=Maruts] know “mutually” (*mitháh*) their own (individual) means of begetting. In other words, they share the knowledge of their separate births -- something we don’t know. Note the middle *vidre*: they know facts about *themselves*, contrasting with the 3rd-party lack of knowledge in ab *nákiḥ ... véda*.

VII.56.3: This vs. continues the theme of mutuality in vs. 2, but now concerns the Maruts’ adult behavior as gods of the storm. The mutuality is expressed both by the adv. *mitháh* repeated from vs. 2 and by the reciprocal 3rd pl. verb *aspr̥dhran* “they contended with each other.”

The hapax *svapū-* has been variously, and surprisingly, interpr. See Old ad loc. (also KEWA s.v., etc.) for the numerous suggestions, incl. BR ‘broom’, Lanman ‘wings’. However, the most obvious analysis also is most likely the correct one, as a root noun cmpd. to root $\sqrt{pū}$ ‘purify’, hence ‘self-purifying’. This is Old’s conclusion, reflected also in Ge’s and Re’s tr. and in Scar (323). Perhaps the resistance to this obvious interpr. resulted from the fact that it is a hapax -- astonishing given the centrality of Soma Pavamāna “self-purifying Soma” in RVic ritual as the subject of the entire IXth Maṇḍala -- and in this passage it has no connection with soma. Here it quite likely refers to the rain drops accompanying the Maruts’ storm, as Ge suggests.

Old acutely notes that the verb in this pāda *vapanta* resembles *pavanta* ‘they purify(/ied) themselves’. Rather than considering *vapanta* a corruption of *pavanta* (which seems extremely unlikely to me), I would instead suggest that it’s a metathetic word play (*vap* ≈ *pav*), aided by preceding (*s*)*vap(ūbhīḥ)*.

VII.56.4: Whenever the birth of the Maruts, and esp. the udder of Pṛśni, are found in the RV, bewilderment ensues, and this passage is no exception. At least it is here identified as a secret that only the insightful can perceive -- a characterization that the modern interpreter fully concurs with. For other problematic passages on this topic see II.34.2, VI.48.22, and VI.66.1, 3 with comm. ad locc. Our passage would be fairly easy to interpr. if we could take *ūdhaḥ* (that is, *ūdhar*) as a loc. sg. Such is Ge’s solution (“im Euter,” explicitly identified as a loc. in n. 4b) and also Re’s, though the latter has the grace to bury the loc. in a parenthesis: “(en sa) mamelle.” But a loc. -*ar* to *īn* stems “ist nicht nachgewiesen” (AiG III.311), and it is safer to take it as an acc. sg. as elsewhere. In my interpr. *yád* is a neut. pronoun (rather than a subord. conj.) and refers collectively to the Maruts and ‘udder’ is a species of appositive to it though with a bit of a twist: ‘udder’ refers to the contents of the udder, and that contents is the collective Marut embryo(s). This seems to me better than taking *yád* as ‘that’ or the like, as in Kü’s (175) “Diese Geheimnisse kennt der Weise, dass die grosse Pṛśni ein Euter getragen hat.” (On p. 339 Kü simply reproduces Ge’s tr., with *ūdhaḥ* as loc. and a pronominal obj. [“sie”], referring to the Maruts, supplied; he doesn’t comment on these two incompatible interpr.)

VII.56.5: The good heroes that the clan possesses are in fact the Maruts themselves, specified in the instr. Re calls this an “instrumental of identification.” Whatever term is used, it is not, in my experience, a common usage of the instr., but it is nonetheless not hard to interpret. A similar usage is found two vss. later, in 7cd.

VII.56.6: A very cleverly constructed vs., nicely fitted to Dvipadā Virāj meter. Each 5-syl. pāda consists of two words, phonologically and etymologically (or pseudo-etymologically) related. There are both repetition of morphological figures and variation on them. All four pādas end with a nom. pl. masc. adj.; the first two pādas end with superlative *-iṣṭhāḥ*, the third with the phonologically similar, but morphologically distinct *-iślā(h)*, the last with something phonologically distinct (*ugrāḥ*).

Three (a, b, d) of the four pādas contain etymological pairs; in the first two the etymological relation is reinforced by phonological repetition (*yāmaṃ yā(y)iṣṭhāḥ*, *śubhā śóbhiṣṭhāḥ*. (As for the first, the Samh. has *yéṣṭhāḥ*, but the first vowel must be distracted. HvN restore *yáyīṣṭhāḥ* with short root vowel, but I think *yā* is more likely. In neither of the other two occurrences of this stem [V.41.3, 74.8] does the meter establish the quantity of the root syllable.) In the third ex. (pāda d) the etymological relationship is not transparent, but would be available to the audience steeped in derivational morphology: *ójobhir ugrāḥ*. Although c, *śriyā sámīślā(h)*, lacks the etymological connection, it mimics it through alliteration, though it is notable that we have *miśLa*, not the also attested *miśRa*, which would match *śriyā* better. Another set of three versus one: in three pādas (b, c, d) the first noun is in the instr., but in pāda a it is not. The 2nd pāda is the only one that doesn’t deviate from the various patterns in any regard: it’s an etymological figure, ends with a superlative, begins with an instrumental.

One can also note the reversal of vowels in the root syllables of the word pairs of b and d: *u ... o* versus *o ... u*.

VII.56.7: The first pāda of this vs., *ugrām va ójah*, restates the last pāda of the preceding vs. (6d *ójobhir ugrāḥ*) as an equational nominal clause. Because of its connection with vs. 6 it also sets up the expectation that what follows will also be an etymological figure, but b *sthirā śāvāmsi* is not, though it has the same syntactic configuration as pāda a.

The loose construction of the instr. *marúdbhiḥ* is similar to that in 5a.

VII.56.8: The nominal equations of 7ab continue in the first half of this vs., and *śubhrāḥ* picks up *śubhā śóbhiṣṭhāḥ* of 6b. Although *súṣmaḥ* is not etymologically related to *śubhrāḥ*, they are alliterative.

Pāda c contains a rhyming simile: *dhúnir múnir*. Such full rhyme is quite rare in the RV and seems to provide the crescendo of this highly wrought little passage. Note also that the final word of d, *dhṛṣṇóḥ*, is a slight flip of the initial word of c, *dhúnir*.

In order to get a proper Dvipadā Virāj line, the *iva* of c has to be read ‘*va*’, as it sometimes is elsewhere. See Old. If the particle is disyllabic, however, it makes cd a Triṣṭubh pāda. Since the Dvipadā Virāj section of the hymn is drawing to a close (fully Triṣṭubh starting with vs. 12), the possible double metrical reading here may be gesturing towards the upcoming Triṣṭubh takeover. Indeed the Dvipadā Virāj begins to break up beginning in vs. 10, despite the Anukr. identification of 1–11 as DV.

In the simile of c, *iva* (/va) is out of place; we expect **dhúnir iva múnih*. This displacement was doubtless made to draw attention to the rhyme noted above. But it also interacts somewhat with the question of whether cd contains two DV pādas or one Triṣṭubh, because a quick glance at Lub shows that *iva* is fairly rare immediately after the caesura, which would be its position here if we are dealing with a Triṣṭubh pāda. I imagine that this rarity has less to do with *iva*'s accentless status (though that might contribute) than with its usual tendency to take 2nd position, which would generally put it earlier in the line. There certainly do exist trimeter lines with *iva* post-caesura, e.g., IV.18.6 *ṛtāvarīr iva saṃkrōṣamānāḥ* (cf. also V.1.1, 11.5, etc.); they are just less common than I had expected.

VII.56.10: The metrical decay noted for 8cd continues here. Although the first half of the vs. has the expected 10 syllables with a word boundary after 5 -- thus allowing a division into two DV pādas -- the opening of b is *huve*, an unaccented verb. In the immediately preceding vs. (9), pāda b opens with accented *yuyōta*, which must owe its accent to its pāda-initial position, as there are no syntactic features favoring it. The DV here is far less sensitive to the pāda boundary. Even more clearly, the second half of the vs. is an undoubted Triṣṭubh, since it has 11 syllables and a caesura after the first 4, with the unaccented voc. *maruto* spanning syllables 5–7.

Both Ge and Re (also Lub) take *vāvasānāḥ* to *√vas* 'want, desire' with the supposed object being soma, but I think it makes more sense, and requires less machinery, to assign it to *√vās* 'bellow'. Otherwise too much has been gapped and needs to be supplied; cf. Re's expansive parenthesis: "... pour qu'à satiété ... (vous vous gorgiez de soma, le) désirant-avec-force." See the same disagreement about the affiliation of the same participle in VII.36.6, with comm. ad loc.

VII.56.11: This vs. is unambiguously Triṣṭubh, consisting of two pādas of 11 syllables. The first has an opening of 5, which could be a self-contained pāda of DV, but what follows it is 6 syllables, marking the whole as a single Triṣṭubh pāda. The second part is even less ambiguous, as it has an opening of 4, so a DV division is impossible. The only feature that matches that of DV is that there are only two Triṣṭubh pādas in the vs., not four.

On *iṣmín*- see comm. ad I.87.6.

VII.56.12: The metrical boundary, however fuzzy, between the DV and Triṣṭubh sections separates the first part of the hymn from the more ritually focused one beginning here. The expression *hinomy adhvarām* "I set the ceremony in motion" announces the inauguration of the sacrifice.

This vs. harps, rather tediously, on the adj. *súci*- 'gleaming', which occurs 6x, twice each in pādas a, b, and d.

Pāda c contrasts *ṛtá*- in *ṛténa ... ṛta-sāpaḥ* with *satyá*-, the latter as goal of *√i* 'go, come'. In my view, *satyám ... āyan* refers to the truth-serving Maruts' epiphany on the ritual ground: they "came to reality" for the sacrificers, that is, they became really present. This epiphany is effected "by truth": the operation of the properly performed ritual mechanism.

VII.56.13: This vs. has no finite verbs, but three predicated tense-stem participles: pf. *upaśiśriyāṇāḥ* (b), aor. *rucānāḥ* (c), pres. *yāchamānāḥ* (d), in a hymn already well provided with such (see 10d, 11d).

As for *upaśiśriyāṇāḥ*, although pf. participles regularly have preterital value, the middle pf. of $\sqrt{\text{śri}}$ is presential (Kü 527–28) and stative, and this form contrasts with the far more common ppl. *śrita-* ‘set’ -- hence my “being set,” though this rendering somewhat undercuts the stative value.

In cd it is possible that only one of the participles is predicated, and in fact the publ. tr. renders pāda c as wholly a simile. However, this hemistich could contain two independent predications: “(you are) shining like ...; (you are) holding yourselves ...” In any case there is an unsignaled change of subject between the hemistichs: in ab the ornaments (nom. *khādāyaḥ*, *rukmaḥ*) are the grammatical subjects, while in d the Maruts must be supplied because the participle *yāchamānāḥ* seems to assume an animate subject. Pāda c is ambiguous: either the brilliants (*rukmaḥ*) or the Maruts can be shining. The etymological relationship between *rukmaḥ* in b and the part. *rucānāḥ* in c might suggest that c goes with b. However, in my publ. tr. I have privileged the hemistich boundary and supplied the Maruts as subj. of c (as do Ge and Re), but the other interpr. is certainly possible. One argument for the standard interpr. might be that the subjects of medial participles to $\sqrt{\text{ruc}}$ (well-attested *rócamāna-*, as well as *rucāná-*, *rurucāná-*, *rórucāna-*) are generally gods.

VII.56.14: Ge suggests (n. 14a) that the *budhnyā ... mähāmsi* “deep-grounded powers” are the “verborgenen Herrlichkeiten” (*ninyā*) concealed in Ṛṣni’s udder in vs. 4. Even leaving aside the fact that, as was discussed above, *ūdhaḥ* in vs. 4 should not be a loc., this interpr. seems both unnec. and too specific, esp. since ten vss. intervene. *budhnyā* here may refer to the powers that the Maruts, gods associated with the midspace, derive from the earth below, or it may simply mean something like ‘fundamental’, by a semantic development parallel to that of the Engl. word.

The preverb *prá* is showcased in the first hemistich: *prá ... irate ... , prá ... prayajyavas tiradhvam*. I am not certain what *prá* $\sqrt{\text{tṛ}}$ *nāmāni* in b is meant to convey, but I interpr. it in the context of the importance of the Maruts’ individual identities (vss. 1–4) and of calling their names (10a) earlier in the hymn. Perhaps the Maruts need to “put their names forward” and make themselves individually known before they can enjoy the Gṛhamedha offering.

As noted in the publ. intro., the ritual references in pādas b-d are quite specific, alluding to the Maruts’ role in the Sākamedha, the last of the Cāturmāsyaṇi (“Four-monthly”) rituals. See the publ. intro. for further details.

VII.56.15: The phonological figure of the two words *adhīthā*, *itthā* straddling the pāda boundary of ab provide a nice little study in syllable weight. (The echo is of course obscured by the application of sandhi in the Saṃhitā text: *adhīthéthā*). If we add in the opening of the vs., *yádi*, the echo is even more pronounced: *yádi ... adhīthā*, *itthā*, with (y)*ádi* doubling *adhī*.

Exactly what *itthā* is doing here is unclear to me, but this adverb several times appears in context with *vīpra-* and some verb of invoking (see Ge ad VII.94.5), as here (with the invoking represented by the nominal *hāvīman*). Cf. VII.94.5 ... *īlata*, *itthā*

víprasaḥ, IV.29.4 = VIII.7.30 *itthā vípraṃ hávamānam*. I suggest that *itthā* refers to the precise manner in which a *vípra-* makes the invocation.

The Maruts are asked to “give study to / be mindful of” what is *stutásya*. *stutá-* is of course a very common past *passive* participle meaning ‘(what/who is) praised’. In this context we might rather expect the abstract noun ‘praise’, and indeed Ge simply so tr.: “... des Lobpreises eingedenk seid,” with no explicit comment, but a crossref. (n. 15a) to several passages with a similar idiom but with *stotrásya* ‘praise song’ instead of *stutásya* (e.g., V.55.9 *ādhi stótrasya ... gātana*). But the poet could easily have used *stotrásya* here in the same metrical slot if he had wanted to, and so I think we must take the ppl. seriously. Re in fact does so -- “prêtez-attention à la chose-louée” -- though in his n. he simply notes its similarity to the *stotrā-* passages. I think the point is a cleverer one: the poet suggests that if the Maruts pay attention to what we poets praise -- what *gifts* we poets praise -- they will know what to bestow on us. The “if” clause is immediately followed by its corollary: “right away give (us) wealth ...” -- the poet implying that the Maruts are a quick study! Although I must admit that *stutá-* ‘praised’ seems always to refer to gods, not to material objects, the semantic extension seems an easy one, and we can invoke the term *dāna-stuti-* ‘praise of the gift’ -- though it’s notable that, although this term is ubiquitous in secondary lit. on the RV, it is not actually attested in Vedic.

By my rules, we might expect that *anyāḥ* in d should be definite (‘the other’) rather than the indefinite ‘another’ that better fits the passage (unless we assume that the *anyāḥ* is a rival poet). However, I suggest that *nū cid ... anyāḥ* is a composite negative indefinite expression like *nā kás cid anyāḥ*. Cf. VIII.24.11 *nū anyātrā cid ...*

The cadence of d is bad. It is tempting to emend injunc. *ādābhat* to subj. *ādābhāt*, which would fix the meter and fit the sense (in fact, the publ. tr. renders the verb as if a subj.: ‘will ... swindle’), though no doubt the temptation should be resisted.

VII.56.16: Each pāda in this vs. contains a simile marked by *nā* comparing the Maruts to domestic animals (a, d), spirits (b), and children (c). Except in c, the simile begins the pāda. The vs. contains only one finite verb, *śubháyanta*, in b; the functional role of the finite verb is filled instead by the adjectives that are the point of contact between the simile and the frame. In the publ. tr. I deliberately failed to render ab as the rel. cl. it technically is because the “which Maruts ... they ...” structure would have intruded upon the succession of similes.

In b opinion is divided on the sense of *yakṣa-dṛś-*. Ge takes *-dṛś-* as active, with the first member in an acc. relationship with it (“Geisterseher”), flg. Sāy. in his analysis of the syntax of the cmpd., though not of the meaning of the first member. So also Re. However, Ge considers the possibility of a pass. sense in his n. (16b), and Old opts for the pass. interpr. For disc. of this cmpd. see Scar (232); of his choices I opt for the *bahuvrīhi*.

Another oblation to the Maruts at the Sākamedha, besides the Gṛhamedha mentioned above (vs. 14), is made to the *krīḍin-* (‘playful’) Maruts on the 2nd day of the sacrifice (see, e.g., ŚB II: 20 and Eggeling, SBE XII.408). The characterization of them in d as *prakṛīṇaḥ* obviously makes ref. to this oblation.

VII.56.17: This vs. has the feel of a final vs. Though there is no overt sign of a break with what follows, the next vs. turns its attention to the Hotar, Agni, and this might be taken as a change of subject.

In the cadence of pāda a *mṛlantu* should be read with a light root syllable, contrary to normal practice. Old doubts that the form should be read with this exceptional light syllable and ascribes the irregularity to “die metrische Unebenheit” of this hymn, while HvN do accept the light reading and adduce one other occurrence that requires this scansion (IV.3.3, though that passage looks more equivocal to me).

Ge and Re take *varivasyá-*, lit. ‘make wide space’, in a general ‘help, protect’ sense (e.g., “qui protègent les Deux Mondes bien fixés”). But surely the beneficiaries are us (not the two worlds), and the idea is to make the worlds spacious for us.

VII.56.18–19: As was just noted, vs. 17 “feels” like a final (or pseudo-final) vs. If vs. 18 marks a new beginning, we can note both that in vs. 18 the Hotar invokes the gods as he would at the beginning of a sacrifice and that in vs. 19 (and 20a) the Maruts are referred to four times (19a, b, c, 20a) with the near-deictic pronoun *imé* “these right here,” which might indicate their epiphany on the ritual ground.

VII.56.18: The first hemistich of this vs. presents us with a common problem: the most obvious way to interpr. it meets a syntactic stumbling block that should not allow that interpr., and the standard interpr. ignore that obstruction. In this case the issue is the middle participle *grṇānāḥ*. This part. is attested over 50x; the vast majority of these attestations are clearly passive in value. In fact, Gr interpr. only 2 forms as “medial” (that is, transitive, not passive): this passage and I.181.9. Nonetheless, both Ge and Re take it as transitive here (though with different objects) without comment. But I think we ignore the use of the overwhelming majority of forms at our peril. In fact, since Agni as Hotar is the implicit subject of the sentence, a passive value of *grṇānāḥ* is easily possible: as both Hotar and god, Agni performs a ritual invocation (as priest) while himself being hymned (as god). (The other occurrence flagged by Gr as non-passive, I.181.9, is indeed transitive, but owes its anomalous usage to special circumstances. See comm. ad loc.)

If we eliminate *grṇānāḥ* as a potential governor of an object, the acc. *satṛācīm rātīm* must be construed with *ā ... jōhavīti*. Although the acc. with (*ā*) *√hvā* is more usually a god or other animate being, abstract entities (like ‘giving’ here) are also possible. The *vaḥ* in 2nd position in pāda a, which might have served as acc. to *ā ... jōhavīti* must then be a gen. dependent on the acc. NP. The more usual configuration is restored in pāda d *havate vaḥ* “he calls upon you,” a minor ex. of poetic repair.

In c both Ge and Re supply ‘sacrificer’ with gen. *īvataḥ* ‘such’, while I supply ‘wealth’. There is in fact no good support for either position that I can find. I prefer mine because ‘wealth’ would pick up ‘giving’ from the previous pāda, whereas there is no mention of a sacrificer anywhere. But I do not strongly favor my solution. *gopā-* ‘herdsman’ is regularly construed with *ṛtāsya* ‘truth’ (e.g., I.163.5, III.10.2), so perhaps that phrase is meant, anticipating *ādvayāvi* ‘without duplicity’ in d. Note that the *gopā-* is also *ādabdhā-/ādabhya-* ‘undeceivable’ (e.g., II.9.6, X.25.7).

VII.56.19: As was noted above, this vs. contains three examples of the near-deictic *imé*, opening the first three pādas. The publ. tr. only fully renders the first one, as three

examples of “these here” seemed too heavy. It is also worth noting that, though the *imé* forms might suggest the presence of the Maruts right here at the sacrifice (as was suggested above), the clauses in which they are found describe general activities of those gods, which would almost necessarily be performed away from the ritual ground.

Both Ge and Re follow the Pp. reading *sáhasaḥ*. Re interpr. it rather loosely as an abl., whereas Ge takes it as a gen. and as if it were the differently accented poss. adj. **sahásah* (“die Gewalt des Gewaltigen”), without comment. Old suggests that the better reading is dat. *sáhase* and cites passages containing *ā√nam* with the dat. I follow this interpr.

VII.56.20: Ge and Re both take b as a self-contained clause. I think it better (with MMüller in SBE) to take *bhīmim cid* beginning b as obj. to *junanti* in pāda a, parallel to *radhrām cid* -- beginning a new clause with *yáthā* in the middle of b. The point would be that the Maruts are so vigorous that they can energize both an entity that has no energy at all (“the feeble”) and one that has energy in excess (a whirlwind).

VII.56.21: The adj. *sujātā-* ‘well-born’ generally refers to gods, or at least to mortals; it is only here used of material goods (implicitly *vasavyā-* in the preceding pāda, hence my ‘of good quality’. Of course, it is possible that *vasavyā-* here refers, at least partly, to human capital (sons), as apparently in II.9.5 *ubháyam te ná kṣīyate vasavyām ... kṛdhi pátiṁ svapatyásya rāyāḥ*, where the second category of “goods of both types” (*ubháyam ... vasavyām*) is “wealth in good descendents” (*svapatyásya rāyāḥ*). But I don’t think this is a necessary interpr.: “well-born/produced” is likely available to semantic extension.

VII.56.22: As most interpr. point out, the three locc. in b are especially contested objects for the Ārya. See esp. Proferes (98): “Because of their economic value, rivers, plants and clans were subject to competing claims, and constituted flashpoints for conflict between various groups for whom control over resources meant increased power” -- as well as his elucidation of the three terms. See also Thieme (Fremdling 55), Oberlies (I.350).

Fem. *yahvī-* ‘exuberant’ is in the pl. typed for rivers/waters.

VII.56.23: Despite the use of *√kr* ‘make’ (2nd pl. pf. *cakra*), it is not likely that the Maruts created the *ukthāni* themselves, though they are singers on other occasions; rather they provided the occasion and the subject for the poets of earlier eras to celebrate them. Though Re’s ‘provoke’ is a bit strong, it’s the right idea. My ‘have given rise to’ is a bit weak.

VII.56.24: The sense of pāda d is somewhat unclear and the various tr. incompatible. Ge’s “wir möchten euch mehr gelten als das eigene Heim” seems esp. difficult to wring out of the Skt., though the other possibilities he suggests in the n. (24d) are somewhat more likely. I start with the *abhi√as* lexeme, which generally means ‘surmount, dominate, be superior’, which doesn’t seem to be reflected in the Ge suggestions. However, in my interpr. the enclitic *vaḥ* has only the vaguest syntactic connection to the clause. I do not have a better solution.

VII.57 Maruts

VII.57.1: My interpr. differs considerably from the standard—Old, Ge, Re—all of whom take ab as a single clause, with the sg. *nāma mārutam* the subject of 3rd pl. *madanti* and *mādhvah* the oblique obj. of that verb. So, e.g., Old “Am Honigtrank erfreut sich ... euer Marutname (=Marutgeschlecht).” The number disagreement between subj. and verb is taken as a constructio ad sensum (so explicitly Ge n. 1ab, sim. Old), and the clash between 2nd person encl. *vah* / voc. *yajatrāḥ* and the 3rd ps. verb is glossed over. I find these disharmonies disturbing and prefer to separate the two pādas. By my interpr., as noted in the publ. intro., pāda a has an idiomatic construction very similar to Engl. “has X’s name on it,” meaning “is destined for / belongs to X.” (“That cookie has your name on it” means “you should take it; I’ll cede it.”) Then in b the person switches from 2nd (*vah* ... *yajatrāḥ*) to 3rd (*madanti* with gapped subj. = Maruts), but the number is unchanged. This situation lasts through the first hemistich of vs. 2. As for the sense, I take the ‘honey’ to refer to the soma to be offered to the Maruts at the sacrifices mentioned in b: the soma oblation at the sacrifice in question is intended just for them. Alternatively, but less likely in my view, it could refer to the rain that the Maruts produce. In that case it would have the Maruts’ name because it is their product. The rain is metaphorically referred to in d *pīnvanti ūtsam* “they swell the wellspring.”

The relationship among the clauses in the 2nd hemistich isn’t certain, although there are no real implications whichever interpr. is chosen. With the standard tr. I take *pīnvanti ūtsam*, which opens d, as the main clause on which both the preceding rel. (c: *yé rejáyanti*) and the following temporal clause (*yád áyāsuḥ*) depend. In this case *pīnvanti* would be accented because it opens its pāda. However, that verb could be part of the rel. cl. starting in c (*yé* ...), with all of cd dependent on b: “... they become exhilarated -- they who set ... to trembling (and) swell the wellspring, when ...”

VII.57.2: The two suffix-accented *-tár-* agent nouns in the first hemistich take accusative objects, rather than the expected gen. (*nicetāraḥ* ... *gr̥nāntam*, *praṇetāraḥ* ... *mánma*). See Tichy (363–64). Although Tichy suggests some possible reasons for this unexpected (but not vanishingly rare) construction (pp. 367ff.), they don’t seem to be particularly applicable here.

I see no easy way to get a causal sense from *hí*, hence my “surely.”

Object-less *vītáye* is clarified by 6b *vyantu* ... *hávīm̐si*.

The pf. part. *pīpriyāṇāḥ* is interpr. by Ge/Re as implicitly prospective: the Maruts will become pleased/gratified as a result of their *vītí-*. I take it rather as having preterital value: they have first been gratified by the initial guest-reception ritual and are now awaiting their meal. A passage like I.73.1 *átithir ná prīṇānāḥ* “being gratified like a guest” supports this interpr.

VII.57.3: Ge takes *anyé* with *marútaḥ*: “Nicht glänzen andere Marut so sehr wie diese ...” But both the position of *yáthā*, which in its simile-marking role should follow the first term of the simile, and common sense (who would the other Maruts be?) strongly suggest that *anyé* refers to a group separate from the Maruts. By my rules *anyé* should be definite, and I think Re is correct in supplying ‘gods’. This would make sense in a ritual context: the other divine visitors at the ritual (save for Indra) are pretty drab compared with the Maruts.

Since the other occurrence of *viśva-pīś-* modifies Dawn's cart (VII.75.6), as Old points out a passive sense 'all-adorned' is more likely than 'all-adorning'. So Scar (319) 'allgeschmückt'.

The middle part. *piśānā-* is an isolated form: the only apparent attestation of a root aor. to this root, beside the thematized nasal pres. *piṃśā-* and the pf. *pipeśa*, etc. (However, *piśā* in VII.18.2 is taken by most as an impv. to a thematic aorist [see comm. ad loc.], which could easily have replaced the opaque root aor. impv. **pīdhī*, so the root does have a fragmentary aor. system.) That it is a participle at all has been called into question by John Lowe, who suggests it may be a Caland adj. instead ("Caland adjectives ..." 2012: 92–93; see also *Participles in Rigvedic Sanskrit* 2015: 133). Although I don't see any advantage in assigning it to a category of dubious existence (Caland adj. in -*ānā-*), its isolation does make it difficult to interpr. As a medial form, it might be expected to match the medial perfect usage and be pass. (e.g., VI.49.3) or reflexive (V.60.4) vel sim. However, it is generally taken as transitive, as in the publ. tr., with the transitive value ascribed to the preverb *ā* (see Gr) opening c. Lowe (*Part.* 133) disputes this interpr., declaring the supposed tmesis between preverb and participle here "a unique type of discontinuity." He prefers to construe *ā* with the finite verb *añjate* in d and take *piśānāḥ* as an intransitive adj.; *ródasī* is then an obj. of *añjate* along with *samānām añjī* and not construed with *piśānāḥ*. "All adorned and *decorated*, they anoint / the two worlds (with) the same anointing for beauty." As far as I can find, however, there are no occurrences of $\sqrt{añj}$ with double acc. When the object anointed is in the acc., the ointment is in the instr., so his suggested interpr. would be syntactically unique in a different way. I therefore prefer to construe both *ā* and *ródasī* with *piśānāḥ*. However, the construction need not be transitive "adorning the two-world halves," as is the standard interpr. and publ. tr. Old suggests several other possible relations (see also Re's n.), including that *ródasī* might be an internal / Inhalts-type of acc., expressing the ornament, hence "wearing the two world-halves as adornment." Old ultimately rejects this interpr., as does the publ. tr., but it remains a possibility, one that would better reflect the medial form.

VII.57.4: Unlike Ge/Re I attach b to c, not to a. Nothing rests on this, but the cause and the (hoped-for non-)effect are more closely allied that way.

I did not tr. *vaḥ* in c, which would have necessitated the awk. rendering "... into the way of it of yours." This vs. is over-supplied with *vaḥ*-s, with one in each pāda.

VII.57.5: Ge and Re tr. *raṇanta* as a modal ("sollen sich ... erfreuen"; "Que les Maruts se réjouissent ..."), as does Hoffmann (259), who explicitly identifies it as a subjunctive, not an injunctive, flg. Re (BSL 33.1: 6–7), who claims that *-anta* is a regular RVic subjunctive ending. I think a modal value, whether the form is identified as injunctive or subjunctive, is unnecessary and in fact fits the context less well than a preterital reading. Previous vss. refer to the performance of the sacrifice at which the Maruts are present (esp. 1ab and 2). They are now asked to provide benefits in return, and so we might assume that the sacrifice is now over (though 6ab gives me pause), an assumption supported by *kṛté* with its past reference: 'what has been/was done'.

In the publ. tr. *cīd* is not tr. I think it is a simple emphatic here "in just what has been done here," which is somewhat stilted in Eng., or else (perhaps more likely) it

actually emphasizes the following word *átra*: “in what has been done *here*” -- at our sacrifice, not at someone else’s. So Sāy. It could, of course, mean “also” or “even,” but neither of those makes sense in context -- nor does Ge’s (/Hoffmann’s) “wenigstens” or Re’s “(un peu) même.”

VII.57.6: With Ge, I take *vísvebhir nāmabhiḥ* with *stutāsaḥ*, despite the displacement of word order. In fact, there’s nowhere else to put that unwieldy instr. phrase but at the beginning of a new pāda. Re tr. it as an independent phrase, whose referent and relation to the rest of the sentence aren’t clear to me: “Alors, (une fois) loués, que les seigneurs Marut agréent, de tous (leurs) noms, les offrandes!”

VII.57.7: The contrast of *vísve ... sarvātātā* “all (of you) ... in (your) totality” highlights a constant theme of Marut hymns, that they are both individuals (emphasized by “all your names” in 6b) and a collectivity. See the treatment of this at the beginning of the previous hymn (VII.56) and comm. thereon.

The position of the patrons (*sūri-*) as middle men in the circulation of goods and services is nicely expressed here: you help the patrons; they help us.

VII.58 Maruts

VII.58.1: The gen. phrase *daívyasya dhāmnah* does not have a clear syntactic relationship to the rest of its clause. The standard interpr. (Ge, Re, Scar [62]) resupplies the word *gaṇá-* in the rel. clause and seems to take the phrase as gen. of material, as it were: e.g., Ge “die starke (Truppe) der göttlichen Rasse.” By contrast I treat the possessive adj. *túviśmant-* as a real possessive with the gen. phrase implicitly dependent on the underlying nominal *tuví(s)-/*távis-*, hence “having the power of its divine nature.”

The *utá* beginning the 2nd hemistich is relatively functionless. Klein (DGRV I.375–78) says it signals weak nexus between distichs with non-parallel structure. It might also be possible to claim that it is a sort of inverse *utá*, which should connect c with d, which *are* syntactically and thematically parallel. I also think it possible that it expresses a covert conceptual connection between the heaven indirectly referred to in b (*daívyā-*) and the midspace defined by the two world-halves in c, a space also indirectly measured by the distance from ‘chaos, disorder’ (*nírṭi-*) and the heavenly vault (*nāka-*) in d.

VII.58.2: Like the gen. phrase in 1b, the instr. *tveṣyèṇa* has insufficient syntactic grounding in its clause. Like Ge “(geschieht)” and Re “(s’est produite),” I see no choice but to supply a verb to link the subject *janūḥ* and the instr.

I have no opinion on the morphology of *janūḥ*. Gr calls it a masculine nom. sg. to the *-us*-stem *janús-*, an interpr. bolstered by the acc. form *janúṣam* (3x). AiG II.2.490 posits a paradigm of alternating gender, with m. or f. in the (nom./acc.) singular, but neuter in the dual and plural, which accords with the distribution of forms in the RV (du. *janúṣī*, pl. *janūṃṣī*) but fails to account for the gender switch. In the same vol. (II.2.496–97) Debrunner suggests that our *janūḥ* belongs to a *-ū*-stem (though acc. *janúṣam* would still need to be a masc. [or fem.] form to an *-us*-stem). The problem is that non-neut. forms of *-is-* and *-us*-stems don’t lengthen the suffixal vowel in the nom. sg., unlike *-as-*

stems. However, it seems possible that our *janūḥ* contains a nonce lengthening on the model of the vastly more common masc. -as-stems, as AiG III.292 indirectly allows. It should also be noted that because of following *cid*, the suffixal syllable of the preceding noun would be heavy, whether it originally read *janūs cid*, as in the transmitted text, or **janūs cid*, as grammar would have us expect.

The relationship between the first hemistich and the rel. cl. in c displays the RV's customary willingness to switch person reference in midstream and without warning. The first hemistich refers to the Maruts in the 2nd ps., with the enclitic *vaḥ* in a and the b pāda consisting only of vocatives. Because there is nothing to lean on, all three vocatives are accented, but in all three cases the initial accent contrasts with the inherent accent of the stem: *bhīmāsaḥ* (*bhīmā-*); *túvimanyavaḥ* (*tuvī-* cmpds. are accented either on the 2nd member [e.g., *tuvī-rādhas-*] or on the 2nd syllable of the first member [e.g., *tuvī-brahman-*]); *áyāsaḥ* (*ayās-*). There could therefore be no doubt that the reference is 2nd person; yet the rel. cl. that picks up the referents with the nom. pl. prn. *yé* is unequivocally in the 3rd ps.: (*prá ...*) *sánti*. The following pāda returns to 2nd ps. ref. with *vaḥ*.

On the “X Y *utā*” construction (rather than expected X *utá* Y) see Klein DGRV I. 344ff.

VII.58.3: In pāda a I take *maghávadbhyaḥ* as referring to our human patrons, because I take the Maruts as subj. of the 2nd pl. impv.: *dadhāta*. However, given the connections between 3ab and 6ab (for which see below), where *maghónām* refers to the Maruts, it is quite possible that the subj. of the impv. is the poet's fellow priests and the Maruts are the referent of *maghávadbhyaḥ*.

The simile in c causes some interpretational problems. Both Old (ad VI.50.10) and Re suggest interpr. that violate the structure of the RVic simile, and I think both treatments are wrong; Ge's treatment is more possible, though it differs from my own. All three take *jantúm* as part of the simile with *gató nádhvā* (= *ná ádhvā*), roughly for both “as a travelled road leads (the) people on,” while I take *jantúm* in the frame.

The RVic simile is only nominal; when a verb is involved it is shared by simile and frame. Both Old and Re take c as entirely simile, with its own independent verb (*ví tirāti*), and d as a loosely (Old) or more tightly (Re) connected frame, with its own verb (*prá ... tireta*). Old explicitly argues (ad VI.50.10) that *ná* can sometimes be a quasi-clausal simile marker, and he tr. “Der gegangene Weg vergleichsweise mag einen Menschen vorwärts bringen: so bringt auch uns verwärts.” After examining all the similes in the RV (see my “Case disharmony in RVic similes.” *IIIJ* 24 [1982] 251-71), I would vigorously contest his characterization of *ná*. Re's tr. has a more conventional simile/frame relationship, but still violates the shared verb rule: “Comme le chemin parcouru fait passer l'homme outre, qu'elle nous pousse (plus) avant ...” (The subject of d, “elle,” seems to refer to the *susṭutí-* in b.) Although the structural violation in Re's tr. would be mitigated by the fact that the two verbs belong to the same verb stem, *tirá-*, they have different preverbs (*ví* and *prá*), and therefore different senses, and are also in different moods (subj. and opt.).

Ge's rendering, “Wie ein zurückgelegter Weg der Leute, so möge es (uns) zum Ziele führen,” respects the simile structure, with the subject in the frame (“es”) presumably referring to the good praise in b (see Re also), but the sense seems off. If the

praise is to bring anyone or -thing across, it should be the Maruts (brought to our sacrifice), not us. Still I would be willing to consider a variation of Ge's interpr., with the praise as subj. in the frame, but the Maruts as obj.: "As a road when it's travelled (does) people, (the good praise) will bring the (Maruts) across."

However, I think it likely that the focus in this 2nd hemistich has shifted to the help that the Maruts will give us when they have enjoyed our praise (see the thrice repeated *yusmótaḥ* 'aided by you' in the next vs., 4abc). In particular, pāda d *prá ná spārhābhir ūtībhis tireta* is almost identical to VII.84.3 *prá ná spārhābhir ūtībhis tiretam*, addressed to Indra and Varuṇa. In the latter passage, *tiretam* must be a 2nd du. active opt. with Indra and Varuṇa as subj. In other words, in that passage gods are the subject. In our passage *tireta* is ambiguous: it can be a 2nd pl. act. opt. or a 3rd sg. mid. opt., and different factors pull in different directions. The parallel in VII.84.3 suggests we have gods, namely the Maruts, as subject here too, and the easiest way to do that is take it as a 2nd pl. A passage in the preceding hymn, VII.57.5 *prá vājebhis tirata puṣyāse naḥ* "Further us with prizes for our thriving," with 2nd pl. act. impv. to the same stem, also supports this interpr. This is the analysis of Gr, and it is also responsible for Old's "So bringt ..." On the other hand, the clear 3rd sg. *tirāti* in c invites a 3rd sg. interpr. also of *tireta*, and the following hymn contains the idioms we have here, *prá √ tī* and *vī √ tī*, there with a single instance of the verb stem in the 3rd sg. middle positioned between the preverbs: VII.59.2 *prá sá kṣāyam tirate vī mahīr īṣaḥ* "He furthers his dwelling place, ex(tends) his great refreshments." Re and Ge both opt for the 3rd sg. middle interpr., but the subject they each (seem to) provide is the good praise of b, a far cry from the gods we expect as subject of the expression found in d. My interpr. of cd solves both problems, though, admittedly, not in the most elegant fashion. I supply 'flock' (*gaṇā*; see 1a) as the subj. of both *vī tirāti* and *prá ... tireta*. We thus have a singular subject that will allow *tireta* to harmonize with *tirāti* and the divine subject that will allow d to harmonize with VII.84.3.

VII.58.4: As noted just above, this vs. is structured by three (abc) pāda-init. *yusmótaḥ* 'aided by you'. The three separate clauses containing this opening build on each other in an interesting way, and the first two are also linked by a morphophonological relationship.

To begin with the latter, both a and b end with a predicated *-ín*-stem qualifying the successful poet and the successful steed respectively with semantically parallel descriptors: ... *śatasvī*, ... *sahasrī* "possessing hundreds ... possessing thousands." The two words are also phonologically similar; to put it schematically, *SaCasRī*, where the *-s*-Resonant-*ī* final is esp. salient. The second one is correctly formed (to *sahásra*-) and well attested. The first is a hapax and aberrantly formed: the expected *-ín*-stem to *śatá*- is *śatín*-, which is in fact reasonably well attested. *śatasvín*- is obviously modeled on *sahasrín*- (already implied by AiG II.2.917 and Re ad loc.), aided by the fact that *-vín*- is regularly added to *-as*-stems (AiG II.2.917). So with *śatá*- temporarily re-configured as an *-as*-stem, the suffix *-vín*- can be affixed, allowing the stem to parallel *sahasrín*- in metrical and phonological shape. In b *sahasrī* is immediately preceded by *sāhurīḥ*, which reinforces the phonological pattern: *sah Vri(h)*.

Now as to the relations among the three *yusmótaḥ* clauses. I suggest that they can be seen as an instance of Behagel's Law (the law of "increasing members") involving syntactic blocks, not merely NPs. Pāda a contains a noun and a predicated adj. (*vīpraḥ* ...

śatasvī); pāda b a noun and two predicated adjectives (*ārvā śāhurīḥ sahasrī*). And pāda c has two clauses, a nominal one consisting of a noun (*samrāṭ*) predicated of an unexpressed subject (=Indra), and a full clause, with finite verb and object (*hanti vṛtrām*). My view of the increasing complication of syntactic structure in these three clauses produces interpr. of two of the clauses that differ from the standard. In b both Ge and Re (also Klein, DGRV I.436) take *śāhurīḥ* as an attributive adj. and only *sahasrī* as predicated (e.g., “... does the winning steed become a possessor of thousand(-fold) booty”). This is of course possible, but both the structural argument already adduced and the pragmatic fact that the horse has to become victorious before he wins prizes speak for my interpr.

In c the difference between interpr. is greater. I take *samrāṭ* as one clause, with the noun predicated of unmentioned Indra : “(Indra) is sovereign king.” This clause is linked to the next (*hanti vṛtrām*) by *utā*: “and (he) smites Vṛtra.” Ge, Re, and Klein all take *samrāṭ* simply as the subj. of *hanti* (e.g., “and with your aid does the great king smash the obstacle”). But this interpr. must ignore or explain away the position of *utā*. Klein is the only one who is explicit about the function of *utā*. He groups it with passages that contain “a repeated term within one of a set of parallel clauses,” conjoined by *utā*. But in the other exx. he gives (pp. 436–37) the *utā* is adjacent to the repeated element and in Wackernagel’s position. In our passage this should yield **yusmōta utā samrāṭ*. Klein does not comment on *utā*’s position here. Although one could argue (though Klein does not) that *utā* was displaced to the right to avoid the clash ...-ōta *utā*, in fact that is the kind of clash that RVic poets like! (Indeed the presence of *utā* in this pāda may be partly to call attention to the compositionally suppressed -*ūtā*.) My interpr. takes the *utā* as properly positioned to conjoin two clauses, and no special pleading (much less ignoring of the problem) is required.

Although Indra’s name is not mentioned, *hanti vṛtrām* is of course a definitional predicate for Indra, who is also regularly identified as a *samrāj*-. The Maruts’ role in helping Indra in the Vṛtra conflict is of course one of the contended issues in the RV (see the Agastya hymn I.165 for example).

Re takes abc as expressing the three functions, which I find hard to see. Does he assume pāda b is the third function and c the second? Surely he doesn’t see the smashing of Vṛtra in c as third function!

VII.58.5: On *jijīṛé* as a presential stative, see Kü (610–11).

VII.58.6: The first hemistich, which contains both *suṣṭutī*- ‘good praise’ and a form of *√juṣ* ‘enjoy’ with the Maruts as subject, but in separate clauses is an expansion of 3b *jújoṣann ín marútaḥ suṣṭutīm naḥ*. As was noted above, the first pāda of 3 also contains a pl. form of *maghávan(t)*-, which I take there as referring to our human patrons, because I take the Maruts as subject of the 2nd pl. impv., but the presence of *maghónām* here, clearly referring to the Maruts, may instead suggest that the *maghávant*-s in 3a are also the Maruts.

idám in b (*idám sūktám*) is yet another example of the frequent use of a form of *ayám* in the last vs. of a hymn to refer to the whole preceding hymn.

VII.59 Maruts

VII.59.1: The āmreḍita *idám-idam* in pāda a must go with the clause in b. The *ca* that connects the two clauses is slightly displaced: we might expect it to occur after the first element of its clause, namely *idám-idam*. But the pāda boundary and the intrusion of a pāda-initial voc. *dévāsaḥ* have clearly interfered with the placement, and the sequence *yám ... yám ca* makes the syntax perspicuous.

The sequence of vocc. in cd is puzzling because the first is unaccented, while the rest are accented, including those that follow the first in the same pāda: *tásmā agne váruṇa mītrāryaman, mārutaḥ* ... We would, I think, expect either all accented (**agne váruṇa mītrāryaman*) or all unaccented (*agne *varuṇa mītrāryaman*). Old suggests that a new “Ansatz” begins after *tásmā agne*, and it is of course true that the caesura follows *agne* -- but also of course true that vocatives are not ordinarily accented in that position. He also points out that the three vocc. in the 2nd part of the pāda are the names of the three principal Ādityas, which occur together and as accented vocc. elsewhere (V.67.1, VIII.19.35). In the latter passage the three vocc. are found pāda-internal post-caesura as here (see comm. ad loc.) Both of the factors adduced by Old no doubt contributed to the accentual behavior of this pāda, but it is a fine reminder that the rules of voc. accent, which we think of as fairly mechanical, are in part rhetorically driven.

VII.59.2: *yuṣmākam ... ávasā* is a variant of the cmpd. *yuṣmóta-* (i.e., *yuṣmā-ūta-*) found three times in the preceding hymn in VII.58.4.

The vs. contains two, or implicitly three, 3rd sg. act. present forms of the root $\sqrt{tṛ}$, *tarati* in b, *prá/ ví tirati* in c. For the same pairing of preverbs, see comm. ad VII.58.3 in the previous hymn.

VII.59.3: This vs. plays on the common contrast, also found earlier in this Marut cycle, between the Maruts as individuals -- here “the last” (*caramá-*) of them -- and as a collective (*vísve*).

On *sácā* as loc. absol. marker, see comm. ad IV.31.5.

I have rendered the nom. pl. *kāmínah* as an adverb (avidly) to avoid the somewhat heavy ‘having desire (for it)’.

VII.59.3–4: Both of these vss. begin *nahí vaḥ*; in neither one is it easy to produce a causal value for *-hí*, hence my ‘certainly’. The opening of 4c *abhí vaḥ* plays on the *nahí vaḥ* of 3a, 4a.

VII.59.5: Both Ge and Re take c as a single clause (e.g., “Car je vous ai donné ces offrandes”), but the position of *hí* suggests that a new clause begins with preceding *raré*, and *imā vo havyā* is a fine nominal clause announcing the oblations present right here on the ritual ground.

VII.59.6: The sequence *sádatāvitā* is analyzed by the Pp. as *sádata avitā*, with the latter form generally taken as a 2nd pl. impv. to \sqrt{av} ‘help’. But this interpr. is problematic on grounds of both form and meaning. There is no stem *avi-* to \sqrt{av} ; the best that can be done is to classify it with the *-iṣ-*aor. *ávīt*, etc., but, in addition to *-i-* rather than *-iṣ-*, the accent is wrong, since the *-iṣ-*aorist has root accent. Moreover, a form of ‘help’ fits badly

in the passage, where the main verb should provide syntactic support for the infinitive phrase *spārhāṇi dātave vāsu* “to give coveted goods.” These difficulties are treated in detail by Narten (Sig. aor. 87–88), who suggests an appealing and convincing solution, to read *sādatā vitā*, with the latter the 2nd pl. impv. to the root pres. of √ *vī* ‘pursue’, a solution that does not require emending the Saṃhitā text. As Narten points out, this pres. appears elsewhere with an infinitive. Although we ideally would expect a long root vowel (**vītā*), she adduces the 2nd sg. impv. *vihī* (3x), beside more common *vīhī*, as a model. This solution is accepted by Lub, though it is rejected by Baum (Impv. in RV 93, although he hesitates p. 167); Klein (DGRV I.166, 167; II.39) implicitly accepts the Pp. reading, but he does not cite the following pāda containing the infinitive phrase.

The accent on the 2nd pl. impv. *sādatā* presumably results from its juxtaposition and contrast with adjacent *vitā*.

āsredhantaḥ at the beg. of c can be either a voc. or a nom. pl.; nothing hangs on the exact identification.

VII.59.7: I take pāda a as a nominal clause separate from b, with predicated pres. part. *śumbhamānāḥ*. The hemistich cannot form a single clause because *apaptan* in b is unaccented despite the *hī* in pāda a. I take the sense of the first pāda to be that storms come out of nowhere, fully beautified as it were, so the beautification must have been done “in secret” (*sasvār*). The dark-backed geese of b are the storm clouds. The next hymn, dedicated to Mitra and Varuṇa, has a similarly structured vs., VII.60.10 *sasvās cid dhī sámṛtis tveṣy eṣām apīcyena sāhasā sāhante* “Because their fiery attack is even in secret and they are strong with hidden strength ...” (JPB tr.). In that vs. the finite verb in b, *sāhante*, is accented and therefore falls under the domain of *hī* in pāda a.

VII.59.8: *tirás cittāni* is a striking expression, without obvious parallels. In interpreting it, we can begin by noting that *tirás cid* is a reasonably frequent pāda opening (IV.29.1, V.75.7, VIII.33.14, 51.9, 66.12), including in the next hymn, VII.60.6. Although I toyed with the possibility of reading *tirás cit tāni* here, with the neut. pl. prn., this does not seem to be productive. However, the fact that *tirás cid* is a formulaic expression may help account for the fact that our *tirás cittāni* seems to be only loosely connected syntactically to the rest of the clause. Ge takes the expression as meaning “against/contrary to expectation” (wider Erwartung), but I’m not at all sure that *tirāḥ* can mean ‘against’ (though see X.171.4 *devānām cit tiró vāsam* “even athwart the will of the gods”). And in any case we would surely want to punish someone who tried to kill us, whether we expected him to or not. Re’s “en croisant (nos) pensées” is better; I have adapted an English idiom “cross-purposes,” which is practically a calque on the Skt. phrase. Here it reflects the hostility between the would-be attacker and “us.”

VII.59.8–9: Although, as noted in the publ. intro., the last four vss. of the hymn (9–12) must be late additions, there is a verbal link between vs. 8 and vs. 9: *tāpiṣṭhena* “with the most scorching ...” opening 8d is echoed by the Maruts’ ritual epithet *sāmtapanāḥ* opening 9a. This link may help account for why these Sākamedha vss. were attached just here.

VII.59.9–12: For the Sākamedha rites reflected in these vss., see publ. intro. and, e.g., ŚB II.5.3, esp. 3ff.; ĀpŚS VIII.9; sec. lit. including Hillebrandt, *Ritual-Litteratur*, 117–19; Keith, *Religion and Philosophy*, 322–23, etc.

VII.50.9: With the standard tr., I supply “come” in c, anticipating *ā gata* in 10a.

VII.59.11: The āmreḍita *ihéha* echoes that in vs. 1, *idám-idam*, forming a superficial ring. Given the apparent composite nature of the hymn, this apparent ring is presumably not a sign of a hymn conceived originally as a unity, but perhaps a hasty adjustment to try to integrate the separate pieces.

Pāda c appears to mean “I choose the/your sacrifice” (*yajñám ... ā vr̥ṇe*), as in Re’s “je choisis votre sacrifice.” But this doesn’t make a lot of sense in its baldest form. Although *ā√vr̥* normally just means ‘choose’, in this passage the *ā* appears to be used as it is with *√yaj*: *ā√yaj* means ‘attract through sacrifice’ (sim. *ā√pū* ‘attract through purification’), hence my “I will you (to come) here to (my) sacrifice,” that is, I attract you to it by the force of my will.

[VII.60–74 JPB]

VII.75 Dawn

VII.75.1: Although the Saṃhitā form *āvo* in pāda a (Pp. *āvaḥ*) is assigned to *√vr̥* ‘cover’ by Gr, it clearly belongs to *√vas* ‘shine, dawn’. See, e.g., AiG I.335. It is rightly glossed by Sāy. with *vyaucchat*. Both roots occur regularly with the preverb *ví* as here (‘dawn widely’ / ‘uncover’) and both are regularly found in dawn contexts. Here *ví ... āvas* explicitly contrasts with *āpa ... āvar* (*√vr̥*) ‘uncovered’ in c.

The latter form makes a bad Triṣṭubh cadence: ... *āvar ājuṣtam*#, where we would expect *-var* to be a heavy syllable. Old (Prol. 424 n. 1) persuasively suggests that this apparent light syllable may actually represent **āvarr* (from original 3rd sg. **āvart*), with the same doubling of final resonant before initial vowel that we find in *-nn* from older **-nt*. He suggests the same for *kar* (IX.92.5) and *abibhar* (X.69.10), both of which would be metrically better as **-arr*.

āv- is something of a signature of this vs.: *āvo ... , āviṣ(kṛṇvānā) ... / āvar*, reinforced by numerous other *a-/ā-*initial words: *āgāt / āpa ... ājuṣtam, āngirastamā ... ajīgaḥ*.

The “truth” (*ṛténa*) of Dawn must refer to her conforming to the standard patterns of the cosmos by dawning every day and indeed her embodiment of these patterns, since the regular alternation of night and day is the most salient sign of cosmic laws. The word here contrasts with *drúhaḥ* ‘deceits’ in c.

Corey Barnes (class, 12/15) pointed out the repeating pattern (*drúh*)*as táma ... (ājuṣ)tam, á(ngir)astamā*, which showcases ‘darkness’.

In d I take *pathyā* as standing for acc. pl. *pathyāḥ* in harmony with the Pp. and the standard views. Scar (137 and n. 191) tentatively suggests taking it rather as an instr. *pathyā* (“gegen den Text”), modelled on *pathyā (jánānām)* in nearby VII.79.1, where either instr. sg. *-ā* or acc. pl. *-āḥ* is possible. Although “awaken the paths” with the acc. pl. is not an entirely straightforward expression, his instr. interpr. not only goes against

the text but also requires supplying an obj. for “awaken” (“der Menschen”), and in addition “awaken (the men) along the path” doesn’t appreciably improve the sense. (Were they sleeping by the roadside?) I assume that “awaken the paths” is shorthand for “filling the paths with (newly awakened) people moving hither and thither and thereby making the paths lively.” An instr. in VII.79.1 fits the context better.

VII.75.2: Like the *āvaḥ* forms (see vs. 1), *bodhi* is ambiguous, and either interpr. could be made to fit the context. Gr takes it to \sqrt{budh} ‘be aware, be awake’, but most later interpr. assign it to $\sqrt{bhū}$ (Old, Ge, Re, Lub). However, I opt for \sqrt{budh} for several reasons. For one thing, as I have shown elsewhere (1997 “Syntactic Constraints on Morphological Change,” 69–74), *bodhi* to $\sqrt{bhū}$ is in virtual complementary distribution with the parallel impv. *bháva*, with *bodhi* confined to pāda-medial position, against *bháva*, which occurs initially and finally. A pāda-final *bodhi* here would violate this distributional rule. Moreover, the last word of the preceding vs. is *ajīgaḥ*, belonging to \sqrt{gr} ‘awaken’, and I think the poet is playing off these two ‘awaken’ roots. Although Old gives numerous supposed parallels with $\sqrt{bhū}$ and the syntactic construction in our pāda, most of these involve dat. infinitives. However, two give me pause — III.54.3 *mahé śú naḥ suvitāya prā bhūtam*, VII.85.4 *āsad ít sá suvitāya ...* — both of which contain the dat. *suvitāya* and a form of ‘be(come)’. On the basis of these passages, I admit the possibility that *bodhi* here belongs to $\sqrt{bhū}$, but still think it likely that the poet is slyly playing with the ‘awaken’ roots. If it does belong to $\sqrt{bhū}$, I would explain its wrong positioning on the basis of strict parallelism between the semantically and syntactically parallel clauses of a and b, with the latter ending with the impf. (*prā*) *yandhi*.

Ge and Re construe *márteṣu* with *śravasyúṃ* (“... Reichtum, der unter den Sterblichen nach Ruhm strebt”; “... la richesse ... qui crée le renom parmi les mortels,” with Re adding a “creative” dimension to *śravasyú-* that does not seem to me to be justified, though it makes the tr. make more sense). I think rather that the sequence *dévi márteṣu mānuṣi* is meant to draw attention to two different relationships that Dawn, a goddess, has with the human world: on the one hand, she comes among mortals (*márteṣu*) every day, awakening the whole human world; on the other, she has a special relationship with the descendents of Manu, that is, the Ārya sacrificial community, a much more restricted set of humans to whom she is more tightly bound by ritual activity.

VII.75.3: The focus shifts from the sg. Dawn of vss. 1–2 to her pl. beams (*bhānāvaḥ*), but with lexical repetition linking them: *āguḥ* at the end of b echoes *āgāt* similarly positioned in 1b, *citrāḥ* repeats *citrām* (qualifying ‘wealth’) in 2c. And the nom. pl. beams and gen. sg. goddess are syntactically intertwined: *eté tyé bhānāvo* [nom. pl. m.] *darśatāyāś* [gen. sg. fem.] *citrā* [nom. pl. m.] *uśāso* [[gen. sg. fem.] *amṛtāsaḥ* [nom. pl. m.].

The phrase *janáyanto daívyāni vratāni* “generating the heavenly commandments” seems to expand on the *ṛténa* of vs. 1: by her dawning, Dawn every day recreates in visible form the rules that govern the cosmos.

VII.75.4: The initial *eṣā syā* “this very one” (fem.) matches *eté tyé* “these very ones” (masc.) opening the previous vs., referring to her beams.

As Old points out, pāda a lacks a syllable (even reading, as expected, *s’yā*). He tentatively suggests **yuyujānā*. It is certainly the case that *yujānā-*, which is fairly

common, never appears in this post-caesura position, while the four occurrences of *yuyujānā-* are all post-caesura. But it is difficult to explain why the corruption would have occurred -- perhaps haplology in the sequence (*s'*)*yā* **yuyu(jānā)*?

The “patterns of the peoples” (*vayúnāni jānānām*) seem almost to be the human equivalent of the *daívyāni vratāni* of 3c.

The pāda-final pres. *jigāti* picks up the aor. forms to the same root, also pāda-final, *āgāt* (1b), *āguḥ* (3b), but it also plays against the likewise redupl. *ajīgaḥ* at the end of 1d, belonging to the separate root *√gr* ‘awaken’.

VII.75.5: *citrā-* reappears in b (cf. 2c and 3b).

The polarized position of the phrases *īṣiṣṭutā* (beg. of c) and *vāhñibhir grṇānā* (end of d) helps anchor the application of *vāhñi-* ‘conveyor’ to ‘conveyor of ritual offerings’, since ‘praised by seers’ is unambiguous. Cf. also I.48.11 *yé tvā grṇānti vāhnayah*.

VII.75.6: And *citrā-* again, for the third time opening a b pāda.

The metaphorical use of *vāhñi-* found in the previous vs. contrasts with the literal use (well, as literal as the RV gets) of the participle *vāhantaḥ* ‘conveying’ referring to Dawn’s horses (*ásvāḥ*).

VII.75.7: The first hemistich consists of four consecutive etymological figures, all nom. sg. fem. + instr. pl. masc. — simple but effective.

On cd see Hoffmann (Injunk. 134).

VII.75.8: Since it directly follows *vāvaśanta* ‘(the cows) keep bellowing (7d)’, *nū no* opening the vs. is surely meant to evoke the root *√nu* ‘bellow, roar’, also used of bovines, with its (pseudo?) intensive (*ā*)*nūnot* (also *nónuv-*), though of course it really consists of particle followed by enclitic pronoun.

VII.76 Dawn

On the intricate structure of this hymn and its relationship to verb tense, see publ. intro. As noted there, vss. 1–2 have augmented aorists referring to the immediate past (*ásret* 1b, *ajaniṣṭa* 1c, *akar* 1d, *adīśran* 2a, *ābhūt* 2c, *āgāt* 2d); vss. 3–4 have augmented imperfects and one perfect referring to the more distant past (*āsan* 3a, 4a, *dadṛkṣé* 3d, *avindan* 4c, *ajanayan* 4d); and vss. 5–7 have present indicatives and imperatives stating general truths and urging action (*sām jānate ... yatante* 5b, *minanti* 5c, *īlate* 6a, *ucha* 6c, *jarasva* 6d, *ribhyate* 7b).

VII.76.1: Unlike the previous hymn, which contains no other divinities, this vs. introduces two (though one without name) before mentioning Uṣas, who enters only as the very last word of the vs. The two other gods are Savitar (b) and Sūrya in his role as “eye of the gods” (*devānām ... cākṣuḥ*, c).

The two virtually synonymous adj. *viśvājanya-* ‘belonging to all people’ and *viśvānara-* ‘belonging to all men’ are juxtaposed across the pāda boundary (a/b); they refer to two different entities: the immortal light (*jyótir amṛtam*), presumably the sun, and god Savitar (*savitā devāḥ*). As such they may also subtly allude to the well-known group,

the All Gods, with their first member(s) *viśvá-* and the ‘men’ words implicitly summoning up the opposite, *devá-*. The pl. gods then show up in c, with another occurrence of *viśva-* in d.

In c it is not possible to determine whose *krātu-* is being referred to. Ge takes it as the gods’, and certainly the adjacency of the two words (*krátvā devānām*) is suggestive. Re seems to favor Uṣas. However, given that it is Savitar’s action in ab that raised the light, I think it likely that the *krātu-* is his.

VII.76.2: On the relation of this vs. to its paired frame vs. 5, see publ. intro. Their relationship is signalled in the first instance by patterned repetition, with 2b and 5b almost identical: *āmardhanto vásubhiḥ* x x x x. This patterned repetition also involves poetic repair. The qualifier *āmardhantaḥ* ‘not negligent’, used unusually of paths in vs. 2b, returns in 5d with a far more appropriate referent, the Fathers or their modern-day representatives, the Vasiṣṭhas. The standard tr. either ignore the identity of the two words, found in the same metrical position, and tr. each in a way that fits the context as the tr. sees it (so Ge “unfehlbar” 2b versus “nicht zurückstehend” 2d) or choose an anodyne tr. that doesn’t reflect the act. transitive morphology of the form (Re “impeccable” in both places). But forms of the root \sqrt{mrdh} generally take an acc. obj. (or an enclitic prn. that is likely acc.) in the sense ‘neglect X’, and we would expect the participle, even negated, to reflect the same usage. As usual, I think it is incumbent on us to follow the morphology, even when it leads us to interpretations that seem, at first, awkward. Here I would first point out that Dawn “awakened” the paths in the previous hymn (VII.75.1d *pathyā ajāgaḥ*), so paths in this group of hymns appear to have more animacy than might be expected. The paths in our vs. are the ones that lead to the gods (*devayānāḥ*), and in this context “non-negligent paths” could be ones that don’t fail to lead us there, perhaps because they stay in good order, as is implied by the qualifier *īṣkṛta-*. As often with such semantic mismatches, the sense that comes from apparently incompatible words construed together is hard won, but it also leads to a deeper understanding of what the poet intended.

In the ppl. *īṣkṛta-* here and in a number of other locutions involving $\sqrt{īṣ}$ + $\sqrt{kṛ}$ (*īṣkartār-*, *īṣkṛti-*, etc.), *īṣ-* behaves like a pseudo-preverb. The most likely default source for this *īṣ-* is the root noun of the same shape meaning ‘refreshment, nourishing drink’ (so EWA s.v. *īṣ-*), although the semantics makes difficulties: the additive meaning we might expect (‘prepare nourishment’ vel sim.) is not found. Instead it seems to mean something like ‘set in order, set to rights, restore’. Although some interpr. the idiom as ‘heal’ (see EWA loc. cit.), I see no good evidence for this in the RV; certainly “healed paths” here would be even more aberrant than “non-negligent” ones. The form here is the only occurrence of the lexeme $\sqrt{īṣ} \sqrt{kṛ}$ in the Family Books; otherwise it is limited to the late RV: the finite verbs *īṣkaram* X.48.8, *īṣkṛṇudhvam* X.53.7, the past participle here and in the cmpd. *īṣkṛtāhāva-* X.101.6, as well as negated *āniṣkṛta-* VIII.99.8 and IX.39.2, agent nouns *īṣkartar-* VIII.1.12 and *īṣkartār-* VIII.99.8, X.140.5, and the fem. abstract *īṣkṛti-* X.97.9. Besides its possible etymological connection with *īṣ-* ‘refreshment’ (textually hinted at only in IX.39.2, X.48.8, 140.5), it also seems to form an antonymic pair with *nīṣ* $\sqrt{kṛ}$ ‘expel’; see the hymn to healing herbs, X.97, where *īṣkṛti-* is contrasted with *nīṣkṛti-*, *nīṣ kṛtha*. This rhyming contrast may account for the ‘restore’ sense, antonymic to ‘expel’. Our passage also contains interaction with a different pseudo-preverb: *īṣ-kṛta-*

can be seen as picking up (*āv*)*ír akar* in 1c. Though the augment induces -*r* sandhi, the underlying idiom is *āvīṣ* √*kṛ* (e.g., IV.4.5 *āvīṣ kṛṇuṣva*) with -*īṣ* matching *īṣkṛta*- here. *purástāt* / *pratīcī* “from the east, facing west” is another example of a paired contrast across a pāda boundary.

VII.76.3–4: As noted in the publ. intro., these two vss. are defined as an omphalos, and this relationship is signaled by the patterned repetition of their first pādas: 3a *tānīd* ... *āsan* / 4a *tá íd* ... *āsan* “just those were ...”

VII.76.3: Despite the straightforward, indeed ballad-like opening (“those were the days ...”), the syntax of the rest of this vs. is difficult to entangle. The problem is that there appear to be two subordinating expressions (*yā* in b, *yātaḥ pári* in c), though it is difficult to identify more than one subordinate clause; if there are two subordinate clauses, one of them would have very sketchy clausal structure. Nonetheless, Ge and Re opt for the latter solution, supplying a verb in b, both taking *yā* as neut. pl. nom. and the subject of this clause (e.g., “Nombreux furent ces jours en vérité qui (surgirent) autrefois ...”); for them cd is then a new subordinate cl. marked by *yātaḥ pári* referring to these same days (e.g., “à la suite desquels ...”). Something like this is possible, and in my many fiddlings with this vs. over the years I have more than once hovered over something like it. But the stumbling block is *prācīnam* in b, which both Ge and Re must take as an adverbial temporal expression (“vorher” and “autrefois” respectively), even though this stem is otherwise only locational ‘forwards / towards the east’, often in a ritual context. I can see no way to integrate the standard use of this stem into a nominal clause consisting only of pāda b. I therefore take bcd as a single subordinate clause with two markers of subordination, *yā* (b) a neut. pl. acc. extent of time (“through which ...”) and *yātaḥ pári* (c) referring to the place from which Dawn comes, picking up *purástāt* in 2c. The *yā* is more narrowly construed with the finite verb *dadṛkṣé* in d (“... the days through which you became visible” -- that is, dawned over and over), the *yātaḥ pári* with the participle *ācārantī* “faring forth thence [= from the east].”

I further take *prācīnam* as the goal of that participle (“faring forth ... towards the east-facing [sacrifice]”). As I just noted, *prācīna-* is often found in a ritual context, modifying *yajñā-* (VII.7.3) or *barhís-* (I.188.4, IV.5.4, X.110.4). Either would be possible here, and the point would be that Dawn is hastening from the east towards the sacrifice that, like an expectant lover, is facing towards her. Assuming with most comm., beginning with Sāy. (see esp. Old’s argumentation) that we should read loc. *jāré*, contra Pp. *jārāḥ*, the acc. *prācīnam* in the frame would be the functional equivalent of *jāré* in the simile -- GOAL -- despite the mismatch of cases, a nice example of case disharmony in a simile (as discussed in my 1982 IIJ article).

Although I realize that this is a very fussy solution, I cannot see any other way to deal with the troublesome *prācīnam*. And it is, after all, an omphalos vs., where perturbations are common. Strictly speaking, my tr. fails to render both subordinators as such: “thence” should be “whence.” But the tr. is hard enough to parse as it is.

The contrastively paired similes, “like (a maiden) faring forth to her lover, not like one going (home) again” (*jārā ivācārantī ... ná púnar yatīva*), are well understood by the standard comm. and nicely indicate that Dawn dawns with as much speed as she can muster, eager for reunion with her lover, rather than lingering like one reluctantly leaving

a tryst. For the first cf. I.123.9 ... *yóṣā ná ... niṣkṛtām ācārantī* “going to the appointed place like a maiden to a rendezvous,” also of Dawn (see also VI.75.4 in the weapon hymn). The *iva* is wrongly placed in the 2nd simile, but the poet had too many elements to fit in as it was.

VII.76.4: Although this vs. begins in the same way as vs. 3, the syntax is quite straightforward, with no dependent clauses and the Fathers as subject throughout. Once again we might consider this an example of poetic repair, given the syntactic difficulties the previous vs. posed.

VII.76.5: As noted above, this vs. marks the transition to present-tense verbs and imperatives from the distant past of vss. 3–4. Who the subject of these verbs is in vs. 5 is not entirely clear. Until the very last syllable of the first hemistich, it is impossible to know even the gender, but the oddly positioned *té* at the end of pāda b identifies the subject as masc.; up until then, since *sāṃgatāsaḥ* could be either masc. or fem., the fem. Dawns are a possibility. The second hemistich repeats the *té* immediately (c), and adds an unambig. masc. adj. *āmardhantaḥ* (as well as potentially ambig. *yādamānāḥ*). Once *té* restricts the subject to masc., our immediate thought would be the Fathers, who are the subject of vs. 4. This is the solution of both Ge and Re. However, the temporal switch between 4 and 5 might speak against that. In vs. 6 the Vasiṣṭhas are explicitly identified as the subject (6a). My own view is that the subject of vs. 5 is deliberately left unspecified, to allow a transition between, and identification of, the Fathers and their latter-day representatives the Vasiṣṭhas. That the Fathers are at least arguably present is suggested by *samānā ūrvé* “in a common pen,” since *ūrvā-* frequently refers to the Vala cave where the cows/dawns are confined and therefore could set the action of the vs. in mythological time when, as the preceding vs. notes, the Fathers “found the hidden light” and “generated the dawns,” as in the Vala myth. As for a contemporary reference, “common pen” could refer to the sacrificial ground, where the Vasiṣṭhas would be acting in concert.

In addition to specifying the gender of the subject of ab, the final *té* also repeats the final syllables of the two verbs that precede it in the pāda, *jānate ... yatante*.

VII.77 Dawn

On the structure of this hymn, as signaled by its verb forms and personal reference, see publ. intro. The first three vss. contain a series of sg. augmented aorists (started with a perfect), all but *ābhūt* with Dawn as 3rd ps. subj.: *úpa ruruce*, *ābhūt*, *ákar*, *úd asthāt*, *ásvait*, *aroci* (which last almost forms a ring with the opening pf.), *adarśi*, into which fem. sg. pres. participles have been interspersed: *prasuvántī*, *bádhamānā*, *bíbhraṭī*, *váhantī*, *náyantī*. Following that we get in vss. 4–5a an equally insistent series of imperatives: *ucha*, *kṛdhi*, *yāvaya*, *ā bhara*, *codāya*, *ví bhāhi*, with Dawn as 2nd ps. subject. In 5b the fem. pres. parts return: *pratirántī*, *dádhatī*. In the last vs. the pattern is broken again: a pl. present *vardháyanti* with the Vasiṣṭhas as subject, found in the only subordinate cl. in the hymn, and in the last pāda before the clan refrain an aor. injunctive in imperival usage, *dhāh*.

VII.77.1: \sqrt{ruc} appears with the preverb *úpa* only here. I connect it with the simile *yuvatír ná yóṣā* “like a young maiden”: *úpa* generally connotes ‘up close, intimate’, and *úpa* \sqrt{ruc} may suggest the beguiling radiance of a beloved young girl close by.

As Re points out, $\sqrt{bhū}$ + dat. inf. is rare. Here *ābhūt ... samídhe* seems to be the intrans./pass. equivalent of a periphrastic causative $\sqrt{kṛ}$ *samídhe*, as in I.113.9 *úṣo yád agnīm samídhe cakārtha* “O Dawn, since you have caused the fire to be kindled,” adduced by both Ge and Re. For a periphrastic caus. nearby, see VII.75.8 *mā ... nidé kar* “Don’t put to scorn ...”

I do not know why we have pf. *ruruce* in a vs. containing two augmented aorists, *ābhūt* and *ákar*, with two more in the next hemistich (2a *asthāt*, 2b *aśvait*); the passive aor. (a)*roci* would have been possible, and is in fact found in 2d.

VII.77.2: Whatever the reason for the pf. *ruruce* in vs. 1, its semi-repetition in the aor. *aroci* in 2d inaugurates a pattern of lexical chaining in the first part of this hymn.

vísavam opening the vs. may pick up *vísvaṃ jīvám* “every living thing” of the previous vs. or anticipate *vísvam* in 3d, where I supply ‘world’.

In c the bahuvrīhi *sudṛśīka-saṃdṛś-* ‘having an appearance lovely to see’ is an internal etymological figure, ... *ḍṛśīka- ... ḍṛś-*. Since the final segment of the cmpd, underlying -ś (or rather the product of nom sg. -ś+s), appears as -g in sandhi, it echoes the -k- of the prior member: *sudṛśīka-saṃdrg-*.

VII.77.3: More chaining: the compound etym. figure with *ḍṛś* in 2c is echoed not only by a repetition of the entire first member of the cmpd. *sudṛśīka-* (3b) but also in the pass. aor. *adarśi* (3c), while the fem. agent noun *netrī* of 2d returns as a participle *nāyantī* (3b), likewise fem., and the aor *aśvait* of 2b matches the adj. *śvetā-* in 3b.

VII.77.4: On the abrupt change of tense/mood and of person here see above and publ. intro. Notably, the lexical chaining stops here as well.

In pāda a *ānti-* ‘nearby’ contrasts with *dūré* ‘in the distance’, though the first is in a cmpd. and the latter is not. The ‘away’ / ‘here’ contrast is also found in c, though *yāvāya* means ‘keep away’ without benefit of preverb or adverb, while *ā* serves for ‘here’. The objects of the antithetical pairs are similar in the two pādas: “(bring) nearby” takes -*vāma-* ‘valuable things’ (a), *vásuni* ‘goods’ (c); “keep/send away” *amítam* ‘foe’ (a), *dvéṣaḥ* ‘hatred’ (c). Re comments similarly. *ānti-* may also implicitly refer back to the semantically similar *úpa* opening the first vs. and mark the beginning of the 2nd section of the hymn. For the complementary opposition *ānti* / *dūrā-* in a similar passage, cf. IX.78.5 *jahí śátrum antiké dūraké ca yáḥ* “Smash the rival nearby and the one who is in the distance.”

The VP *dūré amítam ucha* “dawn the foe into the distance” displays an apparent transitive sense of \sqrt{vas} ‘dawn’. This transitive sense is otherwise limited to *ápa* \sqrt{vas} ‘dawn (X) away’, as in nearby VII.81.6 *uṣā uchad ápa srídhaḥ* “Dawn dawns away failures” (= I.48.8; cf. VII.104.23, VIII.47.18). In our passage the locational adverb *dūré* ‘in the distance’ fills the role of the preverb *ápa* ‘away’, a point also made by Re. Baum’s interpr. (Impv. in RV, 164) of *amítam* as an acc. of goal, in the sense “‘illuminate the enemy (when he is) far away,’ i.e. prevent him from hiding,” is unlikely, and he does not mention the *ápa* \sqrt{vas} passages.

VII.77.5: I take the two *ca*'s in cd as marking a "both ... and" construction: *īṣaṃ ca ... gómad áśvāvad ráthavac ca rádhaḥ* "both refreshment and largesse in cattle, horses, (and) chariots." Though ordinarily we might expect the 2nd *ca* to be placed after the first term in the second constituent (hence* *gómac ca ...*), I explain its late position as resulting from treating the three parallel *-vat* adjectives as a unitary qualifier; it also allows the complementary placements of *ca* in cd: #X *ca* ..., ... *ca* Y#. Klein interprets the passage very differently, taking the two *ca*'s as independent: the first as conjoining the two participial clauses in bc (... *pratirántī* ... / ... *ca* ... *dádhatī* ...)(DGRV I.104–5) and the second as an XYZ *ca* construction, conjoining the *-vat* adjectives (86 and passim).

VII.78 Dawn

On the lexical marks of this hymn, see publ. intro. The signature word *práti* opens the hymn and is repeated at the beginning of the first two pādas of vs. 2 and in the middle of 3a; it returns at the beginning of the last vs. (5), thus sketching a ring. The other signature word, fem. pres. part. *vibhātī*- 'radiating widely' is concentrated in the latter part of the hymn, ending the pādas 3b, 4b, and 5c.

VII.78.2: The lexeme *ápa* √ *bādh* appears, as often, in tmesis. This tmesis appears to be regular even when the lexeme appears, as here, in the participle (univerbated as *apabādhāmāna*- only in the late X.103.4; in tmesis I.35.3, 90.3, V.80.5, IX.97.43 as well as here). But in our passage *ápa* is oddly positioned for a preverb in tmesis (which may account for Gr's failure to register the preverb, as also in V.80.5): immediately following the object and not adjacent to a metrical boundary, ... *bādhāmānā, víśvā támāṃsi duritāpa devī*. Although this aberrant position might suggest that *ápa* is not a preverb here but a postposition or adverb, this would require separating the expression from the well-attested verbal lexeme, which I prefer not to do. I should however note that in vs. 1b *bādhāmānā támāṃsi* is found without *ápa*.

VII.78.3: As noted in the publ. intro., this vs. departs from the practice of the rest of the hymn by referring to plural Dawns.

práty adṛśran in the middle of pāda a repeats the opening of the hymn (1a), with polarized #*práti* ... *adṛśran*#. The plural subject in vs. 1 are Dawn's "beacons" (*ketávaḥ*).

VII.78.5: As noted in the publ. intro., the hapax denom. *tilvilāyādhvam* is the most notable feature of this hymn. This verb is clearly built to the adj. *tīlvila*-, found in V.62.7, where it appears to mean something like 'fertile': *bhadre kṣetre nimitā tīlvile vā* "(the pillar) fixed in the good or ____ field/land." Note not only the *l*-s, but the rhyming *tīl-vīl*-, a word-formation tactic not otherwise found in standard Vedic; the standard assumption is that it is a non-Indo-Aryan word (see, e.g., Kuiper, Aryans 14). The standard interpr. take it as a (presumably more specific) synonym to *bhadrá*-, though of course the *vā* 'or' construction could identify it as a contrast or even opposite to *bhadrá*-. If the word belongs to the agricultural sphere (as *kṣetra*- 'field' suggests), a non-IAr origin makes sense. It is sometimes connected (see EWA s.v.) with *tīlā*- (AV+) 'sesame', which also lacks an IAr etym. The word *tīlvila*- is found in later Vedic; most of the occurrences are in similar passages in the grhya sūtras for the erection of a housepost and are clearly

dependent on RV V.62.7 (e.g., ĀśGS 2.8.16, ŚāṅkhGS 3.3.1), but a ŚB passage seems to place it in the ‘fruitful, fertile, rich’ sphere. The passage concerns a cow let out to wander; whichever direction she goes will predict what will happen to the sacrificer. ŚB IV.5.8.11 *yádi prātīcīyād ībhyaṭilvīla iva dhāṇyatīlvilo bhaviṣyatīti vidyāt* (Eggeling) “If she goes westwards, let him know that he will be rich in dependants and crops.”

VII.79 Dawn

As noted in the publ. intro., *vī* is the signature word of this hymn. The first and last hemistichs of the hymn (1a, 5c) begin with *vī* and a form (indeed two, in the etymological figure in 1a) of \sqrt{vas} : 1a *vy uṣā āvaḥ* and 5c *vyuchāntī*, forming a ring, and *vī* opens 1d, 2a, 3c, 4d as well. This preverb also gets played with in various ways: 2b opens with *vīso* ‘clans’, whose 1st syllable falsely promises the preverb. The regular oppositional counterpart of *vī*, namely *sām*, opens 2c and provides the 2nd syllable of 1c (*susamḍṛgbhiḥ*). The alliteration of 3c is also set in motion by its opening *vī* (see below).

VII.79.1: This vs. echoes the 1st vs. of VII.75 in several ways, and VII.75.1 is helpful in resolving the verbal ambiguities in this one. Our vs. contains two occurrences (pādas a, d) of *vī ... āvaḥ* in exactly that sandhi form. The 3rd sg. augmented root aor. form *āvaḥ* is entirely ambiguous between \sqrt{vas} ‘dawn’ and \sqrt{vr} ‘obstruct, cover’, and the preverb *vī* does not help, since *vī* \sqrt{vas} regularly means ‘dawn widely’ and *vī* \sqrt{vr} ‘uncover, open’. VII.75.1 also contains two such forms, but both of them are in sandhi forms that allow their root affiliation to be unambiguously identified. VII.75.1 opens exactly like our vs., *vy uṣā āvaḥ*, but in VII.75 the sandhi form of the verb is *āvo*, which must belong to \sqrt{vas} . Pāda c of VII.75.1 contains *āvar* (though in tmesis with *āpa* rather than *vī*); again, the sandhi form *-ar* makes it clear that this verb must belong to \sqrt{vr} . Given the parallelism of the two vss., it seems almost as if VII.75.1 is providing a guide to the ambiguities of our vs. In any case the standard interpr. all distribute the *āvaḥ* forms in this vs. as just laid out.

There is another echo between the two vss.: pāda a here contains *pathyā*, which could represent either instr. sg. *pathyā* (so Pp.) or acc. pl. *pathyāḥ* out of sandhi, recalling *pathyā* in VII.75.1d, which must represent acc. pl. *-āḥ* before a vowel. In this passage I favor the instr. sg. Note also that *pāñca ksītīḥ* opening our b pāda opens VII.75.4b.

VII.79.2: Whatever the etymology of *aktú-* ‘night’ -- I favor the connection with PIE **nok^wt-* ‘night’, *pace* EWA s.v.; see most recently LIN 505 and n. 20 -- it is here at least secondarily associated with $\sqrt{añj}$ ‘anoint’ (which for some, e.g., EWA, is its etymon), since *aktūn* serves as obj. of *vy añjate*. My “glossy nights” is an attempt to capture the pun. For those who consider *aktú-* a derivative of $\sqrt{añj}$, *aktūn* here would be an internal obj. / cognate acc.; cf. Oberlies (Relig. v. II.111): “Die [rotglühenden] Morgenröten verstreichen ihre Farbe ...”

In any case, *aktūn* participates in two phonetic figures: *añjate ... ánteṣu aktūn* and the near-mirror-image *aktū(n) ... yuktā(h)*.

As in the previous hymn (VII.78), Dawn is sg. in this hymn, except in one vs., in this case this one; in VII.78, vs. 3.

VII.79.3: #*ābhūd uṣā(h)* is reminiscent of #*ābhūd agnīh* in VII.77.2, though there the construction involved a predicated infinitive. See also VII.76.2 #*ābhūd u ketúr uṣasaḥ*.

Dawn is *īndratamā* because she is *maghónī* ‘bounteous’ as he is *maghávan(t)-*. The splv. suffix *-tamā* echoes *tāmaḥ* ‘darkness’ in the previous vs., 2c.

As Re points out, *suvitāya* in b recalls *duritā* in VII.78.2.

Pāda c displays heavy alliteration: *vī divó devī duhitā dadhātī*. The pattern is set in motion by the preverb *vī*, which, as was noted above, is the hymn’s signature word. The first three words in c have *vī* itself, its inverse (*d*)*iv(ó)*, and a long-vowel variant (*de*)*vī*, but in the meantime the *d* pattern has asserted itself and carries through to the end of the pāda. The elements of this sequence are found nearby each other in other hymns in this cycle, though not with the same intense concentration. Cf. esp. VII.77.5–6: 5b *devi*, 5c *dádhatī*, 6a *divó duhitā*.

VII.79.4: As slowly becomes clear, this vs. concerns the Vala myth, as the last pāda, describing the opening of “the doors of the firm-fixed stone,” illustrates. This slipping into the Vala story accounts for the otherwise puzzling *āṅgirastamā* ‘best / most like the Aṅgirasas’ in the previous vs. (3d; found also in nearby VII.75.1, also in a potential Vala context). The Aṅgirasas, of course, were responsible, along with Indra, for opening the Vala cave and releasing the imprisoned cows; they did so by singing. As Ge points out, the praisers who benefit from Dawn’s largesse in 4b are most likely the Aṅgirasas, and they would also then be the subjects of c.

Note the phonetic echo between *rādho* (a) and (*á*)*rado* (b), which is then found scrambled in d (*dú*)*ro ádr(eḥ)*. Pāda d also contains internal phonetic play with *d*’s and *r*’s, as well as *a*, *u*, and *o*: ... *dṛḥ(asya) dúro, adr(e)r āūr(ṇ)o(h)*. This is the only trisyllabic reading of the augmented stem *aurṇo-* and the vowel hiatus *a-ū* (or *a^vū*?) emphasizes the phonetic figures.

The verb in c, the pf. *jajñúh*, is perfectly ambiguous between *√jan* ‘beget’ and *√jñā* ‘recognize’. It is now standardly taken to the former, though Ge previously (Ved. St.) assigned it to the latter, a stance criticized by Old and silently given up by Ge in his tr.

VII.79.5: As noted in the intro. above, *vyuchántī*, which opens the last pāda of the hymn (save for the clan refrain), forms a ring with the opening phrase (1a) *vy uṣā āvaḥ*. This reinforces the affiliation of *āvaḥ* in 1a with *√vas*, not *√vṛ*.

VII.80 Dawn

VII.80.1: This vs. reprises various parts of the other dawn hymns in this cycle. The first hemistich *prāti ... uṣásam ... abudhran* echoes VII.78.5a *prāti tvā ... budhanta*, with each having the mortal worshipers as subject. (Note augmented *abudhran* versus injunctive *budhanta*.) In c Dawn is “unrolling” the two world halves (*vivartáyantīm*), while in VII.79.2c her cows “roll up” the darkness (*sám ... táma ā vartayanti*) with the preverb *sám* complementary to *vī*. In our vs. *sám* is found in the same pāda in the adjective describing the two world-halves, *sámante* ‘adjoining’. Finally, Dawn’s role in “revealing all beings” (*āviṣkṛṇvatīm bhúvanāni víśvā*) reminds us of her revealing her own greatness (*āviṣkṛṇvānā mahimānam*) in the first vs. of this cycle (VII.75.1b). The act. part. in our

vs. is externally focused, while the middle part. in VII.75.1 properly captures the internal focus of that expression. The act. expression is also found in VII.76.1 *āvīr kar bhūvanaṃ vīśvam uśāḥ*.

Ge takes du. *rājasī* as referring to the Dark (and Light), i.e., Night and Day. But du. *rājasī* ordinarily refers to the two world-halves and is often used in conjunction with *ródasī* (e.g., I.160.4, IV.42.3), and I see no reason to seek a different referent here. Dawn's action of 'unrolling' the two world-halves would refer to the visual effect of the gradual revealing of their features as the dawn's light strengthens. For a similar notion, though with *vī√vr* 'uncover', see the previous hymn VII.79.1 *vī sūryo ródasī cákṣasāvaḥ* "The Sun has uncovered the two world-halves with his eye."

VII.80.2: Because of the middle voice of the part., I interpr. *návyam āyur dádhanā* as referring to Dawn's new life, which she would then assume every day. The middle voice contrasts with VII.77.5 *pratirántī na āyuh* "(she,) lengthening our lifetime." Both Ge and Re seem to imply that in our passage the new life is established for others.

The sg. *abodhi* at the end of the first hemistich matches the pl. *abudhran* in the same position in vs. 1.

Pāda d *prācīkitat sūryam yajñām agnīm* is exactly parallel to VII.78.3 *ājījanat sūryam yajñām agnīm*, which suggests that *ācīkitat* is felt as a redupl. aor. to the caus. *cetáyati*, despite the obvious drawbacks of form (we would expect **acīkitat*).

VII.80.3: This vs. is identical to VII.41.7, though it may fit better here.

The three *-v/matī-* adj., *áśvāvatīr gómatīḥ ... vīrávatīḥ*, modifying the pl. 'dawns' reprise the sequence at the end of the first hymn in this cycle, VII.75.8 *gómāḍ vīrávat ... áśvāvat*, where they qualified *rátanam*.

VII.81 Dawn

VII.81.1: Note the adjacency of *tāmaḥ* and *jyótiḥ*, though here across the pāda break.

VII.81.3: The stem *vānanvant-*, in my opinion, must be separated into two separate words on semantic grounds, neither of which is entirely clear morphologically. In VIII.102.19 and X.92.15, where it is associated with an axe (*svádhitī-*) in the identical phrase *svádhitīr vānanvatī*, it appears to belong with *vāna-* 'wood'. Cf. for the association IX.96.3 ... *svádhitīr vānānām*, X.89.7 *svádhitīr vāneva* But in VIII.6.34 it modifies *matīḥ* 'thought' in a context in which 'wood(en)' seems effectively excluded. In both VIII.1.31 and our passage I also find it difficult to make 'wooden' work, though Ge, for example, thinks our voc. addressed to Dawn (may -- he tags it with ? --) mean "Wagenbesitzende," on the assumption that the wagon is wooden and the material has come to refer to the object made of it. In VIII.1.31, where it modifies 'horses' (*áśvān*), he takes it as referring to their wooden yokes. (He refuses to tr. the form in VIII.6.34.) Mayrhofer (both KEWA s.v. *vānam* and EWA s.v. *vān-*) favors the 'wood' connection as well, and in EWA suggests that *vānan-* is the *-n*-form of a heteroclit, whose *-r-* is found in the locative 1st cmpd member *vanar-* (though one would of course not expect the *-r-* in the oblique). Re, having written in favor of the 'wood' connection (BSL 37: 19), disavows it in his n. to this passage in EVP III, in favor of "gracieuse," on what seem firm grounds. Old

discusses the problem with his customary acuity and decides for a derivation from \sqrt{van} ‘win, hold dear’, with a pun on ‘wood’ in VIII.102.19 and X.92.15. Although I generally favor seeing audacious metaphors in the RV, in this particular case I find that putting all the forms of *vānanvant-* under one rubric unduly stretches the metaphorical fabric -- though I might be open to Old’s suggestion that in VIII.102.19 and X.92.15 there is a pun on ‘wood’, but the form belongs with \sqrt{van} . This does not, however, help with the morphology. I tentatively suggest that the form derived from \sqrt{van} is the result of the further derivation or contamination of originally participial forms. The 8th class present to \sqrt{van} *vanóti* has an act. part. *vanvánt-*; if this acquired a *-vant-* suffix, the result would be in the first instance **vanv-án(t)-vant-*, which by dissimilation of the middle *-v-* could develop into our form (though with accent shift). Or the pf. part. *vavan-váms-* could have dissimilated to **vanan-váms-* (again accent is a problem). Or, starting with the pres. part. *vanv-ánt-*, we could imagine a perseverative form **vanv-an(t)-ant-*, with migration of the 2nd *-v-*. Or we can confect an intens. stem **vanvan-* with participle **vanvan-a(n)t-*, again with flip of the *v*. But all of these scenarios are pure fantasy, I’m afraid. As for the form putatively derived from ‘wood’, I have even less idea, though I suppose it’s worth pointing out that all attested forms from both stems *vānanvant-* actually have the weak form of the suffix *-vat-* and **vana-vatV*, built directly to *vāna-*, would be metrically unfavorable.

VII.81.4: This vs. presents several minor syntactic problems. Pāda b contains two apparent dative infinitives, the almost synonymous *prakhyai* and *drśé*, most likely to be construed with *kṛṇóṣi* in pāda a. The standard interpr. take the two infinitives as separate parallel constructions, though the details of these constructions differ acdg. to tr. (cf., besides Ge and Re, Scar [353] and Keydana [Inf., 167, 203]). As a typical ex., see Scar’s “... die du ... machst, dass man sieht und man das Licht schaut.” Although as far as I know there is no way to tell, I prefer to take both the datives with *svâr*; the standard expression *svâr drśé* indicates that the sun is visible, available for seeing, while *prakhyai* is used in a similar fashion to *cákṣase* in 1c.

The 2nd hemistich is more problematic. The first question is the grammatical identity of *ratnabhājah*, which could be gen. sg. and modify immediately preceding fem. gen. *táśyās te*, or nom. pl. and modify the implied pl. subj. ‘we’ of immediately following 1st pl. *īmahe*. Ge opts for the latter (“... die du Belohnungen austeilst”), but Old, Re, and Scar favor the nom. pl., as do I. For one thing other *-bhāj-* cmpds have similar syntacto-semantic value (“having a share of X”), rather than the transitive sense (“sharing out X”) required by the gen. interpr. It is of course possible that the positioning between the gen. sg. and the 1st pl. was deliberate, and the form is meant to be ambiguous.

The other problem lies in the interpr. of the two verbs *īmahe* (c) and *syāma* (d). The standard interpr. take the pāda break as a clause break (“as sharers of your treasure we beseech you; may we be like sons ...”). I find this mildly problematic, in that *ratnabhājah* would be better construed with *syāma* (“might we be sharers ...”) than with *īmahe*, and I have therefore taken it that way, with *īmahe* parenthetical and the simile in d an adjunct. This interpr. is supported by VI.71.6 *vāmabhājah syāma* “May we be partakers of the valuables” (sim. III.55.22 *sákhāyas te vāmabhājah syāma*). However, my interpr. not only complicates the syntax slightly, but the lack of accent on parenthetical *īmahe* might be troublesome -- though I don’t have strong intuitions on how verbal accent

works with parentheticals. (The one example I can come up with, however, does accent the verb that interrupts the clause: X.95.1 *mānasā tīṣṭha ghore vácāṃsi miśrā kṛṇavāvahai nau* “Thoughtfully -- stand still, fearsome woman! -- let us two now exchange words.”) In any case it might be better to follow the standard interpr. and tr. something like “we beseech you ([for us] to be) sharers in your treasure; may we be like sons to a mother” -- though as the tr. shows, taking *īmahe* with *ratnabhājah* requires more semantic machinery.

In c *tásyās te* is a fairly unusual ex. of the double *sá tvám* construction. As is sometimes the case with oblique forms of this construction, I think it likely that the *tásyāḥ* is there to indicate the gender of the personal pronoun -- though, given the Dawn context, the fem. gender of *te* could hardly be a secret.

VII.81.6: *codayitrī maghónaḥ* is perfectly ambiguous, since *maghónaḥ* could be either gen. sg. or acc. pl. In the former case it would refer to Indra, the archetypal *maghāvan-*, in the latter to the pl. patrons (the *sūrī-* referred to in pāda a). According to the standard distribution of cases, suffix-accented *-tār-* agent nouns should take the gen.; indeed our stem does just that in I.3.11 *codayitrī sūnṛtānām*. However, this distribution is not absolute, and given the recent mention of the pl. patrons and the absence of Indra from this hymn (and mostly from this hymn cycle), a pl. reading is quite possible as well.

sūnṛtātvatī at the end of c forms a faint ring with *sūnārī* at the end of vs. 1. Note that it also recalls I.3.11 just cited.

[VII.82–89 JPB]

VII.84 Indra and Varuṇa

VII.84.3: Note that JPB tr. *tiretam*, an opt., as an impv.

VII.86–89 Varuṇa

For a detailed examination of these hymns see my disc. in *The RV between Two Worlds* (2007: 92–108).

VII.86 Varuṇa

VII.86.7b: ‘god’ omitted → “to the ardent god”

Re treats VII.90–92 in EVP XV.105–9.

VII.90 Vāyu / Indra and Vāyu

VII.90.1: As noted in the publ. intro., this hymn plays on the two senses of *niyút-* in Vāyu context: his teams of wind-horses and our teams of poetic thoughts. This ambiguity is fully on display in pāda c *vāha vāyo niyúto yāhy áchā*, where acc. pl. *niyútaḥ* is stationed between the two imperatives. *vāha* and *yāhy*. The latter is interpr. by the Pp. as accentless *yāhi*, but in this sandhi situation, followed by initially accented *áchā*, it could also represent *yāhí*. If this impv. is unaccented, *niyútaḥ* should be construed with it, with a

clause boundary after preceding voc. *vāyo*. If it is accented, it should begin a new clause and *niyútaḥ* should be construed with *vāha*. The situation is complicated by the semi-parallel passage I.135.2 *vāha vāyo niyúto yāhy asmayúḥ*, where unaccented *yāhi* is the only choice because the following word does not begin with an accented vowel. If *niyútaḥ* is to be construed with *yāhy*, it is an acc. of goal and refers to our teams (poetic thoughts); if with *vāha*, it should refer to Vāyu's teams. Curiously, both Ge and Re in both passages choose to construe *niyútaḥ* with *vāha* (e.g., "Fahre, Vāyu, die Niyut-Rosse, komm here!"), even though in I.135.2 this interpr. should be excluded. Old (ad I.135.2) opts for the other construction and tr. "fahre, Vāyu; zu (unsern) *n.[iyút-]* komm." This interpr., the only one strictly possible in I.135.2, is further supported by III.35.1=VII.23.4 *yāhī vāyúr nā niyúto no áchā* "Travel like Vāyu to our teams" where *niyútaḥ* is clearly construed with *yāhī*. However, just because *niyútaḥ* needs to be construed with *yāhy* in our passage and in I.135.2, construing it also with *vāha* isn't excluded -- so an alt. tr. of this passage and of I.135.2 could be "Drive (your teams), Vāyu; travel to our teams." See also 3c.

VII.90.2: The rel. *yāḥ* in pāda a may be somewhat deeper in the clause than we would like, following both the indirect obj. *īśānāya* and the direct obj. *prāhutim*.

VII.90.3: I take *dhāti* as a root aor. subjunctive (as apparently also Kü, judging from his tr. "... soll ... führen ...," p. 186); unfortunately it does not have a distracted root vowel, but see disc. ad IV.8.3 as well as my forthcoming article on *dāti-vāra*.

Note the extreme alliteration of b: ... *devī dhiṣāṇā dhāti devām*, with mirror-image plain and aspirated voiced stops, as well as the etym. figure *devī ... devām* enclosing the whole.

The *niyút-* in this vs. are explicitly identified as Vāyu's 'own' (*svāḥ*), which supports the view that the *niyút-* in 1c are not Vāyu's but ours.

The question in d is the referent of *vásudhiti-* 'treasure-chamber'. Both Gr and Ge identify it as Vāyu himself, though this seems pretty much excluded by the fact that acc. *vásudhitim* is conjoined with the other acc. *vāyúm* (c) by *utá* (see Klein DGRV I.323–24, though he also suggests Vāyu could be the referent). Old suggests Indra (flg. Pischel), and Re so renders it in tr. To me Agni seems more likely than either Indra or Vāyu, since Agni is actually called a *vásudhiti-* in I.128.8, and *śvetá-* 'gleaming' is more appropriate to Agni than to either of those gods. (For Agni as *śvetá-* see, e.g., V.1.4.) However, to my mind the most likely referent is Dawn, a possibility also floated by Re. Dual *vásudhiti-* occurs twice (III.31.17, IV.48.3), both times of Night and Dawn. In both cases the noun is modified by dual *kṛṣṇé* 'black', which of course characterizes only one of the pair and evokes the opposite, suppressed quality, 'bright' (see comm. ad IV.48.3). In IV.48.3 the two treasure-chambers are intimately associated with Vāyu and his journey to the sacrifice. Note also that the dawns show up in the very next pāda in our hymn (4a). The one obstacle to identifying *vásudhitim* here as Dawn is that the accompanying adj. *śvetām* is masc., but this would be problematic in any case, if it modifies *vásudhiti-*, because the noun itself is fem. (see du. fem. *kṛṣṇé* just cited)—though it can have a masc. referent (e.g., I.128.8 *agním hótāram īlate vásudhitim* "They invoke Agni, the Hotar, [as] treasure-chamber"). I assume that **śvetām* has been redactionally shortened (without metrical consequences, since it precedes a consonant-initial word) on the basis of such

equational passages, or perhaps on the basis of such passages *vásudhiti-* was simply interpr. as masc. here.

VII.90.4: In the publ. tr. the injunc. *uchán* is rendered as a preterite; I'd now be inclined towards a pres. "the dawns dawn," if the vs. depicts the ritual scene unfolding. If, however, it is an account of the Vala myth, a preterital *uchán* would be better. Since there is probably split temporal reference here, describing the actions both of the mythical Āṅgirasas originally opening the Vala cave and of the priests reenacting this mythic model, the injunctive *uchán* can fit both scenarios—likewise the perfects that follow (*vividuḥ* b, *ví vavruḥ* c, *sasruḥ* d), since that tense can be used both for both distant and immediate past. Unfortunately English does not have a temporally un- (or under-)marked tense like the injunctive, and so a choice between present and preterital translations has to be made.

On the basis of the next hymn, VII.91.4 *náraḥ ... dīdhyānāḥ* (and see also our 5a), the subject of b should be 'men' or the Uśij-priests in the next pāda, though the 'dawns' of the previous pāda would technically be available.

I did not render *cīd* in c in the publ. tr. Cf. V.29.12, where the same phrase opens the pāda and *cīd* likewise appears to be functionless. It could perhaps mean 'also' here, as a second action after finding the light.

On *ānu pradīvaḥ* see Old's extensive disc.

VII.90.5: If the previous vs. had two temporal reference points, this one seems completely focused on the ritual here and now. As noted in the publ. intro., the priests have become the draught animals that draw Indra and Vāyu's chariot -- alluding to the trope of sacrifice as chariot.

VII.90.6: As noted in the publ. intro., the use of *īśānā-* 'having dominion' here cleverly assimilates the patrons modified by this participle with Vāyu (2a) and Indra-Vāyu (5d), who receive the same modifier.

Ge (n. 6a) persuasively suggests that the striking phrase "confer the sun on us," with the patrons as subject, refers to "the great light of the Dakṣiṇā" (priestly gift). This is reminiscent of the biblical quotation "Let your light so shine before men ..." that always preceded the taking up of the collection in the Episcopal church of my youth.

VII.91 Vāyu / Indra and Vāyu

VII.91.1: For my interpr. of the context of this vs. see the publ. intro., where I suggest that the vs. depicts the primal situation before the ritual was first instituted, with the gods existing without a sacrificial compact. I take *purā ... āsan* as existential, "existed previously," as I do almost the same construction (but with pf., not impf.) in IV.51.7 *purāsuḥ* -- but not *purā-āsitha* in VI.45.11, where the *purā* is contrasted with *nūnām* in disjunctive *vā* clauses. The existential reading seems to me preferable to a predicative one, whether *ṛdhāsaḥ* or *anavadyāsaḥ* were to be predicated.

The construction of *kuvīd* is unusual, in that it appears on the surface that the *kuvīd* construction consists of a rel. clause introduced by *yé* without a main clause. Old's first suggested rendering is of this type ("Bewiesen sich wohl einst die Götter als

tadellos?"); similarly Hettrich (Hypotaxe, 145). But Old alternatively suggests supplying a main verb with *kuvíd* with the relative clause subordinate to that clause ("Wie denn (verhielten sich) die Götter, welche ... waren?"), a syntactic solution silently adapted by Re. In either case *āsan* would unproblematically be accented because it belongs to the rel. cl. Although my interpr. differs somewhat from Ge's, we both take *āsan* as the verb of the main clause with *kuvíd* ("Ganz gewiss waren es schon früher die untadeligen Götter ..."), with the rel. clause either requiring a verb to be supplied (Ge) or simply being a nominal rel. cl. (me). By this interpr. the accentuation of *āsan* would contradict Gr's rule (s.v. *kuvíd*) that the verb introduced by *kuvíd* is accented only when it is in the same pāda -- but see comm. ad II.35.1 for further violations of this "rule." The construction I envisage runs into another problem, that the rel. cl. (*nāmasā yé vṛdhāsaḥ*) would seem to be embedded in the main clause *kuvíd ... āsan*). But we have seen elsewhere (e.g., VI.21.2, 22.5, 64.5, 6) that *nominal* relative clauses can function as pseudo/proto-izafe constructions and be embedded in the matrix clause. Here the rel. cl. would, further, precede the main clause proper, beginning with *purā*, and be preceded only by the rhetorical introductory *kuvíd aṅgá*, so its "embedding" is slight. This example would differ from the norm in being preposed to its referent, *devāḥ* in the next pāda.

For "hard-pressed Manu" see VI.49.13.

VII.91.2: Ge (n. 2a) suggests that *ná* in pāda a stands for haplologized **ná ná*, with both the simile particle ("Willig wie Boten") and the negative ("... nicht zu hintergehen"). Certainly it must represent the negative with infinitival dat., since *ná dábhāya* occurs twice elsewhere (V.44.3, IX.73.8) with *gopá-*, but it is less clear that we need the simile marker. Though Indra and Vāyu are probably not technically messengers in the way that Agni is, I see no real problem in identifying them thus when they come to the sacrifice from the heavenly world, rather than simply comparing them to messengers.

I do not entirely understand why *pāthāḥ* is accented, and, unusually, Old makes no comment in the Noten. I assume that it falls roughly in the category of expressions with a single verb and "zwei Subjekten, Objekten u. s. w." (specifically here the u. s. w.) treated in Old's lengthy article on Verbalenklisis in the Rig Veda (ZDMG 60 [1906]:707–41 = KISch 182–216; cited phrase p. 708=183), though in a rather cursory scan of the article I did not find this passage. The triggering phrase here would be *māsás ca ... śarádaś ca pūrvīḥ* "though the months and many autumns," with the accented verb in the middle, even though the conjoined NPs are not contrastive.

Ge tr. the just cited phrase with "viele Monaten und Herbst," though technically speaking fem. *pūrvīḥ* can only modify *śarádaḥ*, to which it is also adjacent. Klein (DGRV I.134) echoes Ge's interpr. forcefully ("... must be taken with both conjoined nouns" [my ital.]), and no doubt this is the ultimate intent, though I find preferable the rendering that matches the grammar (so also Re without comment).

VII.91.3: As discussed in the publ. intro., I differ from the standard tr. (which consider Vāyu the subject of ab and the referent of the acc. pl. in pāda a to be the sacrificers) in considering this first hemistich a disguised reference to the soma offered to Vāyu. Although the Vāyu identification might seem the default -- and it indeed may be correct -- both the vocabulary and the ritual situation seem to point in another direction. The descriptor *sumedhás-* is never otherwise used of Vāyu, but it is applied 3x to Soma or his

drop (IX.92.3, 93.3, 97.23); the only figure who receives this epithet more often is Agni. Similarly *śvetá-* is not used of Vāyu (for the supposed application in the immed. preceding hymn, VII.90.3, where I think it refers to Dawn, see comm. ad loc.), but does apply to a drop (*drapsá-*) in nearby VII.87.6, while Soma makes himself a *śvetá-rūpá-* in IX.74.7. The adj. is also used of horses (VII.77.3), and perhaps, in conjunction with *niyútām abhiśrīḥ* “the full glory of the teams,” Soma is configured here as the lead horse of the “teams” of offerings we will make to Vāyu. The beings (acc.) that the subject accompanies (*siṣakti*) are called *pīvoanna-* ‘whose food is fat’, a hapax. It seems an unlikely epithet of human sacrificers, as the standard interpr. requires. It might describe the ritual fires, but it is most clearly reminiscent of X.100.10 *úrjam gāvo yāvase pīvo attana, ṛtasya yāḥ sādane kóse aṅgdhvé* “O cows, eat nourishment in the pasture, eat fat, you who are anointed in the cup, at the seat of truth,” addressed to the milk to be ritually mixed into the soma. The masc. gender of *pīvo-annān* is something of a stumbling block to this interpr., but it might result from the variable gender of the underlying referent *gó-* ‘cow’ or reference a masc. term for milk or liquid in general. The other acc. pl. in this pāda, *rayivīdhah*, is a hapax, though reminiscent of *nāmasā ... vīdhāsaḥ* in 1a. Like the numerous other cmpds in *-vīdh-* the root noun 2nd member could have either intransitive/passive value with the 1st member in an instr. relationship (‘strong/increased by wealth’) or transitive value with an acc. 1st member (‘increasing wealth’) -- though most *-vīdh-* cmpds conform to the former type. Ge interpr. it as transitive (“die ... ihre Reichtümer mehrend”), Gr as intrans.; Old fails to comment, and Re takes refuge in vagueness (“ayant ... une richesse abondante”), which seems to lean towards the intrans. Scar (521) allows both possibilities in his gloss, though his tr. of the passage follows the transitive path, “die ihren Reichtum mehren,” echoing Ge. For my larger interpr. of the passage, either would more or less work, but neither adds much or seems particularly apt.

To sum up, though I don’t reject the Vāyu / human ritualist interpr. of the nom. / acc. in ab out of hand, I think an identification of the nom. as Soma and the acc. as the cows(’ milk) with which soma is mixed works better in the passage. (I do have to admit that Indra and Vāyu drink *clear*, unmixed soma in the very next vs.) Alternatively we might consider the ritual fire (specifically the one that receives the offerings, later called the *Āhavanīya*) the subject and the libations themselves the acc. And, on the basis of VII.92.3 in the next hymn I also now wonder if the acc. referents in ab might be the teams of wealth we meet in that vs. Basically, no single interpr. of this vs. can account for all the elements of it.

My interpr. of c follows from that of ab. I take the pl. subj. to be the drops of soma, extending themselves as offering to Vāyu -- not the priestly sacrificers. Only in d do these sacrificers make their appearance (*nāraḥ*).

VII.91.4: Both Ge and Re take ab as a series of subordinate clauses truncated without a main cl. By contrast, as I indicated in the publ. intro., I think that the *yāvat* ‘as long as’ clauses in ab project the future temporal limit to the institution of sacrifice, with cd inviting the gods to participate as long as it will last.

ḍīdhyānāḥ in b matches the same word in the same position in the immed. preceding hymn VII.90.4b, though the contexts are different.

The 2nd du. act. aor. impv. *pātam* in c echoes the 2nd du. act. pres. *pāthāḥ* in 2b, but these two root forms belong of course to two different roots $\sqrt{pā}$, ‘drink’ and ‘protect’

respectively. Both of them are anchored to their roots by root-noun cmpds closely preceding them, *go-pā* ‘cow-protectors’ (2a) and *śuci-pā* ‘drinkers of the clear (soma)’ (4a), both dual and both subject of the following verb. In fact *śuci-pā* looks both left and right, with elementary etymological figures on both sides: *śucim̐ (śomam̐) śucipā pātam̐*

VII.92 Vāyu / Indra and Vāyu

VII.92.2: For *śomam* as obj. of *prá√sthā*, see parallels cited at VI.41.2.

VII.92.3: I assume that the object of Vāyu’s quest in our house is soma. Other interpr. take *iṣṭāye* differently: Ge “um gern in sein Haus zu kommen,” which seems quite loose; Re “pour (aller le) chercher en (sa) demeure,” with the referent of “le” apparently *dāśvāmsam* of pāda a, which I suppose is possible.

As disc. in the publ. intro., this vs. makes clear the equation between the teams (*niyút-*) in ab that Vāyu drives to the sacrifice, his wind-horses, and the teams of wealth he hitches up (*ní ... yuvasva*) for us in cd. In cd we would expect an accusative resumptive prn. *tān* or the like, picking up the rel. phrase *yābhiḥ ... niyúdbhiḥ* of ab and serving as obj. of *ní ... yuvasva*. The absence of this prn. is presumably what led Ge to pronounce the *yābhiḥ* of a as “die freie Verwendung des Relatives” (n. 3) and to tr. the subordinator with “Wenn.” But I think rather that the objects in cd stand for the missing **niyútaḥ*. Though the noun *niyút-* doesn’t appear explicitly in cd, elsewhere that noun can be obj. of its etymologically twin verb; cf., e.g., I.180.6 *ní yád yuvéthe niyútaḥ ...* and, in the immediately hymn, the passive phrase *niyuvānā niyútaḥ ...* (VII.91.5). Therefore the accusatives in cd expressing wealth and its material realizations are implicitly equated with *niyút-*. The important complementarity of the two forms of *ní√yu* in the two hemistichs is disguised by Ge’s bland translation of the verb in c: “gib uns”; similarly Klein (DGRV I.26) “grant to us.”

In the phrase in d *vīrām gavyam áśvyam ca rādhaḥ* “(a) hero and bovine and equine bounty,” the sg. *vīrām* is superficially unsettling and disharmonious: surely we want more than a single hero! But *vīrām* most likely is meant to characterize *rādhaḥ*, along with the common adjectival collocation *gavyam áśvyam*. However, an adjectival *vīryá-* *‘consisting of heroes’ is blocked, because that stem has been frozen as a neut. substantive meaning ‘heroism, heroic deed’. I would now be inclined to reflect what I consider the substitution of *vīrā-* for the non-functional adjectival stem and tr. the acc. phrase as “(teams that are) well-nourishing wealth for us, *bounty in heroes*, in cows and horses.”

VII.92.4: The standard interpr. (Old, Ge, Re) take the nom. pl. rel. *yé* of ab to be coreferential with the instr. *sūrībhiḥ* ‘with the patrons’ in c. This is certainly possible, but I follow Thieme (Fremd. 20) in taking it rather with the 1st pl. subj. of *syāma* in c, hence “(we) who ...” There is no morphosyntactic way to tell, as the rel. cl. of ab has no finite verb, so the person of *yé* is unspecified. I favor “we” because cd seems to set up a contrastive pair of the two instr. pl. in c / d (*sūrībhiḥ* / *nībhiḥ*), with which we accomplish complementary feats: smashing obstacles along with the patrons (c), conquering in battle

with the superior men (=warriors) (d). If the first hemistich refers exclusively to one of these instrumentals the rhetorical balance is disturbed.

I do not follow Thieme (Fremd. 20 n. 1) in accepting the old suggestion (conjectured by Gr; see Old for further lit.) that the Samhitā *vāyāva* should be taken as a nom. pl. *vāyāvaḥ*, against Pp. dat. sg. *vāyāve*, as an adj. ‘serving Vāyu’ vel sim. As Old points out, the dat. is supported by *té vāyāve* found twice in the preceding hymn (VII.91.1, 3), like our *yé vāyāve*, and in any case the posited adjectival form would be morphologically dubious (see, e.g., Re’s remarks inter alia). Most supply another nom. pl. adj. to construe with dat. *vāyāve*; cf. Ge’s “die dem Vāyu (opfern),” Re’s “(étant) au (service de) Vāyu.” But I think this is unnecessary: I take the phrase *vāyāva indramādanāsaḥ* as an example of the fungibility of compounds and free syntagms with the same structure. In other words, I would extract the \sqrt{mad} form from the cmpd and construe it also with dat. *vāyāve*. This is a particularly nice ex. of the makeshifts employed to avoid three-member cmpds – here even splitting up a dual dvandva. Although transitive forms of \sqrt{mad} generally take the acc., cf. for the dative IX.25.1 *marúdbhyo vāyāve madaḥ* “exhilarating (drink) for the Maruts and for Vāyu” and, with the same nominal form as here, VII.31.1 *prá va indrāya mādanam, háryaśvāya gāyata* “Sing forth your exhilarating (song) to Indra of the fallow bays,” though the dat. there is more likely controlled by the verb *prá* $\sqrt{gā}$. The connection between Vāyu and \sqrt{mad} is reinforced in the next vs.: 5c *vāyo ... mādayasva*.

With Old, Re, Thieme (loc. cit.), I take *aryāḥ* as gen. sg. of *arí-*, construed with *nitósānāsaḥ*, not as nom. pl. with Gr, Ge.

In cd the opt. *syāma* seems to serve as a modal-establishing auxiliary to the participles *ghnāntaḥ* (c) and *sāsavāmsaḥ* (d), perhaps a more economical and less clumsy alternative to two separate optatives (*hanyāma* and *sāsaḥyāma*) or else a makeshift attempt to express repeated modal action (expressed by my parenthetical “be (always) X-ing”).

In d *amitra-* seems deliberately positioned verse-final to contrast with *aryāḥ*, which ends the previous hemistich, and therefore most likely has its full etymological sense -- ‘(one) without alliance (to us)’ -- in opposition to *arí-*, which identifies members of our larger sociopolitical community, even if unknown to us personally.

Re treats VII.93–94 in EVP XIV, starting p. 55.

VII.93 Indra and Agni

Both Ge and Re remark on the prominence of the word *vāja-* in the hymn (“Das Schlagwort ist *vāja-*”; “Thème du *vāja-*”). Although I would certainly not deny that, the word does not seem to call attention to its dominance in the way that other signature words often do: not only is it absent from three of the eight vss. (4, 5, 7), but especially at the beginning (vss. 1–3) it is not prominently positioned (not at a pāda boundary or after the caesura) nor positioned in the same place in the vs. line -- both being ways in which a word can assert itself -- nor does it repeat the same case and number. In vss. 6 and 8 it is hemistich-final (6d, 8b) and so becomes slightly more salient. In other words, it’s certainly a theme, but a somewhat muted one.

VII.93.2: The first hemistich is hyper-alliterative, with sibilants *s* and *ś* and, esp. in the 2nd pāda, *v* and *u*, all tied together by alternations of short and long *a*: *tā sāsāś śavasānā hī bhūtām, sākamvṛdhā śāvasā śūśuvāmsā*. This phonological effect is reinforced by the etymological figure of *śavasānā ... śāvasā śūśuvāmsā*, all belonging to the root √*śū*, *śvā* ‘swell’. To capture the etymological relationship I would be inclined to adjust the publ. tr. to “o swelling ones .. swollen with swelling (strength).”

It is difficult to say which of the qualifiers is/are being predicated of Indra and Agni with the *bhūtām*, but Ge, Re, and I seem all to have settled on *sāsāś*.

vāja- is modified by *ghṛṣvi-* in IV.32.6, 9 and by *sthāvira-* in VI.1.11, 37.5. The two adjectives seem, if not contradictory, at least slightly incompatible, but note that Indra is qualified by the same two adjectives in the same order, case, and metrical location as here in III.46.1, VI.18.12. In keeping with the Indraic slant to this hymn (on which see publ. intro.), it seems as if a phrase more appropriate to Indra has been transferred to the prize.

VII.93.3–4: There is no main clause in vs. 3: the three co-referential participial phrases (... *ichāmānāḥ* b, ... *nākṣamānāḥ* c, ... *jóhuvataḥ* ...d) all simply expanding on the dependent cl. of pāda a, *úpo ha yád ... gúḥ* “When they have come”). However, the first pāda of vs. 4 echoes 3b exactly, save for number: 3b ... *víprāḥ prāmatim ichāmānāḥ* (pl.) versus 4a ... *víprāḥ prāmatim ichāmānāḥ* (sg.), vs. 4 seems to continue vs. 3. Interestingly enough, it is not possible to determine whether his new start in 4 is a main clause or continues the dependent cl. in vs. 3 -- though Ge, Re, and I all take it as an independent cl. The problem is that the finite verb *īṭe* opens the second pāda; its accent then can be owing to its metrical position and it can be a main-cl. verb (as we all interpret it). However, the accent could also signal that it’s the verb of a dependent cl., and the whole complex of vss. 34 could be interpr. “When the prize seekers have come ..., (when) the inspired poet ... invokes ..., (then,) o Indra and Agni, further us ...” -- in other words 4cd would supply the main cl. for all of 3–4ab.

VII.93.7: In d the verb is pl. (*śísṛathantu*), but only two gods, Aryaman and Aditi, are mentioned in the pāda; the subjects must therefore include the gods found in b.

VII.94 Indra and Agni

As noted in the publ. intro., this hymn is made up of four ṛcas, which were probably originally independent, since four 3-vs. hymns would fit the standard pattern of hymn arrangement, but a single 12-vs. hymn following one with 8 vss. would not. There is little sign of unity within the separate ṛcas, but the content of the hymn as a whole is so generic that it would be hard to identify features that would either unify or distinguish the various parts. Also, there may be a faint, probably secondary, ring between the 1st vs. (1c) and the last (12d) (see comm. ad vs. 12), which may suggest that the four ṛcas were combined into a single hymn even before the redaction of the Saṃhitā text. The first ṛca (vss. 1–3) also has a faint sign of internal unity: the dual dvandva voc. *īndrāgnī* beginning the b-pāda in each vs. However, the 3rd ṛca (vss. 7–9) also contains the same form in every vs. (7a, 8c, 9c), and 10b also begins with this compd., though there it is not a voc. but an acc., and it requires a distracted reading (*indrā-agnī-*).

VII.94.1: Both Ge and Re take *ajani* ‘has been born’ in c as the main verb for ab, while I take ab as a separate nominal cl. Either is possible. I would be more inclined towards the Ge/Re solution if *mánmanaḥ* were an ablative, parallel to *abhrāt* in the simile (“has been born *from this conception, like rain from a cloud”). But though *mánmanaḥ* itself could be abl., it is anchored as a gen. by *asyá*, which must be adjectival (and hence go with *mánmanaḥ*) because of its accent. In fact, at least in tr. “this ... praise hymn of this conception” is a clumsy expression, though both Ge and Re make it slightly less so by adding ‘mine’ (“of this conception of mine”). Though the 1st ps. ref. is not found in the text, it does ameliorate the tr. The point is the usual one, that the verbal product, the hymn, arises from the poet’s mental functions.

VII.94.2: This vs. traces the genesis of the praise hymn further back: the poet’s insight (*dhî-*) / conception (*mánman-*) that produces is the hymn is itself the product of the gods’ stimulation, here expressed by *pipyataṃ dhíyah* “swell his insights.”

VII.94.4: The loc. phrase *índre agnā* beginning this *ṛca* echoes the repetitive voc. dvandva *índrāgnī* of the 1st *ṛca*.

VII.94.5–6: Both vss. begin with the dual pronoun *tā*, but the first is 3rd ps. (“these two”) and object of a 3rd ps. verb (*īlate ... víprāsaḥ* “the inspired poets invoke those two”), while the 2nd, followed by 2nd ps. enclitic *vām*, has switched reference to 2nd ps. and is object of a 1st ps. verb (*havāmahe* “we call upon you two”) -- thus effecting a relationship of considerably more intimacy.

VII.94.7: On *īśata* see comm. ad I.23.9.

VII.94.8: On my reading **akásya* for *kásya* after *mā*, see comm. ad IV.3.13.

VII.94.10: This vs. is a fragment, a *yád* clause without a main cl. It also contains an augmented intensive *ājohavuh*; this preterital form seems out of place in a hymn that lives almost entirely in the ritual present (our actions for Indra and Agni) and immediate future (via the imperatives we address to those same gods). (Only *ajani* in vs. 1 is preterital, but this aorist refers to the immediate ritual past.) The verse is also one of the few in this hymn that lacks parallel *pādas* or near repetitions elsewhere. (See Ge’s nn and Bloomfield, RReps for some of the details, though Bloomfield does not list partial repetitions.)

VII.94.11: This vs. is likewise a fragment, a nom. dual dvandva (*vṛtrahántamā*), which supports a rel. clause characterizing Indra and Agni, but no main clause. By my interpr. (and those of Ge and Re), this rel. cl. is nominal, with a predicated part. *mandānā*. Old takes the ambig. *āvīvasataḥ* as a dual finite verb (but cannily doesn’t tr.); this interpr. requires an anomalous meaning for the form, whereas the interpr. as a gen. sg. participle, shared by Ge, Re, and me, allows the form to have its usual sense (“seek to win [the gods]”).

VII.94.12: The 3rd ps. ref. of the nom. du. in vs. 11 is transformed into 2nd ps. ref. by the 2nd du. impv. *hatam* in 12b, mediated by the dual prn. *tāū*, which in this context, with a flg. impv., can have either 3rd or 2nd ps. ref. (see my “*sá figé*”).

Ge and Re take *ābhogá-* and *udadhí-* as PNs, which seems odd since both words are easily interpretable. The latter is in fact attested in other passages as a common noun meaning ‘water-holder, reservoir’ and its components are clear. I assume that the reason for assuming a PN is that a ‘water-holder’ is considered to be a positive entity, and since it is to be smashed, it must be negatively viewed here. But “holding” water can shade into “withholding” water, a negative action, and *udadhí-* here may refer to the Vala cave (see comm. ad X.67.5, 111.4, and also HPS Vedisch *Vrata* 47 n. 84). We might here also invoke the first vs., where the hymn is produced “like rain from a cloud.” A cloud can be considered a ‘water-holder’, and the positive and negative aspects of water-holding may be contrasted in the 1st and last vss. As indicated above, although I do think the *ṛcas* in this hymn were originally independent, some sense of ring composition might have gone into their combining.

As for *ābhogá*, Old seriously doubts the gloss ‘snake’ found, e.g., in Gr. But I’m somewhat puzzled as to why. There is certainly a root *√bhuj* ‘bend, coil’ distinct from *√bhuj* ‘enjoy, benefit’, and *bhogá-* definitely means ‘(snake’s) coil’ in reference to *Vṛtra* in V.29.6 ... *bhogān sākām vājreṇa maghāvā vivṛścāt* “the bounteous one hews apart his [=Vṛtra’s] ... coils at one blow with his mace.”

VII.95 Sarasvatī

VII.95.1: The problem in this vs. is *rathyèva* in c. Contextually the most obvious interpr. is as a nom. sg. fem., subject of *yāti*, but assuming the correctness of the Pp. reading, *rathyā iva* (and there is no other viable alternative), it is difficult to find a way to get there morphologically. If it belongs to the *vrkī*-inflected *rathī-* ‘charioteer’, the nom. sg. should of course be *rathīs*. Gr assigns it to this stem, but as an instr. sg., but who would this other charioteer in the instr. be? Ge/Re also interpr. as an instr., but to a stem *rathyā-* ‘Fahrstrasse’ / ‘une route-carrosable’. See Ge’s somewhat opaque comm. in the 4th vol. of his tr. (p. 252, col. 3, ad II.4.6b) and Old’s more illuminating one, interpreting a previous, but similar formulation of Ge’s (ZDMG 61 [1907] 831–32 = Kl.Sch.262–63). Old himself prefers an interpr. as an acc. pl. *rathyāḥ* with double application of sandhi (to nom./acc. pl. **rathyās iva*). Here the acc. pl. would presumably be parallel to “all the other waters” that Sarasvatī pushes ahead of her, but the simile would ill fit the passage. (Old does not transl.) The sequence *rathyèva* occurs several times elsewhere: II.39.2, 3, III.33.2, 36.6, VII.39.1. In all but III.36.6, *rathyā* is clearly the correct dual nom./acc. to the *vrkī*-stem, and in III.36.6 I interpret it also as a dual (contra most interpr.), for reasons given in the comm. ad loc. But here that solution, wedding morphology and sense, will not work. My ad hoc and admittedly entirely unsatisfactory “solution” here is to take it as a nonce fem. nom. sg. in *-ā*, perhaps based on *asuryā* (also nom. sg. fem.) in the 1st vs. of the next hymn (VII.96.1), also of Sarasvatī. The hymns are twinned and can be read against each other.

VII.95.2: By my interpr. (as well as the standard ones), this vs. contains two forms of the act. pres. stem *céta-*, 3rd sg. *cetat* (or *acetat*: see immed. below) in pāda a and part. *cétantī*

in c. The first is found in the sequence *ékācetat*, analyzed by the Pp. as *ékā acetat*. This is perfectly possible, but an injunctive form is equally possible on textual grounds and in my opinion would fit the presential/resultative context better. See Gotō (1st cl., 138 and n. 181), who so interprets it. In any case, I take it as intransitive ‘shows / appears’, with *śūciḥ* as the predicate adjective. In c the participle *cétantī* has the sense ‘perceives, takes note’ and governs the gen. *rāyāḥ*. Given the semantic multivalence of the root *√cit* and the pleasure poets take in manipulating and juxtaposing its forms, this functional shift within a verse is not surprising. (Gotō [p. 138] also assigns different functions to the two forms.) The intrans. use of *cetat* is supported by *cetati* in the same usage in the next hymn (VII.96.3).

VII.95.3: The male subject of this vs. is not identified, but the Anukramaṇī identifies him as Sarasvant. This seems correct (despite doubts raised, e.g., by Old), given that half of the following hymn, the 2nd ṛca (VII.96.4–6), is devoted to him and he is mentioned by name in all three vss. The two hymns VII.95 and 96, despite being in different meter, should be read against each other. See comm. ad vs. 1 above.

I take med. *māmṛjīta* as reflexive, with Sarasvant both subj. and obj. (so also, apparently, Kü 373), though Ge thinks that the obj. is the racehorse and Re that both subj. and obj. are the racehorse.

VII.95.4: On *mitā-jñu-* see comm. ad VI.32.3.

The *sākhibhyaḥ* of the final pāda must be Sarasvatī’s sister rivers. As Old points out, the stem *sākhi-* can be used of females as well as males; fem. *sākhī-* is absent from the older language. See also Re ad loc. For the glorification of Sarasvatī over the other rivers, see vs. 1 and implicitly vs. 2, as well as the 1st vs. of the next hymn (VII.96.1) and VI.61.9, 10, 13. The formulation “higher than ABL” is identical to the boast of the victorious co-wife in X.145.3 *úttarāhām ... úttaréd úttarābhyah* “I am higher, higher even than the higher ones (fem.).”

VII.95.5: My interpr. of the syntax and the reference in this vs. differs considerably from the standard. Most (Ge, Re; see also Old) take b as parenthetical, with pāda a parallel to c, both containing nom. pl. m. med. participles with 1st ps. subjects, *júhvānā(h)* and *dádhanā(h)* respectively. The first part. is transitive with *imā* as object. Hence, “Offering these (oblations, vel. sim.) ... , setting ourselves in your shelter, we ...” Under this interpr. according to Re, the *yusmāt* in pāda a refers to the patrons, already found in vs. 3 -- rather loosely construed (“de votre part”). Ge fails to identify the 2nd pl. referent, while Old considers both the patrons and the rivers possible and makes no decision.

Although the Ge/Re/(Old) interpr. is certainly possible -- and has the parallelism of the two participles in its favor -- I am reluctant to bring in patrons, who figured only in the Sarasvant vs. 3, and I also prefer to avoid parenthetical clauses if at all possible. I therefore go against the Pp. in taking the first participle as *júhvānā* and neut. pl., rather than *júhvānāḥ* and masc. pl. As a nom. pl. neut., the part. is passive and forms a nominal clause with *imā*, with the participle predicated (as is not rare). The part. stem *júhvāna-* is found with both transitive and passive interpr. (Note that Gr takes this form as passive, but as a nom. pl. fem. in *-āḥ* modifying his supplied *gírah* ‘hymns’, represented by *imāḥ* [requiring him to go against the Pp reading *imā*].)

By my interpr. of pāda a, the 2nd pl. refers to the (other) rivers just featured in 4d, and in the expression *yusmād ā*, *ā* means ‘all the way to’, though it must be admitted that *ā* in that usage usually precedes (see Gr col. 169). Old himself suggests as one of his possibilities “bis zu euch hin” of the rivers or waters. The ambiguous position of *ā* in the expression in 2b *girībhya ā samudrāt* “from the mountains all the way to the sea” also has *ā* directly before an abl. expressing goal.

VII.95.6: Ge and Re seem to take *vājān* as the obj. of *vārdha* as well as *rāsi*, while I supply Vasiṣṭha, the subject of the preceding hemistich.

VII.96 Sarasvatī (1–3), Sarasvant (4–6)

VII.96.1: With Gr, Ge (etc.) I take *gāyīṣe* as a 1st sg. -*se* form of the *stuṣé* type; Old, fld by Re, takes it as a 3d sg. passive. Besides separating the form from the standard usage of *stuṣé* and the like, this leaves *brhāt ... vācaḥ* syntactically untethered. Old takes it in instr. sense, but it’s hard to get the neut. acc. to function that way.

Re also takes *mahayā* in c as a 1st sg. subjunctive, but an impv. works better with the voc. *vasiṣṭha* (d), an example of poetic self-address (treated in my 2005 Fs. Skjaevø article).

VII.96.2: On the interpretational problem posed by du. *ubhé ... āndhasī* “both stalks,” see publ. intro. As indicated there, I do not subscribe to the interpretation that takes this as a metaphorical expression of political geography. Rather I assume that the usual sense of *āndhas-* ‘soma stalk’ → ‘soma’ allows the dual to refer to two liquids. Ge (n. 2a) points out that in ŚB V.1.2.10 this dual is used for soma and surā (the profane intoxicating drink), and since in the Sautrāmaṇī ritual surā is mixed with milk, the second liquid could also be the more benign milk. Old makes a good case for the connection of soma and surā with Sarasvatī and also suggests that the formulation is meant to indicate that the Pūrus make use of profane drinks as well as soma. Re favors soma and surā without disc. Two textual passages nearer to hand suggest other possible solutions. As was noted ad VII.95.1, 3, these two adjacent hymns to Sarasvatī, VII.95 and 96, show twinning tendencies. In VII.95.2 (that is, the vs. corresponding to this one in position) Sarasvatī milks out “ghee and milk” (*ghṛtām páyah*) for Nāhuṣa, probably the designation of a human family group or lineage (see Mayrhofer, Personennamen s.v. *nāhuṣ-*); here the Pūrus (another such designation) preside over two liquids, which could be those very two. Alternatively, in this same hymn, VII.96.5, Sarasvant’s waves are characterized by honey and ghee (*mādhumanto ghṛtaścútaḥ*), and this pair is another possibility, esp. if ‘honey’ stands for soma, as often. These two vss. (2, 5) match each other in another way; see ad vs. 5 below. In the end, Ge’s interpr (at the end of his n.) that the Pūrus, living beside the Sarasvatī, inhabit a land rich in soma and milk seems to suggest the most likely image: whatever the two liquids are, they are indications of a place rich in nourishment -- in biblical terms, a land of milk and honey.

I do not know why the Maruts would be the particular companions of Sarasvatī, unless their storms swell her waters.

VII.96.3: The subjunctive *kṛṇavat* seems to have a more strictly modal sense than most subjunctives; I am tempted to tr. “should do good” or “may she do good.”

VII.96.4: Why Sarasvant should receive the pleas of bachelors seeking wives and sons is utterly unclear to me, and the standard tr./comm. don’t address this issue.

VII.96.5: The third pāda of this vs., which is the 2nd vs. in the ṛca addressed to Sarasvant, the masc. equivalent of the far more prominent Sarasvatī, parallels that of the 2nd vs. in the ṛca addressed to Sarasvatī that opens this hymn:

2c *sā no bodhi avitrī marútsakhā*

5c *tébhir no avitā bhava*

Re suggests that this parallelism attests to the secondary character of Sarasvant. The difference between the two impvs. *bodhi* and *bhava*, both to √*bhū*, conforms to the positional distribution of these two forms discussed in my 1997 “Syntactic constraints on morphological change: The Vedic imperatives *bodhi*, *dehi*, and *dhehi*” (*Syntaxe des langues indo-iraniennes anciennes*, ed. E. Pirart).

VII.96.6: The acc. phrase in ab *pīpivāmsam ... stānam* is the object, or one of the objects of *bhakṣīmāhi* in c, which makes the rel. clause *yó viśvadarśataḥ*, referring to the *stāna*-, technically an embedded rel. But as we have often seen, *nominal* rel. cl. -- pseudo-izafes - - are regularly found embedded.

The expression “share in the breast” seems somewhat odd, but this “swelling breast” is presumably swelling with the honey and ghee in vs. 5. As noted in the publ. intro., it is also odd to attribute this breast to the male figure Sarasvant. The more appropriate association between the breast and Sarasvatī is found in I.164.49, a passage adduced by Ge (n. 6ab).

VII.97 Indra and Bṛhaspati

Re treats this hymn in EVP XV.66–69. For the structure of the hymn and the covert identification of Bṛhaspati (/Indra) with Agni, see publ. intro. This identification is argued for extensively by Schmidt (B+I, 62–67, which also contains a complete tr. and philological comm.).

VII.97.1: This vs. plays on the ambiguity of reference of the noun *nṛ*-, which can refer both to superior (mortal) men and to gods. It also cleverly but uninsistently identifies the sacrifice as the meeting place of men and gods, the *nṛśādana*- ‘seat of men’ who come from / belong to both heaven and earth (*divāḥ ... pṛthivyāḥ*) -- though see Ge’s n. 1a for other, in my opinion less likely, possibilities. (In keeping with my current understanding of *nṛśādana*-, however, I would slightly emend the tr. to “the (ritual) session of men,” rather than “seat.”) The *nāraḥ* in pāda b, however, seem only to be men proper, that is mortals, who seek the gods at the sacrificial common ground.

In c *sunvé* is one of the rare exx. of a singular verb with neut. pl. subj. (here *sāvanāni*), a construction that is of course supported by comparative evidence. Gr interprets the verb rather as a 1st sg. transitive. This is not impossible -- and note the 1st pl. verb in 2a -- but *sunve* is otherwise passive, with 3rd pl. *sunviré* likewise passive.

In d the verb *gáman* (in sandhi) could represent either 3rd pl. *gáman* or 3rd sg. *gámat*, but both the context, with Indra mentioned in the preceding pāda, and the parallel I.178.2d *gáman na índraḥ sakhyā váyaś ca* support the 3rd sg.

The pāda is also marked by case disharmony: dat. *mádāya* and acc. *váyaś ca* appear to be joint complements of *gámat*, conjoined by *ca*. Such case disharmony is rare in *ca* collocations (see Klein DGRV I.56–57), but at least in this example poses no obstacle to understanding: the dat. expresses purpose, the acc. goal. Although neither Klein nor I find the construction problematic, Re supplies a second verb to govern *váyaḥ* (“obtenir”), and HPS interprets the acc. as an Inhaltsakk.

A more problematic issue, at least for me, is the position of *ca*, unmentioned by any one, incl. Klein. The standard tr./interpr. take the 2nd term of the conjoined NP to be *prathamám váyaḥ* “first vitality/youth,” but we should then expect the *ca* to follow *prathamám*, the first word of the second member. Although such positioning is not an unbreakable rule, it is remarkably regular. To avoid the problem I take *prathamám* as an adverb here, as I do in the parallel I.83.4 (*prathamám ... váyaḥ* without a *ca*), cited by Old and Re, for which see comm. ad loc.

VII.97.2: The problem in this vs. is *maha* (sandhi form) in b *bṛhaspatir no maha ā sakhyāḥ*. The Pp reads this as *mahe*, as do most subsequent interpr. -- though *mahaḥ* is possible and is in fact the interpr. of at least one tr.: HPS takes it as the voc. pl. of *māh-*, construed with *sakhyāḥ*, hence “ihr grossen Freunde.” But this seems unlikely: there are no voc. forms to this stem in the RV (though the derived fem. *mahī-* does have some), and the intrusion of *ā* in the middle of the voc. phrase seems unlikely. Others accept the Pp *mahe* and generally take it as a 3rd sg. verb, but opinions differ on its root affiliation and meaning. I will not detail these disagreements; see the disc. in Old, Ge’s n. 2b, Re ad loc., and Gotō 243–44. My interpr. is closest to Gotō’s: he assigns this to a root *√mah* ‘bring about’, separate from *√mah* ‘magnify’, with a *t*-less 3rd sg. of the *śáye* type (see also comm. ad I.94.1) and tr. “Bṛhaspati ist für uns imstande.” I differ from him in the interpr. of the rest of the pāda: he takes *ā* as the trigger of an unexpressed verb of motion, “[kommet] o Genossen herbei.” This seems to assume that the friends addressed are not coreferential with *naḥ* earlier in the pāda, or the referents of the 1st ps. verbs in pādas a and c. I do not entirely understand the position of *ā*, but it may show the occasional positioning of a preverb immediately after its verb or simply be an adverbial ‘here’, as in my tr.

As Re points out, the optative (*bhávema*) is quite unusual in a *yáthā* purpose cl., where the subjunctive is standard. See Gr s.v. *yáthā*, cols. 1083–84, nos. 6–8.

VII.97.3: Both Ge and Re take great pains to avoid indentifying Indra in c with *bráhmanas pátim* in b and the elaboration on this phrase in d, but as discussed in the publ. intro. and extensively by HPS, the identification is the point.

VII.97.4: The second pāda contains an equational rel. cl. with expressed copula *ásti*; main cl. equational expressions almost always lack copula (when *asti* is found, it is generally existential), but overt copulas are not uncommon in dependent clauses. It is of course optional; see the nominal rel. cl. in the preceding vs., 3d, which lacks copula.

Pāda c contains a phrase in the nominative, *kāmo rāyāḥ suvīryasya* “desire for wealth in good heroes,” which is picked up abruptly by the acc. prn. *tām*, object of the immediately following verb *dāt*. There seems no other way to interpret it -- and it goes perhaps too easily into English -- but both the syntax and sense are slightly off. The fronted expression seems like a topicalized phrase, but in Vedic topics would not default to the nominative but remain in the appropriate case for the larger syntactic frame; see in the next vs. the acc. phrase that occupies the whole of pāda a, which is the obj. of the verb in b. Moreover, one doesn’t *give* wishes/desires but rather the contents of those desires, so that the referent of *tām* may be *rayí-*, not *kāma-*. Both concerns suggest that the relationship between the *kāma-* phrase and the abbreviated *tām dāt* clause is less close than it appears. Re supplies some structure to the first phrase -- “(En nous est) le désir ...” -- and something like that might produce the necessary distance.

VII.97.5: On *pastyā-* see comm. ad I.40.7. As noted ad I.40.7 HPS in that passage renders the stem as ‘stream’ but here as ‘house’, the interpr. I prefer. Note that in our passage HvN should be corrected from *pastiyānām* to *pastīyānām* (that is, *pastyānām*).

VII.79.6: The construction of the vs. is uncertain in several regards, which center on the 2nd hemistich. The first is whether neut. *sāhaḥ* belongs in the rel. cl. or not; the position of rel. *yasya* is compatible with either answer. I take it as an independent qualifier of acc. *bṛhaspátim* in b, hence an acc.: Bṛhaspati is identified with the abstract noun ‘strength / force’ itself. I therefore assume that the rel. cl. begins with *yasya*. This also seems to be the Ge solution. The sense of Re’s tr. is similar, but he puts *sāhaḥ* in the, or a, rel. cl. as a nominative -- taking c as containing two nominal rel. clauses: “lui dont la force-dominante (est réelle, dont) le séjour-commun (est) noir.” HPS makes *sāhaḥ* the subject of an equational rel. cl.: “dessen Gewalt eine schwarze Stätte ist.” Since I think it more likely that Bṛhaspati is identified as strength itself than that his seat is, I find Schmidt’s interpr. less likely, though it does have the merit of not inserting a syntactic break in the middle of a pāda. If Bṛhaspati is identified with *sāhaḥ* here (as I think), Schmidt’s claim that Bṛhaspati is identified with Agni in this hymn -- an identification esp. clear in this vs. (see publ. intro.) -- is strengthened, since Agni is so often called “son of strength” (*sūnúsāhasaḥ*, e.g., in this maṇḍala VII.1.21, 22, 3.8, etc.).

A more interesting question is what to do with d. The pl. *vāsānāḥ* is universally, and plausibly, taken as referring to the horses of ab: in pāda they are called ‘ruddy’ (*aruṣāsaḥ*); in d they “clothe themselves in ruddy form” (*rūpām aruṣām*). The question then is whether d is simply a continuation of the main cl. in ab, the part. *vāsānāḥ* modifying *ásvāḥ* in pāda a, with the rel. cl. of c embedded in it. This is perfectly possible and seems to be the standard interpr. Although we prefer to avoid interpr. with embedded relatives, once again the rel. cl. in this instance is nominal (whichever finer grained interpr. we follow), and nominal relatives are systematic exceptions to this rule. However, I prefer to take d as a continuation of the rel. cl. introduced by *yasya*, with oppositional nominal expressions, contrasting Bṛhaspati’s dark seat with his horses which take on “ruddy form.” This interpr. allows the ‘ruddy’ in d to be more than a pleonastic repetition of the same word in pāda a and gives more punch to the *nīlavat sadhástham* of c by making it part of a contrastive pair. If this interpr. is correct, the part. *vāsānāḥ* would be predicated.

Ge (n. 6bc) notes the word play between semantically and etymologically distinct *saha-* (b) and *sáhaḥ* (c). In fact the play is more tightly constructed than he indicates, with the chiasmic figure *saha-vāho vahanti / sáhaḥ*, with the hemistich boundary isolating the semantically non-conforming word.

VII.97.7: It is difficult to wring a causal sense out of *hí* here. The vs. continues the depiction of Br̥haspati as Agni: the hundred feathers of the preening bird are the flames dipping and rising much like the action of preening; the golden axe or axes are likewise flames; while the descriptions in cd are focused on the role of Agni in the ritual.

On *śundhyú-* see comm. ad V.52.9.

I would now be inclined to tr. the bahuvr̥hi *híraṇya-vāśīḥ* (for the inflection see AiG II.2.408) as implicitly pl. ('having golden axes', rather than the publ. 'having a golden axe' flg. Ge/Re) because it seems to refer to Agni's flames. HPS tr. "mit hundert goldenen Äxten bewaffnete" without comment; he seems to have silently transferred the *śatá-* from *śatá-patraḥ* in pāda a, presumably an oversight.

svāvesā- is somewhat difficult and disputed. HPS specifically rejects Velankar's "easy of approach" and Re's "d'accueil favorable"; Schmidt's "mit seinem gute Eintritt" is closer to Ge's "bringt Glück mit seinem Eingang." HPS (p. 66) suggests that *svāvesā ṛṣvāḥ* simply evokes the image of a fire flaring up, but I don't see what 'entrance' has to do with that. I take it as 'providing good/easy entrance'; here this would refer to the entry of the libations into the offering fire, an interpretation that is in harmony with d, which concerns the subject's superior ability to provide *āsutí-*, the 'pressed drink', to his comrades, presumably the gods who consume the oblations through Agni as their mouth.

VII.97.8: I take the 'comrades' addressed by the voc. *sakhāyaḥ* to be different from those mentioned in the dative in the preceding vs. There the comrades of the god were the (other) gods who receive the oblation from Agni; here they are the comrades of the poet, who urges them to tend to the god. The identity of comrades obviously depends on who they are comrades *to*.

Pāda d implicitly echoes 4d.

VII.97.10: On *kīrī-* see comm. ad V.52.10.

VII.98 Indra

VII.98.1: Verbal forms of the root $\sqrt{pā}$ 'drink' do not appear with the preverb *áva* in the RV or, indeed, elsewhere in Skt. But this noun stem *avapāna-* is found 5x in the RV (I.136.4, VII.98.1, VIII.4.10, X.43.2, 106.2); in 3 of these passages (all but I.136.4, X.43.2) it is used of a wild beast come to drink; cf. (besides our passage) VIII.4.10 *ṛṣyo ná ṛṣyann avapānam ā gahi* "like a thirsting antelope, come to the drinking (hole)." These specialized contexts suggest that rather than meaning simply "das Trinken, der Trunk" (Gr), the stem refers to a drinking hole frequented by wild animals (so already MonWms). The preverb *áva* 'down' would refer to the physical stance of animals lowering their heads to drink. The image of Indra beating buffalos to a watering hole is rather charming.

VII.98.2: With Ge I take *yád* as a neut. rel. prn. rather than as the subordinating conj. *yád*, though this poses some minor syntactic difficulties. If the referent is ultimately soma, we would expect a masc. form (*yám*); the neut. can be explained as “attraction” to the predicated “food” (neut. *ánnam*) in the same cl. (“what you made your food ...”). As a resumptive pronoun in the main cl. we might also prefer **tásya* to *asya*, though this is a small problem.

VII.98.3: I might now slightly alter the tr. of the pf. part. *jajñānāḥ* to ‘having (just) been born’ to put emphasis on Indra’s prodigious actions immediately after his birth.

VII.98.4: On the *s*-aor. of *√sah* see Narten (Sig.Aor. 264–67) and on the lengthened grade of some forms of this aor., as well as elsewhere in the root, see Narten (op. cit.) Gotō (1st Kl. 325–26), EWA s.v. *SAH*.

On the root noun *√rt-*, see Schindler (Rt.Nouns s.v.); it belongs with *√vr* ‘obstruct’ (etc.), not, with Gr, *√vrt* ‘turn’. In this passage a derivation from ‘obstruct’ makes sense for the defensive forces that provide an obstacle to the attacking army.

VII.98.5: The first hemistich *préndrasya vocam prathamā kṛtāni, prá nūtanā maghāvā yā cakāra* is a variant on the famous opening of I.32: I.32.1ab *índrasya nú vīryāni prá vocam, yāni cakāra prathamāni vajrī*. The two contain almost all of the same elements (*prá vocam, índrasya, prathamā(ni), yā(ni) cakāra, nú / nūtanā*), with variation only with *vīryāni* \cong *kṛtāni* and different epithets of Indra, *maghāvā / vajrī*. Nonetheless the distribution of elements between clauses and the word order in each clause are significantly different. This variation is typical of RVic formulae, which generally do not follow a fixed template and are not sensitive to meter alone (both vss. in question are Triṣṭubhs).

Re comments on VII.99–102 in ÉVP XV: 99–100 pp. 39–43, 101–2 pp. 113–14.

VII.99 Viṣṇu, Viṣṇu and Indra

VII.99.1: Re supplies “other gods” as the subj. of *ánv aśnuvanti* in b. This seems perfectly acceptable, though not strictly necessary. And since in vs. 2 it is, presumably, mortals (since they are ‘born’) who fail to reach the limit of Viṣṇu’s greatness, mortals could also be the subject here. See remarks below on the formulatic connection between the two vss.

As Re points out, both the case of the complement (acc. versus gen.) and the voice (act. versus mid.) differ between 1st pl. *vidma* in c and 2nd sg. *vitse* in d. The middle voice of *vitse* makes sense, since Viṣṇu knows *his own* farthest realm; the variation in case is harder to account for. Perhaps the two earthly realms are subjects of direct knowledge, while the farthest realm is something even Viṣṇu only knows *of*.

VII.99.1–2: The b-pādas of these two vss. are variants of each other, using two different roots for ‘attain’ (*√naś*, *√āp*) and two different formulations of ‘greatness’, the 2nd an elaboration on the first:

1b *ná te mahitvám ánv aśnuvanti*

2ab ná te ... mahimnáḥ páram ántam āpa

Another example of the freedom of RVic formulaics; see comm. ad VII.98.5 in the previous hymn for further on this.

VII.99.2: Ordinarily the pres. part. should express ‘being Xed’, in contrast to the past part. ‘Xed’. But in this context *jāyamāna-* must refer not to someone in the process of being born, but more likely someone who is still alive, against *jātá-*, someone born in the past and presumably now dead.

VII.99.3: With Ge I take the first hemistich as Viṣṇu’s quoted speech. This, however, does not solve the puzzle posed by *hí bhūtám*. Is *bhūtám* an impv., as Ge takes it -- or an injunctive, with Re? If an imperative, how does it square with *hí*? This particle is not rare with imperatives, but it always seems somewhat problematic. Often it appears with the first impv. in a series, and the *hí* clause can command the action on which all subsequent actions depend, with the following impvs. often introduced by *áthā* -- see comm. ad I.10.3, 14.12, etc. -- but here there is no following imperative. In the publ. tr. I manage a syntactic sleight-of-hand, reading *bhūtám* twice, once as an injunctive in a causal *hí* clause, to be construed with the two adj. in pāda a, *írāvatī dhenumátī*, and once as an impv. in a main cl., to be construed with the adj. in b, *sūyavasínī* (schematically “because you are X Y, become Z”). Although this works, it seems somewhat artificial and requires separating the three apparently parallel adjectives into two clauses. This interpr. was based in part on I.93.7, which contains a clause ADJ ADJ *hí bhūtám* followed by an *áthā* cl. with an impv. to a different verb. In the publ. tr. of I.93.7 I take *bhūtám* as an injunc (with Ge, Re). “Since you are X Y ..., therefore ...” But in the comm. I cast doubt on that interpr. and prefer an impv. interpr. “Become X Y, then ...” Therefore, I.93.7 is not necessarily a support for my publ. interpr. here; I still weakly prefer it because of the absence of a following impv., but now consider the alternative possible: “Become full of refreshment, rich in milk-cows, affording good pasture ...” The following impv. may be missing because Viṣṇu’s direct speech is truncated. (Despite their distance in the text, comparing I.93.7 to our passage is justified by the fact that the first pāda in the very next vs. in our hymn, 4a, is identical to I.93.6d, adjacent to the vs. under comparison.)

VII.99.4: As was just noted, the first pāda of this vs. is identical to I.93.6d, where Agni and Soma are the dual subjects. Indeed, the identity of the dual subjects in this vs. is left hanging throughout the vs., and the poet may have left a false trail: the last du. 2nd ps. referents were the two world halves (*ródasī*), addressed by Viṣṇu in 3ab. Assuming that the hymn as we have it is a unity (rather than consisting of two separate *ṛcas*, plus summary vs., as is possible), *ródasī* would remain a live possibility for the subj. of this vs. until the final pāda (d), where the 2nd du. subjects are addressed as *nārā* ‘superior men’, suppling a gender that clashes with fem. *ródasī*. But since *nṛ-* has a wide range of reference, this still does not definitively identify them. Even the dual number leaves the identity open: *nārā* is used of the Aśvins (mostly), Indra-Vāyu, Indra-Agni, Indra-Varuṇa, Mitra-Varuṇa -- and only once (here) of this pair. It is only with the first word of the following vs. (5a), the voc. *índrāviṣṇū*, that the question is settled.

All of the deeds recounted in this vs. can be attributed to Indra alone (see publ. intro.), although Viṣṇu’s role in enlarging and defining cosmic space may be alluded to in

pāda a, with the creation of space for the sacrifice. Re's claim that ab belong more to Viṣṇu, cd more to Indra is overstated: the cosmogony in b has little to do with what we know of Viṣṇu but is associated elsewhere with Indra.

As Old points out, the name of the Dāsa in c, Vṛṣaśipra, seems akin to Viśiśipra in V.45.6, whom Manu defeats (note that Manu figures in our vs. 3b) -- a connection not registered in Mayr.'s *Personennamen*. However, as noted in the comm. ad V.45.6, this gets us nowhere, since we know nothing further of either of these figures. More interesting is the potential relationship between these names and Śipiviṣṭa, the epithet of Viṣṇu found in the RV only in this hymn (vs. 7) and the next (VII.100.5, 6). The first member of this epithet, *śīpi-*, looks like a Caland form of the 2nd member of the two names, *śipra-*, while the 2nd member, *viṣṭā-*, is esp. close to the 1st member of the name found in V.45.6, *viśi-*; *vṛṣa-* in our passage is a plausible re-Sanskritization cum folk etymology of a possible MIA form **visi-*, underlying *viśi*.

VII.99.5: Both Śambara and Varcin are Indra's targets elsewhere, with no involvement of Viṣṇu. They are conjoined objects (*varcīnaṃ śambaram ca*) of Indra's smiting (*āhan*) in VI.47.21.

There is numerical play between the two hemistichs: in c the numbers are raised both by a digit (9 → 10) and by a factor of 10 (9 [10] → 100; 90 [100] → 1000). The connection is emphasized by the parallel structure of the numerical expression: b: *#náva X navatīm ca* / c: *#śatām X sahásraṃ ca*. Varcin is credited elsewhere with the same number of forces: II.14.6, IV.30.15.

I do not know why the verb is in the present in the second hemistich (*hatháh*) but aorist in the first (*śnathiṣṭam*). In the passages containing the other three occurrences of Varcin (II.14.6, IV.30.15, VI.47.21) the verbs are all preterital.

VII.99.6: The adj. *urukramá-* 'wide-striding' is otherwise used only of Viṣṇu (5x), but here encompasses Indra as well, in the dual.

The dual dvandva voc. *indrāviṣṇū* that opened vs. 5 is here divided into two pāda-final vocc. in c (*viṣṇo*), d (*indra*). Presumably because they belong to separate clauses, the dvandva doesn't decompose into a *vāyav indraś ca* construction, but it does follow such constructions in placing the 2nd member of the dvandva first (see my 1988 "*Vāyav indraś ca* revisited," *MSS* 49: 13–59).

VII.99.7: On *śipiviṣṭa* see comm. ad vs. 4.

VII.100 Viṣṇu

VII.100.1: The meter of the first pāda is badly off and is not easily fixable. See Old. He suggests a distracted reading of *nū* and records the suggestion that *márto* should be emended to *márt'yo*, which HvN print as their text. If both are adopted (distracted *nū* and *márt'yo*; so Arnold p. 310), the line achieves 11 syllables, but the price may be too high, esp. as the light fourth syllable would be unusual.

Although *dáyate* generally means 'distribute (goods to someone else)', e.g., I.68.6 *tásmai ... rayīm dayasva*, in a few passages it seems to have adopted the more "middle" meaning 'receive/take a share', perhaps adjusted to the model of other words of sharing,

esp. *bhájate* ‘receive a share’ versus act. *bhájati* ‘share out, distribute shares’. See Gotō (1st Kl., 172–73), whose tr. of this passage is close to mine. As noted ad II.33.10, I do not subscribe to Gotō’s separation of forms of *dáyate* into two separate roots.

The three subsequent pādas (bcd) state the conditions under which the mortal in pāda a will receive the longed-for share. They are marked by the rel. prn. *yáḥ* in b and c; adopting Re’s strategy I have rendered them as conditionals (“if”) for clarity, rather than as straight rel. clauses (“who”). Unfortunately I don’t think my tr. makes it clear that cd are parallel to b, rather than being part of a resumed main clause, and I would now slightly emend the tr. to “..., if he will set ... and will seek ...”. The apparent non-parallelism is exacerbated by the fact that the verbs of c and d (*yájāte* and *āvívāsāt* respectively) are subjunctives, whereas *dāśat* in b should be the injunctive to the thematic pres. *dāśati*, which elsewhere attests a real subjunctive (*dāśāt*). KH discusses just this passage (Inj. 238), suggesting that in such contexts the indicative present, injunctive, and subjunctive overlap in usage.

VII.100.3: Flg. a suggestion by Ge (n. 3a, though not reflected in his tr.), I take *eṣá-* in pāda a (also 4a) as belonging to the stem *eṣá-* ‘quick’, which is used several times of Viṣṇu in the gen. expression *viṣṇor eṣásya* (II.34.11, VII.40.5, VIII.20.3), in which confusion with the nom. pronominal *eṣá(h)* (possible here) is excluded.

The hapax *śatārcas-* is problematic. The Pp analyses the 2nd member as *arcasam*, but Wackernagel (AiG I.318) points out that the sandhi between the cmpd members would require rather *-rcasam*. However, Old disputes this, claiming that it would then have to be written (“... geschrieben werden müssen”) **śatārcasam*, though it’s not clear to me why. Interpr. differ significantly: Sāy. glosses with *arcis-*. Old posits a masc. *s-* stem **arcás-* ‘singer’, comparing VI.34.3 *yádi stotāraḥ śatām yát sahasraṃ gṛṇānti* “When a hundred, when a thousand praisers sing to him ...,” an interpr. followed by Ge -- though the connection between the two passages seems tenuous to me. By contrast, Re tr. “au cent éclats,” perhaps flg. Sāy.’s *arcis-*. Since an infinitival dat. *rcāse* ‘to praise, for chanting (praise)’ is found in VI.39.5 and VII.61.6, it seems reasonable to take the underlying stem *rcas-* as the base here, as Gr does, glossing ‘hundertfach zu preisen’. My ‘worth a hundred verses’ is close to that, though perhaps ‘praises, chants’ would be better.

Because of the lack of accent on *asya*, it should be pronominal, not adjectival; I would adjust the tr. to “of him, the stalwart.”

VII.100.3–4: As noted in the publ. intro., vss. 3 and 4 are responsive. The first pāda of 4 concentrates the essence of the 1st two pādas of 3, substituting *vī cakrame* (of 3b) for *trír deváh* (in 3a) at the beginning of the pāda. This phrase, *trír deváh*, is short a syllable; Old suggests reading *tṛir*, but this seems unlikely: I don’t know of any other disyllabic readings of this extremely common numeral (either as 1st cmpd member *trí-* or adverbial *trís*). I suggest rather that the metrically disturbed opening draws attention to the beginning of this set of paired vss. by being flawed and is “repaired” by 4a. See similar remarks about 3c and 5c ad vs. 5.

VII.100.4: By concentrating Viṣṇu's strides in the first pāda of 4, the poet is free to express the aim of Viṣṇu's action -- creating space and dwelling places for the people -- in the rest of the vs.

As Ge points out (n. 4c), *asya* can refer either to Viṣṇu or to Manu, although in actuality this may not matter. It may be an instance of "trickle-down" ownership: Viṣṇu makes a dwelling place for Manu, and in turn Manu's people also get firmly planted. Or, Manu *and* the people may both be under Viṣṇu's auspices.

VII.100.5: On the name Śipiviṣṭa, see comm. ad VII.99.4. Note that Viṣṇu's name was already celebrated in 3d, though the actual name is not mentioned there.

The syntactic affiliation of *aryāḥ* is disputed: the question is whether it depends on *vayúnāni* or simply picks up *te* in the previous pāda. With Ge and Re I follow the latter course; Re argues cogently that *vayúna-* √ *vid* does not normally have a "régime extérieur" (though I.72.7, II.19.3 appear to be exceptions). I would further add that since Śipiviṣṭa seems a type of "secret name," referring to Viṣṇu as a stranger (*arí-*) might fit with that. By contrast Thieme construes *aryāḥ* with *vayúnāni*, in two somewhat different ways: Fremdling (1938, p. 41) "... kennend die Ordnungen, die für den Fremdling gelten," later corrected in Unters. (1949, 22 n. 1) to "... kennend die Geheimnisse des Fremden."

The end of pāda c *tavásam átavýān#*, with the *s*-stem adj. followed by a (negated) comparative to the same root, nicely echoes the end of 3c with the same configuration but the comparative not negated: *tavásas távīyāni*. The employment of longer and shorter forms of the comparative (i.e., with or without the linking vowel *-ī-*) allows the phrases to make an almost exact metrical match -- except that the cadence of 5c is faulty (... *-sam átavýān*), with a light syllable at the beginning (and in fact 5 light syllables in a row (... *-ī tavásam a-*), starting right before the caesura and continuing through the break and into the cadence. As in the paired vss. 3–4 the metrical disturbance may call attention to the formulaic match. *átavýān* also picks up *kīráyah* '(even) the weak' in 4c semantically.

In d the pres. part. *kṣáyantam* is rendered by both Re and Th (Fremdl.) as if it belongs to √ *kṣi* 'dwell' ("qui réside" and "... [dich,] der da wohnt"), but the part. to the root pres. of that root is *kṣīyánt-*; the part. here must belong to √ *kṣā* 'rule over' (them. pres. *kṣáyati*). Ge may be trying to have it both ways with his "der ... thront," if my German dictionaries are correct in glossing *thronen* as "sit enthroned."

VII.100.6: Exactly what this vs. is trying to tell us is unclear. Most tr. and comm. take *paricákṣya-* as referring to something blameworthy (tadelnswert); so, e.g., Ge ("Was war an dir zu tadeln ...?"), Old, KH (Injunc. 78–79). But the other example of this gerundive in VI.52.14 modifies *vācas-* specifically and seems to mean 'to be disregarded, overlooked': *mā vo vācāṃsi paricákṣyāṇi vocam* "let me not speak words to you that can be disregarded." Esp. because the verb in the dependent cl. belongs to √ *vac*, pf. *vavakṣé*, it seems reasonable to supply 'speech' here as well. The point seems to be that we should have paid attention when he called himself Śipiviṣṭa, and that even when he appears in other form(s), he should not keep the *form* of Śipiviṣṭa concealed from us, any more than we should not notice the name. But what these statements are in service of, I have no idea -- and the hymn ends here (save for the repeated vs. 7, which, however, makes a point of addressing Viṣṇu as Śipiviṣṭa).

VII.101 Parjanya

VII.101.1: As was noted in the publ. intro., this hymn has a penchant for triplets, but it is not always clear which three entities are referred to -- as in this vs., at least for me, with “the three speeches.” As Ge points out (n. 1a), the identities of the speeches depends on the identity of the addressee of the impv. “speak forth” (*prá vada*). If it is Parjanya, the dedicand of the hymn, they probably refer to thunder(claps) (so, e.g., Lü, Va 392 -- three because they sound in the three heavenly domains) or thunder, lightning, and rain (so, e.g., Doniger 174). I am inclined to follow Lü but for reasons differing from his. I suggest that this could be an early version of the triple utterance “*da da da*” of Thunder in BĀU V.2, made famous in the West by T. S. Eliot in the section of *The Wasteland* entitled “What the Thunder Said.” Note that in BĀU V.2.3 Thunder or the thundering one (*stanayitnuḥ*) is identified as *daivī vāk* (like the three *vāc*- here).

If the impv. is the self-address of the poet, it would refer probably to the three types of ritual speech (*īc*-, *sāman*-, *yájus*-), or, on the basis of VII.33.14 (which contains *prá vadāty āgre*, similar to our *prá vada [jyótir]agrā*), solemn speech (*ukthá*-), melody (*sāman*-), and the sound of the pressing stone -- or, less likely in my view, with Ge three dynamic levels of sound, soft, medium, loud. Needless to say, both sets of referents may be meant. In the natural world interpr., the “light at the front” would of course be lightning; in the ritual interpr. it would be the ritual fire.

The three speeches milk the udder of pāda b. Again the identities of the referents of the udder and the liquid it produces depend on the referents in pāda a. In the natural world interpr., the udder would be heaven or the clouds therein, the liquid the rain; in the ritual the udder would probably be the soma plant and the liquid the soma -- though the udder could possibly be the sacrifice as a whole and the good things that result from its performance.

On *vād*- *prá* √ *vad* see comm. ad VII.103.1.

In the publ. tr. of the 2nd hemistich it was not made clear which nouns go together -- since Engl. lacks the convenient tool of case. The calf (*vatsám*) is the same as the embryo of the plants (*gárbham ósadhīnām*); both are objects of the participle ‘creating’ (*kṛṇvān*), whose subject is the bull (*vṛṣabhāḥ*), which is also the referent in the phrase “as soon as he is born” (*sadyó jātāḥ*) and the subj. of “sets to bellowing” (*roravīti*). The calf, embryo of the plants, is most likely Agni, who is so called elsewhere (see Ge n. 1c). Ge suggests that it is Agni as lightning, which is possible, but I assume that lightning and the ritual fire are here assimilated, via a trope whereby the sound of thunder, likened to ritual speech, kindles the ritual fire. The bull is surely Parjanya, as is confirmed by the identical phraseology of vs. 2 of the next, related hymn (VII.102.2): *yó gárbham ósadhīnām ... kṛṇóti ... / parjanyaḥ*.

VII.101.2: Multiple candidates have been suggested for the three lights of d, but it should be pointed out that there is actually only *one* light (*jyótiḥ*), which has three *vartu*-s (*trivártu*). Unfortunately this adj. is a hapax, but it is most likely related to the better attested *trivṛt*-. For the relationship between these two and the uncertainty of the root affiliation (√ *vṛt* [which I favor] or √ *vṛ*), see Scar (511). If the form does belong with √ *vṛt* we should properly expect **trivarttu*, but of course *rTT* and *rT* clusters can generally only

be distinguished on etymological grounds (see AiG I.112–14). As for our form, AiG II.2.663 (with lit.) suggests that *trivár(t)u* in this passage is a nonce creation modeled on well-attested *tridhātu* found in the preceding pāda (c).

In any case the triply layered shelter and triply turned light conform to the triadic focus of this hymn; I’m not sure they need to be more specifically identified.

VII.101.3: As disc. in the publ. intro., this vs. is full of gender ambiguity and gender switching, in service of the Vedic love of paradox. Although the subject of the first hemistich is surely Parjanya, he is not identified by name, and a masc. gender pronoun only appears as the very last word of the half-vs. (... *eṣāḥ*) -- while the state and activity ascribed to the subject of pāda a are quintessentially female.

In the 2nd hemistich the referents probably align well with the implied genders, unlike pāda a: by most interpr. the mother is Earth, the father is Heaven, as usual. But the action, at least in pāda c, is paradoxical, since it is the “milk” (*pāyaḥ*) of the *father* that the mother accepts. This milk is of course a metaphor for rain. In d it is said that both the father and son grow strong on it, another apparent paradox. Assuming that the father is Heaven, this is probably an early ref. to the water cycle: rain produces plants, which ultimately produce the offerings sent to heaven via the smoke of sacrifice, swelling the clouds that then again produce rain. By most accounts the “son” who is also strengthened in d refers to mankind, the offspring of the earth.

VII.101.4: This extravagant claim of Parjanya’s cosmic centrality -- all creatures, the three heavens, and the waters all take him as their basis -- must derive from his control of the rain, as the second hemistich suggests and 5cd further develops. The vs. is also made up of pādas with either exact (a, d) or near repetitions (b, c) elsewhere in the RV (see Ge’s nn. 4a, 4c, 4d and for pāda b partial reps. in I.35.6, VII.87.5; VII.90.4, X.111.8), which may account for the generic impression it gives.

Note the fem. *tisráḥ* modifying ‘heavens’, which is ordinarily masc. The same phrase is found in I.35.6 and VII.87.5.

VII.101.5: The subjunctive *jujoṣat* in b would fit the context better with a modal reading (“let him enjoy it / may he enjoy it”), surrounded as it is by impvs. (*astu* b, *santu* c) -- though the standard rendering of the subjunctive, as given in the publ. tr., is certainly not excluded.

VII.101.6: With Lü (506), I take the first hemistich as a truth-formulation, summarily referred to by *tád ṛtaṃ* “this truth” beginning c.

VII.102 Parjanya

Although the Anukr. identifies the meter of vs. 2 as Pādanicṛṭ (7 7 / 7), it is clearly a Gāyatrī like the other two vss., with distraction of the gen. pl. ending *-nām* at the end of pādas a, c.

VII.102.2: This vs. consists only of a rel. cl; it could be attached either to vs. 1 or to vs. 3, both of which have pronouns in pādas adjacent to vs. 2 that could serve as referent (*sá* 1c,

tásmai 3a). I prefer attaching it to vs. 3, since this configuration would fit the standard model of definitional relative clause / ritually based main clause.

On *gárbham ósadhīnām* see VII.101.1c and comm. thereon.

VII.103 Frogs

My interpr. of this hymn relies on the treatment of it in my 1993 article “Natural History Notes on the Rigvedic ‘Frog’ Hymn,” *Annals of the Bhandarkar Oriental Research Institute* 72-73 (1991-92 [1993]) [=Amṛtamahotsava Volume, for 75th anniversary of the BORI], pp. 137–44. Since this article is not universally accessible, I will reproduce much of the commentary here (without particular ref. to pg. nos. or to the sec. lit. that is excerpted there). The hymn is one of the most popular in the RV and has been constantly tr. -- e.g., besides the usual, Macdonell (VRS and *Hymns ...*), Renou (*Hymnes spéculatifs*), Thieme (*Gedichte*), Maurer, Doniger.

VII.103.1: This first vs. is in Anuṣṭubh, as opposed to the rest of the hymn, which is Triṣṭubh, and it reads like a scene-setting introduction. Old suggests that it’s an addition.

The natural history phenomenon corresponding to the “year-long vow” (*saṃvatsarām ... vrata-[cārīṇaḥ]*) undertaken by the frogs is surely estivation, as was already suggested by H. H. Bender in 1917 (“On the Naturalistic Background of the ‘Frog-Hymn,’ RV VII. 103,” JAOS 37: 186–91). The rains (here embodied in Parjanya) trigger the emergence of the frogs, in a frenzy to mate—what is known as “explosive breeding.” A loud chorus of male vocalizations attends the mating, calling females to the breeding place.

The pf. of √*sī* ‘lie’ is represented in Vedic only by the med. part. *śasayānā-*, found twice in the RV (also V.78.9). It has full-grade for expected zero-grade in the root syllable, matching the full-grade forms of the archaic root pres. *śāye*, part. *śáyāna-*. See the matching pres. part. form at the end of 2b, *śáyānam*.

The presence of the stem *brāhmaṇá-* is of course a sign of the lateness of this hymn, since it is restricted to only the latest layer of the RV.

I now think the phrase *brāhmaṇā vratacārīṇaḥ* “(like) brahmins following their commandment” may be a sly reference to *brahmacārya-* (first found in the AV, but cf. *brahmacārīn-* in late RV X.109.5), which refers not only to the studentship phase of life stages, but also, specifically, to celibacy. The frogs, by virtue of their estivating state of suspended animation, have perforce been celibate, but they now go about energetically remedying the situation.

The phrase *vācam ... prá √ vad* is reminiscent of nearby VII.101.1 *tisró vācaḥ prá vada* in a hymn to Parjanya, who is the instigator of the frogs’ speech here.

The presence of *parjanya-* in c links this hymn to the two preceding ones (VII.101, 102) dedicated to Parjanya.

VII.103.2: The comparison of the estivating frog to a “dried-out leather bag” (*dṛtiṃ ná śúṣkam*) may reflect a natural phenomenon: a 1932 “Notes on Indian Batrachians” by one C. McCann in the *Bombay Journal of Natural History* recounts an experiment undertaken by him that involved depriving frogs of water until they became shrunken and dried out like pieces of wood and then rehydrating them, at which point they began behaving normally.

It is difficult to interpr. *sarasī* as anything but a loc., but its morphology is a bit problematic. To the well-attested *-s*-stem *sáras-* ‘pond’, the loc. sg. is the expected *sárasī* (IX.97.52), but our form not only shows an unusual ending with a long *ī*, but it also bears the accent. No other forms to a putative stem *sarasī-* (so Gr, etc.) are found.

Wackernagel-Debrunner (AiG II.1.306; II.2.384) also posit a *sarasī-* stem, a *vrkī-* type fem. with collective meaning, with loc. sg. in *-ī* (AiG III.170; see also Lanman, *Noun Inflection*, 389), by way of a contraction of **sarasī-i*. Though *vrkī-* loc. sgs. are rare, see *nadī* (I.135.9) and *gaūrī* (IX.12.3) to better established *vrkī-* stems. Rather than following the Lanman analysis of such forms as contractions of the stem vowel *-ī-* with a loc. sg. ending *-i*, I consider these forms possible exx. of endingless locatives – on the basis of TY’s discussion of this category. His exx. of loc. *camū* and *tanū* to *-ū*-stems provide a nice parallel to our *-ī* locatives (though of course in the latter case a contraction with *-i* cannot be ruled out). On balance, it seems best to posit a stem *sarasī-* with Gr, Lanman, Old, Wackernagel-Debrunner, etc. I am somewhat reluctant to do so because of its extreme isolation and the widespread attestation of the *-as*-stem *sáras-*, which in fact is found in vs. 7b, but The need for a heavy final syllable may have led to the creation of this nonce stem, but my reluctance is considerably tempered by TY’s discussion of the category. The use of the nonce *sarasī* here may have been encouraged by the need for a heavy final syllable.

VII.103.3: This vs. contains the famous hapax *akhkhalīkītya* with the otherwise non-occurring (in Skt.) cluster *-khkh-*. The word was brilliantly explained by Thieme (KZ [1951] 109 = KISch 138). He sees it as the first attested *cvī* formation in Sanskrit (but see comm. ad X.28.12). The base noun is *akṣāra-* ‘syllable’, and the sense would be ‘making syllables’ -- a reference to the Indian pedagogical technique, still in use today in traditional instruction, of students repeating the text after the teacher, syllable by syllable, word by word. Here the teacher would be the father, as was most likely the original situation -- hence *pitāraṁ nā putrāḥ* “like a son to his father.” Since even in RVic times the language used in instructing young boys would surely have been an early form of Middle Indo-Aryan, it would not be surprising that this technical pedagogical term should appear in MIA garb: *akṣāra* should yield **akkhara-* in early MIA -- and in fact does; cf. Pāli *akkhara-*. This has simply been transformed into the more “froggy” sounding **akhkhara-* → *akhkharī-* in the *cvī* formation. This onomatopoetic rendering of a frog call is worthy to take its place beside the better known imitation in Aristophanes’s brekekekex koax koax. In fact, because the word does double duty in this passage -- imitating frog vocalizations directly, while implicitly comparing the frog chorus to the call-and-response style of childhood instruction -- our word seems even more ingenious and well chosen than the Greek. And it is quite striking that both the Greek and the Sanskrit immediately convince as froggy, though they are phonologically very distant from each other.

VII.103.4: The verb in the first pāda, *ānu grbhṇāti*, is generally rendered with an anodyne ‘greet’ (Macdonell, Maurer, Doniger; sim. Re ‘salute’), ‘support’ (unterstützt, Ge), or is given a specifically ritual interpr. (Thieme, *Gedichte*). But the lexeme has a straightforward literal sense ‘grasp in following, grasp from behind’, and this literal meaning exactly describes the posture of frog mating (“amplexus”), with the male

grasping the female around her middle with his forefeet (sometimes facilitated by so-called “nuptial pads” developed during the mating season). Since once achieved, this posture is held for long periods—hours, days, even weeks or months—it would be visually salient to any Vedic bard outdoors during the rainy season, which is also the frog mating season. The only potential problem with my interpr. is that the obj. of the verb is masc. *anyám*. However, the expression here *anyó anyám* “the one ... the other” is already stereotypical in the RV for any mutual activity and will soon be frozen as the adverb *anyonyam* ‘mutually’. Moreover it is not impossible that the original text had a fem. **anyām* (*anyó *anyām ánu gr̥bhñāti enoh*): four-syllable openings almost always have a heavy fourth syllable (see Arnold, 188), whereas the transmitted text has a light one. Thus **anyām* could have been changed redactionally to *anyám* on the basis of the later adverb.

Note the phonetic echo ... *ámandiṣātām / maṇḍúkaḥ*.

The intens. *kániṣkan* in c, ‘hopped and hopped, continually hopped’, is a nice description of the apparently random and chaotic “scramble competition” of male frogs seeking partners.

VII.103.5: The pedagogical model seen in vs. 3 is made more explicit here: the repetition of one frog’s call by another is likened to that of a pupil and his teacher (*śāktāsyeva ... śikṣamāṇaḥ*). Both of these terms are used here in a specialized pedagogical sense, already seen in the Aves. desid. *śikṣa-* ‘teach’ as well as post-RV, but not found elsewhere in the RV, where extremely common *śikṣati* means ‘do one’s best’. For reff. for this Itr. usage see Heenen (233). In contrast to this widespread development of the desid. to *śak*, the use of *śāktá-* for ‘teacher’ seems to be only here – it’s derived from *śakti-* ‘ability’; see AIG II.2.111, 127.

With Maurer, I take *sárvam ... párvatā* as referring to a group of frogs, not to the section of a lesson with most others. The “speaks” in this pāda should be in parens.

VII.103.6: This vs. reflects the natural fact that different frogs have different cries, which allow the females to differentiate conspecific males from those unsuitable for their mating.

VII.103.7–9: With the behavioral model of the frogs established in the first 6 vss., the next three treat the ritual application of this model.

VII.103.7: The first ritual application is that of the Atirātra or “Overnight” soma ritual. Frogs are generally nocturnal; they are active during the day only if the weather is rainy or very humid. So, the first signal to humans of the frogs’ emergence from estivation would be the *sound* of the nocturnal frog chorus when the rain supplied them with the impetus to emerge. Hence they are compared to brahmins at an Overnight ritual speaking around a soma vessel configured as a pond. The similes are complexly intertwined: the frogs are compared to brahmins, but those hypothetical brahmins are then implicitly compared to frogs around a pond – in other words to the original target of comparison.

VII.103.8: But as the day dawns, the frogs become visible, with their drive to mate overriding any instinct to flee or conceal themselves. This visibility is insistently

conveyed by “[they] become visible; none are hidden” (*āvīr bhavanti gúhyā ná ké cī*). The frogs are compared to two different kinds of priests: brahmins (7a, 8a), who are here responsible for ritual speech, and Adhvaryus (8c), the priests who do the physical labor in Vedic ritual. They are “sweating” (*siṣvidānāḥ*): sweat is a sign of hard ritual labor in Indo-Iranian religious terminology (see my 2011 [2015] “Avestan *xšuuīd*: A Relic of Indo-Iranian Ritual Vocabulary,” *Bulletin of the Asia Institute* 25: 19–29). Here, once again the image does double duty -- the frogs would be covered with water drops from the rains, but they are also compared to the hard-working priests officiating at the Pravargya ritual. The Pravargya is an especially sweat-inducing ritual, since it involves a hot milk drink (*gharmā-*), which must be tended as it is heated over the fire. Other features of the Pravargya conform to aspects of the hymn: there is a year-long *dīkṣā* (period of consecration for the sacrificer), reflected in both 1a (*saṁvatsarām śaśayānāḥ* “lying for a year”) and 8b (*bráhma kṛṇvántaḥ parivatsarīṇam* “creating their yearly sacred formulation”); this *dīkṣā* involves a taboo on water or moisture of any kind. But the most crucial intersection between the Pravargya and frog behavior is found in the next vs.

Note in passing the non-etym. figure *vācam akrata bráhma kṛṇvántaḥ* with two forms of $\sqrt{kṛ}$ governing two words for speech, with the subject, *brāhmaṇāśaḥ* in a derivational relationship to the 2nd form of speech.

VII.103.9: The year-long preparation for the Pravargya rite is again emphasized here in the first three pādas.

In b the *ná* is potentially ambiguous. The first reading is no doubt the negative: the ritualists/frogs do not fail to observe the proper ritual calendar. The VP *ná (...)* (*prá*) *minanti* is quite common (e.g., II.24.12, III.28.4, X.10.5). But *ná* could also be a simile marker in the phrase *náro ná*, for, after all, the subjects are frogs, *compared* to men. Since *ná* occupies the fifth syllable of the pāda, either reading is compatible with its position: an early caesura, followed by *ná*, for the negative reading; a late caesura, preceded by *ná*, for the simile.

The final pāda of the vs. is the ritual climax: the *gharmā*-drinks, heated on the fire, bubble up and overflow their vessel, as milk does when it’s been left too long on the stove. The “obtain their own release” (*aśnivate visargám*, note the middle verb), a phrase rendered rather generically by many tr. (e.g., Doniger “the hot fires come to an end”; Maurer “the heated receptacles get emptied out”), is in my view a rendering of the dramatic moment when the bubbling mass boils over. I further suggest that its analogue in the natural world is the female frog’s release of her masses of eggs (up to 2000+ in some species), which are fertilized by the male as they are released – which must be a visually striking event. It may also refer to the practice of some frogs of making a “foam nest” in which to deposit the eggs, liquid albumen whipped up by the frog’s hind legs into a “dense light foam” -- a process that also might appear like milk boiling over.

VII.103.10: This final vs. is a mock-dānastuti.

The frogs’ release and fertilization of masses of eggs in the preceding vs. serves as a model for the fertility and increase of the ritualists that are major aims in Vedic rituals. This is surely the sense conveyed by the final vs. of the hymn, describing various types of frogs as “giving” goods and hundreds of cows to us, as well as lengthening both their and our lifetimes. They do so “at a pressing of thousands,” which can literally refer

to the release of the frogs' eggs. The prodigious fertility of frogs (no matter what happens subsequent to the thousands of eggs produced) is an encouragement to our own.

The publ. tr. renders *prá tiranta áyuh* as "they lengthened (their / our) life." But the verb is of course *tirante*, a present indic., out of sandhi and the tr. should be corrected to "lengthen."

VII.104 Multiple divinities, to destroy demons and ward off evil

See the publ. intro. for an intro. to this complex composite hymn and its parts. Complete translations are given by Norman Brown ("The Rigvedic Equivalent for Hell," JAOS 61 [1941]: 76–80) and Herman Lommel ("Vasiṣṭha und Viśvāmitra," Oriens 18-19 [1965/66]: 200–27), as well as Doniger.

VII.104.1: The verse contains a remarkable eight verbs of violence, with three in the last pāda alone -- all quite different.

VII.104.2: The syntactic function of *aghám* in pāda a is ambig. It could be an acc. sg. masc. parallel to *aghásamsam*, the object of *yayastu*. So Wh (tr. of AV VIII.4.2) "against the evil plotter, the evil ..." The pāda break following it might support this reading. However, it can also be a neut. sg., modifying *tápuḥ* and therefore the subject of *yayastu*, as in the publ. tr., flg. Ge, followed also by most subsequent tr. Ge's cited parallel, VI.62.8, where *tápur aghám* belong together, seems decisive here. See also V.3.7, where *aghám* is used as a weapon against an *aghásamsa-*: *ádhīd aghám aghásamse dadhāta* "set evil upon him, the speaker of evil."

The simile particle *iva* in the simile *carúr agnivāṁ iva* is postposed, but such late placement of simile markers is not uncommon in the RV.

The hapax *anavāyá-* is unclear. Old approvingly cites Bergaigne's gloss 'qu'on ne peut détourner par des supplications', and this interpr. seems to inform most subsequent tr., including mine. But this interpr. should rest on the lexeme now understood to be *áva √yā* 'appease', and I do not see how the morphology would work. *√yā* has a zero-grade *ī*, but no *ay-* forms -- but (*an-*)*avāya-* can only be broken down into *ava+ay-a*, containing no elements of *√yā/ī*. AiG fails to treat this form. Re (EVP XVI.114) tries briefly to get it from *áva √ī*, but decides that *áva √ī* is "simpler." This is certainly the case morphologically, but the semantics are harder: *áva* is not a particularly common preverb with *√ī* and when it appears, the lexeme generally means 'go down' (with 'down' the physical direction), occasionally more generally 'go away'. Re cites V.49.5 *ávaitu ábhvam*, claiming that the verb there means 'céder', thus allowing our form to mean 'qui ne cède pas'. But I do not see a 'cede' sense in that passage, just 'go away'. This is, in fact, the interpr. found in RIVELEX (I.181), which glosses the stem *anavāyá-* as 'nicht weggehend' -- 'not going away' (metaphorically 'nicht vergehend, verbleibend', 181 n. 1) and analyses as a "Verbales Rektionskompositum/Dete<r>minativkompositum" *an-* + *avāya-* 'weggehend' (< *áva* + *√ay¹-*). This must be the correct analysis, though I am sorry to abandon the richer semantics of a derivation from *áva √yā*. My publ. tr. 'unrelenting' can still probably stand, as a strengthened expression of 'not going away'. (Note in passing that RIVELEX I.394 [s.v. *ay¹-*] glosses verbal forms of *áva* + this root as 'herabsteigen; Abbitte leisten — descend; apologize'; the second terms of the German and English glosses must result from confusion with *áva √yā/ī* and should be stricken.)

The rendering ‘worm-eater’ for *kimīdīn*- here and in the following vs., as well as in X.87.24, is based on a suggestion of Schindler and Werba recorded in EWA s.v. and also entertained by Scar (41). Note that in X.87.24 it is associated with *yātudhāna*- ‘sorcerer’, which stem figures prominently later in our hymn as well as in other parts of X.87.

VII.104.3: The first hemistich of this vs. contains 2 locative phrases, *vavrē antār* (a) and *anārambhaṇé támasi* (b). Essentially all tr. are agreed that the two phrases are parallel and refer to the same place -- and this is reasonable and probably would be the default reading. This interpr. in turn leads some (see esp. Norman Brown and Oberlies I.473) to take this as a description of Hell, or the RV equivalent thereof. My interpr. is syntactically bolder, and perhaps less well supported, but it arises from my discomfort with equating the enclosed space denoted by *vavrā*- (which is several times used of the Vala cave, e.g., IV.1.13, V.31.3) with “ungraspable darkness.” Because these locales seem incompatible, I take *vavrē antār* as referring to the place where the evil-doers are hiding / taking refuge, and the action enjoined on Indra and Soma in b is to roust them from this hole and thrust them into a dark void with no handhold, the very opposite of an enclosure. A similar use of *vavrē antār* as a place from which creatures are ejected is found in the account of the Vala myth in V.31.3 *prācodayat sudúghā vavrē antār* “(Indra) impelled forth the good milkers (who were) within the cave.” The action there is of course benign, but the loc. phrase also refers to the original location of the cows, not their destination. I must confess, however, that vs. 17 in our hymn, with the phrase *vavrām̐ anantān* “holes without end” into which the villainess is to fall, does give me pause. (On the other hand, vs. 17 is in a portion that was probably a late addition to the hymn; see publ. intro.)

VII.104.4: The lexeme *úd √ takṣ* (lit. ‘fashion up’) that opens the 2nd hemistich occurs only here in the RV, and at least acdg. to Monier Wms nowhere else in Skt.; it was clearly artificially generated to contrast with the verb *nijūrvathaḥ* (‘grind down’) at the end of the hemistich, to highlight the *úd* ‘up’ / *ní* ‘down’ contrast.

VII.104.5: Both *áśmahanman*- and *tápurvadha*- have bahuvrīhi accent, and though it’s tempting to render them as tatpuruṣas, the accent should be respected. See Old’s disc. and Ge’s wavering in the n. [he is definitely tempted], though the tr. in the text is bahuvrīhi-like.

pársāna- occurs only 3x in the RV (and nowhere else in Skt.), here and in VIII.7.34, VIII.45.41. It has no good etymology (see EWA s.v.). The sense of ‘deep place, chasm’ is thus entirely dependent on context. Such a meaning is compatible with all three passages; the strongest support for it is VIII.7.34 *girāyaś cin ní jihate pársānāso mányamānāḥ* “Even the peaks bend down, thinking themselves depths.” Parallel locatives in VIII.45.41 make it likely that it refers to a place, but not what sort of place it might be: *yád vīlāv indra yát sthire, yát pársāne párābhṛtam* “What is in a firm place, what in a solid place, Indra, what has been borne away (in)to a *pársāna*” In our passage the *ní* ‘down’ does suggest that the destination is a depth, but I also think that this interpr. has been somewhat uncritically embraced by those with preconceptions about the Vedic hell/underworld.

nisvarām ‘in silence, to silence’ contrasts with *svaryā-* ‘reverberant’, used of the weapon in 4c.

VII.104.6: As disc. in the publ. intro., this vs. closes the first section of the hymn, at least as I understand the structure.

The preverb *pāri* appears with \sqrt{hi} ‘impel’ only here in the RV (and, acdg. to Mon Wms., all of Skt.). It seems to have been suggested by the *pāri* in pāda a, construed with $\sqrt{bhū}$, in the meaning ‘encircle’. The idiom *pari* \sqrt{hi} ‘impel around’ does not make much sense, unless the image is of *hótrā-* compared to horses made to circle a race track. Re thinks rather that it reprises *pāri bhūtu* in a: “l’offrande que (je ceins) autour (de vous en la) poussant” -- but this seems more trouble than it’s worth: he is forced to supply the crucial verb (je ceins: ‘gird, buckle on’) while relegating the actual verb stem *hinomí* to a participial adjunct (“en ... poussant”).

hótrā- is of course completely -- and not very interestingly -- ambiguous between ‘libation’ and ‘invocation’.

In the last pāda Indra and Soma are compared to *nṛpātī*. Some interpr. (Brown, Doniger) take this as a ref. to the Aśvins, and it is true that the other three occurrences of this dual refer to the Aśvins (VII.67.1, 71.4, X.106.4), as duals often do. However, I think it’s more interesting to assume that the poet is comparing these two great gods to *human* ‘lords of men = kings’, a sly switching of the hierarchy of roles. (Of course he just compared the gods to horses, so being compared to humans may be a step up.) I think Ge is correct in his interpr. of this simile: the gods should encourage our poetic formulations in the way that human kings do, by providing us with material goods. If *nṛpātī* = Aśvins, the simile doesn’t work.

VII.104.7: See publ. intro. for the init. *prāti* here echoed by that beginning 11c and forming a ring defining vss. 7–11 as a subsection. Since *prāti* ‘against’ is not otherwise found with $\sqrt{smṛ}$ (or with $\sqrt{śuṣ}$, see vs. 11), I think the preverb has been stationed at both ends of this section to focus attention on the targeted victim. See disc. in publ. intro.

The NP *rakṣāso bhaṅgurāvataḥ* is entirely ambiguous between gen./abl. sg. and acc. pl. It is almost universally taken as acc. pl. here, as parallel obj. to *druhāḥ* ‘deceits’, but I prefer gen. sg. for several reasons. For one thing “deceits (and) demons” is a somewhat off-balance coordination (though certainly not impossible in RVic discourse). More important, the second hemistich defines a single enemy who shows hostility “with his deceit” (*druhā*); it makes sense to identify this single foe as the singular demon of pāda b, who owns the deceits mentioned there. In favor of the acc. pl. interpr., in X.76.4 (cited by Ge, n. 7b; cf. also X.87.23) the same phrase must be acc. pl. obj. of a form of \sqrt{han} , as here: X.76.4a *āpa hata rakṣāso bhaṅgurāvataḥ*. On the other hand, in IX.71.1 (also cited by Ge) in the two-word sequence *druhó rakṣāsaḥ*, which we also find here, *druhāḥ* is an acc. pl. (as here), obj. of the verb *véti*, but *rakṣāsaḥ* belongs to a different syntagm and is abl. sg., construed with *pāti* “protects from the demon.” The point of citing all these parallel passages is to demonstrate that even identical word sequences can function differently syntactically in different contexts: the poets were not locked into a morphological template.

The poss. adj. *bhaṅgurā-vant-* (to *bhaṅgurá-* [AiG II.2.487], to $\sqrt{bhañj}$ ‘break’; see EWA s.v. *BHAÑJ*) modifies *rakṣās-* 3x and *hantár-* once. I choose to render its possessive

morphology by tr. ‘with his wreckage’ (lit. ‘having breakage, wreckage’), referring to the damage that a demon brings in his train -- in contrast to looser and more colorful tr. like Brown’s (reproduced almost verbatim by Doniger): “Slay those who employ demons, who hate us, who would break us to bits,” where he manages to turn both the root noun *druh-* and the poss. adj. *bhaṅgurāvant-* into verbs qualifying *rakṣāsaḥ*. Others attenuate the meaning of *bhaṅgurāvant-* to ‘crooked’, and then by easy metaphorical extension ‘tricky, malicious’ (see Gr’s ‘tückisch, trügerisch’, also EWA’s ‘trügerisch, mit krummen Wegen’; Ge, Lommel, Lü 419 ‘hinterlistig’). This interpr. is based on the second of BR’s glosses of the base adj. *bhaṅgura-* 1) zerbrechlich, vergänglich, 2) krumm, kraus, gerunzelt; see Gr’s reproduction of the 1st word of each in his gloss of (*bhaṅgurā*). This base word is not found in Vedic -- and *bhaṅgurāvant-* is found outside the RV only in passages based on RVic passages -- though *bhaṅgura* is fairly widespread in Classical Skt., where it generally means ‘breakable’, but occasionally ‘curved’ esp. in connection with eyebrows (cf. AiG III.195 in addition to BR s.v.). Since the ‘curved, crooked’ sense seems to be a late and specialized development, I see no reason to impose it on this RVic word, esp. since I see no clear line from ‘break’ to ‘be crooked’ except in such a specialized application.

VII.104.8: The lexeme *abhí√cakṣ* here seems almost a substitute for *abhí√car* ‘conjure against’, and note that the object (“me”) is qualified by the part. *cārantam*. Re notes that this is the only RVic pejorative ex. of well-attested *abhí√cakṣ*, which generally means ‘look upon, look towards, oversee’ in neutral or positive sense. It is notable that in our passage the action of this *visual* idiom is accomplished by *verbal* means (“untruthful words” *āṇṛtebhir vácobhiḥ*). Re remarks that it coincides “avec le passage de «voir» à «dire»” -- without specifying what he means.

VII.104.9: The hapax *pāka-śamsá-* is taken by some as a bahuvrīhi (implicitly, Gr ‘arglos redend’; cf. Whitney [AV VIII.4.9] “him of simple intent,” Brown “him of pure and single heart,” Doniger “the man of pure heart” [with *śamsa-* = ‘heart’?!]), but by accent it should be a determinative cmpd, contrasting explicitly with the bahuvrīhi *aghá-śamsa-* ‘having evil speech’ with 1st member accent, found in vss. 2 and 4. It is surely *my* guileless speech that is in question, since I was “acting with guileless mind” (*mā pākēna mānasā cārantam*) in the immediately preceding vs (8a). As Re points out, *ví√hr* probably refers to distortion of ritual speech.

Since *pāka-śamsá-* is a thing, not a person, the parallel *bhadrām* in b should also likewise be a thing (so Ge, Whitney, Lommel, Brown), not, as the publ. tr. (“an auspicious one”) has it, a person. I would thus take the form as a neut. acc. sg., not a masc. and slightly emend the publ. tr. to “something auspicious.” This something is probably also connected with ritual performance.

VII.104.10: I take *ní ... hīyatām* as belonging to *√hā* ‘change position’; in most passages *ní√hā* means ‘bend down’ (e.g., VIII.27.2), but here and in VI.52.1, also a curse, I take the passive as ‘be bent double’. Most tr. are unsatisfyingly generic (‘perish’ and the like).

VII.104.11: See disc. in publ. intro. and ad vs. 7 on the use of *prāti* to define this section of the hymn and call attention to the victim. As noted ad vs. 7, *prāti* √ *śuṣ* is found only here.

VII.104.12: The prim. comp. *ījīyas*- here (=AVŚ VIII.4.12; also in AVŚ V.14.12), to *ījū-* ‘straight’, should of course have a full-grade root syllable **rājīyas*-, like the superlative *rājiṣṭha* (RV 7x, = Aves. *razišta*-). Re plausibly suggests that it has adopted the root syllable of the base adjective -- though why other primary comparatives and superlatives tolerate root ablaut is not addressed. It’s worth noting that if we were to restore the expected form, it would fix a problematic cadence (*yatarād* **rājīyaḥ* ← *ījīyaḥ*), by producing a heavy syllable four syllables from the end. As it is, the cadence is ∼ ∼ – ×, rather than expected – ∼ – ×. I am reluctant to emend, however, since it is not clear how the erroneous zero-grade would have been introduced.

VII.104.13: Most interpr. (Ge, Oberlies [Rel. RV I.441], Re, Doniger, Wh [AV]), take *kṣatríyam* here as masc. personal ‘ruler’, modified by the part. *dhārāyantam*, while I take it as neut. ‘rule’ (as it sometimes is; cf. IV.20.3, V.69.1) and the obj. of the participle. The problem with the standard interpr. is that the part. has nothing to govern, and in fact a number of interpr. supply a second *kṣatríyam* (or *kṣatrám*; see Re) to occupy that role. Cf., e.g., Ge “... den Herrscher, der fälschlich (die Herrschaft) führt.” However, Lü (419), Lommel, and Brown interpr. as I do.

VII.104.14: The disjunctive “if” clauses that occupy the first hemistich are more complicated than they first appear. In the publ. tr. I took the first half, *yádi vāhám ānṛtadeva āsa*, as a contrary-to-fact expression “if I were ...” The general context speaks in favor of this interpr.: in the 2nd hemistich the speaker asks indignantly why Agni is angry at him, so the implication is that the speaker has *not* done what would occasion such anger. This assumption presumably accounts for Ge’s tr. “als ob ...” (fld. by Lommel), which is strenuously disputed by Old. But the grammar makes problems: the indicative perfect *āsa* should not express contrary-to-fact modality, but a fact in the past (that may or may not have present relevance). For contrary-to-facts of this sort, the pres. opt. usually serves; cf. VII.44.23 *yád agne syām ahám tvám, tvám vā ghā syā ahám* “If I were you, Agni, or you were me ...” Note also that the AV version has an indicative *present*, *ásmi* (Wh “If I am one of false gods ...”). So we must reckon with the real possibility that “I” did have false gods, at least in the past, and I would slightly alter the tr. to “If I was (previously) a man with false gods ...”

The parallel verb in b is the perfect *apy ūhé*. In the publ. tr. I take this as presential -- and this is quite possible, since the other forms of this pf. are so used (see Kü 489–90) -- but Kü takes it as preterital, and, given my slight reinterpret. of pāda a, this might be best: “if I called upon ...” Kü accepts Insler’s 1996 positing of a root √ *vāh* ‘respect’ separate both from √ *vah* ‘convey’ and from √ *uh* / *ūh* ‘laud’ (which latter has a full-gr. root med. pres. → them. pres. *óh(a)*-). I am not convinced of the need for this separate root and would simply group the pf. *ūhé* with the pres. of √ *ūh*, despite Kü’s argument that unless the pf. is clearly distinguished from the pres. by meaning or function, they should not belong to the same root. For further on the lexeme see comm. ad X.52.3.

What exactly this pāda is conveying is not clear. Did the speaker call upon the true gods but in a false (that is, ritually faulty or with false intent or a false heart?) way? Such is the interpr. of most comm. -- e.g., Ge “nur zum Schein” -- but Lü (420) suggests equating *mógham* and *devān* (“oder wenn ich das Falsche als Götter ... auffasste ...”), though he also gives the alternate “in falscher Weise.” And Re is more radical in his interpr. of the verb: “si j’ai une compréhension (fausse des) dieux.” Given the appearance of the same adverb *mógham* in 15d, with the sense of false speech, the standard interpr. of the occurrence in this vs. seems the correct one, esp. as it contrasts nicely with the false or untrue gods in pāda a.

The question in d is where to construe *te*. Ge (fld. by Scar 469, but with ?) takes it as a quasi-agent: “Die Falschredenden sollen dem Tode *durch dich* verfallen.” Given that *te* is an enclitic and that the verb is not passive, this seems a stronger statement than the text would seem to support. I take *te* with the *drogha-* of the cmpd *drogha-vāc-* “deceitful to you,” but I admit that it might rather go with *nirṛthām* “your dissolution” (so Brown, Doniger “your destruction”; sim. Lü) -- that is, dissolution stemming from you. Not all tr. render the *te*: it is absent from Lommel’s rendering.

VII.104.15: I use the standard English rendering of *yātudhāna-* (with cognates well attested also in Old and Middle Iranian) as ‘sorcerer’ (German Zauberer), without any implications about what practices this figure might engage in. Since in the RV the word is found only in “popular” discourse, he presumably doesn’t work his ill through orthodox ritual means.

VII.104.17: The standard rendering of *khargālā-* is ‘owl’; see, inter alia, Gr, EWA, and the various tr. of this vs. But I find this unlikely for several reasons. The ‘owl’ is found as *úlūka-* in 22a, so it is already represented in this sequence of vss. But, though one could argue that there are numerous types of owls, which could have different designations, there are other arguments against this identification. For one thing, if the word is onomatopoeic, as EWA suggests, *kharg(a)* is not a particularly owl-ish sound. I tentatively suggest the nightjar. A number of species of nightjars are found in the proper geographical area. As for behavior and appearance, judging from information aggregated from the internet, nightjars are nocturnal (“goes forth by night” *prá ... jīgāti ... náktam*), feeding esp. at the twilights; the sexes are similar, and the birds are small and therefore could be considered typically female (hence the fem. *khargālā-*). They stay hidden on the ground by day (“concealing her own body by deceit” *āpa druhā tanvām gūhamānā*): images on the internet show them visually almost indistinguishable from the ground and one YouTube video is entitled “Indian Nightjar -- Master of Camouflage”; acdg. to Wikipedia “During the day, the Indian nightjar lies still on the ground, concealed by its plumage; it is then difficult to detect, blending in with the soil.” Moreover, their cries are much easier to connect with *kharg(a)* than an owl’s, being described as “a continuous churring” (the internet provides numerous recordings of various types of nightjars). Note that etymologically the “-jar” of nightjar is derived from its churring song -- and *jar* and *kharg* are reasonably close phonetically. Moreover, their genus name is *Caprimulgus* “goat-sucker,” based on the old belief that the birds suck milk from goats; if a similar belief was also found in India, it might seem to be the habit of a sinister or at least uncanny creature -- accounting for its inclusion here among the sorcerers in animal form.

The ability of the soma-pressing stones to smash demons, referred to in d, is also found in the pressing stone hymn X.76.4 *āpa hata rakṣāso bhaṅgurāvataḥ* “Smash away the demons with their wreckage,” which incidentally contains one of the three other occurrences of *bhaṅgurāvanta-* in the RV, besides the one in vs. 7 above. The demon-destroying ability of ritual implements, especially the noise made by their clashing, also reminds me of “Manu’s Cups,” whose clattering destroys Asuras. See the various Vedic prose versions of this in my *Sacrificed Wife*, pp. 21–26.

VII.104.18: I am not entirely certain why it is the Maruts who are tasked with the destruction of these creatures, though it is probably because the demons in question have taken the form of birds and therefore are moving in the midspace, which is the Maruts’ domain. Re also cites the well-known relationship between the Maruts and the *vīś-* (see *vikṣū* here), and these animal demons may be associated with the “folk.”

The root noun *rīp-* is otherwise used of cheats and swindles (cf. also *ripú-* ‘cheating, swindler’), and I am reluctant to allow a sense ‘defilements’ only here -- though it is the almost universal solution of other tr. (Wh, Brown, Klein [DGRV II.149: “impurities”], Lommel “Unsauberes,” but cf. Ge’s “Unredlichkeit” [dishonesty], which has a moral nuance). Deception and cheating are also characteristic of the animal-demons in this section: see the *khargālā* who conceals her own body “with deceit” (*druḥā*) in 17b, the flying dog-sorcerers that want to deceive Indra in 20b, and the oblation-stealers in 21b -- so the standard sense of *rīp-* fits the larger context. However, I do have to acknowledge that the root *√rip* does mean ‘smear’, and so ‘defilement’ is not out of the question.

It is difficult to avoid taking *devé* here as an adjective ‘divine’, modifying *adhvaré* ‘ceremony’, a temptation that all tr. (including me) have succumbed to and that is endorsed by Old.

VII.104.19: The “mountain” with which Indra smites the demons must be Indra’s *vájra-* ‘mace’, identified with a mountain elsewhere, as Re points out: in VII.22.6, as well as in the curious dvandva *indrā-parvatā* (3x, only in voc.: I.122.3, 132.6, III.53.1). See comm. ad locc.

VII.104.21: I have rendered the impf. *abhavat* in pāda a as an immediate past (‘has become’), though this is not ordinarily a usage of the impf. But this sense fits the context -- with the parallel pres. *śísīte* (20c) and *eti* (d) and the imminently threatening meances -- better than a simple past.

Note the echo of *parāśaró* in *paraśúr* in c.

As Re remarks, this is the only negative use of the desid. *vívāsa-* (*√van* ‘win’), usually ‘seek to win, covet, coax’. The negative sense must be attributable to the confrontational preverb *abhi-*.

How to distribute and construe the two similes in cd is the question. I take both similes, *paraśúr yāthā vānam* “like an axe a tree” (c) and *pātreva* “like pots” (d), with the pres. part. *bhindán* (d) in two slightly different senses, ‘splitting’ and ‘breaking’ respectively (sim. Brown, Doniger). This pres. part. is anticipated by the preverb complex *abhīd* that opens the hemistich, looking like an aberrant form of *√bhid* -- a low-level ex. of poetic repair. Others (notably Ge, Wh, Lommel) take *bhindán* only with the 2nd simile,

with the first controlled by *eti* in d (e.g., Ge “Śakra fährt auf die Dunkelmänner los wie die Axt in den Baum”). But axes are more likely to “split” than to “advance,” and I take *eti* only with the acc. pl. (*satāḥ* ...) *rakṣāsaḥ* as goal. It would also be possible to take *bhindān* + *eti* as a verb phrase with auxiliary, ‘keeps splitting’ or the like.

The function, and indeed the morphological identity, of *satāḥ* is unclear. With Gr, I take it as a pres. part. to *√as* in the acc. pl., modifying *rakṣāsaḥ*. In my interpr. it means ‘real, really being X’, though that could extend to ‘really present’. Re by contrast suggests that it’s an adverb, meaning here ‘tout à fait’, also probably found as 1st cmpd. member in *sató-mahant-* (‘entirely great’ VIII.30.1) and *sató-vīra-* (‘entirely heroic’ VI.75.9). Although Re does not pronounce on the morphological analysis, AiG II.1.237 implies that it contains the adverbial ablatival suffix *-tas* / *-tās* and thus does not belong to the pres. part. of *√as*. See also EWA s.v. *satās*. Old (ad VII.32.24) allows several possibilities, incl. the adverb, which he considers assured in the cmpds. cited above. Although, with Old, etc., I think that an adverbial *satāḥ* is found in those cmpds., I do not find that interpr. *satāḥ* as adverbial here improves the sense, though I grant that the acc. pl. pres. part. doesn’t really either.

VII.104.22: The *śuśulūka-*, occurring beside *ulūka-*, must be some species of owl, and it is tempting to take it as a deformation of **śīśu-ulūka-* ‘baby owl, little owl’, hence presumably the diminutives found in many tr. (incl. mine).

Sāy. takes *kōka-* as the cakravāka bird (see Ge n. 22b), Gr, Wh, Lommel, Brown, Doniger as the cuckoo, presumably on onomatopoetic grounds. The reinterpret. ‘wolf’ is owing to Lü (see Re and EWA s.v.) and has MIA support. Despite the dominance of birds in *pādas* a and c, ‘dog’ and ‘wolf’ make a natural pair in b.

VII.104.23: Acdg. to Re, Mehendale interpr. the curious formation *yātumāvant-* in *pāda* a (also I.36.20, VII.1.5, VIII.60.20) not as a metrical variant of *yātumānt-* (so AiG II.2.775) but as a haplogy for **yātu-māyyāvant-*. I assume (I have not seen the art.) that his posited form contains *-māyā-* in one form or another and anticipates the next vs. where the female sorcerer is “exulting in her magic power” (*māyāyā śāśadānām*), though I don’t know why the form posited is not just **yātu-māyāvant-*, containing attested *māyāvant-* ‘possessing māyā’ (IV.16.9). If we accept this suggestion, or modified suggestion, the tr. could be slightly altered to “the demonic power of those possessing the magic power of sorcerers.”

The *kimīdīn-* was singular in vs. 2, but a dual matched pair (*mithunā yā kimīdīnā*) here. Why the dual is not entirely clear, but the next vs. specifies both male and female sorcerers as Indra’s target, and the *mithunā-* here suggests a sexual pairing.

VII.104.24: *vīgrīva-* ‘with no / broken neck’ is ambiguous: is it descriptive of a pre-existing condition and thus a species, ethnic, or personal slur (in English “no-neck” is an insult, referring to a burly and stupid thug or goon)? or is it used proleptically here, to indicate what will happen to those who “shake to pieces” (*rdantu*). I’ve taken it as the former, but opinion is divided and either would work in the passage.

mūra-deva- is also contested. Acdg. to EWA (s.v. *mūla-*), flg. Wack., it is an *r-* form of **mūla-deva-* ‘whose gods are roots’ (Wurzelanbeter)(see also Brown). This excursion into exotic anthropology seems unlikely to me -- not the sort of divinity that

Vedic people would posit even of their worst and most primitive enemies. Most tr. take it as ‘idol-worshiper’ (e.g., Ge Götzanbeter), without, however, indicating what the ‘idol’ rests on: ‘root’ → ‘root as representation of god’ → ‘idol’ (not a semantic chain that seems reasonable to me)? Or, more likely to me, based on *mūrā-* ‘stupid, foolish, dumb (i.e., non-speaking)’. My own ‘with feckless gods’ is rests on this association, but is closer to the sense of the original adjective. The problem of course is the accent, since *mūrā-* ‘dumb, foolish’ has suffixal accent, and *mūla-* ‘root’ has initial-syllable accent like the first member of this compound. However, accent shift in cmpds isn’t unknown; cf., in the opposite direction, the famous case of simplex *viśva-* but cmpded *viśvā-*. And the semantics works better with ‘foolish, feckless’.

Maṇḍala VIII

VIII.1 Indra

VIII.1.1: As disc. ad X.143.3, the lexeme *vī√śams* barely exists, and its sense is not entirely clear. However, here since *mā ... anyād vī śamsata* contrasts strongly with *īndram id ... śamsata*, I suggest it means something like ‘praise apart, praise on the side’ – in other words, just focus on Indra. It is likely that *vī* is a nonce addition in this contrastive usage. I would now slightly alter the tr. to reflect this interpr.

In the publ. tr. I take *ca* in d as conjoining the two clauses found in c and d (so apparently also Ge and explicitly Klein, DGRV I.103, 105). However, given that the *ca* is somewhat wrongly positioned and that it reminds us of other *ukthā ca* passages, I now consider it possible that *ukthā ca* is part of a truncated conjoined NP. See disc. ad VIII.82.4.

VIII.1.2: This verse, couched in the acc. sg. masc., is entirely dependent on the *īndram* of 1c.

In b Ge (followed by, e.g., Scar 163) takes *gām* as a “(Kampf)stier” terrorizing the communities. Although it is of course sometimes necessary to interpret forms of *gō-* as masculine, the feminine “cow” predominates (esp. in contrast to the bull of 1c and 2a), and the Kampfstier seems to me an invention of contextual desperation. I interpret it instead as the first member of a decoupled compound **go-śāh* (like *go-jīt-*), parallel to *carṣani-* in *carṣani-śāh-*. A similar decoupling is found in the next pāda, and playing with analytic versus synthetic expressions is found elsewhere in the RV (see, e.g., VII.19.3–4, V.44.6, 52.15). A plural *gās* might have been desirable, but number is of course neutralized in 1st compound members, and when decoupled, the default might be the singular.

In the compound *ubhayaṃkarām* ‘making both’, the 1st compound member *ubhaya-* ‘both’ is further specified by two syntactically independent words *vidvēṣaṇam* and *saṃvānanā* – a play reminiscent of the one proposed for the preceding pāda. For the latter word, Old considers but seems to reject the possibility that it represents *saṃvānanam* with contraction of *-a-* with following *u-* over the *-m*. It sees best to accept the text we have and interpret *saṃvānanā* as neut. pl., contrasting with the singular of *vidvēṣaṇam*. Perhaps Indra favors unions over divisions, and it would also be a clever reversal for ‘division’, which is inherently plural, to be presented in the singular, while ‘union’, which is inherently singular, is in the plural. It would also be possible to take *saṃvānanā* as an instr. singular of accompaniment: “division by hate along with union by love.”

VIII.1.3: I follow Klein (I.58–59) in taking the *ca* as connecting *āhā vīśvā* with *idām* used in a temporal sense. We might have preferred the order **āhā ca vīśvā* in the 2nd constituent. but compare I.130.2, 9 *āhā vīśveva*, where the phrase also behaves as an indissoluble unit before the particle *iva*.

VIII.1.4: Following Old I take both *vipaścītaḥ* and *vīpaḥ* as nom. pl., rather than taking the latter as a genitive sg. (with Ge et al.). The thought is that the poets and their products

that belong to and emanate from the competing sides – that of the stranger and that of our peoples – keep crossing each other in their efforts to reach and attract Indra. For a thorough discussion of the possibilities of this hemistich see Old, who calls it a “Musterbeispiel für Vieldeutigkeit.” The intensive *ví tartūryante* brilliantly captures the constant roiling motion of these competitive elements.

The abrupt imperative *úpa kramasva* seems to merit a slangy tr.

nédiṣṭham appears to be functioning proleptically: bring it here so that it will be nearby.

VIII.1.5: Klein (DGRV I.286) asserts that this is the only passage in which *caná* has “an indisputably negative value”; although *caná* is almost always found in negative context (pp. 285–86), the negation is expressed elsewhere in the context. But I think this passage can be eliminated as the one counterexample with inherent negative sense, because the second hemistich, which continues the clause in ab, “I would (not) hand over + dat.” (*pārā ... deyām*), has three further dative expressions, each governed by *ná*: *ná sahásrāya náyūtāya ... ná satāya*. The negative cast in this hemistich can be, as it were, backprojected to the 1st hemistich, with *caná* + dat.: *mahé caná ... śulkāya*. This would be a variant of Klein’s first category of negative spread (my term, not his), where the *caná* clause follows a negative clause (p. 285). Given the intricate syntax of the RV and the relative unimportance of word order, the fact that the negatives follow *caná* rather than preceding it here seems to me unimportant. (Klein does not cite the rest of VIII.1.5.)

This verse contains one of the two examples of *śulká-* in the RV. The word later becomes specialized in the meaning ‘brideprice’, but clearly does not mean that here.

On the famous root aor. opt. (trisyllabic) *deyām*, see Jamison 1999, with discussion of some of the abundant sec. lit.

VIII.1.6: Pāda c contains a cute and tricky construction: a conjoined nominative subject of a 2nd ps. dual verb, with one of the subjects gapped. That is, underlying **tvám mātā ca* “you and a mother” is reduced to *mātā ca*, with the other subject only detectable in the verb *chadayathaḥ* and implied by the *ca*. Similar gapping with the 1st dual is found, e.g., in VII.88.3 *ā yád ruhāva vāruṇas ca nāvam* “When we two, (I) and Varuṇa, mounted the boat...,” VIII.69.7 *úd yád ... grhām índras ca gānvahi* “when we two, (I) and Indra, go up to his house....” Both constructions are somewhat reminiscent of the *vāyav índras ca* construction, though that does not involve gapping.

The sentiment of the verse is likewise a bit tricky. In ab the poet dismisses father and brother as providing no benefit, in contrast to Indra, who is “good for goods” (cd), but Indra is equated (positively) with a mother, who would in this society of course have little or no control over goods and giving (as opposed to the father and brother).

VIII.1.7: On *iyatha* (rather than *iyetha*) see Kü (100), following Hoffmann 1976: 553 n. 3.

The verse contains several unexpressed presuppositions. The anxious questions in pāda a are explained by the statement in b: we ask where Indra is because we know his mind is in many places. With Ge I take *ālarṣi* in c also as a question, again explained by d: they have sung to you, so are you coming?

Pāda c contains a heavy, accentless vocative phrase: *yudhma khajakṛt puramdara*, the last two of whose members contain object-governing compounds. The long (12-syl.) third pāda of brhatī nicely accommodates such iterations.

VIII.1.8: The first hemistich reprises 7cd, with a close variant of 7d recast in the imperative (8a), and one of the vocatives of 7c made into a predicated nominative (8b). This compound (*puramdaráḥ*) is in turn transformed into an independent clause (with lexical variation) in 8d: *bhinát púraḥ*. This process is reminiscent of the play with synthetic and analytic means of expression in vs. 2.

The fem. pl. relative *yābhiḥ* has no possible antecedent anywhere in this verse or nearby verses. The only possible fem. pl. referent is the ‘fortresses’ implicit in *puramdaráḥ*, but this makes no sense. With Old and Ge I supply ‘songs’, suggested by pl. *gāyatrā* in 7d, although not directly connected thereto, because *gāyatrā*- is neuter.

Hoffmann (1967: 237–38) takes *bhinát* as a parenthetical verse filler, with the injunctive expressing a characteristic of Indra, parallel to *vajrī*. Although he is attempting to account for the fact that *bhinát* is injunctive and *yāsat* is subjunctive (and perhaps for the fact that sitting on the barhis and splitting fortresses can’t be done at the same time), this explanation seems over-complex. *bhinát* is a rhyme form to *yāsat*, and the expected subjunctive *bhinádat* would be a good candidate for haplology under these circumstances.

VIII.1.10: Most interpret *gāyatrā-vepas-* with a trans./caus. sense of *vepas-* (Gr ‘zu Gesängen anregend’, Ge ‘die die Sänger beredt macht’, Scar [69] sim.), but neither independently or in compounds does *vépas-* have this sense; it simply means ‘trembling excitation, excitement’. Moreover the usage of *gāyatrā-* nearby in this hymn (7d, 8a) indicates that Indra (who is the referent of *gāyatrā-vepasam*, though in the guise of a cow) is the recipient of the songs, not their inciter. Presumably his pleasure in them will induce him to be a “good milker” by giving largesse to the singers, but at least in this passage he does not seem to be giving inspiration to the singers in the form of songs.

Trisyllabic *ánⁱyām* in c is problematic, distinguished from *anyā-* ‘other’ both by accent and by trisyllabic reading. Nonetheless Ge (reluctantly, see his n.) tr. it as if it belonged to that stem: “eine andere [zweite]...” Old by contrast derives it from *á-ni-ya-* ‘nicht niedergehend, nicht (in Unglück) hineingeratend’. (I assume that he meant the final portion to be analyzed as the root *√i* ‘go’, with thematic vowel, but he doesn’t specify.) Both Gr and Scar (69) extend this semantically to ‘nicht versiegend’ (not drying up), which pushes the limit in my view. Its only other occurrence is in VIII.27.11, in a less diagnostic context but one that is at least compatible with a bovine referent. My own analysis of this word is admittedly quite shaky. I take it as a back formation of sorts from *ánika-* ‘forefront’ and meaning “belonging to the forefront, lead(-cow)”. Dawn is regularly called *ánika-* and the word is sometimes used of her cows (e.g., I.124.11 *yukté gāvām aruṇānām ánikam* “She yokes the forefront of the ruddy cows”). A couple of not very strong models can be adduced: *samaniká-* ‘encounter’ / *samanyà-* ‘appropriate to the encounter’, *dṛśika-* ‘appearance’ / *dṛśya-* ‘to be seen’. However, I am aware of the weakness of this analysis, and only produce it because other analyses are equally weak; Old’s is certainly thinkable, though not with the explicit extension to ‘not running dry’ made by others.

VIII.1.11: Various semi-understood myths are alluded to here, with minimal (or no) identification of the subjects of the three parallel injunctives (*tudāt*, *váhat*, and *tsárat*). I am inclined to take the subject of all three as Indra (who is clearly the subject of the middle one), but see both Ge and Old for discussion of other possibilities.

VIII.1.12: As indicated in the publ. intro., this verse poses serious problems of interpretation. It is also found in the AV in a marriage hymn (AVŚ XIV.2.47), used as an expiation when something is broken during the sacrifice, or anything on the bridal car needs mending, or when a student's staff is broken (see Whitney AV ad loc.). The verse is extensively and illuminatingly discussed by Old, who summarizes the first two pādas as indicating that (a) Indra heals without using any adhesive material to bring together the damaged parts, and b) he does so before the weapon (unmentioned but presumed by Old to be the cause of the damage) drills through to the collarbones, or rather the rib cartilage. This scenario seems plausible, although it rests on several assumptions not explicit in the text, and it is essentially followed by Ge, Tichy (1995: 327, 338), and Scar. I would only mildly dispute taking the root noun *abhiśrīṣ-* in pāda a as a concrete noun, a sort of band-aid (*ṛté cid abhiśrīṣaḥ* "auch ohne Verband" Ge, Tichy, Scar; see also EWA II.670), a piece of equipment that seems uncharacteristic of Indra. This ablative seems to me parallel to the ablative in b, *purā ... ātīdāḥ* "before drilling through," and this parallelism invites an abstract verbal interpretation of *ṛté ... abhiśrīṣaḥ* "without clasping/taking hold." The point would be that Indra can heal from afar, without even touching the afflicted, and can intervene before the damage is done. The root *√śreṣ* is primarily an Atharvan word and is found elsewhere in the RV only in the horse sacrifice hymn, I.162.11. Most similar to our passage is AVŚ III.9.2 *asreṣmāṇo adhārayan* "Without claspers they held fast."

VIII.1.13: Both this verse and the next seem to rest on the unexpressed presupposition that on our own we have a pretty poor impression of ourselves, but if Indra will pay attention to us, we'll feel good about ourselves again. (Early lessons in self-esteem!) It may be that the curious verse 12 that immediately precedes sets the stage for these verses by depicting Indra as one who can set everything to rights. See esp. the last pāda of 12.

On *duróṣa-* see EWA s.v. This rare and unclear word, appearing 3x in the RV (IV.21.6 and IX.101.3 as well as here), must be compared with similarly unclear Aves. *dūraoša-*, a standing epithet of Haoma in the Hom Yašt and also once in the Gāthās (Y 32.14). In the RV it modifies Soma only in IX.101.3; here it qualifies "us" and in IV.21.6 the Hotar, most likely Agni. The Avestan word has been variously interpr. – but no more convincingly than its RVic counterpart. The tr. adopted here, 'difficult to burn', makes a connection with the Aves. forms more difficult because *dus-* 'bad, ill' should not appear with *-r* in sandhi (see disc. in EWA), though Humbach et al. (n. ad Y 32.14) upholds this analysis. This rendering is not altogether a good fit in any of the RVic passages; nonetheless, the alternatives seem worse. In tr. it so, I'm assuming a Vedic-internal folk etymology from an opaque inherited word; the tr. therefore has no implications for the meaning of the Avestan word or for Ir. etymology. Sāy's interpr. of the word in two of the three passages falls squarely in this realm: VIII.1.13 *oṣitum anyair dagdham aśaktyā(h)*, IX.101.3 ... *durdahaṃ durvadhaṃ vā*

VIII.1.14–17: Note the concentration of nominal forms of the root \sqrt{stu} ‘praise’ in these verses: *stómam* 14d, 15a, *sadhástutim* 16a, *úpastutiḥ* 16c, *suṣtutim* 16d. The appearance of *sómam* in 17a signals a sort of ring-composition by variant, echoing the two forms of *stómam* in successive pādas of 14 and 15.

VIII.1.14: Although the primary sense of d, “take delight in your praise,” is surely that the poets will enjoy praising Indra, in the context of these two verses it presumably also implies that they will take delight because their praise will put them (back?) into Indra’s good graces and thereby improve their own view of themselves and their chances of making good.

VIII.1.15: Again the uncertainty about whether Indra will pay attention to their praise gives a slightly nervous air to the beginning of this verse. In the 2nd pāda the full form of ‘our’ (*asmākam*) is fronted; a tr. better reflecting this emphasis and in harmony with the poets’ anxieties about Indra’s attention would be “let it be *our* (soma-)drops that invigorate Indra...” Cf. 3cd.

VIII.1.16: The phraseology of this verse echoes some previous ones: its opening *ā tv ādyā* is identical to 10a, and *vāvātar-* ‘favorite’ occurs in the RV only here and in 8b (in the same position).

VIII.1.17: Because *dhāvata* in b is unaccented, it cannot be directly parallel with *sótā* in pāda a, as, e.g., Ge takes it, because the *hí* of pāda a should then have domain over b and induce accent on the verb. I take the *hí* clause as indicating the grounds or prior action needed for the next clause, as so often when *hí* appears with the imperative (see Brereton 2012). It is also possible that *sótā* is an injunctive, though clear impv. *sotā* in 19b disfavors this interpretation.

On the *īm enam* doubling see Jamison 2002.

In c I take *gavyā* as part of the frame, not the simile, because of the position of *iva*. Contra Ge, who takes *gavyā vástrā* as the simile: “[g]leichsam in Milchgewänder...” *dhukṣan* should be an injunctive to the *sa*-aorist found in *ádhuḥsat*, etc., the only reliably attested sigmatic aorist to \sqrt{duh} . It would be appealing to interpret it as a subjunctive to an athematic *s*-aorist (as the pub tr. “will milk” and Ge’s “wollen ... herausmelken” suggest), but it should then have full-grade **dhokṣan*.

On *vakṣāṇā-* ‘belly’ as a pl. tantum, see comm. ad X.27.16.

VIII.1.19: The second hemistich contains a slight reversal of expectations: *śakrá-* is a standard epithet of Indra, who must be the subject of *pīpayat* (unless we read loc. *śakre*, not nom. *śakraḥ* with Pp.). But we do not expect Indra to swell the soma drink – if anything the reverse. (In fact, Gr suggests that *śakrá-* modifies soma in just this instance.) I think we must take Indra as the indirect agent of the swelling of soma: by his presence at the sacrifice he causes the sacrificers to press and mix the soma with water and milk, thus swelling it. See Old on this verse.

VIII.1.20: *gáldā-* appears in the RV only here and its meaning and etymology are entirely unclear. See EWA s.v. as well as detailed discussion by Old. In his study of the word

(AcOr 13 [1925], see ref. in EWA), Lüders suggests that it means ‘Strom, Gerausche’; although most do not accept Lüders’ interpretation, it makes contextual sense here, and a passage adduced by Old from MŚS I.7.2.18 *ā mā viśantu indava ā galdā dhamanīnām*, where it is parallel to *indu* ‘drop’ and is the *galdā(h)* of pipes (*dhamanīnām*) also supports an interpretation in that general sphere. Note that the fact that the word begins and ends with plain voiced stops makes it phonotactically unlikely to be an inherited word, at least in the form we have it, and the *-l-* marks it as “popular.”

The notion that “begging” by inferiors of superiors is a social requirement and also a potential source of annoyance to the superior is found elsewhere in Vedic. See Jamison 1996 (Narten Fs.): 191–99.

VIII.1.21: The first three pādas of this verse are couched in the acc. sg. masc. I take them as continuing the last pāda of the previous verse, as objects of *yāciṣat* (to be supplied from 20d). So also Tichy (195). By contrast, Ge, flg. Old, supplies “(Preiset),” which is certainly possible but not generated from context. The root $\sqrt{yāc}$ takes a double acc.: “beg s.o. for s.th.” Here I assume that *mādam* of a is what is begged for and *ugrām* of b qualifies the one begged, namely Indra, as an appositive to *īśānam* ‘master’ in 20d. The referent of *tarutāram* ‘overcomer, triumphant one’ in c is most likely Indra, but it is worth noting that *māda-* is the referent of *tarutār-* in VIII.46.8–9.

Why we are begging for *māda-* ‘exhilaration’, which is a state of Indra’s, not ours, is made clear by pāda d: when Indra is exhilarated, he gives to us.

VIII.1.22: *śévāra-* ‘treasury’ is a hapax, derived from haplologized **śéva-vāra-* ‘having dear valuables’, a derivation found already in Gr (though with *vara-* as suggested 2nd member; for reff. see KEWA s.v. *śévaḥ*). Note its juxtaposition with *vāryā* ‘desirable things’ here.

I take pāda a as a nominal sentence, and supply *rāsate* ‘will grant’ in b, from c, given their parallel datives. Ge takes ab as a single sentence and supplies “verwahrt” (keeps), again possible but not generated from context.

VIII.1.25: I supply ‘yoked’ with *rāthe hiraṇyāye*, on the basis of the same phrase in 24b with *yuktā(h)*, but it would be possible to follow Ge and take it as merely a locational phrase: “[d]ich ... im goldenen Wagen.”

VIII.1.27: *abhí* in b, in conjunction with *ásti* in a, invites us to read the lexeme *abhí√as* ‘be dominant’ in b.

The second half of the verse returns to the anxieties about whether Indra will come to our sacrifice found earlier in the hymn by a series of insistent assertions that he *will* come. Alternatively these could be read as questions: “Will he come?” etc.

VIII.1.28: In c I read the injunctive *ānu carah* twice, once as preterite and once with future meaning, contrary to Ge, who only takes it as a modal: “Du mögest ... nachgehen” (followed by Klein II.121). The peculiar position of the *ádha* and the presence of *dvitā* suggest this double interpretation to me, though admittedly pāda-final *ádha dvitā* does occur elsewhere without this syntactic effect (e.g., I.132.3, VI.16.4).

VIII.1.31: Some lexical and syntactic problems here. First, though the most obvious noun to construe with *ā ... ruham* ‘I mounted’ is the acc. *āśvān* ‘horses’, in fact horses never get mounted in the RV, only chariots (including in the loc., VIII.22.9). I therefore construe *rāthe* with the verb here and take the horses loosely with *śraddhāyā*.

The next question is the meaning of the adjective modifying the horses, *vānanvataḥ*. Ge connects it with *vāna-* ‘wood’ and tr. “die ans Holz gespannten Rosse,” but, although there are undoubted occurrences of the stem *vānanvant-* that do mean ‘wooden’, I doubt that this is one of them. Among other things in the occurrence in nearby VIII.6.34 modifying *matí-* ‘thought’, ‘wooden’ is effectively excluded. I instead connect it with *√van* ‘win’, whose various participles cross each other so much that a blend of this sort would not be surprising. For further disc. see VII.81.3.

The second hemistich opens with the conjunction *utā*, which is a problem for any interpretation of this verse, since it is ordinarily a coordinating conjunction but the first hemistich is a subordinate clause (note the final accented verb *ruhām* conditioned by *yád* in a) and the second a main clause (unaccented verb *ciketati*). Klein (I.451) is puzzled by the passage but suggests that if the chariot of the subordinate clause is a gift and the valuable goods is another prospective gift, “*utā* is thereby explained.” But his tr. of the verse clearly divides it into subordinate and main clauses. I simply leave it unexplained.

Finally, what is the value of *ciketati*? Old, followed by Klein, suggests supplying the patron as subject: “(then) will (the liberal one) take note (to give me) also (some) of the desirable wealth, which is the herd of Yadu” (tr. Klein I.451), taking the verb in the I/T meaning ‘perceives’. But this requires inventing a patron (although it is true that one appears in the next verse) and, more problematic, supplying a further verbal complement, not only “take note” but “to give me,” which seems to me to be taking more liberties with the text that we should. I therefore prefer to follow Ge in taking *ciketati* in its less common intransitive value, meaning ‘appears, stands out’ (see Ge’s notes for parallel passages, which interestingly are also *dānastutis*), with the relative clause of *pāda d* as its subject.

VIII.1.34: Although Ge takes *śāśvatī* as a personal name, and indeed the name of the poet’s wife, in this *dānastuti* context it’s far more likely that the woman in question is part of the gift, and *śāśvatī* here can be seen as a semantic development of the literal meaning of the stem *śāśvant-* ‘each and every, one after the other, ever and always’ can develop to ‘constant, reliable, always available/ready.’ The woman is “ever ready” for sex, at least in the poet’s imagination. For a slightly different development of **śāś(-vant-)*, in the comparative *śāśtyas-*, also applied to a woman, see V.61.6.

VIII.2 Indra

VIII.2.2: This is an orphan verse, which cannot be construed grammatically with either 1 or 3, though a mere *yāḥ* would allow it to be the rel. clause to 3, as the initial *tām* of 3a suggests.

The them. instr. pl. *āśnaiḥ* is the only unambig. thematic form to the complex of forms related to *āśman-* ‘stone’; it is most closely related to the oblique forms with reduced cons. cluster: instr. sg. *āśnā* (RV 3x), gen. sg. *āśnaḥ* (= YAv. *ašnō*), but it is not entirely easy to get from them to the thematic form here. AiG III.269 suggests that it is a

pluralization of instr. sg. *ásnā*, which is possible in principle, but seems a bit artificial. However, it might be possible to motivate it in context: Our form is pāda-final; *ásnā* also occurs once pāda-final (IV.28.5). Our form appears before a vowel opening the next (even) pāda, and it might be that a nonce pluralization was undertaken to avoid hiatus.

VIII.2.3: I take *góbhiḥ* twice, with both the frame and the simile. In the frame it is to be construed with *tám ... śrīṇántaḥ* “preparing it with cows’ milk,” but in the simile *yávam ná* “like barley” I take it as a passive variant of the common figure “as cows enjoy a grainfield (*yávasa-*),” e.g., V.53.8 *rāṇan gāvo ná yávase*.

In c Ge supplies “lade ich,” but I read *akarṃa* from b also in this pāda, in a different idiom “make X to be at/in.” The usual idiom is *ā√kr* ‘bring here’; unfortunately there is no trace of *ā*.

VIII.2.5: *tṛprá-* only here in the RV, though it appears later and may also be related to *tṛpála-* (RV 2x), also used of soma (see EWA s.v.); ‘sharp’ is only a guess, though shared with Ge, a characterization of soma usually expressed by *tīvrá-* (as in 10b).

In c *āpa√spr* is found only here in the RV; if it belongs to *√spr* ‘win’, it might mean ‘win away’. Ge. tr. “abstossen” (repel). EWA (s.v. *SPAR*) suggests that it belongs to a synchronically separate root ‘losmachen, befreien, in Sicherheit bringen’, in which case ‘keep away’ would work.

VIII.2.6: A quite opaque verse. The underlying point, in the context of the preceding verse, is that though our own preparations of soma may not be of the best, Indra will still come to our sacrifice (vs. 5), even if other sacrificers aggressively pursue him with (better-tasting) soma mixed with cows’ milk. The repetition of two words for cow (*góbhiḥ* opening the verse and *dhenúbhiḥ* closing it) draws attention to the notion and suggests that the other sacrificers have mixed their soma with milk (the most desirable way to serve soma), while our soma was characterized in vs. 5 as unmixed, badly mixed, or “sharp” (?).

Pāda b adds its own difficulties to the verse’s interpretation, esp. the rare and disputed word *vrā-*. In Jamison 2003 [HPS Fs.] I discuss this word and its contexts at length, suggesting that it means ‘(female) chooser’ (that is, the bride at a *svayamvara* “self-choice” wedding) and is a reduced form of **varā-*. This passage gave me pause, however, and in that article I toyed with the possibility that it contains a different word *vrā-* or else that its meaning had become attenuated because it was moribund. I now think that it is the same word *vrā-* and that it does here compare the other sacrificers to women chasing husbands, perhaps hinting at the unseemly nature of this pursuit. I take *mṛgám ... mṛgáyante* as a phrasal verb with a cognate accusative, so meaning simply “go hunting.”

Note that the accent on *abhitsáranti* requires it to be part of the *yád* clause, leaving the verse without a main clause and making its dependence on vs. 5 clear.

VIII.2.7: The three soma drinks might refer to the unsatisfactory types in vs. 5 or to the soma at the three pressings, but most likely to the three types mentioned in vs. 9 (the final verse of the *tṛca* of which this is the first). We might think of this as a species of “ritual repair”: the poor versions of soma in vs. 5 are adjusted slightly to produce the properly prepared ones in this *tṛca*.

The referent of *své* in c is unclear. (Note in passing that if read as distracted *suvé* [with HvN], its first syllable matches *sutāsaḥ* of b and *sutapāvnaḥ*. However, with Old I prefer to distract the final word to *sutapāvanaḥ*; cf. *somapāvan-*, whose oblique forms require distraction although they are written with *-vn-*.) If we assume that *své* refers to the subject, then it must be soma's dwelling, whatever that is (the ritual ground?). The only other personage mentioned in the verse is Indra, but it is unlikely to be his dwelling — *pace* Ge, who construes *sutapāvnaḥ* with the loc. phrase (“im eigenen Hause des Somatrinkers”). I take it as referring to the unexpressed agent of *sutāsaḥ santu* “let them be pressed,” namely us.

VIII.2.9: There are successive gappings here: we need to supply *asi* with b, and *asi + āśīrtah* in c. I take all three clauses as 2nd person, though Ge makes b and c both 3rd person.

On *niṣṭhā-* see comm. ad III.31.10. Here it is cmpd with *puru-*, but, though root-noun cmpds with direct-object 1st members, do not also include preverbs, *puru-* here is not an object. See also *karma-niṣṭhā-* (X.80.1) ‘outstanding through his work’. A parallel rendering ‘outstanding among many’ is found in the publ. tr. and matches that of Scar (649). However, it is also possible, at least in its other occurrence in V.1.6, that it is a bahuvrīhi meaning ‘having many standouts’, referring there to flames, with a compound structure like *puru-niṣṣīdh-* (I.10.5) ‘providing many fulfillments’. Despite being a bahuvrīhi it could have root accent because bahuvrīhis compounded with *puru-* often have second-member accent. Unfortunately the bahuvrīhi interpr. does not easily fit Soma. On all these forms see my forthcoming “Limits on Root-noun Compounds in Indo-Iranian.”

VIII.2.11: It is a little odd to command Indra to undertake the sacrificial preparations that are really our job. Presumably once again (see VIII.1.19) Indra is conceived of as the indirect agent: by coming to our sacrifice he sets our preparations in motion, and our impetus for this preparation is the knowledge that he has riches to distribute.

VIII.2.12: A peculiar ending to a celebration of soma, presumably describing some of the potential side-effects of (over-)indulgence in soma.

With Ge (implicitly) I take *ūdhar* as belonging not to ‘udder’, but to a homonymous stem ‘cold’, with Avestan cognate (OA, YA *aodar-*). See EWA s.v. *ūdhan-*. The same ‘cold’ sense is found also in V.34.3 and as a pun in X.61.9. But compare Old, who finds a complex way to rescue ‘udder’, though not one sufficiently plausible to me, anyway. See also disc. ad IX.107.20.

VIII.2.13: Given the parallelism with ab, we might expect to supply *śrutāḥ* in c. However, *prā* makes some difficulties: no *prāśruta-* is attested. However, *prā śīnve, -īre* has the meaning ‘is/are far-famed’.

VIII.2.14: As Ge (n.) points out, this is a subtle jab at Indra. If the god doesn’t provide cows (and other wealth) to his praiser, then no one will pay attention to either the praiser or, by implication, the praise he produces for the god.

VIII.2.15: Note the etymological and phonological figure *śīkṣā śacīvaḥ śacībhiḥ*. The desire to have a pāda consisting of only these related words may account for the absence of *naḥ*: *śīkṣa*- regularly takes a dative. Cf. the fuller expression in I.62.12 *śīkṣā śacīvas tāva naḥ śacībhiḥ*. Of course *naḥ* can be easily supplied here from pāda a.

VIII.2.16: This verse is a minor but neat example of syntactic modulation. The first pāda is in the 1st plural, the third in the 3rd plural, while the middle one is ambiguous: the plurals here can refer to *vayám* ‘we’ in pāda a or (coreferential with *kāṇvāḥ* in c) serve as subject of the 3rd plural *jarante*. So pāda b, by being without inherent reference to grammatical person, allows “modulation” from 1st to 3rd person. I have taken pāda a as a nominal sentence, and b as having third person ref. and belonging with pāda c. But in fact the whole verse could be one sentence (as the *tvā* in pāda a suggests, since it should be the obj./goal of *jarante* in Wackernagel’s Law position) with a harsh clash between *vayám* and *jarante* (which, notice, are the absolute first and last words of the verse, so we can go along as an audience on the happy assumption that the whole verse is in the 1st plural until the rude awakening of *jarante*).

The bahuvrīhi *tadīdartha-* is a nice example of phrasal univerbation, from *tād id ārtham* “just this (is the) aim.”

VIII.2.17: In b I follow a suggestion of Re’s (EVP 13.98, ad IV.6.4) in interpreting the hapax *nāviṣṭau* as *ná *viṣṭau*, with the only emendation the accenting of the second word. Cf. I.92.3 *ārcanti nārīr apáso ná viṣṭibhiḥ* “They chant like women busy with their labors.” Old explains it rather as a haplology of **nāvaviṣṭi-* ‘new labor’ (also Re’s 1st suggestion), and he is followed by Ge “bei der Neuheit des Dichterwerkes,” taking *apásah* as a gen. sg. But by its accent *apásah* should mean ‘worker’, not ‘work’. Kü (p. 297) also follows Old, but, taking account of the accent, tr. “beim neuen Wirken des Künstlers.” In the publ. tr. “at their labor” should be preceded by an asterisk.

VIII.2.18: *pramāda-* in c is a hapax, but clearly derived from *√mad*. I do not understand where Ge gets “... gehen sie auf Reisen.” Old, commenting on Ge’s same gloss in his Gloss., says “... glaube ich nicht.”

VIII.2.19: Hoffmann (1967: 87) notes of *mā hṛīthāḥ* that the prohibitive contains a present injunctive, and he interprets it, plausibly, as “lass ab von deinen Groll...” rather than simply “don’t be angry.” However, recent work by IH (first presented at AOS March 2017; see now “A New Approach to Prohibitive Constructions in the *R̥gveda* and the *Atharvaveda*,” JAOS 140 [2020]) has argued strenuously, and in my view successfully, against Hoffmann’s claim that *mā* clauses with pres. injunc. are inhibitive, not prohibitive, showing that pres. injunc. verb are found in *mā* clauses only when the default (root) aor. injunc. is not available. Note that *√hr* ‘be angry’ only makes pres. forms. The context then must determine whether the form is inhibitive or preventive -- in particular, the simile “like a great man with a young wife,” the interpretation of which will be severely affected by interference from our contemporary assumptions about such a situation and by our lack of knowledge about the corresponding assumptions in ancient India. If we assume on the basis of popular Western depictions that young wives have many ways of annoying their old husbands (profligate spending, flirting with

younger men, etc.), but also have many wives to win back their husbands' favor, then an inhibitive would work.

VIII.2.20: The opening *mó śú* matches *ó śú* of 19a.

On first glance this verse appears to contain a *mā* prohibitive with a subjunctive *karat* (so tr. Ge), which would be grammatically quite anomalous. Hoffmann (1967: 92) claims that in the Sprachgefühl *karat* is an injunctive, but this seems extremely unlikely to me because the root aor. of $\sqrt{kṛ}$ is one of the best attested of such formations, and though the stem *kāra-* is well established, there is no evidence that it is not interpreted as a subjunctive. There's no augmented *ākara-* for example, and no thematic part. **kārant-* or **kāramāṇa-*. I therefore take pāda a as an independent clause, with gapped prohibitive copula ("don't be") with *mā*. Since the root \sqrt{as} doesn't form injunctives (or an aorist), there is in fact no way to make a prohibitive copular sentence in any other way.

As noted in the intro., I think this may be a reference to the instituting of the Third Pressing, which happens in the evening. The point may be that sacrificers who fail to have a Third Pressing risk losing the presence of a disgruntled Indra to those who do.

I do not entirely understand the social relations depicted in c. Ordinarily, in patrilocal marriage the son-in-law would be at a distance anyway; that is, the wife would be living with her husband's family. Is this a reference to an in-comer, a husband who lives with his wife's family because he's too poor and who then makes it worse by distancing himself — or to the return of a bride because the husband was too feckless? Or is this similar to the situation in the Gambler's Lament (X.34), where the husband loses his wife because of his gambling or other economically ruinous activities?

In d "down on his luck" translates *āsīrā-*, which phonologically resembles the characteristic offering of the Third Pressing, the *āśīr-* 'milk-mixture'. It thus indirectly hints at the Third Pressing theme.

VIII.2.21: The referent of "the three" in c is not clear; perhaps again the three pressings.

VIII.2.23: What to supply with *jyēsthena* 'most superior' is not clear. Ge "Schoppen"; on the basis of nearby VIII.4.4 *jyēstham ... sāhaḥ* I supply 'might'.

VIII.2.28: *nāyām* is a famous crux. See esp. Thieme (1949) and more recently Jamison 2013 (Fs. Hock), both with discussion of previous literature. After my recent reconsideration of the evidence I would now eliminate "to the landing site," since I now think the underlying expression is **nā ayām* "(just) this man here," which lost its transparency and came to mean "on one's own" and could be used for any person, not just the 3rd.

VIII.2.29–30: Verse 29 consists of a relative clause (beginning *stútaś ca yāḥ*) conjoined with the relative clause of 30 (beginning with parallel *gíraś ca yāḥ*), but the rest of verse 30 causes some syntactic problems. The main clause appears to consist of the end of 30b: *túbhyaṃ tāni*, but pāda c contains an accented verb *dadhíré*, which appears to continue the interrupted relative clause beginning in pāda a. The result is what looks like an embedded main clause, a syntactic anomaly. I am not happy with this syntactic arrangement, but if we read *dadhíré*, there seems no way to escape it. As Ge points out in

his n., the Indian Pp. and Max Müller's 1877 edition read the verb without accent, but as Ge says, "*dadhiré* ist doch wohl die richtige Lesung."

VIII.2.31: Following EWA (s.v.) I take *tuvikūrmí-* to $\sqrt{car^i}$, not \sqrt{kr} as Gr, Ge do. See disc. ad III.30.3.

VIII.2.33: Ge takes Indra as the referent of *c* with *maghónaḥ* acc. pl. referring to human benefactors ("Wenn er berauscht ist, so tut er es den freigebigen Herren gleich"). However, *mandín-* usually describes soma (although it does modify Indra in I.9.2, 101.1, and X.96.6), and the only occurrence of *māndiṣṭha-* in the RV is found in this hymn and also modifies soma: VIII.2.9 *māndiṣṭhaḥ śūrasya* "most invigorating for the champion," with a dependent genitive, which is how I take *maghónaḥ* here. I therefore, somewhat reluctantly take the subject to be soma, who is accompanying (*ánu*) Indra, who already contains the multitudes listed in pāda a. However, the appearance of pl. *maghónām* in the next verse (34c), where it refers to humans who receive Indra's largesse, gives me pause, and it is quite possible that Ge's interpretation is correct.

VIII.2.36: In the first pāda the grammatically unparallel *vipro árvadbhiḥ* express the two complementary areas in which Indra is the winner. So also Ge; see his extensive note.

VIII.2.37: On apparent impv. *yājadhva* see Old, though I don't think the last word has been said about this form.

VIII.2.38: The formation of the hapax *purutmānam* is not entirely clear. With Gr, AIG III.267 (and implicitly Ge), it presumably contains the truncated (*ā*)*tmán-* stem in one way or another, but I am dubious about the meaning generally assigned to it (Gr 'lebenreich', Ge 'langlebig'), since *tmán-* almost always means 'self' not 'life, lifebreath', and *puru-* 'much, many' doesn't seem the most likely way to characterize length of life anyway. I think it possible that it was influenced by expressions like *purú tmānā* (I.142.10) 'abundant in itself', though it is not a straight univerbation. It is also worth noting the long vowel in *-tmānam*, given that the only acc. sg. to *tmán-* is short-vowel *tmānam* (I.63.8), though I don't know what to make of this.

VIII.2.39: Ge's tr. with added "(fand)" (see also his n. and Hoffmann 1967:137) implies that this is a reference to the beginning of the Vala myth, in which the cows are stolen and leave no traces, so that Indra must find them before he gives them away. This interpretation makes sense of the otherwise opaque *ṛté cid ... padébhyaḥ*, but it seems to require a lot of added machinery. I do not have an alternative interpretation, however.

VIII.2.40: This verse as it stands poses a number of problems, but some of them disappear if, following Ge's earlier Komm., adopted also by Old, and reflected in Ge's tr., the sequence *yánn áyaḥ* (per Pp.) is read *yán náyaḥ*, which requires no change in the Saṃhitā text. This produces a subordinating conjunction (*yád* out of sandhi), which in turn accounts for the accented verb (*náyaḥ*) and allows the whole verse to be read as a single dependent clause (in my interpretation: Ge supplies the verb "... hast du ... erhört" for pādas ab, while Old suggests rather "du hast ... gesegnet"). Although my

interpretation has the *yád* uncomfortably late in its clause, after two heavy constituents (violating Hale’s old observation that only one constituent can precede the *yá*-form), it avoids supplying a verb out of nowhere for the first part of the verse, and I take the acc. phrase of *ab* as an almost extra-sentential topicalized NP, so positioned to get the name and attributes of the poet up front.

With Old and Ge I take *abhí* with *náyah*, but unlike them don’t supply ‘heaven’ as the goal (on the basis of AV XII.3.16, 17). In the RV the lexeme *abhí√nī* can take as goal *vásu* ‘goods’ (VI.53.2) or *vásyah* ‘better state’ (VI.61.14, I.31.18), and since this verse inaugurates the *dānastuti*, goods would be at issue.

As noted in the intro., there are various tales or tale fragments in Vedic prose (see esp. JB III.233-35. also ŚB III.3.4.18) linking Indra as ram and Medhātithi, but to my mind they are later and not particularly successful rationalizations of this obscure verse.

VIII.2.41: As noted in the intro., one unfortunate consequence of taking all of vs. 40 as a single subordinate clause is that the 2nd ps. referent in the subordinate clause of 40 is Indra, while in the main clause here it is Vibhindu, the poet’s patron. As I suggested in the intro., this may be a ploy to superimpose Indra’s divine generosity on the human patron by implicitly identifying them. Vs. 21 in the next hymn (VIII.3), also in the *dānastuti*, supports this hypothesis, since there Indra and the Maruts and the human patron Pakasthāma Kaurayāṇa serve as undifferentiated subjects of the verb ‘gave’ (*dúh*).

VIII.2.42: Although Ge declines to tr. *māḱī*, the interpretation of this word as a *-ka*-suffixed form of the 1st ps. possessive pronoun, accepted by Old (see also Scar 519), not only fits the context but would exemplify the tendency to use *-ka*-suffixed forms in slangy, low-register contexts such as *dānastutis*. For disc. see Jamison 2009, also 2008.

VIII.3 Indra

VIII.3.2: I am not sure why the “future imperative” *avatāt* is used in pāda c. Its use implies that Indra should, first, not lay us low and, then, actually help us. This is possible but not compellingly required by the sense.

VIII.3.4: In pāda a note *sahás(ram) ... sáhas(kṛtaḥ)*.

In c “(When) realized” may push the English beyond the Sanskrit *satyáh só*, but the word order may weakly support this rendering. As often with *satyá-*, the meaning is ‘real, really present’.

VIII.3.6: Pāda-final *śávaḥ* here is often considered to stand for instr. *śávasā* (see Old for previous lit., Ge’s tr. and n., and most recently Hale [Fs. Melchert], who takes it as an archaic zero-grade *s*-stem instr., with loss of laryngeal in pause; see comm. ad VIII.39.2). However, as Old points out, an accusative reading is perfectly possible. The presence of the same pāda-final nom.-acc. form nearby (4c, 8a, 10b) supports an accusative interpretation here.

VIII.3.7: The *pūrvá-* in *pūrvápīṭaye* ushers in a set of verses with *pūrvá-* forms (7d, 8d, 9b, 11d).

VIII.3.9–10: Although Ge takes the second hemistich as dependent on the first, because of the parallel *yénā* clause opening vs. 10, I prefer to take 9cd and 10a as dependent on 10b, with the *yénā*'s of 9c, 9d, and 10a all referring to *śāvaḥ* in 10b. But this sequence can also be seen as a type of modulation: the hearer is invited to assume that the *yénā*'s of 9c and 9d have 9b *bráhma* as their antecedent, but the opening of the next verse can cause reanalysis and a refocusing on *śāvaḥ* in 10b.

In 9c a verb needs to be supplied. Although the sentiment seems to be essentially identical to 9d (“you helped X”), the root \sqrt{av} ‘help’ does not take a dative recipient. I therefore supply a form of \sqrt{as} or $\sqrt{bhū}$ with the meaning “be there for...” Ge rather “zu Hilfe kamst.”

VIII.3.10: For *vṛṣṇi* and the phrase *vṛṣṇi te śāvaḥ* see disc. ad VIII.96.19.

Thieme (KZ 92: 46) rejects the usual interpr. of *kṣonṭh* as nom. sg., on the grounds that the nom. sg. is attested as *kṣonṭ* in I.180.5 and that *kṣonṭh* is otherwise nom. or acc. pl. However, this requires him to interpr. it as an acc. pl. of *Inhalts* or result with a passive verb: “dem (d.h.: wenn ihm) Gebrüll (aufrüttelndes Kampfgechrei) hinterhergeschrien worden ist.” The syntactic complications of this interpr. seem to me to outweigh the drawbacks of assuming that the poorly attested stem *kṣonṭ-* could generate a nom. sg. in *-ṭh*, esp. since its suffixal accent matches that of *vṛkṭ*-type nouns.

VIII.3.11: Rather than construing *vājāya* directly with *śagdhi*, as Ge does (“Tu uns, was du kannst zum Siegerpreis...”), I interpret it as the object of the participle *sīśāsate*, attracted into the dative in the fashion of datival phrases like *vṛtrāya hāntave* (e.g., III.37.5–6). For the VP see VIII.103.11 *vājam sīśāsataḥ*. However, 12d *śagdhi stómāya* may support Ge’s interpretation.

VIII.3.12: Ge’s interpretation of ab (“Tu uns, was du kannst, für diesen, der [den Preis] der Dichtung gewinnen möchte, da du ja dem Paura beigestanden hast”) is syntactically quite troublesome, in that it not only involves an embedded relative (rare to non-existent in the RV) *yád ... āvitha*, but one that splits up a close constituent *asyá ... sīśāsataḥ*. Old, by contrast, takes *dhíyaḥ* as object of *āvitha* parallel to *paurám* and cites abundant parallels for \sqrt{av} + *dhíyam*, *-aḥ*. This allows the *yád* clause to be normally positioned, although I still find the position of the *asyá* unusual. I also supply a presential form of \sqrt{av} to govern *dhíyaḥ*, since the aid to the striver’s insights seems to be a matter of current concern.

Unlike Ge I do not take *svàṇṇaram* as a fourth client of Indra’s, but as an epithet of the final name in a classic Behagel’s Law construction. In the next hymn (VIII.4.2) mentioning Ruśama, Śyāvaka, and Kṛpa there is no Svarṇara. I also take it as an epithet in VIII.12.2, but as a PN in VIII.6.39.

VIII.3.13: It is generally, and reasonably, accepted (e.g., Gr, Old, EWA s.v. *atasṭ-*) that the hapax *atasṇām* belongs with *atasāyya-*, attested twice, so its meaning depends on our interpretation of the latter – generally held to mean ‘to be called/praised’. However, I take *atasāyya* as a negated gerundive to \sqrt{tams} ‘shake’ (see I.63.6), and so *atasṭ-* should mean ‘unshakeable, unshaking, firm’. In context here, I assume that it refers to the stable, fixed

elements of the cosmic world and the standard subjects of poetry. This may implicitly contrast with *nāvyaḥ* ‘anew’, sketching the usual tension between the poet’s desire to produce a new song and the fact that his topics are preordained.

This category of possible *atasī* poetic topics is then exemplified by the sun in pāda d — a subject that, despite its greatness, does not match the greatness of Indra. This interpretation of cd follows Old; Ge switches the objects of participle and main verb, taking *svār* with *ānaśuḥ* and *mahimānam* with *gr̥ṇāntaḥ*: “Denn noch nicht haben die, welchen seine indrische Grösse besingen, die Sonne erreicht.” Although word order is hardly a reliable guide to RVic interpretation, the adjacency of pāda-initial *svār gr̥ṇāntaḥ* weakly favors the Old interpretation, which also makes more sense.

VIII.3.17: Ge takes *parāvātaḥ* in b with the second hemistich (“aus der Ferne komme...”), but the idiom \sqrt{yuj} + ablative (“yoke out of X,” that is, hitch up your horses and come from...) is found elsewhere; cf. esp. I.48.7 *eṣāyukta parāvātaḥ, sūryasyodāyanād ādhi* “This one has hitched herself up from out of the distance, from (the place of) the rising of the sun” (also I.115.4, V.87.4, VII.60.3, 75.4, X.94.12, etc.).

On *hī* with the imperative, marking that clause as the causal basis for the following imperative clause, see Brereton 2012.

VIII.3.18: Most assign *vāvaśúḥ* to $\sqrt{vaś}$ ‘desire’ (e.g., Ge “diese deine Dichter ... verlangen...”; so also Gr, Lub), but I take it to $\sqrt{vāś}$ ‘bellow’. Kü (477–80) allows both possibilities, though he argues that the original affiliation of the pf. stem *vāvaś-* was to $\sqrt{vāś}$, though it may have become partially co-opted by $\sqrt{vaś}$ by semantic overlap. I have opted for $\sqrt{vāś}$ because this hymn contains a number of instances of noise-making by poets or their substitutes: 3d *abhī ... anūṣata*, 7c *sām asvaran*, 16d *asvaran*, in addition to the usual verbs of singing and praising. Notice also the very parallel 5cd ... *havāmahe ... dhānasya sātāye*, with a verb of calling and X *sātāye*.

VIII.3.19–20: The preverb *nīḥ* is the theme of this pragātha, with seven occurrences, six pāda-initial, in eight pādas, with a variety of different verbs.

VIII.3.20: The apparent 2nd sg. verb *kṛṣé* in this pāda (pāda repeated at VIII.32.3) is morphologically problematic. One likely interpr. is as a truncated 2nd sg. pf. (implied by Lub’s placement of the form right after *cakṛṣe*), rather than as a nonce root pres. form, per Wh (Roots), Macd (VGS). Cf. VIII.63.8 *cakṛṣé tāni paúṃsyā* with pf., very like our *kṛṣé tád indra paúṃsyam*. This interpr. is reflected in the publ. tr. “... did you perform.” But it is difficult to see why the truncation happened; of course, opening with two light syllables is disfavored, but, as VIII.63.8 shows, it does not block the use of such a form there. A different possible explan. is as a predicated infinitive, an interpr. tentatively fld. by Kü (431 and 791, contra Old ad loc. [who is otherwise indecisive]). Unfortunately in this passage an interpr. “this manly act is to be done” does not fit well with the immed. preceding announcement of the act already done (*adhamah* c), but it does conform better in VIII.32.3, where it follows an impv. Which of the alternatives one favors depends on part on which context one considers the principal one. The other question that *kṛṣé* raises is whether it is the same as the three unaccented forms in X.49.7, 40.5–6. My feeling is that they are independent (and possibly independent of each other), but see comm. ad loc.

VIII.3.21: On the mixture of divine and human subjects, see comm. on VIII.2.40–41.

VIII.3.23: The son of Tugra is Bhujyu, a client of the Aśvins, whom they rescue with birds or winged steeds – a tale alluded to especially in the Kakṣivant hymns (e.g., I.116.3–5, 117.14).

VIII.3.24: This final vs. of the dānastuti has the form of a priamel, with a series of listed alternatives presented as foil to the last and best. This figure is quite at home in praise-poetry, and this particular ex. was identified as a priamel by Watkins in Dragon (115–16).

Although Ge (n. ad X.61.1) takes *ojodāḥ* as a neut. despite its apparent masc. form, Scar (204 n. 279) is more likely correct that it is being used as a noun here.

VIII.4 Indra

VIII.4.3: *apā* is one of the few singular forms of the *áp-* ‘water’ stem.

On *īriṇa-* as ‘salt-pocket’, see EWA s.v., citing esp. Falk, *Bruderschaft*.

VIII contains two other occurrences of *āpítvá-*, both clearly derived from *āpí-* ‘friend’ and meaning ‘friendship’ (VIII.20.22, 21.13), but the presence of the temporal designation *prapítvá-* here suggests a similar temporal analysis, *ā-pítvá-*. It is surely a pun, as indicated in the publ. tr.

As noted in my 1982 article on the structure of RVic similes (IJ 24, p. 30), the *yáthā* clause here unusually introduces a clausal simile or pseudo-simile, against the hundreds of similes in the text that only match nominals. However, the *yáthā* clause here still fulfills one of its standard functions, of providing a model for an action we wish to see the god or gods perform.

VIII.4.4: Pāda c refers to Indra’s stealing of his father Tvaṣṭar’s soma right after birth — the drinking of which made him immediately strong. See III.48.4, etc.

VIII.4.5: The image of warriors holding themselves down “like trees” belongs more to the Maruts’ rhetorical realm, where all natural phenomena bend before their storm (see nearby VIII.7.34). Vs. 10c below contains another image fully intelligible only in a Marut context.

VIII.4.6: The subject shifts without overt signaling from Indra to the man who ritually serves Indra. Indra himself features in the verse as the *yavīyudh-* ‘ever-battling’ one, who is worth a thousand others.

prāvargá- is found in the RV only here, but cannot be separated from *suprāvargám* (which I tr. ‘well in advance’) in VIII.22.18 *suprāvargám suvīryam* (cf. our *prāvargám ... suvīrye*). There is also *dāsá-pravarga-* in I.92.8, which I tr. ‘with alien-slaves as its forelock’. The *prā- ... kṛṇute* also reminds us of vs. 5a *prā cakre* ‘put forward’. It is difficult to arrive at a consensus translation for these forms; although all share the sense that the item in question is in front, it is difficult to assess the contribution of the *-vargá-* element (much less what connection it might or might not have with the Pravargya

ritual). My “with a good twist” was an attempt to render the root value of $\sqrt{v\check{r}j}$ (cf. *suvṛktī-*), but I am not now sure that it was a happy choice.

VIII.4.7: The logical connection between pādas c and d can be variously interpreted (see Ge n.). In my view pāda c expresses the desire that Indra should in short order perform a great deed that we can witness, rather than the usual bland notion that we wish to celebrate his previous great deeds. Since Indra regularly aids Turvaśa and Yadu (e.g., I.54.6), we may desire to see them (pāda d) because under those circumstances we are likely to encounter Indra doing such deeds.

VIII.4.8: Pāda a contains one of the two occurrences of *sphigī-* ‘hip’ in the RV (and in fact anywhere). The other is in III.32.11 in a thematically similar passage, *yād anyāyā sphigyā kṣām āvasthāḥ* “... when you wore the earth on the other hip.” (See comm. there.) It is difficult not to assume that the same situation is being depicted in this passage, and I therefore supply ‘earth’ here as well, esp. since a tr. without an object makes little sense (e.g., Ge’s “Der Bulle deckte seine linke Seite,” without further interpretation). In III.32.11 the image serves to give a comparison by which to measure Indra’s vast size (the preceding pāda says “Heaven did not come close to your greatness then”). Despite the truncated expression in our passage, I think the same comparative impulse applies: Indra is so big that the whole earth fits on one of his hips.

Pāda b is then thematically contrastive, though in a very indirect way. Even though he is so vast and, by implication, too important to concern himself with the likes of us, he gives freely and without feeling peevish towards the petty recipients of his largesse. This sets the stage for our invitation to him in cd, describing the soma mixed with milk (or rather, the reverse in this case: the milk mixed with the honey[ed soma]) and then urging him to come.

VIII.4.9: This verse returns to the theme of vs. 6, the prosperity of a man who has Indra on his side. The only difficult phrase is *śvātrabhājā vāyasā*, which Ge takes as referring to a particular age in the life of a man: “Er steht jederzeit in dem Alter, in dem man die Vollkraft besitzt.” Although *vāyas-* can refer to a vigorous time of life, it generally means simply ‘vigor’ itself, and I also find it hard to make *sacate* + INSTR mean “steht ... in.” I think that it simply refers to the waxing prosperity and strength of the man in question.

VIII.4.10: As noted in the intro., this verse forms a ring with vss. 3–4: 3a/10a the buffalo at the waterhole, 4d/10d Indra’s assumption of power (... *dadhiṣe sāhaḥ*).

Pāda c with *niméghamānaḥ* ‘pissing down’ fits a Marut context better than an Indraic one, and the other occurrence of this form (II.34.13) does in fact refer to the Maruts and the rain they produce. See 5d above for another motif borrowed from a Marut context. In this passage the product is presumably metaphorically the gifts that Indra showers down. On the root behind this participle, see comm. ad II.34.13.

VIII.4.12: The last pāda echoes 8d, with the same three abrupt imperatives in the same order: *éhi (prá) dravā píba*, but in 12d the initial *tásya* needs to be construed with the final imperative *píba*. On this as a quasi-serial-verb construction, see Yates 2014 [UCLA conf. vol.]. On the sandhi of *tásya* + *éhi* as *tásyéhi* (not **tásyaíhi*), see Old ad loc. and ad I.9.1.

VIII.4.13: On the basis of *bradhnásya viṣṭápam* (VIII.69.7, IX.113.10) I supply *viṣṭápam* here as well. In these contexts *bradhná-* ‘coppery’ refers to soma (see Old). For further disc. of the phrase see comm. ad VIII.69.7.

VIII.4.14: *apásu* is supposed to be the only RVic ex. of a loc. pl. to an *s*-stem in *-asu* < **as-su*, corresp. to Aves. *-ahu*.

VIII.4.16: Pāda d is, one way or another, an improper relative, in that there is no referent for the *yám* in the main clause. Ge’s ‘wenn’ suggests that he takes *yám* as standing for *yád*. I am assuming the ellipsis of a *ca*, for a “X and which Y” construction.

VIII.4.17: See the intro. for speculation about the social situation here. Pajra Sāman produces his own *dānastuti* in VIII.6.47, and our poet seems to be both denying any interest in Pajra’s windfall and declaring Pajra’s duty to compose his own thanks for it. See also Old’s extensive note on this passage.

The sequence *vémi ... ṛñjase* is reminiscent of VI.15.1 b ... *ṛñjase ... / c véti*. In that passage because of the lack of accent *ṛñjase* must be a *-se* 1st sg. (and therefore with a diff. subject from *véti*). On *ṛñjase* see comm. ad IV.8.1. In the passage here the publ. tr. follows Gr’s interpr. of the form as an *s*-stem dat. inf. (so also, e.g., Ge). However it is possible that it is also a *-se* 1st sg., but accented because it opens a new clause: “I pursue you, Pūṣan; I aim (towards you).” On the other hand, and probably decisively, the parallel pāda b *vémi stótave* also has a dat. inf. as complement of *vémi* and so the infinitive reading should stand.

VIII.4.18: Here the singer seems to be implicitly separating his own (newly acquired) cows from the alien ones of Pajra mentioned in 17 (*nítyaṃ réknaḥ* “our own legacy” 18b, *āraṇaṃ hí tát* “for that is alien” 17c) and driving them to a different pasture. For the driving see vs. 20.

VIII.4.19: Here the desire expressed in 7d, to see Turvaśa (and Yadu), is realized in imagination: the largesse of the king is so extensive that the poet feels he himself is in company with the favored Turvaśa (and family). This returns us to the beginning of the hymn (vss. 1–2), where Indra comes to various sacrificers, including Turvaśa (1d).

VIII.4.20: There is no consensus on the meaning or etymology of the hapax *nírmajām*; see EWA s.v. *nírmaj-*, with various reff. to KEWA; also Old ad loc. Scar does not comment on it, though at least by shape (though not by accent) it appears to be a root noun (presumed gen. pl. to a stem *nírmaj-*, though EWA allows possibility of *-majā*, and AiG II.1.220 lists it as *nírmajā* without further comment). The tr. ‘flawless’ is adopted from Old. Though it may not be possible to determine what the word means or where it comes from, as often it *is* possible to suggest a motive for its presence in the passage: the phonological figure (*nír-*)*majāmaje*, *nír*.

VIII.4.21: The meaning of this verse is opaque to me. Perhaps the trees (and the rest of the landscape features) are enhanced by the presence of an abundance of cattle, indicating

that the owner (or controller) of the land is prosperous. Kü (p. 413) tr. essentially as I do, but (wisely) makes no comment.

VIII.5 Aśvins

VIII.5.1: *ásíśvitat* is an isolated verbal form; the stem is otherwise not attested. Gr identifies it as the “Aor. des Caus.,” and formally this is possible (type *atitrasat* ‘made terrified’ √*tras*). However, there is no trans./caus. **śvetáyati* to which it could have been generated, and there is no possible direct object in this passage to justify a trans./caus. reading. It is more likely a nonce intrans. redupl. aor. (type *apaptat* ‘flew’ √*pat*) created to substitute for the *s*-aor. *aśvait* (or the root aor. **aśvet* on which *aśvait* is built, acdg. to Narten), which would not fit the expected iambic cadence of dimeter verse. The *i* root vocalism of √*śvit* would account for the redupl. vowel, which would by chance coincide with the redupl. vowel expected for a causative aorist: short *i* before the initial cluster.

VIII.5.2: Ge and Re take *nṛvát* as standing for *nṛvátā*, on the basis of VI.62.10 *nṛvátā ráthēna*, but there seems no reason to do so, since the adverbial neut. *nṛvát* is well-attested.

VIII.5.3: The Pp. analyses the sequence *yáthohiṣe* as *yáthā ohīṣe*, which would be, to say the least, unusual sandhi (though see *tásyéhi* in VIII.3.12). Nonetheless, the context favors a connection with the root √*ūh* ‘solemnly proclaim, etc.’ with pres. *óha-* (in my opinion); cf. I.30.4 *vācas tād ... ohase* “I solemnly proclaim this speech,” with a 1st sg. *-se* form, as apparently also here. For this passage I assume a form *ūhiṣe*, built to the presential perf. *ūhé*. This is also Kü’s solution (488–89), though he assigns the form to √*vāh* ‘anerkennen’, which, acdg. to him, is at least synchronically separate from √*oh*. Re and Lub. assign the form instead to √*vah* ‘convey’. For further disc. cf. Old and Ge (n. 3c).

VIII.5.3–4: Both these vss., though not belonging to the same *ṛca*, most likely contain 1st sg. *-se* forms.

VIII.5.4: Note the three compounds beginning with *puru-* in ab.

I emend the accented nom. *kāṇvāsaḥ* to accentless **kaṇvāsaḥ*, thus avoiding the awk. “I shall praise (and also) the Kāṇvas (shall praise)” (so Re), or the necessity of taking *stuṣé* as an infinitive. Nearby VIII.7.32 has *#kāṇvāsaḥ ... /#stuṣé ...*, with a pāda-init. accented voc. *kāṇvāsaḥ* (cf. also VIII.2.38, and with nom. VIII.4.2, VIII.6.31), and the accent here may have been acquired redactionally on these models. By my interpr. “I” (the poet, who is himself a Kāṇva) announces to his fellow Kāṇvas that he is invoking the Aśvins “for *our* help” (*na ūtáye*); the 1st pl. enclitic *naḥ* encompasses the poet himself and those addressed in the voc.

VIII.5.5: Here and in the repeated pāda VIII.22.3d I think *gántārā* may, but need not, be interpr. as a periphrastic future. There are enough possible exx. in the RV that Macdonell’s statement (VGS, p. 177) that there are no certain examples in the Saṃhitās needs reexamination.

VIII.5.6: With Ge and Re I (reluctantly) supply imperative ‘give’ in ab. It is barely possibly (but I think unlikely) that *ukṣatam* in c is a pun, belonging to √*ukṣ* ‘sprinkle’ in c, but √*vakṣ/ukṣ* ‘increase’ in ab, with the meaning “increase good wisdom for the pious man.” (Kiehnle 1979: 152 takes it to ‘increase’ in the whole vs.) Unfortunately there are no certain exx. of the act. suffix-accented stem *ukṣāti* to √*vakṣ* ‘increase’ (though see med. part. *ukṣāmāṇa-* and isolated root-accented part. *úḁsant-*), and even if so, we would probably expect them to be intrans., at least on the basis of pf. *vaváḁṣa*, etc., and the just cited pres. forms.

The hapax *ávitāriṇī-* is clearly derived from *ví√tṛ*, but its meaning is variously rendered. Gr (Sāy) ‘enduring, lasting’, Ge “die nicht auf sich warten lässt” (doesn’t keep (s.o.) waiting), on the basis of X.34.6. However, I take that passage in the Gambler hymn to mean ‘run counter’ (adopting the tr. of Macdonell), or more pointedly ‘doublecross’, the tr. I use here, though something like ‘thwart’ would convey the sense of this idiom as well.

VIII.5.8: The acc. phrases *tisráḁ parāvátah*, *divó víśvāni rocanā*, and *trīm̐r aktūn* are all accusatives of extent and presented as if they were parallel; the specification ‘three’ in the first and last underlines this supposed parallelism. But the first two express extent of space and the third extent of time. A better tr. might be “you fly around the three far distances (and? see below) all the luminous realms of heaven *for* or *during* three nights. I do not know what “three nights” refers to: there is no parallel locution elsewhere and the standard tr. do not comment. It may simply reflect the common association of the Áśvins with triplets of various sorts. See esp. I.34, which does have a roughly similar expression: I.34.7 *trīḁ ... divé-dive* “Three times, day after day ...” As for the first two accusative phrases, the *rocanā(ni)* are regularly qualified as ‘three’, so “all the luminous realms” may be synonymous with immediately preceding “the three far distances” (a phrase also found in I.34.7 and VIII.32.22).

VIII.5.9: Re (explicitly) and Ge (implicitly) supply as the verb of ab *volḁhám* ‘convey’ from 10c. This is not impossible, and the duplication of some vocabulary (9a *gómatīr íṣa(ḁ)*: 10 *gómantam ... rayím ... áśvāvatir íṣaḁ*) may favor it. But the two verses belong to different *ṛcas*, a fact that should disfavor such automatic filling in the blanks. I in fact think that ab can be construed with c. That *pāda* asks the gods to “unfasten” the paths (*ví patháḁ ... sitam*), in other words, to make the way clear, for winning (*sātáye*). The dat. infinitive *sātáye* frequently takes an accusative of what is to be won (among many exx., cf., e.g., IX.88.2 *purūṇi sātáye vásūni*). I see no reason why the accusatives of ab cannot be the object of this infinitive; with the acc. in b, *sātīḁ*, we would have not only a cognate accusative construction, but one involving two forms of the same stem. Alternatively the accusatives in ab could serve as objects of *ví ... sitam*, thus parallel to *patháḁ*. Cf. VIII.23.29, where both accusatives found here are the objects of *ápā vṛdhi* ‘uncover’, semantically similar to *ví ... sitam*: VIII.23.29bc *tvám no gómatīr íṣaḁ / mahó rāyáḁ sātīm agne ápā vṛdhi* “Uncover for us refreshments consisting of cows and the winning of great wealth, o Agni.” Hence in our passage “(Unfasten) refreshments and winnings; unfasten the paths for winning.” See further disc. ad vs. 21 below, which lends additional support to the 2nd alternative.

The epithet *aharvíd-* (4x, twice in this hymn) can contain either \sqrt{vid} ‘know’ or \sqrt{vid} ‘find’. Ge (and Gr) opt for the former, with Ge generalizing it to ‘Zeitkenner’. Scar (480–81) considers either possible, though his tr. reflect the former. In I.2.2 and I.156.4 I choose ‘know’, because both passages seem to involve knowledge of the ritual day, but esp. in the latter I recognize the possibility of ‘find’. (See comm. thereon.) By contrast the publ. tr. of this hymn has ‘find’ for both occurrences. I do not feel strongly either way, but since this hymn begins with the Ásvins accompanying Dawn (vss. 1–2) and the immediately preceding vs. (8) has a mention of their traversing the nights, I mildly favor ‘find’, expressing the Ásvins’ advent in the early morning, bringing the daylight with them. Note also *svarvidā* ‘finders of the sun’ of the Ásvins in nearby VIII.8.7. This latter well-attested cmpd. seems universally to be analysed as containing ‘find’, not ‘know’; cf. Scar 491–92.

VIII.5.12: The voc. *vājinīvasū* recurs here from 3a; in both verses it is immediately preceded by a heavy dat. pronoun, the near-rhyming *yuvābhyām* and *asmābhyam*. Its other two occurrences in this hymn (vss. 19, 30) are not so structured.

“Shelter that cannot be cheated (/deceived)” (see also VIII.85.5) is a striking and somewhat opaque expression, since *ādābhya-* usually modifies animate beings (generally gods) who aren’t gullible. I assume that the intention is shelter that can’t be breached by trickery, vel sim., but the context of neither passage gives us any help.

VIII.5.13: The Pp. analyses *yāviṣṭam* as *yā áviṣṭam*, with the latter an injunc. *-iṣ-*aor. to \sqrt{av} ‘help, favor’. Ge accepts this analysis and Re is sympathetic; however, Old dismisses it, taking *yāviṣṭam* rather to \sqrt{yu} ‘unite’, as the verbal counterpart (with initial preverb *nī*) of the common noun *nīyūt-* ‘team’. This analysis is already found in Gr and is vigorously defended by Narten (Sig. Aor. 212). One argument against the Pp. interpr. is the fact that this would produce an unambiguous embedded relative clause, and these are rare to non-existent in the RV.

VIII.5.14: The partitive gen. with *pibatam* consists of the phrase *asyá ... mādasya cāruṇaḥ* / *mādhvaḥ rātāsya*, rendered in the publ. tr. (sim. Ge) as “of “this dear exhilarating drink, of the honey bestowed,” which faithfully represents the hemistich boundary. However, it also construes the adj. *cāruṇaḥ* with masc. *mādasya*, though *u*-stem sg. oblique forms with interposed *-n-* should of course only be neut. This is in fact the only certain ex. of such a masc. form given by Lanman (Noun inflec., 410). There are several ways to avoid this undesirable morphological analysis. The least attractive is to take *māda-* here as adjectival, but this exceptionally well-attested stem is otherwise only a noun. The other two possibilities are better. On the one hand, the rest of the gen. phrase includes the neut. noun *mādhvaḥ*, and *cāruṇaḥ* can be construed with it: “of this exhilarating drink, of the dear honey ...” The drawback is that this artificially splits the gen. in b and reads part of it across the hemistich boundary. Perhaps the best solution is suggested by the other four occurrences of *cāruṇaḥ*, which always modifies *amṛtasya* ‘(drink) of immortality’, with the nominalized *amṛta-* neuter (IV.70.2, 4; 108.4; 100.4, always in the order *amṛtasya cāruṇaḥ*, pāda-final as here). I suggest we read *cāruṇaḥ* here as representing that phrase and tr. “of this exhilarating drink, of the dear (drink of immortality), of the honey ...”

VIII.5.19: I don't really understand why the skin-bag of honey is set in the chariot-rut. One might think of the English expression "grease the skids," except that the Áśvins are meant to drink out of it.

VIII.5.20: The referent of *téna* 'with it' is not clear. Although the verse sequence might suggest the skin-bag of vs. 19, the chariot makes more sense, and in 30a, where *pāda* a is repeated, it does seem to refer to the chariot or parts thereof.

VIII.5.21: This vs. is structured very like vs. 9, presenting some of the same syntactic problems, but in a somewhat clearer fashion. The first two *pādas*, *utá no divyā íṣa, utá síndhūmr̥ aharvidā* are identical to 9ab *utá no gómatīr íṣa, utá sātīr aharvidā*, save for the adj. modifying *íṣaḥ* in a and the acc. pl. found in b. Recall that Ge and Re supply a verb (*volhám*) for ab, separating those *pādas* from c. Some support for their position might be found in the larger context of vs. 21: the immediately preceding *pāda*, 20c, contains *váhatam* with a variant *íṣaḥ* object ("fat," not "heavenly"). So it could be possible to read 21ab as a continuation of the VP in 20c, giving support to Ge/Re, who supply a verb from the same root (\sqrt{vah}) to govern the identically structured 9ab. But Ge happily takes ab as the obj. of the verb in 21c, *ápa ... varṣathaḥ* 'you two will open up' (*s*-aor. subjunctive to \sqrt{vr} 'cover, obstruct'). As was noted ad vs. 9, *ápa* \sqrt{vr} 'uncover, open up' is semantically very like *ví* $\sqrt{sā}$ 'unfasten', and if refreshments can be the object of the first, this should also be possible for the second.

varṣathaḥ is the only *s*-aor. form to \sqrt{vr} in all of Sanskrit. It is very possible that it was created for this passage because the resulting syllable *varṣ* evokes the root $\sqrt{vrṣ}$ 'rain', which would be appropriate for the liquids that are its objects in ab. Re also remarks on this word play.

VIII.5.22: The subjunctive *pátāt* seems to be used in an unusual past prospective sense in this mythological context. This may be an English problem, however. Since the verb of the main clause is injunc. *vidhat*, this context is not necessarily preterital, but "timeless," and the subjunctive can therefore be expressing pure future modality. The fact that the next verse is also mythological and contains an undoubted present tense form *daśasyathaḥ* shows that mythological tense is fluid here. Re remarks (ad vs. 23) that the indifference between present and preterite underlines the reflection of the current human situation in the legendary material.

VIII.5.24: *susastībhiḥ* in *pāda* b is taken by Ge (also Gr) as modifying *ūtībhiḥ* in *pāda* a ("mit diesen löblichen Hilfen"; Ge takes *nāvyasībhiḥ* as adverbial "aufs neue"), but this requires *susastī-* to be adjectival. However, almost all occurrences of this stem -- and all seven other instr. -- are nouns ('good laud')(and see nominal *susṭutīm* 'good praise', identically formed and nearly synonymous, in 30c below). Although in Gāyatrī the b-*pāda* more regularly construes with the a-*pāda*, it is not out of the question for it to go with c instead. In this case the instr. phrase of b goes well with c, and it would only represent one constituent fronted before the subordinating *yád*.

VIII.5.28: This vs., like the almost identical IV.46.4, is syntactically somewhat ragged: the beginning of pāda c, *ā hí sthāthaḥ*, should ideally be the beginning of the clause, given the fronted preverb and the *hí*. But the object occupies all of ab (and the end of c).

VIII.5.29: The syntactic disorder continues here. The main clause corresponding to vs. 28 is vs. 30; this intermediate verse, the middle one of the *tr̥ca*, is an elaborate nominal sentence couched entirely in the nominative and functions as an extensive parenthesis further specifying the features of the chariot found in 28a (in the acc.).

On *ubhā cakrā* “both wheels,” with apparent neut. pl. for expected du *cakré* see comm. ad X.10.8.

VII.5.31: The sense of this vs. is a little odd: it sounds as if the Aśvins on their journey are snacking on the comestibles they are bringing to us and we will only get the scraps. This is not the usual way to urge the gods to bring us things and makes the Aśvins sound mingy. Perhaps the point is rather that there are so many (*pūrvīḥ*) refreshments that there’s enough for everyone? Ge compares 19c, which does not seem similar to me.

VIII.5.33: The publ. tr. “feathered birds, frothing at the mouth” is, to say the least, inelegant and perhaps unintelligible. What I think is meant: the birds are compared to horses (or the horses to birds); *pruṣitāpsavaḥ* ‘frothing at the mouth’ qualifies the underlying horses and indicates their speed. Cf. the overt horses in V.75.6 *áśvāsaḥ pruṣitāpsavaḥ*, VIII.87.5 *áśvebhiḥ pruṣitāpsubhiḥ* (both Aśvin hymns)(latter =VIII.13.11 [Indra]).

VIII.5.34: The hapax *-gāyas-* (a hapax) in *ánugāyasam-* is generally taken as a primary *s-* stem to the diphthongal root $\sqrt{gā}^i$; see Whitney (Roots), AiG II.2.235, EWA s.v. $\sqrt{G\bar{A}}^2$. The contextual question is what is following what. For Ge the song is sounding after/following the chariot (“Gesang schallt eurem Wagen nach”), but most *ánu-* compounds have the structure “following X,” where X is the 2nd member (e.g., *ánu-patha-* ‘following/along the path’; with diff. accent *anu-kāmá-* ‘following/according to desire’). I therefore think the chariot is following the song; in other words, it is making its way to the ritual ground, drawn to the song being sung there. Rather like the modern expression “follow the money.”

Pāda b seems to be a clear embedded relative clause -- or else, at least as I have punctuated it, a parenthesis.

The point of c seems to be that the wheel doesn’t knock against the chariot no matter how fast it moves. Such knocking presumably would be a problem with wheels that were not securely fastened to their axle and well balanced, so the Aśvin’s chariot is, not surprisingly, well constructed.

VIII.5.36: With Sāy I take the wakeful wild beast to be soma. The obj. of \sqrt{svad} is regularly an oblation, and in IX.105.1 its object, soma, is compared to a *śísu-*, the young of an animal or human.

vā in b cannot be the disjunctive ‘or’, as there is no disjunction possible. I take it as the short form of *iva* ‘like’ (with lengthening), as Ge also seems to (on the grounds of his “sozusagen”), marking the statement as an approximative. Old’s comment is not

entirely intelligible, but he seems rather to imply that *vā* expresses a strong positive, and I therefore assume he thinks it's a form of *vaí*, as do Re and Klein (DGRV II.201–2).

VIII.5.38: There is much disagreement on what to supply with *híryanasaṃdrśaḥ* and indeed on whether it modifies *rājñāḥ*, interpreted as an acc. pl. (see Ge n. 38ab). Since it seems unlikely that Kaśu gave the poet ten golden *kings*, even as figurines (*pace* Old), it seems best to take *rājñāḥ* as gen. sg. and supply another desirable golden item. Ge suggests garments, probably in part because of the hide-tanners? Hoffmann (Inj. 229 n. 227) points out that gold(-bedecked) horses are mentioned elsewhere in *dānastutis*, and I follow him in the publ. tr. However, given how prominently gold figures in the description of chariots in this hymn (vss. 28–29, 35; cf. also 11), ‘chariots’ might be a better choice.

The apparently contemptuous ‘hide-tanning’ (*carmamnāḥ*) must be a way of indicating that, in comparison with Kaśu, all men hereabouts are no better than tanners: ignoble, low, and engaged in dirty and polluting activity. But perhaps there's just a whiff of a suggestion that Kaśu has enough cows to furnish work for many tanners -- and therefore he should be more generous with these cows to his poet.

VIII.5.39: Like many *dānastutis*, this one seems to have a bit of sting in its praise. The poet *seems* at first to be saying that the Cedis are so lavish in their giving that no one else could follow them, but the 2nd half of the verse warns that all it would take for another man to receive more praise than Kaśu is to give more. Although the *mā* prohibitive of ab is technically applied to other men (“let no one go ...”), it's really an implicit challenge to Kaśu: he can only stop others from going on his path by always giving the most.

VIII.6 Indra

VIII.6.1: The rel. clause in ab appears to be of the embedded *izafe* type, but more elaborate than most such examples.

Displaced *iva* in b; we might expect **parjánya iva vṛṣṭimān*, which would also be metrically acceptable.

VIII.6.2: The publ. tr. takes *pāda a* as a nominal sentence with a predicated present participle (*píprataḥ*), a fairly rare but not unprecedented construction. This has two advantages: 1) it provides the verse with a main clause, 2) it avoids an anomalous position for *yád*. However, since *yád* is also badly positioned in 3a and 8b, the second observation may not be an argument. See remarks on 8 below.

VIII.6.7: The co-occurrence of a 1st pl. verb (*abhí prá ṇonumaḥ*) and nom. pl. *imāḥ ... dhītāyaḥ* causes some interpretational difficulties. Ge takes initial *imāḥ* as an accusative plural object with the verb in *pāda a* (“Diese stimmen wir auf (dich) an”), separating it from *dhītāyaḥ* in b, and interprets *pādas bc* together as a nominal clause. This would rescue the word order, but an accusative with *√nu* is almost always the goal of the roaring (and this exact phrase *abhí prá ṇonumaḥ* occurs a number of other times), not the contents of the roar, as an obj. *imāḥ* would require (but see comm. on I.6.6). I prefer to take the

insights as identified with ourselves, both subjects of *abhí prá √ nu*. Old also suggests this identification, which is also found in vs. 8.

With *vipām āgreṣu* compare IX.99.1 *vipām āgre*. There are 43 occurrences of sg. *āgre* and one of pl. *āgreṣu*; it seems unlikely that the number is significant here, but simply used to supply an extra syllable.

In c Ge sees two similes, “like the flame of fire, (like) missiles,” but I think the latter is not used as a comparison but an identification, just as in 3c the Kaṇvas praises are called their “familial weapon” (*jāmí ... āyudham*).

The simile marker *ná* is again misplaced; we would expect **agnér ná śocīḥ*.

VIII.6.8: See comments on 7ab. The identification of the Kaṇvas and their *dhītí* is quite clear here.

Another example of anomalously positioned *yád*, like 2b and 3a. In fact this verse is structured entirely parallel to vs. 2: participial phrase in pāda a, *prá yád* opening b followed by an injunctive in *-anta* and a nom. pl. subj *-i*-stem, c nom. pl. referring to poets followed by *ṛtásya* INSTR. phrase.

VIII.6.10–12: This *ṛca* is characterized by emphatic pronominals: initial *ahám* 10a, 10c, 11a; *tvām* 12a; *máma* 12c.

VIII.6.10: Ge explains the form of *ājani* as “attraction to the simile” (that is, 3rd ps. instead of 1st ps.), but although obviously there is no 1st sg. passive aorist, if there were to be, this is what it would be. More problematic is the logical connection of ab with c. Ge thinks that the rebirth is “durch die Erleuchtung”; I assume he means that the acquisition of knowledge and the resulting illumination caused the poet to be reborn like the sun. But the sun is reborn every day, and the passing of knowledge from father to son presumably happens once or a few times at most -- although, if the father is the son’s teacher, it might be a daily event.

VIII.6.12: The 2 occurrences of *tuṣṭuvūḥ* are standardly interpr. as preterital (“... gepreisen haben”; see Ge and Kü [578], as well as the publ. tr.), but the context does not impose this value, and the existence of an augmented plupf. *átuṣṭavam* (III.53.12) with the same apparent meaning is disturbing. It is therefore possible that the verbs here should be rendered “... who do not praise you ... who do praise you.” The existence of a pf. subj. in a nearby hymn, *tuṣṭávat* in VIII.8.16, also supports a presential interpr. of this pf.

Pāda c contains an ellipsis: we expect an instr. here, as in VIII.1.18 *ayā vardhasva tanvā girā máma*. The appropriate word can either be extracted from the proleptic adj. *súṣtutaḥ* “by my (praise) (so that you become) well praised” (as well as the two forms of *tuṣṭuvūḥ* in ab) or, less likely, *pratnéna mánmanā* in 11a.

VIII.6.13: The accented *aírayat* in c raises questions. It is natural to interpret c as the main clause, in which case we must assume a preverb *ā* with an unaccented *airayat* (see Old ad I.157.5). This is possible semantically and syntactically, but the Pp. does not so analyze. Alternatively we could take all of vs. 13 as a subordinate clause (“when his battle-fury smoked ... (and) he sent ...”) dependent on the main clause in vs. 14, but this

is not attractive, because it not only requires a switch from 3rd ps. to 2nd, but it also yokes together two otherwise independent myths.

VIII.6.16: Ge takes the footsteps or feet in c to be those of Indra's horses, but on the basis of I.32.8 *tāsām āhiḥ patsutaḥśīr babhūva* "The serpent came to be lying at the feet of those (waters)" it should rather be the waters' feet or footsteps. What these are conceptually is not clear – perhaps deeper pools in the riverbeds? – but the parallel is clear, and furthermore Indra's horses take no part in the Vṛtra myth.

VIII.6.18: This verse is structured entirely parallel to vs. 12 and thus forms a small ring that does not conform to the tṛca structure. On *tuṣṭuvūḥ* see comm. on vs. 12.

VIII.6.19: *enām* in c would be the only accented form of the ordinarily enclitic pronominal stem *ena-*. See Old's lengthy discussion of possibilities and previous suggestions, although he does not reach a definite conclusion. My interpretation is one that Old also seems to favor, that *enām* stands for the independent adverbial instrumental *enā* 'thus, in this way' (an idea in different form that goes back to Hopkins). As he points out, in the position before *r* this would probably come out as *enām̐* with *anunāsika* (Proleg. 470), and the redactional conversion of this to a "real" *m*, esp. in a feminine context, would not be surprising. This adverb *enā* is quite often, though not invariably, pāda-initial. See esp. semantically parallel III.33.4 *enā vayām pāyasā pīnvamānāḥ* "So we (are) -- swelling with milk ..." For *pipyūṣī-* construed with the genitive, see vs. 43b below, *mādhora ghr̥tāsya pipyūṣīm*.

VIII.6.20: The first problem in this verse is what to do with *āsā*. Ge construes it with *prasvāḥ* "Die ... durch den Mund gebärend...", and it would also be possible to take it with *ācakrīran*, as Old seems to imply, yielding "with their mouth they have made you their child." In either case this would require that 'mouth' is equivalent to the products of mouth, namely noise, and that the bellowing of the cows, which stands for the poets' insights, is the instrumental cause. This is not impossible; indeed *āsā* sometimes refers to poetic speech. But I suggest instead that *āsā gārbha-* is an idiom, "infant-by-mouth," that is, nursling, and that they are nurturing him directly.

Pāda c is puzzling, in part because it lacks both a verb and both parts of the frame that should match the simile *dhārmeva sūryam*. The verb is the easiest: the preverb *pāri* invites us to supply a form of *√as* 'be', in the standard idiom 'surround, envelop'. Ge's reconstruction of the frame also seems the most likely: the subject continues to be the cows/insights of vss. 19 and 20ab, the object 'you' [=Indra]. They surround/envelop him in a nurturing, maternal manner. But the image in the simile is very different: I do not know of other places in which the sun is surrounded or enveloped in this fashion or what "supports" could be involved. If they are in fact the "supports (of heaven)," as seems at least reasonable, it is possible to envision the sun operating within a space defined by these supports – though, again, this does not seem to be a RVic notion elsewhere. See Old for other, not particularly plausible, scenarios. As indicated in the publ. intro., the translation given is very uncertain.

VIII.6.22: The position of the *utā* is abnormal, as it most naturally connects the two nominatives *prāśastiḥ* and *yajñāḥ*. See Klein DGRV I.434–45. The *utā*'s of 23b and 24a are correctly positioned.

VIII.6.25: The lexeme *abhí√tan* has the idiomatic meaning 'stretch over' and therefore 'extend control, dominate'. The image found in the simile (*vrajām nā*) is found exactly in the parallel IX.108.6, where the *vrajām* is not in a simile. Elsewhere (I.160.5, V.54.15) in the active it seems to mean 'stretch over' (and therefore dominate), and in a TS passage adduced by HO (III.4.6.2) Keith transl 'overpower', which seems right in context.

Here the question is the referent of the object in the frame, *sūra upākācakṣasam* "whose eye is near to the sun." Ge supplies "Schatz" and thinks it refers to gold, which is "near to the sun" in its color and also (hyperbolically) its value. This is quite possible, but Agni is also found in just these expressions, e.g., IV.11.1 *upākā ā rocate sūryasya*, and of course Agni is often identified as the sun. The "gold" interpretation is probably correct, however, since the idea would be that Indra controls goods and therefore can distribute them to us; what Indra's control over Agni would amount to is less clear. Note the independent gen. *sūrāḥ* dependent on the first member of the compound *upākā-*.

Because the verb of c is a subjunctive, which would clash with the preterital perfect of ab, I take c with the following verse, whose present tense verbs are more compatible with a subjunctive.

VIII.6.26–27: Vs. 26 (and if I am right, 25c) are both dependent on vs. 27 by my reading.

VIII.6.28–30: The translation of this *ṛca* is superficially easy, but its interpretation is difficult. Ge takes 28 as referring to soma, 29 to Indra (or 29ab to Indra and 29c to soma; it's not entirely clear), while Old emphatically rejects Ge and takes Indra as the referent of both verses. Neither of them is entirely clear about the identity of the plural subjects of 30, though both think that the verse is a reference to the dawn and/or the dawn sacrifice.

I do not have a solution to these riddles, though I have some further suggestions. But before presenting them, I should first point out how different the style of this *ṛca* is from the rest of the hymn. There are no proper names in the verse, either divine or human; the reference is only 3rd person; there is no specific ritual vocabulary; the presentation is all descriptive, without even an implicit hint of the hortatory; there are no similes, though the imagery is strikingly poetic. The whole effect is almost allegorical, stripped of the busy specificity and the divine-human give-and-take that characterize the rest of the hymn and reappear emphatically in the next *ṛca*.

As often in the RV, I think some of the difficulties arise because two separate referents are present. On the one hand, the location of the birthplace of the poet in 28 suggests, as Ge says, that soma is the subject. Soma, esp. the celestial soma often encountered in Maṇḍala IX, could also be the subject of 29, looking down upon the sea of the earthly soma. But in both verses poetic inspiration could also be the subject, signaled by the two forms of *√vip*, *vīpraḥ* in 28c, *vīpānāḥ* in 29c, and by the emphasis on seeing in 29 and 30. The progression from birth with insight (28c) to quivering and stirring (29c) seems to describe first the germ of the poetic idea and then its development.

VIII.6.30: In 30 in a different image “they” (poets/sacrificers?) see “the dawning light of the age-old semen” – a baffling phrase. The “milk of the age-old semen” (*páyah prasnasya rétasah*) is found in III.31.10 in a Vala context, where it may refer to the poetic products that help open the Vala cave. Here it may refer to the even further development of the poetic insight, now fitted to a ritual context and available to be “seen” by the ritualists who will make use of it. But all this is highly speculative.

VIII.6.34: “Wooden” seems excluded for *vānanvatī* here. See VIII.1.31.

VIII.6.36: Note the phonetic figure *hāribhyām haryatābhyām*. See also VIII.12.25–28.

VIII.6.38: The publ. tr. of a and c may be difficult to parse in English: “after you (roll)...” does not contain a temporal conjunction (“after”) followed by a subject + verb, but rather a prepositional phrase (“after you,” that is, “following you”) followed by a verb with postposed subject (“both worlds” / “the drops”). It might be clearer if rephrased as “following you (roll) ...”

The isolated verb form *vartī* is, curiously, identified as an injunctive by Lub, despite the apparent primary ending. Gr considers it a development of **vart-tī*, which is phonologically possible. I don’t have a firmly founded analysis of it, but I wonder, since outside of the perfect, intransitive forms of \sqrt{vrt} are medial, if this is actually a “passive aorist,” which displays the expected strong form and *-i* ending, in which case Lub’s inj. label would be correct.

In c *svānāśah* is a pun: it can either be the nom. pl. m. of the mediopassive participle of the root aorist to \sqrt{su} ‘press’ or nom. pl. m. to the thematic nominal *svānā* ‘sounding, sound’. See VIII.7.14, 17.

VIII.6.39: I give *śaryaṇāvati* its literal meaning, deriving ultimately from *śarā-*, *śārya-* ‘reed, stick’, rather than taking it as a PN as Ge does, since in other places it seems to have literal content. On the analysis see Thieme *Unters.* p. 40 n. 2. But a PN, esp. in this context, is certainly possible.

VIII.6.41: On the sense of *coṣkūyā-* see Schaeffer (201); the action envisaged is poking or prodding a fire, extended to Indra’s poking more and more good things out to us.

VIII.6.44: *vímahi-* is a hapax, but presumably built to *vímahas-* (2x) and of fairly obvious meaning.

VIII.7 Maruts

As noted in the publ. intro., this hymn contains dense repetitions of vocabulary and numerous phonetic echoes within and across verses. I have noted some, but by no means all, below. Particularly common in the earlier part of the hymn is the root $\sqrt{yā}$ ‘drive’, in both verbal and nominal forms (2b, 4c [2x], 5a, 7b, 8b; also 14b, 23a, 26b, 28c, 29c).

VIII.7.1: *triṣṭúbham íṣam* “Triṣṭubh refreshment” causes some interpretational difficulties. Although in RVic discourse there is no problem with an image that involves

refreshment conceived as metrical poetry, this hymn containing the phrase in its opening phrase is in Gāyatrī meter, not Triṣṭubh. The same phrase recurs in VIII.69.1 (Indra), a hymn that is also not in Triṣṭubh. Some remove the word here entirely from the poetic sphere, as in Macdonell's "threefold Soma draught." Ge believes that it can't refer to the Triṣṭubh *meter* here, but that it must be a different technical term in recitation. I do not think that the fact that these two hymns are not in Triṣṭubh necessarily means that that meter can't be referred to in this expression; there are, after all, plenty of hymns to both the Maruts and Indra in Triṣṭubh, and the verb governing the phrase is in the imperfect and therefore should refer to another occasion. But following Ge's lead, I think it possible that '(having?) threefold rhythm' could refer to the Gāyatrī meter in which this hymn is composed, since Gāyatrī consists of three pādas. Unfortunately this will not work for VIII.69, which is composed in a variety of meters (incl. Gāyatrī, but only vss. 4–6); the verse in which the phrase is found (VIII.69.1) is in Anuṣṭubh. I might emend the publ. tr. to "refreshment in threefold rhythm." For further on the compound see Scar (641–42), who is somewhat indecisive about both the compound type and the sense.

VIII.7.2: *ācidhvam* in b (see also the identical pāda in 14b) should be read with distracted final syllable (*ācidh^uvam*) in order to make up an 8-syllable pāda, but it also should ideally have a heavy root syllable in order to avoid four consecutive light syllables in the cadence. (Even though I do not believe that the cadences of dimeter verse are as regulated as those in trimeter, iambic cadences do prevail, and four shorts would be quite unusual.) Werba (183, flg. Seebold) suggests that the form represents **ācid-dh^uvam* to *√cit*, which seems very plausible (also for the identical distracted form in I.87.2; in V.55.7 it does not require distraction and is therefore not diagnostic). Gr assigns *ācidhvam* to *√ci*, which is nearly identical in meaning to *√cit*; Lubotsky, curiously, puts it with *√ci* 'pile'. The same type of cluster reduction is found in the Marut hymn VIII.20.18 in *vavṛdh^uvam*, which likewise requires distraction and a heavy root syllable and represents **vavṛd-dh^uvam* from *√vṛt* 'turn'.

VIII.7.3: I take *úd īrayanta* here as a reflexive transitive. It thus contrast with intransitive *úd ... īrate* in 7b.

See also comm. on vs. 10.

VIII.7.1–4: Note recycling of vocab. -- *īṣam* 1, 3; *pārvata-* 1, 2, 4; *yāmam* 2, 4; *vīp/vep* 1, 4; *vāyúbhiḥ* 3, 4.

VIII.7.4 *vāpanti* is also echoed by *vepayanti* in the next pāda, and the whole verse is marked by alliteration: *v*'s, *p*'s, and *r*'s in *vāpanti ... prá vepayanti párvatān*; *m*'s in *marúto mīham* (both sets in ab), and *y*'s in c: *yád yāmam yānti vāyúbhiḥ*.

VIII.7.5: The vs. consists only of a subordinate clause. I attach it to the preceding vs., since the *yád* clause of 4c seems parallel to the *yád* clause of 5 and *yāma-* recurs here. However, there is a change from 3rd ps. ref. in 4 to 2nd ps. in 5.

VIII.7.6: Each pāda of this vs. begins *yuṣmān*, picking up *śúṣmāya* in 5c.

VIII.7.7: Both *úd ... īrate* and *vāśrā-* echo vs. 3. There is an internal echo between *aruṇāpsavaḥ* (a) and *ṣṇūnā* (c).

VIII.7.8: Exactly what atmospheric phenomenon is being described here is not clear. Ge seems to think that it's the Maruts who are traveling the path (*pānthām ... yātave* “dass sie ihre Bahn laufe”), though his n. 8b seems closer to my interpr. I suggest that it is a post-storm image: the thunderclouds/Maruts part, releasing the sun's ray and allowing the sun to travel its usual path across the sky. The parting of the clouds is expressed in c, the extending or spreading of the clouds that is accompanied by the beams of the sun.

Thieme (Fremd. 112) instead sees the Maruts releasing a ray as the path for the sun to travel: the first ray of morning, which the sun follows. But the Maruts are not dawn gods.

Pāda c is repeated as the final pāda of the hymn (36c).

VIII.7.10: The stem *ṛśni-* in the plural otherwise refers to “dappled cows” and is marked (by pronouns and modifying adjectives) as feminine; see the immediate preceding hymn VIII.6.19, as well as VIII.69.3, I.84.11. Here, however, there are no diagnostically feminine forms syntactically associated with *ṛśnayaḥ*. This allows it to refer both to (fem.) dappled cows and to the (masc.) Maruts, whose mother is *Ṛśni*. Although the Maruts are regularly called “Rudras” after their father Rudra (e.g., 12b), this is the only place in the RV where they are called “*Ṛśnis*” after their mother. This verse reprises 3bc ... *ṛśnimātaraḥ / dhukṣānta pipyúśīm īsam* “They whose mother is *Ṛśni* have milked out swelling refreshment,” with the bahuvrīhi *ṛśnimātaraḥ* matched with *ṛśnayaḥ* here and *dhukṣānta* matching *duduhré*. The *ṛśnimātaraḥ* in 3b all but ensures that we will take *ṛśnayaḥ* here as a referent to the Maruts.

The referent of the three lakes they milk out as honey is the rain they produce.

VIII.7.12: Ge and Re (see his comm.) take *sudānavo, rūdrā ṛbhukṣaṇaḥ* as predicative vocatives with the copula expression *yūyām hí śthā* “for you are ...” This seems unnecessary, since there is a fine nominative plural, *ṛácetasah*, which can serve as predicate. I take the *utá* to be connecting not the supposed predicative vocc. with *ṛácetasah*, but the two locc. *dāme* and *māde*. The predicative vocative analysis is esp. unlikely because this is a repeated pāda (I.15.2, VI.51.15, VIII.83.9; there are also further exx. of *yūyām hí śthā* ... as a pāda-opening), and only in I.15.2 is a predicative voc. likely. (See Bloomfield, RR ad I.15.2; he considers it “plain mechanical borrowing” there.)

The conjoined locc. “in our house and in exhilaration” may not seem to form a natural semantic class, but note that they are anagrams of each other: *dāme / māde*, and in a hymn so structured by phonetics, that would be enough.

VIII.7.13: I take *madacyútam* as having “active” meaning (‘arousing exhilaration’), rather than passive. Scar (126) allows either for this stem, and Re takes it as passive here. Since the passive form *mádacyutam* built with the past participle would fit the same metrical slot, I think that the active sense must be meant.

VIII.7.14: I supply loc. *upahvaré(ṣu)* in a because *ádhi* doesn't take the genitive (so can't be directly construed with *girīṇām* as Ge does), on the basis of the immediately preceding

hymn VIII.6.28 *upahvaré girīṇām* and the Marut hymn I.87.2 *upahvaréṣu yád ácidhvaṃ yayīm*, whose phraseology is very close to this.

I do not entirely understand what *iva* is doing here. Perhaps their wandering in the distant parts of the mountains is implicitly compared to their journey here.

As in VIII.6.38 (q.v) I take *svāná-* as a pun, both a passively used root aor. mediopassive participle to \sqrt{su} ‘press’ (‘being pressed’), which is eminently appropriate for drops, and a thematic adj. to \sqrt{svan} ‘sound’. Although the latter may seem less characteristic of drops, see 16a *drapsā iva ... dhámanti* “like droplets they blow their blast,” as well as 17a, where *svāná-* seems to encapsulate the same pun.

VIII.7.15: The problem in this verse is the referent and syntactic construction of gen. sg. *etāvataḥ ... ádābhyasya* (assuming that the two are to be construed together). Most take the phrase as obj., one way or another, of *bhikṣeta*. Ge takes it as a separate obj. of *bhikṣeta*, parallel to *sumnám*: “Um solche unfehlbare (Gabe), um ihre Gunst ...” Old, by contrast, suggests that the poet started out with the gen. *etāvataḥ*, meaning to continue with **sumnásyā*, but had to substitute the acc. *sumnám* for metrical reasons. He then takes *ádābhyasya* either as continuing the gen. phrase *etāvataḥ ... *sumnásyā* or as having a separate referent, the Maruts considered as a unity. Re also considers *sumná-* to be the ultimate referent, but has the genitive phrase express a partitive sense: “Puisse le mortel avoir une part, (si) petite (soit-elle), à la bonne grace ...” Sim. Bl (RR) ad loc. In favor of the Old/Re/Bl solution is the phrase *etāvataḥ ... sumnásyā* in VIII.49.9 (Vālakh.), construed with *īmahe* ‘we beg’ (cf. 50.9); see also VIII.5.27 *etāvat... / ... sumnám īmahe*. But I find Old’s metrical about-face very unlikely: RVic poets don’t have “whoops, that genitive won’t fit here” compositional moments, as far as I can tell, while Re’s semi-partitive construction seems rather weaselly. Moreover, $\sqrt{bhikṣ}$ is almost always construed with the acc. as here (genitives probably in I.152.6 and VII.90.6). And, further, in the scenario where *ádābhyasya* is part of the phrase, “unfehlbar” (Ge), “unerring” (Bl) is not what *ádābhya-* means. My solution is not necessarily better, though it does arise in part from Old’s alternative suggestion for *ádābhyasya*. I take the gen. sg. phrase as doubling the gen. pl., *eṣām*, with both referring to the Maruts -- the plural to them individually, the singular to their collectivity (so Old’s “von den als Einheit gedachten Maruts”), i.e., the Marut flock (*gaṇá-*). This seems to be Gr’s view, also Macdonell’s. It should be noted that the Maruts (in pl.) are several times referred to as *ádābhya-* (II.34.10, III.26.4).

The publ. tr. reflects that analysis, but I am not entirely certain it is right. If I were to follow some version of the other view, I would render *bhikṣeta* in two different ways depending on the case of its complement: “might beg their benevolence, might seek a share of such undeceivable ...”

VIII.7.16: However odd the expression *drapsāḥ ... dhámanti* “the droplets blow their blast” may seem, it is found twice elsewhere: the extremely enigmatic VIII.96.13 and the somewhat clearer IX.73.1. The latter is a noise-making context, as this may be.

VIII.7.16–17: 16c *útsaṃ duhántaḥ* reprises 10bc *duduhré ... útsam*, which in turn reminded us of *dhukṣánta* in 3c. Other elements in vs. 3 reappear in vs. 17: *pṛśnimātarāḥ*

in 17c was the subj. of *dhukṣānta* in 3b, and 17ab *úd u ... īrate ... úd u vāyúbhiḥ* reminds us of 3a *úd īrayanta vāyúbhiḥ* (cf. also 7ab).

On *svānébhiḥ* in 17a see comm. on 14. Because vss. 16 and 17 are so closely tied, I connect the *drapsá-* of 16a with the *svānébhiḥ* in 17a and consider this a variant of *svānaīḥ ... indubhiḥ* in 14c.

VIII.7.18: Note the extremely recessive 2nd pl. perfect *āvā:* 2nd pl. pfs. are rare and poorly marked as it is; with its initial swallowed by *yéna*, this one barely surfaces.

The referent of *yéna* and its correlative *tásya* is most likely ‘help’ (*ávas-*); so Ge. This assumption is supported by I.112.5 *yābhiḥ káṇvam ... ávatam* “with which you two helped Kaṇva,” where the referent of *yābhiḥ* is the etymologically related *ūtíbhīḥ* and the same Kaṇva story as in 18b is referred to.

As for Turvaśa and Yadu -- though, as Ge points out, their helper is usually Indra, in this run of hymns the deed is assigned to several different gods: the Maruts (here), Indra (VIII.4.7), the Aśvins (VIII.9.14, 10.5).

The construction of c is unusual. With Ge (and Re), I take *tásya* as a partitive gen. with *dhīmahi*, though somewhat reluctantly. The dat. *rāyē* ‘for wealth’ is then an indication of our purpose once we receive some help from the Maruts; Ge’s fuller “um Reichthum (zu gewinnen)” makes the purpose clearer.

VIII.7.19: *pipyúṣīr īṣaḥ* echoes *pipyúṣim īṣam* in 3c.

VIII.7.21: Ge thinks that this verse is addressed to the other singers, but this requires that the voc. *ṛkṭabarhiṣaḥ* in 20 and 21 have two different referents (so explicitly Ge’s n. 3), which seems unlikely. I take the Maruts to be the addressees, as in vs. 20, and follow Macdonell (*Hymns from the Rigveda*, p. 60) as well as Lüders (Var. 426–27) in taking the verse as contrasting the Maruts’ former friendly behavior to the poet and his fellow ritualists with their neglect now -- a neglect drawn attention to by the questions in the immediately preceding vs. 20. Acdg. to Delbrück (AiS 502), *ha sma purā* + PRESENT expresses what was accustomed to happen in the past. I also take *stómebhiḥ* not as the Maruts’ praise songs, but rather the ones produced by us, as an instrumental of price. Macdonell’s tr. “as once ye did *for praise*...” seems to reflect a similar interpr.

VIII.7.22–23: The insistently repeated *sám* in vs. 22 (4x in 3 pādas) is complemented by its opposite *ví* in 23, though *ví* needs only two occurrences to continue the pattern.

VIII.7.23: *arājín-* is a hapax. Though it is obviously derived from a root $\sqrt{rāj}$, it is not clear whether it belongs to ‘shine’ (so Gr ‘nicht glänzend’, Re ‘sans éclat’) or ‘rule’ (Ge ‘die herrenlosen Berge’; Old ‘königlos’) -- or both, as I suspect. Although neither root yields compelling sense as a negated quality of mountains, the phrase should be interpreted in light of 1c *ví párvateṣu rājatha*, where I see the same pun.

It is possible that $\sqrt{vī}/yā$ should be rendered ‘drive through’, not ‘drive apart’, although this produces a less happy contrast with *sám* in vs. 22. In that case I would tr. “they drove through Vṛtra, joint by joint, (drove) through the mountains ...”

On *vīṣṇi* see comm. ad VIII.96.19.

VIII.7.24: The pattern of repeated preverbs continues with *ānu*. The lexeme *ānu* √*av* is quite rare (but see X.113.1); presumably the poet was looking for a preverb to pattern with *sām* and *vī* in the previous vss. In X.113.1 I tr. ‘assist’, but ‘stand by’ here to provide a separable particle for the pattern.

VIII.7.25: I have punctuated pāda b, *śīprāḥ śīrśān hiraṇyáyīḥ*, as a parenthetical expression, a nominal locational clause, but in context it is the equivalent of a decomposed bahuvrīhi modifying the Maruts and parallel to *vidyúddhastā(h)* ‘having lightning in their hands’ in pāda a (so approx. Re). A bahuvrīhi *‘‘having golden (helmet-)lips on their head’’ would have been difficult to construct with these elements. Including the modifier ‘golden’ would have produced a three-member compound, which would be unusual for the RV, and determining what form ‘head’ (*śīras-* / *śīrṣ-ṇ-*) would have taken as the final member of a masc. pl. bahuvrīhi may have defeated the poet. This analytic expression is given somewhat fuller form in V.54.11.

VIII.7.26: Like almost every verse involving Uśanā, this one is quite obscure. On the morphology of the name, see my art. in Fs. Jasanoff; for the mythological background and development of Uśanā, chap. 4 in my *RV between Two Worlds*. I take this verse as a disguised treatment of the Vala myth, with which Uśanā Kāvya is associated elsewhere. Pāda a is also found at I.130.9; there I take Uśanā as an acc. of goal (or perhaps a gen. with a gapped ‘house’), while here I take it as an instr. As discussed in the Fs. Jasanoff article, the word *uśānā* behaves essentially like an indeclinable in the RV.

In my analysis the curious expression *ukṣṇó rāndhram* ‘‘the loins of the ox’’ (on *randhrá-* see Gotō 1985 [MSS 44] and EWA s.v.) is a reference to the Vala cave: the loins are a weak or vulnerable spot in animals, and MIA *randha-* ‘opening, cleft, weak spot’ shows how easily this can develop into a word that might qualify a cave. A similar circumlocution for the Vala cave is *nāme gōḥ* ‘‘in the bend of the cow’’ (III.39.6). Ge takes the phrase instead as a personal name; as he points out, Ukṣṇo Randhra is a PN in PB 13.9.19/JB III.150 and has the epithet *kāvya-*, apropos of the so-called Aukṣṇorandhra Sāman, but this is surely a secondary reinterpretation of this opaque vs.

The roaring in c is the noise of the cows penned inside the cave.

Note the phonetic echo in the initial words of the first two pādas: #*uśānā* / #*ukṣṇas*.

VIII.7.28: *prāṣṭi-* ‘side-horse’ is a rare word in the RV, occurring two other times in addition to a single instance of the deriv. *prāṣṭimant-*. As often, the occurrence of a rare word can be attributed to phonological triggers; here *pṛṣatī rāthe* / *prāṣṭir ... rōhitah* (with a nice scrambling of *th* → *h...t* in *rāthe ... rōhitah*). Our pāda b is also found at I.39.6b, with *rātheṣu pṛṣatīr* in the preceding pāda. (The other two occurrences are less phonologically driven.)

The exact arrangement of the horses isn’t clear, and the sandhi form *pṛṣatī* has accordingly received different grammatical analyses. I take it as representing underlying *pṛṣatīḥ*, an acc. pl. fem., obj. of *vāhati* (so also Gr, Bl). Ge (/Re) seems to take it rather as a nom. pl. implicitly conjoined with *rōhitah*, presumably with the verb agreeing with the latter. Hoffmann (Inj. 126) take the form as a dual nom., a parallel subj. to *rōhitah*.

Old suggests that *riṇán(n)* is a nom. sg. participle, modifying the subjects of *yānti* with incongruence of number. This seems unnecessary, since it can easily be a 3rd pl. injunctive, requiring no such grammatical adjustment.

VIII.7.29: Ge/Re take *śaryaṇāvatī* and *ārjīke* as place names, but see comm. ad VIII.6.39 above for *śaryaṇāvatī*, depending on Thieme, *Unters.* p. 40 n. 2. There he also explains *ārjīka-* as a vṛddhi adj. ‘foamy’, derived from *-rjīka-* (found in various bahuvrīhis) ‘foam’ (< ‘of white appearance’).

VIII.7.31: On *kadhapriyaḥ* see comm. ad I.30.20. Note *kád dha ... kadha-*.

The verse seems to allude to the Maruts’ supposed leaving Indra in the lurch at the Vṛtra battle, but this seems to be a slander: it is often said that they were the only gods who stayed with him (though Ge adduces ŚB IV.3.3.6, where they temporarily withdraw until Indra offers them a joint share of the sacrifice [7ff.]). Certainly 24c expresses their help to Indra at that time.

VIII.7.32–33: Note opening 32a *#saho ṣu* / 33a *#o ṣu*. HvN mark *o* in 33a as disyllabic. The agreement across vss. would be an argument against such a reading, and Old has several alternative suggestions.

VIII.7.34: On *pársāna-* see comm. ad VII.104.5. Our passage here is the best support for the usual gloss ‘depth, deep place’.

VIII.7.35: I take the final word of the vs., *váyah*, as a pun, both nom. pl. ‘birds’ and neut. acc. sg. ‘vital energy’, with the birds subject of *vahanti* in pāda a. Birds figure in several nearby hymns (VIII.3.23, 5.33), with the latter passage esp. close: ... *vām ... váyo vahantu parṇīnaḥ* “Let your feathered birds [=horses] convey you two [=Aśvins] here.” Ge instead takes the obj. of *vahanti* here to be the Maruts’ horses (supplied), with the Maruts themselves presumably the subj. Scar (415–16) has the Maruts as subj. and clouds as obj., but in the absence of any clouds in the context, it seems better not to invent them. The disadvantage to my proposal is that the ‘birds’ reading of *váyah* has to leap backwards over a nominal clause (*dhātāra stuvaté* ...) that clearly has the Maruts as its nominal referent. Nonetheless, I think this kind of syntactic manipulation is possible in punning: the audience reaches the end of the verse and realizes that ‘birds’ is the subject they were missing at the beginning, while also interpreting *váyah* as the neut. object of *dhātārah*.

I am tempted to take *dhātārah* as a periphrastic future: “they will establish ...”

VIII.7.36: Pāda b contains two ambiguous forms, whose variant interpretations have produced very different tr.: *chāndaḥ* may be nom. sg. masc. to *chānda-* ‘pleasing’ (the only other possible ex. in the RV is at I.92.6, q.v.) or nom./acc. sg. neut. to *chānda-* ‘meter’; *sūrah* can be nom. sg. masc. *sūra-* ‘sun’ or gen. sg. *svār-* ‘id.’ The standard tr. opt for the former choice in both cases, e.g., Re “tel un charmeur est le soleil, de par (son) éclat.” I have chosen the latter in both cases, at least in the publ tr., though I now have doubts about the identity and meaning of *chāndaḥ*, though I would still stand by the gen. interpr. of *sūrah*. The verse is a reference to the ritual here-and-now, the kindling of the fire at dawn: the phrase *sūro arcīṣā* “with the ray of the sun” is an indicator of that time.

In the publ. tr. I took *chāndaḥ* as “a metrical verse” because the hymn opened with a similar metrical expression: *triṣṭúbham íṣam* (see comm. ad vs. 1). The Maruts are characterized as *chandastúbh-* ‘chanting in rhythm’ in V.52.12, a cmpd that unites the *chandas-* of our vs. 36 with the 2nd part of *triṣṭúbh-* in vs. 1. To be born “like a metrical verse” makes sense in a RVic context: the fire is kindled (born) as the verbal portion of the ritual begins to be spoken (born). However, I am disturbed by the fact that the *s*-stem *chāndas-* has late distribution (X 7x, Vālakh. 1x, with deriv. *chandasyà-* found one in late IX). Although the just cited *chandastúbh-* is always analyzed (beg. with Pp.) as containing the *s*-stem, on formal grounds the 1st member could just as well be a them. form. I am therefore more sympathetic to seeing a thematic form here (Gr’s *chānda-*), perhaps with the sense ‘pleasing’. So I provide an alt. tr. “like one aiming to please.”

VIII.8 Aśvins

VIII.8.4: The hapax voc. *adhapriyā* is clearly based on the slightly better attested *kadhapriya-/prī-* (on which see comm. ad I.30.20), a form of which is found in the immediately preceding hymn VIII.7.31. The latter is a dismissive and slighting form of address (“when-friends?” -- that is, fair-weather friends) whereas *adhapriya-* seems to be the opposite: “now/here-friends,” that is, reliable friends.

VIII.8.5: I construe both *svāhā* and *stómasya* with *úpaśrutī*, although they are in different pādas. (Ge takes *svāhā* as an independent mini-clause and construes *stómasya* with voc. *várdhanā*.) Although *várdhana-* regularly does take the genitive, I am reluctant to take *stómasya* with it because we might expect the gen. to lose its accent in a vocative phrase (although this loss is of course not invariable, as Old points out). *úpaśrutī-* also takes the gen. (see I.10.3), and since *svāhā* is indeclinable, it can also be dependent on *úpaśrutī-*, at least as I see it. Old also floats the possibility that *stómasya* goes with *úpaśrutī*, though he seems to favor a connection with *várdhanā*.

It is not clear whose *dhītī-* ‘insights’ are in question in c. Ge takes them as the Aśvins’, and the fact that *kavī* ‘poets’ qualifies them directly adjacent to *dhītībhiḥ* would support this view. However, in 19cd the *dhītībhiḥ* definitely belong to the (human) poet, and this also seems to be the case with *suṛktībhiḥ* in 3b (on the basis of 22ab), as well as *dhībhiḥ* and *stómebhiḥ* in 7cd. In general the unrelenting point of this hymn is that the Aśvins are supposed to come here at our producing various verbal products for their delectation. I take the instr. in these cases to be instrumentals of cause.

With *prā* in d I supply another verb of motion. Judging from his tr. Ge must take the verb to be supplied as *prā√as* ‘be outstanding’: “Ihr ... (seid) an Gedanken ... voraus.” This is not impossible, but this is a journey hymn and not much else happens, esp. in this section: we offer praise; they come.

VIII.8.6: *yác cid dhí vām purā ...* is very like (*nahí śma*) *yád dha vaḥ purā* in the immediately preceding hymn (VIII.7.21), which, with a present tense verb, expresses habitual action in the past. Here we have instead the med. 3rd pl. perfect *juhūre* (found otherwise only in almost identical context in I.48.14; see Kü 606), also apparently expressing habitual past action. (Delbrück [AiS 501–3] does not comment on this usage.)

In both cases (also I.48.14) that action is implicitly compared to what is happening in the present. Here *my* praise is contrasted with those of the seers of the past.

VIII.8.11, 14–15: The bahuvrīhi *sahásranirñj-* ‘having thousandfold raiment’ is found only in this hymn and does not seem a particularly natural qualifier either of a chariot (vss. 11, 14) or of refreshment (15).

VIII.8.12: The stem *manotár-* is found only twice in the RV, in identical pādas (I.46.2=VIII.8.12), in the dual *manotārā*, with unexpected short vocalism in this strong form (expect **manotārā*)—as opposed to *manótar-* (so accented), which occurs only in the nom. sg. In I.46.2 the form appears in a pāda after one containing likewise dual *síndhumātarā*, which has *-tar-* legitimately, and as Old says (ad I.46.2; see also AiG III.199), *manotārā* might have been shortened in this context, with the pāda then borrowed into VIII.8.12. But Old is not enthusiastic about this explanation, and Tichy (*-tar-*stems, 58) persuasively suggests that the *-mātarā* form probably provided the context for preserving the short vowel in *manotārā*, but was unlikely to have produced it. But her explanation (if that’s what it’s meant to be), that *manotārā* is “eine dichtersprachliche Reliktform” (58; cf. 41 n. 48, where she calls both *manotā* and *manotārā* “dichtersprachliche Einzelformen”) doesn’t explain its source: the *-tar-* vocalism should not be a relic if we assume that agent nouns derive from **-tor-*stems, and blaming it on Dichtersprache is a non-account: poets don’t make up forms with no reason, at least in my view. The problem is similar to *dhánutarā* (on which see comm. ad IX.93.1), also dual, and though I have no good explanation for either of them, the fact that they are built not to roots, like standard agent nouns, but to pres. stems may have weakened the perceived links to *-tar-*stem inflection and allowed them both to assimilate themselves to *-tara-*comparatives, whose duals would have had the same *-tarā*.

VIII.8.15: The first hemistich reprises 8cd, but in this vs. the poet asks for something in response to his strengthening hymns.

VIII.8.15–16: Another example of chained vocabulary: *ghṛtaścút-* ‘dripping with ghee’, which is reasonably appropriate both for ‘refreshment’ (*īṣ-*, 14) and ‘nourishment’ (*ūrj-*, 16).

VIII.8.18: I supply “who listen” in d on the basis of V.61.15 *śrótāro yāmahūtiṣu*.

VIII.8.19: *mayobhúvā* in pāda a repeats the same word in 9d, with *śambhúvā* in b generated as a variant to it.

Pāda d, *gīrbhír vatsó ávīvr̥dhat*, is the third occurrence of this same pāda in this hymn (also 8d, 15b, except the verb in 8 lacks the accent). The instr. pl. *dhītúbhiḥ* at the end of c seems to double *gīrbhíḥ*, as *śambhúvā* does *mayobhúvā* in the first half-verse.

VIII.8.22: It may not be clear in the publ. tr. that “found in many places” is a voc. addressed to the Ásvins and does not qualify the songs and hymns. I take this form as a “vocatized adverb” in Re’s phrase, derived from *purutrā* ‘in many places’, against the standard opinion that it contains the root noun to *√trā* ‘protect’ and means ‘protecting

many' (so Sāy, Gr, Ge). Scar (194) considers both options and cannot decide. In fact I do not feel strongly about the analysis reflected in the publ. tr. and could also accept 'protecting many'. However, it might be worth noting that the adv. *purutrā* frequently occupies pāda-initial position, as here, and that there are several occurrences of it in nearby hymns (VIII.1.7, 5.16, 11.8), one of which (VIII.5.16) is in an Aśvin hymn. The Aśvins are the subj. of a form of $\sqrt{trā}$ only once (VII.71.2), but this is not a strong argument either way.

VIII.8.23: As noted in the publ. intro., the three footsteps (*trīṇi padāni*) attributed to the Aśvins must be meant to evoke the three celebrated *padāni* of Viṣṇu (cf. I.154.4). Perhaps it is simply the Aśvins' penchant for trios (not found in this hymn, however) that is the point of contact. One might note, however, that in the next hymn (VIII.9), also by Vatsa, vs. 2 asks the Aśvins to confer on us the power in the midspace, in heaven, and "through the five peoples of Manu" (i.e., on earth). Since Viṣṇu's three steps cover the same three cosmic divisions, the Aśvins' geographical reach may be alluded to here. Even more striking in the next hymn (VIII.9.12d), the Aśvins "stand in the strides of Viṣṇu" (*viṣṇor vikramaṇeṣu tiṣṭhathaḥ*).

The purport of the paradoxical pāda b is also not clear; see speculations by Old, Ge, and Re. I think it must have something to do with the anxiety expressed throughout this hymn about exactly where the Aśvins are and our oft-expressed desire for them to leave wherever it is and come to us. So we are never sure whether they are visible or hidden.

The final pāda reflects our also stated desire that the Aśvins forsake other sacrificers to come to us (see esp. vs. 8).

VIII.9 Aśvins

VIII.9.2: For the possible relevance of this verse to VIII.8.23, see comm. ad loc.

VIII.9.3: *pāri* $\sqrt{mṛś}$ is a more vivid expression than Gr's 'geistig berühren', Ge's 'befassen' indicate: in X.34.4 it is the verb the Gambler uses in his tortured imagining of others fondling his wife: *anyé jāyāṁ pāri mṛśanti asya*. Something similar seems to be the point here. The Aśvins put their powers at the disposal of other poets; Vatsa sees this promiscuity in almost sexual terms and begs them for an exclusive relationship.

VIII.9.4: I take *cīketathaḥ* 'attend to' in a somewhat sinister sense here: with the help (/invigoration) of soma the Aśvins will turn their attention to Vṛtra/the obstacle and take care of the threat he/it poses. However, I am not entirely certain why the Aśvins are being implicated in the Vṛtra battle and assimilated, as it were, to Indra. The gharma of the 1st half-verse is more naturally their drink. But see 7cd below. Note also that in 12a they drive on the same chariot with Indra. On the basis of that hemistich, which also associates them with Vāyu (12b), we can assume that it is their joint appearance at the dawn sacrifice that brings them into conjunction.

VIII.9.5: The referent of the *yád*'s in ab is not overtly expressed. Ge supplies 'Heilmittel' on the basis of vs. 15 with *bheṣajām*. That verse does not seem to me particularly

apposite. Nonetheless, I follow him, because the denom. *bhaiṣajyá-* is found in the next vs. (6b), because *bheṣajá-* is elsewhere found in the waters (cf. I.23.19), and because plants are generally associated with healing (see X.97).

ṛtām can be either a neut. sg. ppl., agreeing with *yád*, or a root aor. 2nd du. act. injunc. Gr and Ge take it as the former; Old considers the latter, but rejects it on what seem to me slight grounds. I take it as the latter, in part because the immediately preceding hymn contains 2 of the 7 (per Lub; 8 if this is counted) examples of accented finite 2nd du. *ṛtām* (VIII.8.13, 17) and also because I think it more likely that the Áśvins would be portrayed as actively producing these remedies (see 6b) than that the remedies simply got made. However, the ppl. interpr. is far from excluded.

VIII.9.6: The rendering of *ná vindhate* in the publ. tr. is opaque. By “does not get enough” I meant something like “produces in superfluity” -- from Vatsa’s point of view, there can never be enough praises for the Áśvins.

The sense relation between the *yád* clauses of ab and the main clause in c is not clear. I *think* the idea is that even when the Áśvins are preoccupied with some other activity, Vatsa keeps praising them on the assumption that they will pay attention at some point.

I am also a bit unclear on how pāda d fits with the rest. I think that it reinforces pāda c; that is, Vatsa keeps producing hymns because he knows that the Áśvins ultimately come to someone who offers them sacrifice (here represented by the *havís-* ‘oblation’). But it could instead mean that Vatsa is wasting his time, because the Áśvins go for the oblation, not the praise. This seems less likely, esp. since both praise and oblation are offered to the Áśvins in the next vs.

VIII.9.7: This new ṛca opens as the hymn does (1a): *ā nūnām*, followed by a form of *aśvín-*. The 2nd vs. of the ṛca (8) also opens with *ā nūnām*.

Ge (also Lü 362) supplies a form of ‘speech’ with *vāmáyā*, obviously as part of the seer’s ritual offering to the Áśvins. But *vāmá-* generally expresses the valuable thing that the ritualist receives from the god(s) in exchange for his ritual service, and I have taken it this way here, with (loosely) an instr. of price. I do not have an explanation for its fem. gender, however. There are no other occurrences of a fem. in *-ā* to this adjective; most forms are masc. or neut, and the other fem. forms are in *-ī*.

The honeyed soma and hot milk of vs. 4 return here.

Ge (also Lü), flg. Ludwig, takes *átharvaṇi* rather bizarrely as a nominative, but there seems no reason not to interpr. it as the loc. it appears to be (so, e.g., Old). Nor does there seem any reason not to take it as the name of a priest, as it is elsewhere (*pace* Sāy., Old). I take it as a loc. absol. without an overt participle marking it.

VIII.9.8–9: With Kü (181–82), I assign the curious paired reduplicated med. opt. forms (*ā ...*) *cucyavīrata* (8) and *ācucyuvīmāhi* (9) to the caus. reduplicated aorist, which is otherwise only active. I have no explanation for the difference in the grade of the root syllable (*-cyav-* vs. *-cyuv-*); no morphological or metrical factors can explain the variation between these two almost adjacent forms. Possibly the 3rd pl. has full grade in some kind of imitation of the full grade of act. 3rd pl. imperfects to redupl. presents (type

ájuhavur vs. *ájuhuma*), but that is found only in the active voice and not in the optative, so it would be a bizarre and tenuous imitation indeed.

VIII.9.9: The last pāda of the verse (d) is identical with the last pāda of vs. 3 (c), but the point is very different. In vs. 3 the poet asks the Aśvins to pay attention only to him despite the activities of *other* poets; here it's "we" who are moving the Aśvins, but the poet still asks for their exclusive attention. Given the constant interchange between 1st singular and plural in ritual situations, I find it difficult to think that the poet is trying to distance himself from his priestly comrades and get the Aśvins all to himself. But I don't have a good explanation.

VIII.9.10: The final pāda here is a variant of 3c and 9d, but the circumstances differ from both. Here the poet doesn't contrast himself with other rival poets (as in 3) or with the larger group of "us" (as in 9), but asks that the Aśvins pay attention as they did to previous seers -- though actually not *so* previous: Kakṣivānt and Dīrghatamas are of course famous poets represented in the collections of Maṇḍala I (I.116–26 and I.140–64 respectively); Kakṣivānt is also identified in the Anukramaṇī as Dīrghatamas's son (or descendant). A son/descendant of Vyaśva, Viśvāmitra, is the poet of VIII.23–26, and X.148 is attributed to Pṛthu (not Pṛthī) Vainya. So our poet seems to be asking for the same attention as these famous seers received, but they are not seers of the distant past but at most of a few generations ago, possibly even roughly contemporary (though the perfect *juhāva* puts the invocation in the past). They are both models and, to a certain extent, rivals.

Pṛthi in the publ. tr. should be corrected to Pṛthī.

VIII.9.16: Ge tr. *devyā ... vācā* (belonging to different pādas) as "mit der göttlichen Rede," which is certainly possible. But since Dawn is explicitly the topic of the next two vss. (17–18) and since there's a voc. *devī* (or possibly, against the Pp., a nom. *devī*) in pāda c, it seems best to separate the two instrumentals and take *devyā* as referring to Dawn. The poet has awoken with the advent of the goddess Dawn (the natural world) at the same time as the ritual speech directed to the Aśvins commences.

If nom. *devī* is read here, *vy āvar* can be 3rd ps., not 2nd. But I see no reason to go against the Pp. in this case, since Dawn is addressed in the voc. (*uṣaḥ*) in both 17a and 18a, and the unambiguous voc. *devī* is found in 17b.

VIII.9.19: *āpīta-* is better derived from $\sqrt{pī}$ 'swell' (so Ge, EWA s.v. *PAY*⁷) than to $\sqrt{pā}$ 'drink' (Lub, Re [though Re allows a double sense]).

Pāda d requires a verb to be supplied with *prā*. I follow Re in supplying 'wake', on the basis of vs. 17. Ge *kṛnvata* (on the basis of I.186.10), thus "... (lassen) ... den Vorrang." His model seems awfully distant, given that *prā bodhaya* appeared two vss. previously.

VIII.10 Aśvins

VIII.10.1: Ge and Re take *dīrghāprasadman-* as a PN, but I follow Gr and Old in taking it as a fully lexical bahuvrīhi, 'providing a long seat'. Both of the latter consider the word

an epithet of the earth, and the parallel cited by both, V.87.7 *dīrghám prthú paprathe sádma pāṛthivam*, is quite suggestive. However, the other occurrence of this form in VIII.25.20 seems to narrow its application to the ritual ground, rather than the earth in general.

I do not know quite what an *ākṛta*- house is, and the past participle *kṛtá*- is not otherwise found with *ā*. The publ. tr. ‘prepared, made ready’ follows Ge/Re. However, since the lexeme *ā√kṛ* generally means something like ‘bring here’, and since there is no second *vā* in pāda c, I am tempted to tr. “on the sea in a house directed here’, namely a boat, though this may be too whimsical.

VIII.10.2: Elsewhere *hēṣas(-vant)*- means ‘weapon’, and I see no reason to ascribe a different sense to it in this compound. So Lü (Philol. Ind. 783), contra Ge’s ‘Rosstreiber’, Re’s ‘à l’incitation rapide’. I am somewhat disturbed by the accent, however.

VIII.10.3: Re points out the similarity of *grbhé kṛtā* in 3 with *ākṛte grhé* in 1c.

VIII.10.4: Again Ge takes the presumed loc. *asūré* as a PN, explicitly rejecting Gr’s ‘sunless time’ in his n. 4b. But I do not see a good reason for this rejection, and given that the Aśvins are the “early-coming” gods and receive offerings before dawn, ‘sunless time’ makes sense ritually. As Old and Ge both point out, *asūré* is involved in word play with *sūrāyah*, which of course may account for the appearance of this hapax here, as so often.

VIII.10.5: The final clause of this vs. contains a misleading ambiguity: the second element in *átha mā gatam* ‘so come to me’ should be interpreted as *mā ā*, but *mā* could also represent the prohibitive particle, with *mā gatam* “don’t go” or even *mā ā gatam* “don’t come.”

VIII.11 Agni

VIII.11.4: The verb *veṣi* can be either a 2nd sg. indic. pres. or a *si*-impv. to *√vī* ‘pursue’. (See, e.g., the distribution as given by Lub 1330 and 1331; Lub takes this occurrences as an indic.) Ge tr. it as an indic., Re as an impv., and the publ. tr. takes it as an indicative present. Contextually I would (weakly) prefer the imperative, and the undoubted *si*-imperative *sátsi* found in 10b might support this interpr. But I am not certain that *si*-imperatives take *nā* as negative rather than *mā*. Given their derivational status as haplogologized *s*-aor. subjunctives, *nā* should be quite correct, but they have generally transferred functionally into the imperative domain and so might be expected to take *mā*, however anomalously. I know of no diagnostic passages.

The voc. ‘o Jātavedas’ was carelessly omitted from the publ. tr.

VIII.11.10: The accent of *sátsi* is probably owing to its presence in a *hí* clause. However, if one follows Ge and Re in seeing a suppressed “you have taken your seat” to be supplied with *sanāt* ‘of old’ (e.g., Re “assieds-toi comme Oblateur nouvellement, (comme tu t’es assis) anciennement!”), the accent could come from the implicit contrast between the two verb forms.

The accent on *pipráyasva* is somewhat more difficult to account for, and, curiously, the standard tr. and comm. do not mention it (incl. Kü 323). I think it also arose by contrast with another verb form, namely *ā yajasva*. The stem *pipráya-* to which this impv. belongs (see Kü and my 2018 “The Vedic Perfect Imperative and the Status of Modal Forms to Tense-Aspect Stems,” in Fs. Lubotsky), several times co-occurs with a form of \sqrt{yaj} and on several of these occasions is accented (e.g., VIII.39.9 *yákṣac ca pipráyac ca naḥ*, also VII.17.4; cf. also II.6.8 without accent, all cited by Kü 323).

VIII.12 Indra

VIII.12.1–3: This *ṛca* is unified by a series of relative clauses (mostly introduced by *yéna*) whose antecedent in the main clause is the *tám* that opens the refrain. The presumed referent of all the relative pronouns (and the *tám*’s) is *mádaḥ* in 1b, although it could be any power or capacity of Indra’s that comes to mind.

VIII.12.1: Although it is Indra whom we expect to be the best soma-drinker, here the epithet is transposed to his *máda-* ‘exhilaration’.

VIII.12.2: Unlike Ge I take *svàṇṇara-* here as an epithet of Adhriḡu, rather than a PN (sim. VIII.3.12), though not on strong grounds, and VIII.6.39, where I do take it as a PN, undercuts this position.

Either Adhriḡu or, if he is a personage, Svarṇara receives the qualifier *vepáyant-* ‘setting atremble’, without an object. Given how little we know about Adhriḡu (or Svarṇara), it is not clear what such an object might be, though it might refer to poetic inspiration.

VIII.12.4: Ge supplies a verb (*verhílf*) to govern the accusative phrase in ab, but given the parallelism of vss. 4 and 5, it is better that this phrase is governed by the *jūṣasva* in 5a.

VIII.12.5–6: The verbal form that constitutes the refrain, *vavákṣitha* ‘you have waxed strong’, is accented. Old plausibly attributes the accent to its position as a semi-independent refrain (*Anhang*), so that it is not necessary either to supply a subordinator or to take the verb as an independent clause. Ge, by contrast, supplies a subordinator, flg. Sāy (see Ge n.).

VIII.12.6: In c *pratháyan* is used differently in simile and frame. In the former it is straightforwardly transitive, with *vṛṣṭúm* as object; in the latter it is intransitive or, at least, absolute, as in, e.g., IV.53.2.

VIII.12.7: Note the chaining between *ṛcas*, with the refrain of vss. 4–6 *vavákṣitha*, returning as the first word of the following verse, *vavakṣúh*, with person and number adjustment. Interestingly, it’s this verse where the *Anhang* refrain doesn’t precisely match the two following verses: *āvardhayat* versus *prá vāvṛdhe*, with the same root but different stem, and transitive versus intransitive. This is the only such deviation in this hymn.

VIII.12.8: I take *yádi* in pāda a as standing for **yád ī*, with shortening before the cluster *pr*. See Jamison 2002. Hence ‘when’, not ‘if’. The **ī* as usual functions as an accusative, anticipating the obj. *sahásram mahiṣān*.

The word play between the voc. *pravṛddha* in a and the refrain verb *prá vāvṛdhe* cannot be easily captured in English.

VIII.12.9: Ge takes the simile in c *agnír váneva* with ab: “Indra brennt ... den Arśasāna nieder, wie Agni die Bäume,” with *sāsaḥīḥ* only construed with the refrain: “der Siegreiche ist erstarkt” (though see his n. on 9c). But this violates the structure of the rest of the hymn, where the c pāda hangs together. I therefore take the quality held in common between simile and frame to be *sāsaḥīḥ*. For *√sah* with this simile see VIII.40.1 *yēnā dṛḷhā ... sāhiṣīmahi / agnír váneva...* “by which we might become victorious over the strongholds ... as Agni (is victorious) over the woods,” and for the reduplicated -*i*-stem governing the accusative III.16.4 *cákrir yó víśvā bhúvanābhí sāsaḥīḥ* “Who creates and overwhelms all living beings...” On this nominal type and its syntactic behavior, see Grestenberger 2013 (JAOS 133).

Arśasāna is generally taken as the name of an enemy of Indra in the RV about whom little is known. See now comm. ad X.99.7, where I accept its formation to a poorly attested root *√ṛś* ‘harm’ and suggest a tr. “Harmer” rather than taking it as a PN. This pāda is identical to I.130.8g.

VIII.12.10, 12: The verb initiating the refrain, *mímīte*, is accented, and in these two verses the accent can be explained as a result of the status of the refrain; see above ad vss. 5–6. In 11 it starts a new clause and can owe its accent to that.

VIII.12.10: Encouraged by the insistent feminines, *ṛtvīyāyatī* here is a pun, referring both to Thought’s conformity to the ritual order and to her menstrual cycle. See VIII.80.7 for the same word play involving *dhīḥ*, where the femininity of the subject is more emphasized than here. It is possible that the refrain here “she is (well-)measured indeed” can also refer to the menstrual cycle. Otherwise it probably refers to the metrical character of the thought and perhaps the fact that she measures up even to Indra’s great size. The refrain also has to be considered beside a phrase in the next hymn, VIII.13.30 *mímīte yajñām ānuśák* “measures the sacrifice in proper order.”

VIII.12.11: The subject of this verse is not made clear. Ge suggests either *stóma-* or *dhītí-*. The latter is more likely in my view, continued from vs. 10. There are no clashing non-feminines, since *devayúḥ* could serve either for masc. or fem., and in any case could be matching the gender of the *gárbhaḥ*. Another possibility is Agni, since he is regularly called an embryo in these circumstances, but the unity of the *ṛca* speaks against this. I would therefore change the “it”s in the publ. tr. (“its intention,” “it has grown,” “it is”) to feminine forms, to match vs. 10.

The VP *krátum punīte* of b is found in the next hymn, VIII.13.1b, where the subject is Indra, but that referent is not possible here.

VIII.12.12: Since *sáni-* is only a nom. actionis, not an agent, it must mean ‘winnings, gain’. What it must mean here is that Indra is what we win if we keep our part of the sacrificial bargain (*mitrá-*).

The subject of c must again be the *dhītí-*. So also Ge. But the point of the simile “like an axe” (*vāśīva*) is somewhat unclear, though Ge’s explanation seems reasonable: just as the thought is measured out metrically (*mīmīta íd*), so is an axe wielded in a regular rhythm (he compares VIII.19.23).

VIII.12.13–15: Lüders (*Varuṇa* 450) comments about the *ṛca* that it concerns only the songs sung to Indra; therefore in the refrain *ṛtá-* can only refer to “die Wahrheit des Liedes,” and the refrain *ṛtasya yád* is paraphrase for “das Lied.” I agree that the refrain refers to the verbal product offered to Indra, but prefer to supply *ukthá-* ‘(solemn) speech’, extracted from *ukthá-vāhas-* in 13a for 13c and 14c.

VIII.12.13: Ge interprets the verb *abhipramandúḥ* somewhat bizarrely as ‘go on a pilgrimage to’ (“Zu dem ... die ... Āyu’s ... pilgerten”), presumably influenced by *ukthāvāhasaḥ* ‘whose conveyance is solemn speech’. Kü (357) takes the same verb as intransitive, with the *yám* expressing the source of pleasure (“An dem die Erregten ... sich (schon immer) erfreuen”). I see no reason why it is not a straight transitive “bring to exhilaration” like other forms of the act. pf. of *√mad*.

The question is what is the relationship between ab and c. Properly speaking, the *yám* should have a referent in the main clause (which is c: note the unaccented verb *pipye*), but there is no obvious candidate. Ge simply treats ab as an unresolved relative clause, without comment. I assume that Indra, the presumed referent of *yám* in pāda a, is covertly present in c: it is his mouth in which the speech/hymn swells – the speech having been homologized to soma already by the *√mad* form in b. See also 4ab where praise is compared to purified ghee, which may mediate the simile in our c, *ghṛtām iva*. Ge, however, seems to take the mouth as belonging to the Āyus (“... ihrem Mund”); this would make sense as the source of the speech offered to Indra. Perhaps the lack of an overt genitive limiting ‘mouth’ allows both interpretations some currency. I might therefore emend the publ. tr. to “it swells in his/their mouth.”

VIII.12.19: Ge tr. the infinitival *gṛñṣáni* as a modal “soll ... loben.” Similarly Keydana, who takes it as a “matrix infinitive” with 2nd ps. subject but tr. modally (“... sollt ihr euch zu Hilfe besingen,” 174, 246). Because it is locative in form, I am somewhat dubious about assigning it this value, which is typical, and understandable, for dative infinitivals.

I have reordered the elements in c to make the sentence parsable. That the refrain *vy ānaśuḥ* should be construed with what precedes is shown by the parallel VIII.45.27 *vy ānaṭ turvāṇe śámi* “he came through to victory by his labor.”

VIII.12.24: Note the slight variation on the refrain: abl. *ójasaḥ*, parallel to abl. *ámāt* in b, versus 22–23 dat. *ójase*.

Ge supplies “the world” (extracted from the dual of a) as subject of *títviṣe* in c. I follow Old in taking Indra as subject, with the *asya* reflexive. As Old points out, in nearby VIII.6.5 it is Indra’s *ójas-* that is subject of the same verb; here the attribute has

been deflected to an oblique case and the god himself is subject. Note also X.55.1, where Indra is modified by the participle *títviṣānāḥ*.

VIII.12.25: The opening verse of this *ṛca* echoes that of the last *ṛca* (22), with 22ab *īndram ..., devāso dadhīre purāḥ* matched by 25b *devās tvā dadhīre purāḥ*.

VIII.12.25–28: The phonetic figure noted in VIII.6.36 dominates the next four verses: *haryatā hārī*.

VIII.12.27: That *te* in a is a dative of benefit, not a genitive with *ójasā* is shown by VIII.52.3 *yásmai víṣṇus trīṇi padā vicakramé*.

VIII.12.28–30: The linkage of *ṛcas* is unusually close here, with the *pāda*-length refrain of vss. 25–27 recast as the first hemistich of vs. 28 and *ā́d ít te*, which opened the refrain of 25–27, retained as the opening of the refrain of 28–30.

For the only time in the hymn the Anhang is only three syllables, *yemīre*, but this deviation is probably a word play. Old rejects Ge's older suggestion that we should read *ní yemīre* as the refrain on the basis of *niyemiré* in 28b, but although Old is probably correct that we should not change the text by accenting *ní*, I think he was too hasty in dismissing the idea out of hand. The refrain *ā́d ít te víśvā bhúvanāni yemīre* temptingly juxtaposes the final syllable of the neut. pl. *bhúvanāni* and the verb *yemīre*, and of course *bhúvanā* without its *-ni* would be a fine neut. plural as well. The audience is surely being invited to consider alternative segmentations.

VIII.12.29: The doubling of *te ... túbhyam* is presumably pleonastic in ab, with the *yadā́ te* simply repeated from 27a, 28a.

VIII.12.31–33: This *ṛca* is unified by the 4-syllable *pāda* *prādhvaré*. This *pāda* appears also in VIII.46.18 and IX.102.8, always as the final *pāda* of Uṣṇih (or the equivalent: in 46.18 Upariṣṭādbṛhatī). I interpr. it in the context of the fairly frequent fuller expression *prayaty ādhvaré*, a loc. absol. meaning “while the ceremony is proceeding,” which is esp. common in VIII: I.16.3 = VIII.3.5, V.28.6 = VIII.71.12, VIII.7.6, VIII.13.30, X.21.6; cf. also VI.10.1). I take *prādhvaré* as a truncated version of this loc. absol. and tr. it “while the ceremony is pro(ceeding).”

VIII.12.31: *Pāda* c presents some difficulties of interpretation, in particular how to distribute the three accusatives *jāmím*, *padā́*, and *pípratīm*. The last, a participle, takes *padám* as object in IX.10.7 (adduced by both Old and Ge): *padám ékasya píprataḥ* “guiding the track of the lone one safely across.” But it also takes personal objects, as in nearby VIII.6.2 *prajām ṛtásya píprataḥ* “guiding the child of truth [=poem] safely across.” I therefore take it as a semantically mixed construction, with *jāmím* ‘kin’ (which in this case, as in VIII.6.2, would be a poem or hymn) in the frame and ‘footsteps’ in the simile. By contrast, Ge takes *jāmím* as the subject of the simile, parallel to *susṭutím*: “die wie eine Schwester deine Schritte geleitet.” His interpretation reads better, but ignores the position of *iva* and also the contrasting constructions of the participle *píprat-* elsewhere.

By my interpretation the point is that the *susṭutí-* produced in ab takes the rest of the verbal portion of the sacrifice along with it to the god.

I take the refrain *prādhvaré* as a (quasi) locative absolute, as in VIII.46.18, rather than as integrated into what precedes.

VIII.12.32: Contrary to Ge, I take pāda c as part of the subordinate clause of ab, with vs. 33 the main clause. Ge. is forced to supply a verb (“geht”).

dohánā is the problem here. Gr suggests we read it as underlying *dohánās* as in I.144.2, despite the sandhi. This seems to be the basis of Ge’s interpretation (“die Melkung” as subject), but Old rejects this and takes it as an instrumental. I weakly follow Old, but neither of the interpretations is particularly compelling.

VIII.13 Indra

Although the intro. to the publ. tr. is somewhat dismissive of this hymn and dubious about any unifying factors, closer examination shows a subsurface thematic unity esp. in the mid and later parts of the hymn, roughly vss. 16-30. For discussion see below.

VIII.13.1: For b see VIII.12.11.

VIII.13.2: The word *apsujít* never occurs without an immediately preceding *sám*, whose function is not clear. See VIII.36.1–6, IX.106.3. Dissatisfaction with this expression goes back to Ludwig, and Scar (154–55) suggests that the phrase is a metrically more favorable version of **apsú sámjít* “completely victorious in the waters.” This has some merit, but it’s also worth noting in this metrical context that there seems to be a feeling that a preverb is a good way to start the final four syllables of an Uṣṇih, and when in doubt *sám* is a safe one. See in the previous hymn VIII.12.16-18 *sám índubhiḥ* (though the *sám* is functional there), 22-24 *sám ójase, -aḥ*. In its other two occurrences (VIII.36.1–6, IX.106.3), *sám apsujít* is a separable 4-syllable pāda (as long as one accepts Old’s analysis of the meter of VIII.36; see comm. there).

VIII.13.3: “I call” in the publ. tr. is a careless error for “I have called,” tr. augmented *ahve* and should be changed.

VIII.13.6: In c the subject of sg. *rohate* ‘grows’ is apparently unexpressed. Ge supplies Indra, while supplying the songs as subject of the pl. *juṣánta*, which he seems to take as transitive ‘please’: “dann wächst er [n. Indra] wie Zweige nach, wenn sie [n. Lobreden] wohlgefallen,” though I have trouble interpreting his tr. But forms of *juṣáte* almost always mean ‘take pleasure’, not ‘give pleasure’ (see 29b for *juṣánta* in just this sense). To tackle the latter problem first, I take the subject of *juṣánta* to be the closest plural noun, namely ‘branches’. Although the notion of branches enjoying themselves seems odd, I suggest it may refer to their growth under favorable conditions, with good soil and the proper amounts of water and light. (Modern gardening manuals often say that a plant “likes” this or that condition.) As for the subject of *rohate*, I take it as an imperfect pun: the form *vayā(h)* is, on the one hand, the nom. pl. of *vayā-* ‘branch’; however, a **váya(h)*, which would differ from the text only by accent and the length of the final vowel, could be the nom. sg. of the neut. -s-stem meaning ‘vitality’, and so I take it. Alternatively one

could follow Bloomfield's suggestion (made at the parallel passage II.5.4) that *vayā(h)* is the masc. nom. sg. of an internally derived **vayās-* 'possessing vitality, vital one' (=Indra). In fact I now prefer this solution and would change the publ. tr. accordingly, to "the vital one grows" (though in this case we might expect a 2nd sg. verb). (In II.5.4 this is unnecessary because Agni is easily and properly supplied as subject, and the tree branches work fine in the simile.)

VIII.13.11: On the voc. *mahe-mate* (4x), see AiG II.1.45, III.157; Wack. favors an underlying stem **mahā-mati-* with the usual combining from of *mah-*, against Gr's *mahi-mati-*. (Only the voc. is attested.) The voc. *mahe* would then be a rough-and-ready analogy to the voc. of fem. *-ā-*stems. That *mati-* is fem. would help trigger the analogy.

VIII.13.14: Although Ge interprets the stretching of the thread as a metaphorical expression for the continuation of old relationships, it seems far more likely that it reflects the normal idiom "stretch the thread" for setting up and performing the sacrifice. See vs. 18b *devāso yajñām atnata*. "The way that is known" means the standard procedure. That Indra is being urged to do this, rather than the sacrificers, might be a little odd, but see, in fact, 18b just cited, as well as 30c *mīmīte yajñām*.

VIII.13.15: The next section of the hymn is introduced by the end of this verse (*a*)*vitéd asi* "Just you are (our) helper," a phrase repeated in 26a *indra tvám avitéd asi*, signalling the subsurface thematics of the apparently disordered midsection of this hymn.

VIII.13.16–18: This *ṛca* begins and ends in the same way: 16a *indram vardhantu no gírah* and 18c *tām íd vardhantu no gírah ...* In between are several clauses with augmented verb forms (aor. *arāṇiṣuḥ* 16c, impf. *avardhayan* 17c, aor. *atnata* 18b). It is not immediately clear if these form a mythological or historical sequence or are unconnected observations about the mythological and/or historical past. The most specific statement is found in 18ab, with the gods stretching the sacrifice *trikadrakeṣu*. This same verse is found in VIII.92.12, which, however, provides no contextual help. But, as Ge points out, in I.32.3 Indra drinks soma *trikadrakeṣu* before the Vṛtra battle, and II.11.17 and II.22.1 suggest the same scenario. If 18ab is somehow concerned with a soma sacrifice connected to the Vṛtra battle, then 17 may belong to the same complex, with the "inspired poets" of 17ab perhaps being the Maruts, who in some version of the myth encouraged Indra before the Vṛtra battle, and, again perhaps, their battle cries also strengthening Indra in 17c. Note that JPB tentatively identifies the Trikadrakas in I.32.3 and II.11.7, 22.1 as the Maruts. The clause in 16c may also belong with these mythological references, if the clans (*vísah*) are the same as or equatable with the *marútvatīr vísah* in 28c.

VIII.13.17: I am puzzled as to what "downward coursing help(s)" (*pravátvatībhir ūtībhiḥ*) might be. As Ge points out, vs. 25 shows that the instr. phrase should be construed with *avardhayan* and so it must be help that the poets are giving Indra rather than getting from him (though they themselves are also *avasyávaḥ* 'seeking aid'). The stem *pravátvant-* is generally used of landscape/cosmic features that have a gentle, and by implication pleasant and easily traversed, slope; see esp. V.54.9, where heaven and earth, the paths, and the mountains all provide a *pravát-* for the Maruts' journey. The help provided to

Indra by the poets may be of the same quality, smoothing and easing his journey to the sacrifice and his participation in it. In our 8b we met waters at play going along a slope (*pravātā*). Again ‘downhill, sloping down’ implies the path of least resistance and the opposite of effortful activity. If the identification of the poets with the Maruts suggested above is correct, it might be worth noting that four of the seven forms of *pravātvant-* are found in a single verse in a Marut hymn (the aforementioned V.54.9).

We meet *vayā iva* again, repeating the simile of 6c. As in 6 I think that the tree branches are compared with Indra (and hence are acc. here), rather than being compared to the battle cries. They make Indra grow as tree-branches grow.

VIII.13.18: See the discussion of the *ṛca* as a whole above.

VIII.13.19: It is noteworthy that the properly performing praiser acquires epithets esp. characteristic of Agni and Soma (*śúci-*, *pāvakā-*), the quintessential ritual gods. Pāda c is an interesting twist on IX.24.6–7; see comm. there.

VIII.13.20: This verse is quite opaque and its grammar can be construed in a number of different ways, giving the lie to Ge’s breezy “Die Konstruktion ist klar.” See Old’s rather more despairing assessment (“Es ergeben sich mannigfache Möglichkeiten, zwischen denen sichere Entscheidung ausgeschlossen...”).

The first problem is the value of the verb *cetati* and, when that has been determined, the identity of its subject. Ge takes the verb as intransitive/reflexive “... zeichnet sich ... aus,” but an I/T value (‘perceive’) is also possible for this active stem. I interpret it so (as does Old in one of his suggested tr.), and continue as its subject the *stotā* of vs. 19.

The next issue is the reference and distribution of *tād íd rudrásya ... yahvám*, which Ge takes as subject of *cetati* and I as object. I will not rehearse the various suggested possibilities (see Ge and Old), but simply add my own: *rudrásya* is generally used with ‘son(s)’ to refer to the Maruts, who can be called ‘young’ in that context (cf. V.42.15b *rudrásya sūnūṁ yuvanyūn...*); and a neut. noun regularly used for the Maruts is *śárdhas-* ‘troop’, as in the nearby hymn VIII.15.9c *śárdhaḥ ... mārutam*. In fact see *mārutam śárdhaḥ* in the pāda immediately preceding V.42.15b, namely 15a, where the singular (15a) and plural (15b) expressions are coreferential. So here I supply that noun with *tād ... yahvám*.

Then what are the “ancient domains”? On the basis of IX.52.2 *pratnébhir ádhvabhiḥ* “along your age-old routes,” referring to the protocols of the soma sacrifice and the ritual journey of soma, I suggest that the ancient domains here are the age-old practices of the sacrifice. It is essentially equivalent to 14c *tántum tanuṣva pūrvyām yáthā vidé* “Stretch the ancient thread in the way that is known.”

In c I take *vícetasah* to refer again to the Maruts. For the switch between singular and plural see V.42.15 just cited. The Maruts are called *vícetas-* in V.54.13.

What the whole verse means and what function it fills in the hymn are not clear to me. If my interpretation of the various parts is correct (and I have no confidence that it is), the successful human praiser of vs. 19 perceives his divine model, the Maruts, whose praise inspired Indra in the Vṛtra battle, at his sacrifice, where they have placed the thought or mental power that he should himself follow.

VIII.13.21: I struggle to make the final verse of the ṛca fit with the speculative scenario sketched for the first two verses (19–20). (As far as I can tell, neither Ge nor Old makes the attempt, an omission with which I am in sympathy.) One thing to account for is the switch from 3rd ps. in 19–20 (though note *te* in 19a) to a 1st–2nd partnership in 21. I suggest that the *stotā* in 19 (and 20, by my reading) is now the 1st ps. speaker of 21. He offers Indra companionship or partnership (*sakhyām*) modeled on that shared by Indra and the Maruts, of which he had a vision in vs. 20. The sign of Indra’s choosing his companionship will be his (=Indra’s) acceptance of the speaker’s offered soma.

On *āvārah* see comm. on I.143.6. It may be better to tr. it as ‘grant’, rather than ‘choose’. If so, I would change the sentence immediately above to “The sign of Indra’s *granting* his companionship ...”

VIII.13.22: One piece of evidence for my interpretation of the preceding ṛca as having the praiser (*stotār-*) as its thematic center is his reappearance in this verse, in this anxious question. The verse expresses the reciprocity inherent in the ritual situation, with the praiser wishing to be “most wealful” for Indra, while also receiving his own benefits from the god. This reminds us of verse 17, where the poets (quite possibly the Maruts) were both seeking help and making Indra increase through the help they gave him.

VIII.13.24: Pāda b *yahvām pratnābhir ūtībhiḥ* is a deliberate echo of 20a *yahvām pratnéṣu dhāmasu*, and the only indication that *yahvām* is neut. in 20b but masc. in 24b are the pronouns *tād* and *tām* respectively that open the a-pādas. The phrase *pratnābhir ūtībhiḥ* also recalls *pravātvaṭībhir ūtībhiḥ* in 17b. These patterns suggest there is some reality to the below-the-radar thematic unity I’ve sketched out for the three ṛcas, vss. 16–24.

VIII.13.25: This verse both parrots the preceding verse (24ab ... *puruṣtutām*, ... *ūtībhiḥ* / 25ab ... *puruṣtuta*, ... *ūtībhiḥ*) and concentrates into a single expression the reciprocal aid between god and praiser that has dominated the rhetoric of the last ṛcas. In the command *vardhasva* ... *ūtībhiḥ* “become increased ... by forms of help,” the instr. should express the means by which Indra becomes strong, and that should be the help given him by others, as in vs. 17 *tām id víprāḥ* ... *ūtībhiḥ* / ... *avardhayan*... “The inspired poets increased him with helps.” But the forms of help in 25 are *ṣistutābhiḥ* ‘praised by the seers’, which suggests that these are forms of help given by Indra to us, like those in 24b. The condensed expression in this verse sets up a closed circle, a never-ending loop, in which forms of help given and received are identical and have identical results. With that established, the poet then presses his advantage and in pāda c and in 26a puts Indra squarely in the role of helping us.

VIII.13.26: See remarks on the repetition in pāda a under vs. 15 above.

VIII.13.27: Although Ge gives up on the cmpd. *pratādvāsū*, which modifies *hārī*, Old suggests that it’s a univerbation of the frequent collocation *prá tād* “forth to that” or perhaps *prá tād vásu* “forth to that good thing,” perhaps as the actual command Indra “cries out” to the horses. Rendering it in English is somewhat clumsy. And indeed it is

not an altogether satisfying explanation. I tentatively suggest emending to **prathád-vasū* ‘spreading goods’. Although $\sqrt{\text{prath}}$ usually takes geographic features as object, cf. *rayím paprathat* II.25.2, VII.42.6, with ‘wealth’, similar to ‘goods’.

VIII.13.28: Note the chaining over ṛca boundary: 27c ... *abhí svara#* / 28a *#abhí svarantu*.

Most interpreters (Ge, Old, Klein [I.383]) take *sakṣata* as the verb of the relative clause beginning *yé táva*, but it is unaccented. Old recognizes the problem but considers it unnatural to separate *táva* from *śríyam* and accounts for the lack of accent acdg to ZDMG 60, 737–38 [=Kl.Sch. 212–13], namely occasional lack of accent when the rel. pronoun and the verb are in different pādas (not, in my opinion, a compelling explanation in any of these cases). But *yé táva* functions fine as an independent rel. clause, and supplying ‘your’ again with *śríyam* is no problem in an independent clause.

Ge supplies “come” in c, but the verb in b can do duty here as well.

The Maruts, who were only latent in vs. 20 (and probably 17), appear here with Rudra, who was present in vs. 20. The Marut clans here may pick up the clans in 16c; see above.

VIII.13.29: As Ge says, the subject here probably remains the Maruts. The question is whether “which is in heaven” is a restrictive or non-restrictive relative clause – that is, are there various possible tracks and it’s the one in heaven that they like, or is there one track and it happens to be in heaven. My inclination is to take it as restrictive, and the track or footstep in which they take pleasure is the one called elsewhere the *paramá-* (I.22.20–21, 72.2, 4, 154.5, etc.), *upamá-* (V.3.3), or *uttamá-* (V.51.4) ‘highest’, as well as *divás padá-* (IX.10.9, 83.2). There seems to be an implicit contrast to this high and distant *padá-*, which they like, and “the navel of the sacrifice” (*nābhā yajñásya*), where they find themselves. But these locations may be more complementary than contrastive, since the “highest track/footstep” often seems to indicate a place where a heavenly form of the earthly sacrifice is conducted simultaneously. See, e.g., I.22.20–21 and remarks on I.21.6.

VIII.13.30: This verse uses some of the material found in the previous hymn, also in Uṣṇih: *prāci prayaty ādhvaré* is a heavy variant of *prādhvaré* (that is, *prá adhvaré*) of VIII.12.31–33; *mímīte* is identical to the refrain *mímīta íd* (12.10–12); *ānuṣák* occurs in 12.11.

Who is *ayám*? This near demonstrative should mean that the referent is actually present. It can only be Indra. In the first two verses of the ṛca the focus is on his companions, the Maruts (“who are yours [=Indra]” 28a), and now attention turns to their leader, the subject of the hymn as a whole, and in the finale to the hymn his longed-for epiphany is signalled by this dramatic *ayám*.

That Indra himself “measures the sacrifice” is consistent with his being urged to “stretch the thread” in 14c above.

Ge’s interpretation of ab is quite different from mine, and seems to envisage the sacrifice receding in the distance as the subject keeps gazing further out towards it. This doesn’t make much sense to me, and the similarity of the expression in b to the clichéd *prá adhvaré* (see just above), which refers to the temporal progress of the ritual (and in

this case, perhaps the carrying of the Āhavanīya fire eastward), makes his interpretation unlikely.

The only other occurrence of *dīrghāya cákṣase* is in I.7.3, where Indra puts the sun in the sky for this purpose. See remarks ad loc., where I point out that the expression can be either temporal or locational or both.

VIII.13.33: *prātiṣṭuti-* occurs only here. I assume that it is a praise-hymn made in response to whatever the god has done for us, though Ge suggests it is a praise that corresponds to Indra's greatness.

VIII.14 Indra

VIII.14.5: Note the phonetic figure in ab: ... *avardhayad*# / ... *āvartaya*#

VIII.14.8: The sense of c is a little unclear; I consider it a condensed expression for “he shoved (the contents of) Vala [=cows] in our direction.” The verb *nunude* was presumably chosen to contrast with *parāñúde* in 9c.

VIII.14.10: Misplaced simile marker in pāda a.

Both verbs in this verse are nonce forms: *ajirāyate* and *arājīṣuḥ*. Note their mirror image phonology, *ajirā* / *arāji*, which may help account for the creation of both the hapax denominative and the nonce *iṣ*-aorist. The former is built to *ajirā-* ‘quick’; the latter could belong to either of the $\sqrt{rāj}$ roots, ‘rule’ or ‘shine’. Ge seems to opt for the former, at least judging from his invocation of *vī rājasi* in the preceding and following hymns (VIII.13.4=15.5) in his n., but his “haben den Ausschlag gegeben” (decided the issue) is hard to derive from ‘rule over’ and also doesn’t make much sense to me. But his n. also cites *vī rājati* in IX.61.18, where it clearly means ‘shines forth’, and also cites Sāy’s gloss *dīpyante*. Narten discusses the issue and finally decides (weakly) for ‘shine’, an interpretation I share.

VIII.14.11: The two *-vārdhana-* compounds express something of the same type of role reversal found in the last hymn, where the help given by Indra and received by Indra became conflated. Here we might expect Indra to *be strengthened* by the praises and recitations, rather than strengthening them. And in fact, contrary to grammar, both Gr and Ge so interpret the compounds (Gr ‘am Loblied sich erlabend’, Ge “Denn dir sind ... die Lobgesänge, die Lobgedichte eine Stärkung”). But *-ana-* nominals have transitive-causative force and are associated with *-āya-* verb stems, and in compounds their first member serves as object. See other *-vārdhana-* compounds such as *ṛmṇa-vārdhana-* ‘strengthening manly powers’ (II.36.5), *paśu-vārdhana-* ‘strengthening livestock’ (IX.94.1), as well as numerous other stems such as *yajña-sādhana-* ‘making the sacrifice succeed’ (2x). If we stay true to the grammar, the point is that Indra, by his presence at the sacrifice and his willingness to receive praise, strengthens the products of his praisers, and this in turn creates *bhadra-* for them, as pāda c says.

VIII.14.12: The last two words of the verse are *yajñām surāḍhasam* “sacrifice, very generous,” which appear to belong together, but the latter must in fact modify *īndram*, the

first word of the verse, as it usually does. A textbook example of why word order is not a reliable guide to RVic interpretation.

VIII.15 Indra

VIII.15.2: Note the juxtaposition of *dvibárhas-* and *brhát*; for disc. of the former see comm. ad X.63.3.

VIII.15.3: By the rules established in Jamison 1992 for *sá* with 2nd ps. reference, *sá rājasi* here is in violation. But notice that this line (*sá rājasi puruṣtutam̐, éko vṛtrāṇi jighnase*) is twinned with 11ab *satrá tvám puruṣtutam̐, éko vṛtrāṇi tośase*, which begins with *satrá*, phonologically like our *sá rā* ... Also note *vī rājasi* in 5c, which could invoke a **sám rājasi* here (which would change the meter, but not improperly). For *sám* $\sqrt{rāj}$ / *vī* $\sqrt{rāj}$, see I.188.5 *virāt samrāt* ... And note that *samrājām* is the second word of the next hymn (VIII.16.1).

VIII.15.6: In c *jayā* can be a 2nd sg. imperative with lengthened final (so Pp., Gr, Ge) or a subjunctive (*jayāḥ* out of sandhi). Although an undoubted form of the imperative is found in 12c (*java*), I weakly favor the subjunctive here, the idea being that the praisers keep praising the same deed, and so he will keep doing it.

VIII.15.7–10: Every half-verse in this *ṛca* but 7c and 10c opens with a form of the 2nd sg. pronoun.

VIII.15.9: Since *kṣāya-* otherwise means only ‘dwelling place’, the text as we have it means “Viṣṇu, the lofty dwelling place,” as in the publ. tr., not “der hohe *Wohner*” (my italics), as Ge would have it. Already BR (see Gr s.v. *kṣāya-*) suggested that we read instead a bahuvrīhi **brhát-kṣayaḥ* ‘having a lofty dwelling place’. This of course makes better immediate sense, but I think we can keep the text as we have it and also avoid making *kṣāya-* into a nonce agent noun (per Ge). Given the flexibility of RVic diction, it is not difficult to identify a god with his most characteristic product—in this case, Viṣṇu’s three footsteps, particularly his highest one, which becomes an important locus in heaven (see, e.g., I.22.19–21) — and he elsewhere is said to create dwelling places: VII.100.4 *vī cakrame pṛthivīm eṣá etām, kṣétrāya víṣṇur mānuṣe ... / urukṣítum ... cakāra* “Quick Viṣṇu strode across this earth for a dwelling place for Manu ... / He has made wide dwelling.” In the RVic conceptual realm it is just one step from creating a dwelling place to being a dwelling place. The identification of Soma with a dwelling place in vs. 13 below supports the literal reading here.

VIII.15.11: The VP *vṛtrāṇi tośase* poses a challenge to the standard older gloss of \sqrt{tus} , namely ‘drip, stream’, which I defend (comm. ad VIII.38.2) against Gotō’s reinterpr. as ‘hasten’. In fact Gr has a separate lemma (2. tuç) for this passage and a few others, as a Nebenform of *tus* ‘be satisfied / satisfy’. However, I think this passage can be easily accommodated under the old rubric, with *vṛtrāṇi* as an acc. of goal, as it were: “you stream over obstacles” reminds us of the scenes in the great Indra-Vṛtra hymn I.32, where the waters stream over the slain Vṛtra (see esp. I.32.8, 10).

On this verse forming a ring with 3ab, see intro. and comments on vs. 3.

VIII.15.12: Note that *nānā* opening b picks up *nānyá(h)* opening vs. 11.

VIII.15.13: The identity of the addressee in this verse is not overt. As Ge points out, Sāy suggests that the singer is addressing himself, though pādas ab make difficulties for that interpretation. Old argues for Soma, which seems likely even though, unusually for an Indra hymn, soma has not previously figured in this hymn. However, all three pādas have parallels in the soma maṇḍala: for pāda a see IX.109.3c *mahé kṣáyāya*; pāda b is repeated in IX.25.4a modifying soma; and IX.111.3e is identical to the first three words in pāda c, save for the grammatical identity of the verb form (3rd pl. injunctive in IX.111.3, 2nd sg. imperative here). That Soma is the addressee here and so the subject of the impv. *harṣayā* is also supported by vs. 4 in the next hymn (VIII.16), where the exhilarating drinks (of soma) are called *harṣumánt-*.

Again, as in vs. 9, Ge waters down the meaning of *kṣáyā-* to fit the context (“dweller,” not “dwelling”), but in his n. suggests that the dwelling, namely heaven, stands as a metonym for its inhabitants, the gods. I prefer not to recast and paraphrase the literal sense as Ge does, especially since, as it stands, this half-verse expresses a small but neat paradox involving container/contained: Soma both enters everything (b) and provides a vessel in which everything (or “we” anyway) can dwell (a).

In c *jaítrāya* picks up *jaítrā* in 3c.

VIII.16 Indra

VIII.16.2: The simile in c, *apām ávo ná samudré*, is hard to interpret. “The sea” corresponds to Indra in the frame and “the aid of the waters” should correspond to recitations and famous deeds, but what is the *aid* of the waters? Ge suggests in passing a possible connection with *avániḥ* ‘stream(bed)’, but this seems based only on superficial phonological similarity, and in the end he tr. “die Gunst der Gewässer” and hopes for the best. Old suggests an emendation to *apām *ápah* ‘work of the waters’, but it is hard to see how a nice alliterative phrase like that would become corrupted, and so, like Ge, I stick to the text transmitted and the common word *ávas-* that it seems to contain. Perhaps the point is that, like recitations that find their joy in contributing to Indra’s power, the waters take pleasure in submerging themselves in the sea, “aiding” the sea by making it bigger.

VIII.16.3: How to construe *maháh* in c is not clear. I tentatively take it as the gen. sg. of *máh-* and supply ‘prize’ or ‘wealth’. Lub groups it with the adverbial *maháh* ‘greatly’, which is also possible. I do not understand how Ge takes it grammatically, given his tr. “der grosse Beute macht,” which must somehow be rendering *mahó vājínam*.

VIII.16.4: *harṣumánt-* occurs only here, but note the impv. *harṣayā* that ends the last hymn (VIII.15.13).

VIII.16.6: The rare verbal stem *ārya-* ‘recognize’ is probably a derivative of the *arí-* word family (including *ārya-* ‘Ārya, that is, belonging to our group’) and means ‘recognize as an Ārya, treat as an Ārya’. See EWA s.v. *ĀR*, where some doubts are expressed, and

recently Kulikov (522–23), who tr. “Him alone the races treat as an ārya through his activities ...” The ppl. *āritā-* ‘recognized’ is found 4x, incl. VIII.33.5 below.

VIII.16.8: The content of ab is straightforward, but it is worth noting the phonological play. On the one hand the independent pronouns *sá ... sá* of pāda a are picked up in b by *sa(tyāḥ) sá(tvā)*. On the other, the morphologically parallel forms *stóm’yaḥ ... háv’yaḥ* in a are picked up by the morphologically different *satyāḥ* in b. (This would be a neater figure if the first two words didn’t show distraction in the suffix, as opposed to *satyā-*.) Then the *-tyāḥ* of *satyāḥ* morphs into the *-tvā* of *satvā*, which then distracts into *tuvī-* in the following word.

VIII.17 Indra

VIII.17.1: On the injunctive *sadaḥ* as functional imperative, see Hoffmann 1967: 263.

VIII.17.3: Old discusses who/what to supply with *yujā*, suggesting first the *bráhma-* of 2c, but then opting with Gr (tr.) and Ge, for soma. See Ge “(mit Soma) im Bunde.” Old rejects the possibility that it is Indra, which is the solution I have adopted here. I do so because you=Indra is almost the default with *yujā* throughout the RV. For exx. in VIII see nearby VIII.21.11 *tváyā ... yujā* (where the referent of the 2nd ps. is Indra) and VIII.68.9 *tvā yujā* (ditto), etc., etc., and for the full noun I.23.9 *índreṇa ... yujā*, etc. I would in fact suggest that the poet is here making the enclitic *tvā* do double duty; it is the correct accusative goal with *havāmahe*, but it also evokes the accented older short instr. *tvā* that as an independent word is limited to constructions with *yujā*.

VIII.17.6: The root noun cmpd dat. *samsúde* is ascribed to the root $\sqrt{svād}$ (see, e.g., Wh Rts, EWA s.v *SVAD*, Scar 618), favored by the adj. *svādúḥ* earlier in the vs., with which it forms a figure. However, since no other forms of that root show a true zero-grade, but only *svad* and *svād* root syllables even in zero-grade formations (ppl. *svāttā-*), I am skeptical. It is possible that the CRaC root syllable got frozen (as happens elsewhere; see my *-āya*-formations 208–11), with *-súde* the lone archaic survival of ablaut in this root. But I suggest rather that it’s derived from the synchronically semi-independent root $\sqrt{sūd}$, with secondary shortening of the root vowel (a possibility suggested also by Scar 626), possibly favored by semantic overlap with *-sū-t-* ‘press’ in soma-ritual context. See comm. ad X.64.15.

VIII.17.7: The consensus that soma is covered (*sámvrtaḥ*) with milk is surely correct; this is simply a different way of expressing the mixing of the two substances that is such a common trope in the soma maṇḍala, where it is often said that soma is clothed in cows (/milk). But the simile presents difficulties. For both Old and Ge a covered-up person (presumably male) is going to women/wives (Ge “soll ... wie ein Verhülter zu Frauen schleichen”). Neither of them makes any comment on this bizarre image. I prefer to follow Caland-Henry’s interpretation (cited and rejected by Old): “voilé comme des femmes [qui vont au rendez-vous].” There is evidence elsewhere in the RV of women going to trysts (e.g., X.40.2), and the abhisārikā, a woman going secretly to her lover, often depicted as veiled or disguised, is, of course, a standard figure in the later literary

and visual arts traditions. (Perhaps the untethered *abhí* in this pāda refers to this idiom, although it must be admitted that neither $\sqrt{sṛ}$ or $\sqrt{sṛp}$ appears with *abhí* in the RV.) There are a few grammatical difficulties to address. First, *sām̐vṛtaḥ* is masculine and singular, whereas the corresponding women are feminine and plural, but *sām̐vṛtaḥ* refers to soma in the frame, and the later rules about grammatical agreement between elements in the frame and the simile simply do not hold in the RV. More serious is the fact that the nom. pl. of *jāni-* is normally *jānayaḥ*. However, the asigmatic nom. sg. *jānī* in IV.52.1 shows that a long \bar{i} -stem *jānī-* had been extracted from the ambiguous forms acc. pl. *jānīs* and gen. pl. *jānīnām* (cf. AIG III.144).

VIII.17.8: *vapódara-* is a hapax, but its general analysis is fairly clear: it's a bahuvrīhi with *udāra-* 'belly' as second member and some word for 'fat' or 'bulging' presumably as first member. Filliozat (*Doctrine classique*, 126, without comment) takes it to be *vapā* 'omentum'. See EWA s.v. *vapā*.

VIII.17.12–13: Contains a number of PNs, whose exact identity eludes us. See Ge's nn., Mayrhofer PN s.vv.

VIII.17.13: *kundapāyya-* is a technical term in later śrauta ritual; see Old. I have given a literal tr. of the word and disclaim any knowledge of what this verse really refers to.

The verb *dadhre* is taken by Old as most likely a 1st sg.; Ge allows that possibility but tr. with a 3rd sg. I supply Indra as subject, both because he is the deity of the hymn and because he is the default consumer of soma. Kü (264) takes the verb as intransitive and presential with *mānaḥ* as subject: "darin bleibt das Denken fast." He also notes the possibility that this is a 3rd plural to $\sqrt{dhā}$, rather than belonging to \sqrt{dhr} .

VIII.17.15: The PN should be *Ṁṛdākusānu*, with a second long ā. The publ. tr. should be corrected.

In c the unaccented form *gr̥bhā* in the HvN edition is a mistake for *gr̥bhā̃*, with the Pp.

VIII.18 Ādityas

VIII.18.1: Ge (see also Gr s.v. *sāvīman-*) construes *ādityānām* with *sāvīmanī*, but this seems unlikely. *sāvīman-* is otherwise only found with its etymological partner Savitar, who does indeed appear in the last verse of this ṛca (3a). It is hard to believe that any other divinities could lay claim to this word.

VIII.18.2: The cmpd. *sugévr̥dh-* is a hapax; the locative 1st member *suge* 'on an easy road' was presumably suggested by the paths of the first half of the verse.

VIII.18.3: As pointed out by JPB, both Savitar and Bhaga are anticipated in this ṛca by the cognate forms *bhikṣeta* and *sāvīmanī* in vs. 1.

VIII.18.5: On *amhór uru-cakri-* see comm. ad II.26.4, on Wh's view that *amhóḥ* depends on the first member of the cmpd.

The adj. *anehásah* modifies the Ādityas, and the publ. tr. ‘faultless’ appears to be more appropriate than my reinterp. ‘flawless’ (see X.61.12 as well as vs. 21 below). However, since the pāda containing it concerns the Ādityas’ ability to make wide protective space for us, shelter that is elsewhere (indeed in vs. 21) called *anehás-*, the adj. may have been transferred from the flawless shelter to the producers of it.

VIII.18.6: There may be phonetic play between *dívā* in a and *advayāḥ* in b, facilitated by the *áditiḥ* that opens each pāda.

VIII.18.7: The *naḥ* of pāda a was carelessly omitted in the publ. tr., which should be changed to “will come to us with her help.”

The text of pāda a reads *utá syā no dívā matír*, with *matír*- ‘thought’. Ge takes this pāda a as a separate clause: “Und dies ist unser Gedanke bei Tag.” But the context seems to enforce Aditi as referent for *syā*: note the insistent repetition of nom. sg. *áditiḥ* in all 3 pādas of the previous vs., once also associated with *dívā*; the initial *áditiḥ* of our pāda b; the parallel opening of 8a *utá tyā*, also with a divine referent. Re uses his trademark parentheses to manipulate the syntax, yielding “this celebrated Aditi, (the object of our) poetic thought” -- “cette-célèbre Aditi, (objet de notre) pensée-poétique” -- which can’t be legitimately extracted from the text. The text as transmitted, with two fem. nominatives, should rather encourage an identification of Aditi with “thought,” a step I am reluctant to take. I suggest instead a slight alteration to the text, which could have read **dívāmatír*, i.e., *dívā* + **amátír* ‘banner’, contra the Pp. This requires only a change in the accent, which could have been redactional, arising because of *durmatīm* in 10b (cf. also *ámatim* in 11b). In this reading Aditi is implicitly compared to a banner or ensign. Although this comparison is not found of Aditi otherwise, *amátí-* is associated elsewhere with the Ādityas: Mitra and Varuṇa (V.62.5, 69.1) and Savitar (VII.38.1, 2, 45.2, 3).

Although as a noun, we would expect *sāmtāti* to be feminine, hence **sāmtātīm* in context, I prefer to take it here as a nonce neuter noun, rather than as a nonce neuter adjective modifying *máyah*, contra Ge’s “beglückende Freude.” Perhaps instead of a neuter, we might consider it an honorary indeclinable, matching its base *sām* ‘weal’, which opens 8b and all three pādas in vs. 9; our *sāmtāti ... karat* would be entirely parallel to 8b *sām ... karataḥ* and 9a *sām ... karat*.

Gr identifies a lexeme *āpa √ kṛ* for just this passage, on the basis of the sequence *... karad āpa srídhaḥ*, but *āpa srídhaḥ* is the refrain of this ṛca and must therefore be independent of what precedes it.

VIII.18.19: Ge and Re take *hīlāḥ* as a gen., construed with *ántaraḥ* interpreted as ‘between’; hence “the sacrifice comes between (us and) your anger.” But this poses several difficulties: *antarā* and sometimes *antár* mean ‘between’, but *ántara-* ordinarily means ‘nearer, dearer’; moreover, the other party to the ‘between’ reading, namely ‘us’, is not in the text. Old’s solution, which I follow, avoids both difficulties. He takes *hīlāḥ* as an ablative (also accepted by Schindler, Rt Nouns), construed with the comparative *ántaraḥ*. The idea must be that, given the choice between holding on to their anger and accepting a sacrifice, they will opt for the latter. This sentiment might be more straightforwardly expressed in English by “Sacrifice is closer to you than your anger,” rather than the publ. tr. “There is a sacrifice ...” However, I am disturbed by *ásti*: a

copular sentence like the one suggested does not need, and should not have, a surface copula. I therefore take it as an existential “there exists a sacrifice that is closer ...” As for the accent, *ásti* may be accented because it follows a pāda-initial voc. or because it is immediately followed by another verb and shows contrastive accent.

VIII.18.21: Since the shelter we beg for is physical in nature, on the basis of my reinterpret. of *anehás-* (comm. ad X.61.12) I would now substitute “flawless” for the more morally focused “faultless.”

VIII.19 Agni

VIII.19.1: I take *dadhanvire* as intrans. ‘run’ with acc. goal, contra Gr, Ge, Re (with the bizarre portmanteau “ont-installé en hâte”), and Kü (256–57). The secondary root \sqrt{dhanv} is otherwise intrans. (for VIII.33.12 and X.113.2 adduced by Re, Kü, etc., see comm. ad locc.). Moreover the supposed obj. *aratīm* should not be “made to run” because it is a fixed feature of the ritual ground, the fire/fireplace, which is often the object of $\sqrt{dhā}$ ‘establish, place, install’ (hence Re’s tr.). After installation, it doesn’t move, but as the focal point of the ritual ground, it is approached by the gods – hence my interpr. here.

VIII.19.2: On *yantúram* see comm. ad III.27.11.

VIII.19.3: On metrically bad *vavṛmahe*, see comm. ad Kü (459) and comm. ad VI.4.7.

VIII.19.4: In the second hemistich of the publ. tr. “in heaven” (*diví*) has been carelessly repeated; the second one should be deleted.

VIII.19.7: The verse contains a double 2nd ps. address: implicitly with oblique 2nd ps. plural prn. *vah* in pāda a, explicitly with the (singular) voc. phrases in b and the 2nd singular prn. *tvám* in c. The latter invoke Agni, of course, but the former are most likely, in my opinion, the assembled peoples bringing together their clan fires. (See publ. intro.) Ge suggests rather the “Opferveranstalter” (arrangers of the ritual), which would ordinarily be the default reading of *vah* in this type of context, but given the political agenda of the hymn, I think it covers a greater number of mortals than simply the ritual officiants. In the publ. tr. I take the vocc. of pāda b with c, which allows the vocatives to be the correct grammatical number and addressed to the correct personage. Strictly speaking, however, this logical division is not syntactically possible, as the vocc. are unaccented and must therefore belong with the preceding clause, ending *syāma*. Nonetheless, the slight violation in the tr. seems justified by sense.

VIII.19.8: The standard tr./interpr. assign *védyaḥ* to \sqrt{vid} ‘know’: Ge ‘denkwürdig’, Re ‘reconnaissable’ (also Gr). But a connection to \sqrt{vid} ‘acquire’ makes more sense to me.

VIII.19.9: Assuming (see EWA s.v.) that *addhā* is cognate with Old Aves. / OP *azdā*, as ppl. to PIIR $\sqrt{*adh}$, Skt. \sqrt{ah} ‘speak’, I take this adv. to mean originally ‘in the announced / stipulated / well-known way’, which can then be bleached to ‘truly’ vel sim. But this passage allows the more literal meaning.

VIII.19.10: I supply *astu* (“let him be”) with the two forms of *sánitā* in cd on the basis of 9c *sá ... astu sánitā*. However, either a straight equational reading (“he is a winner ...”) or a periphrastic future (“he will win ...”) is also possible.

VIII.19.11–12: The VP *cáno dadhīta* “should take delight” takes complements in two different cases (both found independently elsewhere), acc. *stómam* (11b), *havyā* (11c) and loc. *rātīṣu* (12b), all connected by *vā* (11c, 12a). Another ex. of the poets’ enjoyment of syntactically licensed case disharmony.

Note the alliterative *v*’s of 11c *havyā vā véviṣad víṣah* (immediately preceded by 11b ... *viśvāvāryah* and immediately followed by 12a *víprasya vā ...*) and of 12d *váso vívidúṣo vácaḥ*.

VIII.19.12: Both Ge and Re take the hapax *avódevam*, modifying *vācaḥ*, as meaning ‘below / inferior to (that of) the gods’. This makes a nice contrast to *upárimartyam* ‘above (that of) mortals’. However, it otherwise seems an odd sentiment: it is surely a given that anything we mortals produce will be inferior to whatever comes from the gods, but this is a given that we don’t necessarily want to emphasize. In this ritual context the point of our speech is that it should be good enough (better than that of other mortals) to bring the gods to us. Hence something like Gr’s “die Götter herunterholend, sie herabblockend” seems preferable (see also Kü 492). The compound itself is a version of, or manipulation of, the reasonably common expression *avó divā / divāḥ* (I.163.6, V.40.6, VIII.40.8, IX.74.6).

VIII.19.14: My semantic reasons for rendering *áditim* as ‘boundlessness’ here, rather than as the PN of the goddess (contra Ge/Re), are given in the publ. intro. I would add here that *√dāś* almost never otherwise takes an acc. of the recipient of the pious service (except V.41.16 and possibly VI.48.2), but does occasionally take an acc. of the offering (e.g., I.71.6, 93.3). It’s also the case that *áditim* makes an irregular cadence: it should have an initial heavy syllable, though I don’t know what to make of that or how to repair it. There is also some phonetic play between pāda-final *áditim* and the final of 13a (*havyā*)*ádātibhiḥ*.

Ge, flg. Sāy, takes *viśvā* (< *viśvéd*, i.e., *viśvā+íd*) with *jānān* and explains its neut. pl. form as attraction to *udnāḥ*, “das trotz der maskulinen Form doch Neutr. ist” -- a convoluted and quite dubious explanation. It seems best to take the neut. pl. form seriously (with Re; see also Old) and supply another (underlyingly masc. pl.) ‘all’ with *jānān*, by perservation, as it were. (Old and Re do not go that far.)

As for Ge’s supposed *udnāḥ*, the Saṃhitā text of d reads *dyumnaír udná iva tāriṣat*, and the Pp. analyses the 2nd word as *udnāḥ*. But, as the HvN restoration *udná ‘va* shows, the pāda has one too many syllables. Moreover, the second syllable of *udná* would be better heavy. I follow Gr in assuming an instr. *udnā* here, despite Old’s curt dismissal. The underlying text may have been either *udnéva* or *udnā ‘va*. I find entirely baffling the Old/Ge preferred underlying form *udnāḥ* (presumably because they wish to follow the Pp.) and their analysis of it as acc. pl. masc. because the expected neut. pl. cannot be produced (“für den kaum herstellbaren neutralen,” so Old). Why would **udā(ni)* be blocked when *āhā(ni)* ‘days’, to an entirely parallel stem, is produced frequently and

easily? Re prefers taking putative *udnáḥ* as a gen. sg., which has the merit of not arbitrarily changing the stem's gender, but requires supplying an acc. (*kṣódaḥ*) for it to modify. Old's objection to the instr. sg. is that it isn't parallel to the accusatives over which the mortal is crossing. But instr. *udnā* is the idiomatic expression for traversing water (cf. V.45.10 *udnā ná nāvam anayanta*), and we have already had another instance of case disharmony in parallel expressions (see comm. on vss. 11–12).

VIII.19.15: Note the near mirror-image *dyumnám* (a) and *manyúm* (c).

VIII.19.16: Ge and Re take *cáṣṭe* here as 'appears', but this sense is otherwise not found for this stem, and I see no reason why the gods are not seeing by means of the illumination (*dyumná-*) that Agni provides. (Ge allows for the possibility of 'sieht' in n. 16a.) On the singular number of the verb, see the similar passage X.92.6 and comm. thereon.

It is the same illumination that we wish to acquire, in order to become the best path-finders (*gātuvítama-*), presumably since it's impossible to find one's way in the dark. My interpr. of *vidhemahi* reflects this desire for acquisition and differs from the standard rendering 'honor, do reverence to' (so Ge/Re). My interpr. depends first on the analysis of *√vidh* as historically derived from *ví√dhā* 'divide, ritually distribute' (see EWA II.555–56) and further on the observation that our form is the only real medial form to this secondary root (*vidhanta* in III.3.1 is an *-anta* replacement). While act. *vidhéma*, etc., means "may we distribute ritual shares (→ do honor to)," the contrastive middle can mean "may we receive ritual shares" -- much like the functional distribution of *bhájati / bhájate*. It might be argued that we should not take the middle form seriously because *vidhemahi* has been artificially created to produce an iambic cadence out of a Triṣṭubh cadence, given that act. *vidhema* is most commonly final in Triṣṭubh pādas. But in I.36.2 and I.114.2 the enclitic *te* serves this purpose: ... *vidhema te* #, a solution that would have been available here.

There is some phonetic play between the pāda-final (*gātu-*)*vítamā(h)* and *vidhemahi*.

VIII.19.17: The first hemistich resembles VIII.43.30 *té ghéd agne svādhyò, 'hā vísṣvā nṛcákṣasaḥ*, but in my opinion has a very different meaning. Given vs. 16, in which Agni's brilliance produces the light by which gods and men see, I take *nṛcákṣas-* here as 'providing sight for men', as opposed to its usual senses 'having (one's) eyes on men' or 'having a manly gaze'.

VIII.19.18: Ge takes *diví* as 'at day(break)', but this loc. is almost always used of heaven (so also Re), save for a few expressions like *pūrvyám diví* "early in the day" (II.22.4, VIII.22.6) and *diví pārye* "on the decisive day" (VI.17.14, etc.) and the cmpd. *diviyāj-* (IX.97.26) 'sacrificing in the day'. To make this locative work, I see the hemistich as containing two slightly different constructions, both involving *cakrīre*. I supply that verb from b to govern the accusatives in pāda a, where it has the straightforward sense "made X." But in pāda b, governing the acc. + loc., it means rather "make X (to be) in Y," i.e., "put X in Y." It is possible that the second acc. in a, *āhutim*, also participates in that construction ("make the poured oblation [to be] in heaven"), but it is unlikely that *védim*

does: the altar is surely earthbound. And since Agni is said to be ‘bepoured’ (*āhutaḥ*) in the next vs. (19a, also 22d, 23a, 25c), the poured oblation may well stay on earth too.

VIII.19.19: Both Ge and Re take this verse as expressing a wish (Ge “Glück bringend (sei) uns Agni ...”). This is possible, but there is no overt modal, and a straight equational reading is perfectly fine.

VIII.19.20: Ge takes *sthirā* simply as ‘Kräfte’, but (with Re) on the basis of the bahuv. *sthirā-dhanvan-* ‘having sturdy bows’ and phrasal instantiations thereof (e.g., in the next hymn, VIII.20.12 *sthirā dhānvāni*), I supply ‘bows’.

VIII.19.23: Ge takes pāda a as the dependent clause and b as the main clause, but this causes a difficulty: why is *bhārate* accented? I follow Re in taking ab as the dependent clause and c as the main clause. This accounts for the verbal accent. It also solves another problem: *yādī* is hard to render as ‘if’, but if analyzed as *yād ī* (for this phenomenon see Jamison 2002 [Fs. Cardona]), the *ī* can, as often, double the object, in this case *vāśīm*. But if *vāśīm* is not part of the dependent clause, *ī* has no obvious function.

The question then arises, what is pāda c doing? It consists of a nom. (*āsuraḥ*), a simile marker (*iva*), and an acc. (*nirñījam*). What binds them together? With Re, I supply **bharate* as the verb, from *bhārate* in b. The verb is used in two different senses: in b it describes the up-and-down motion of Agni raising and lowering (“bearing”) his axe, i.e., his flames, when ghee is poured on the fire, but in c ‘bears’ means ‘wears’, of a garment. This is a standard idiom; cf. I.25.13 *bībhrad drāpiṃ hiraṇyāyaṃ varuṇo vasta nirñījam* “Bearing [=wearing] a golden mantle, Varuṇa dons his cloak.” This is yet another example of the fondness the poet of this hymn has for parallel but disharmonious constructions.

Rather than trying to identify a particular divinity as the *āsura-* in this simile (Re: Varuṇa; Ge: “die Asura”), I concur with Hale (Asuras, 68–69) that this probably refers simply to a rich human lord who would be distinguished by his fine clothing. In the frame the *nirñīj-* would be the ghee with which Agni is bepoured. Cf. V.62.4 *ghṛtāsya nirñīg*; sim. VII.64.1, IX.82.2.

VIII.19.27: Ge and Re take this brief verse as a self-contained sentence, but this requires that masc. *sūbhṛtaḥ* modify neut. *havīḥ*. Though the masc. can be explained as attraction to *putrāḥ* in the simile, the sentence still doesn’t yield compelling sense. In this vs., a brief pendant to the preceding pragātha, I prefer to take pāda a as completing, contrastively, the thought of 26cd. In the fantasy role reversal depicted in vss. 25–26, where “I” am the god and “my praiser” is Agni, my praiser would not be ill-established (*dūrhitaḥ* 26c), but well-kept (*sūbhṛtaḥ*) in my house (27a). The two adjectives are complementary, and I therefore take the subject of 27a to be the praiser (not the oblation nor, as Ge also suggests [n. 27ab], Agni). (This is more or less Old’s view.) Pāda b is then an independent ritual instruction.

VIII.19.29: The three *tāva*’s morph from subjective to objective genitives: the will (*krātvā*) is definitely exercised by Agni, hence subjective genitive, while the lauds (*prāsastibhiḥ*) are those praising Agni, hence objective. The gifts (*rātibhiḥ*) can be either

those given by or given to Agni. This sequence is framed by two exx. of *táva (...)* *ūtíbhīḥ* “with your help(s)” (28a, 30a), with subjective genitive.

VIII.19.30: On *āvārah* see comm. on I.143.6. It may be better to tr. it as ‘grant’, rather than ‘choose’ -- hence “(the man) to whom you grant companionship.” The general sense is essentially unaffected either way: a man who is Agni’s companion thrives.

VIII.19.31: The voc. *śiṣṇo* is a hapax. Flg. Gr (hesitatingly endorsed by EWA, s.v.), I take it as a nonce *u*-adj. to a reduplicated form of $\sqrt{\text{san}}$ ‘gain, win’. Although an analysis as a desiderative *u*-adjective is morphologically impossible (there being no trace of a desid. suffix), I still wonder if that is the semantic nuance here -- as if it were an anit variant of *śiṣāsū-*. Ge tentatively follows Ludwig’s connection with $\sqrt{\text{sāl}}$ ‘bind’ (“du Fänger”); Re tr. it as a PN and considers it an imitation of *viṣṇo*. It might also be a deformation of **śiśo*, the expected but unattested voc. to *śiśu-* ‘child’, a frequent epithet of Agni. The context does not strongly favor (or disfavor) any of these hypotheses, and none of them is particularly strong.

ā dade is variously interpreted; even its root affiliation is disputed: to $\sqrt{\text{dā}}$ ‘give’ (which with *ā* in the middle means ‘take’) or $\sqrt{\text{dā}}$ ‘bind’. I take it to the former and assume an idiomatic meaning ‘take’ of a fire just “catching hold,” starting to burn -- an idiom also present in English (at least my English). If it also has its standard meaning ‘take [goods, etc.]’, the kindled and spreading fire could be “taking” everything in its path, and the ‘desire to gain’ sense I imputed to *śiṣṇo* might be weakly supported.

Gr, Ge, and Re take *kṣapāḥ* as gen. sg. dependent on *vāstuṣu* (Ge: “beim Hellwerden der Nacht”), though Re raises, and rejects, the possibility that it is acc. pl. -- the analysis I favor. The acc. pl. of *kṣap-* is found elsewhere in extent-of-time usage. Case disharmony (here between acc. and loc. pl.) is esp. common in temporal expressions, and, as we’ve seen, there are a number of other disharmonious phrases in this hymn.

VIII.19.34–35: These two vss. are so interrupted by heavy voc. phrases addressed to the Ādityas that it is difficult to follow the thread. The poet identifies a mortal who is especially favored by the Ādityas (34b) and who therefore holds power among men (35b) and then expresses the hope that “we” might be “they” (*vayám té ... syāma*, 35cd), that is, the fortunate man just identified. The switch in numbers is somewhat disconcerting, but can presumably be ascribed to attraction to the 1st pl. pronoun: “might we be he/that one” doesn’t work well in either Sanskrit or English.

VIII.19.35: The triple voc. phrase *vāruṇa mītrāryaman* is accented despite being internal in a pāda that begins with tonic elements. There is no obvious reason for this: although the vocc. follow the caesura and immediately follow an enclitic (*vayám té vo, vāruṇa mītrāryaman*), neither of these factors ordinarily triggers voc. accentuation. See, e.g., I.122.7 *stuṣe sã vām, varuṇa mitra rātīḥ*, where both conditions are found. For discussion of a similar case, see comm. ad VII.59.1.

VIII.19.37: *túgvān-* is a hapax. Ge and EWA (hesitatingly) take it as ‘ford’, following one suggestion of Gr’s; Old and Hoffmann (Injunk. 234–35) as ‘Stromschnelle,’ following

another. Of the two, ‘ford’ would make better sense in context: all this giving would be better at a place where the animals aren’t likely to be swept away by a rapidly flowing river. On the other hand, the likely root etymon, \sqrt{tuj} ‘thrust’, is not really conducive to ‘ford’. Re’s ‘source’, which I follow, solves both problems: a river at its source is generally a fairly placid affair, and \sqrt{tuj} is used esp. of the thrusting forth of progeny, a situation to which the arising of a river could be assimilated.

VIII.20 Maruts

VIII.20.2: *sudītībhiḥ* could also modify the chariots (so Ge), but Re suggests that it is a separate nominal when in the instr. pl., rendering it as “avec (vos) beaux éclats,” and I am inclined to agree on the basis of VI.48.3d *sudītībhiḥ sū dīdīhi*.

VIII.20.3–4: Pādas 3a, 3c, and 4a all begin with *vī*, with the last example doubled *vī (d)vī*. This sequence is anticipated by 2a *vī*.

VIII.20.4: The vs. describes the effects of the monsoon. The first hemistich contains three injunctives (*pāpatan*, *tīṣṭhat*, and *yujanta*) and the last pāda a present (*ējatha*), but pāda c contains the apparently augmented *airata*. Given this collection of verbs, it is difficult to produce a consistent temporal interpretation. The injunctives can harmonize either with the preterital *airata* or with the presential *ējatha*, but those two are incompatible. A way out of this dilemma was shown by Hoffmann (Injunc, 210), who suggests that the “cacophonous hiatus” *dhānvāni *īrata* was avoided by substituting the augmented form for the injunctive. (It would be good to have other exx. of such a hiatus-avoiding technique, however.) The whole verse can then be interpr. as presential or “general.” This temporal value continues in vs. 5, also describing the effects of the storm, with two present-tense verbs.

The second clause in pāda a, *tīṣṭhad duchúnā*, has been interpreted in two opposing senses. Ge supplies the *vī* of the first VP and tr. “das Unheil breitet sich aus.” But without the *vī* the verb would mean ‘stand (still)’ or ‘stop’ (so Re “stoppe le misère”). I favor this latter interpretation. Since the monsoon brings desired rain, which makes the plants grow and produces food and attendant well-being, it stops misery in its tracks, as it were. This stoppage contrasts with the movement of the features of the natural world in pādas a and c.

VIII.20.5: There are several ways to treat pāda a. The simplest (and to my mind the least satisfactory) is simply to take *ācyutā* as another subject of 3rd pl. *nānadati* (so, e.g., Schaeffer, Inten.). With Ge and Re, an intrans. ‘shake’ (vel sim.) can be supplied, on the basis of passages like VI.31.2b *ācyutā cic cyāvayanta rājāṃsi*, whose d-pāda ends *ājman ā te*, very like this pāda. I favor a different solution: simply continuing *yād ējatha* “when you stir” from the preceding pāda (4d). Although the two verses do not belong to the same pragātha, the continuity of theme is clear.

VIII.20.6: Although *jīhīta* appears, unusually, to lack a preverb, the comp. *úttarā* ‘higher’ substitutes for *úd* here. For general disc. of $\sqrt{hā}$, see comm. X.49.5.

The fem. form *úttarā* modifies (at a distance) *dyaúh*, which is otherwise overwhelmingly masc. For this occasional gender switch, see comm. ad I.57.5 and VIII.40.4.

Given that the Maruts are displaying their *tvákṣāmsi* on their own bodies (*tanūṣvā*), I wonder if there is a little pun on *tvác-* ‘skin’.

VIII.20.7: I read *ānu* both with what precedes (*svadhām*) and what follows (*śrīyam*) and do not, contra Ge, take the latter as obj. of *vāhante*. Med. forms of *vāha-* are several times used reflexively of the Maruts’ progress (V.58.1, V.60.7, V.61.11, X.77.6) without obj.

My tr. of *vṛṣa-psu-* and *āhruta-psu-* (as well as *vṛṣa-psu-* in 10a) are owing to Thieme. See reff. at comm. ad I.49.3.

VIII.20.8: The charming phrase “the music is anointed with cows” refers of course to the standard economic transaction: hymns of praise rewarded with bestowal of livestock.

Against most tr., I take pāda a as an independent nominal clause and construe b with c. The locc. in b refer to the chariot and its box, onto which the Maruts are mounting. The same phrase two hymns later, VIII.22.9 *ā hí ruhátam ..., ráthe kóse hiraṇyáye*, with a verb of mounting, seems to clinch this interpr., though Ge (n. 8b) explicitly claims that the two nearby phrases, in hymns by the same poet, are used differently.

I think *gó-bandhu-* ‘having a cow/cows as kin’ is a pun, an interpr. not registered in the publ. tr. On the one hand it refers to the Maruts’ mother Pṛśni; on the other, on the basis of *vāja-bandhu-* ‘having prizes as kin’ (VIII.68.19) and the word play in the adjacent hymn, VIII.21.4 (see comm. there), it is also a clever way to say that the Maruts have cows at their disposal to give to us. These are the same cows with which the music is anointed in pāda a.

I do not see any way around supplying a verb of motion or mounting in bcd: the Maruts mount their chariot or come in order for us to enjoy the nourishment they bring (cf. 2c *iṣā nah ... ā gatā* “come here to us with nourishment”) and to gain other desirable things, in two parallel infinitive phrases (*iṣé bhujé ... na spárase*).

The root noun *iṣ-* is tr. two different ways in 2c (‘refreshment’) and 8c (‘nourishment’). These should have been harmonized.

VIII.20.9–10: The ‘bull’ stem (*vṛṣa(n)-*) is dominant in these verses (9b, 9c, 10a [twice], 10b), with this sequence phonologically inaugurated in 9a with *vṛṣad(-añji-)* ‘raining unguents’, a synchronically distinct word – if this is the correct analysis. It is followed by Gr, Ge (tentatively), Gotō, and me, but see Old and Re for contrary views. In any case the cmpd was evoked by the repetition of ‘bull’ in these vss.

VIII.20.12: Ge takes *tanūṣu* as attenuated to something close to a reflexive (“sind nicht auf sich selbst eifersüchtig”), but in vss. 6 and 26 it is lexically robust. I think the point here is to contrast the adornment of their bodies with that of other locations associated with them (their chariots and their faces).

VIII.20.13: That their name can be “broad/widespread like a flood” may at first seem odd, but the point is simply that it is widely known.

Pāda b expresses another common point about the Maruts: they do not have individual names (though see V.52.10–11), but “Marut” serves for each one of them. I differ from Ge and Re in taking gen. pl. *śásvatām* ‘of each and every one’ as referring to the Maruts, not to the mass of people; therefore in my view the subj. of the inf. *bhujé* is the Maruts, not these same unidentified people.

I do not know if *pítrya-* here refers specifically to the Maruts’ ancestors (esp., presumably, Rudra), as I have taken it, or whether this is a more general statement: “like ancestral life force” (so, more or less, Ge and Re).

VIII.20.14: As Old points out (and as is reflected in Ge’s and Re’s tr.), *ná* must stand for **ná ná*, i.e., the simile marker followed by a negative. The same no-last-spoke image is found in V.58.5 with alternative realizations of both simile marker (*iva*) and negative (privative *a-*): *arā́ ivéd ácaramā(h)*.

The pāda break between c and d goes counter to the syntactic parallelism:
 syntax: *tád eṣām dānā́* meter: ... *tád eṣām,*
mahnā́ tád eṣām *dānā́ mahnā́ tád eṣām*

This produces a syncopated effect, emphasized by the polarized positions of the parallel instr. *dānā́* and *mahnā́* in their nominal clauses.

VIII.20.15: In c the presence of both *vā* ‘or’ and *utá* ‘and’ is curious, as is the position of the latter. Klein (DGRV I.450) suggests that the placement of *utá* after *nūnām* means that it should be construed with that adv., and so *vā* and *utá* each retains its own force.

VIII.20.16: The *yásya vā* opening this verse, parallel to *yó vā* in 15c, shows that this clause is still dependent on the main clause in 15ab *subhāgaḥ śá* “very fortunate he ...” The main clause in 16c may refer only to the *vājín-* of ab or to the various *subhāga-* folk of vss. 15–16.

The hapax *gatha* in b is an anomalous form, with a present 2nd pl. ending (*-tha*) on a root aorist stem. It is clearly a nonce form generated beside 2nd pl. impv. *gata* in 10d. The pādas are otherwise almost identical: 10d *havyā́ no vītā́ye gata*, 16b *ā́ havyā́ vītā́ye gatha*.

VIII.20.17: The identity and distribution of forms in pāda b are oddly unclear. Is *diváh* dependent on *ásurasya*, or are they coreferential, or are they independent of each other? In the first instance this produces “lord of heaven” (as I have it in the publ. tr; see also W. E. Hale [Asura, p. 75] “of the asura of the Sky”); in the 2nd “Lord Heaven” (so Ge: “Asura Himmel”); in the 3rd Re’s “(les hommes) du ciel, de l’Asura.” Do these genitives qualify Rudra (gen. *rudrásya* in a), as I take it, or *vedhásah* (so Ge: “die ... Meister des Asura Himmel,” sim. W. E. Hale), or, with Re, are they direct qualifiers of the Maruts? I opt for the first solution because *vedhás-* does not usually govern anything and because Rudra is called *ásuro mahó diváh* in II.1.6, *divó ásurāya* in V.41.3, and probably *diváh ... ásurasya* in I.122.1 contra Ge. And in fact is *vedhásah* nom. pl., as it’s universally taken, or another gen. sg., perhaps qualifying Rudra? Parallels cut both ways. Rudra is in fact called *vedhás-* in VII.46.1, but the Maruts are so called in V.52.13, 54.6.

VIII.20.18: Syntactic problems continue in this verse. Contra most interpr., I take *ab* as a continuation of vs. 17, still couched in the 3rd ps., and *cd* as a new clause directly addressing the Maruts in the 2nd ps. The first hemistich consists of two parallel relative clauses, with the two forms of *yé* positioned at the extreme ends, opening and closing the half-verse. The clauses are connected by an inverse *ca*: #*yé ca ... yé*#. This inversion is phonologically motivated, producing a mirror image figure: #*yé cārḥanti ... cāranti yé*# (Saṃhitā text, but 1st verb metrically to be read *ca árḥanti*).

There are further problems. *árḥanti* has no expressed object -- unless *marútaḥ* is taken as acc., with the subj. being unexpressed human worshipers; see Old's reff. This seems a thoroughly bad idea, given the rhetorical structure of this pragātha. Ge supplies "zu heissen" (that is, "deserve [to be called]"), which seems a fairly radical addition; Re "notre hommage" (so also Klein, DGRV I.186), which is somewhat easier to justify semantically but for which there is no parallel. My "soma drink" is based on a number of passages where some expression containing *pītīm* 'drink' (+/- 'soma') serves as obj. of \sqrt{arh} (I.134.6, II.14.2, IV.47.2, V.51.6); this is the most common expressed obj. to \sqrt{arh} .

In *b mīlhúṣaḥ* is the problem. Technically speaking, this cannot be a nom. pl. as I have rendered it. The correct form should be *mīlvāṃsaḥ*, which is found only once in the RV, though nearby (VIII.25.14, but not attributed to the same poet). Most take it here as the accusative pl. it appears to be, referring to the generous (human) patrons whom the Maruts approach (e.g., Ge "und die zu den Lohnherrn insgesamt(?) kommen"). This is certainly possible, but, with Old, I nonetheless take it as a nominative, because the stem is often used of the Maruts, including in this very hymn (3c gen. pl. *mīlhúṣām*). The misinterpretation could be aided by passages like VI.66.3 *rudrāsya yé mīdhúṣaḥ sánti putrāḥ*, where the adjective technically modifies gen. sg. Rudra, but could be interpr. as going with nom. pl. *putrāḥ*. Cf. also VII.58.5, which is entirely ambiguous. It is indeed barely possible that *mīlhúṣaḥ* here actually *is* a gen. sg., picking up the *rudrāsya* of 17a, but I think this unlikely. The morphologically weak nom. pl. here might also be favored by phonological motivations, in order to produce a form similar to *marútaḥ* in the previous pāda in the same metrical position (i.e., immediately preceding a four-syllable cadence).

yúvānaḥ here is a voc.; the identical form in 17c is most likely a nominative. The acc. to the same stem, *yūnaḥ*, opens the next vs. (19a).

In *d* the Saṃhitā *vavṛdhvam* must be read **vavṛd-dh^uvam* with both distraction and a heavy root syllable ($\sqrt{vṛt}$ 'turn'). For a similar situation, see *ácidhvam* in VIII.7.2, which must be read **ácid-dh^uvam* (\sqrt{cit}).

VIII.20.19: As was pointed out in the publ. intro., pāda *c* contains a pun: the intens. part. *cárkṛṣat* can belong straightforwardly to $\sqrt{kṛṣ}$ 'plough', and in this reading the simile depicts a person engaged in ploughing singing or otherwise verbally encouraging his team, just as Sobhari sings to the Maruts. (In this case *gāḥ* would probably be better rendered "oxen.") But it can also be secondarily associated with the root $\sqrt{kṛ}$ 'celebrate, praise', which has a curiously formed 3rd sg. -*se* medial intensive *cárkṛṣe* (3x), beside act. *carkar-/carkir-*. For purposes of word play a nonce stem *cárkṛṣ-* could be extracted from the isolated *cárkṛṣe*. In this reading Sobhari is praising the Maruts like cows (see vs. 21); in other words this is a sort of reverse dānastuti. That the Maruts are called bulls in pāda *b* simply adds to the play.

Note also the phonological echo in *gāya gā(h)*.

VIII.20.20: Ge plausibly explains the sg. *hāvyaḥ* as attraction to the number in the simile (sg. *muṣṭihā*). One might also add that *hāvya-* is overwhelmingly nom. sg, and there are no masc. pl. forms attested. There seems no obvious reason for such a grammatical restriction, but it may have contributed to the somewhat anomalous form here.

All standard interpr. (including mine) take the simile in b to be *vīṣṇaś candrān ná* “like lustrous bulls,” despite the displaced simile marker -- in part presumably because “like lustrous/brilliant ones” doesn’t make much sense as a simile. I have no explanation for the placement of *ná*, nor do I understand why this needs to be a simile at all, since the Maruts are regularly called bulls without such marking (see nearby 19b, e.g., as well as 9–10, 12). Perhaps it indirectly continues the pun in the simile in 19c, which in turn is continued in vs. 21.

VIII.20.21: The cow imagery of vs. 19 (and implicitly 20) continues here. Ge and Re take this as a simile (“like cows”), but this requires interpr. *cid* as a simile marker, a function for *cid* that I do not believe in. It is even less likely because the next verse begins with a parallel structure (*mārtaś cid*), where the *cid* is definitely not a simile marker. I do, however, think that the Maruts are identified with the cows here. There are several themes intertwined. The most obvious point of comparison between cows and Maruts is their common birth (*sajātyèna ... sábandhavaḥ*) as a herd/flock and consequent lack of individual differentiation, a characteristic of the Maruts treated earlier, in vss. 13–14. But the Maruts also have a cow for a mother; this was asserted in 8c, and the phraseology there (*góbandhavaḥ sujātāsaḥ* “akin to a cow, well-born”) is echoed here (*gāvaḥ ... sajātyèna ... sábandhavaḥ*), thus alluding to the Maruts’ kinship with cows. Hence *sábandhu-* here has two senses: both cows and Maruts have common birth within their own group (that is, cows with cows, Maruts with Maruts), but cows and Maruts have a common birth with each other (cows with Maruts, due to the Maruts’ bovine mother). This type of kinship is treated also in 22ab. I also identified a secondary meaning in 8c: being akin to cows is a way of saying that the Maruts have cows to give, and I think that is slightly hinted at here.

I don’t quite understand the relevance of “they lick each other’s humps.” Lü (Varuṇa 90) suggests that the vs. praises the unity (Eintracht) of the Maruts, and, if somewhat sharpened, this may be the correct explanation. “Lick each other’s humps” may be the equivalent of English “watch each other’s backs”: individuals act reciprocally (*mithāḥ* here) and protectively for the common good of the group.

Note the echo of the final words in a and b: ... *samanyavaḥ*# ... *sábandhavaḥ*#. The opening *gāvaś cid ghā* also faintly echoes *gāya gā* opening 21a.

VIII.20.22: The theme of cross-species kinship in vs. 21 continues here, with the mortal seeking brotherhood (*bhrātrtvám*) with the Maruts.

The verse as a whole, balancing brotherhood (*bhrātrtvám*) and friendship (*āptivám*), should be evaluated in conjunction with vs. 13 of the next hymn (VIII.21, by the same poet) *abhrātrvyó anā tvám, ánāpir indra janúṣā sanād asi / yudhéd āpitvám ichase*, where Indra is said to lack either. See comm. thereon.

VIII.20.23: *bheṣajāsya* appears to be a partitive genitive.

VIII.20.24: Note the relatively elementary figure in c *máyo (no) bhūta ... mayobhuvah*.

The voc. *asacadviṣah* has given rise to multiple competing analyses, well summarized by Scar in his detailed treatment of this hapax (246–48). Most start with *dvīṣ-* ‘hatred, hater’ as 2nd member and some form of \sqrt{sac} ‘follow, accompany’ as its first, governing the second. The problem is *what* form of \sqrt{sac} ? It cannot be a straightforward thematic verbal stem or participle/injunctive (*saca-* or *sacat-* [though **asacad-dviṣah* is a phonologically possible underlying form]) because the Class I pres. of \sqrt{sac} is resolutely middle. (Debrunner [Nachtr. AiG II.1.87] also disputes this analysis on the basis that the accent is wrong for a verbal governing cmpd of that sort, but since the form is a voc. and unaccented, this argument is inapplicable. [It does apply to the other form he mentions, *jaradvīṣ-*, but these forms do not have to be parallel.]) It is also possible to take it as a standard type of root noun cmpd with the root noun governing the 1st member (‘hating the *asaca*’ or ‘not hating the *saca*’; at some point I toyed with the idea of ‘hating the non-aligned’), but this still founders on the puzzle of *asaca-*. Scar’s own solution is to divide the cmpd differently, as *asacad-vīṣ-*, with $\sqrt{vīṣ}$ ‘bring about’ as 2nd member and a form of \sqrt{sac} (2) ‘dry out’ as 1st member, hence ‘not bringing about drought’ or ‘bringing about non-drought’. Unfortunately getting *-sacat-* from this root requires a lot of not too plausible machinery -- it is no more straightforward than deriving *-saca(t)-* from \sqrt{sac} (1) -- though I am sympathetic to his argument that the meaning would fit well with the Maruts’ character. My own ‘who do not partner hatred’ rests essentially on a loose interpr. of the verbal governing analysis presented first above, though I hold no particular brief for it. I would point out that if it does contain \sqrt{sac} ‘accompany’, it could pair contrastively with *sakhāyāḥ* in the preceding vs. (23c). A very weak argument for \sqrt{sac} (1) and $\sqrt{dvīṣ}$ could be constructed on the basis of VIII.22.2, a hymn to the Aśvins but also composed by Sobhari. There the Aśvins’ chariot is described as *sacanāvantam* ‘provided with companions’ vel sim., the first word of pāda c, and as *vīdveṣasam* ‘free of hatred’, the first word of pāda d, with the same two roots. But I would not make much of this.

VIII.20.26: The voc. *marutaḥ* in c was carelessly omitted in the publ. tr.

VIII.21 Indra

VIII.21.2: *dhṛṣát* is ordinarily an adverb, originally probably the neut. of a VIth class present of which there are no finite forms – except, possibly, this one. The relative pronoun *yāḥ* invites *dhṛṣát* to be read as a 3rd sg. injunctive (and of course in a relative clause its accent would be correct). I would suggest that either the neut. part. *dhṛṣát* has been misanalyzed and pressed into service as a finite form or, more likely, that *yāḥ* is serving as a loose izafe connecting this adverbial qualifier with the subject. I’m afraid that the publ. tr. does not attempt to render *yó dhṛṣát* literally – it’s represented by “in his daring.” Note that the *yāḥ* cannot be a postposed rel. with *cakrāma* because the pf. is unaccented.

On metrically bad *vavṛmahe*, see Kü (459) and comm. ad VI.4.7.

Old suggests that the “youth” is King Citra, whose dānastuti ends the hymn. This seems perfectly plausible but nonetheless unprovable.

VIII.21.4: The publ. tr. should have a close parens after “[horses, etc.].”

I interpret this verse in the context of its pragātha. The question is who are the kin that Indra has and we do not. I suggest that Indra’s “kin” are the horses, cows, and so forth named in vs. 3. In VIII.68.19 the patrons are called *vāja-bandhu-* ‘having prizes as kin’, as a hint that they should give them to us. I think the same image is at work here: we lack kin, and you have these desirable kin (horses, etc.) that could become akin to us too.

In the second hemistich these kin become *dhāmāni*. The stem *dhāman-* is of course a highly charged and multivalent word, but in this case I think it comes close to its literal sense: ‘deposits’, that is, things put or set down ($\sqrt{dhā}$), which Indra is to bring to deposit on the ritual ground.

VIII.21.5: A verse that makes less sense the more one thinks about it, since the bird simile does not seem to fit the context: birds don’t normally sit either next to or in honey, nor do they normally roar. The simile must have as its third term “in a nest” or “in a tree” (cf. *dru-śād(van)* several times of birds) as the parallel to the loc. honey phrase.

VIII.21.6: In pāda a *ca* must have subordinating value because of the accent on *vādāmasi*. So also Klein (I.245), though he considers the *ca* originally to have signalled interstanzaic conjunction.

VIII.21.8: The loc. *samasmin* belongs to the indefinite prn. *sama-*. As discussed ad X.29.4, the stem (13x not counting repetitions) is overwhelmingly used in clear pejorative contexts, and the apparently neutral or positive uses found in VI.27.3 and X.54.3 are in fact better read as negative (see comm. ad locc.). Our passage also initially looks neutral, but in the context of its pragātha I think the intent is negative as well. In vs. 7 the poet complains that Indra has been holding out on him and his fellows, who previously “have not known your abundance.” Vs. 8 indicates that the situation has been remedied and Indra is showing favor, but I suggest that in the 2nd hemistich the poet remains dubious about Indra’s full generosity, and that *samasmin* in the loc. phrase *samasmin ... vāje ... gómātī* is meant to convey the poet’s desire that Indra exert himself for them whenever any prize of cattle, however paltry, is in play. In the publ. tr. *samasmin* is not rendered; I would emend the tr. to “whenever *any* prize ...”

VIII.21.9: The 2nd pl. reference is to the poet’s fellow ritual celebrants.

VIII.21.10: The first pāda, in the accusative, continues 9c, hanging off *īndram* there. The second pāda may be attached to the first, as Ge takes it, or to cd, as I take it. There are no strong arguments either way, but I assume the causal clause in b grounds the expectations we have in cd: because he has reached exhilaration *with us* (this last bit unexpressed), he will provide for us.

VIII.21.11: The image in this verse is of a contest for cattle, where a competitor challenges us (ancient trash talk) and we can successfully respond, thanks to having Indra

as our ally. The word qualifying the competitor, *śvasānt-* ‘snorting’, calls to mind Indra’s enemy Śuṣṇa (on the etymological connection see EWA s.v. *śuṣṇa-*) and therefore makes our human competition sound more formidable.

VIII.21.12: Continues the thought of vs. 11, that with Indra on our side we can take on all challenges and challengers. I therefore tr. the 1st pl. optatives as potential “we could” rather than the voluntative “might we” (Ge “wir wollen”). The 2nd sg. verb *aveḥ* in d does not work well in this schema, at least in its ordinary interpretation as an optative to the 1st class pres. of \sqrt{av} ‘help’. Although “you should / might you help our visions” is possible, esp. given that *dhî-* is not infrequently the object of \sqrt{av} (cf., e.g., I.117.23 *vísivā dhíyaḥ ... prāvatam me*), I have taken it instead as the imperfect of the root pres. of $\sqrt{vī}$ ‘pursue’. Although ‘thought, vision’ is not a regular object of $\sqrt{vī}$, it does occur; cf. I.77.4 *agnír gíró ’vasā vetu dhītím* “let Agni with his help pursue our hymns, our visionary thought” (note the presence of *āvasā* ‘help’ as well). This *aveḥ* would pick up the subjunctive *vayati* of 10c, also with Indra as subject, also performing this action in our service, and the visions he pursues here are those announced in 6d. I interpret the word *dhî-* in both places as referring to our fantasies about what we want out of Indra and how we could be victorious. In 12 Indra seems to have fulfilled these fantasies. Against the interpretation of *aveḥ* as belonging to \sqrt{av} we might note that the optative to the extremely well-attested thematic present *āvati* is almost non-existent. If the form here is otherwise analysed, the only secure form is *avet* in VI.47.15; *āvet* in V.34.8 I also take to $\sqrt{vī}$. However, I do not consider the standard interpretation of *aveḥ* here as belonging to \sqrt{av} entirely excluded.

VIII.21.13: The use of *bhrātrvya-*, lit. ‘nephew, cousin’, as ‘rival’ is exceedingly common in Vedic prose, but only really begins in the AV; this is the only such example in the RV. The passage here seems to be an expansion, with lexical renewal, of I.102.8 *aśatrúr indra janúṣā sanād asi* “You are without rival, Indra, by birth from of old,” but I would also suggest that the use of an explicit kinship term *a-bhrātrvyá* (as opposed to the generic *a-śatrú-*) is deliberate, given the web of relationships the poet develops in this hymn (see publ. intro.) It is possible that *-bhrātrvya-* here is meant to be taken in both the negative sense that is standard later (rival < rivalrous nephew/cousin) and in a positive one, simply naming a blood relation. Thus the hemistich could mean both “you have no nephew *and* no friend” and “you have no rival *but* no friend”). As a kinship term *abhrātrvyá-* would contrast with the *bāndhumant-* of 4a, where Indra is explicitly credited with having kin.

As disc. ad X.94.3–4, the function/meaning of the adverbial instr. *anā* is hard to pin down. I opt there for ‘evidently, clearly’ and would now substitute for “by the same token” (my ad hoc solution in the publ. tr.) “you are clearly without rival, but (also) without friend.” Indra’s superiority in might would make his lack of rival obvious, but his lack of friend is a more surprising. Note that *anā* in pāda a is phonologically echoed by *ānāpiḥ* ‘without friend’ opening the next pāda.

VIII.21.14: The motivation for some of these statements needs some explication. The first hemistich concerns two negative figures; the second one, in pāda b, the man who swells up on *surā*, the secular and disreputable drink -- in other words a drunk, a lush, or in Ge’s felicitous tr. “die Schnappshelden” -- is implicitly contrasted with a man who handles the much-honored drink *soma* in a ritual context. But why should a rich man

(pāda a) be disfavored? Perhaps because he has what he needs and need not enter into partnership with Indra, whereas we, more needy, are willing to engage in the reciprocal activities involved in honoring Indra. I reluctantly abandoned my tr. of *revántam*- as ‘fat cat’, primarily because *revánt-* is not usually used in slangy contexts.

In pāda a *nākiḥ* is problematic. This form generally serves as 3rd ps. subject ‘no one’, but in this context it cannot refer to the 2nd sg. subj. of *vindase*, namely, of course, Indra. Instead it is standardly rendered ‘never’ (e.g., Ge as well as the publ. tr.). I now wonder if it actually qualifies the acc. obj. *revántam*. Just as *nākīm* in VIII.78.4 (see comm. ad loc.) takes on nominative function (see also *mākim* in VI.54.7 and comm. thereon), so perhaps *nākis* got secondarily extended to acc. function. I would now consider an alt. tr. “You take on no rich man ...”

I’m afraid that I don’t understand the second hemistich at all, primarily because I don’t know whether the omitted object of *sám ūhasi* should be the negative figures of ab or positively or neutrally viewed humans in general. The sentiment of pāda d would support the latter idea: that when Indra enters into battle, he puts everyone together (under his protection), thereby behaving like a father. But the only other instance of *sám √ ūh* (I.131.3), also with Indra as subject, has him shoving the two opposing sides into fighting each other, with a come-what-may attitude. This seems more likely here, in which case pāda d would express the opposing sides’ competing calls to Indra to help them.

VIII.21.15: Again the cultural content here is somewhat elusive and therefore the relation of the simile to the frame not entirely clear. The woman who grows old at home (*amājūr-*) must be a spinster (see II.17.7 for the clearest context of this word), but what aspect of her activity we wish to avoid isn’t defined. It may simply be that we should not sit still and inactive at the soma sacrifice when we should be busying ourselves serving Indra. (Although one wonders whether an ancient Indian spinster was allowed just to sit around, rather than being a virtual servant to her parents and the rest of the extended family. I would think she’d be busy enough.) Or perhaps there is a pun embedded in *nī √ sad*; in later Sanskrit this lexeme can mean ‘sink down (mentally), be depressed’ and so perhaps it’s the spinster’s mental state that’s at issue. It is even possible, if we read this verse with its pragātha partner, vs. 16, to take “let us not miss out...” of 16a as a gloss on what aspect of the spinster’s life we wish to avoid in 15: she missed out on marriage, but we do not want to miss out on Indra’s gifts.

VIII.21.16: The connection between pādas a and b must be that were we to miss out on Indra’s gifts, we would be likely to complain about him.

On d see Scar 196. Ge’s “Gaben” cannot be right for *dāmānaḥ*, which should be a personal designation; see Scar’s “die Geschenke machen / Geschenke bekommen.” Perhaps like *somānam* (I.18.1) it contains a Hoffmann suffix.

VIII.21.17: There is no overt question marker, but the verse works better with vs. 18 as a series of deliberative questions, to be answered by the emphatic declaration of Citra’s preeminence in 18.

VIII.21.18: The clustering of demotic *ka*-forms in *dānastutis* (see Jamison 2008, 2009) is nicely illustrated by *rājākā́ id anyaké, yaké*, with the suffix even attached to the relative pronoun.

tatānat must be a pun on the two roots \sqrt{tan} ‘thunder’ and ‘stretch’. See Old. Parjanya of course thunders, but he also stretches through the midspace with his rain. Citra will likewise both make a big noise and extend his largesse.

VIII.22 Aśvins

Esp. towards the end of the hymn, *pāda*-initial (*C*)*ā* becomes an insistent marker: *ā́* (8c, 9a), *yā́(bhiḥ)* (10a, b), *tā́(bhiḥ)* (10c, 12a), *yā́(bhiḥ)* (12d), *tā́(u)* (13a, b, c, 14a, b), *mā́* (14c), *ā́* (15a), *prā́(tā́)* (15b), *ā́(rā́ttāc)* (16c), *ā́* (17a). The most concentrated sequence is in vss. 13–14 with the repeated dual prn. *tā́(u)* ‘these two’, referring to the Aśvins.

VIII.22.1–2: This *pragātha* contains poetic self-address at a distance. Vs. 1 begins *ā́ ... have* “I have called here ...,” while 2c ends with the voc. *sobhare*. (On poetic self-address see Jamison [Fs. Skjaervø, 2009].)

VIII.22.2: The reading of the first word of this vs. is uncertain. The *Samhitā* text apparently reads *pūrvāyúṣam* but the Pp. *pūrva-āpúṣam*, accepted by Sāy as well as Old and edited in all the standard editions (MM, Aufr., HvN). This seems to be a genuine variant reading. For disc. see Old ad loc. and Scar 320–22. I generally follow the Old analysis for the 2nd member; the objection that with a 2nd member *āyus-* the accent should be **pūrvāyusam* or **pūrvāyusām* seems cogent to me. But I have not adopted Old’s suggestion that *pūrva-* stands for **puru-* (hence ‘prospering many’, vel sim.), with the *ū* introduced under the influence of *pūrvyam* at the end of the hemistich. This is not impossible, but since *puru-spṛham* intervenes, it might have helped maintain an original **puru-* in the initial word. Scar suggests several further analyses, which seem too fussy to me.

sacanāvant- is construed with the instr. *sumatībhiḥ*: “provided with favors as accompaniment.”

I would now substitute “without flaw” for “without fault,” on the basis of my reinterpret. of *anehās-* (comm. ad X.61.12). The Aśvins’ chariot is physically, not morally, perfect. See also the use of *anehās-* in nearby VIII.18.21, 31.12.

VIII.22.4: For *īrmā́* ‘at rest, standing still’, contra Gr ‘*rasch*’, etc., Ge ‘*zurück*’, see Narten IJ 10 (1967–68) and EWA s.v.

iṣanyā- is ordinarily transitive, so I take *vām* as its obj. (so also Gr), contra Ge and Re. This must be a paradox: the motionless chariot wheel is the one that propels them, not the speedy one in *pāda* a. I do not have a vision of how this would work in practice, though.

VIII.22.6: On ploughing with a wolf, see the publ. intro.

VIII.22.11: Although *ádhrigu-* is simply a *-u*-stem, the negated form of Aves. *drigu-* ‘poor’ (see comm. ad I.61.1), in the nom. pl. it is treated as if it were a compd. with ‘cow’, with *ádhrigāvaḥ* (also I.64.3) instead of expected **ádhrigavaḥ* (see AiG III.158). But

things may be more complicated, for, as Gr notes, in I.61.1 the dat. *ádhrigave* would be better metrically as **ádhrigāve*. In this case it does not match the ‘cow’ word, whose dative is *gāve*. However, Wackernagel (AiG III.149) considers an emendation to *-gāve* unnecessary and refers to Old (Prol. 90 and Noten ad loc.) for the meter. It’s also possible that I.61.1 just borrowed the length from I.64.3, both Nodhas products, because the stem was not entirely understood.

VIII.22.12: On *viśvápsu-* see comm. ad I.148.1.

Old explains 3rd pl. *vāvr̥dhúḥ* as metri causa for du. **vāvr̥dháthuḥ*, and this is accepted by Ge. But the only other passage in which *krívi-* is found as a clear PN (though cf. V.44.4, VIII.51.8 [Vālahk.], IX.9.6 for more dubious exx.) is in a nearby Sobhari hymn, in which he is favored by the Maruts (VIII.20.24 *yābhīr daśasyathā krívīm* “with which you favor Krivi”). The *yābhīḥ* there has the same referent as here, namely *ūtíbhīḥ* ‘forms of help’ and *vāvr̥dhúḥ* is a semantic variant of *daśasyathā*. I therefore think it very likely that the plural verb is correct and that this is an allusion to the Maruts’ aid to Krivi. Recall that in vs. 1c, at least by my interpr., the Aśvins also follow the Maruts’ lead, also and identically 14b, and they are addressed as Rudras (that is, Maruts) in 14c.

VIII.22.15: The vs. begins with an echo of the first vs., or rather the first pragātha, in which the poet called on the Aśvins’ chariot (1a *ó tyám ahva ā rátham*), here reprised by *ā ... súgmyam ... / huvé* “I call the easily moving (chariot).” But in pāda b the poet thinks better of it and addresses the Aśvins directly. This change of heart is signalled by *vā* ‘or’.

Ge, flg. Sāy, takes *sakṣāṇī-* to \sqrt{sac} ‘accompany’, but as Re points out, all other forms of *sakṣāṇī-* (incl. those separated by Gr into a separate lemma derived from \sqrt{sac}) belong to \sqrt{sah} , and this etymon works fine here.

The echo of the first pragātha continues with the poet’s self-identification as *sóbharī* at the end of the verse, echoing his self-address with voc. *sobhare* at the end of 2c. *sóbharī* here is one of two occurrences of this PN that have apparently fem. endings (the other is gen. sg. *sóbharyāḥ* in VIII.103.14). Ge questioning suggests that we might be dealing with a female poet, but this seems highly unlikely, esp. given the voc. *sobhare* in vs. 2 and elsewhere in this group of hymns (VIII.19.2, 20.19). See AiG III.183 on masc. - \bar{f} -stem PN and their transfer to the *i*-inflection.

VIII.22.18: On *suprāvargám* see comm. ad VIII.4.6.

VIII.23 Agni

VIII.23.1: The hymn begins with a *hí* clause. Flg. JPB, the *hí* signals that the action in this clause precedes and forms the basis of the action in b.

On *pratīvyām* see Scar 500.

VIII.23.2: With Ge I take ab as a continuation of vs. 1, with c starting a new clause. The vocc. in ab are the self-address of the poet, as in VIII.22.1–2. Here the poet first exhorts himself with 2nd ps. imperatives (1ab) and then switches to a pseudo-modal 1st ps. -*se* in c. The first voc. *viśvacarṣaṇe* (2a) is a bit of a red herring, since this stem is otherwise used of gods. But he addresses and thus identifies himself with his speaking name

Viśvamanas in b, making it clear that he was simply appropriating the divine epithet for himself.

I supply *vāhnīn* to govern *rāthānām* in c, on the basis of *vāhniḥ* in 3c and *vāhnī rāthānām* in VIII.94.1. I surmise that this is also Re's thinking behind "(comme conducteurs) des chars," though he makes no comment.

VIII.23.3: Ge (n. 3c) takes *upavidā ... vindate* as simply equivalent to *upavindate*, which is esp. puzzling because *úpa* is not otherwise construed with \sqrt{vid} in the RV. My 'close' in the tr. 'close searching' is meant to convey the intimate nuance of this preverb.

Note the *v* alliteration in c: *upavidā vāhnir vindate vásu*.

VIII.23.5: I take *abhikhyā* in the sense of 'glance' rather than 'appearance' (as Gr, Re, and Scar 99 do). The finite forms of *abhí* $\sqrt{khyā}$ all have the meaning 'look at', as do the 2 occurrences of the gerund *abhikhyāya* (I.155.5, II.30.9). *abhikhyā* occurs 3 times (here + I.148.5, X.112.10, all compatible with a meaning 'glance' [*pace* Gr]). It may either be the instr. sg. of a root noun or (with AiG II.2.782) a haplologized form of the gerund *abhikhyāya*. Both possibilities are considered by Scar (98–99).

VIII.23.6: Contra most interpr., I take Agni as driving to the gods to present them with our praises as well as our oblations, rather than coming here (e.g., Re "arrive avec les belles louanges").

The impv. *yāhí* is accented because it follows an initial voc.

VIII.23.9: Both Ge and Re explicitly identify the subj. of *jujuṣuḥ* in c as those seeking truth (voc. *rtāyavaḥ*), the human ritualists addressed in a. Although switch between 2nd and 3rd ps. even within a verse is not rare, I think the gods are the more likely subject, as they generally are to forms of $\sqrt{juṣ}$. This verse depicts the ritual model whereby Agni brings the gods to the ritual ground to receive oblations, with this location specified by *námasas padé* -- in contrast to vs. 6, where Agni conveys the oblations and praises to the gods (presumably in heaven), the other model of sacrificial interaction.

VIII.23.16: The point of this verse seems to be that Vyaśva (the poet's father) got the goods, either directly from Agni or via the patron Ukṣan, and we hope this will provide a pattern for us.

The grammatically disharmonious phrase *mahó rāyé* would better be tr. "greatly for wealth." See disc. ad IV.31.11.

VIII.23.18–19: Just as vs. 16 provides an ancestral pattern for the poet to gain goods from Agni and/or his patron, these vss. take the gods' establishment of Agni as their messenger as the prototype for mortals' doing the same.

VIII.23.21: On the apparent bad cadence produced by *ávidhat*, see remarks ad II.1.7, where Arnold's suggestion to read a long augment is adopted.

VIII.23.24: The hapax *sthūrayūpavát* may be a pun. On the one hand, formations of this sort, with neut. -*vát* suffix, generally mean 'like X', 'as X did', with X a PN. The

presence of an undoubted ex. in the same position in the immediately preceding vs., *vyaśvavāt* ‘like Vyaśva’, strongly supports this interpr. The poet addressed by the impv. *arca* is being urged to chant ‘like Sthūrayūpa’. Gr and Re interpr. the form thus. But *sthūrayūpa-* also has lexical meaning, ‘(having?) sturdy posts’ (in the absence of accent we cannot tell whether the cmpd is a bahuvrīhi or a karmadhāraya). The yūpa is both the post to which the animal to be sacrificed is tethered and a crucial post or beam in the construction of dwellings. In this lexical meaning the comparison could either be between the praise songs and sturdy posts or someone who possesses them, *or* between Agni and the post or post-possessor. Note that it is Agni *dāmya-* (‘of the household’) who receives the chant. If the comparison is to the praise songs, they would be conceptualized as the uprights that help make the house solid. The parallel adduced by Ge, I.51.14 ... *stómo dūryo ná yūpaḥ* “a praise-song like a door-post,” is particularly apt. This is the sense reflected in my tr. and also in Ge’s and assumes a karmadhāraya. If the comparison is to Agni, a bahuvrīhi would be better: “to Agni of the household, like one [=a house] having sturdy posts.” The kinship asserted between Agni and trees in the next verse may give some support to this last interpr.

VIII.23.26: The syntax of this vs. is very difficult; Re even suggests that it consists of fragments “non syntaxisés” -- a coinage I would like to introduce to English. The standard interpr. take the NP in pāda a as acc. pl., more (Old) or less (Ge) parallel to *havyāni* in b and then either supply a verb to govern them (Ge: “bring [X to Y]”) or cobble together a very implausible syntactic bond between the verb *nī satsi* in c and the accusatives in ab (e.g., Re “En direction de tous ... assieds toi”). I take a very different route, first by interpr. *mahāḥ ... satāḥ* not as acc. pl. but gen./abl. sg. This phrase seems to have some special status: cf. I.36.3 *mahās te satāḥ* “since you are great,” same phrase in VIII.101.11 “of you who are great.” I take the referent of the abl./gen. phrase to be Agni, and I also interpr. *abhiḥ satāḥ* in the usual idiomatic meaning of *abhiḥ√as* ‘be superior to’, construed here with the acc. *viśvān*. In b I simply supply a different form of the root *√as*, namely *santu*, to be construed with the *abhiḥ* in the same meaning. The point of the sentence is that since Agni, who is superior to everything, is our Hotar and the conduit of our offerings to the gods, our oblations cannot help being superior as well.

VIII.23.27: I am not happy with the partitive gen. with *√van* in cd, but I do not see any way out of it.

VIII.23.30: The abrupt introduction of Mitra and Varuṇa may look forward to the next hymn but one, VIII.25, devoted at least in its first part, to these two gods. The last pāda of the first verse of VIII.25 (*ṛtāvānā yajase putādakṣasā*) is almost identical to the last pāda here (*ṛtāvānā samrājā putādakṣasā*).

VIII.24 Indra

VIII.24.1: Ge takes *stuṣé* here as an infinitive, but the nearby parallels he cites (VIII.21.9, 23.7) are unaccented and clearly 1st person. The switch between 1st pl. (*ā śiṣāmahi*) and 1st sg. (*stuṣé*) is not unusual in this kind of context, where the poet speaks in the 1st plural

jointly for himself and his fellow ritual performers and in the 1st singular for himself alone, with a 2nd pl. address to those same comrades (*vaḥ* in b).

VIII.24.2: Two etymological figures: *vṛtrahátyena vṛtrahā* (b) and *maghaír maghónaḥ* (c). On the unusual construction of *áti √ dās* see comm. ad VI.16.20.

VIII.24.4: Another figure: *dhṛṣatā dhṛṣṇo*.

This verse echoes vs. 3 in reverse order: 3a *stávāno ā bhara* / 3c *nirekám* // 4a *nirekám* / 4c *stávamāna ā bhara*. These echoes straddle a *ṛca* boundary.

VIII.24.5: “hindrances” (*āmúraḥ*) and “repulsions” (*paribādhāḥ*) are complementary notions, the equivalent of “thrust and parry” (or rather parry and thrust). Unfortunately they do not go well into English, esp. in the plural. On *āmúr-* see Scar 391-92.

VIII.24.6: The matching instrumentals in frame and simile are phonological variants: *góbhir* (a) / *gīrbhir* (b).

VIII.24.7: The poet of this group of hymns (VIII.23–26) is Viśvamanas, but *viśvámanasaḥ* here can be read both literally and as the PN. Note also the cross-*ṛca* echo, 6c *mánaḥ* / 7a *-manasaḥ*, and the initial figure *viśvāni viśvá-*, which together make up the poet’s name.

VIII.24.8: The opening word of c, *váso*, is read as *vásoḥ* by the Pp., followed by Old and Ge – that is, with the loss of underlying final *-s* before the cluster *sp-* -- hence a gen. sg. belonging with the long gen. sg. noun phrase ending with *rādhasaḥ*. This is of course possible, but the presence of undoubted voc. *vaso* in 7c in a hymn that is over-partial to vocatives and given to repetitions across verses, supports a voc. interpretation here.

VIII.24.10: A verse full of figures: *mahāmaha*, *mahé* (ab), *ḍṛḥś cid ḍṛhya* (c), *maghavan maghāttaye*. There is also an inter-*ṛca* echo between voc. *nṛto* (9b) and voc. *nṛtama* (10b), with *nṛto* returning in 12a.

VIII.24.14: The expression *dákṣam pṛñcāntam* is somewhat peculiar, and Ge takes the two words as separate qualifiers of Indra: “dem Verständigen, Spendenden.” However, I.141.1 *bhágam dákṣam ná papṛcāsi* suggests that *dákṣam* should be the object of the pres. participle. By the tr. “engorging skill” I mean that Indra fills his latent quality (skill) with energy (perhaps derived from soma and praise) and makes it available to use.

Acdg. to the Anukramaṇī, our poet Viśvamanas has the patronymic Vaiyaśva (vs. 23), that is, son of Vyaśva (‘without horses’), and the poet mentions his family in vss. 22, 28–29 with the distracted stem *v’yaśva-*. But in this verse he refers to himself instead as *aśv’yá-*, also distracted, which, on the one hand, is simply an anagram of the family name with the first two syllables reversed, but, on the other, credits him with possession of (or at least relationship to) horses, whereas the unmetathesized version announces him as horse-less.

VIII.24.15: On the lexeme *yújyāya √ vṛ* see comm. ad IX.88.1.

Rather than taking *nákiḥ* in c as a mere negative, paralleling rhyming *nahí* in pāda a, I'd now give it its full nom. sense: "... never before has a greater hero than you been born, no one in wealth ..."

The expression *naíváthā* (that is, *ná eváthā*), placed between the two instrumentals, is opaque: *eváthā* is a hapax. Old helpfully adduces IV.30.1 *nákir indra tvád úttaraḥ ... nákir evá yáthā tvám* "There is no one higher than you, Indra ... no one who is exactly as you are," and our *eváthā* appears almost to be a blend of *evá yáthā* or some abbreviation thereof.

VIII.24.16: I supply *siñcá* from b as the verb also of a, and supply *madántaram* of a as the object of b, with *ándhasaḥ* dependent on it as *mádhvaḥ* is in a. Ge by contrast (fld. by Klein DGRV II.183) supplies "bring" in a and takes *ándhasaḥ* as a partitive genitive in b. This is not impossible, but my interpretation requires less extraneous material.

Another cross-trca connection: *evá* in c echoes *eváthā* in 15c. More cleverly, 16ab *éd u m(ádho) ... siñcá* picks up 13a *éndum ... siñcata* (note that *édum* and *éndum* are almost identical).

VIII.24.18: On *áprāyu-* see comm. ad V.80.3.

VIII.24.19: The a pāda is repeated twice elsewhere in VIII: 81.4, 95.7. The reason for the accent on *stávāma*, which does not begin the pāda and probably not its clause, is unclear, though it may well be connected with its relationship with the exhortative 2nd pl. impv. *éta* "come on!" It would, in fact, be possible to construe *índram* with *éta nú* and begin a new clause with *stávāma* ("Come now to Indra; let us praise the superior man..."), but this seems unnatural. It is curious that Old does not comment on the accent here or in the other passages.

VIII.24.22: Here as elsewhere (II.5.1, III.27.3, both with pl. *vājínaḥ*) *yámam* governs the accusative.

VIII.24.23: A very cute pun, with *návam* meaning, as often in a hymnal context, 'anew', but in conjunction with *daśamám* 'tenth' evoking *náva* 'nine'.

caráni- is a hapax, but most likely derived from the root $\sqrt{\text{car}}$ 'wander' (see EWA s.v. *CAR^I*, though AiG II.2.207 considers it of unclear meaning). It must have been created to contrast semantically with the very frequent near-rhyme form *carṣaṇí-* 'settled/bounded peoples', whose gen. pl. *carṣaṇīnām* occurs 35x in the RV, always at the end of the pāda as here (including VIII.23.7 *hótāram carṣaṇīnām*, the adjacent hymn by the same poet). That the short initial syllable of *carāṇīnām* produces a bad cadence surely draws more attention to the word it was created in opposition to.

VIII.24.25: Elliptical and with some syntactic puzzles. See Old on the verse in general and the multiple solutions proposed in earlier lit.

In b I supply "be there" as the verb; Ge, to more or less the same effect, "beistandest."

In c I supply Śuṣṇa as the object of both verbs, since he is the demon Indra ordinarily slays for Kutsa. The problem here is that the verbs are not parallel: injunctive

śísñathah followed by imperative *ní codaya*. Somewhat reluctantly I ascribe imperatival value to *śísñathah* (so also Ge without comment), possible because of the functional shape-shifting ability of injunctives. (See the same form in VIII.70.10.) However, I am not certain how often regular injunctives can show imperatival value, as opposed to lexicalized forms like *dāḥ* and *dhāḥ*. The root \sqrt{cud} does not otherwise appear with *ní*, a fact that makes its value here even less clear. Ge supplies “horses” as object, while Old suggests importing *ávaḥ* ‘help’ from a.

VIII.24.26: Again elliptical. In ab the semantic opposition between new and old is obviously the point, but what new thing are we begging Indra for? Ge supplies “deed” (“... eine (Tat), die auch dem Älteste neu ist”). In III.31.19 the same expression *návyam* ... *sányase* refers to the making of a new hymn, but it makes no sense to beg *Indra* for a new hymn. I tentatively supply *āyuh* ‘life’, which occurs several times with *návyam* (I.10.11, III.53.16, VII.80.2). The other occurrence of *návyam sanyasé* (VIII.67.18) is found immediately after a periphrastic causative “you make live” (VIII.67.17c *dévāḥ kṛñuthá jīvāse*), and a “new life” works reasonably well in that passage. But this is all circumstantial, and I do not know why such a wish would be expressed here, beyond the usual Vedic desire to live a full and vigorous lifetime.

The *sá tvám* in c does not conform to the rules for 2nd ps. *sá* reference developed in Jamison 1992. I would therefore prefer to supply an imperative “(be) victorious ...,” which would, I think, also fit the context better. However, the offending *sá* might be explained by the 3rd ps. verb (*mucát*) in the following verse (27ab), whose relative clauses hang off 26c, in my view. In other words, the construction of the whole sentence fluctuates between 2nd and 3rd ps. subject.

VII.24.27: As noted just above, I take the relative clauses in ab as hanging off 26c. Both Ge and Old make 27bc into a single clause, but the verb in c (*nīnamah*) is unaccented although b begins with a relative pronoun *yāḥ*. I therefore take ab as being two parallel relative clauses sharing a single verb *mucát*; cleverly the poet has exploited the fact that \sqrt{muc} participates in two different syntactic constructions with accusative and ablative: “release ROPE vel sim. [acc.] from VICTIM [abl.]” and “release VICTIM [acc.] from ROPE [abl.]” (Perhaps not surprisingly, English has the same two constructions.) In 27a we find the first, though without overt expression of the VICTIM (=us or perhaps the Ārya); cf., e.g., X.97.15 *tā no muñcantu āṇhasaḥ*. In b we find the second, though without overt expression of the ROPE. Here I supply *āṇhaḥ* adapted from abl. *āṇhasaḥ* in pāda a. Cf. IV.12.6=X.126.8 *evó śv àsmán* [i.e., *asmāt*] *muñcata vy āṇhaḥ*.

VIII.24.29: The adj. *somínaḥ* can of course be either abl.-gen. sg. or nom.-acc. pl. It shares a pāda with acc. *vyāśvān*, so proximity favors taking it with that noun – as in the publ. tr. (also Ge). However, Sāy. takes it with gen. *nāryāsya* in the previous pāda, and he may be correct. Nārya appears to be the (or one) name of the patron of the sacrifice, the dispenser of the dakṣiṇā to the poets, and it would make sense to refer to him as possessing or providing soma. I would therefore entertain the alternative tr. “let the priestly gift of Nārya, provider of soma, come to the Vyaśvas.”

VIII.24.30: In contrast to the first two fairly straightforward verses of the *dānastuti* (28–29), this one bristles with slangy jokes and their attendant puzzles. It is also the only verse in the hymn not in Uṣṇih meter. The verse opens with the sacrificer (*ījānāḥ*, lit. the pf. mid. participle to √*yaj*) asking “you” an abrupt question *kuhayā kuhayākṛte*, consisting of an extended form of *kúha* ‘where’ (the extended form found only here) and an oddly formed, nonce vocative made up of the same adverbial interrogative plus (probably) *-kṛti-* (though *-kṛtā-* would also be possible). Judging from vs. 28, the beginning of the *dānastuti*, which contains a vocative addressed to Dawn, she is also the addressee here, though a reversion to the default Indra is certainly not excluded. So, literally, “where? you where-actor.” Ge takes *ījānāḥ* as the subject of the question (“where is the sacrificer?”), rather than the questioner. I follow Old: “Die Opferer fragt die Morgenröte ...,” although Ge’s interpretation is by no means excluded. The question is whether Varosuṣāman is the sacrificer himself or his patron, and without a better knowledge of the distribution of roles in RVic sacrifice, we cannot know for sure.

It is generally assumed (I think correctly) that the second hemistich is the response of the addressee to the question in ab, and it is an extended pun. He calls the subject, about whose whereabouts the question was just asked, “Vala,” that is, the name of Indra’s opponent and the cave that contained the stolen cows. But Vala is also a phonological variant of Vara, the first part of the name of the patron Varosuṣāman. He is said to be “set apart” (*āpaśritaḥ*) along the Gomatī (River), but *gómant-* literally means ‘possessing cattle’ and can also qualify the Vala cave itself (see I.11.5 *valásya gómataḥ*). Thus this line appears to be a subtle reminder to Varosuṣāman not to withhold his cattle within himself, like his phonological multiform, but to be generous to his clients. The whole line reminds us of the *dānastuti* in V.61.19: *eṣá kṣetī ráthavītīr maghávā gómatīr ānu, párveteṣv āpaśritaḥ* “This Rathavīti dwells in peace, a bounteous patron throughout the cow-rich (clans) [/along the Gomatī river], set back among the mountains,” containing one of the only two other occurrences of *āpaśrita*. I do not know the significance of this.

VIII.25 Mitra and Varuṇa

VIII.25.1: For the connection of the last pāda of this vs. with VIII.23.30, see comm. there.

VIII.25.2: The du. *mitrā* is used in two different senses: on the one hand, in its appellative sense it refers to the two gods as allies; on the other *mitrā* is a pregnant dual PN, meaning “Mitra (and Varuṇa),” with the “and Varuṇa” then pleonastically supplied in pāda b in an “X and which Y” construction (*váruṇo yás ca*).

Most take *tánā* as another dual (to thematic *tána-*), but struggle to interpr. it. I take it as the instr. sg. of the root noun *tán-* and in this context as indicating the “(home) stretch” of a race course. The image is of two charioteers running neck and neck and therefore evenly matched.

tánayā of course echoes *tánā*, though it belongs to a different stem (whichever interpr. of *tánā* is followed). In this case I accept the general interpr. as du. to *tánaya-*.

VIII.25.3: Because the phrase *asuryāya prāmahasā* is found also in VII.66.2 (also of Mitra and Varuṇa), the two words must be construed together -- though in both instances Ge construes them separately (as do Re and W. E. Hale). Moreover Ge's minimalist tr. of *prāmahas-* ("Die ... Erhabenen") does not reflect its bahuvrīhi status: it should mean something like 'having their greatness forth/in front'. In combination with the dat. *asuryāya*, some forward motion seems indicated.

VIII.25.4: This is a particularly good passage to demonstrate that the unending rivalry between the two opposed groups Devas and Asuras so characteristic of middle Vedic literature cannot be backprojected into the core RV, since Mitra and Varuṇa are called simultaneously *devāṁ āsurā*.

The phrase 'grandson of strength' (*śávaso nāpāt-*) is used a number of times of the Ṛbhus (I.161.14, IV.34.6, 35.1, 8, 37.4) and only here of other divinities. It seems based on the more common *śávasas páti-* (I.131.4, IV.47.3, V.6.9, etc.), with (*nā*)*pāt-* echoing *pát(i-)*. It also evokes semantically the phrase *śávasaḥ sūnú-* (IV.21.1, 37.4) / *putrá-* (VIII.90.2, 92.14), 'son/child of strength'.

VIII.25.5–6: The usual problem with (-)*dānu-*: 'gift' or 'drop' or both? In this case the first cmpd member *sṛpra-* 'fatty, luscious', the dwelling "in the house of refreshment" (in vs. 5), and the refreshments and rains (in vs. 6) favor 'drop', though both Ge and Re opt for 'gift' (Ge with an outdated rendering of *sṛprá-* as 'ausgedehnt'). On *sṛprá-* see comm. ad I.96.3.

VIII.25.7: "your herds" of the publ. tr. should rather be "their herds."

VIII.25.8–9: Both these verses have a subject / VP construction that's an etymological figure: 8c ... *kṣatríyā kṣatrám āsatuh*, 9c ... *nicirá ní cikyatuḥ*. The latter is reinforced phonologically by the pāda-opening *ní cin miśántā*. The unusual tmesis of preverb and participle, interrupted by the particle *cí*, may be (partly) accounted for by the desire to produce a *ní ci-* sequence matching the two that follow in that pāda.

VIII.25.9: On *anulbaṇá-* see comm. ad X.53.6. I there reject the standard rejection of a connection with *úlba-* 'caul' and reject as well the standard interpr. of the word as 'without bulges or knots'. In the publ. tr., since eyesight "without knots/bulges" didn't make sense, I substituted "without motes," with 'mote' a reasonably close equivalent to 'knot'. I now think it means something like 'without a caul', and describes eyesight unaffected by cataracts. I would now emend the tr. to "by means of eyesight without a caul [=cataract]."

VIII.25.10–12: This ṛca takes a break from Mitra and Varuṇa, introducing a somewhat random collection of other protective divinities. See also vs. 14.

VIII.25.11: The lexeme *ní√sac* is found only here in the RV and indeed, judging from MonWms, in all of Sanskrit. I consider the *ní* here intrusive, having crept in from passages like VII.38.3 *vísvebhiḥ pātu pāyúbhir ní sūrīn*. The lexeme *ní√pā* is fairly well attested, and so I think *ní* has, as it were, hitched a ride on *pāyúbhiḥ*, which is ordinarily

found with a form of the cognate verb as in the just cited passage. The insistent *nī*'s of 11c may also have played a part.

VIII.25.12: A verb needs to be supplied for ab to be a clause. On the basis of *śrudhī* in c, I supply 'sing', but any verb of service to a divinity that takes a dative would work. Ge "serve" (dienen), Re, somewhat more elaborately "apportons notre prière." Ideally we would supply *sacemahi* on the basis of *āriṣyantaḥ ... sacemahi* in 11c, but \sqrt{sac} doesn't accommodate this case frame. (The few exx. with dat. given by Gr are to be explained otherwise.)

VIII.25.13: Alliteration in the etymological figure *vāryaṃ vṛṇīmahe, vāriṣṭham*, anticipating *vāruṇaḥ* in c.

VIII.25.14: In the publ. tr. I supply "let ... grant," flg. Ge, Re, Klein (DGRV I.403). But I would now change that to "protect," assuming that the *tād* + divinities in the nom. simply continues the rel. cl. in 13c *mitró yāt pānti ...*

VIII.25.15: The standard interpr. take *bhūrṇayaḥ* with the frame (Ge "diese eifrigen Herren"), but its position at the end of the verse, far from its supposed NP, leads me to put it in the simile. (Sim. Re.) Passages like IX.17.1 ... *iva síndhavo, ghnānto vṛtrāṇi bhūrṇayaḥ* "like turbulent rivers ... smashing obstacles" give support to this assignment. The simile then consists of a nom. + acc. matching those of the frame. It might be objected that rivers don't strike against their own surge, but the image may be of fast water catching up with itself and overtopping a wave.

VIII.25.16: *itthā* is not sufficiently represented in the publ. tr. I would now insert "just so" after "the many."

ānu ... carāmasi could also be subjunctive (so Ge), "we shall proceed," though the undoubted indicative *ānu ... saścima* in the parallel phrase in 17ab supports an indicative interpr. here.

VIII.25.17: Flg. Kü I take the pf. of \sqrt{sac} as presential in value.

sāmrājyāsya is in the same position as *sāmrājyāya* 'sovereign kingship' in 8b but differently accented. The form here must be an adj. 'related to sovereign kingship'. This makes sense: its referent, the Sun, is not a sovereign king himself, but associated, as their eye and spy, with Mitra and Varuṇa, who are.

The form of *dirghaśrūt* is problematic. It appears to be a nom. sg., but the subj. of this sentence is plural ("we"). Gr takes it as a neut. pl. modifying *vratā*, as do Ge (without comment) and Re; Scar identifies it as a neut. pl. but with a query. AiG III.65–66 suggests that it follows the model of short neut. plural forms that are identical to the neut. singular belonging to other stems (type *nāma* 'name(s)'). I think we can sympathize with the plight of a poet who's trying to figure out how to make a neut. pl. out of a root noun ending in *-t*: it's simply impossible. In VII.16.8 we get *śārma dirghaśrūt*#. Since *śārma* there could technically be plural (and there were presumably other such expressions with neut. *n*-stems, etc.), it's not hard to see the poet assuming, rightly or wrongly, that *-śrūt*

can be a neut. pl. Old also adduces VIII.61.2 *vípro mánmāni dīrghaśrūt*, where the adj. modifies nom. sg. *vípraḥ* but could be interpr. as going with *mánmāni*.

VIII.25.18: I would now substitute ‘limits’ or ‘boundaries’ for ‘ends’ in tr. *ántān*.

VIII.25.20: On *dīrgháprasadman-*, see comm. ad VIII.10.1.

I don’t quite understand “non-poisonous food”: is this an understated way of referring to good food, or is it a real fear? In VI.39.5 we call upon the king (Indra or Soma) to give (*√rā*) non-poisonous plants. I also don’t understand the use of *hí* here, since *c* does not seem to be the cause or grounds for *ab*, but rather a parallel clause.

VIII.25.21: This is presumably the speech referred to in vs. 20 that controls good things.

VIII.25.23: This vs. is puzzling, in part because the identity of “these two” (*tā*) is not clear nor is the sense of *nītósana-* + GEN. The lexeme *ní√tuś* means ‘overflow with, spill down’ with an acc. of the largesse so spilled. See, e.g., IX.63.23 *ní tośase rayīm* “You [=Soma] spill down wealth” (cf. IV.38.1, VIII.54.8). I take the genitives here as objective gens., corresponding to the acc. in the VP. Since both *ásvyānām* and *hárīṇām* refer to horses, we might want the two that are overflowing with them to be the human (or possibly divine) givers. This is possible, if we take them as the two patrons who give horses in 22ab (and not the one who gives a chariot in 22c). Or it could be a reference to Mitra and Varuṇa (so Re). But du. *nṛvāhasā* ‘carrying men’ in 23c and *vājínāv árvantā* “prize-winning chargers” in 24c must surely be horses (probably the silvery and silver horses of 22ab), and this suggests that the duals earlier in vs. 23 should have the same referent. This is Ge’s solution, and he considers this expression shorthand for saying that the two horses given are worth as much as a whole herd of horses. This may be correct, but it is a bit difficult to wring it from the text.

kṛtvya- ‘effective, getting results’ is several times used of horses (VI.2.8, IX.46.1, IX.101.2), and in this context that should be the default interpr. as well.

VIII.25.24: With Old I take *víprā* as instr. sg. fem. with *matī*, contra Ge’s voc. pl. See I.82.2.

VIII.26 Aśvins and Vāyu

VIII.26.2: *mahé táne* ‘for great extension’ presumably refers to his extending his lineage.

VIII.26.3: *havāmahe havyébhiḥ* “we call with oblations” is a word play between the roots *√hu* ‘pour, libate’ and *√hū/hvā* ‘call’ and economically refers to the two complementary aspects of Vedic sacrifice, the verbal and the material. It is the mirror image of the trope “pour prayers.”

iśáyantau can belong either to trans. *iśáyati* to *√iś* ‘send’ (so Gr, Lub) or intrans. *iśáyati* ‘prosper’. I tentatively opt for the latter, with a cognate acc. of respect, *iśáh*, hence “prosper, become refreshed with respect to refreshments.” It is not entirely clear to me which root affiliation is represented by Ge’s “spenden” (probably ‘send’?) or Re’s “sécrtant à titre de jouissance” (probably ‘prosper’?).

I suggest that *āti kṣapāḥ* “beyond the nights” refers to the Atirātra soma (“overnight soma”) offered to the Aśvins the morning after, as it were.

VIII.26.8: This vs. is somewhat curiously constructed. It contains, probably, a dual dvandva whose 2nd member is itself dual: *índra-nāsatyā* ‘o Indra and the two Nāsatyas’. Since the form is in the voc. it is actually impossible to determine if it is in fact a dual dvandva or two separate vocc., *índra nāsatyā*, sg. and du. Although in most dual dvandvas the first member also has dual inflection (type *índrā-váruṇā*), see *índra-vāyū*, with stem form in the first member and a single 2nd member accent; its voc. is *índra-vāyū*, which would match the template found here. In any case, the verb is dual (*gatam*), and the rest of the verse (pāda c) is couched in the dual. VIII.26.8: This vs. is somewhat curiously constructed. It contains, probably, a dual dvandva whose 2nd member is itself dual: *índra-nāsatyā* ‘o Indra and the two Nāsatyas’. Since the form is in the voc. it is actually impossible to determine if it is in fact a dual dvandva or two separate vocc., *índra nāsatyā*, sg. and du. Although in most dual dvandvas the first member also has dual inflection (type *índrā-váruṇā*), see *índra-vāyū*, with stem form in the first member and a single 2nd member accent; its voc. is *índra-vāyū*, which would match the template found here. In any case, the verb is dual (*gatam*), and the rest of the verse (pāda c) is couched in the dual. This means that Indra is being ignored (which is possible, since the hymn is dedicated to the Aśvins), that the dual dvandva *índra-nāsatyā* is being treated as if it contained two entities, rather than one+two (which is also possible), or, more likely, that the verb agrees with the nearest entity (*nāsatyā*), as is often the case when a singular verb is used with a series of implicitly conjoined singular nouns. For another number mismatch, see vs. 11.

VIII.26.9: *vayám ... ukṣanyánto vyaśvavát* is a play on words. *ukṣanyántaḥ* is read doubly, in one sense in the frame (‘seeking bulls’) and another in the simile (‘seeking Ukṣan’). Unusually the simile is conveyed by -*vát*. On the poet Vyaśva seeking his patron Ukṣan, see VIII.23.16 *vyàśvaḥ ... ukṣanyúḥ*, where *ukṣanyúḥ* can also be read as a pun.

VIII.26.11: Pāda c *sajóśasā váruṇo mitró aryamā* “the two of one accord (and) V, M, A” is reminiscent of the number disharmony in vs. 8. It can be seen as a syntactic blend of 8c *devā devébhiḥ ... sacánastamā* “the two gods joined with the gods” and a putative plural *sajóśasaḥ* that includes the Aśvins with the other gods mentioned.

VIII.26.12: I take *sūrībhiḥ* as an instr. of accompaniment “for me along with my patrons,” but Ge’s view, that the patrons are the middlemen distributing the goods, is possible: “do your best for me by means of / through my patrons.”

VIII.26.13: I take the referent of ab to be Agni. Cf. III.3.5 *táviṣṭbhir ávṛtam* ‘swathed with [=in] his powers’; given Agni’s ritual role it makes sense for him to be swathed in sacrifices. Making a god the referent avoids the role reversal Re notes in *saparyántā*, with (in his view) the gods serving humans rather than the usual situation -- though he then tr. *śubhé cakrāte* as reflexive or self-involved: “ils se sont fait (pour eux-mêmes une parure - - contrapartie de b),” rather than supplying a human object. But surely it is better (with Ge) to supply as obj. of *śubhé cakrāte* the being referred to in the relative clause of ab.

VIII.26.14: With Ge I take ab as a continuation of vs. 13, still with Agni as referent. Agni is regularly called *cikitvān*, to the same stem as *ciketati* here. Clearly *vartīḥ* ‘circuit’ is to be supplied as object; it not only appears in pāda c but also in 15b, where it is modified by *nṛpāyyam* as here.

VIII.26.15: *viṣudrúheva* (that is, *-ā+iva*) is quite problematic. Ge refuses to tr., as does Scar (245–46), though by classing it with *-druh*-compounds, he indicates a root affiliation. Acdg. to Re, it’s the equivalent of **druhó viśuvīt* “opposé au Mal” or “qui met le Mal en déroute”; somewhat sim. Kü 484 “Wie die nach verschiedenen Seiten Trügenden (?)”. What all these suggestions have in common is the assumption that the 2nd member belong to *√druh* ‘deceive’. I suggest a different analysis, *viśud-rūh-*, where the 2nd member is the root noun to *√ruh* ‘mount’, and the first (*viśud-*) is a deformed version of the already deformed adverb *viśvadryāk* ‘facing in different directions’, with the complex adverbial suffix found also in *asmadryāk* ‘facing towards us’. The empty *-d-* (*-t-*) has been suffixed to the combining form *viśu-* (*/viśū*) underlying the adjective *viśvañc-* ‘facing in different directions’. For the suggested phrase, cf. IX.75.1 *rātham viśvañcam aruhat* “he mounted the chariot that faces in different directions” (with *√ruh*) and, with semantically related *√yuj* and horses not chariot, VI.59.5 *viśūco áśvān yuyujāná īyate*; X.79.7 *viśūco áśvān yuyuje vanejāḥ*.

VIII.26.16: The publ. tr. does not make sufficient clear that the messenger (*dūtāḥ*) is our praise song, not “you.”

VIII.26.17: The *íd* of c surely limits *me*, but has been displaced to the left into Wackernagel’s position; “just listen to me” is less likely.

VIII.26.18: I don’t understand what the Sindhu is doing here. Is it a third place (besides the two in 17ab) where the Áśvins might find exhilaration? Or is it a metaphor for the “good praise” and/or “bright insight” (both fem., as *síndhu-* is) in vs. 19? The agreements in vocabulary, *śveta-* and the *-yāvan/r-ī-* cmpds, speak for the latter, but the former makes more sense to me.

VIII.26.20: As often, *hí + IMPV* marks the action of the *hí* clause as the grounds for the subsequent clause (in this case c, as b is presumably parallel with a).

VIII.26.21: The voc. *ṛtaspace*, belonging to a hapax cmpd., has an unusual 1st member for a thematic stem. We should expect **ṛtapate*. But to construct that form is to confront its problem, a sequence of light syllables (4 in stem form). Rather than seeing anything archaic in the form we have, I think it likely that the cmpd was shaped in analogy to the numerous gen. *-as-pāti-* with athem. gen., esp. *bṛhas-pāti-* with similar phonological shape. See also *rāthas-pāti-*, which shows the same anomaly as *ṛtaspace*: comm. ad V.50.5. Unlike *rāthas-pāti-*, the form here makes no metrical problems.

VIII.26.22: *rāyā(h)* can be both gen. sg. and acc. pl., the former to be construed with *īśānam*, the latter with *īmahe*, between which it is positioned. So already Old. The identical pādas (VI.54.8, VIII.46.6, 53.1) are susceptible to the same interpr.

VIII.26.24: In keeping with my current understanding of *nē-śādana*- I would slightly change the tr. to “to the sessions of men,” not “the seats ...”

I do not think that Vāyu is being compared directly to the pressing stone, but rather than we call on Vāyu as we call on the pressing stone. Unfortunately this attenuates the force of the simile, but the various suggestions (Old, Ge, Re) as to why Vāyu is like a horse-backed stone are so convoluted that I find them difficult to accept. The stone may be called horse-backed for two reasons: first, since the stones are also called *sóma-pr̥ṣtha*- (VIII.63.2) and soma is commonly identified as a horse, the identification has been transferred. It may also be that it also means ‘having the back of a horse’, that is, bowed or made for carrying.

VIII.26.25: Ge takes *apáh* for *ápah* ‘work’, but this seems arbitrary. I tr. it as the acc. pl. ‘waters’ it appears to be.

As noted. ad X.50.2, this is the only ex. of a syntagm *vājam*, -*ān* √ *kṛ* that I have been able to find. Since *vājān* here is in an ill-assorted acc. phrase with *dhíyah*, I wonder if this is a maladroit version of the phrase *dhíyam* (*/-ah*) *vājaratnām* (-*āh*) √ *kṛ* “make insight(s) to have prizes as jewels” (VI.35.1 *dhíyah karasí vājaratnāh*; X.42.7 *kṛdhí dhíyam ... vājaratnām*).

VIII.27 All Gods

VIII.27.1: I take both *ukthé* and *adhvaré* as functional loc. absolutes. Cf. *śasyāmāna ukthé* (VI.23.1, also IV.20.10, X.45.10), *prayaty ádhvaré* (I.16.3 [=VIII.3.5], V.28.6 [=VIII.71.12], etc.). The latter expression appears as a full phrase in 3a *prá sú na etv adhvaráh*.

VIII.27.2: *uśāsā náktam* is a curious variant of the dual dvandva *uśāsā-náktā*, occurring only here. Old suggests that it is an ex. of a singular 2nd member following a dual in the 1st (cf. AiG II.1.154), which seems a description not an explanation. I think two factors entered into its creation: on the one hand, all forms of *uśāsā-náktā* precede a consonant; here that form would be in hiatus with vowel-initial *óṣadhīh*. (Acdg. to Old, BR think that the original form was in fact *náktā*, but it was altered to avoid hiatus.) But all forms of *uśāsā-náktā* are also initial in trimeter verse, where a heavy fifth syllable is fine. This is dimeter verse, and a heavy fifth syllable would produce a bad cadence; light -*am* √ allows an iambic cadence.

Here and elsewhere through the hymn I render *visvávedas*- as ‘affording all possessions’, not ‘possessing all knowledge’, because it is usually found in the context of the gods’ generosity.

VIII.27.6: The syntax of ab is oddly muddled for what seems on the surface a banal sentiment. The problem is the position of the relative and its relationship both to the *priyā* earlier in the verse and accented verb *prayāthána* later. The key, I think, is neut. pl. *ásvyā*

‘equine’. Contra Ge I don’t think that it should be construed with *havyā*, with “equine oblations” as a reference to the *Aśvamedha* -- an interpr. that Re rightly calls “adventurous.” The stem *ásvya-*, esp. in the neut. pl., is generally used of gifts (*rādhās-*, *maghā-*) consisting of horses that gods (or patrons) give to mortals (e.g., VII.16.10 *yé rādhāṃsi dádaty ásvyā maghā*), whereas *havyā* are of course oblations given by mortals to gods. I think we therefore must reckon with two different constructions in this hemistich, a structure that accounts for the fractured word order. On the one hand I see a nominal clause (or rather a nominal clause whose subject is itself a relative clause): “which equine gifts are yours (i.e., come from you), (they) are dear (to us).” On the other, the same predicate *priyā* has as subject a full rel. clause whose verb is *prayāthāna*: “which oblations you drive to, (they) are dear to you.” The *vah* is used both as a genitive (in the first construction) and as a dative (in the second). Unfortunately it is wrongly placed in the relative clause for this second interpr., but I can only imagine that the poet allowed this small breach to avoid doubling the *vah*, or rather that the dative could be integrated into the rel. cl.: “which oblations for you you drive to, they are dear.” Note that two different entities are dear to two different groups of beings. I have not yet solved the problem of *abhi*, however. Re’s interpr. requires *prá √ yā* to be transitive and also intermingles the main and relative clauses in an illegitimate way and should be rejected: “Di(riger) vers (nos) oblations les chères troupes de chevaux que vous mettez en marche.”

Ge takes *turā nárah* as a qualifier of the immediately following *Ādityas*. Although both *turā-* and *ní-* can sometimes apply to the *Ādityas*, they are more frequently used of the *Maruts*, who are somewhat dominant in this part of the hymn (1c, 3d, 5c, 6a, 8a).

VIII.27.11: On *án'yām* see comm. ad VIII.1.10.

VIII.27.15: I assume that *Aryaman* is tacitly included with *Mitra* and *Varuṇa* in c, given the *vah* in d (and a). In the phrase *varuṇa mitra márt'yam*, trisyllabic *márt'yam* is a sort of scrambling of *Aryaman*.

On the apparent bad cadence produced by *ávidhat*, see remarks ad II.1.7, where Arnold’s suggestion to read a long augment is adopted.

VIII.27.16: *prá prajābhīr jāyate* is a nice figure in which *prá* doubles the first part of the compd. and *jāyate* the second.

dhármaṇas pári receives quite varied interpr. I take it as a spatial metaphor: the fortunate pious man is propagated through his progeny “from his foundation,” that is, starting from himself and spreading out by children and grandchildren (etc.). On this repeated pāda and esp. on the identity of the suppressed genitive with *dhármaṇah*, see comm. ad VI.70.3 and X.63.13.

On the relationship of pāda d [=I.41.2] with the variant in X.63.13 see comm. ad loc.

VIII.27.18: The 2nd hemistich presents some niggling syntactic and lexical problems. To start with the latter, by most interpr. *ásredhantī* is transitive (Ge “ohne Schaden anzurichten,” Re “sans causer de nuisance”). But the verb to which this negated participle belongs is consistently intransitive, meaning ‘fail’, not ‘cause to fail’, and though Gr

glosses *ásredhant-* (and related stems) as transitive ‘nicht schädigend’, hence ‘heilsam’, all passages are compatible with intransitive ‘unfailing, unfaltering’. Although in this particular case ‘not harming’ might be tempting, the point here must be that the missile should go to destruction without pause or deviation in its trajectory.

I am disturbed by the pleonastic pāda-final *sā*, doubling initial *eṣā*, as well as what looks like a self-contained clausette in which it is found: *paró nú sā*. Neither Ge nor Re takes any notice of the oddly constructed c pāda; Ge takes c and d as independent clauses, while Re treats cd as a unified clause. My tr. tries to mirror the construction by taking *asmāt ... paró nú sā* as a parenthetical. I remain concerned about two things: 1) This is the only passage in which *parāḥ* seems to mean ‘far from’; other passages containing *parāḥ* + ABL. mean ‘beyond, other than’ (see also the 1st verse of the next hymn, VIII.28.1, with *parāḥ* ‘beyond’ without abl.). However, ‘far from X’ and ‘beyond X’ are close enough semantically to allay my concerns, and in fact a tr. “it is now beyond him” would work fine. 2) I do not like the position of *asmāt*, but I must assume that it was extracted from the *paró nú sā* clausette in order to conform to the pattern set in pāda a: x x *cīd asmai* matched by c: x x *cīd asmāt*.

I have reluctantly rendered *cīd* in c as ‘also’ (so also Ge), though it does not match the two *cīds* in a and b (‘even’) because I cannot make ‘even’ work. (I suppose “even this missile ...” is possible, but it is not favored.)

VIII.27.20: Most interpr. take *mādhyā ā* as indicating “in the midst (of the shelter)” (*chárdih*, of pāda b). This is certainly possible, though I weakly prefer my own rendering.

VIII.27.21: The hapax *ātúc-* is difficult. See EWA s.v. Mostly for contextual reasons it is generally taken as referring to evening or night, and it has been connected to *tvác-* ‘skin’, with the sense of ‘covering over’. I have followed this interpr., though with full awareness of how fragile it is. For one thing ‘cover as if with skin’ (which must be the presumed semantic channel, one way or another) is not an altogether compelling way to get to ‘evening’. For another, *tvác-* ‘skin’ has no zero-grade forms. Scar (182–83) discusses several possibilities. Besides the ‘covering’ hypothesis, he suggests, citing Schindler and Kü, that *tvác-* may belong with a root $\sqrt{*t\check{y}ek}$ ‘sichtbar werden’ to which *ātúc-* could also belong, and that *ātúc-* might better be taken as an adj. with *madhyāmdine* “when midday is clearly visible.” He is less disturbed than I am that this would leave the verse without a third temporal period; furthermore, given that midday is the most “clearly visible” of the three standard time periods, it seems unnecessary to mark it as such. Another problem with *ātúc-* is that one is reluctant to separate it from the dat. *tucé* ‘for progeny’ in 14c. However, it is difficult to connect them and still maintain sensible semantics in our verse. Scar makes a creative attempt: evening is the time when one goes back to one’s children, so ‘zu den Kindern hin’ becomes ‘Rückkehr nach Hause’. I admire the ingenuity but I think the unlikelihood speaks for itself.

VIII.28 All Gods

VIII.28.1: Ge unaccountably takes injunctive *vidán* as modal: “Die sollen wirklich (etwas) vorfinden,” but *asanan* (flg. Pp.) as preterital. As Old points out, however, the latter need not be augmented (with Pp.) but represent *dvitā sanan* with an injunctive, a

reading favored by the apparent parallelism with *vidán*. I follow the injunctive reading, but take both *vidán* and *sanán* as preterital in function. I also don't think that an object should be supplied with either of these verbs, contra Ge ("etwas," which he further specifies in n. 1 as "die Opferspenden") and Re ("un trésor pour l'Homme"). The absence of objects with two verbs that are standardly transitive must be deliberate. Note the absolute use of *vindate* in VIII.27.17.

VIII.28.2: The Gift Escorts (*rāti-śāc-*) are rather shadowy divine figures. In II.1.13 they escort (*saścire*) Agni at the ceremonies, a situation that may be reflected here. Otherwise they mostly show up in All God hymns (esp. a run of them in VII) as fairly uncharacterized minor divinities. For further disc. cf. comm. ad VII.38.5. See Scar 593.

In III.6.9 Agni is urged to bring the 33 gods (see our 1a) to the sacrifice along with their wives (*pātnīvant-* as here), a ritual situation that can link our vss. 1–2.

VIII.28.3: Ge hesitates between cardinal points and relative directions ("behind, above," etc.), but cardinal points are most likely better because they provide totalizing protection, which is then summed up by *sārvayā viśā*.

VIII.28.5: The phrase *saptá ṛṣṭáyah* "seven spears" may be a sly pun on *saptá ṛṣayah* "seven seers" (IV.42.8, X.130.7; also *saptaṛṣáyah* X.82.2, 109.4). Although this group is better known later and only occasionally referred to in the RV, it does have a foothold there.

VIII.29 All Gods

On the intricate structure of this hymn see publ. intro. and my *Rigveda between Two Worlds* (75–77).

VIII.29.1: The description given is apt for Soma. The soma twigs start out brown, but when they are pressed, the golden juice comes out and, as it were, anoints them.

VIII.29.2: This vs. depicts in fairly straightforward terms the installation of Agni on the ritual hearth.

The phrase *antár devēṣu* is metrically probably better taken with the second part of the vs. (as in the publ. tr. and most other tr.), but Renou prefers first, which might work slightly better. Is it meant to contrast with the same phrase in 3b or to be parallel to it?

VIII.29.3–5: The first pādas of these three vss. are nearly identical: x x *éko bibharti hásta ā(...)m*; note esp. *bibharti hásta ā(...)m*. This agreement introduces another layer of structure: if we treat vss. 1–7 as a sub-unit, all marked by X *ékaḥ*, then 3–5 are symmetrically in the center of that unit. These vss. are also reminiscent of, and perhaps anticipate, the visual iconography of later Hindu deities, each depicted with his/her characteristic object – even in this aniconic Vedic culture. The redupl. pres. *bibharti* here expresses habitual carrying, rather than a bounded action of taking an object from one place to another, the usual function of Class 1 *bhāráti*.

VIII.29.3: The riddle in this vs. is somewhat harder to solve, but the referent is probably Tvaṣṭar: for Tvaṣṭar in his capacity as “shaper” and with his secondary association with the root $\sqrt{takṣ}$ ‘hew, carve, build’, it makes sense for him to have the axe as his emblem. The poet induces this identification rather cleverly. The *vāśī-* is not Tvaṣṭar’s usual object; in fact it’s more characteristic of Agni. See nearby VIII.19.23 *vāśīm agnīr bharate*, which is mighty close to our passage. But Agni has already been slotted in (vs. 2), and the way the hymn is structured, each god gets only one vs. So we’re forced to consider alternatives. The root $\sqrt{takṣ}$, which isn’t etymologically related to Tvaṣṭar but is synchronically associated (e.g., I.32.2 *tvāṣṭā ... vājram ... tatakṣa*), can be construed with *vāśī-*. Cf. X.53.10 *vāśībhiḥ .. tākṣatha*. So, with Agni out of the picture, by a chain of associations we arrive at Tvaṣṭar:

vāśī- → $\sqrt{takṣ}$ → Tvaṣṭar

The pairing with the next verse, clearly of Indra, may also make sense, since by many accounts Tvaṣṭar is Indra’s father. Oberlies (Relig. I.336) claims that this vs. has to do with battles over settling places, which must first be made habitable by felling and burning trees, but I think this reads too much into the passage.

VIII.29.5: On *jālāṣa-* see comm. ad I.43.4.

The 2nd pāda has 10 syllables rather than the expected 8. Unfortunately deleting the somewhat pleonastic *jālāṣa* will not work because of its syllable count. It would be possible to delete either of the first two adjectives -- *śúcīr ugrāḥ* -- but I see no justification for that. It could be noted, however, that the other occurrence of *jālāṣabheṣaja-* is found at the end of an 8-syllable pāda, preceded only by *rudrām* (I.43.4). That pāda would fit nicely here, while the one we have does not, but including the name Rudra in this vs. would violate the structural principles of this hymn.

VIII.29.6: Ge tr. *pīpāya* as ‘bewacht’ and assigns it to $\sqrt{pā}$ ‘protect’ (via a byform \sqrt{pi}), because he finds “swell the paths” semantically difficult. But ‘swell’ in the RV universe of discourse is associated with prosperity and abundance, and swelling the paths can simply refer to making them productive and full of the treasure mentioned in the 2nd pāda. Since Pūṣan, the referent of this verse, ensures that livestock find their way home, is associated with paths, and is called “lord of the path” (VI.53.1 *pathas pate*), the metaphorical expression “swell the paths” makes sense as a description of his activities.

What may have tipped the balance for Ge is the simile in this pāda, “like a thief,” for it hard to explain how a thief would “swell the paths” -- whereas keeping a close watch on the path (as a semantic extension of ‘protect, guard’) is something a thief, or highwayman, would naturally do. Old is forced to suggest that the thief makes the paths prosperous for himself in his own way, presumably by robbing people who are traveling on them (sim. Re). But there is a simple solution to the simile problem: take it with the 2nd pāda as I have done (sim. Macd., Maurer). Although up to this point in the hymn, pāda boundaries coincide with syntactic boundaries, the poet is starting to shake up the structure, which has been quite static so far, and breaching the pāda break is his first step. Bolder moves follow in the next vss.

VIII.29.7–9: A new chain starts in this vs.: the verbs of the first pādas of these vss. are *cakrame* (7a), *carata(h)* (8a), *cakrāte* (better read **cakrate*, 9a).

VIII.29.8: I do not understand the apparently tautological 2nd pāda, *prá pravāśéva vasataḥ*, with the same type of double etymological figure as in VIII.27.16. Renderings like Old's "wie Reisende reisen sie" (sim. Ge, Re) are literally correct but give no hint as to what the simile is conveying. There must be some wordplay here, perhaps an astronomical reference? In later Skt. *prá√vas* can refer to exile or banishment, and already in RV III.7.3 the causative means 'cause to live apart, banish'; in II.28.6 the poet expresses the hope that we won't have to go to *pravasathāni* 'foreign dwellings' and in VIII.60.19 Agni is a house-lord *āproṣivān* 'who doesn't go abroad' (or, I suppose, even out of the house). Assuming that this meaning is also operative in *pravāśá-* accounts for my "like exiles."

VIII.29.10: On my solution to the identity of the *éke* 'some', that is, the human ritualists, see the publ. intro.

The pattern set in the rest of the hymn is also broken by placing a trisyllabic word initially before the numeral; vss. 1–9 all begin with a disyllable.

Note the phonological play between the opening verb *árcanti* and the final verb *arocayan*.

VIII.30 All Gods

For the rhetorical distance between vss. 1 and 2 see publ. intro.

VIII.30.1: The *-ka-* suffix on *arbhaká-* and *kumāraká-* mark these words as belonging to a lower register than normal Rigvedic discourse. See my 2009 "Sociolinguistic Remarks on the Indo-Iranian *-ka-Suffix."

VIII.30.2: As indicated in the publ. intro. I take the introductory *ítí* here as a mark that the preceding vs. is the quoted praise referred to by *ítí stutāso asathā* "thus shall you be praised." Re comments that this is a relatively rare passage with *ítí* not close to direct speech. But my interpr. avoids that.

The 33, the (or a) canonical number of gods, were mentioned in a nearby hymn by the same poet, VIII.28.1.

VIII.30.4: Ge takes *vísve vaiśvānarā utá* as "and all the Vaiśvānaras" (so also Klein, DGRV), but it is the gods who are *vaiśvānarā-*, as Ge clearly states in his n. 4b. (Interestingly, this is the only pl. form of this stem, which otherwise, save for one passage [IX.61.16, referring to light], is used only of Agni.) The terms that are being conjoined are *ihá* 'here' and 'belonging to all men', not gods and Vaiśvānaras; the point is that they are here and available to us because they belong to all of us. There is also complementary contrast between "all gods" and "(belonging) to all men," and the *vísve* of the former phrase has been postponed so that it can adjoin the latter: *devāsaḥ ..., vísve vaiśvānarāḥ*.

VIII.31 Yajamāna and patnī, etc.

VIII.31.2: The word order of c is slightly skewed. All things being equal, forms of the *sá/tám* pronoun, esp. in correlative usage, tend to take 1st position in the pāda/clause. This expectation is reinforced here by 2nd position *íd* 'just, only', which really should limit *tám*

(as my tr. reflects), but the verb *pāt* seems to have displaced the pronoun to the right of *íd*.

VIII.31.5: As noted in the publ. intro., vss. 1–4 and 5–9 present loosely parallel treatments of the rewards of sacrifice, with 1–4 applying to the sacrificer alone and 5–9 to the sacrificer and his wife. In this vs. *sunutáh* (5b) reprises *sunávat* of 1b, and the structure of those two b pādas is roughly the same: *sunávac ca pácāti ca* and *sunutá ā ca dhāvataḥ*, with two ritual verbs conjoined by *ca(s)*. The *nítyāśírā* ‘with its own proper milk-mixture’ referring to soma echoes *sómam ... āśíram* in 2b.

VIII.31.6: *prāśavyān* has been subject to various analyses. Sāy suggests ‘nourishment’, which is tentatively accepted by Re. Ge tr. “die für die Pünktlichen bestimmten (Belohnungen)” without comment, leaving it unclear (at least to me) even what root he assigns it to. With Old (also EWA s.v. *ŚÁ V*¹, Hoffmann apud Gotō 304 n. 723, Scar 539–40), I take it to the root *√śū* ‘swell’ and connect it to the root noun cmpd *prāśū-* in the following hymn (though attributed to a different poet), VIII.32.16. (Contra Re explicitly.) In both passages the lexeme seems to have a negative connotation, ‘swollen (with pride), puffed up’. Here the sacrificing married couple successfully ‘go up against’ (*prāti √i*), that is, compete with, these puffed-up rivals. The passage reminds us of the Agastya and Lopāmudrā hymn, I.179.3 ... *visvā spṛdho abhy āśnavāva / ... yāt samyāñcā mithunāv abhyājāva* “Let us two take on all contenders ... when as a united couple we will drive on,” depicting another sacrificing pair competing with rivals. Our vs. and I.179.3 contain the only two masc. du. *samyāñcā* in the RV. The triumph over hostile rivals is also expressed in the parallel section of this hymn (vss. 1–4) in 3c *visvā vanvānn amitriyā* “winning all (the things) of the enemy.”

VIII.31.7: *vivāsataḥ* ‘the two seek to win’ is matched in the parallel by 3c *vanvān* ‘winning’.

VIII.31.8: *putrīṇā ... kumārīṇā* “possessing sons, possessing children” expands on *prajāvatī* ‘possessing offspring’ in the parallel, 4a.

VIII.31.9: With Ge and Re, I take pāda c as referring to sex, though in a devotional context (Ge: “Kinderzeugung als verdienstliches Werk”). The point of the Agastya and Lopāmudrā hymn I.179, already cited ad vs. 6, is of course that ascetic practice must yield to sex as a duty even for the very devout.

VIII.31.10: Flg. Ge, I take *svastí sarvadhātamaḥ* as if containing a dvandva *svastí-sarva-*. Ge convincingly cites other *svastí √dhā* passages. It might be possible to take it instead as a (short) instr.: “best establishing wholeness along with well-being,” though the status of *svastí* as an instr. seems shaky to me. Scar (264) takes it as an acc., with *sarva-* in the cmpd functioning as a predicative acc. to it: “der am besten das Glück vollständig macht.”

VIII.31.12: This vs. consisting entirely of nominals is surprisingly hard to interpret, primarily because of the unclear grammatical identity of *anarváṇaḥ* and the lack of parallelism between the animates of ab and the neut. *aneháḥ* of c.

To deal with the first problem first, beside the *-n*-stem *anarván-* we must reckon with a thematized form *anarváṇa-* (so Gr, Lub), the latter of which is attested twice as apparent nom. sg. masculine *anarváṇaḥ* (V.51.11 [or pl?] and this passage) and once as apparent acc. sg. masculine *anarváṇam* (X.92.14). Unfortunately all three forms immediately follow feminine singulars (*áditīḥ*, *arámatīḥ*, *áditim* respectively). Despite this clear pattern, I was reluctant to interpr. the apparent masc. forms as fem., esp. in the case of the nominative forms, and therefore contrived ad hoc fixes for those passages. Here the fix is not too difficult: the immediately following word (beginning the next pāda) is masc. *viśvaḥ*. I take this as referring to another entity who should come here, with *anarváṇaḥ* modifying it, rather than *arámatīḥ*. The referent is in fact open-ended: “every” or “any” one with the mind of a god. Note the evocation of the All Gods through the phrase *viśvo devásya*, though the words are in different cases.

Although this will (barely) work, on reexamining the evidence I am not at all sure that it is worth denying the apparent pattern of feminine reference with this stem, and I might substitute (with Ge) “Aramati, the unassailing one,” though in this passage that leaves masc. *viśvaḥ* orphaned. Both Old (ad V.51.11; see his careful disc. there) and Re in their different ways take *anarváṇaḥ* here as a nom. pl., but the nom. pl. to the athem. stem is *anarvāṇaḥ*, and in this passage the immediately following sg. *viśvaḥ* makes further trouble. It is worth noting that the bahuvrīhi *anarván-* and its derivatives have a troubled relationship with gender in general; see comm. ad I.37.2, 185.3, VI.48.15, II.40.6. In several instances, masc. forms are used to qualify neuters (I.37.2 and VI.48.15), and the supposed masc. nom. sg. of the *-n*-stem seems to have fem. reference in II.40.6 and VII.40.4. This may have led to a certain cavalier tendency to use masc. forms to cover all genders, even when not morphologically necessary.

As for *aneháḥ*, Ge and Re supply ‘protection’ (Ge “der unfehlbare (Schirm) der Ādityas”) on the basis of VIII.18.21, while Old (ad V.51.11) takes it as an adv. (construing *ādityānām* with *viśvaḥ*), though in his comm. on this passage he rescinds this in favor of its depending on *aneháḥ* (without tr.). On the basis of I.185.3 *anehó dātrām áditer anarvām* “the faultless gift of Aditi, which is unassailable” I tentatively supplied ‘gift’ (note the presence also of another apparently variant stem, *anarvá-*; see comm. there) in the publ. tr. However, the Ge/Re solution is quite possible, and I now prefer it, since protection/shelter is often modified by *anehás-* incl. in nearby 18.21. On the basis of my reinterpret. of that adj. (see comm. ad X.61.12) I would now tr. “the flawless (shelter) of the Ādityas.”

VIII.31.14: The 1st sg. *īle* in b does not match the nom. pl. part. *saparyántaḥ* in c. I take the pl. as including the *vaḥ*, the fellow ritualists for whom the poet invoked the god. As Ge points out, V.21.3 has *saparyántaḥ ... īlate*, with number congruence.

VIII.31.18: A nice etymological pun in *āśv-áśvya-*.

VIII.32 Indra

VIII.32.2: Ge takes *ánarśanim* and *ahīśúvam* as PNs, in addition to *śṛbindum* and the familiar *píprum*. Mayrhofer (2003, *Personennamen*) is uncertain about *ánarśani-*. Scar (538–39) tr. all as PNs as well, but discusses the possible interpretations of *ahīśú-*. On the basis of the parallel he cites in IV.16.13 *píprum mṛgayam śūśuvāmsam* “Pipru Mrgaya, swollen with power,” with the pf. part. to $\sqrt{śū}$, I prefer to take *ahīśú-* as a meaningful epithet. The question is then what the first member *ahī-* represents. Although it would be easier to identify it with *ahī-* ‘fertile cow’, which matches it exactly, I prefer to take it as a metrically lengthened version of *āhi-* ‘snake’, which makes more sense in the designation of a demon. See Scar (loc. cit.), also EWA s.v. *ahī-*. All four occurrences of this stem would have four short syllables if the second weren’t long \bar{i} , but I do not otherwise have an explanation of the lengthening. But note *prāśú-* below (16b) with the same lengthening before *śú-*.

As for *ánarśani-* I would again prefer to give it full lexical value, relating it (as Gr does) to *ánarśa-rāti-* (VIII.99.4) ‘possessing non-harmful gifts’(?), *arśasānā-* designation of another demon. See EWA s.v. *arśasānā-*. However, the root etymology (supposed $\sqrt{arś/ṛś}$ ‘harm’) is not strong, and the analysis remains uncertain. If it does mean ‘harmless’, the adjective is used proleptically, as is not uncommon.

The name of the first demon, *Śṛbindu*, displays non-Indo-Aryan phonology. See Kuiper (*Aryans* 40–41).

VIII.32.3: For *kṛṣé* in this repeated pāda, see comm. ad VIII.3.20. As was noted there, the alternative interpr. as a predicated inf. “this manly act is to be done” works well with the preceding impv. *tira*.

VIII.32.4: With Ge I supply both “bring” and “soma,” though I would prefer to have more formulaic or textual support for providing this extraneous material – however, cf. II.14.8 *gābhistipūtam bharata śrutāya* “Bring what is purified by your hand [=soma] to the one who is famed,” adduced by Ge. The preverb *prāti* occurs with \sqrt{bhr} (see, e.g., VIII.20.9 *prāti ... śārdhāya mārutāya bharadhvam / havyā ...*), but is not common.

tūrṇāśa- is a hapax without etymology (though Old’s literal gloss, “was dem Ueberschreitenden Verschwinden, Untergang bringt,” implies $\sqrt{tṛ}$ and $\sqrt{naś}$, without attempting to explain the morphology). I follow the consensus, that the word refers to a watercourse of some sort, since that makes sense in context. As often, verbal play may have had a role in its appearance here: 4b #*tūrṇāśam ná ...* is partly echoed by 5c *púram ná śūra ...* (*ūr/ur na am ś*, though not in the same order in both).

VIII.32.6: An alternative syntactic analysis of ab would take everything through *vā* in b as part of the *yádi* clause with *rārāṇaḥ* as verb, and start the main clause with *dádhase*, accented because it’s clause-initial: “If you will take pleasure in my pressed (soma) or in my solemn speech, you will find delight.” There are no strong arguments either way.

VIII.32.8: I do not understand Ge’s tr. of *saṃrarāṇāḥ* as ‘mitteilsam’ (communicative, talkative) and as if it were an adjective modifying food (“bring us mitteilsam Speise...”). (I assume that the specialization of this German cmpd for [verbal] communication postdates Ge’s language acquisition stage and his usage reflects some sense of teilen ‘divide, share’.) Kü (421) suggests that this participle means “bereitwillig,

spendefreudig,” implying that it is used absolutely and doesn’t take an object. This certainly is possible here, but doesn’t bring us to Ge’s rendering. In any case, the form here (*-rarāṇāḥ* to $\sqrt{rā}$) echoes *rārāṇāḥ* (to \sqrt{ran}) in 6a.

VIII.32.10: *bṛbāduktha-* is a hapax and has aggressively non-Indo-Aryan phonology (not one, but two *b*’s). My rendering is adopted from Weber (1891, cited by EWA s.v. *bṛbū-*; see also s.v. *bṛbāduktha-*). The word must deliberately evoke the name and epithet *bṛhād-uktha-* but should not be emended thereto; see Old and Ge. If Weber’s suggestion is correct, this may be a little joke, implying that Indra is powerful but not very good with words.

The bahuvr. *sṛprā-karasna-* matches the du. NP *sṛprā karāsnā* in III.18.5, used of Agni. Given the meaning of *sṛprā-* elsewhere (‘fat, glossy, sleek’; see EWA s.v. *sarpís-*), the tr. here should be changed to “of sleek forearms.” The description is more appropriate to Agni in III.18.5, where ghee is at issue, than of Indra here, though perhaps it refers to sweat gleaming on the forearms or else simply to their evident good shape and muscle tone.

VIII.32.11: A novel construction, at least as interpreted by Ge (fld. by Klein and accepted also by me). The word *-kratu-* ‘intention, resolve’ is extracted from Indra’s epithet *śatā-kratu-* and implicitly made object of *kṛnóti*, represented by the enclitic pronoun *īm*. See Ge’s “der ... hundertfach Rat weiss und ihn ausführt.”

VIII.32.12: A similar type of construction as the immediately preceding verse, though the connection between epithet and its dynamic manifestation is clearer: the epithet *śakráḥ* ‘able’ is transformed into the verb *śakat* ‘he will be able’. For an almost identical construction see I.10.6 and discussion there.

In both 11 and 12 I take *cid* as marking the epithet to be transformed, though in 11a it is displaced to the left.

Ge interprets the hapax *antarābhará-* as “der zwischen den Kämpfen steht,” presuming an analysis *antarā-bhará-*, rejected by Old, who favors the Pp *antara-ābhará-*. This fits the context better.

VIII.32.14: Ge takes *máhi sthirám* as the neut. obj. of *āyantāram*, supplying ‘bow’: “Der den grossen starken (Bogen) spannt.” There are several objections to this. First, it’s \sqrt{tan} , not \sqrt{yam} , that is the standard idiom for stretching or spanning the bow, including in the passages he cites as parallels. Moreover, suffix-accented *-tár-* stems (like *āyantár-* here) ordinarily govern the genitive not the accusative, and although this rule is often violated, the fact that *niyantár-* in the following verse (15), an agent noun to the same root, does take the genitive makes it less likely that this one would take an accusative. I therefore take *sthirám* as a modifier of Indra (as in the next hymn, VIII.33.9, and elsewhere) and *máhi* as adverbial. *āyantár-* here is best interpreted in the context of \sqrt{yach} in 23b below.

VIII.32.16: On *prāśū-* see Scar (539–40) and vs. 2 above, as well as comm. ad VIII.31.6.

This verse is oddly couched as an impersonal. Ge’s interpretation of it is conventional: the humans have fulfilled their obligation (*ṛṇám*) to the god and he

correspondingly fulfills his to them. But the curiously detached affect of the expression gives me pause, and the temporal relations between ab and c are backwards for this interpretation: *nūnām* ‘now’ situates the first two pādas temporally after the action of the third, whose verb is the perfect *pape*, and the perfect of $\sqrt{pā}$ is generally preterital. I therefore interpret the verse quite differently from Ge. I take the debt to be Indra’s, what he owes to the human worshippers who praise and press soma for him. But he has preemptively fulfilled it: his soma-drinking is always accompanied by his gift. The reason for the indirect and impersonal expression is to avoid saying directly that Indra could owe a debt to humans. This interpretation requires taking the genitives in ab as quasi-datives, but this is quite common.

On *apratā* see Old.

VIII.32.17: The loc. *pānye* as beneficiary/target of the verbs $\sqrt{gā}$ ‘sing’ and $\sqrt{śaṃs}$ ‘recite’ is peculiar: these verbs generally take the dative or, esp. with certain preverbs, the accusative. But loc. *pānya* in sandhi matches the nominative *pānya* in sandhi (that is, underlying *pānyaḥ*) that begins the next verse (18a), and this match accounts for the unusual case usage. A small, but telling, example of how rhetorical motivations can override strictly grammatical issues.

VIII.32.18: The intensive (that is, iterative-frequentative) *dardīrat* is appropriate to the multiple objects implied.

VIII.32.20: The curious term *svādhainava-* appears to mean ‘having its own milk/milk-cows’, with vṛddhi of *dhenú-* (see AiG II.2.114). It echoes *svadhā ānu* in 19a, and, as often, this echo may help account for its deployment here. Its referent is presumably soma-pressings or soma-drinks.

The relation between pāda a and the relative clauses of bc is, at best, “improper.” That is, the two singular forms *yāḥ* in b and c must have as their (rough) antecedent the gen. plural of pāda a referring to the pressings/drinks.

VIII.32.22: I take *āti* only with b: Indra is not supposed to pass *over* the three realms, but through them on his way to us. It is only the (other) peoples he is to pass over.

I now think it possible that *āva* $\sqrt{cakṣ}$ here means, literally, ‘look down upon’, as Indra travels through the air on his way to our sacrifice. See the very similar expression in X.43.6 and comm. there.

VIII.32.23: Pāda a plays on the ambiguity of *raśmī-*, both ‘ray’ and ‘rein’.

Although the simile in c seems to match the frame in b in case (nom. *gīraḥ* / *āpaḥ*, acc. *tvā* / *nimnām*), there is a functional mismatch: the waters are not guiding the deep as the songs are guiding Indra. It therefore seems best to take *āpaḥ* as one of the occasional examples of nom. for acc. in this stem, corresponding to *tvā* in the frame, with *nimnām* a further specification of goal. Ge clearly recognizes the problem and supplies a verb for the simile in c, “wie die Gewässer ... (fliessen),” but this violates the structure of the RVic simile, which always holds the verb in common with the frame.

VIII.32.24: The *hí* in the first imperative clause provides the logical basis for the second one. See Brereton 2012.

VIII.32.26: On *īcīṣama-* see I.61.1.

As in 2b *ahīśúvam* may be a PN, but I prefer to take it with lexical value. The same problem is encountered with *aurṇavābhá-*. Arbuda, however, is a known enemy of Indra, but this episode, with snow as the weapon, is otherwise unknown. Note again the non-Indo-Āryan phonology.

The return of the theme of Indra's smashing named enemies from vs. 2 suggests a ring, and the fact that the following verses (27–28) sketch a ring with vs. 1 strengthens this impression.

VIII.32.27–28: These two verses form a sort of ring with vs. 1. There *gāthayā / máde sómasya vocata* “with a song proclaim ... in the exhilaration of soma”; here *bráhma gāyata* // ... *sómasya máde* “sing a formulation ... in the exhilaration of soma.”

VIII.32.27: The “who lays low” of the publ. tr. might be better “who lays (enemies [vel sim.]) low,” to make clear that a transitive sense is required. On the form *niṣṭúre*, whose vocalism and morphology are puzzling, assuming it's derived from *ní√stṛ*, see, e.g., Scar (642–43) and JC's (as yet unpubl.) paper on rounding of syllabic liquids in IIR. There does not seem to be a satisfactory solution.

VIII.32.28: The phrase *viśvāni abhí vratā* in pāda a is difficult to connect with any other part of the vs. The only verb in the vs. is the verse-final *cétati*, but *√cit* does not otherwise appear with *abhí* in the RV, or indeed elsewhere in Skt. as far as I know – though Ge seems to construe the *vratā* phrase with it: “der ... alle Obliegenheiten ... bedenkt” (sim. HPS [Vrata 60] “der ... alle Gelübde ... beachtet”). I wonder if this involves a crossing of *abhí√caks* ‘oversee’ with expressions like I.70.2 *ā daívyāni vratā cikitvān* “Observing / watching over all the divine commandments,” with a form of *√cit* as here. The lexeme *abhí√caks* often governs *viśva-* phrases (e.g., I.108.1 *abhí viśvāni bhúvanāni caṣṭe*) and also takes objects in the same general range as *vratā-* (e.g., *bráhmāni* VII.70.5, *dhāmāni* VIII.101.6). The drawback to this suggestion is that *abhí* is wrongly positioned for a preverb in tmesis (also a drawback to Ge's and HPS's interpr.). We should also take into account *abhí vratā* in X.66.9, which is also difficult to construe. See comm. there.

VIII.33 Indra

VIII.33.1: This verse has at least one clear subject (*vayám* ‘we’ in a) and one clear verb (3rd pl. *pári ... āsate* ‘sit around’ in d), but they do not match grammatically. There are (at least) two possible solutions: either to supply a 1st ps verb with ab (or abc) (so Ge) or to assume a modulation from 1st ps to 3rd ps. because of the nom. pl. *stotārah* ‘praisers’ in d, which, by this interpretation, would be in apposition to *vayám*. (Ge acknowledges this possibility in his n.) Despite the awkwardness I prefer the second option, in part because there is no obvious verb to supply in the earlier part of the vs. -- though I admit that Ge's “anbrausen” (*√svar*) is possible, given *svāranti* opening vs. 2 and the parallels he cites in his n. for singers and waters as subjects of *√svar*.

The other problem is the application of the simile “like waters” in b. It is not immediately clear why we are like waters. I connect the simile to the phrase *pavítrasya prasrávaneṣu* in c and suggest that the waters go in circles at this outpouring just as we take our seats in a circle. It is also possible that the waters are being compared to the pressings in the adjective *sutāvantah* “provided with pressings, (which are) like waters.”

On both difficulties in this verse, see detailed discussion by Old.

VIII.33.2: On *svabdín-* as derived from *sva-* and a reduced form of *pád-* ‘foot’, see Old, whose interpr. is fld. by Ge, though EWA (s.v.) is agnostic.

VIII.33.3: Phonetic figure in ab *dhṛṣṇav ... dhṛṣád ... darṣi*

Ge supplies “gepreisen” with the instr. *kāṇvebhiḥ*. He is probably correct that the Kaṇvas are not likely to be assisting Indra in his conquests, but I still resist supplying material without a clear basis.

VIII.22.4–6: This *ṛca* is unified by the series of rel. clauses, all introduced by *yáḥ*, most of them nominal, all characterizing Indra (4c (2x), 5a, 5b, 5c (2x), 5d, 6a (2x), 6b.

VIII.33.4: “Drink!” is an imperative that the poet Medhyātithi should not be addressing to himself, as opposed to “sing!” I therefore take it as the content of his song, addressed to Indra.

On *suté sácā* (also vs. 7) see comm. ad IV.31.5.

In d Ge takes the last two words *rátho hiraṇyáyaḥ* as a separate nominal clause “golden is his chariot.” This is possible, but I think it is far more likely a phrase qualifying Indra, despite its slight oddness. Indra can be called a chariot because he comes with lots of goods, like a chariot (see, e.g., I.125.3 *vásumatā ráthena*), and also because he’s “linked” (*sám̐mislāḥ*) to the two horses, as if he were the chariot they are yoked to and pull. Moreover, starting with 4c the rest of the *ṛca* (4c–6c) consists only of descriptions of Indra in the nominative, arranged in relative clauses. A nominal clause with a different subject would interrupt this structure.

VIII.33.5: I take the phrase *susavyáḥ sudákṣiṇaḥ* as referring to Indra’s two horses, since it follows immediately on a hemistich (4cd) concerning those horses and his chariot. But ‘sides’ or ‘hands’ are also possible. Ge simply fails to supply a referent (“Der eine gute Linke, eine gute Rechte hat”). I.82.5 *yuktás te astu dákṣiṇa utá savyáḥ ...* supports my interpretation as horses.

The stem *ākarā-* ‘distributor’ (< *ā√kṛ* ‘scatter’) occurs 3x in the RV; twice (III.51.3, V.34.4) it is construed with a gen. (*vásoḥ* and *vásvaḥ* respectively). Acdg. to Gr it takes an acc. here, and this interpr. is followed by Ge and the publ. tr. I now wonder, however, whether the apparent obj. of this nominal, *sahásrā*, is not instead truncated, by a kind of lexical haplology, from a cmpd. **sahásrā-magha-* parallel to *śatā-magha-*. I suggest an alt. tr. “the distributor who has thousands, hundreds of bounties.” The proposed cmpd., *sahásrā-magha-*, is found in VII.88.1.

On *āritā-* see comm. ad VIII.16.6.

VIII.33.6: The expression *śmāśruṣu śritāḥ* “embedded within his beard” is striking. It seems to be a slightly jocular expression, meaning perhaps that Indra has such a big bushy beard that it’s as if he’s been embedded into it -- one sees it before one sees him.

Although most instances of surface *asti* are existential, accented *ásti* often functions as a copula, esp. in subordinate clauses as here. See my 1990 “Tense of the Predicated Past Participle,” 4–5.

VIII.33.7: The presupposition behind the questions of ab seems to be that Indra becomes so formidable when he drinks soma that he becomes unrecognizable. Shape-shifting of heroes under such circumstances is a widespread mythological phenomenon.

The loc. absol. *suté sácā* is also found in vs. 4; on the phrase see comm. ad IV.31.5.

VIII.33.8: I think the idea behind the simile is that elephants establish a large territory in which they wander, and that Indra has established a similarly large territory by giving to sacrificers scattered all over the map. Ge’s “mit seinem Bruntsaft” (‘rutting liquid’) stems from an idea of Pischel’s (see Old, Kl. Sch 306) connecting this passage with the later (Epic+ *dāna-* meaning elephant’s rutting liquid [see EWA s.v. *dānā-*]). This seems unlikely and it is hard to see how simile and frame would work together.

I have toyed with another possibility that remains tantalizingly hard to realize: *dānā* may indeed be a pun, but a different one: an instrumental both to *dānā*, as it’s taken here, and also to *dāmān-* ‘rope’ (whose inst. is indeed regularly *dānā*). In this second reading *nā* would be ‘not’, not ‘like’, and *vāraṇāḥ* would be some derivative of √ *vṛ* ‘hold back, restrain’ in addition to ‘wild’. The meaning of the second reading would be “a beast not (to be) restrained by a rope,” in addition to “Like a wild elephant ... by his giving.” The second reading would harmonize with 6a, 10b *āvṛtaḥ* ‘unobstructable’ and be paraphrased by the next pāda in its own verse, 8c *nákis tvā ní yamat* “No one will restrain you.” However, I have been unable to find a way to make *vāraṇā-* a plausible form of √ *vṛ* in the correct sense and so have not pursued this possibility further.

The 2nd part of c, *ā suté gamah*, is an abbreviated version of 2c *kadā sutám ... ā gamah*. The whole pāda is paraphrased by 9d.

VIII.33.9: At first glance it is hard to find a concessive sense for the pres. part. *sán* in pāda a, despite its usual value. Indeed Ge takes ab as an independent nominal clause and begins a new sentence in c. However, the idea may be that although Indra is very tough and primed for battle, he’ll drop everything and come when we call him to the sacrifice.

The sense ‘perfected’ for *sāmskrta-* may be anachronistic; if so, ‘entirely readied’ or the like can substitute.

The *yádi* in c may be an ex. of my *yád ī* “when it ...” (see my 2002 “Rigvedic *sīm* and *īm* [Fs. Cardona] 305–9), with the **ī* shortened (redactionally?) before the cluster *st-*. The *ī* would double the obj. *hávam* later in the pāda. In this case we can substitute the alt. tr. “when the bounteous one will hear ...”

Pāda d is essentially a paraphrase of 8c, with *ā gamat* in particular doubling *ā ... gamah*.

VIII.33.10–12: A ṛca marked by repetition of *vṛṣan-* ‘bull’; every pāda but 12d contains at least one form of this stem.

VIII.33.12: On *ṛjīpin* see comm. ad IV.26.6.

“In the waters” in the publ. tr. should be corrected to “in the rivers.”

Ge and Kü (256) take *dadhanve* as transitive (Ge “... liess ... laufen,” Kü “... hat laufenlassen...”), but the other examples of this medial perfect are intransitive (VIII.19.1, also taken by Kü as transitive, can be interpreted in the same way as this one), and the accusative can easily be a goal. See comm. ad VIII.19.1 and X.113.2.

VIII.33.13: On *nāyām* see VIII.2.28. After my reexamination of the evidence (Hock Fs., 2013) I would now rephrase the translation of the first three pādas as “Drive here, most powerful Indra, to the somian honey to drink it, as bounteous one, all on your own,” eliminating “to the landing site” and construing *āchā* with *mādhu ... somyām* in the preceding pāda. The tr. “all on your own” renders *nāyām*, that is, *nā + ayām*./

A new clause begins with *śṛṇāvat* in the middle of c. Ge takes all of cd together, but the accentuation of *śṛṇāvat* is unexplained in this interpretation. Moreover *āchā* is not otherwise found with $\sqrt{śru}$ but is common with $\sqrt{yā}$. However the distribution of clauses is handled, there is a switch of person between 2nd ps. *yāhi* in pāda a and 3rd ps. *śṛṇāvat* in c, both with Indra as subj.

VIII.33.14: Note the indefinite use of pāda-initial *anyēṣām*, by rule (Jamison 1997 “Vedic *anyā* [Fs. Beekes]).

VIII.33.15: The marked emphatic initial *asmākam* in a and c is not reflected in the publ. tr., which is unfortunate because these two forms contrast sharply with initial *anyēṣām* of 14d.

VIII.33.16–19: As discussed in the publ. intro., in my view this strange pendant to the hymn is an oblique attack on what I consider a late RVic ritual innovation, the introduction of the Patnī, Sacrificer’s Wife, as a required role in standard ritual. For both general discussion of this situation and some detailed consideration of passages throughout the RV, including this one, that fight this doctrinal battle, see Jamison 2011 “The Secret Lives of Texts” (Presidential Address, American Oriental Society 2010; JAOS 131: 1–7) and “‘Sacrificer’s Wife’ in the Rig Veda: Ritual Innovation?” (Brereton and Proferes, eds., *Creating the Veda, Living the Veda: Selected Papers from the 13th World Sanskrit Conference*, 19–30). The division of speakers, again in my view, is that the poet, who opposes the new ritual model, speaks the first (16) and last (19) verses, while 17–18 are put in the mouth of Indra, who is a proponent. These verses are extensively discussed by Old and Ge, with Old somewhat more in line with my own interpretation; I will not consistently signal my agreements and disagreements with them in what follows.

VIII.33.16: I take the disgruntled speaker to be the poet and the subject of *rāṇyati* to be a rival ritualist, who has accepted the new doctrine. The “you or me” of pāda a is rather like the English expression “the likes of you and me,” meaning “ordinary people.” I take

the *nahí ... nó* (= *ná u*) as having domain only over *táva* and *máma*, not the *anyásya* of pāda b. By my rules (Jamison 1997; see ref. ad vs. 14 above) *anyá-* in this position should be definite (not Ge's indefinite "oder eines anderen..."), and I take its referent to be Indra. The referent of the *yáh* in the rel. clause in c I again take to be Indra (that is, *anyásya*), rather than the subject of *rānyati*, as Ge does. The designation *vīrá-* is of course regularly applied to Indra, and "led us here" can refer both to Indra's leadership in the acquisition of new territory and to his role in introducing the ritual innovation. And Indra starts off the next verse.

VIII.33.17–18: The repetition of *cīd ghā* (17a, 18a) may help identify these two vss. as the speech of a single individual, namely Indra.

VIII.33.17: Indra begins, cleverly, with concession: he admits that women's mental powers are not as strong as they should be. I take this as Indra's direct speech, even though pāda c is in the accusative (and pāda b could be), since I think such mixed constructions (X said "abc" / said that abc) are found elsewhere. However, little is lost if it is taken as indirect discourse. For a different sort of conflation of direct and indirect speech, see my discussion of MS II.4.3 in my 1991 "The Syntax of Direct Speech in Vedic," p. 51 and n. 10. For a novel interpr. of the history and function of the particle *āha*, including its use in this passage, see Zachary Rothstein-Dowden, "On the Etymology of Vedic *āha*," JAOS 142.1 (2022).

Note that the term *krātu-*, used extensively of Indra previously in this hymn (vss. 5, 6, 11, 13, 14), is now applied to the woman.

VIII.33.18: In my interpretation Indra's speech continues here, and having admitted the drawbacks to employing women in the ritual, he introduces the model of the yoked pair (that is, the married couple) drawing the chariot of sacrifice, a pair that must be more or less equally matched, but with the side of the pole to which the male is attached somewhat higher than that of the female. (Some animals are more equal than others.) (On the chariot pole [*dhūr-*] see comm. ad X.28.5.) The image of the sacrifice as a chariot is of course a common one, and the word *mithunā* 'complementary pair, sexual pair' seems to me the tipoff that this is about the married couple. (Old is in general agreement.)

VIII.33.19: The poet returns in his own voice to mock the new model, by imitating in the first three pādas the speech of a mother to her little daughter, inculcating proper behavior. *kaśaplakaú* in c is a hapax, but its *-ka-* suffix suggests that it belongs to a low register (note also *pādakaú* in b) and the fact that it is in the dual limits its possible applications. Old suggests "weibl. Geschlechteile" (though he moves on to breasts), and the fact that keeping one's feet together keeps them from being seen makes the labia a good possibility.

The poet then unleashes a devastating insult on his addressee, a brahman – that he has turned into a woman. I take this unfortunate figure to be the ritualist favoring the new model, and our poet is suggesting that too much association with and sympathy for women, too much emphasis on equality, will unman a man.

VIII.34 Indra

On the formal structure that dominates this hymn see the intro. The hymn is awkward to translate and, I have to say, sometimes seems awkwardly composed.

VIII.34.1: I do not understand the accent on *yayá* in the refrain, but it may be implicitly contrastive with *yāhi* in a.

VIII.34.3: Note the syntactic disharmony between simile and frame, exploiting the variant valencies of the verb, with *dhūnute* an intrans.-reflexive in the frame (“felly shakes [itself]”) but transitive in the simile (“as a wolf shakes a lamb”). See Jamison 1982.

VIII.34.5: Since the referent of *te* is Indra, explicitly comparing him to a bull in the simile *vīṣṇe nā* seems odd, since he is ordinarily simply identified as such. Ge seems to think it’s a real bull, exhibiting thirst.

VIII.34.16: See the publ. intro. for the relation between the PN Vasurocis and the vocative addressed to Indra through the first fifteen verses, *divāvaso*.

An example of the rare 1st ps. dual construction “(I) and X” as subject of a 1st dual verb, with the “I” unexpressed: *índraś ca dādvahe* “(I) and Indra took ...” For further discussion see VIII.62.11.

VIII.34.18: The apparent PN Pārāvata (‘who comes from afar’) apparently naming the patron makes sense as a speaking name in this hymn, which emphasizes the *coming here* of Indra from distant places and allows the identification of patron and Indra.

Note that the last word of the hymn is *ā*, as it was the first (and it opens twelve of the hymn’s verses).

VIII.35 Aśvins

See the publ. intro. for the pattern of repetitions in this very repetitious hymn. The c pāda of every vs. save for the last three (22–24), “in concert with Dawn and the Sun” (*saṁjōṣasā uṣāsā sūryeṇa ca*), of course refers to the Aśvins’ participation in the dawn sacrifice.

VIII.35.10–12: The first hemistichs of the three verses in this ṛca are excessively provided with *ca*’s, as well as 2nd du. act. impvs in *-tam*. Cf., e.g., 10ab *pībatam ca tṛṇutām cā ca gachatam, prajāṁ ca dhattām dráviṇam ca dhattam*.

VIII.35.11: The distribution of *ca*’s in pāda a is somewhat puzzling or, perhaps, syncopated, with the 2nd *ca* following preverb+verb (*prá stutam ca*), though the other two preverb/verb combinations in this ṛca place the *ca* in the expected position after the preverb (*ā ca gachatam* 10a and immediately following *prá cāvatam* 11a). This does not seem to be metri causa, or at least not in some obvious way.

VIII.35.13: Exactly what *dhārmavant-* is conveying here is unclear, but it is highly unlikely to be, with Ge, “von Dharma [den Gesetz] ... begleitet,” since ‘law’ is quite anachronistic for *dhárma(n)-*. I also do not think Re is correct in seeing it as a proper

noun, despite its appearance in a -*vant*-stem parallel to those containing gods' names. Rather, the repetitive template of the *ṛca* imposes the -*vant*-stem here, on the abstract principle *dhárman*- generally associated with Mitra and Varuṇa -- here perhaps referring to their authority and its manifestation (their statute) by which they impose order on the world.

VIII.35.15: *vājavant*- may mean -- instead of, or in addition to, 'accompanied by prizes' - - 'accompanied by Vāja' (name of one of the Ṛbhus) or '... the Vājas' (as a designation of all the Ṛbhus). Certainly the juxtaposition with *ṛbhumánt*- is meant.

VIII.35.16–18: A verb needs to be supplied with the d pādas of this *ṛca* (*sómaṃ sunvató áśvinā*). On both general grounds and the d pādas of vss. 1–3 (*sómaṃ pibatam áśvinā*) (see also 22b *pibatam somyám mádhu*), 'drink' makes the most sense, though 'drive to', which dominates the middle part of the hymn, is certainly possible.

VIII.35.23: On *vivákṣaṇa*- see comm. ad VIII.45.11. Contra Ge and Re, I take it with $\sqrt{vakṣ}$ 'strengthen', not \sqrt{vac} .

VIII.36 Indra

The meter of vss. 1-6 of this hymn is analyzed by Arnold (p. 248, E73) as consisting of 6 pādas: 12 12 / 8 8 8 8, and this arrangement of the stanzas is followed by HvN. Old disputes this, suggesting instead 12 8 4 / 8 12 4 8. (On the lack of accent on *śatakrato*, which he takes as a separable 4-syll. sequence, see his remarks on II.22.3.) Among other things, this division allows *sám apsujít* to be an independent sequence, as it is in its occurrences in Uṣṇih, VIII.13.2 and IX.106.3. On this expression see comm. ad VIII.13.2.

VIII.36.2–3: Somewhat unusual 2nd ps. reflexive using the standard 2nd ps. pronoun: 2a *áva tvám* "help yourself," 3a *ávasi ... tvám*. The accent on the verb in 3 is probably the textbook example of an implicitly contrastive accented verb, with predicates preceding and following.

VIII.36.6: Note *átrī... adri...*

VIII.36.7: This verse breaks out of the rigid structural mold of the first six verses, but note that it also echoes vs. 1: 1a *avitāsi sunvatáh* / 7a, c *sunvatáh ... āvitha*.

VIII.37 Indra

VIII.37.1: Although this hymn of the twinset of VIII.36–37 is the domain of the *kṣatrāṇi* 'lordly powers', it begins with the *bráhman*- that ended the last hymn and provided its key word, also echoing that verse in other ways (*āvitha, sunvatáh*).

Ge takes *sunvatáh* as acc. pl., but given the connections between the two hymns and the fact that *sunvatáh* in VIII.36 is gen. sg. in both the first and last verses of VIII.36, I find this unlikely.

There are some difficulties in distributing the words in the refrain pādas. Given its regular recurrence, *sacīpate* ‘o lord of power’ should be the first word of the refrain, but given its lack of accent it must be the last word of the non-refrain pādas. Nonetheless I have tr. it with the refrain. Also problematic is unaccented *anedya*, which comes at the end of a pāda already twelve syllables long and should therefore not belong to it. Old discusses but doesn’t really solve.

VIII.37.2: Note that *sehānāḥ ... pṛtanāḥ* in the new material of this verse picks up a phrase in the refrain of VIII.36 *vīśvāḥ sehānāḥ pṛtanāḥ*.

VIII.38 Indra and Agni

VIII.38.1–3: The referent of *tāsya* in the refrain pāda is not specified. It must fall into the cultic sphere, but could be ‘sacrifice’ or ‘hymn’ or, perhaps best, since it’s explicit in a nearby hymn by the same poet, ‘call’: VIII.35.4 *bódhatam hávasya me*.

VIII.38.2: I adopt Brugmann’s suggestion (presented and generally endorsed by Old, also Scar 417–18) to read **tośā** *sarathayāvānā* for *tośāsā ratha...* Scar assembles an impressive number of passages involving *sarátham* / *saráthā* and *√yā*, incl. I.108.1 dedicated to Indra and Agni. The suggestion has the merit of eliminating the supposed *s-*stem *tośās-* with its apparent anomalous *uśās*-like inflection with lengthened grade in the strong form *tośāsah*. The dual to the thematic *tośā-*, *tośā* exactly as here, is found in another Indra and Agni hymn III.12.4. The change does require going against the Pp. and also emending *sā* to *sa*. The publ. tr. should have an asterisk before “driving on the same chariot.”

As for *tośā-*, Gotō discusses it at length (1st Class, 166–68), rejecting the old gloss as ‘drip’ in favor of ‘hasten’; his redefinition is accepted by Mayrhofer (EWA s.v. *TOŚ*, replacing KEWA’s ‘drip’). Because the anodyne ‘hasten’ can fit almost any verb in the RV (and in fact the old RVicist joke is that, judging from Ge et sim., all verbs in the RV mean ‘shine’, ‘hasten’, or ‘sing’), there is nothing in the usage of the forms of this root that imposes ‘hasten’ (or excludes it). That Gotō labels his reinterpretation “plausibler” than the older one shows once again a certain deafness to metaphor and a penchant for the semantic lowest common denominator. Moreover, that most of its subjects are liquids supports the old rendering ‘drip’. The only preverb with which it is found is *nī* ‘down’. Verbs of hastening (etc.) generally take a variety of directional preverbs, of which *nī* is one of the rarest and most specialized; dripping, on the other hand, goes in only one direction, down. Gotō’s ‘hasten’ gets little or no support from the Iranian evidence he adduces (168 n. 275), which is quite weak and questioned even by him. Although as ‘drip’ *√tus* has no good etymology either (see KEWA s.v. *tósate*), I see no reason to replace it with ‘hasten’ without better evidence. In our passage ‘streaming’ probably reflects the same metaphor in English for speed. Or, like *nitósana-* in VIII.25.23, it could mean ‘overflowing’ (with goods) and refer to the anticipated generosity of the gods.

VIII.38.3: Pāda a can of course be in the acc. (not nom. as I take it) and form a single sentence with b (so Ge). There are no implications either way, but I prefer to take fronted

forms of *ayám* as annunciatory (“here is ...”) if at all possible. However, given initial *imā* (5a) and *imām* (6a), which can’t be so tr., this is not a strong arg.

VIII.38.5: Pāda b is somewhat awkward because it states that both Indra and Agni carry oblations. Ge gets out of the difficulty by making the oblations an acc. of goal with an intransitive reading of *ūhāthuh* (“... ihr zu den Opfergaben gefahren sind”), but Old convinces me (ad I.84.18, with a number of parallel passages) that we cannot sidestep the transitivity in these expressions (√ *vah* + oblation(s)). In this particular case we can attribute the transitive phrase to a feature of Indra and Agni hymns noted in the publ. intro., that both gods get credited with actions or qualities appropriate to only one of them, and Agni is of course the conveyor of oblations par excellence.

VIII.38.6: Both Ge and Re take *gāyatrā-* as a technical reference to the Gāyatrī meter and poems composed in it (also vs. 10); this is possible, but the stem is often used just of a song.

VIII.38.7: On *jenya-* see comm. ad I.128.7.

VIII.38.8: I construe the Śyāvāśva genitive phrase directly with the verb, rather than supplying ‘call’ (*hávam*) with Ge, on the basis of VIII.36.7, 37.7. But either is of course possible.

VIII.39 Agni

VIII.39.1: Ge tr. *vidáthe* as “den beiden gelehrten Stände,” commenting (n. 1de) that *vidátha-* “ist die Autorität in gelehrten Sachen.” Following Thieme (Unters. 37ff.; see also EWA s.v.), however, I take the stem as derived from *ví* √ *dhā* ‘divide, distribute’. In most instances (esp. in the loc. *vidáthe*, identical to the form here) *vidátha-* refers to the ceremonial distribution of goods and, more loosely, to the ceremony itself, but it can also refer to cosmic divisions (for other passages see Thieme’s collection; one ex. is 9b below), and that is the referent here. The presence of *ubhé* helps mark the form as a neut. dual, as opposed to the otherwise ubiquitous loc. sg.

VIII.39.2: In c I read, with Old but contra Pp, *árātūr árāv^a nām*. This does not require emending the Saṃhitā text, but simply redividing the words.

With most interpr. I take *vācaḥ* synchronically as a truncated form of the instr. *vācasā* to be construed with *nāvyasā* (also II.31.5, VI.48.11 in the same pāda-final position; versus medial ... *nāvyasā vācasā* ... VI.62.5). However, I do not regard it as an inherited instrumental showing deeply archaic morphology (with Hale, Fs. Melchert, esp. 93–95), esp. since Hale sets out very persuasively the cost of assuming such a preserved archaism (87–88), thus undercutting his own view of *vācaḥ* in these passages. I am not entirely certain what gave rise to what in my view is a synchronic, poetically generated variant. On the one hand, the expected instr. sg. *vācasā* would not fit the end of any cadence in Vedic meter; the form is almost invariably found in the break after an opening of either 4 or 5. The instr. pl. *vācobhiḥ* is, by contrast, quite common pāda final in Triṣṭubh (8 of 13 forms), and I wonder if our “instr.” *vācaḥ* did not originally start out

from a truncation of the *-bhiḥ* ending to fit into an iambic cadence (Jagatī or dimeter vs.). This of course does not get us the instr. *singular* with *nāvyasā*, however. Another factor that may have contributed is contexts in which a nom./acc. *vācaḥ* would be grammatically possible, with *nāvyasā* an adverbial instr. ‘anew’. Ours is such a passage; *vācaḥ* here can be parallel to *śāmsam* ‘laud’, hence “(set) down ... anew a speech, a laud ...” (also suggested by Scar 392 n. 544). Then analyzed as an abbreviated instr. because of its proximity to *nāvyasā*, the phrase could be used in passages in which a nom./acc. *vācaḥ* is excluded.

The tr. just suggested depends crucially on accepting my interpr. of pāda b, against that of Ge (see also Gr, Scar 392). The questions are the positive or negative value of *śāmsam* and the referent of unaccented *eṣām*. Most take the latter as referring to the *ārāvnām* of the following pāda, but, strictly speaking, unaccented forms of *ayām* should refer to something already in the discourse. Although the proximity of the two forms might allow *ārāvnām* to “count” as already in the discourse, I would prefer to find a referent preceding *eṣām*, and *devān* in 1c is available. This also allows us to interpr. *śāmsa-* in its more common positive usage ‘laud’, rather than the rare (though definitely attested) negative sense (see, e.g., III.18.2 *śāmsam āraruṣaḥ*, with a gen. akin to our *ārāvnām*).

We thus have two parallel expressions, pādas ab and cd, each beginning with *nī* and lacking a verb. I supply *√dhā* for both, with slightly different senses: ‘set down (upon)’ for ab and ‘put down’ in the idiomatic sense also found in English (though without the English specialization to speech) for cd. For *√dhā* with *tanūsu*, see, e.g., I.85.3, III.19.5, III.53.18; for *śāmsam √dhā* + loc. of god, see X.42.6a *yásmin vayām dadhimā śāmsam índre* “Indra, upon whom we have set our laud” (lit. “upon which Indra we have set our laud”).

VIII.39.3: *prá cikiddhi* presents the usual problem of forms of *√cit*: does this fall in the intransitive ‘appear, be perceived’ range or I/T ‘perceive’? I have opted for the latter, since Agni is regularly called *prácatas-*, which I interpr. as ‘discerning, provident’. But Ge and Re go for the former, which is certainly not impossible and might be supported by *ciketa* in 5a.

VIII.39.4: Ge supplies a different subject (“singer”) for *kṛpaṇyāti* in the rel. clause than for *dadhe* in the preceding main clause: “so viel Kraft verlieht Agni wie immer (der Sänger) bedarf.” This is novel, but seems unnecessary and supported neither by context nor by parallels.

The Pp. analyzes *ūrjāhutiḥ* as *ūrjā āhutiḥ*, that is, probably with an instr. 1st member, but Old prefers to see the 1st member as a stem form, either *ūrjā-* or *ūrjá-*. The latter is marginally attested in cmpds and in the verb stem *ūrjáya-*, probably originally a denom. (see Jamison, *-áya-*, 50, 81). By Ge’s interpr. (which I follow), gen. pl. *vásūnām* limits the first member of this cmpd *ūrjāhuti-*. This is common in later Sanskrit, but somewhat rarer in the RV. Re (and Klein) render it backwards (Klein, DGRV I.205–6 “whose nourishment is the oblation of the gods”), but still with the gen. pl. limiting only one of the members. It may not be sufficiently clear in the publ. tr. that I take the cmpd as a bahuvrīhi.

Note that both *-āhuti-* (*√hu* ‘pour’) and *-hūti-* (*√hū* ‘call’) appear in this vs.

VIII.39.5: The standard interpr. take *pratīvyām* as the obj. of *inóti* (e.g., Ge “er befördert die Darbringung”), and this is certainly the simplest way. But *inóti* means ‘impel’, and *práti* √ *vī* refers to the gods’ reception of mortals’ offerings, not the offerings themselves (see the root noun in quasi-infinitival usage in VIII.23.1, 26.8, and finite passages like VIII.101.10), so the simpler syntax requires attenuating the meanings of both words. I therefore complicate the surface syntax somewhat by supply an obj. to *inóti* extracted from *dákṣiṇābhiḥ* in pāda c and making *pratīvyām* the goal. If the infinitival sense of *pratīvyām* in its other two occurrences is maintained here, it could be tr. “impels (them) to be received.”

VIII.39.6: As pointed out in the publ. intro., pādas ab contain a pun -- which Ge fails to note and Re mentions in his n. but fails to render in his translation. Agni “knows the races” (*jātā ... veda*) of gods and men. Those two words in that order produce his common epithet Jātavedas. I take *apīcyām* ‘hidden, secret’ at the end of b as a separate clause, alluding to this pun: “(this is his) secret (name).” (The publ. tr. should have “name” in parentheses.) *apīcyām* (-āni) almost always qualifies ‘name’, including two hymns later by the same poet (VIII.41.5 ... *apīcyā / véda nāmāni gúhyā*). Both Ge and Re instead take *apīcyām* as a separate object of *veda*, construed with *márt(y)ānām*, while *jātā* is limited only by *devānām* (“knows the races of the gods and the secret [/Re ‘specificity’] of mortals”), though gods and mortals are frequently a merism. My view that *apīcyām* is a separate clause is supported by the meter. Mahāpañkti consists only of 8-syllable pādas, and 6b should end after *márt(y)ānām*. In fact, Old in his Prol. suggested deleting the following *apīcyām*, but in the Noten thinks better of it, allowing a 4-syllable pendant to this line. This pendant is, in my interpr., syntactically independent and a sort of meta-comment.

In e Ge supplies ghee with *nāvīyasā*: “mit erneutem (Opferschmalz).” This of course is more semantically harmonious with *svāhutaḥ* ‘bepoured’, but betrays a sad lack of poetic sensibility. The stem *nāvīyas-* is regularly used of verbal products, and it narrowly echoes *nāvīyasā vācaḥ* of 2a. Moreover, 3ab contains an example of the trope “pour prayers” (there explicitly compared to ghee: *mānmāni ... ghṛtām ná juhve*). This expression *svāhuto nāvīyasā* economically combines the “newer speech” of 2 and the “pouring prayers” of 3, using both √ *hu* (from 3) and *nāv(ī)yas-* (from 2). The poet could hardly have made his metaphorical intent clearer. (Re is only a bit less flat-footed than Ge; he gives *nāvīyasā* the correct referent [hymne], but still sneaks in a supplied beurre fondu to construe with *svāhutaḥ*.)

VIII.39.7: Gr derives *sāmvasu-* from √ *vas* ‘dwell’, and Ge’s “Hausgenosse” reflects this derivation (see also AiG II.1.75). But Old argues that it contains *vāsu-* ‘good(s)’ and compares *sahāvasu-*, *vāsubhiḥ sāha*, an analysis accepted by Debrunner (AiG II.1 Nachtr. 24, AiG II.2.471), Re, and me.

With the standard tr., I take *visvām bhūmeva* as a two-member simile, acc. + nom. A passage two hymns away in the same cycle, VIII.41.5 *sā kavīḥ kāvyā purú, rūpām dyaúr iva puṣyati* “he is a poet who fosters the many poetic arts, as heaven does its (concrete) form,” makes this analysis pretty much inescapable. But I am still somewhat concerned by the position of the *iva* (in both passages), following the 2nd element of the

simile rather than the first, and *viśvam bhūma* ‘the whole earth’ would also be a possible NP.

VIII.39.8: “Seven” here is probably a loose indication of totality (so Oberlies, II.74) rather than a precise enumeration. The number may have been displaced from *sīndhuṣu*: the rivers are generally seven.

VIII.39.8, 10: I do not understand the sudden prominence of the rivers/waters, esp. the waters that in 10e are *svāsetu*- ‘having/being their own bridges/dams’. Ge (n. 10de) thinks it alludes to the ritual sprinkling of the fireplaces with water, which may well be, but which does not explain the descriptor. In its other occurrence (X.61.16) *svāsetu*- refers to a poet who crosses the waters (*apāḥ ... tarati*) by having or making his own bridge. Are the waters providing Agni with a bridge for him to cross them? It may (or may not) be relevant that the waters/rivers are fairly prominent in the next hymn (VIII.40) to Indra and Agni.

VIII.39.9: On *vidātha*- as ‘cosmic division’ see comm. ad vs. 1 above.

VIII.40 Indra and Agni

VIII.40.2: The hapax *vavrāyāmahe* is somewhat puzzling. It appears to be a denom. to *vavrā* ‘hole’, with accent retraction because it is transitive (so Jamison, -*āya*-, 88–89). This deriv. goes back to Bartholomae and is endorsed by Old, for want of anything better. But what is its point in context? Here Re seems to show the way, taking it as oppositional to the following pāda, which begins with the contrastive particle *ātha*: “But we sacrifice just (/especially) to Indra.” The idea is that, though the hymn is dedicated to both Indra and Agni, we don’t put the two gods in the same undifferentiated category, “in the (same) hole,” as it were, but treat them individually. As noted in the publ. intro., the two gods *are* treated with more independence than in most Indra and Agni hymns (which isn’t saying much).

VIII.40.3: The clauses ab and cde begin identically, with *tā*. It is only with the last two words of the final pāda, *aśnutam narā*, that it becomes clear that a change of person has been effected between 3rd (ab) and 2nd (cde). Unfortunately this change has to be signalled much earlier in the Engl.

VIII.40.4: I take cde as consisting of two relative clauses, both introduced by *yāyoḥ* in c. The first is only pāda c and is a statement of ownership (“whose is this whole moving world,” phrased in the publ. tr. as “to whom ... belongs”); the second comprises de, with *yāyoḥ* construed with *vāsu* and Heaven and Earth the subj. of the dual verb *bibhṛtāḥ*. (Re’s tr. is sim.) Ge’s tr. differs from mine in taking cde as a single relative cl., with “this whole moving world” as a parallel subj. to Heaven and Earth. He must assume that *bibhṛtāḥ* has been attracted into the dual by the nearer paired subject. I prefer to take the dual verb seriously, and I also wonder if the moving world (which usually refers to the animate beings therein) has a collective lap. For the lap of Heaven and Earth, see nearby VIII.42.2 *pātām no dyāvāprthivī upāsthe* (in the same hymn cycle).

Judging by word order, *iyám dyaúh* should belong together and I have so tr. them. But *iyám* has the wrong deixis: *iyám* expresses near deixis and, when indicating a cosmic division, ordinarily characterizes the earth (cf., e.g., X.60.9 *iyám pṛthivī mahī*). It also has the dispreferred gender: *dyaúh* is ordinarily masc., though occasionally apparently fem. by extension from Earth (see comm. ad I.57.5). Since demonstratives are often separated from their nouns, I am tempted to take it with *pṛthivī* here (“heaven and this great earth”). But a series of passages in which the feminine near deictic does seem to belong with ‘heaven’ (*pṛthivīm dyām utémām* III.32.8, 34.8, X.88.3, 9, 121.1) gives me pause, and IX.96.3 *dyām utémām* is even worse, because it is not conjoined with an ‘earth’ word. So I have honored the word order as well as accepting the gender switch.

VIII.40.5: What this is about is not entirely clear. Ge suggests Vala, while Lüders, fld. by Re, thinks of the heavenly ocean (as usual).

That -*bāra*- ‘bank’ is a MIA development of *pārā*- ‘(far) shore’ (KEWA s.v. *jihmāḥ*, EWA s.v. *pārā*-) seems plausible.

VIII.40.6: Both *vratāti*- and *guspitā*- are found in the RV only here, but are attested later - the latter already AV.

The meter of de is faulty, with two extra syllables. Which pāda is hypermetric depends on which one *vásu* is assigned to: Old (Prol.) and Lub put it final in d, HvN initial in e. In favor of the former is *vásu*’s general preference for pāda-final position and, in particular, the final of 4e, with a form of $\sqrt{bhṛ}$ + *vásu* (*bibhṛtó vásu*). Old (Noten) explicitly counsels against omitting it as others have suggested. It would be possible to eliminate another disyllable, e.g., pleonastic *vayām*, but there is no strong reason to.

VIII.40.7: Ge and Re tr. *indrāgnī* as voc., without commenting on accent. I assume this is simply a lapse on their parts.

VIII.40.8: Ge and Re take *uccārātaḥ* as the verb of all of ab, whose action unfolds “under heaven” (unterhalb des Himmels), but the contrast between *avāḥ* ‘down’ and *úd* ‘up’ invites an interpr. of cyclical complementary action -- the rising and setting of the two heavenly bodies. I therefore supply a verb of motion with pāda a.

I read pāda c with both ab and d.

Pāda d *úhānā yanti síndhavaḥ* provides support for Pischel’s resegmentation in I.32.8 of *māno rúhānā áti yanti āpaḥ* to *mānor úhānā(h)*. See Ge’s n. ad loc.

VIII.40.9: In my interpr. the verse is structured by two complementary pairings of reciprocal gifts between “us” and Indra. Both involve Indra’s gifts (*úpamātayaḥ* a, *āpīcaḥ* d) and our praiseful thoughts (*prásastayaḥ* b, *dhīyaḥ* e).

úpamāti- is variously rendered, but I take it to *úpa* $\sqrt{mā}$ ‘mete out’; cf., e.g., VII.26.5 *sahasríṇa úpa no māhi vājān* “mete out prizes to us in thousands.” Ge’s ‘Zuwendungen’ (‘contributions, donations’, but also ‘care’) could belong either to $\sqrt{mā}$ or to \sqrt{man} , but I surmise he links it to the former. Both Gr and Re connect it to the realm of speech/thought (‘Anrede’ and ‘pensées-appliquées’ respectively) with Gr explicitly positing a root affiliation with \sqrt{man} . Re gives no disc. in his comm. ad loc. (EVP 14), but in EVP 16 (ad IV.43.4) he rejects a root affiliation with $\sqrt{mā}$. Cf. also his comments

in EVP 13.155 (ad VIII.60.11). A root syllable *mā* cannot be derived from the anīṭ root $\sqrt{\text{man}}$ in any straightforward fashion, though AiG II.2.630 derives both *úpamāti-* and *abhímāti-* from *-mati-* via metrical lengthening, citing Meillet. Metrical lengthening is, of course, a non-explanation except under very controlled conditions, and the fact that other compounds with *-mati-* (e.g., metrically identical *ánumati-*) maintain the short vowel make it even less likely in this case.

In both d and e I supply ‘many’, based on the parallelism with ab *pūrvīḥ ...*, *pūrvīḥ ...* HvN’s loosing of the sandhi in d as *vīrásya apṛcaḥ* is incorrect: the initial vowel is *ā-*, which is supported by the meter and so given by the Pp (see Scar 324). Ge takes *āpṛcaḥ* as adjectival modifying *dhīyaḥ*, but I follow Old’s interpr. (so also Scar 324–25) as a nom. act.; the *vásvaḥ* with it is an objective gen., the *vīrásya* a subjective gen.

VIII.40.10: The “eggs” of Śuṣṇa are probably his progeny (so Old, Ge); see X.68.7, adduced by Ge, also X.22.11 *śúṣṇasya ... jātām víśvaṃ* and X.61.13 *śúṣṇasya ... puruprajātásya*. They can’t be testicles, given the number.

The standard interpr. takes *jéṣat* (e) as parallel to *bhédati* (d) and still part of the rel. clause beginning in c, whereas I take it as the verb of the main clause to which the rel. clause is attached. Either is grammatically possible because, if *jéṣat* is the verb of a main clause, its accent is owing to its initial position. The rel. cl. interpr. requires that cde all hang off the *tām* of a, despite the *utá*. Klein (DGRV I.302) seems to suggest that the verse is structured as an “X and which Y construction” (*tām ... utá ... yáḥ*), but as far as I know, the X and Y in such constructions always have different referents.

VIII.40.11: This verse, dedicated to Agni, is constructed entirely parallel to vs. 10 to Indra; note, e.g., the end of the b pādas: 10 ... *sátvānam ṛgmíyam*, 11 ... *sátvānam ṛtvíyam*. It therefore seems important to construe the exactly parallel cde in the same way in both verses. The only differences between the two are *ójasā* (10c) / *óhata* [-e out of sandhi] (11c), the order of Śuṣṇa and his eggs in d, and the tense/mood of the verb in e (*s*-aor. subj. *jéṣat* in 10e, *s*-aor. indic. *ájaiḥ* in 11e). My tr. reflects this strict parallelism, but others do not. Ge, e.g., takes d as the main cl. to c and e as a second independent cl., whereas in 10 he takes cde as a single rel. clause (see above). Klein, DGRV I.302, calls 11 “an awkward attempt to create a vertical parisyllabic responsio to 10a–e.” My tr. is made possible by taking *óhate* as passive (‘is proclaimed as ...’) (or possibly reflexive ‘vaunts himself as’; see V.42.11).

I now find ‘seasonal, at its season’ a somewhat misleading tr. for *ṛtvíya-* in a ritual context and would substitute ‘at the right time’ here; see comm. ad X.28.5.

VIII.41 Varuṇa

VIII.41.2: Given *prásasti-* in VIII.40.9, rendered ‘encomia’, the *prásasti-* here should probably be so tr. as well, rather than ‘panegyrics’.

VIII.41.3: I don’t understand the purport of this vs., esp. de. Ge and Re suggest various possible referents for the *véniḥ* and for the three dawns, all possible and none particularly compelling. Note the archaic weak form of the acc. pl. of ‘dawn’, *uṣáh* with true zero-grade of the suffix and simplification of the geminate *ṣṣ* (see AiG III.282).

I supply *śasvaje* with the *pāri* in c, on the basis of *pāri śasvaje* in a. Ge and Re construe the pāda without a verb (e.g., Ge: “er ist rings um die Welt sichtbar”). This is possible.

As for *venīh*, this is the only fem. form to the stem *véna-* ‘tracker, seeker’, on which see comm. ad VIII.100.5. Gr takes it as an acc. pl. coreferent with *uśás*, but most (incl. the publ. tr.) take it as a nom. pl., subj. of *avardhayan*. This is certainly possible, but the problem is to identify a referent. Ge tr. the term as “die Liebenden” (though this is not a sense of *véna-* in my view) and suggests that they could be the nights, fem. pl. *kṣāpaḥ* in pāda a, and the publ. tr. follows him in the identification, though not the gloss. Re “les femelles-vigilantes,” whom he identifies as possibly the rivers, possibly the nights. But the nights are unlikely to be “trackers” (or vigilants) – it’s dark then! And how the rivers might strengthen the dawns is a question, even if they are “les rivières célestes.” I would now return to Gr’s interpr., as acc. pl. with ‘dawns’. As disc. ad VIII.100.5 *véna-* when masc. and sg. often refers to the sun, whose ability to track the deeds of men is well known. The dawns share the quality of light with the sun and also move across the sky, and so the epithet makes a certain amount of sense. Who then is the subj. of *avardhayan*? I suggest that it is the gods, on the basis of pāda 7e *vísve devā ānu vratām* with the same *ānu vratām* as here. I would now emend the tr. to “Following his commandment, they [=the gods?] increased his trackers, the three dawns.” For another possible use of (-) *venī-* with the dawns, see X.56.3.

VIII.41.4: The hapax *sáptya-* is problematic. Most (though not Ge) take it as a derivative of *saptá* ‘7’ (e.g., Re ‘la septuplicité’, a fine coinage) and point to Varuṇa’s 7 sisters in 2e. His control over the 7 in 9e is perhaps more relevant. Ge tr. “treue Freundschaft”; though he does not comment, he must derive it from *sápti-*, though the standard view of the meaning of the latter is now ‘team’ and those meanings seem quite distinct. If the word belongs with *sápti-*, which I think more likely than a connection with *saptá* (though 9e now gives me pause), it should mean something like ‘teamwork, cooperation’. The problem is that in this hymn Varuṇa is credited with doing everything on his own; his usual companions, Mitra and Aryaman, are absent. I therefore tentatively suggest that it is based on a syncopated form (*sa-pti-*) from a putative **sa-pāti-*, hence ‘joint leadership/lordship’ → ‘leadership, master-ship’. This is a very fragile suggestion, I realize.

VIII.41.5: On the displaced simile particle here, cf. comm. ad VIII.39.7.

For a phrase similar to de see X.124.7, though it there probably refers to Indra.

VIII.41.6: The *iva* marking the simile is also displaced to the right, as in the previous vs. The simile is also more complex than it first appears. The obvious way to render it is “In whom are fixed all poetic arts like the nave in a wheel,” with Varuṇa the wheel and the poetic arts the nave, but the more likely image is that the spokes are fit into the nave -- with Varuṇa the nave and the unexpressed spokes the poetic arts.

I have no idea what or who *tritá-* stands for.

The images in de are also somewhat skewed. Ge takes the two pādas separately, with d a nominal sentence with infinitival *saṃyúje* as predicate, despite the yoking vocabulary common to both pādas. He must do that because the *gāvaḥ* in d must be nom.,

but corresponds logically to the acc. *áśvān* in e. Old suggests taking *gāvaḥ* as acc. (as also possibly in IX.24.2, on which see comm. ad loc.). I take the two pādas together, classifying it as another example of case disharmony in a simile (Jamison 1982), enabled by the syntactic multifunctionality of the infinitival *saṃyúje*, *yujé* (with both act. and pass. readings). Scar's attempt (431) to construe the two pādas together and also account for the cases shows the pitfalls, as it wanders off into fanciful territory.

VIII.41.7: The purport of this verse and the referents of the unidentified fem. pl. (*āsu*, pāda a) and masc./neut. pl. (*eṣām*, pāda b) are completely unclear to me, and multiple suggestions have been made about the identities of these entities and the ways they might fit together. I roughly follow Old's interpr., but cannot carry it further.

VIII.41.8: With Ge (n. 8d) I take *arcīṇā* as instr. to *arcí-*, not *arcín-*; among other things, “with his flaming foot” (with *arcín-*) seems comic.

VIII.42 Varuṇa and Aśvins

VIII.42.3: As disc. ad I.112.19 the old desid. stem *śíkṣa-* ‘do one's best’ in its simplex forms is ordinarily construed with a dative of benefit and no other case form. The stem is also overwhelmingly active. Of the three medial forms, *śíkṣamāṇa-* in the Frog hymn, VII.103.5, has a specialized pedagogical sense; see comm. ad loc. The other two, *śíkṣate* (I.28.3) and *śíkṣamāṇasya* here, both take acc. complements, unlike the simplex active forms. The acc. expresses the activity or product that the subject is expending his/her particular effort on. In the active this effort is generalized and diffuse: the focus is on the beneficiary of the effort.

VIII.42.4: Pl. *vīprā(h)* ‘poets’ is taken as a second conjoined subj. by Ge (“die Presssteine ... (und) die Redekundigen”), but given how often the pressing stones are said to speak, I take it (with Re) as characterizing the stones.

VIII.43 Agni

VIII.43.1: With Old I take *ástrta-yajvan-* as a karmadhāraya, not the bahuvrīhi of Ge and Re, who seem to ignore the evidence of the accent (on which see AiG II.1.80).

VIII.43.3: Ge takes *ārokāḥ* (only here in RV) as “Maschen” (mesh), and this does seem to be the meaning in late Vedic. This idiomatic sense presumably developed from ‘light flashing through openings’ to the ‘openings’ themselves. However, mesh or netting does not seem a particularly apt comparison here, and I prefer to take the word in a more literal, but still concrete, sense, esp. since *rocate* appears several times in the hymn (8c, 10b). By ‘brilliant’ I mean gems or gem-like objects (rhinestones, e.g., had they been invented then) that catch and flash light. A more abstract sense, like ‘flashes’ or ‘flares’, risks near identity with what it’s being compared with (*tvīṣaḥ*).

The force of the particle pile-up *ghéd áha* is not entirely clear to me, but this poet is partial to it. See *ghéd ... áhā* in 30, as well as *ghéd* in 29, *áha* in 8. I have not found *ghéd (...)* *áha* elsewhere in the RV.

VIII.43.4–5: *vīthak* is found only in these two vss. It is generally considered to be a formal cross of *vīthā* ‘at will’ with *pīthak* ‘separately’ (see EWA s.v., AiG III.231, Re ad loc.), a form of which appears in repeated pādas later in the hymn (18b=29b), and to maintain the semantics of the former (Ge “jäh” [‘precipitously’ -- a rather extended sense], Re “à leur gré”). Sāy, however, simply glosses it as *prthak*. I am reluctantly sympathetic to Sāy’s opinion, as ‘at will’ does not fit the contexts well, esp. 5a. (Both Ge and Re tr. it with pāda b in 4, not in its proper place.) X.91.7 *ā te yatante rathyò yáthā pīthak*, adduced by Ge, echoes our 4c. The publ. tr. reflects the Sāy gloss. However, on returning to this passage, I find the Sāy solution too convenient and entirely unmotivated, but still remain unsatisfied with the connection with *vīthā* and its suggested crossing with *pīthak*. That the formation of both *vīthā* and *pīthak* is murky does not help. I do not have anything resembling a solution, but I’m inclined to think that *vī* ‘apart’ is somehow implicated. Perhaps via an (unfortunately unattested) *-āñc*-stem, **vīyañc*- ‘facing separate directions’, whose neut. adv. **vīyak* could have been assimilated to *pīthak* given their similarity of meaning. Cf. the similarly formed *vīsvañc*- ‘facing in separate directions’, whose neut. appears two hymns later in a suggestive collocation, VIII.45.8 ... *vīsvag yáthā*.

VIII.43.8: On *jañj* see comm. ad I.168.7.

VIII.43.9: Assuming with the Pp., Macd. (VGS §48a), and Lub (s.v. *sá*) that *saúṣadhīḥ* represents *sá(h) óṣadhīḥ*, this sandhi contravenes the standard treatment; cf. I.103.5, X.88.10 *sá óṣadhīḥ*. The *sá* with 2nd ps. reference also does not conform to my rules for this usage, as it is not in an imperatival clause. I do not have an answer, though poetic factors may have had some influence: note the preceding pāda (*ap*)*sú ... sádhi(ṣ) ...*, which is a good match for the three syllables in *saúṣadhī(r)*.

VIII.43.10: I prefer to maintain the older gloss ‘kiss’ for *nīṃs* rather than flg. Gotō (200-201; cf. EWA s.v., Lub s.v. \sqrt{nas}) in the colorless substitution ‘approach’. Even if *nīṃsa-* is in origin a redupl. pres. to \sqrt{nas} , passages like this, with *múkhe* ‘on the mouth’, support the richer semantics, which could have developed from an earlier ‘approach’, used metaphorically or euphemistically.

VIII.43.12: *īmahe* is formally ambiguous and could also mean ‘approach’; Ge’s “wir nahen dir bittend” seems to represent a blend of the two.

On the cmpd. *vāreṇya-kratu-* see comm. ad IX.98.12.

VIII.43.14: *agne* has to be tr. “Fire,” rather than the usual “Agni,” because otherwise the verbal play is lost. The constant interplay in the RV between physical fire and the god Agni is hard to render in tr. because of the PN problem.

VIII.43.17: Despite the case disharmony between acc. *tvā* in a and the dat. phrase in b, I take them both as referring to Agni (so also Old). Ge takes the dat. in b as part of the simile in c, referring to a calf awaiting the cows coming to its stall. (Re’s tr. seems to combine the two.) But vs. 2a *ásmāi te pratiháryate* (and cf. VIII.44.2 *práti ... harya*) establishes Agni as the primary referent here, though a secondary connection with a calf (via the bellowing) isn’t impossible. As for the case difference, vs. 2 provides a possible solution, since the verb there is *jánāmi* ‘I generate’, construed with the dat. of benefit. Hence my “(praises generated)” here.

VIII.43.30: *vísṡvā(h)* was carelessly omitted in the publ. tr., which should read “may we all be ...”

VIII.43.31: *śīrá-* occurs 4x in the RV in the same pāda, *śīráṃ pāvakásociṡam*, and twice more in the compound *śīrásociṡ-* (also acc. *-am*). My tr. ‘sharp’ follows the current standard, but not strongly held view (see Ge, Re, KEWA, EWA) that sees a possible connection with $\sqrt{śā}$ ‘sharpen’ (see EWA s.v. *śīrá-*).

VIII.44 Agni

VIII.44.1: The phrase *adhvarāṇām abhiśríyam* could alternatively be rendered “excelling in glory over the ceremonies,” as I suggest for X.66.8.

VIII.44.10–11: The contents of the imploring mentioned in 10c seems to be given in direct speech in 11.

VIII.44.11: With Ge I supply *daha* in b, with the preverb *práti*, since *práti* is not otherwise found with $\sqrt{pā}$, the verb of pāda a, but is common with \sqrt{dah} ‘burn’. Cf. esp. I.12.15 *práti śma ríṡataḥ daha*. VII.15.13b is identical to our pāda, and the verb in pāda c of that vs. is *daha*, which governs the acc. in b.

VIII.44.14: Although in some passages I have reinterpr. *adhavara-śrī-* as transitive: “perfecting the rite” (see I.44.3 and comm. ad III.26.5), in this case context favors the interpr. in the publ. tr.

VIII.44.26: As noted in the publ. intro., Agni is repeatedly referred to as both ‘inspired poet’ (*vīpra-*) and ‘sage poet’ (*kavī-*) in this hymn, sometimes with the words in the same vs. (12, 21). Here *-vépas-*, belonging to the root of *vīpra-*, \sqrt{vip} ‘tremble, become inspired’, co-occurs with *kavī-*, filling the contrastive *vīpra-* role.

VIII.44.27: The root affiliation of *iṣema* is not entirely clear. Lub puts it with $\sqrt{iṣ}$ ‘send’, but the case frame is wrong. But an affiliation with $\sqrt{iṣ}$ ‘desire’ is even less likely. With Ge and Re I take it as meaning ‘hasten’ or the like and note the connection of the pāda, *stómair iṣemāgnáye*, with VIII.43.11c *stómair vidhemāgnáye* in the immediately preceding hymn, with *iṣema* a near-rhyme with *vidhema* in an otherwise identical pāda. Re suggests that the form and the syntactic construction have been borrowed from VIII.43.11, but doesn’t explain what verb we’re starting with (though I surmise ‘send’). So perhaps substituting for “we would send praises to Agni.”

VIII.45 Indra

VIII.45.4: The bunda bow is the weapon Indra uses to kill the boar Emuṣa, in a rarely told myth. (See esp. VIII.77.1–2.) Its phonology sets a non-Indo-Aryan scene.

Ge renders *ké ha śṛṇvire* as “Wie heissen sie?” This is certainly possible, although I prefer my tr.

VIII.45.5: Śavasī is taken by many as the name of Indra’s mother, but there is no particular reason not to take it in its lexical sense, referring to the same woman.

The Pp. text divides the beginning of b into *girāṁ āpso*, with the second word the *s*-stem *āpsas-* ‘breast’, a word otherwise used of Uṣas (I.124.7, V.80.6). But even in a proverbial expression such as this seems to be, where semantic latitude is to be expected, “like a/the breast/chest at a mountain” (or Ge “Wie mit der Brust gegen den Berg ...,” taking *āpsaḥ* as a truncated instr. **āpsasā*) doesn’t make any sense. Old suggests a different word division: *girāṁ vāpso*, with the latter being the word for ‘wasp’ found elsewhere in Indo-European, though not directly in Indo-Aryan (except, quite possibly, in I.181.8); see EWA s.v. *vāpsas-*. This does allow sense to be made of the expression: the extraordinary size difference between a wasp and a mountain dooms the wasp, but wasps are notoriously belligerent and therefore willing to take on any opponent, however unlikely they are to defeat it. In the same way, anyone who is foolhardy enough to take on Indra will ensure certain defeat for himself.

VIII.45.6: The rest of Indra’s mother’s advice (if she is the speaker) implicitly contrasts the person who approaches Indra with requests (and, presumably, homage) and whom Indra may decide to favor with the pugnacious wasp of the previous verse that only wants to fight.

VIII.45.7: The publ. tr. may not make it clear that I think that Indra is also the “setter of contests” of the subordinate clause.

VIII.45.8: Assuming that the syntagm of the simile is *viṣvag yáthā* “as if *viṣvak*,” that is, “as if asunder,” I have slightly reconfigured the expression to conform to an English idiom. Ge seems to take the *yáthā* as expressing purpose, “dass sie zerschellen” (be smashed to pieces) but I do not understand how *viṣvak* can be configured as a verb.

Note the alliteration *víṣú víśvā ... vājrin viṣvag ... vṛha*, esp. *víṣú víśvā ... viṣvag*.

VIII.45.10: Ge takes b and c together as a single clause and has *gómataḥ* modify *te* (“zu deiner, des Kuhbesitzers, Schenkung”), but *gómant-* is not regularly used of gods (though it occasionally is) and is frequently found with *vāja-* ‘prize’, as in vs. 28 below. And *áram* is used elsewhere as predicate of a nominal clause.

VIII.45.11: There is no expressed referent in this verse, and Gr (s.v. *áśvāvant-*, etc.) indicates that it is “we” of vs. 10. However, Ge supplies “soma drops,” esp. on the strength of VIII.49.4 and the fact that *vivákṣana-* is always used of soma. This seems correct. The question is the meaning and root affiliation of *vivákṣana-*. Ge tr. ‘redselig machend’, connecting it thus with \sqrt{vac} , while I prefer to take it to $\sqrt{vakṣ}$ ‘become / make strong’, as a transitive *-ana*-nominal, beside *vákṣana-* also ‘strengthening’. The connection with $\sqrt{vakṣ}$ is asserted by Old ad X.21.1 (fld. by AiG II.2.198). See also EWA s.v. *VAKṢ*, esp. p. 487; he does not decide.

I would now substitute “flawless” for “faultless.” See comm. ad X.61.12.

VIII.45.14: Pāda c takes one aback, but the next verse explains.

VIII.45.15: On the relationship between *pramamārṣa* here and *durmārṣam* in vs. 18, see comm. ad the latter.

VIII.45.18: The first two pādas contain two perfect optatives: *śuśrūyāḥ* and *cakriyāḥ*. On the surprising dominance of perfect optatives in the RV, see Jamison 2009. I do not know why these striking forms are found together in this vs., with Indra as subject, unless the generally lower register of perfect optatives is appropriate to this sometimes slangy hymn.

The interpr. of pāda b is disputed. The publ. tr. follows Ge, also fld by Klein (DGRV II.50), in supplying ‘deed’ as object of *cakriyāḥ*, modified by *durmārṣam*: “you should do (a deed) difficult to forget.” Gr by contrast indicates that *durmārṣam* modifies *hávam* found in pāda a as object of *śuśrūyāḥ*, which noun should therefore be supplied as obj. also of *cakriyāḥ* in b. Kü (137; also 520 with slight differences) takes it in that way: “Wenn du diesen Ruf hier erhören würdest, würdest du ihn auch unvergesslich machen.” I now think this is correct. The previous vs. (17) emphasizes that Indra listens to us when we call; in this vs. we urge him not to neglect our call when he hears it, thereby showing himself to be our dear friend. Although doing unforgettable deeds is Indra’s stock in trade, this particular sequence of vss. is more concerned with his ready response to our invocation. I would now alter the tr. to “When you should hear this call here, you should make it hard to neglect.” This literal Engl. rendering is somewhat awk and a bit

misleading, since it makes it sound as if others are doing the neglecting. It would be clearer (if less literal) as “you should not neglect it.” This emended interpr. also allows *durmārṣa-* to be more closely related to the pf. *pramamarṣa* in nearby vs. 15, where the impious rich man neglects his giving. For the other occurrences of *durmārṣa-* see comm. ad X.45.8.

VIII.45.19: The logical relation between the subordinate clause (ab) and main clause (c) is somewhat indirect. The point seems to be that though we think that our behavior towards Indra has not been entirely straightforward and proper, we hope that he will continue to be generous to us despite our failings.

VIII.45.24: *mahé* was mistakenly omitted in the publ. tr. Substitute “to great generosity.”

I follow Old in taking *góparīṇasā* as standing for *-āḥ*, nom. pl. to a thematic stem, rather than, with Ge (and Pp.), as *-ā* and instr. sg. of the *s*-stem. In the simplex both *pārīṇas-* and *parīṇasā-* exist, though the latter occurs only once (IX.97.9), where it is indirectly associated with cows/milk. Old points out that soma is generally the subject of $\sqrt{\text{mand}}$ (as in 14b *mandantu ... índavaḥ*), and taking *góparīṇasā(ḥ)* here as modifying a plural form of soma drinks or drops would save having to supply another element in the instrumental. However, Ge’s interpretation does have in its favor that the more common simplex is *pārīṇas-* and that it is regularly found in the instrumental.

VIII.45.25–27: The proclamation of Indra’s deeds called for in 25c is presumably contained in the following two verses.

VIII.45.26: Gr takes *sahásrabāhve* (with distraction, *-bāhuve*) as belonging to a *u*-stem and as a poetic synonym for ‘battle’. I find this suggestion quite attractive, though this type of kenning is somewhat unusual for the RV. Ge and Old (see also EWA s.v. *bāhú-*; Mayrhofer PN) take it as a thematized *-bāhva-* in the locative as a PN (Ge: “bei Sahasrabāhva”). Though Gr’s interpretation gives the richer semantics, the problem is of course that the dative sg. should be *-bāhave*, not *-bāhve*. AiG III.139 also identifies it as a thematic locative, but allows a lexical meaning “in der tausendarmigen Schlacht,” flg. Sommer). I still think it may be a dative, with the alternative *-ve* ending (e.g., *pásve* beside *pasáve*), but a locative with lexical value is also possible.

VIII.45.27: Ge takes *vidānaḥ* as belonging to $\sqrt{\text{vid}}$ ‘know’ and construes it with the preceding PNs: “Das ist wahr, bei Turvaśa und Yadu bekannt.” It is true that the participle *vidāna-* ordinarily belongs to $\sqrt{\text{vid}}$ ‘know’, but it is usually passive and appears with a predicate, “known as X.” The idiom envisioned here, “known to,” I’m not at all sure is a Sanskrit expression, though it works well in German and English. I therefore take the participle as belonging to $\sqrt{\text{vid}}$ ‘find’, whose middle generally means ‘acquire’, with the soma “not to be spurned” (*ahnavāyyám*) as object. Turvaśa and Yadu offer soma to the gods elsewhere; cf. VIII.9.14 *imé sómāso ádhi turváśe yádau*. Ge takes *ahnavāyyám* with *vy ānaṭ* (“hat er nicht Abzustreitendes erreicht”), which prevents him from construing that verb with *turvāṇe* as it is in the parallel he himself cites (VIII.12.19 *ádhā yajñāya turváṇe vyānaśuḥ*). His rendering of the last two words of the pāda as

purpose infinitival clause (“dass der fromme Dienst triumphiere”) involves what seems to me a dubious construal of *śāmi*.

VIII.45.28: *jānānām* may go with *tarāṇim*, as Ge takes it (“Den Durchhelfer der Menschen”); I construe it with *b*, because *tarāṇi-* doesn’t otherwise take a genitive.

VIII.45.30: The lexeme *nír√i* ‘go out’ is specialized for birth contexts, to go out of the womb, so *yonyá-* as a descriptor of the mountain is particularly apt.

VIII.45.31: For the odd sentiments of this verse and what follows, see the publ. intro. Both Ge and Old supply an object to the first verb (*dadhiṣe*), an object drawn from ritual (Ge “das Opfer,” Old “Lob u. degl., Somatränke”), but this seems unduly restrictive. I think that the poet is apprehensive about the consequences of whatever Indra might undertake.

VIII.45.37–38: For my interpretation of this bit of dialogue, see the publ. intro.

VIII.45.37: On the basis both of the content of the verse and the use of the voc. *maryāḥ*, I consider this verse to be Indra’s address to the Maruts. The plural of *maryá* in all clear cases refers to the Maruts. And in VIII.96.7–8 the Maruts address Indra, reminding him that all the other gods but them deserted him, using the same *√īṣ* ‘shrink from’ as is found here.

Ge takes *ámithitah* as “ohne Zank” (without a quarrel), but I think it refers instead to Indra’s potentially friendless state -- ‘unpaired’ – a fear expressed by the poet in the immediately preceding verse (36). The hypothetical speaker still has a comrade (*sákhā sákhāyam*), but, like one unpaired, threatens to say to this comrade “I’m leaving.”

The form *jahā* is taken by Ge (and others) as a 3rd sg. pf. to *√hā* and therefore, implicitly, a precious example of a 3rd sg. pf. to a long-*ā* root without *-au* ending. However, Old very persuasively suggests that it is a 1st sg. subjunctive in the direct speech introduced by *abravīt*. Although to the reduplicated present of *√hā* we would expect accent on the reduplication (**jāhā*), Old argues that the fluctuation of accent in IIIrd class presents makes the accent irrelevant. I would alternatively suggest that it could be a subjunctive to the perfect stem. See Old’s extensive discussion of the various previous proposals about this form.

VIII.45.38: I consider this verse the Maruts’ insulted response to Indra’s insults, couched in a very slangy register. The first sign of this speech level is the voc. *are* (to *arí-* ‘stranger’), a vocative not otherwise found in the RV, but remember the Pāli and Pkt. “interjections” *are*, *ale*, clearly derived from this voc. (Thieme, *Fremdl.* 3–4), as well as the famous shibboleth *he ‘lavo* of ŚB III.2.1.23, consisting of an *l*-form of the plural voc. of this word in MIA guise (see EWA, KEWA s.v.). Its use as a shibboleth and with an *l*-form suggests popular speech.

Note also the lengthened voc. *vṛṣabhā* (also in 22a). Lengthened vocatives are quite rare in the RV; AiG III.96–97 cites only these two forms, but remarks that pluti vocatives were surely a feature of living speech, found in the Brāhmaṇas and in Pāli and the Prākṛits. The use of the well-known gambling term *svaghnī* also marks the speech as

low register. The substance of the Maruts' counter-accusations is that Indra greedily drank up the soma offered to him below (that is, among men). I've used the expression "lower depths" to refer to the louche aspects of a gambling place (and also possibly to the depression in the ground where the dicing happens). Indra carried on arrogantly and without sharing the soma, but then, they say, when he got into a jam in the Vṛtra battle he suddenly remembered he had pals and upbraided them for desertion.

VIII.45.39: Unfortunately this last verse of the ṛca does not seem to have any connection with the foregoing Indra-Marut dialogue. The "I" is presumably not a Marut, but the poet or other ritual officiant, and it's difficult to know how his holding on to the horses will bring about Indra's gifts. Is he holding them hostage, as it were, not allowing them to leave the ritual ground and return to heaven (recall the "Fallow-bay-yoking libation" that ends I.61–63 and sends Indra and his horses back home at the end of the sacrifice) until Indra distributes the goods? Or is he helpfully holding them to leave Indra's hands free? Given the aggressive tone of the previous two verses, I favor the former idea.

VIII.45.40: On *pári bādhaḥ* see comm. ad IX.105.6. Both there and here I suggest a haplology of the finite impv. *bādhasva*, in the putative sequence *pári *bādhasva bādhaḥ* -- rather than accepting the BR / Gr emendation to **paribādhaḥ*, accepted by Old. If we accept that emendation and make **paribādhaḥ* another acc. obj. of *jahī*, parallel to *mṛdhaḥ*, the accent on *jahī* is unexplained.

VIII.45.42: *viśvāmānuṣa-* should, by accent, be a bahuvrīhi; it is also difficult to separate from *viśvāmanus-* in the next hymn (VIII.46.17). However, most interpreters take it implicitly as a karmadhāraya: Gr 'die ganze Menschenschar', Ge 'jedermann', and Wackernagel (AiG II.1.266) explicitly identifies it as a tatpuruṣa with irregular accent ('Gesamtheit der Menschen'). But this seems unnecessary: *mānuṣa-* regularly modifies *jāna-* (so 'human race' / or 'folk consisting of the descendants of Manu'), and here we can supply an underlying *jāna-*, modified by the compound, hence '(races) consisting of all the people of Manu'. The publ. tr. seems to reflect the tatpuruṣa interpretation because the more literal tr. is simply too awkward.

VIII.46 Indra

VIII.46.6: As in VI.54.8, 55.2 I take *rāyāḥ* as a morphological pun – both genitive sg. depending on *īśānaḥ* and accusative pl. as object of *īmahe*.

VIII.46.8–9: A thematic and syntactic modulation. The *yāḥ* clauses of vs. 8 (which lacks a main clause) clearly refer to Indra's *māda-* 'exhilaration', and the *yāḥ* which opens vs. 9 seems simply to continue this construction. But the 2nd hemistich is couched in the 2nd ps. and refers to Indra, and it is possible to assume that Indra is also the subject of ab (despite the 3rd ps. construction and the 2nd ps. vocative), because the qualifiers in 9ab are better suited to Indra than to his *māda-*. (As Old says, "Übergleiten von Indras māda zu I. selbst.") In the end, though, it is better to assume a covert identification of Indra and his *māda-*, which allows a smooth transition from describing the latter to describing the former.

VIII.46.10: Despite appearances, *gavyó* is entirely parallel to *ásvayā* and *rathayā* later in the verse, since it consists of *gavyā* + *u*.

VIII.46.14: Ge takes *vāco yāthā* as a truncated clause: “soweit (es) die Rede (vermag),” but, although accented *yāthā* is seldom pāda-final, unaccented *yathā*, the simile marker, is almost always so placed. Therefore pāda-final *yāthā* here must also be a simile marker at least in my view, but see Old for contrary opinion.

VIII.46.15: Very condensed expression. The first two long pādas characterize Indra as a giver (*dadī-* 3x) of various desirable things. The third pāda, a mere four syllables, implicitly calls on Indra to actualize this identity by making the gifts.

The expression “legacy to/for the body/self” (*rékṇas tanvè*) probably stands for a son, as Ge points out in his n.

The short final pāda *nūnām ātha* is curiously formed. There are no other examples of this word sequence, but *nūnām* has a tendency to be followed by a di- or trisyllable beginning with *a-* (though usually heavy syl), e.g., *nūnām asyāḥ*, *nūnām anyā*. Moreover, *ātha* is almost always initial in pāda or clause, so its presence in this position must be signalling something special, which I take to be a peremptory command (English “now then!” corresponds nicely). Note that it echoes verse-final *yāthā* of 14 and that it again takes final position at the end of 16.

VIII.46.16: Following Old, I supply the verb “sing to” (*abhí ... gāya*) from 14 to govern the accusatives here.

In the publ. tr. I also followed a suggestion of Old in taking *kṛpayatāḥ* as acc. pl. governed by *āti*, rather than gen. sg. dependent on *várpasah* (Ge: “über diese Gestalt des Erbarmenden”). But the syntactic distribution of elements in this verse is very uncertain, due in part to the unclarity of the meter, where even pāda boundaries cannot be certainly determined. In coming to the version found in the publ tr. I reasoned that what confronts us here is a sort of syntactic śleṣa of *irajyánt-*, with the uncompounded participle as usual governing the genitive in pādas a and b (*vísveṣām ... vāsūnām* and *asyā várpasah*), while with *āti* in pāda c it takes the accusative. Cf., with *√rāj*, a root with which *irajyá-* becomes entangled, III.10.7 *ví rājasi āti srídhaḥ*. I am now not so certain: I think *kṛpayatāḥ* may in fact be a gen. as Ge takes it, but that it’s construed directly with *irajyánt-*, not dependent on *várpasah* -- with the tr. “(and has control) over the one who yearns (for him) in addition.” Under this interpr. *āti* would be an adverbial additive ‘in addition’, adding another term to the items over which Indra has control.

What “this form” refers to is not clear to me. I assume that it is Indra’s form, quite possibly one of the multiforms that he takes on at will

Since *nūnām ... ātha* reprises 15c, I find the interpolation of the *āti* puzzling, especially if it governs a previous nominal form. However, the poet (who seems to have little conscience about syntax) may have inserted *āti* here because *āti[y]ātha* would echo the *yāthā* that ends vs. 14.

VIII.46.17: Another very disturbed verse. My interpretation follows Old in great degree, but with crucial deviations.

In the first pāda I read, with Gr, Old, and Scar (61), a compound *āram-iṣe*, rather than two separate words with Ge (also Pp.; cf. Lub. p. 321 s.v. *iṣe*), who is forced to take this as a parenthetical 1st ps. declaration (“ich beeile mich recht”). This compound qualifies Indra in the dative and matches *aramgamāya* in b quite nicely.

The accent on the verb *stāvāmahe* can be accounted for (in a somewhat ad hoc fashion) as Old does, as a separate four-syllable pāda, following an eight-syllable opening.

In de (if this is the correct division), I take gen. pl. *viśvāmanuṣām* with *yajñēbhir gīrbhīḥ* “through the sacrifices and the hymns of all the peoples of Manu.” This has the somewhat awkward consequence of separating it from the immediately following gen. pl. *marūtām*, though if the pāda break follows *viśvāmanuṣām* rather than *gīrbhīḥ* as Old takes it, the syntactic separation would be less problematic. (This would produce a pāda of 10 or 11 syllables [with distraction of *-manuṣām*], followed by one of 8 syllables [also with distraction of gen. pl. *-ām*].)

Ge takes the subject of *iyakṣasi* to be the poet addressing himself, while I think that it is Indra, who is the subject of the same verb in the immediately preceding hymn (VIII.45.31). The question then is what the object is. Ge supplies the pronoun “dies,” but the referent of this pronoun isn’t clear to me. I suggest rather *sumnām* ‘favor’: the stem *īyakṣa-* several times takes *sumnām* as object (I.153.2, II.20.1. X.50.3), and it appears here in the next verse (18d), where I supply this verb. If this assumption is correct, we must then ask why Indra would seek to attain the favor of the Maruts. The key to that is probably the odd snatch of dialogue in the last hymn (VIII.45.37–38), in which Indra complains that the Maruts deserted him in his time of need; here he seeks their good will as support in the Vṛtra battle.

VIII.46.18: The referents of the plurals in this verse continue to be the Maruts of the previous verse, and I think that the same situation obtains: Indra is seeking the sacrifice and favor of the Maruts. I therefore supply *iyakṣasi* in this verse, again with *sumnām* as object. Thus one half of the VP is found in each verse: *iyakṣasi* in 17, *sumnām* in 18. (Ge also supplies the same verb stem, but in the 1st sg., referring to the poet.)

The medial transitive-causative *pātáyante* I take as a reflexive: ‘cause themselves to fly, launch themselves in flight’.

On the pseudo-loc. absol. *prādhvaré* see comm. ad VIII.12.31–33.

VIII.46.19: For wealth as a ‘shatterer’ (*prabhaṇḡá-*), see VI.68.3 where it is the implied subject of *prá ... bhanákti*.

VIII.46.20: Note the full hemistich of vocatives, all accented because there is no inherently tonic word to follow.

As Old points out, all the accusatives of the second hemistich should be grouped with *rayím* in 19, and the verb of that verse *ā bhara* continues to have domain over this one.

VIII.46.21: On the patronymic *kānītá-*, see Thieme 1963 (“Jungfrauengatte”): 244–45 (=KlSch 509–10). Acgd. to Th., the word marks Pṛthuśravas as the son of a proper, legitimate marriage, with a virgin bride.

VIII.46.23: On *ṛdhád-rī/i-* see Thieme 1958 (Fs. Turner): 157, EWA 118 (s.v. *ARDH*). Thieme tr. ‘luckily reaching wealth’. The nearby passage VIII.48.2 *śraúṣṭīva dhúram ánu rāyá ṛdhyāḥ* seems to confirm a connection between *-rī/i* and *rayí*. I tr. 48.2 “like an obedient mare the chariot pole you should follow riches to fulfillment” and adopt that interpretation here.

vītá-vāra-: Their tails are presumably straight because they are going so fast their tails are horizontal. In this interpr. the cmpd contains *vītá-* ‘straight’ (on which see comm. ad IX.97.17), as in *vītá-prṣṭha-* ‘straight-backed’, and *vāra-* ‘tail(hair)’. However, both members have different possible interpr.: *vītá-* as ppl. to $\sqrt{vī}$ ‘pursue’ and *vāra-* ‘wish, choice thing(s)’ and could have the sense ‘having choice things worthy pursuing’. Cf. on the one hand *vītá-havya-* ‘having oblations worth pursuing’ and on the other *ṛdhát-vāra-* ‘bringing wishes to fulfillment’ (vel sim.) in VI.3.2. That the only other *ṛdhát-X* cmpd in the RV, namely *ṛdhád-rī-*, is adjacent to *vītá-vāra-*, which contains *-vāra-* like *ṛdhádvāra-*, strongly suggests that *vītá-vāra-* is a pun, and I would now alter the tr. to “straight-tailed (/ providing choice things worth pursuing)”

Ge takes *mathrá-* as a geographical designation: Mathra horses. But I see no reason not to connect it with \sqrt{math} ‘churn, agitate’, hence ‘skittish’. See also I.181.5.

VIII.46.24: The final pāda contains a pun on the patron’s name *Prthuśravas*. See Watkins 1995: 73–74.

VIII.46.25: I take *tāne* and *pājase* as complementary concepts, vertical and horizontal – our descendants and our synchronic extension.

VIII.46.26: This verse gives the impression of being constructed from random constituents, although some cohesion can be wrested from it.

Following Old I take b as further specifying the horses in a (*ásvebhiḥ*), with the bare numeral *saptá* substituting for the non-existent instrumental **saptábhiḥ* as elsewhere. It could also specify the number of soma drinks in c (*sómebhiḥ*), and the position of the phrase between those two instrumental expressions allows it to be construed with both. The gen. pl. *saptatīnām* of course simply depends on the numeral.

In c I supply a form of \sqrt{mad} *mand* to be construed with the instr.; so also Ge (ermuntert).

In d I supply a form such as *maṁhase* ‘you are ready’, which is common with *dānāya*, although Ge’s solution, to have the infinitive depend only on the “ermuntert” is certainly possible and probably neater. See also Scar 313.

On the possible analyses of the three-member cmpd *śukrapūtapā-* see Scar 313.

VIII.46.27: Another verse with unclear referents and no main clause. I take the subject to be the god *Vāyu*, who has inspired the human patron (*imám* in a) to give the poet a splendid *dakṣiṇā*. If *Vāyu* (deified wind) is the subject, *tmānā* lit. ‘by his breath’ is a nice touch.

In c Ge takes *araṭvé ákṣe* as a PN, and it is certainly tempting. But, although the second part of that pāda *is* a PN, interpreting all difficult phrases as names is a practice to be avoided, and Mayrhofer (EWA s.v. *araṭvā-*; also *PN*s.v.) rejects the name

interpretation in favor of “aus dem Holz der *araṭu*-Baumes” (Wagenachse). There is no way to be certain.

VIII.46.28: Another virtually impenetrable verse. Rather than discuss my deviations from others’ interpretations, I will just set out the considerations that produced my own translation.

I take the referent of the *yāḥ* in the relative clauses that dominate vss. 26–28 to be Vāyu in all cases. In this verse there’s the embarrassment of the voc. *vāyo*, but since there is no verb in 28 nothing prevents it from being couched in the 2nd sg.

The *utá* in b I take as connecting *ucathyè vápuṣi* and *ghṛtasnāḥ*, both used of the *svarāṭ*, despite their different cases.

I think cd represents a new clause, with implied “your”; the *prājma* is rather like *prādhvaré* in 18, with verb extruded from the *prá*. The last little bit, *idám nú tát*, is a separate clause (like *nūnám [áty] átha* in 15–16).

In pāda a HvN read *suvarāṭ*, a reading tentatively suggested by Old (ad loc.; see also ad VII.82.2), and in fact *suva(r)-rāṭ* (with distraction of *sv-*, geminate *r*, and disyllabic *raaṭ*) would improve the meter – though given the metrical variety in this hymn, that is not a strong arg. Such a reading would support / allow an interpr. ‘shining/ruling (like) the sun, Sun-king’; see Scar 450, who favors it.

VIII.46.29: After the puzzling detour into Vāyu, this verse reunites us with the *dānastuti* of vss. 21–24 by means of *asanam* ‘I won’ in b, found also in 22a.

“Gelding” is supplied on the basis of vs. 20.

VIII.46.31: I supply *ā dade* from 32b, though *asanam* from 29a would also be possible.

VIII.47 Ādityas

VIII.47.1–18: I would now substitute “flawless” for “faultless”; see comm. ad X.61.12.

VIII.47.1: Although only Mitra and Varuṇa are mentioned in the first hemistich, *vo mahatām* is gen. pl. and must refer to all the Ādityas, who are addressed in the next clause (pāda c).

VIII.47.5: The simile is slightly skewed, though, as in English, the case frame with ‘avoid’ works either way. It might be expected that “we” would be compared to the (presumably) nominative *rathyàḥ* ‘charioteers’, but grammatically “we” are parallel to the hard places (*durgāṇi*). Of course technically both *durgāṇi* and *rathyàḥ* can be either nom. or acc. pl., so that the skewing could be avoided: “Evils will avoid us, as hard places avoid charioteers.” But this produces an unintentionally comic picture, and I follow Ge and Re in the case distribution.

VIII.47.6: This verse is contrastively complementary to the preceding one. Both *pári √ vr̥j* and *pári √ hv̥r* mean ‘swerve, turn aside, avoid’, but in vs. 5 *pári ... vr̥ṇajan* is a beneficial action, whereas here *parihv̥r̥tā* (on accent see Old, Scar 708) refers to turning aside from

the proper course, an action that causes a man to lose out on the Ādityas' gift. How substantial this gift can be for someone whom the Ādityas favor is expressed in cd.

As disc. ad X.94.3–4, the sense/function of adverbial *anā* is elusive, but I decide there for 'evidently, clearly'. That sense works well here: the point is that since any sensible person would embrace whatever Indra has to give, only someone on a crooked (=bad, evil) trajectory would miss out. I would now omit "in such a way" (the anodyne rendering of *anā*) and tr. "It is clearly only by a crooked course that a man ..."

VIII.47.9: Ge and Re take *revātaḥ* with Aryaman, not Mitra. It is true that the adj. is positioned between the two names and could in principle modify either one or both, but it belongs to the same pāda as *mitrāsya*, and the following pāda containing *aryamaṇāḥ* is a repeated pāda (=I.136.2e), in a verse where *revānt-* is not found. Since, further, *revānt-* is not a standard epithet of Aryaman, it seems wise to take it with Mitra.

VIII.47.10: I have not rendered the four nominal *yād* clauses, the last three of which merely introduce further adjectival qualifiers of *śárma*.

VIII.47.15: The accent on *kṛṇávate* is somewhat puzzling. Re explains it as a reflection of the implicit subordination following on vss. 13 and 14, but perhaps better is the implicit contrast of the *vā ... vā* construction.

VIII.48 Soma

VIII.48.1: I take *svādóḥ* as dependent on *váyasaḥ*, not qualifying it (contra, e.g., Ge's "von dem süßen Krafttrunk"). Note that Soma is called *vayodhāḥ* in the final vs. (15a) and is therefore not *váyah* himself.

s"vādh'yo opening pāda b echoes *svādór* opening a.

VIII.48.2: The first pāda is a paradox, in that confinement within leads to boundlessness. Following Ge et al., I take *ca* as a subordinator; the accentuation of *prāgā(h)* is ambiguous: the Pp. reads *prā agāḥ*, but *pra-ágāḥ* is equally possible (so Old).

How to resolve the sandhi in *śraúṣṭīva* is discussed by Old at some length; with him I take it as a fem. nom. sg. *śraúṣṭī*. The Pp. analyzes *rāyá* as *rāyé*, but *rāyáḥ* is also possible, either as gen. sg. or acc. pl. I take it as the latter. My tr. of this pāda is closest to Re's.

VIII.48.4: Note the faint echo *pītá ... pité(va)*.

VIII.48.5: On *anāha* see Kü's length and useful disc. (289). Flg. Old (accepted by Kü), I take it as a 3rd sg., not 2nd pl. with Ge, Re. The nom. pl. *imé ... pītā yaśása uruṣyávaḥ* of pāda a is (silently) resumed by sg. "soma." In order to demonstrate the change in number of the subject, my tr. appears to treat pāda a as a separate clause, which of course it is not. Among other things, the *mā* in Wackernagel's Position in a is the obj. of *sám anāha* in b.

Like 2a this hemistich is a paradox: the soma drops "seeking wide space" nonetheless tie the drinker together.

VIII.48.6: *didīpaḥ* must be a redupl. aor. corresponding to trans.-caus. *dīpáyati*, despite the light redupl. We expect **dīdīpaḥ* or even **dīdīpaḥ* (which is found in B.E. acdg. to Whitney's Rts).

Pāda-final *naḥ* serves as object to both verbs in b.

All standard treatments take *prá carā* as 2nd sg. impv., but I think it works better as 1st sg. subjunctive. See also IX.82.4.

VIII.48.9: Because of its accent *niśasátthā(h)* must still be under the domain of *hí* in pāda a, contra Ge, who takes a as a nominal clause and b as independent.

VIII.48.10: The voc. *haryaśva* (always elsewhere of Indra) is presumably addressed to a previously absent Indra, who surfaces by name in d -- though it could also be referring to soma's color.

VIII.48.11: *ánirā-* is lit. 'want of nourishment'. Since *írā-* sometimes seems specialized for liquid nourishment, I considered 'thirsts' here, and indeed in VIII.60.20, conjoined with *kṣúdham* 'hunger', 'thirst' works well. But in this passage such a translation sounds as if it refers to desires or cravings, and I think the passage refers to external threats rather than those generated within the person.

VIII.48.14: On *īśata* see comm. ad I.23.9.

Vāḷakhilya

VIII.49 Indra

This hymn is twinned with VIII.50. Parallel aspects of the two hymns will be treated in the comments on the latter.

VIII.49.3: *mádā yé* in b appears to be a pseudo-izafe construction, specifying *índavaḥ*, as Ge takes it.

VIII.49.4: On *vivákṣaṇa-* see VIII.45.11.

Ge takes pāda d as a separate clause and supplies a verb, while taking *kṣudrá* as "small animals": "auf dass du ... leibhaftig wie kleine Tiere (?) brav ver(mehrest)" – an interpretation that seems to me both unnecessary and bizarre. The other RVic example of *kṣudrá-* (I.129.6), which he claims also to refer to a small animal, I take to mean 'speck'. It seems more sensible to take d as belonging with c, with the simile *kṣudréva* serving as object to *kirā́si*. The only evidence I can see against this is that *√kr* 'scatter' doesn't otherwise appear with *prá* in the RV, but that lexeme is common later. I take *kṣudrá-* here to refer to small particles of dust; see IV.38.7 *kirate reṇúm*.

VIII.49.5: Phonological figure *svadhāvan svadáyanti*.

VIII.49.6: The simile marking in pāda a seems unnecessary: why is Indra *like* a powerful hero, rather than, as usual, simply being one. Perhaps the tendency for many verses and half-verses in this hymn to begin with similes enforced that pattern here.

In c the double marking of the simile (*udrīva ... avató ná siñcaté*) also seems to serve no purpose.

kṣāranti ... dhītáyah is very close to *kṣāranti dhītáyah* in the matching hymn VIII.50.4.

VIII.49.7: The reason for the three *yád*'s in ab isn't clear. It may be that the duplications and unnecessary markings noted in this verse and the preceding one are signs of apprentice compositions.

VIII.49.8: Ge interprets the first relative clause as only consisting of *yé te* "die du hast," but all things being equal, I try to avoid interpretations that require embedded relative clauses (though see the pseudo-izafe in 3b above), and in this case a relative clause that extends to the end of b is perfectly possible. That 50.8 has the same structure is an additional support for this interpretation.

The corresponding verse in the twinned hymn, VIII.50.8d, contains *yébhiḥ svàḥ parīyase*. I therefore think that *parīyase* in our c also has domain over d, also containing *svàḥ*. Ge, by contrast, supplies *kṛnóṣi*, to produce a periphrastic causative "mit denen du die ganze Welt die Sonne schauen (lässest)."

VIII.49.9: Ge takes *gómataḥ* with *te*, not *sumnásya* as I do. This is possible but not necessary, especially since the adjective isn't exclusively, or even generally, used of beings, and since neuter *gómat* is found in the following verse (probably modifying an unexpressed word for spoils or the like, though I suppose neut. *sumnám* might be possible).

VIII.50 Indra

VIII.50.1: This verse is very close to 49.1 in structure and lexicon. Some items are identical and positioned identically: a: *surāḍhasam*, c: *yáh*, (-) *vasu*, d: *sahásreṇeva*. Others are identical words but placed differently: ab: (*abhī*) *prá ... arca*. Then there are synonyms with the same function: c: *jaritūbhyah* / *suvaté stuvaté*. Root connections deployed differently: 49.1d *síkṣati* / 50.1b *śakráṁ*; 49.1c *maghāvā* 50.1d *mām̐hate*. The only items that don't have any correspondents in the other hymn are 49.1a *abhī*, *vaḥ*; b: *índram ... yáthā vidé*; c: *purū* / 50.1a *sú śrutám*; b: *abhīstaye*; c: *kāmyam*.

VIII.50.2: The two versions of this verse deviate slightly more than those of vs. 1: identical and identically positioned: a: *śatānīkā* (though difference in number concealed by sandhi), a/c: *asya*; more or less identical, but with inflectional difference: c: *giréḥ* / *girír*, *pinvire* / *pinvate*; root connections: 49.2d -*bhójasah* / 50.2c *bhujmā*. Otherwise the verses are distinct, but notice that 50.2a *śatānīkā hetáyah* allows the noun with *śatānīkā* in 49a to be supplied.

VIII.50.3: This verse deviates from its correspondent even more than the last. Identical are *sutāsa índavo* (a) and *āpo ná* (c); root identity: 49.3b *mádā yé* / 50.3ab *yád ... ámandiṣuḥ*. In addition the simile in 49.3, where waters fill a pond, allows the underdetermined simile in 50.3 to be interpreted: it seems more likely that the pressing

has been deposited in Indra than that it has been set out for him. Ge follows the latter interpretation and is forced to supply a recipient in the simile that has no textual support: “... dargebracht wie Wasser (dem Durstigen).” See Ge’s n., which argues for his interpretation and explicitly for a different sense in the simile from that in 49.3.

VIII.50.4: The two verses differ from each other almost entirely, except that the openings of the first two pādas are identical: *anehāsam* (a), *mādhvaḥ* (b). Still, reference to 49.4 aids in the interpretation of this verse: in 49.4 the referent of *anehāsam* is clearly soma; here that is less immediately clear, but surely correct.

See Old for considerable discussion of this verse, though without reaching firm conclusions.

VIII.50.5: Yet another type of variation, whereby the poet plays on distinct but phonologically or semantically similar words. In 49.5a *ā na stómam* / 50.5a *ā naḥ sóme* the common play on *sóma-* and *stóma-* is found. In 49.5b *(d)hyānó áśvo ná* / 50.5b *iyānó ’tyo ná* the phrases are identical in sense and in morphology (medial athematic participle, *a*-stem nom. sg.) but use two different lexical realizations for both. In 49.5c *yām te svadhāvan svadāyanti* / 50.5c *yām te svadhāvan svādanti* the clauses are identically constructed, the verbs are identical and have identical meanings, though one is a Class I stem, the other an *-āya*-transitive, and the vocatives are lexically distinct, though rhyming and identically formed. Finally, both d pādas contain a locative indicating the person(s) at whose sacrifice Indra is.

The phonological figure in c, corresponding to the one in 49.5c, is more exact: *svadhāvan svādanti*, with matching plain *ḍ* s.

VIII.50.6: The two versions are closer together than the last few verses: 49.6a *ugrām ná vīrām* / 50.6a *prā vīrām ugrām* / b: *vībhūtīm* / c: *udrīva vajrinn avatō*. In addition 49.6b has *-vasum* and 50.6c *vasutvanā*, and 49.6d is almost identical to 50.4b.

I supply *ārcā* on the basis of *prā* and vs. 1, but any verb of praising or the like will do.

VIII.50.7: The somewhat awkward tripling of *yád* in 49.7 is avoided here with a simple *yád ... yád vā*, but the two versions still echo each other exactly: *yád dha nūnām ...* (a) / *yád vā pṛthivyām ...* (b), as also in c *mahemata*. The d pādas are identically structured, but lexically distinct: nom. sg. + instr. pl. (to same stem) *ā gahi*.

VIII.50.8: The versions pattern closely together despite variant semantics: *(a)irāso / (rath)irāso hárayo yé te ...* (a); *vātā... /... vātasya ...* (b); *yébhīr ... mānuṣaḥ* (c); *yébhīḥ (...)* *svār ...* (d).

The poor transmission of the Vāḷakhilya is probably responsible for the faulty accent of *nighoṣayaḥ* (for **nighoṣāyaḥ*)(so Old). There is also unnecessary doubling of the preverb *ní* (which does not affect the meter, however).

VIII.50.9: Read, with Gr and Old, **ávaso* (that is, *te ‘vaso*), which also repairs the meter.

The corresponding verses are structured identically, with *etāṁvataḥ* opening the first hemistich and its rhetorical partner *yāthā* opening the two pādas of the second

hemistich. In each verse we seek the same thing for ourselves that Indra provided to two clients, named in the second hemistich. There is also some matching phraseology: *etāvatas te* (a), *yáthā právo* (c), *yáthā* (d), as well as *dháne* in 49.9d and 50.9c.

VIII.50.10: Again the two versions are almost entirely parallel, with named examples of the beneficiaries of Indra's bounty given in *yáthā* clauses, including some with very close similarities in wording: *yáthā káṇve maghavan* LOC LOC... (a) / *yáthā gósarye* √SAN ... (c) / d: *gómad dhíraṇya-* (49.10d) / *gotrám hari-* (50.10d).

I differ from Ge in my interpretation of pāda b. He takes *dirghánīthe dāmūnasi* as another PN (so also Mayrhofer, *PN*, for the first but not the second), and I admit that parallelism with 49b, which contains a PN, is in his favor. However, here there is no *yáthā* marking the pāda as a different segment, and furthermore *dāmūnas-* 'domestic leader, master of the house' is never otherwise used of mortals, but almost always characterizes Agni. Since *dirghánīti-* is perfectly understandable in its literal meaning, I take this pāda as referring to Agni and as parallel to the locatives in pāda a indicating the sacrifice.

VIII.51 Indra

VIII.51.1: As indicated in the intro., this verse replicates the structure of the final verses (10) of VIII.49 and 50.

The PNs *púṣṭi-gu-* and *śrúṣṭi-gu-* have figured in the Indo-Europeanist discourse on the so-called *dāti-vāra-* governing cmpd "type," supposedly meaning 'causing cattle to thrive' and 'causing cattle to obey'. I have shown elsewhere that these glosses are quite unlikely and that the type to which they belong doesn't really exist: see my forthcoming article "Vedic Evidence for the Verbal-Governing *dāti-vāra-* Compound "Type": A Critical Reassessment."

VIII.51.2: It is difficult to understand what is going on in the first hemistich, which is filled with words apparently referring to positions of the body: *sám asādayat* 'made to sit up', *śáyānam* 'lying down', *úddhitam* 'set upright'. I have tr. all of these literally. Ge. takes the first lexeme figuratively, with *sám asādayat* meaning 'invited to a sattra (sacrificial session)'. I consider this to be a secondary sense in this verse, but because of the body-position language, I think something more literal is meant, quite possibly a revival or healing of Praskaṇva by ritual means. But without further context, it remains unclear. Zimmer (Altind. Leben 327, 328; see Macd. & Keith, Vedic Index 395) thinks the passage refers to exposure of the elderly, but we would need more evidence than this enigmatic snatch of text.

Ge and Old suggest that Dasyave Vṛka is the same person as Pārṣadvāṇa and the sacrificial patron of Praskaṇva. (Dasyave Vṛka is celebrated in dānastutis in VIII.55.1 and 56.1.) This seems reasonable but unprovable. In that case Praskaṇva is probably the ṛṣi of pāda c.

VIII.51.3: With Ge I read *aviṣyántam*, not *áriṣyantam*. See his n. on 3d. Old rejects the emendation, but since the *aviṣyantam* is found in the Khila collection and in "die gute

ind. Ausgabe des Pp.,” I think the reading is justifiable, esp. given the poor transmission of the Vāḷakhilya. The publ. tr. should have an asterisk before “a man greedy for food.”

VIII.51.4: Although the first hemistich clearly describes ritual activity, its exact reference is unclear. Ge plausibly suggests that the chant is “seven-headed” (*saptāśīrṣānam*) because it issues from the mouths of seven priests. “Threefold” could refer to the three pressings of the soma sacrifice or perhaps the three fires, but neither of these interpretations imposes itself. As for the “highest footstep,” see discussion at I.21.6 and I.22.21. The highest footstep is usually Viṣṇu’s, and Viṣṇu does stride his three steps in the immediately following (and twinned) hymn, VIII.52.3. As elsewhere, the “highest footstep” seems to be the celestial counterpart of the ritual ground on earth, and the same types of ritual activities are performed there as on earth.

Ge suggests that the referent of *sá* in c is the chant, not Indra, but the *yásmai ... sá* construction virtually demands that the referent of *sá* be the same as that of *yásmai*, which cannot be the *arká-*. Indra is the most likely referent of both (though Viṣṇu might be barely possible). Note that no god’s name appears in the verse, leaving the reference apparently deliberately undefined. However, *paúṃsya-* in d is almost always a characteristic of Indra’s, and both the preceding and following verses (3, 5) open with definitional relative clauses, like that of 4ab, where the relative pronoun is explicitly identified as Indra in the main clause (3c, 5b *índram tám*), which imposes the same identification here.

VIII.51.6: After the three verses whose *yá- ... sál tám* constructions refer to Indra, the same construction now identifies Indra’s client.

VIII.51.7: Notice the over-the-top piling up of particles and similar items in c: *úpa-upa íd nú ... bhūya íd nú*, with the actual topic postponed till the next pāda.

The lexeme *úpa √ prc* generally has a sexual connotation (see disc. I.40.6), and given the barren cow and the going dry of ab, ‘becomes engorged’ better captures the contrast than Ge’s anodyne “nimmt ... zu und zu” (increases).

VIII.51.8: The final pāda is identical to 4d, save for the final word, which serves as subject. The identity of *pārthivaḥ* here isn’t certain. It cannot be Indra, who is the subject of the preceding clauses and whose action in c grounds and precedes the birth of the ‘earth-dweller’ in d. The idea may be that Indra’s cosmogonic actions in c allow the creation of the humans on earth, which has just been separated from heaven. This interpretation is supported by the following verse.

VIII.51.9: A syntactically problematic verse, which has produced multiple interpretations, not all of which can be treated here. It is further complicated by the fact that three different related stems to the highly charged *arí-* word are found in it: *ārya-* (a), *arí-* (b), and *aryá-* (c).

I take ab as an independent nominal possessive clause, with Indra the referent of *yásya*. The clause follows nicely on 8d: since Indra’s cosmogonic deeds led directly to the birth of the earth-dwelling people, it is said in 9ab that all of them, Ārya and Dāsa alike, belong to him.

The expression *tiráś cid aryé* in c resembles a number of passages containing *tiráś cid aryá-*, including several in VIII: 33.14 *tiráś cid aryám sávanāni* ... and 66.12 *tiráś cid aryáh sávanā*. In such passages Indra is urged to pass over the pressings (and so forth) associated with the stranger and come to our sacrifice. I believe that the same thing is being urged here. This requires supplying a verb of motion and also assuming a word haplology of some sort, such as **(aryám/aryáh) aryé* (so also Ge, though we differ on much of the rest of the interpretation).

Unlike all other interpretations known to me (including Thieme *Fremdling* 70–71 and two alternatives given by Scar, p. 308), I take d as a separate clause because *tubhyét só* seems very much a clause-initial sequence. Note that verse-final *rayíḥ* echoes the last word of b, *aríḥ*.

VIII.51.10: *arkám āṇṛcuḥ* matches the same expression in 4a, where it had cosmogonic implications. Presumably the association adds luster to the more mundane efforts of the current poets.

VIII.52 Indra

VIII.52.1: This verse is almost identical to 51.1 in its first half, save for Manu's patronymic; the structure of the second halves is very similar, with locatives expressing the various sacrificers, past and present, where Indra has enjoyed or will enjoy the sacrifice.

VIII.52.2: The pattern of the first verse is continued here.

VIII.52.3: A series of relative clauses without a main clause. It cannot be connected with the next verse because the relative pronoun has a different referent there.

VIII.52.4: This verse is structurally a mess. It seems at first to have made the same shift of the referent of the relative pronoun from Indra (vs. 3) to Indra's client (vs. 4) as was made in the preceding hymn in vs. 6: *yásya stómeṣu* "in whose praises" refers to the praiser. But the resumptive pronoun *tám* refers *not* to the praiser but to Indra, as the phrase *tám tvā* makes explicit, and the single praiser of 4a, implicitly in the 3rd person (though see Scar 225, who supplies "Zu mir"), corresponds to the 1st pl. *vayám* in c.

Ge (followed by Scar 225) takes *vāje* as part of the voc. phrase in b: "du im Kampf Sieghafter, Ratreicher." This is possible, I suppose, and even favored by the pāda boundary, but I take it as one of those locative absolutes without expressed participle, like common *dhāne* "when the stake (is set)."

VIII.52.5: On *īśānakṛt* see I.61.11. Here the point is that Indra does what masters are supposed to do: give.

In c *áyāman* is universally taken (as far as I know) as 'not on a journey', but it makes much more sense as a derivative of $\sqrt{yā}$ 'beg', indicating that even without prompting Indra should do the right thing by us.

VIII.52.6: Although this hymn does not at all correspond to its predecessor (VIII.51) to the same degree as VIII.49 and 50, this verse shows real response to 51.6: *yásmai tvám vaso dānāya* [2ND SG. VERB] (a) / *sá rāyás póṣam* [3RD SG. VERB] (b) / ... *havāmahe* (d).

VIII.52.7: Though the verse starts like its counterpart, 51.7, with *kadā canā* [2ND SG.], the verses go off in different directions.

The elements in the second hemistich can be variously distributed. Like most interpreters I take *hāvanam* as the mortals' call to the gods and the subject of *ā tasthau*, but I take *indriyām* as modifying it, meaning (unusually for this stem) 'destined for / appropriate to Indra' (so, approximately, Old), while Ge instead makes it the goal and supplies "name": "... bis zu deinem indrischen unsterblichen (Namen) im Himmel..." This is not impossible, but I do not understand why our invocation would go to Indra's *name*. I supply *bhūvanam* or similar with *amítam*.

The vocative "fourth Āditya" (*túrīyāditya*) is somewhat surprising, but as Old suggests it must identify Indra as fourth, after the standard trio Mitra, Varuṇa, and Aryaman. Why Indra is called an Āditya in this particular context is not clear to me.

VIII.52.8: Another "improper" relative in ab, where the pious man who is the referent of *yásmai* is then implicitly identified with the emphatic fronted "us" (*asmākam*) in cd.

VIII.52.9: The verse deploys a number of words for verbal offerings: *mánma* (a), *bráhma* (b), and *medhāḥ* (d). In c a feminine term needs to be supplied in the phrase *pūrvīr ṛtasya bṛhatīḥ* "the many lofty ____ of truth." I have supplied *gírah* 'songs' from vs. 8, as it also shows up with *pūrvīḥ* elsewhere (VI.34.1, VIII.96.10, IX.85.11, X.29.5) -- though oddly when we get *pūrvīḥ* ... *bṛhatīḥ*, it's with *īṣaḥ* 'refreshments' (VI.1.2, IX.87.9), which wouldn't fit here because it is not a verbal product. But note *gíro bṛhatīḥ* with the same verb in III.51.1 *índraṃ gíro bṛhatīr abhy ànūṣata*. Ge supplies 'words', which would also work semantically, though he doesn't specify which feminine noun he thinks it is (*vācaḥ* perhaps?).

VIII.52.10: I don't really understand the idiom *sám √dhū* 'shake together'. Its intent seems to be 'produce, create', but the semantic mechanism is unclear to me. It's possible that *sám* occurs with *√dhū* here only because of the *sám* in the second hemistich. A straight 'shake out' or 'shake loose' could more easily develop to 'produce, create'. Though cf. *sám √dhū* in I.10.8 (where I do tr. 'shake loose').

In pāda a *rāyo bṛhatīḥ* seems to require *rayi-* to be fem., as occasionally elsewhere (but not so often as generally thought). I wonder, however, if the *bṛhatīḥ* has been borrowed from 9c: *pūrvīr ṛtasya bṛhatīr anūṣata*, which is structured in parallel to 10a *sám índro rāyo bṛhatīr adhūnuta*. It is even possible that *bṛhatīḥ* in 10a doesn't modify *rāyah* but refers to the same object as found in 9c ("lofty songs" vel sim.). This might solve the just-discussed problem of *sám √dhū*: perhaps there are two objects of "shake together" -- something like "shook together riches and lofty (songs)."

VIII.53 Indra

VIII.53.1: On *rāyāḥ* see VIII.46.6.

VIII.53.3: Ge takes *vísveṣām* as referring to the soma drops (“... den Saft des Honigs all der Somasäfte”), and this interpretation has the advantage of providing a plural referent in the main clause for plural *yé ... índavaḥ* in the relative clause. Nonetheless, I take it instead as qualifying *naḥ* ‘us’, to indicate the totality of the Ārya sacrificial community, near and far, as described in cd (and also 4cd). As indicated in comments on the previous Vāḷakhilya hymns, improper relatives abound, with mismatch between number and person, and so the lack of a plural referent for *yé ... índavaḥ* would not be problematic. However, Ge’s interpretation is certainly possible.

VIII.53.4: The “all” of b is undefined. I tentatively think it refers to us (that is, the entire Ārya community), but Old suggests it is the soma drops of 3cd. Ge doesn’t specify in the tr., but refers to the *vísveṣām* of 3 in his n.

I know nothing about the Śīṣtas.

VIII.53.5: Ge tr. *mitāmedha-* as “die die Gedanken aufrichten,” but I do not see how a transitive reading of *mitā-* would work in a compound so constructed.

VIII.53.6: I supply “lifetimes” (*āyūṃṣi*) in c, because *āyus-* is the standard object of *prá √ tr*. Ge assumes that the object is the referent of the following relative clause (*yé ta ukthínaḥ ...* (“Fördere fein ... die, welche als deiner Lobsänger...”). This is possible, but ignores the usual idiom.

What it means to “purify (Indra’s) resolve” isn’t clear to me, but the phrase occurs elsewhere (cf. VIII.12.11, 13.1). In any case the father of the patron Dasyave Vṛka is Pūtakratu (see VIII.56.2, also 4), so this is a pun.

VIII.53.7: If read with what follows, the relative clause in pāda a is even more irregular than those we have already met in the Vāḷakhilya. However, there is a simple solution. The identical pāda occurs as V.35.1a, where it clearly modifies *krātuḥ* in b: *yás te sādhiṣṭhó ‘vasa, índra krātuḥ tām ā bhara* “Your resolve to help that best brings success, Indra, bring that here.” Since *krátum* is found in the last pāda of the preceding verse, 6d, I take the relative clause of 7a as dependent on the *krátum* in 6d. Unfortunately this straddles a pragātha boundary, but I find it hard to believe that the *krātu* association played no role in the repetition of this pāda. It is even possible that the somewhat odd *bhāreṣu* in 7b was influenced by *bhara* in V.35.1b (though see 8d).

VIII.53.8: Ge takes *ājīm √ yā* as a phrasal verb (“mache ich ... einen Wettlauf”) that can take an accusative (“einen Wettlauf um...”). I do not see any other way to construe *bráhma*, though I am a bit dubious about the construction.

The opening of c, *tvām íd evá tām* is an inflated version, with tonic 2nd ps. pronoun, of *tām tvā*, which is found several times in this group of hymns (our 2c; also 51.6c, 52.4c). This inflation seems to have driven the preverb *sám* into post-verbal position (*áme sám*).

Old and Ge accept the Kashmir reading **matīnām*, but Narten (1960: 132 n. 34 = KISch 22 n. 34) makes a convincing case that the transmitted *mathīnām* is correct and

means ‘robbings/plunderings’. This works well with *vājayúḥ*, *aśvayúḥ*, and *gavyúḥ* in this verse, as well as *bhāreṣu* in 7b.

VIII.54 Indra

VIII.54.1: As Old points out, the accent on *gr̥nánti* is unnecessary. It may have been borrowed, with the pāda, from VIII.46.3, where the accent is correct because the pāda is part of a relative clause.

VIII.54.2: *īndram* in pāda a, apparently 3rd ps., is co-referential with the 2nd sg. subject of *māndase* in the relative clause of b, but this kind of slippage is common.

VIII.54.4: In pāda a it would also be possible to supply ‘hear’ from 3d (governing *hāvanam*, as it did *hāvam* in 3d), with *āvantu* the verb only of b.

VIII.54.6: I take pāda a as a nominal clause, with b separate, in order to account for the unaccented verb in b following *hí* in a. This requires taking *ājipate nṛpate* as predicated vocatives, a rare but still attested construction; see, e.g., I.15.2. This should also require *naḥ* at the end of pāda a to be construed with that clause, which the publ. tr. does not do. I would now add “for us” after “lord of men” and in the second clause make “us” parenthetical. Ge takes ab as a single sentence, which avoids the predicated vocative but has an unaccented verb in a *hí* clause. Old mentions the problem but decides that the lack of accent can be attributed to faulty transmission of the Vālakhilya. This is of course possible.

Both Old and Ge accept the Kashmir *ā bhakṣi* for *ā vakṣi*, though Old admits that the latter also works. I do not see the need to change the text.

Although VIII.54 has little in common with VIII.53, note 6cd ... *hótrābhir utá devāvītibhiḥ, sasavāṃso* ... and 53.7c ... *hótrābhir utá deváhūtibhiḥ, sasavāṃso* ...

VIII.54.7: With Old, Ge, Thieme (*Fremd.* 26), I read *aryáḥ* against Pp. *aryé*.

In b *īndra* can stand for either *īndrah* or *īndre*. Either will work; I have chosen (with Ge) the locative, but see Thieme’s “Indra ist das Leben der Leute.”

VIII.55 Dānastuti

VIII.55.3: Though this vs. continues the list of gifts begun in vs. 2, it is entirely in the accusative, while vs. 2 is in the nominative. There is no verb governing vs. 3, and I simply tr. as part of the list.

In the publ. tr. “ewes” should be in parens.

Ge. tr. *āruṣṭīnām cátuḥśatam* as “hundertundvier rötliche (*Schafe*)” (my italics), which makes one wonder about his barnyard experience. Wikipedia tells me that there does exist something called the Armenian red sheep (or Armenian mouflon, etc.), native to Iran and Armenia. But since the gifts celebrated in dānastutis are domestic animals, this information doesn’t seem helpful. There is also something called the California red sheep, but this hybrid was only developed in the 1970s and half a world away from Dasyave Vṛka. On the other hand, “black” sheep are often more brownish than black and

in certain lights could appear reddish. There is also a (recent?) breed of Indian sheep known as Bannur or Mandya, some of which appear (on Google Images) reddish.

VIII.55.5: Ge takes *sāptā-* as “der treuen Freundschaft,” presumably as a derivative of *sāpti-* ‘team’ (see his sim. derivation in VIII.41.4 and my comm. thereon). But it does not make sense to deny a numerical value for *sāptā-* here, since it is found in clearly numerical sense in nearby VIII.59.5 (Vālah.) *trībhīḥ sāptébhiḥ*.

VIII.56 Dānastuti

VIII.56.4: Old and Ge opt for the Kashmir Khila reading, nom. sg. *pūtākratāyī*, but it hardly makes sense that Dasyava Vṛka would be giving away his mother. It makes better sense to take the Saṃhitā reading *pūtākratāyai* (for **pūtākratāyyai*), dat. (for gen.), “(the female one) of Pūtākratāyī,” namely her daughter and Dasyava Vṛka’s sister, who would be a more likely gift-in-marriage.

yūthyām is probably a faulty reading. The Khila has *yūthyām*, but Ge’s suggestion, *yūthyā*, seems plausible.

VIII.56.5: I suggest reading **brhāt-sūro* here, that is, a bahuvrīhi meaning ‘possessing a lofty sun’. The point is the usual one, that Agni is another form of the sun, and his flame as it rises is like the sun. The publ. tr. should have an asterisk before “having his own sun aloft.”

VIII.57 Aśvins

VIII.57.1: Ge and Old both suggest reading **yuktvā* for *yuktā*, and Ge further suggests *rāthe nā* for *rāthena*. Although such emendations are legitimate in the poorly transmitted Vālahilya, I see no reason to change the text if we can make it make sense as it stands.

VIII.57.2: Once again Old, Ge, and Re are in favor of various emendations (for which see the relevant discussions), but it is possible to make sense of the text, with the only alteration from assuming that *dadr̥śe* stands for a dissimilated **dadr̥śe*.

VIII.57.3: I do not know who the bull (*vṛṣabhāḥ*) is; Old suggests Indra, Ge Agni.

VIII.58 Fragment

VIII.58.1: As indicated in the publ. intro., this verse probably treats the Tānūnaptra. Although Ge suggests that the *yām* and *yāḥ* simply show the free use of the relative pronoun for general subordination, tr. both as ‘wenn’, I think *tātra* in d is the correlative of both: the Sacrificer has a compact with both the sacrifice itself (ab) and the priest who carries it out (c).

As Old points out, *āsīt* should no doubt be read as accented *āsīt*; the sketchy transmission of the hymn no doubt accounts for these errors.

VIII.58.3: As Old points out, *adhijajñe* should be accented (*-jajñé*) and *huve* should not be.

VIII.59 Indra and Varuṇa

VIII.59.1: I do not think it nec., with Ge, to supply a new verb with *prá* in b, since \sqrt{sr} regularly appears with *prá*.

I supply *rādhase* with *mahé*. This phrase is frequent, esp. in VIII (I.139.6, III.41.6, VIII.2.29, 24.10, 45.24, etc.), and *rādhas-* is a favorite word in the Vāl.

VIII.59.2: The Khila *ābhyām* should be read for *āstām*.

pāré can be read with both genitives, *rājasah* and *ādhvanah*, separately (so also Ge) and is positioned between them.

Despite the morphological peculiarity of *sísratuḥ* (on which see Old, Narten [see Kü's ref.], Kü 553), I see no reason to substitute the Khila *tasthātuḥ* with Old, Ge. Both Narten and Kü endorse the nonce form *sísratuḥ*.

VIII.59.3: On Kṛśa and a possible resonance with the “seven voices” of this vs., see comm. ad X.40.8.

The du. *śubhás páti* (generally voc.) is found over 20x in the RV, always of the Aśvins, save for vss. 3 and 5 in this hymn. Its appearance here suggests that the phraseology was adapted from an Aśvin hymn. The Kṛśa passage just cited is also in an Aśvin hymn. The configuration of ab, with *vām* at the end of the a-pāda, following *kṛśásya* might indicate that the original statement began with *kṛśásya*, with *vām* in Wackernagel's position. The detachable opening of the pāda, *satyám tád indrāvaruṇā*, would have been prefixed to fit the Aśvin phrase into the I+V context.

VIII.59.4: On the incomplete clause with *dhattam* see publ. intro.

VIII.59.6: The three gifts in ab seems to show a developmental sequence: they first have an inspired thought, which develops into thought (in the form) of speech, which is then heard.

With Ge (and Old) I read the Khila *tāni chándhāṃsi* for *yāni sthānāni*, which makes things considerably easier.

End of Vālahilya

VIII.60 Agni

VIII.60.3: Most take *yákṣ'yaḥ* as a deriv. of \sqrt{yaks} ‘appear, display’, *yákṣa-* ‘apparition’, hence Ge's ‘wunderbar’. I am taken instead by Old's suggestion (considered also by Re) that it incorporates the *si*-impv. *yakṣi* ‘sacrifice!’ regularly addressed to Agni, and my tr. reflects this. At the very least it is likely to play on \sqrt{yaj} , given its proximity to *yájiṣtha-* (1d, 3c) and *yajñésu* (2d).

VIII.60.4: I take *ádrogham* adverbially with Gr and (apparently) Re, while Ge supplies an acc. of the 1st sg. pronoun to serve as goal for *ā vaha*: “(Zu mir), der ohne Falsch ist, fahre ...” The accent, against adj. *adroghá-*, may support an adverbial interpr.

hitāḥ is ambiguous: it can belong either to $\sqrt{dhā}$ ‘place’ (see *súdhītā* in c) or \sqrt{hi} ‘impel’, and both may be meant. It also plays off immediately preceding *dhītūbhiḥ*, though it cannot belong to $\sqrt{dhī}$.

VIII.60.5: *ṛtāḥ* here is one of only two masc. forms of this extraordinarily common neut. stem, the other of which also qualifies *kavīḥ* (IX.62.30). (Gr’s three masc. acc. *ṛtām* are actually neut., and the apparent du. masc. *ṛtā* appears in X.106, a hymn constructed of gibberish, in vs. 5, which I refused to tr.) In these two passages it must be a secondarily adjectivized application of *ṛtā-* ‘truth’, facilitated by its past participle shape (and origin). Hence the special-effect tr. ‘entruthed’. Its appearance here may also be motivated in part by the semi-palindromic *trātar ṛtās*. The form *ṛtās* is unusual also because of its irregular sandhi with following *kavīḥ*, on which see comm. ad VII.18.2. Curiously the other example of this phrase in IX.62.30 shows the standard sandhi *ṛtāḥ kavīḥ*.

The trio *kavī-*, *vedhās-*, and *vīpra-* recurs from vs. 3. There Agni was both *kavī-* and *vedhās-* attended to by *vīpras*; here his attendants are *vīpras* and *vedhāses*, while he remains a *kavī-*.

VIII.60.6: On the metrical shape of *dīdīhi* see comm. ad IX.108.9.

VIII.60.8: On *tarāṇi-* see comm. ad III.11.3. The adj. modifies pl. *pāyú-*, referring to Agni’s flames, also in IV.4.12. Here I would alter the tr. to “(ever) advancing.”

VIII.60.9: I am a little uncertain why/how Agni protects us with hymn(s) (*gír-*), which are what we usually offer to him. Ge and Re soften the expression by tr. ‘word(s)’, but that is not what *gír-* means. Perhaps Agni’s “hymns” are the crackling noises of the fire, or else the instrumentals express cause: “protect us by reason of (our) hymns.” I prefer the former of these solutions. (See 18a below.) The various instrumentals cannot directly take up the *pāyúbhiḥ* of 8d, because *pāyú-* is masc. and all four number instrumentals (*ékayā*, etc.) are unambiguously feminine, as is *gír-* when it finally shows up in c.

VIII.60.11: A verb like ‘bring’ needs to be supplied with the first hemistich based on the numerous passages containing *ā bhara* governing *no rayīm* (e.g., I.79.8 *ā no agne rayīm bhara*); cf. also 18cd below.

On *upamāte* see VIII.40.9.

The publ. tr. “very glorious” is a careless error for “self-glorious,” misreading *svāyaśastaram* as **súyaśastaram*. I am evidently not alone in this, as the SV reads this instead. If this were the correct reading the accent should probably have been **suyāśastaram*, given forms like *suśrávas(-tama)-*.

VIII.60.12: Ge and Re take *vardha* as intransitive/reflexive “wachse du,” “renforce toi,” but active forms of *várdha-* are about as reliably transitive as Vedic verbs get.

VIII.60.16: The sense of *sutyájam* is disputed. I ascribe to it the same metaphorical meaning as ‘abandon’ acquires in English, namely acting without constraint. This fits nicely with *áhrayas-* ‘unabashed, immoderate, unrestrained’. A fire blazing up out of control is presumably meant; in the next pāda it manages to split a rock -- a sudden glancing allusion to the Vala myth, in which Agni usually has no role.

VIII.60.18: In a hymn of rare clarity, this verse provides a sudden stumbling block. Re’s comment, “Galamatias [gibberish] en *dānastuti*,” does not provoke optimism. My interpr. is very far from the standard ones. The problems arise from the grammatical and semantic interpr. of *suṣāmāṇi* and of the hapax *cikītvānā* and the construal of *sacate* and of *túbhyam*.

The differently accented *suṣāman-* is a PN, and both Ge and Re take *suṣāmāṇi* as such here (so also Mayr. PN) -- Ge as a nom. (“eine der rätselhaften Nominativformen auf *i*”) and Re, more sensibly, as a loc. Because of the accent difference and because a PN does nothing for us, I prefer Gr’s suggestion that it has real lexical value (‘good melody’ or ‘having good melody’), though I confess I do not understand why it would have this particular accent. It modifies loc. *śárman*: a “shelter made of good melody” would either be the protective power of the sung portion of the rite or the protection given by the “singing” fire (see vs. 9 above, with Agni’s hymns).

As for *cikītvānā*, most interpr. take it as an instr. modifying *kétena* and derived in some way from \sqrt{cit} . Old takes it as a deformation of the instr. of the pf. part. *cikītuṣā*, which is metrically impossible in the cadence; others set up a nonce stem *cikītvān-*. By contrast I think *cikītvānā* should be divided into two words: *cikīt vānā*. The first belongs to the stem *cikīt-* ‘perceptive, observant’ (4x) found only otherwise in the nom. sg. (likewise *cikīt*), twice of Agni (VIII.102.2, X.3.1). This would be its vocative, differing only in its lack of accent. What remains is *vānā*, which can be the neut. pl. of *vāna-* ‘(piece of) wood’ (see 15a above), which is found here in a possessive constr. with dat. *túbhyam*. In external sandhi we should, of course, have expected **cikīd vāna*, but I think the multiple exx. of *cikītvān*, *cikītvās*, etc., could have produced a redactional change, once voc. *cikīt* was no longer clearly understood. (In the publ. tr. an asterisk should precede “O perceptive Agni” as well as “pieces of wood.”)

Taking *túbhyam* as part of an independent clause solves another problem in the other interpr., for there is no good way to construe it with pāda a. Ge must take it as an honorary gen. with *śárman* (“in deiner Obhut”), but though the dative can express possession in predicative usage, I do not think this is possible in attributive usage. Re construes it instead with *sacate*, “(le poète) t’obéit,” positing what I consider an unprecedented case frame (dat. only) and meaning for *sacate*. (The parallel he adduces, V.43.15, is to be taken differently, and in fact Re does not tr. it in parallel fashion himself.)

With *túbhyam* belonging to another clause, *sacate* is free to be construed with the instr., as it regularly is. The instr. in question is *kéta-* ‘will, intention’, which is regularly governed by *ānu* \sqrt{i} ‘follow’ (IV.26.2, etc.), semantically very close to ‘keep company with, be accompanied by’; cf. also *keta-sāp-* (V.38.3) ‘serving the will’.

Ge renders *iṣanyáyā* as ‘nach Wunsch’, hence presumably to $\sqrt{iṣ}$ ‘desire’, but it seems arbitrary to separate it from the verb stem *iṣanyá-* ‘send, impel, drive’.

VIII.60.20: The voc. *āghṛṇīvaso* is taken lit. by Ge and Re (‘Glutreicher’ and ‘riche en ardeur-de-feu’ respectively). But *āghṛṇī-* is an epithet exclusively of Pūṣan, and it is highly unlikely that it would be used only here, in this awkward compound, without that reference. So it must mean ‘who has the goods of Pūṣan’ -- presumably the cows and other domestic stuff that are appropriate to this last pragātha.

VIII.61 Indra

VIII.61.1: The *ca* in pāda a is subordinating, as the accented verb (*śṛṇāvat*) shows. See Klein DGRV I.245-46.

Ge, flg. Sāy, suggests that the twofold speech (*ubhāyaṃ vācaḥ*) is Gesang and Vortrag. This is certainly possible, though I wonder if it might be refined to words and melody – that is, not separate performances of songs and recitations, but words set to music – accounting for the grammatical singular.

VIII.61.4: On *āprāmi-satya* see Scar 388, inter alia. With him and others (see already Gr) I take the first member as derived from *prá √ mī*, but in the common idiom ‘confound’. In my view the compound concerns a regularly expressed anxiety about Indra – does he exist? See, e.g., VIII.100.3 *néndro astīti néma u tva āha* “‘Indra does not exist,’ so says many a one.” Our compound addresses this by calling him one “whose reality cannot be confounded.” Ge’s “der sein Versprechen nie bricht” assumes a meaning ‘promise’ for *satyá-* that I don’t think is justified for the RV. Scar’s “dessen Wahrheit unwandelbar ist” is closer to mine, but I don’t think his rendering of the first member is sufficiently pointed.

VIII.61.6: Although *paurá-* is generally a PN in the RV (see Mayrhofer, *Die Personennamen in der Rgveda-Samhitā* s.v.), reflecting the patronymic it is morphologically, here it cannot be so meant. Among other things, Indra cannot be a descendent of Puru! In this passage it puns on *purukīt* in the same pāda, as well as *purūvaso* in 3a, *purū* in 8a. Ge’s tr. takes account of this word play (“Mehrere der Rossherde”), but I don’t think that it should be construed with a genitive as he takes it. I take both genitives (*ásvasya ... gāvām*) with *purukīt* (so also Scar 76) and interpret *paurá-* as ‘stemming from / related to much(ness)’, that is, ‘muchness itself’; “multiplicity ... multiplier” is an attempt to capture the pun in English without undue awkwardness.

In c Ge (also Old) takes *dānam* as subject: “bei dir bleibt die Gabe niemals aus,” but the verbal forms to *√ mṛdh* are otherwise always transitive. Old cites VII.59.4 as parallel, but the parallelism is only apparent and the verb there is also transitive.

VIII.61.7: The two verbs in ab, *éhi* and *vidā*, seem to conform to the quasi-serial-verb construction (on which see A. Yates 2014 [UCLA IE Conference proceedings]), but *hí* makes trouble for this assessment and trouble in general for the interpretation. Since *hí* triggers verb accentuation, the first imperative should be accented *éhi* (that is, *ā + ihí*), not *éhi* (that is, *ā + ihi*), as Old points out. He suggest that *éhi* is parenthetical. This is possible, though ad hoc, but this still leaves the function of *hí* in question. It could be interpreted in the mode of Brereton 2012, as marking the first of two imperatives (in this case *vidā*, if *éhi* is parenthetical) as the basis of the action of the second. Such an

interpretation is barely possible here; however, it seems excessively complex, since it requires banishing the truly first imperative *éhi* from structural consideration. My own ad hoc suggestion is that *hí* is over-represented in this part of the hymn (2a, 2d, 3c, 5c, 6c) and has been inserted here without its usual function and without triggering verbal accent. But this is of course not a satisfying solution, though it does allow the QSV analysis to be maintained.

For impv. *vidā* against Pp subj. *vidāh*, see comm. ad IX.19.6. Here the parallel impvs. *éhi* and *vāṛṣasva* reinforce an impv. interpr.

For the hapax *céru*- see EWA s.v. An association with \sqrt{ci} ‘perceive’ seems possible. Ge is uncertain, tr. ‘seeking’, but in n. suggests ‘traveling’ (to \sqrt{car}).

Morphologically *vāṛṣasva* is somewhat problematic: Lub takes it as the medial perfect imperative to a subjunctive stem, Kü (474) more cautiously as a “thematically built” imperative. It is worth pointing out that a properly built pf. mid. impv. would come out as **vāṛṣkṣva* and would be multiply ambiguous. Thematicization would be a good strategy under these circumstances. For further disc. of this set of “thematic” perfect imperatives see my 2018 “The Vedic Perfect Imperative and the Status of Modal Forms to Tense-Aspect Stems” (Fs. Lubotsky) on the perfect imperative. As is generally noted, this imperative cannot be separated from the medial participle *vāṛṣānā-*, which in two of its three occurrences also appears with *úd*. Following Neisser (1893, also Gotō 1987), Kü (474–77) assigns these forms to a root $\sqrt{2} varṣ$ ‘sich ermannen, sich (tatendurstig) erheben’ (associated with the present *ṛṣāyāte*, which however appears to be a denominative, not a root formation) separate from $\sqrt{1} varṣ$ ‘regnen’ and translates our passage rather like Ge’s “Ermannen dich...” I think this separation is unnecessary and also ignores the *āṛṣasva* in 3a. I find the liquid semantics of $\sqrt{varṣ}$ ‘rain’ not only possible in all the *úd* $\sqrt{varṣ}$ passages but productive of a striking image: ‘bubble/boil up’, expressing Indra’s irrepresible excitement and energy.

VIII.61.9: Thematically and lexically connected with the preceding verse (8) despite straddling the pragātha boundary. In 8c we identify ourselves as *vīpravacas-* ‘having inspired speech’, and in 9ab it is said that either a *vīpra* or a non-*vīpra* might offer his *vācas-* to Indra, with good results either way. Although this seems like a non-RVíc sentiment (esp. after 8c), since ordinarily only good poets (like us) are meant to achieve success, perhaps the “inspired poet” is being implicitly contrasted with a non-inspired but still skillful poet. In the other occurrence of *avīprā-* in the RV (VI.45.2), Indra “places vitality even in the uninspired,” so perhaps, alternatively, here even the uninspired poet achieves success simply by dedicating his product to Indra and acquiring luster by this contact.

The accusative of the offering with \sqrt{vidh} is a bit unusual, but not unprecedented (see, e.g., I.189.1), and Ge’s rather deviant tr. “die Rede recht gemacht hat” and his alternative suggestion that *vācaḥ* represents *vācasā* at the end of the pāda are both unnecessary.

On the apparent bad cadence produced by *āvidhat*, see remarks ad II.1.7, where Arnold’s suggestion to read a long augment is adopted.

The apparent subj. *mamandat* certainly can work as a subjunctive in context and is so rendered in the publ. tr. However, note that it immediately precedes *t''vāyā*, beg. with *t-*, and we might be dealing with an unetymological doubling from an underlying

**mamanda* *t''vāyā*. The final syllable of the verb would then be light, but this doesn't cause major metrical problems. Nonetheless, I'm inclined to stick with the subjunctive. On the other hand, on the basis of VII.18.21 and VII.33.1, I now think it is possible that *prā mamanda(t)* should be interpr. as transitive, with 'you' [=Indra] supplied as object, perhaps as haplology from **tvā tvāyā* as I suggest ad VII.18.21. For the motivations for this reinterpr., see disc. there. The altered tr. would be "... will exhilarate / has exhilarated (you) in devotion to you." On the other hand, the intrans. interpr. in the publ. tr. makes slightly more sense in this context -- and forms of $\sqrt{ma(n)d}$ can be either trans. or intrans., so the current tr. could be maintained.

The voc. *ahamsana* is surely rightly explained (Old ad V.75.2, AiG II.1.327, III.437) as a univerbation of a VP *ahām sanā* "I shall win" (see V.75.2 for another instantiation of this phrase). (AiG II.1.327 suggests *ahām saneyam*, but the thematic subjunctive matches the compound better.)

VIII.61.10: Ge tr. *yādi* as 'So', which does not seem legitimate to me. It might be possible to read it as **yād ī*, even without a following cluster (see Jamison 2002) "when he will hear my call," but I don't see that this appreciably improves sense.

VIII.61.11: Kulikov (339–40, flg. Gotō) does not allow a passive reading for medial forms of \sqrt{man} , but aside from Gotō's dictum I see nothing against such an interpretation, which fits the passage better than a reflexive one.

The hapax *ārāya-* is plausibly taken as a negated form derived from the root $\sqrt{rā}$ 'give, bestow' by Mayrhofer EWA s.v. *rayí-*.

jālu- (i.e., *jādhu-*) is also a hapax with no agreed-upon etymology or meaning. Ge leaves it untr. and Old simply comments "dunkel." See EWA s.v. for references to previous discussions and suggestions. I wonder if it is not related to *jāthāra-* 'belly', with MIA voicing of intervocalic obstruent between vowels (cf. Pkt. *jaḍhara-* 'belly' cited in EWA s.v. *jāthāra-* [though not registered in Turner]), with "belly" as the designation of a greedy, voracious person.

The point of the verse seems to be that we don't want to get a bad reputation for being selfish by grabbing Indra to be our exclusive companion.

VIII.61.12: The second member of the hapax compound *ṛṇā-kāti-* belongs with *kāmakāti-* 'desiring desires', and I therefore produce a more volition tr. than the usual 'Schuld fordernd'.

The interpretation of the second hemistich depends on the interpretation of *bhṛmām*. Gr takes it as 'error', Ge as 'impatience' (Ungeduld), and see EWA s.v. for other suggestions. I consider it a derivative of \sqrt{bhram} 'whirl', and see it here as qualifying the *vājīn-*, the prize-winning horse. The point is that a good charioteer recognizes a good horse even when it's going so fast it becomes a whirling blur. And this fast horse is the one that the knowledgeable charioteer wants and will obtain. Ge's interpretation is very different: "Der Gewinner ... versteht die Ungeduld, die den Sieggewohnten erfasst." He takes *bhṛmām* as a noun, the object of *védā*, and the referent of the relative pronoun in d. Since he considers that rel. pronoun the subject of *násat*, he must account for acc. *yām* by assuming attraction to *vājīnam* from expected nom. **yāh*. My interpretation avoids this unappealing change and also accounts better for the position

of the particles *íd ū*, since *vājínām* belongs to the main clause not the relative clause, by my reading. Moreover, *násat* should be a subjunctive, but his tr. fails to register that.

VIII.61.13: Pāda b would literally be “make lack of fear of that for us,” which is overly stilted.

Pāda c reprises 5ab.

VIII.61.14: Old takes *rādhaspate* as a predicated vocative, presumably with at least *rādhaso máhaḥ* and possibly *kṣáyasya* dependent on it. Ge (whom I follow) supplies a “lord” for those dependent genitives, which may amount to the same thing.

VIII.61.15: The sandhi form *índra* that opens pāda a can be either vocative or nominative. Because of the 3rd ps. verbs of cd, I take it as nominative.

VIII.62 Indra

VIII.62.3: Gr, Ge take *áhita-* as ‘useless’ (untauglich), the negation of what I think of as a later specialized sense of *hitá-* as ‘useful, beneficial, friendly’, which is not, as far as I know, found in the RV. In his n. Ge allows the possibility of connection with \sqrt{hi} ‘spur on’ (which is Sāy’s view), and this seems the better choice. Parallel phraseology supports it: IV.7.11 *hinvé árvā*, V.36.2 *árvato ná hinván*, plus the numerous exx. of \sqrt{hi} + *ásva-*, *átya-*, and other words for horses. Ge’s cited parallel, VI.45.2 *anāsúnā cid árvatā* “even with a steed lacking speed,” also provides support.

I use the “be about to” sense, always possible for desideratives, to tr. *siṣāsati*, rather than ‘desires to win’. The question is not whether Indra wants to win – of course he does – but that he is about to win despite unfavorable circumstances. The ‘about to’ sense also works better with the future part. *kariṣyatáḥ* in d.

VIII.62.5: The interpretation of this verse rests on whose mind (*mānas-*) is at issue. Ge. considers it to belong to the mortal worshiper and makes it the object of *kṛṇóṣi*: “Da du ... selbst des Kühnen Sinn (noch) kühn(er) machst ...,” which also entails interpreting plain *dhṛṣāt* as a comparative. By contrast I consider the mind to be Indra’s and take pāda a as a separate nominal sentence. This has the advantage also of putting *yád* in b in a more acceptable syntactic position. In V.35.4 the *dhṛṣán mánaḥ* is unarguably Indra’s; the full expression in I.54.3 *dhṛṣató dhṛṣán mánaḥ* “the bold mind of the bold one” also refers to Indra.

As for the rest of the verse, I take the gen. participles *saparyatáḥ* (c) and *pratibhūṣataḥ* (d) as genitives of benefit. This has the slight disadvantage of positing different referents for these two participles and for *dhṛṣatáḥ* in a, but it would hardly be the first time that a RVic verse contained genitives referring to different entities, and there is considerable distance between *dhṛṣatáḥ* and the others.

VIII.62.6: As Ge suggests, the object of Indra’s gazing should be the soma, parallel to the wells (*avatān*) of the simile. As he also suggests, the *avatān* can simultaneously refer to soma-springs (Somabrunnen), and so I have tr. the word twice, in simile and frame.

Ge construes the gen. phrase *dākṣasya somīnaḥ* with the gerund *juṣṭvī*. This is probably correct; my “make X [acc.] of Y [gen.]” goes suspiciously easily into English, but in Sanskrit the construction would probably involve a double accusative. I would thus change the publ. tr. to “Finding pleasure in the skillful provider of soma, he makes (him) a partner ...”

VIII.62.8: Ge takes the dat. *devātātaye* with cd: “dass du für die Götterschaft mit Übermacht den Vṛtra erschlägst.” This has some immediate appeal, but I am reluctant to adopt it because both the hemistich-break and the *yād* intervene. Moreover, the use of present tense *hāṃsi* suggests that the Vṛtra-smashing continues in the present day and is perhaps separate from the primal act performed for the benefit of the gods in mythological time.

VIII.62.9: There are various ways to configure the nominals in the first hemistich, *sāmaneva vapuṣyatāḥ ... mānuṣā yugā*, and their relation to the verb *kṛṇāvat*. Most interpreters assume (I think correctly) that *kṛṇāvat* takes a double accusative here (“make X into Y”), but which is the X and which the Y? Ge takes *mānuṣā yugā* as the first object and *sāmaneva vapuṣyatāḥ* as the second: “Er soll die menschlichen Geschlechter gleichsam zu anstaunenden Versammlungen machen,” but does not explain how masc. *vapuṣyatāḥ* can modify neut. *sāmanā*. Old discusses the passage at length, but in all four translations he suggests as possible he also takes *mānuṣā yugā* as the first object. However, this phrase is almost always an accusative of extent of time “through the human generations” (I.144.4, II.2.2, V.52.4, VI.16.23, VIII.46.12). If we take it that way here and thus exclude it from one of the two accusative object slots with *kṛṇāvat*, the remaining two nominals can each take one of the slots. The point then is that generation after generation people/gods marvel at Indra, and all these people oohing-and-aahing are like big festive parties.

VIII.62.11: The full specification of the subject of the 1st dual verb *sām yujyāva* as *ahām ca tvām ca* is noteworthy, since generally the subject is reduced by gapping, as in VII.88.3 *ā yād ruhāva vāruṇas ca nāvam* “When we two, (I) and Varuṇa, mounted the boat ...” VIII.34.16 *indraś ca dādvahe* “We two, (I) and Indra, took ...,” VIII.69.7 *ūd yād ... gṛhām indraś ca gānvahi* “when we two, (I) and Indra, go up to his house....” (Of course all those examples involve 1st ps. exclusive, rather than inclusive as here.) The increasing emphasis in this hymn on partnership between god and human discussed in the publ. intro. accounts for the explicit “both I and you” here.

VIII.62.12: *satyām id vā u* is found as a unit at V.73.9, and I therefore think that *tām vayām, indram stavāma* should be detached from both what precedes and what follows. See also expressions like *satyām tād* (III.39.5, VIII.59.3), *satyām it tād* (VI.30.4), introducing a separable statement of truth.

VIII.63 Indra

VIII.63.1: The two parallel perfects *ānaje* and *ānajé*, each final in its hemistich, require two different functional interpretations, the first passive, the second transitive, with a

double accusative. Kü (95–96) recognizes more or less the same two functions (patientiv and agentiv-reflexiv) for this perfect stem, but curiously claims that the perfect to this root is found only in Maṇḍalas I and X, though offering no alternative interpretation of these forms here.

Various referents have been suggested for the *venā*:- Indra (Old), Soma (Ge). I favor Agni, for the following reasons. First, the actions of ab and cd, whose correspondence is signalled by the identical verbs, take place in the divine realm in ab and in the human one in cd, where Manu directs his action to the divine. This situation suggests a ritual scene, and the Vena, who is the target of both acts of smearing, should then be a middleman between the divine and human in the ritual. This figure can only be Agni or Soma. As for the rest of the vocabulary, *pūrvyā*- can be used of Agni, Soma, and Indra, but is most regularly Agni. Likewise Agni is often the object of $\sqrt{aṇj}$; cf. esp. III.14.3 *yāt sīm aṇjānti pūrvyām havírbhiḥ*. And Agni several times opens doors (e.g., I.128.6, III.5.1, VIII.39.6). With Agni covertly mentioned in this verse and Soma overtly in vs. 2, the whole ritual scene is set.

VIII.63.2: The sense of *māna*- here is disputed. Ge takes it as “Melodie,” explained ad I.39.1 as via “Tonbemessen, Intonation”; Old “Himmelshaus.” Although my interpretation of *māna*- as ‘measure’ shares a root etymology with Ge’s (at least as he sees it, but cf. EWA s.vv. *māna*-², *māna*-³), namely $\sqrt{mā}$ ‘measure’, I take it in a fairly literal sense — the measure of heaven is the distance to it — and as an acc. of goal. See also 7d.

As far as I can see, *úd* \sqrt{sad} occurs only here in the RV. Ge takes it as “make a pause,” but gives no grounds for this interpretation. Although already in the BYV Saṃhitās this lexeme can mean ‘go out, (tr.) put out [of fire]’, here a literal meaning ‘sit up’ fits the context very well. The pressing stones are raised up in preparation for pressing; note that the *grāvan*-, also ‘pressing stone’, are *ūrdhvā*- ‘erect’ in X.92.15, a situation also embodied in the compound *ūrdhvā-grāvan*-.

The *ádrayaḥ* in d are no doubt pressing stones, as the publ. tr. has it, but I now think that there is a second possible reading, as ‘mountains’. Soma famously grows on the mountains (see the epithet *giri-śthā*- for example), and the mountains can be said to sit up “as if to measure heaven.” For a similar comparison between *ádri*- and the height of heaven see X.63.3. I would now emend the tr. to “The stones (/mountains) ...”

VIII.63.3: *stuṣé* could alternatively be 1st sg. ‘I shall praise’. I interpret it as an infinitive, with Ge, because there has been so far no personal reference to the poet. But this is not a strong argument, esp. since “we” make an appearance in vs. 4.

The mention of the opening of the Vala cave may allude to the dawn, and therefore to the dawn that is happening at this sacrifice now.

VIII.63.4: *vakṣāṇi*- is derivationally ambiguous: Gr takes it to $\sqrt{vakṣ}$ ‘grow, increase’, Ge to \sqrt{vah} ‘convey’, though not with entire confidence (“Wortführer (?)”), AiG II.2.207 allows both. Both are possible in the realm of RVic discourse. I opt for $\sqrt{vakṣ}$ because the expression is parallel to *kavivṛdháḥ* ‘strengtheners of poets’, but I certainly don’t rule out a derivation from \sqrt{vah} .

Another ambiguous word is *hóman-* in c; this stem can mean either ‘invocation’ (to $\sqrt{hū}$) or ‘pouring, oblation’ (to \sqrt{hu}). Gr takes it to the latter, Ge, apparently (‘Darbringung’) to the former. I agree with Ge: the trope of pouring out praise is common in the RV.

VIII.63.5: The syntactic deployment of *várasya* is disputed; see Old’s discussion for various possibilities. I follow Ge in taking it as dependent on *krátum*.

It also seems necessary to supply a verb with ab. I import *anūṣata* from cd, with *svāhā* the cry that the sacrificers cry out; however, Ge’s ‘entsprechen’, utilizing the preverb *ānu* present in pāda a, is also possible, though he must take *svāhā* as a syntactic absolute (“unter Svāhāruf”).

Ge takes *śvātrām* as the content of the call (“... haben ... den Drang eingeschrien”), but \sqrt{nu} ordinarily takes as object the being towards whom the cry is directed, and I therefore take *śvātrām* as referring to Indra. (This standard construction of \sqrt{nu} does make some trouble for my interpretation of *svāhā* as construed with supplied \sqrt{nu} in ab, but perhaps the fact that *svāhā* expresses the cry itself makes the difference. See comm. on I.6.6, however.)

Note the phonological echoes: *ā(d ū) nú ... ānu* (a) / *anūṣata* (c).

VIII.63.6: I see no reason to attenuate the identification of Indra with the *adhvarā-* that the grammar seems to demand, by a contrivance like Ge’s “den die Preislieder als (Gegenstand) des Gottesdienstes kennen.” See I.178.4, where Indra is identified with “the laud of the sacrificer” (*yájamānasya śámsaḥ*), and the immediately following verse (63.7d), where he is identified with peaceful dwelling (*kṣáyaḥ*).

VIII.63.7: The second hemistich has been subject to various interpretations. See, inter alia, Old’s discussion, also Thieme (*Fremdl.* 42–43). The primary points of difference are the case/number of *vípāḥ* (gen. sg. or acc. pl.) and of *aryáḥ* (gen. sg. or acc. pl.), the sense of *māna-* (as also in vs. 2), and the syntactic structure of the final pāda. I opt for gen. sg. *vípāḥ* (as Old points out, the acc. pl. should be accented *vípaḥ*), acc. pl. *aryáḥ*, and the same sense for *māna-* as in vs. 2, namely ‘measure’ – in this case the measure, i.e., the sheer size, of Indra. I construe both genitives (*vípāḥ* and *mānasya*) with *barhāṇā*, and take the last two words *sá kṣáyaḥ* as a separate clause, as the position of *sá* might suggest – contra all other interpretations I am aware of. It makes sense that Indra should be identified as “peaceful dwelling,” because he has killed the strangers and thus brought peace to the Five Peoples.

VIII.63.8: As noted in the publ. intro., “the turning of the wheel” (*cakráśya vartaním*) recalls the later designation for a universal monarch *cakra-vartin* ‘turner of the wheel’. The association of *cakráṁ* with \sqrt{vrt} ‘turn’ is found elsewhere in the RV (*cakráṁ ná vṛttám* I.155.6 = IV.31.4 = V.36.3; and a number of VPs, e.g., I.164.11 *várivarti cakráṁ*, II.11.20 *āvartayat sūryo ná cakráṁ*), but this seems the passage most implicated in power and sovereignty.

VIII.63.9: Pāda a contains a textual problem: whether to read the transmitted *vyódana* (-e [so Pp.] or -aḥ, out of sandhi) ‘moistening/moistener’) or to emend to *vyòdaná* (i.e., -é)

‘rice-porridge’, the food associated with the Emuṣa myth that is treated virtually only in this part of VIII (the *odanām* in 69.14; 77.6, 10). See Ge and Old ad loc. I follow Ge in the emendation; it is very difficult to make sense of the ‘moisten’ interpretation, and the rarity of *odanām* might have led it to be changed. In the publ. tr. there should be an asterisk before “to the rice-porridge.”

VIII.63.10: Supplying ‘praise-hymn’ or the like as object of *dádhānāḥ*, which goes back to Sāy, is supported by VII.73.1 *prāti stómaṃ devayānto dádhānāḥ*.

As Ge points out *yusmābhiḥ* may refer either to the gods or to the other singers. On the basis of 11, I think the latter is more likely (so also Ge), although note the gods in 12d.

On the non-**o*-grade in kinship terms as 2nd compound members in the RV (apropos *dákṣa-pitarāḥ* here), against *-pitār-* in later Vedic, see J. Lundquist, “Does *tvátpitārāḥ* = εὐπάτωρ?” IEL 9 (2021), esp. 133–36.

VIII.63.11: Ge takes *ṛtvíyāya dhāmane* as referring to the Maruts (as the “pünktlichen Geschlechten” [timely race], a phrase that doesn’t make a lot of sense to me) or Indra. On the basis of V.48.1 *priyāya dhāme ... sváksatrāya sváyavase* “or the self-ruling, self-glorious one ... for his own dear establishment,” I take this as referring to the establishment of Indra at the sacrifice, governed by the sacrificial order, which the singers are hoping for. This establishment is then stated as accomplished in 12c *yáḥ ... dhāyi* “who has been established ...”

ṛkvabhiḥ reminds us of the insistent *arká* of the 2nd ṛca (4c, 5c, 6c); the same verb *√nu* ‘cry out’ is repeated here, from 5c.

VIII.63.12: I have no idea what the mountains have to do with anything and why they and the Maruts should be in agreement. (Ge takes *sajóṣāḥ* only with the mountains, but this doesn’t help.) Since there is in fact no overt ‘and’, it is possible that the Maruts are being referred to as mountains (“... the Rudras, ‘mountains’ in their profusion, are of one accord...”).

The relativization in cd is somewhat shifty: the *yáḥ* should refer to Indra, who is the first member of the compound in the main clause *índrajyeṣṭhāḥ* ‘having Indra as chief’.

VIII.64 Indra

VIII.64.4: I take *kṣáyo diví* as a nominal sentence, parenthetically inserted, rather than interpreting *kṣáyah* as a 2nd sg. verb form, as most others do. See Old on the two possibilities. Although it makes some complications for the syntax, I prefer the nominal interpretation both because *kṣáya-* is, as Old says, a favored noun in this group of hymns and because a verbal *kṣáyah* should be a subjunctive and I do not see what the subjunctive would be conveying here. (Ge tr. it as a straight indicative, which avoids the difficulty but contravenes the morphology.) Stating that Indra’s dwelling is in heaven makes clear why we command him to “go forth” in order to “come here.”

VIII.64.9: *dānā-*, so accented, regularly means ‘giving’, not ‘gifts’; I would alter the tr. here to the somewhat stilted “your acts of giving.”

VIII.64.10: On c as a quasi-serial-verb construction see Yates 2014 (Proc. 25th UCLA IE Conf.) Also 12c.

VIII.65 Indra

VIII.65.5: The morphological identity of the forms *gr̥ṇīṣé* and *stuṣé* is disputed. Ge takes them as 2nd sg. passives (favored also by Old), though he mentions the possibility that they are 1st sg. -se forms in his n.; Lub identifies them as 1st singulars. I take them as infinitives rather than 1st sgs, primarily because they are accented. However, it is possible that a finite verb would bear the accent after the accented initial voc. *índra*, and that the second form would be accented contrastively, so 1st sg. is certainly not excluded. Since the “you” of the publ. tr. (/ “dich” of Ge’s tr.) is not overtly expressed, either interpretation fits the text.

VIII.66 Indra

VIII.66.1: The nominative plural pres. part. *gāyantaḥ* in c and the 1st singular *huvé* in d are grammatically incompatible but conceptually harmonious: this is the usual situation where the poet speaks both for himself and for the group of officiants he represents. Ge takes abc together and supplies a 1st plural verb (rufen wir), while I assume that the *huvé* of d has domain over the whole verse, with the plural participle in c a grammatical interruption.

VIII.66.2: My tr. of pāda b sounds in English like a loc. absol. or a relative clause, but is simply an attempt to keep the pāda together in tr. The acc. *susíprám* of course simply picks up the rel. prn. *yám* that opens the verse.

Ge tr. *āḍṛtyā* as “fürsorglich” and so must assign it to a separate root $\sqrt{dṛ}$ ‘pay heed’. I instead take the form to $\sqrt{dṛ}$ ‘burst, tear’ (a possibility Ge registers in his n.). See EWA s.v. *DAR*^f for the likelihood that the later *ā* $\sqrt{dṛ}$ ‘pay heed’ forms developed as semantic specializations of ‘tear out’.

VIII.66.3: The first hemistich contains two hapaxes with which Indra is identified. The meaning and etymology of neither of them can be certainly determined.

The first one, *mṛkṣá-*, is the easier, because a root etymology suggests itself (though without imposing itself) and because the adjective qualifying it, *ásvya-* ‘belong to a horse, equine’, narrows the semantic field. If the form belongs to the root $\sqrt{mṛj}$ ‘wipe, groom’, a *mṛkṣá-* can be a curry comb (so Ge, EWA s.v. *MARJ*, both with uncertainty) or other tool for grooming a horse. (The supposed root $\sqrt{mrakṣ}$ ‘comb’ to which Gr and AiG II.2.71 assign it does not exist.) Possibly connected is the hapax *mṛkṣínī-* (X.98.6), where the word seems to describe the tracks on the earth made by a hard rain – possibly envisioned as the regularly spaced impressions left by a comb. Why calling Indra a curry comb would be flattering to the god is not clear. Perhaps it’s one of those cultural mysteries like (semi-)modern Engl. “you’re the cat’s pajamas.” Or perhaps,

like the farm implement the harrow, which likewise has teeth and is pulled across land to break up clods, etc., and which has developed in English into a verb expressing the infliction of distress, the curry comb can be conceived of as a weapon.

The second hapax, *kīja-*, is harder, because there is no apparent root etymology, no similar forms attested in the RV, and, although it is also accompanied by an adjective, that particular adj., ‘golden’ (*hiranyāya-*), leaves the field very wide. Note also that, properly speaking, the velar should have yielded a palatal before *ī*, but there are enough secondary *ki/ī* forms to keep this from being a useful diagnostic. Ge suggests, tentatively, “Sporn” (spur) (sim., and similarly tentative, EWA), but gives no support. I very hesitantly adduce the later (Ep+) *kīcaka-* ‘hollow bamboo’ and suggest that *kīja* might be a ‘stake’. Note the *hiranyāyo vetasāḥ* “golden reed” in IV.58.5. Being called a golden stake seems a bit better than being a horse’s curry comb.

VIII.66.4: Since *vāsāt* is a subjunctive, strictly speaking it should be tr. “as he will wish.”

VIII.66.4–5: Note the cross-pragātha lexical agreement: 4a *purusambhṛtām*, 5c *sām bharāmasi*.

VIII.66.7: The balance of opinion (Gr, Kü, Lub, etc.) takes *apīpema* to $\sqrt{pī}$ ‘swell’, which morphologically makes sense. But Ge seems to take it rather as a redupl. aor. to $\sqrt{pā}$ ‘drink’ (“Wir haben ihn ... hier getränkt...”), though without explicitly saying so. See also the very parallel passage VIII.99.1, with *ápīpyan*. Despite the difficulties (amply treated by Kü), I prefer to associate these two forms with $\sqrt{pā}$. The transitive *-āya-* formation *pāyāyati* ‘makes drink’ is well attested in the RV. It is a little difficult to figure out what a corresponding reduplicated aorist should look like. Since $\sqrt{pā}$ is not an orthodox long-*ā* root, it doesn’t make a *p*-causative (type *sthāpayati*) and therefore would not import the *-p-* into the redupl. aorist (type *ātiṣṭhipat*). One might expect, based on its *-āya-* stem, to produce **ápīpayat* if thematic (type *dīdharat*) and **ápīpet* (type *dīdhar[t]*) if athematic, with the weak form to be expected **ápīpima*. Whether the form belongs to $\sqrt{pī}$ or $\sqrt{pā}$, the full-grade in the root syllable of this form must be secondary, and if it’s not a problem to extend the full grade to the weak form of $\sqrt{pī}$, it should likewise be unproblematic with $\sqrt{pā}$. It is true, however, that the ‘swell’ root is possible and that the forms of the perfect of $\sqrt{pī}$ and the putative redupl. aor. of $\sqrt{pā}$ would be hopelessly mixed up formally and not terribly separate semantically. For *ápīpyan* in VIII.99.1 see disc. there.

VIII.66.8: Ge takes the wolf of ab as a simile, compared with the unexpressed Indra: “Wie der wilde Wolf ... wartet er auf seine Zeiten.” But this requires taking *cīd* as a simile marker, which I am loath to do. I consider it a general statement about nature — wolves follow their own patterns, however much they appear to be acting randomly. Indra, though he is apparently uncontrollable, attends to our ritual patterns and will come when called (which is similar to what vs. 7 says -- same yesterday, same today). So, although the behavior of the wolf is a point of comparison for Indra’s behavior, it is not a simile in the narrow sense. A similar comparison but in a real simile is found in VIII.33.8 ... *mṛgō ná vāraṇāḥ, purutrā carāthaṃ dadhe* “Like a wild elephant he has

established his wandering [= his territory] in many places," where Indra is compared to a wild beast and the territory is somewhat like the *vayúna-* here.

On $\check{a}\sqrt{bhūṣ}$ with *vayúna-*, see I.182.1.

Ge takes *d* as a separate clause, apparently supplying a form of \sqrt{cit} 'appear' ("erscheine ..."), presumably based on *citráyā* and to be construed with *prá*. Although the position of *prá* is suggestive, I do not see that separating the *pādas* is necessary, since *d* fits easily with *c*.

VIII.66.9: Because *asya* is unaccented, it needs to be construed separately from *indrasya*. So also Ge.

VIII.66.10: My interpretation of *pāda a* is quite different from Ge's and starts from the rhetorical structure of the four questions in vss. 9–10. Three of these (9ab, 9cd, 10b) are negative questions, in which the negative is part of the predicate: 9a *ākṛtam*, 9c *ná śuśruve*, 10b *āstṛtam*. 10a also contains a negation, *ādhr̥ṣtāḥ*, but in Ge's tr. it is not predicated: "Was sind seine grossen, unangreifbaren Kräfte?" Furthermore his tr. implicitly equates neut. sg. *kád* with fem. pl. *táviṣīḥ*. These problems can be fixed by taking *kád* as a question marker, not an interrogative pronoun, and by assuming that the powers in question are not Indra's (as Ge takes them), but those of Indra's enemies. The implied answer to the rhetorical question is "no, there exist no powers that Indra can't assail." For *táviṣī* belonging to others, see, e.g., I.80.10 *índro vṛtrásya táviṣīm nír ahan ...*

The hapax *bekanāṭa-* is an almost textbook example of non-Indo-Aryan phonology (see Kuiper, *Aryans*), and it seems safest to take it as the name of a people, rather than in the traditional interpretation (going back to the Nirukta VI.26 *bekanāṭāḥ khalu kusīdino bhavanti*) as "Wucherer" (usurer, profiteer) as Ge does. For disc. see KEWA and EWA s.v.

VIII.66.11: *ápūrvyā* [*sic*, not, as in Aufrecht and HvN, *ápūrvya*] and *purūtāmāsaḥ* play off each other. *We* may be the latest of many, but our formulations have no predecessors – a variation on the usual theme of the "newest hymn."

VIII.66.12: Ge and Old make heavier weather of *ab* than seems necessary, motivated in part by *tvé* rather than *tvā* in *a* and the positioning of the verb in *b* rather than *a*, near to *ūtáyah*. Ge supplies a form of $\sqrt{dhā}$ in *a*, "Zwar werden viele Hoffnungen auf dich (gesetzt)," and takes *hávante* as passive, "und werden deine Hilfen ... angerufen." But the stem *háva-* is overwhelmingly transitive. Old suggests taking *ūtáyah* as accusative pl., which would do even more violence to the grammar. I take the subject of *hávante* to be *āśásaḥ* 'hopes'. As for *tvé*: although $\sqrt{hū}$ ordinarily takes the accusative, I can imagine a locative *tvé* in a more distanced usage: they call towards you, but they do not actually succeed. (Alternatively the *tvé* could have been influenced by *tvé* in 13a, in the same metrical position, though metrically distracted.) I then take *ūtáyah* as a separate existential clause.

VIII.66.14: *citráyā dhiyā* occurs also in 8d, and the tr. should have been harmonized. As in vs. 8, I take the *dhī-* to be ours, rather than Indra's, as Ge takes it.

VIII.67 Ādityas

VIII.67.5: A predicative voc. in a question.

VIII.67.6: I would slightly rephrase ab as “What shield, what shelter you have for the man who has ritually labored and who presses soma.”

VIII.67.7: *ādbhutainasaḥ* is generally taken as a gen. sg., parallel to *ānāgasah* in b. But since the only other ex. of this stem modifies the Maruts in V.87.7, I think it likely that it is a nom. pl. modifying the Ādityas. Moreover there is no NOM + *ásti* construction in c as there are in a and b. There is perhaps too much machinery in the tr., to indicate that it is not the Ādityas’ offenses, but those of others, that cannot deceive or mislead them (=the gods), but given the Ādityas’ character, I think the internal structure of the cmpd would be clear to the audience.

VIII.67.8: What to supply with *mahé* is somewhat up in the air, but some equivalent of Ge’s “Glück” seems harmless enough.

I don’t understand Indra’s role here. Is the idea that Varuṇa & Co. should not be getting any ideas about tying us up, because only Indra gets to do such things? But this would run counter to Varuṇa’s role, at least in later Vedic, of binding offenders. In any case the theme of binding recurs in this hymn; cf. vss. 14, 18.

VIII.67.9: In ab I supply a transitive form of $\sqrt{mṛc}$ ‘harm’ to be construed with the cognate instr. root noun. The fact that the verb of pāda c, (*abhí prá*) *mṛkṣata*, though derived from $\sqrt{mṛś}$ ‘touch’, could technically be an *s*-formation to $\sqrt{mṛc}$ makes the generation of a verb from that root easier, and in fact we might consider *mṛkṣata* as representing both ‘harm’ and ‘seize’. Old notes the phonological play.

In its other two occurrences *aviṣyū-* has the negative sense ‘greedy’ and is clearly related to *avasá-* ‘food’, etc. (see EWA s.v. *avasá-*), but here it must be positive. I assume a portmanteau pun, combining ‘greedy’ with an association with \sqrt{av} ‘help’, resulting in ‘greedy[=eager] to help’.

VIII.67.12: Since *anehás-* is an adjective, a noun needs to be supplied with it (contra Ge, Re). I supply ‘shelter’ on the basis of VIII.18.21 (also a hymn to the Ādityas) containing *aneháh ... trivárūtham ... chardíḥ*, with the *várūtha-* and *chardís-* found in our vss. 3b, 6b. I would also slightly alter the publ. tr. to “flawless (shelter)” on the basis of my re-evaluation of *anehás-* (see comm. ad X.61.12).

VIII.67.12–13: The correlative of *yé* in 13 is *té* in 14, but this unremarkable pairing actually conceals a bit of trickery: *yé* has 3rd ps. reference, but *té* has 2nd ps. reference, with the impv. *mumócata* -- with a change in person in midstream that is not evident until the verb is reached at the end of pāda b.

VIII.67.15: The doubling of 1st pl. pronouns, *naḥ ... asmát* can be interpr. in two different ways. On the one hand, *naḥ* can be just a Wackernagel-position placeholder, doubled by the more emphatic (and case-marked) *asmát* later in the vs. Of course enclitic *naḥ* is not

technically supposed to represent an ablative, but I think that all bets are off with Wackernagel-position pronominal enclitics. Or the *naḥ* can actually be an accusative, construed with *ājaghnusī*.

VIII.67.18: On the phrase *nāvyam sānyase* see comm. ad VIII.24.26, with argument for supplying ‘life’ with *nāvyam*.

VIII.67.21: The preverb *vī* is excessively represented in this vs., with 5 occurrences (including *vīśvak*) and its usual contrastive partner *sām* in the middle. Note also the figure ... *aṃhatīm#* ... *sámhitam#*.

aṃhatīm also makes a faint ring with the same word in 2a.

VIII.68 Indra

VIII.68.2: With Old (and implicitly Ge), read as a compound *vīśvayāmate*; this requires no emendation to the Samhitā text, only the erasure of the word boundary in the Pp.

VIII.68.3: The hapax participle *jmāyánt-* is clearly built to the adverbial instr. *jmā* belonging to the ‘earth’ word (*kṣám-*, etc.). The *pári* preceding it can be read both with the verb *īyatuh* and with *jmāyánt-*. Cf. *párijman-* and EWA s.v. As for what it means for a mace to encircle the earth, it is probably a measure of its size, which then indicates that Indra’s hands are even larger because they encircle the mace.

VIII.68.4: Although the sense of this verse is fairly clear, the second half-verse displays some syntactic intricacies, namely, what I consider two conjoined NPs that interact with each other in various ways and for which there is only one overt conjunction, *ca* in somewhat anomalous position. I take the two pāda-initial instrumentals *évaiḥ* and *ūtī* as forming one NP, with both indicating qualities of Indra’s (differently Ge, who takes *évaiḥ* with the verb: “rufe ich ... mit Eifer”), and the two pāda-final genitives *carṣaṇīnām* and *rāthānām* as a second NP, dependent on either *ūtī* alone or *évaiḥ* ... *ūtī* jointly. The single *ca* connects the two instrumentals in an X *ca* Y construction. This seems to me superior to Klein’s interpretation (DGRV I.172, 192–93) as a *ca* XY construction, with the *ca* conjoining the two genitives. For *évaiḥ* as the quality of a god, not an adverb, see, e.g., X.67.11.

VIII.68.7: The accusative phrase in c, *pūrvyām ānuṣṭutim*, makes syntactic trouble here. See disc. by Old, who lays out various possibilities. Ge takes the hemistich as containing a zeugma, with (as far as I can determine) *īśe* read differently with the two pādas -- taking an accusative in c and meaning “Anrecht haben,” while taking a genitive in d and meaning “herrschen über.” But among the numerous occurrences of *īś-*, I know of none with the meaning or case frame proposed for c. (For further disc. see comm. ad VII.32.18.) Old suggests either supplying another verb (*acodat?*) or taking the phrase as an Inhaltsakk. (though in what sense of that term I don’t understand). I take it either as a haplologized **ānu ānuṣṭutim* or as an acc. of respect. (Note that Old rejects Ludwig’s suggestion to read **ānu ṣṭutim*, but this would be another possibility in my opinion. What perhaps speaks against that is the other occurrence of *ānuṣṭuti-* in nearby VIII.63.8.)

VIII.68.8: I add a parenthetical “other” in ab, because Indra’s fellowship is something we always aspire to (see vs. 11 below), and so to state baldly that no one has achieved it seems defeatist.

VIII.68.10: I take *īmahe* to $\sqrt{yā}$ ‘beseech’, not ‘drive’ (contra Ge “... nahen wir...”).

There is a missing middle term between ab and c, namely what we are imploring Indra for – presumably the same help that he gave to Purumāyya.

VIII.68.14: Ge supplies ‘horses’ with the numbers of pāda a, separating them from the men of b: “... sechs (Rosse), je zwei und zwei, (und) die Herren...,” because the next verse definitely has six horses. But Hoffmann’s (1967: 233) suggestion that there are six men, who are the leaders of the horses, makes the verse less jerky and avoids having to supply both a noun (horses) and a conjunction (and).

VIII.68.15–17: The donors of the various gifts are generally in the locative here and so would be properly translated “bei,” “chez,” “at (the hands of) ...” or the like, but a series of locative tr. is simply too heavy and awkward.

I have made no effort to sort out the internal relationships among the patrons – a topic more than amply discussed in the sec. lit.

VIII.68.17: *vadhūmant-* means literally ‘having women, brides’, but Ge raises the question whether in this context it really refers to mares. I think this unlikely. Dānastutis regularly lump horses and female humans together. Very parallel is I.126.3 *śyāvāḥ ... vadhūmantah ... rāthāsaḥ*, “dusky (horses) and chariots carrying brides.”

VIII.68.18: I take the ruddy female (*āruṣṭī*) as a reference to Dawn, with the bull accompanying her as the sun. This makes sense in a dakṣinā context, since the priestly gifts are distributed at the dawn sacrifice. Ge rather as a mare.

VIII.69 Indra

VIII.69.1: It is necessary to supply a verb for ab; Ge “Traget” but I supply “chant” on the basis of the beginning of the second tr̥ca, 4ab *abhī prā ... arca*, and the insistent repetition in vs. 8: *ārcata prārcata, ... ārcata# / ārcantu ... arcata#*. Pāda a is essentially identical to VIII.7.1a *prā yād vas triṣṭubham īṣam*, where the verb governing the acc. is *ākṣarat* ‘has let flow’ (pāda b), which is not possible here. The “Triṣṭubh refreshment” is obviously the praise hymn; interestingly neither this passage nor VIII.7 is in Triṣṭubh meter.

The second hemistich is somewhat obscure, in part because, as Ge points out, it is not clear who the subject is. Perhaps the “Triṣṭubh refreshment” (that is, the praise), or the drop (that is, the soma) to which it is chanted, or the poet. (I favor the praise hymn.) The pair *dhī-* and *pūramdhī-* appears elsewhere together (VIII.92.15, X.65.13–14). Ge takes them here as names of the goddesses of religious poetry and of the dakṣinā respectively. In VIII.92.15 I take them as qualities that Indra confers on us, but here at least the *dhī-* is probably that of the poet(s). Perhaps they are a reciprocal, rather than parallel, pair: we receive plenty in exchange for insight (as in V.41.6). The interpretation

is further complicated by the fact that *ā vivāsa-* everywhere else takes an accusative, often in conjunction with an instr. of means: “seek to attract X with Y” (e.g., VIII.15.1 *īndram gīrbhīs taviṣām ā vivāsata*), but there is no accusative immediately available. (Though *vaḥ* could technically be an accusative, that interpretation seems unlikely here.) However, this is of course an Indra hymn, and in thinking about this verse again, I have concluded that Indra should be supplied here as the default object, and therefore for the publ. tr. I would substitute “With your visionary thought and with plenitude it [=hymn] is seeking to entice (Indra) here, in order to gain wisdom.” Cf. VIII.3.18 *imé hí te kārāvo vāvaśúr dhiyā, víprāso medhāsātaye* “For these bards, inspired poets, have bellowed for you [=Indra] for the winning of wisdom with their insight,” with both *dhiyā* and *medhāsātaye* in a similar context, where poets seek Indra.

On this vs. see Watkins (Dragon 237–38), where, inter alia, he persuasively claims that the vs. encodes an anagram of the poet Priyamedha’s name.

VIII.69.2: Another verse with unclear reference: neither the 2nd singular subject of *iṣudhyasi* nor the bull and cows are clearly identified, and it is complicated by the fact that there are also two occurrences of 2nd plural *vaḥ* in the verse. I take the subject to be the same as that of *ā vivāsati* in 1d, namely the praise hymn, with the common switch of persons. That the praise hymn is in reality inanimate is not in RVic discourse an obstacle to addressing it. The 2nd pl. *vaḥ* is then the same group of poets / ritual officiants as in 1a and 1c. As for the bull (*nadā-*, a and b) and the *pāti-* (c), I agree with Ge (n. 2) that it can be either Indra or soma. In the latter case, the referent is then the same as the *īndu-* ‘drop’ that was the target of the hymn in 1ab; in the latter, the same as the unexpressed object of *ā vivāsati* in 1cd. The cows are easier to account for if soma is the referent: they would then be the mixing milk as so often. If the bull is Indra, the cows may be the cows he brings us as largesse or praise hymns conceived of as cows (many words for hymn are feminine), and the sexual tinge of ab would be a nod to Indra’s hypersexuality. Probably both referents are meant.

On *iṣudhyasi* see comm. ad I.128.6 and my 2020 article “Vedic *iṣudhyā-* and Old Avestan *iṣud-*, *iṣūdiia-*: The Aim of Praise” (Fs. Lamberterie). Since I analyze **iṣudh-* as a root noun cmpd ‘aim an arrow’, a metaphor for aiming praise towards a divine target, the *nadām ... pātim* must refer to the god receiving praise. Indra or Soma are both possible, of course.

VIII.69.3: The first two pādas seem rather briskly to clear up the uncertainties of the previous verse, or give at least one reading thereof: soma, the cows that give the milk to mix with soma, and Indra (though not by name) are all present, and their relationships are clear.

The connection of the last half of the verse to what precedes is not clear, as Ge also points out. The birth is likely to be that of soma, but why are we now concerned with “the clans of the gods”? I tentatively assume that the gods are awaiting their invitation to the soma-drinking in their usual abodes. Somewhat later in the hymn (11b) all the gods partake of the soma.

There is number discrepancy between pl. *triśú* and sg. *rocané*, as also in the identical pāda in I.105.5b. On the basis of expressions like I.102.8 *trīṇi rocanā*, V.69.1 *trī rocanā*, I.149.4 *trī rocanāni* the two words must be construed together and a truncation of

rocanéṣu must be assumed. I don't quite know why, but Bloomfield (RR ad I.105.5) points out that *rocané diváḥ* is a frequent cadence, and it therefore may have imposed itself formulaically in this phrase. Also the alternation between *trī* and *trīṇi* and *rocanā* and *rocanāni* in the formula may have made an alternative *rocané* to *rocanéṣu* seem acceptable. In fact loc. pl. *rocanéṣu* is only attested once.

VIII.69.4: Although this verse belongs to a different *ṛca*, it seems to provide an alternative resolution to the puzzle of vs. 2, somewhat different from that given in 3ab. Here Indra is definitively identified as a *gópati*- 'lord of cows', paraphrasing 2cd *pátim ... ághnyānām dhenūnām*.

Ge takes *yáthā vidé* as "wie er bekannt ist," but this tag phrase regularly refers to the traditional way of producing poetry or performing ritual. See, e.g., I.132.2, VIII.13.14, IX.86.32.

satyásya sátpatim is probably a pseudo-pun, given that by many accounts (including ours) *sát-pati*- derives from *sáts-patí*-, with the first member a reduction of *sádas*- 'seat, settlement'. See EWA s.v. If *sát*- belongs to *√as* (as some think), it is a real pun.

VIII.69.6: Pāda c is presumably a reference to the Vala cave, as Ge points out.

VIII.69.7: Another elliptical 1st dual construction; for disc. see VIII.62.11.

Ge and Hoffmann, inter alia, take *bradhnásya viṣṭápam* to refer to the height or top of the sun. The phrase occurs also in IX.113.10. *bradhná*- in VIII.4.13–14 seems to refer to soma. Since *viṣṭáp*- several times occurs with *samudrásya* (VIII.34.13, 97.5=IX.12.6, IX.107.14), something liquid makes sense, rather than wandering around on top of the sun. Furthermore, at least in IX.12.6 (and probably IX.107.14) the "sea" in this expression is clearly soma. I also think that it works better as acc. of extent, rather than as goal, since the goal is the *grhām*.

For the ceremonial aspects of the second hemistich see publ. intro. Note that *sákhi*- is an integral part of the "seventh step" mantra at the wedding ceremony: *sakhā saptapadī bhava* "Become a comrade of the seventh step" (ŚGS I.14.6, etc.; see Jamison 1996: 121). Contra Hoffmann (1967: 255) I separate *trīḥ* from *saptá*, and consider the former to refer to drinking soma at the three pressings (so also Ge). I also take the cardinal *saptá* as if it were the ordinal *saptátha*-. For the corresponding verse, see 16 below.

VIII.69.9: It is likely that all three of these obscure words, *gárgara*-, *godhā*-, and *píṅgā*-, are musical instruments, but further specification is difficult. The *godhā*- may be crafted from some part of the monitor lizard also so called. See X.28.10.

The two intensives, *sanīṣvanat* and *canīṣkadat*, are both hapaxes (though cf. equally hapax *kānīṣkan* in VII.103.4), and are probably subjunctives, despite the zero-grade root syllable of *canīṣkadat*. So Schaeffer (38, 199). The preceding clear subjunctive *svarāti* sets the category, as Schaeffer (38) points out.

VIII.69.11-12: I do not understand why Varuṇa is mentioned specially. Perhaps because of the waters of 11d and the rivers of 12b?

VIII.69.12: I take *sudevā-* as a bahuvrīhi, as *su-*compounds with this metrical shape and accentuation generally are (contra Ge's "ein guter Gott"). The gods mentioned in 11b may be part of Varuṇa's retinue.

VIII.69.13: Interpretations of this verse vary, and *cd* is characterized as "dunkel" by both Ge and Old. I take the verse as a series of relative clauses referring to (unnamed) Indra, leading up to the proclamation of Indra in 14ab. The relative clauses are interrupted by an exclamatory *tád id vápuḥ* "just this is the marvel!" in *c*.

Ge takes *takvāḥ* as a PN (rejected by Mayr. *PN*; see also EWA s.v. *TAK*), but I see no reason to separate the stem from *tákvan-*, *takva-vī-*, and *takvavīya-*, all of which seem to refer to the movements of birds of prey.

I take *upamā* (so Pp., or *upamāḥ*) in the same way as in I.31.15, viz., as a root noun compound 'measure'. See disc. there.

VIII.69.14: Ge takes *ohate* as reflexive, but I prefer a passive interpretation here.

The second half of the verse segues into the Emuṣa myth prominent in this part of VIII. For disc. see publ. intro.

VIII.69.15: Note the extreme diminutivization in *arbhakó ná kumārakāḥ*, signalled by the two *-ká-*suffixes. Presumably the point, in this account of Boyhood Deeds, is to emphasize how small and weak he was to accomplish such deeds.

Both Ge and Old are troubled by *vibhukrátu-* as a qualifier of the buffalo. Old goes so far as to suggest it should be nominative, but was attracted into the accusative by the preceding accusatives (which, note, are not even adjacent or in the same *pāda*). This seems unlikely (and unworthy of the usually punctilious Old). Ge also manoeuvres the adjective into referring not to the *krātu-* of the buffalo, but rather to that of the father and mother: "Er kochte das Büffeltier für Vater und Mutter, das ihrem Verlangen genügte." I do not understand how he is interpreting the *vibhu-*, nor do I see any difficulty with assigning the quality named in the compound to the buffalo: that the buffalo is formidable makes the feat of a tiny boy cooking it (and presumably first catching it) all the greater.

VIII.69.16: The first hemistich seems addressed to the present-day Indra, recalling his boyhood deeds recounted in 15ab.

The second half matches vs. 7, with the same proposition that Indra and I (=poet, in my opinion; Ge rather Viṣṇu) should become comrades (both times with *sacevahi*). The referent of the multiple accusatives in *cde* is disputed. Old suggests the sun, in part because *sahásrapād-* is used of the sun already in AV VII.41.2. Ge also considers the sun the referent of the accusatives in *cd*, "den himmlischen, tausendstrahligen, rötlichen (Sūrya)," but separates those in *e* into a separate constituent (as far as I can tell), "den fehlerlosen, zum Heile führenden (Weg) folgen," because *pāda e* is found in VI.51.16ab *āpi pānthām aganmahi, svastigām anehāsam* qualifying 'path'. I prefer to read all the accusatives together and take the path (of VI.51.16) as the referent. This also involves interpreting *sahásrapādam* as 'having a thousand steps', not '... a thousand feet'. This recalls vs. 7 "... become comrades at the seven(th) step...", and I would suggest that the "thousand step" version plays off the previous one, indicating that our comradeship will

last even longer. The path itself may be the soma (see disc. of 7) that facilitated the establishment of our comradeship; see 7c.

Also on the basis of VI.51.16 I'd here substitute "flawless" for "faultless."

VIII.69.17–18: Note the respension of 17b ... *āsate*# and 18d ... *āśata*#.

VIII.70 Indra

VIII.70.2: Pādas b and c are difficult. The superficially most natural interpretation is to take the two together, as Ge does ("in dessen Hand ... die gerngesehene Keule gelegt ward..."; so also Old), but the putative verb in this relative clause, *dhāyī* in c, is unaccented. If we take this lack of accent seriously, and I think we should, some other solution has to be found for the relative clause in pāda b, a task made all the more challenging by the disputed form *vidhartāri*. This particular form appears twice (also IX.47.4) and formally belongs to the agent noun *vidhartār-* (voc. sg. 1x, nom. sg. 4x) 'distributor, apportioner'. The *-tāri* forms are nonetheless generally taken as infinitives. Tichy (1995: 59–61), by contrast, takes them as loc. sg. of a verbal abstract (here "in dessen Hand, *wenn es ans Verteilen geht*, ein weiteres Mal die sehenswerte Keule gelegt wird" [p. 60]), and others take it as nom. sg. neut. (See disc. of these various possibilities with earlier lit. in Old and in Keydana [Inf. 196–99].) Keydana, at least for this verse, suggests that *vidhartāri* is the (infinitival?) subject of the nominal relative clause, *yāsya* its specifier, and *dvitā* a predicate adverb: "Der Hand wurde die Keule dargereicht (pāda c), *deren Austeilung ein weiteres Mal [erfolgt]* (pāda b)" (199 n. 31). I consider the form to be a locative (like Tichy), but a locative not to an abstract but to the agent noun it appears to be and coreferential with Indra in pāda a. Alternatively it could refer to a third party, who is responsible for the return of Indra's mace; this seems to be Old's favored solution: "beim (Welt)ordner," who is responsible for equipping Indra with the mace. In the absence of mythical context we cannot be certain. Though I have added the parenthetical "(in the hand of)," this tr. is an English makeshift for the German bei or French chez, which both render such locatives more efficiently. The statement in b, that the mace has been returned to Indra, is then restated in pāda c more clearly.

The datives *hástāya* and *divé* instead of the locatives that might be expected are curious. I now think that they must be interpr. in the light of the idiom *prāti √ dhā* 'aim'; would now slightly alter the tr. to "... has been positioned/aimed for this hand, like the great sun for heaven."

VIII.70.3: The identity of "him" in "No one will catch up with him ..." is not sufficiently signalled in the publ. tr. I take it to refer to the successful sacrificer (cf. VIII.31.17), who ritually strengthens and thus "has created" Indra. However, the perfect *cakāra* could instead signal mythic time; both Ge and Old believe this refers to the original creator of Indra, as in IV.17.4. The reference to Indra's birth in 4cd may support their position.

VIII.70.4: In my view this verse is structurally parallel to vs. 2: pāda a continues the previous verse; b is a nominal relative clause; and cd may or may not go with b, but have unaccented verbs. Ge (n. to 2b) and Old also consider the verses parallel, but in the case of both verses they think that bc belong together despite the unaccented verbs of c(d). In

separating b and c here I must supply a noun with the fem. adjectives *mahīr urujrāyaḥ* -- and choose ‘waters’, since pl. *āpas, apās* is common with *mahīḥ*; ‘rivers’ would also be possible, so Ge, who seems to take *mahīḥ* simply as a designation of rivers (“die breitströmenden Flüsse”) without comment.

VIII.70.5: The conjoined NPs in ab display a neat chiasmus: *dyāvah ... śatām, śatām bhūmīḥ*. This may help account for the placement of the *utā* after the second term (indeed after the entire second term: *śatām bhūmīr utā*). Although XY *utā* structures are by no means uncommon (see Klein DGRV I.344–53), they are considerably rarer than the standard X *utā* Y type.

In cd there are two parallel nominal subjects, pl. *sahāsram sūryāḥ* and du. *ródasī*, and neither matches the sg. verb *ānu ... aṣṭa* in number. Several solutions have been proposed. BR (see Old) and Gr take *ródasī* as singular, but all other examples of sg. *ródasī* (and more common *rodasī*) refer to the goddess of that name; when *ródasī* refers to the world-halves, it is always dual. Old also cites Ge Komm for the view that the sg. verb was influenced by *sahāsram*. I am inclined to assume that the sg. verb split the difference between the plural and dual subjects, and it is also possible that the construction was somehow syntactically calqued on the inherited neuter plural subject + singular verb construction (though neither of the subjects is neuter). It’s also worth noting that the root aor. 3rd du. middle of $\sqrt{(n)}as$ is not attested, and in fact, acdg. to Macdonell, *Vedic Gr.*, the only 2nd or 3rd du. mid. root aor. attested is *adhītām* (X.4.6, $\sqrt{dhā}$) -- so the poet may have been a bit insecure about what the du. form ought to be (**aśātām*? **aṣṭām*?), and the pl. *sūryāḥ* may have been too distant in the vs. to allow the 3rd pl. *aśata* to be used instead.

VIII.70.6: Ge takes the loc. *gómāti vrajé* as a loc. absolute (“wenn es sich um rindergefüllte Hürde handelt”). By using the Engl. idiom “help someone to something” I may be stretching Sanskrit syntax further than is legitimate. Though see Gr, definition 4 s.v. *av*: “jemandem [A.] wozu [D., L.] verhelfen.” Unfortunately this is the only passage he places under that rubric with a loc.; the others have datives. However, in *Rivelex* vol. I the Deep Case Frame for *av*, subsection 1d / 1da, tags a number of other possible such passages with this structure (not all of which I would so interpret).

VIII.70.7: For *étagva-* as ‘winning dappled cows’, see Thieme, *Studien* 67–68 and EWA s.v.

The second hemistich is unconnected to the first; its two rel. clauses attach to the next verse.

VIII.70.8: Though as just noted, 7cd should be construed with this verse, the main clause to which those rel. clauses should be attached is incomplete – having a referent *tām* for the *yāḥ* of 7c, but no main verb. Ge supplies “rufet,” which seems the simplest solution, extracted from the two forms of *hāvyaḥ* in cd.

Gr, Ge take *āraṇa-* as ‘depths’, presumably as a contextual antonym to *gādhā-* ‘ford’, putatively < *‘shallow’ (but see EWA s.v.). But there seems no good reason to separate *āraṇa-* from *āraṇa-* ‘alien, foreign’ and its relatives, esp. since a ford is a ‘shallow’ only indirectly. The other occurrence of *āraṇa-* (I.112.6) is not in an antonymic context; Ge renders it “in der Grube” (pit), but there is no external support for this tr.

VIII.70.9: The lexeme *ud√mṛś* is found only here in early Vedic, but like other combinations of *√mṛś* ‘touch’ + preverb, it seems to have a slightly slangy sense. Gr “jemand [A.] emporheben zu [D.],” but the sense of touch is lost. Ge “Streck fein (die Hand) für uns aus,” which fails to render both the root meaning and the preverb. My “shape us up” attempts to render both, with the sense “make us ready/worthy to receive.” The insistent *úd* here, opening pādas a, c, and d, may be meant to contrast with *ní* in the following verse (pādas b, d).

Note the alliteration: ab ... *mahé, mṛśasva* ... and esp. cd ... *mahyaí maghavan maghátaye, ... mahé#* This is the culmination of a play on *mah-* and *magha-* forms in the central part of the hymn: 6a *mahinā*, 6c *maghavan*, 8a *mahó mahāyyam*.

VIII.70.10: The lexeme *ní√tṛp* occurs only here (in all of Sanskrit, as far as I can tell). I interpret the *ní* as reversing the meaning of the root verb, as sometimes elsewhere (see Jamison 1983: 86 for some other examples) – hence ‘be unsatisfied’ < *√tṛp* ‘be satisfied’. Scar also seems to interpret the verb in this fashion (“... bist du unzufrieden”), but does not comment on why. Gr ‘verzehren’ (consume), Old ‘sich sättigen’. Since *tṛmpāti* is ordinarily construed with a genitive, I take *tvānīdaḥ* as a gen. sg., not acc. pl., as Gr and Ge take it. Scar allows either possibility, and Old favors the gen. My interpretation is thus rather distinct from Ge’s “du hast deine Schmäher satt” (have your fill of), though his also conveys a negative sense.

The girding motif of c must indicate some kind of preparation for battle, but what exactly the equipment and procedure were is not clear.

I have, reluctantly, interpreted the injunctive *śíśnathaḥ* in d as an imperative, as also in VIII.24.25. So also Ge in both passages. It would be possible here (less so in VIII.24.25) to interpret it modally “you will jab down...” or even as a timeless statement “you jab down...”

Note the play of #*tʰvám...*, #*tʰvanído ...* / ... *tuvinṛmna*

VIII.70.11: Ge takes the *sváh sákhā* to refer to the enemy’s comrade, but given the dual dvandva voc. *indrāparvatā* (3x) “o Indra and Mountain,” it seems more likely to be Indra’s. In those passages I take “mountain” as a designation of Indra’s mace.

VIII.70.12: Indra’s generous handful of cows in this final verse before the sarcastic dānastuti implicitly contrasts with the stinginess of Śara, who gives only one calf (vs. 15).

VIII.70.15: See comment on 12. The thematic connection between the verses is underscored by the presence of the verb ‘grab’ in each, but note that vs. 15, part of the hymn proper, has the older form *√grabh* (*sám grbhāya*), while the dānastuti, belonging to a more popular level of language, has the younger *√grah* (*-gṛhya*).

VIII.71 Agni

VIII.71.2: The 2nd *hí* pleonastically doubles the one in *nahí*.

VIII.71.5: I would delete “the” before “wisdom” in the publ. tr.

I consider *gántā* a possible, but not necessary, ex. of a periphrastic future.

VIII.71.6: Supply ‘give’ from 3c *rayīm dehi viśvāvāram*, with the same obj. and an adj. echoed by *puruvīram* here.

VIII.71.12: I supply “we beseech” as the verb, from the twin pragātha vs. 13c *īmahe*, despite the interruption by a clause containing nom. *agnīḥ* (13ab).

kṣaītrāya sādhasē has to be interpr. in connection with the cmpd. *kṣetra-sādhas-* (III.8.7, VIII.31.14). Ge’s interp. “zur Schlichtung (des Streites) um ein Feld” [for the settlement (of conflict) regarding a field] seems unnecessarily specific and contextually unsupported.

VIII.72 Agni or Praise of Oblations

See the publ. intro. for the general structure and manifold difficulties of this hymn. For disc. of the possible ritual details, see Old, Ge, Re, etc. For the most part I will not comment on such here.

VIII.72.2: *asya* could also refer to Manu’s companionship and be tr. “in his companionship,” but in IX the companionship of soma is mentioned (IX.61.29=66.14, 107.19; cf. also I.91.14, IV.28.1).

VIII.72.3: There are various ways to configure the places where “they seek.” I take *antār* in a pregnant sense, referring to the interior of the subject; the search expands to *jāne*, and finally to the place “beyond inspired thought” (*paró manīṣayā*). Since this phrase is also found in V.17.2, the two words must go together, whatever they are trying to convey.

VIII.72.4: *atītape* has been subject to a number of conflicting analyses (esp. passive or transitive with unexpressed subj.), but all seem to start with a 3rd sg. with anomalous ending -e. I see no reason why it cannot be a 1st sg., with the proper ending for a thematic medial reduplicated aorist. Although there are no other 1st singulars around, referents are ricocheting around everywhere in this hymn, and as indicated in the publ. intro., the vss. do not show close connections to each other.

VIII.72.6: Gr. assigns *dāmā* to an otherwise unattested long-*ā* stem and glosses it as ‘Seil’, but it could just as well be the nom. sg. masc. to an -*n*-stem **dāmán-* ‘binder’ formed to neut. *dāman-* ‘bond’ (like m. *brahmán-* to neut. *bráhma-*).

VIII.72.11: The hapax *abhyāram* is glossed by Gr “zur Hand, bereit,” and Ge and Re follow suit. Old suggests that it’s an absolutive, without specifying to what root or what it should mean. Still I think he has a better chance of being right than the others. The -*am* gerund takes vṛddhi of the root and accent on the root syllable (see, e.g., Whitney Gr. §995, and AV *abhyākrāmam*). This form could well belong to *abhí√ṛ* (as in fact Gr also suggest) and mean ‘going towards’.

VIII.72.12: The first pāda contains a lovely sound sequence: (*g*)*āva* (*up*)*āva*(*t*)*āva*(*tam*).

The hapax *rapsúdā* is difficult. Ge refuses to tr.; Old suggests a connection with the rare *lapsudín-* (TS, etc.) ‘having a beard’. Although the phonology would obviously work, the semantic connection is shaky, and *lapsudín-* has no etymology either. I favor a suggestion of Re’s, that the word here is connected with the secondary root $\sqrt{\text{raps}}$, extracted from *virapsśá-* ‘abundance’, which in turn derives from $\sqrt{\text{vīra-p(a)śu-}}$, by most lights (see comm. ad I.122.4). The first part of the word (*rapsú-*) can be seen as preserving the *-u-*, which the other forms don’t, but losing the *vī* (for which cf. *rapsśád-ūdhan-* ‘with teeming udders’ [II.34.5, of *dhenus*]). The palatal sibilant cluster (*-ps-*) was also regularized to one containing the dental sibilant (for possible parallel ex. see *rāspiná-* I.122.4, with metathesis as well). The second part of the word would be the root noun to $\sqrt{\text{dā}}$ ‘give’, in the nom. sg. fem., modified by *mahī*, indicating a vessel (perhaps *ukhā*?). Although we should expect a nom. sg. *-dāḥ*, the final may have been lost either because it was simply reanalyzed as a fem. stem with suffixal *-ā-* or because it was lost in continuous recitation (before the pāda-initial vowel of pāda c) and not restored redactionally.

VIII.72.13 The phrase *ródasyor abhiśríyam* could alternatively be rendered “excelling in glory over the two world-halves,” like similar phrases in VI.70.1, etc.

VIII.72.15: I take *kṛnvaté* as governing three different objects, *dharúṇam*, *námaḥ*, and *svāḥ*, each with a slightly different relationship with the verb.

VIII.72.17: *ā dade* is ambiguous between 1st and 3rd sg. Ge. opts for 3rd, Re for 1st, and Old waffles. I have chosen “I” but with no strong preference either way.

VIII.73 Aśvins

VIII.73.9: The curious phrase “honed with hope” is probably motivated in part by the phonological similarity in the Skt. *āsāsāḥ ... asāyataḥ*. With Re (EVP XVI), I take *asāyata* here to the root $\sqrt{\text{sā}}$ ‘whet, sharpen’, not $\sqrt{\text{(n)as}}$ as with the other forms with the same apparent stem shape. See further ad VI.33.2.

VIII.73.11: Some of the interpretive questions in this vs. are 1) whether *kím* is a neut. interrog. pronoun (as I take it) or a question particle (so Ge), and 2) what the referent of *idám* is. I supply ‘deed’, since that’s something regularly proclaimed. Ge and Re assume the referent is *ávaḥ* ‘Gnade’/‘faveur’ from the refrain. Since the refrain otherwise has no connection with the rest of the verse in this hymn, I think this solution is unlikely, but I hold no particular brief for my ‘deed’.

VIII.74 Agni

VIII.74.1: Nom. pl. part. *vājayántaḥ* (b) and 1st sg. *stuśé* (d) represents the not unusual number mixture of a singular poet speaking for and with the other ritual officiants. Cf. VIII.66.1 for similar number mismatch.

Pāda-final *vācaḥ* I take (with Ge) as a truncated instr. standing for *vācasā*. For disc. see comm. ad VIII.39.2. However, in this context, since $\sqrt{\text{stu}}$ can, though rarely,

take an acc. of the praise, it is possible (with Old and Re [though Re seems to recant in his n.]) to take it as obj. of *stuṣé* in a construction different from the dominant *agním ... stuṣé*. However, the acc. of the god praised continues in the next two verses, and I think it unlikely that this focus would be interrupted by “I speak a speech as praise.”

VIII.74.3: In ... *údyatā / havyāny aīrayat diví* the ppl. *údyatā* is essentially proleptic: “raised the oblations (so that they were) lifted up to heaven.” For a parallel phrase see X.8.2.

VIII.74.4: On the name *śrutárvan-* see comm. ad vs. 13 below. The underlying **śrutá + arvan-* proposed there, might be reflected metrically here: the pāda is 7 syllables, and a distracted reading might be possible (though is not suggested in the usual sources).

édhate is a pun. Though its general purport is ‘thrive’, it is still transparently related to *√idh* ‘kindle’, and the thriving is a result of flaring up, as of a flame.

VIII.74.9: The publ. tr. should read “Brilliant with its brilliance ...” and “at the overcoming of obstacles.”

VIII.74.10: The vs. is structured as an acc. phrase referring to Agni, with no governing verb. It is probably best to take it as loosely anticipating the rel. clauses beginning with *yám* in the other two verses of the *ṛca* (*yám tvā* 11a, 12a). That the accusatives in ab, d belong in a virtual rel. clause is signaled by pāda c with a rel. clause in the gen. (*yásya ...*).

My interpr. of pāda a differs from the standard, which takes *-prā-* as ‘fill’ and construes *ásvam ... gām* as a simile: “filling the chariot [with goods, vel sim.] (as) a horse (or) cow (does).” This conjures up an unintentionally comic picture in a physical sense, and even in the attenuated sense this interpr. presumably sketches, that a winning horse or productive cow generates goods that would fill a chariot (see Ge’s n. 10a), the structure and meaning of the phrase are muddy. I follow a suggestion of Re’s, given in his n. to the passage but not reflected in his tr., that the sequence is a reduction of **aśvapráṁ íd goprāṁ rathapráṁ* – or a means of avoiding a compd. with a dvandva 1st member (*aśva-go-ratha-prā-*) -- and that *prā-* belongs with forms like *pūrdhí* ‘give!’ (Mayrhofer’s *PAR*²).

The *u*-present *tūrvatha* here is enclosed by two occurrences of the related (*vr̥tra-*)**tūrya-* (9c, 12c) ‘overcoming of obstacles’, but though *tūrv-* does on occasion take an acc. of what is overcome (cf. the same VP in VIII.99.6 *vr̥trám ... tūrvasi*), here “overcome (Agni’s) claims to fame” is excluded by sense, since the poets shouldn’t seek to outdo Agni, and it must mean something like “help to triumph.”

In pāda d I supply **gr̥ṇánti* as the verb with nom. *kṛṣṭáyah* on the basis of the next hymn VIII.75.10 *gr̥ṇánti deva kṛṣṭáyah* (see also *girā* in the next vs. of this hymn, 11a). It is possible that this subj./verb complex governs the whole verse, save for pāda c with its 2nd pl. verb and gen. rel. cl. -- thus, “(whom) the separate peoples (hymn) as the one bestowing the chariot ...”

VIII.74.11: The hapax *cániṣṭhad*, though fairly clearly a 3rd sg. act. injunctive, is not regularly formed. Whitney (Roots) calls it “plainly corrupt”; Old discusses it at some

length and floats various possibilities. Whatever its source, it clearly patterns with the superlative *cāniṣṭhā* in the same metrical position in 8b (so Old, Re). The standard solution, which comes in various guises, has been to posit a more regularly formed verb that has been re-formed (/corrupted) because of the proximity of the splv., either at the time of composition or redactionally. This is the tack Old chooses; of the various underlying possibilities he considers, he favors an *-iṣ*-aor. subjunctive **cāniṣat* (cf. 2nd du. *caniṣtām*). See also Hoffmann (MSS 2 [1952/1957] = Aufs. 367; repeated by Narten, s-aor. 111), who considers the contamination a product of the poet.

VIII.74.13: On Śrutarvan (*śrutārvan-*), see also X.49.5. Mayr (PN s.v.) tentatively favors a cmpd. with truncated *śrut-* plus *ārvan-* ‘steed’ (see also tentatively AiG II.2.42. More likely in my view is a more conventional cmpd with 1st member ppl. *śrutá* + *arvan-* (like *śrutá-ratha-* ‘having a famous chariot’)(sim. also Old ad VIII.74.4), yielding first **śrutārvan-* and then undergoing secondary shortening, perhaps on the model of *śrutārṣi-* ‘having famous seers’ (*śrutá-ṛṣi-*). This would better account for the accent in this presumable bahuvrīhi, as well as the likely sense ‘famed / famous’ for the 1st member, rather than the ‘hearing’ appropriate to *śrūt-* (as in *śrūt-karṇa-* ‘having hearing ears’). (Is the underlying form reflected in the scansion of 4c above?) Certainly on the evidence of this dānastuti (vss. 13–15) ‘having famous steeds’ is an appropriate name for the king: the poet praises the four swift horses he receives (vs. 14) and in vs. 15 pronounces as a truth (*satyám*) that no mortal is a better giver of horses than Śrutarvan (15cd *ná ... aśvadātaraḥ ... asti mártyaḥ*).

Contra Gr, but with Ge and Re, I take *huvānāḥ* as passive.

I take *mṛkṣā* to $\sqrt{mṛj}$ ‘stroke’ and in the same slangy sense as *úd* $\sqrt{mṛj}$ in I.126.4.

VIII.74.15: As noted ad vs. 13, this final vs. is formally phrased as a truth, with *satyám id* opening the vs., and something like an oath sworn to / on the “great river” Paruṣṇi and the waters in general.

The voc. *mahenadi* (or *mahenadī*) is a hapax, with no other forms of the stem attested. Though Gr suggests an underlying stem *mahinadī*, Wack (AiG II.1.45, III.157) favors *mahā-nadī*, with the usual combining form of *mah-*. See disc. ad VIII.13.11 of similarly formed voc. *mahemate*. As with that form, the fact that *nadī-* is fem. helped trigger the analogy to the voc. of standard *-ā* stems.

The intensive *áva dedīśam* here seems to have real “intensive” force; a frequentative reading seems excluded or at least forced, as if the poet were constantly scolding the River (“I keep pointing out to you ...”). A true intensive would fit the solemn oath-like pronouncement at the close of the hymn.

VIII.75 Agni

VIII.75.1: Although it might at first seem odd that Agni’s horses best summon the gods, the horses are presumably the plumes of smoke, and as they ascend to heaven, they inform the gods of the sacrifice.

VIII.75.2: This is the only occurrence of *śrād-* outside the inherited unverbated idiom *śrād* $\sqrt{dhā}$ ‘trust/put trust in’. As I have discussed elsewhere, ‘trust’ is often specifically

trust in the efficacy of the sacrifice, and I think that's the meaning being tapped here: realize our trust in the sacrifice's success with tangible results.

VIII.75.3: The pleonastically suffixed *yáviṣṭhāya-* beside the regular splv. *yáviṣṭha-* owes its suffix entirely to metrical considerations. All 15 occurrences of the stem are pāda-final in a Jagatī or dimeter line and thus provide a text-book iambic cadence. The unextended *yáviṣṭha-* is not as rigidly placed, but is still often pāda-final in a Triṣṭubh cadence.

VIII.75.5: The standard tr. take *tām* as a ref. to Agni, who is then the equivalent in the frame of *nemím* in the simile; so “bend him here as craftsmen bend a felly.” In the publ. tr. I take the frame/simile relation to be an example of case disharmony, with *ā́ namasva* intransitive/reflexive in the frame (“bend (yourself) here”) and transitive in the simile (“as craftsmen bend a felly”). This is based in part on the fact that medial forms of \sqrt{nam} (outside the 1st ps.) are intransitive, and this interpr. also makes better sense of the voc. *aṅgiráḥ* in the sg., *ā́ngiras-* is used almost exclusively of Agni and never, as far as I know, of a human poet/priest as it would be here if a poet/priest is the subj. of *ā́ namasva*. But I failed to remember that *nemí-* is said to be feminine, and therefore *tām* should not qualify it. I am still unwilling to give up my interpr., however, and would note first that at least in the RV there are no diagnostic passages where *nemí-* must be feminine, that is, no passages containing unambiguous feminine adjectives modifying it. And as a short *-i-* stem, it does not look feminine. So I would claim either that it is being treated as a masc. in this passage or that redactionally initial **tām* was changed to *tām*; there are no metrical implications.

VIII.75.7: On *ápāka-* see comm. ad I.110.2.

VIII.75.8: Ge sees cows as the referent of the fem. bathers in b, which are, in his interpr., leaving their calves behind as they bathe. Although I do not know about the bathing habits of cows before modern animal husbandry (and Google is no help here), I doubt that they abandoned their calves to go splash in the river -- and I also doubt that Ge knew much about this topic either. Moreover, having bathing cows abandoning their calves in b and non-bathing cows doing the same in c seems poetically clumsy. Rather I follow Re in taking the rosy bathers of b to be the dawns (though he still sneaks in the cows in his tr. “vaches-aurores”). As he points out, Dawn arises from her bath in V.80.5, and *usrā-* in the fem. pl. is regularly used of dawns. I think there is a hint of coquetry and teasing here: a group of girls bathing in a river, surprised by some young men, with the girls flashing a bit of skin and then running off in fits of giggles. The girls-bathing motif is fairly widespread: the Gopis and Kṛṣṇa come to mind, as well as Nausicaa and her friends in the Odyssey, and nearer to home, the Apsarases engage in water play in X.95.7–9.

VIII.75.10: The standard tr. take *nāmaḥ* as obj. of *gr̥ṇánti* and ab as a single clause (“they hymn homage to ...”). But $\sqrt{gr̥}$ doesn't otherwise take as object the content of the hymn; Gr must make up a special category (8) for this passage. And *nāmaḥ* + DAT is a well-represented construction.

VIII.75.11: The publ. tr. “...you will toil for wealth for us, for our quest for cattle” makes the two “for” phrases sound parallel, though they are not in Sanskrit (acc. *rayīm*, dat. *gāvīṣṭaye*). The intent is that Agni should work hard to obtain wealth for us, which we can use in our quest for cattle (that is, further wealth).

Pāda c is an almost comically economical etymological figure: *úrukṛd urú naḥ kṛdhi*.

VIII.75.12: This vs. relies on an untranslatable pun on the root \sqrt{vrj} ‘twist’, in two different idioms: *pārā* \sqrt{vrj} ‘shun, avoid’ (< ‘twist around’) and *sām* \sqrt{vrj} ‘twist around, encompass’ → ‘gather up’ of winnings at dice (hence my ‘takings’).

VIII.75.14: Technically speaking, the genitives *yásya ... namasvínah ... ádurmakhasya vā* depend on *sāmīm*, but it is almost impossible to render this in parsable English (“the labor of which homage-offerer or not stingy one Agni has enjoyed ...”).

VIII.76 Indra

VIII.76.1: The position and function of *ná* in c are somewhat troubling. If, as seems likely, it is the simile marker, its position should mark *marútvantam* as the simile “like one accompanied by the Maruts,” but this makes no sense, since Indra’s being accompanied by the Maruts for real is the insistent point of this hymn. It therefore must be construed with the following infinitival *vrñjase* and have an “as if” sense (so Ge), rather than participating in a strict simile structure. I attribute the flipping of the word order to the fact that simile-marking *ná* seems to be blocked from pāda-final position. See comm. ad X.21.1 and X.111.7. This phenomenon was already noted by Ge; see his n. 4a to IV.27.4. Among other exx., see comm. ad IV.1.19. The only counterexample I have found is VII.68.8. It might also be possible to take *vrñjase* as a truncation of **párvrñjase* and the *ná* as the negative, “for (him) not to avoid (us),” but there is no model for this nor any reason to assume truncation.

VIII.76.12: The last pāda presents some difficulties: the function of the ablative *indrāt*, the syntactic affinity of *pári* (preverb with *mame* or postposition with *indrāt*?), and the sense of *tanvām*. Ge takes *indrāt* as an ablative of comparison (“habe ich im Vergleich mit Indra zu klein bemessen”). His “zu klein” must render *tanvām*, which I assume he takes, with Gr, as belonging to an adj. *tanú-* ‘thin’ in the fem., rather than to the fem. noun *tanū-* ‘body, self’. But even if we were to accept this analysis of *tanvām*, it would still be a positive, not a comparative. It would be possible to take *pári* as a postposition with *indrāt* in the meaning ‘from’, but despite the positioning I am inclined to take it with the verb *mame* because *pári* $\sqrt{mā}$ is found in a very similar context in the riddle hymn, with numerology: I.164.45 *catvāri vāk párimitā padāni* “Speech is measured in four feet (/quarters).” As for *tanvām* I take it as referring to the “body” of the speech, perhaps the physical realization in sound measured out in time. Scar (667) takes the *tanvām* as reflexive: “Die ... Rede ... habe ich von Indra ausgehend mir angemessen,” which seems to treat the form as a dative. In n. 948 he does recognize the possibility that the poet sees his hymn as “Corpus.” I take *indrāt* as abl. of cause, though it could be a simple starting point: “I measure the speech (starting from) Indra.”

VIII.77 Indra

VIII.77.2: For this verse cf. VIII.32.2, 26. As in the latter, I am now more inclined to take *aurṇavābhām ahīśvām* as descriptive adjectives, rather than names, and would reverse the bracketed and unbracketed tr. there. On *ahīśū-* see also comm. ad X.144.3.

Gr takes *niṣṭúraḥ* as nom. pl., and Ge apparently follows this analysis, taking it as indicating the designated destroyers of Indra (“Diese sollen ... (deine) Niederstrecker sein”; sim. Scar 539, 642, though with more machinery). But I consider it rather a gen. sg. modifying a gapped gen. sg. referring to Indra – quite possibly by haplology from *té *te*. The only other occurrence of the stem is in the dative and modifies Indra, in a verse immediately following an Emuṣa verse: ... *ugráya niṣṭúre* “... to the strong one who lays low.”

VIII.77.3: Note both the phonological figure *khé ... khédayā* and the etymological figure *akhidat ... khédayā*. The sense ‘hammered together’ attributed to *sám ... akhidat* may seem strange, given that \sqrt{khid} means something like ‘tear (out/apart)’. I assume that the lexeme and sense here were generated acdg. to the common *sám / ví* opposition to *ví* \sqrt{khid} ‘tear out/apart’, attested in AVP XVI.73.5 and KS XVII.15 as well as Śāṅkh. Br. II.9.

VIII.77.4–6: The name *índraḥ* is identically positioned in all three verses of this tṛca, at the beginning of the final pāda.

VIII.77.4: The hapax *pratidhā-* is connected by Gr to $\sqrt{dhā}$ ‘suck(le)’, presumably because of the soma-drinking context. But I take it rather to $\sqrt{dhā}$ ‘place’ (so also Scar, though with different semantics). The lexeme *prāti* $\sqrt{dhā}$ means ‘set (an arrow on a bow), aim’, and from ‘aim’ to ‘shot’ seems an easy semantic path. Consider also English ‘shot’ for a quickly downed drink. (For further disc. see my 2020 Lamberterie Fs. art., pp. 486–87.) That a bow and arrows figure in the Emuṣa myth (see vss. 6–7) may support this derivation.

The other hapax in this verse, *kāṇukā* is not so easily handled. All tr. and comm. (including MM, EWA, s.v.) essentially give up. Gr calls it a “Beiwort zu *sáras-*” (the ponds in pāda b) and takes it as an acc. pl. neut., which seems reasonable, though it could also in principle be an old instr. sg. of an *-a-* or *-ā-* stem (as *pratidhā* is). Unlike some other passages containing opaque hapaxes, there is no phonological motivation visible. It resembles the hapax participle *kaṇūkayānt-* in X.132.7, but that is of no help because that form is even more puzzling than this one. It also resembles *kāṇá-* ‘one-eyed (RV X.155.1, AV+), and Edgerton (1911, *The -k-suffixes of Indo-Iranian*, 13) suggests it is derived from that word and means ‘jug’ — a jug “with a small opening and a large bulging body,” though he’s not happy about the *-u-*. I have also considered the possibility that it’s derived from a MIA form of *kárṇa* ‘ear’ and also refers to a vessel for liquids, this time because of its eared handle(s). The Eng. tr. ‘hogshead’ is an attempt to replicate the possible derivation of a word for liquid measure from a word for a part of the head. A hogshead contains a prodigious amount of liquid. One contributor to the word’s appearing here might be a pun on the vṛddhi derivative *kāṇvá-* ‘descendant of Kaṇva’,

which is several times read as *kāṇvā-* (VIII.2.40, 4.20); the Anukramanī attributes this hymn to Kurusuti Kāṇva. So, something like “(the vessels) of soma provided by the Kāṇvas.”

VIII.77.5: I have no idea who or what the Gandharva represents here. Ge suggests that it can be the Gandharva as Somabewacher or, alternatively, the sun, but the context gives no particular support to either identification. It would be desirable to connect this verse with the Emuṣa myth, but I do not see how to do that either. It should be noted, however, that the dative phrase *brahmābhyah ... vṛdhé* “to strengthen the composers of sacred formulations” is reminiscent of the dative phrase in vs. 8, an undoubted Emuṣa verse, *stoṭṛbhyah ... nṛbhyo nāribhyo āttave* “for the praisers, the superior men and their ladies, to eat.” Note in our phrase the “attraction” of the obj. *brahmābhyah* into the dat. to match the inf. *vṛdhé*. Unless we wish to interpr. the phrase as passive, “for the composers ... to be strengthened.”

On the lexeme *abhí√ṛd*, see comm. ad IX.110.5. It is generally specialized for the drilling into the cave in the Vala myth, but that seems to give us no help here.

The one clear connection to the Emuṣa myth within the vs. is the adj. *abudhná-* ‘bottomless’, which anticipates the name of the bow, *bundá-*, in the next vs.

VIII.77.6: Ge takes *bundám* in c as the object of *nír āvidhyat* ‘pierced’ that opens the verse. This requires assuming an aberrant meaning for the verb (‘abschiessen’ [shoot]), and I find it unlikely (so does Old, who also feels that the object should be the target of the verb). Instead, though it requires supplying a first object for the verb in a and a verb to govern the acc. in c, I take the three pādas as relatively syntactically independent and supply the boar as one object of *nír āvidhyat*, in addition to *odanám* in b. I take the first two pādas as shorthand for killed the boar, pierced the mountain, and got the porridge – the three signature actions in the Emuṣa story. Note that *odanám* is the object of *bhinat* ‘split’ in another condensed allusion to the Emuṣa myth in VIII.69.14. As for what verb to supply to govern *bundám*, I supply ‘took’ from yet another abbreviated version in VIII.45.4, the only other hymn in which *bundá-* is found: *ā bundám ... dade*. For a possible long-distance syntactic/formulaic relationship between 6a and 10d, see comments on vs. 10.

I take the phrase *girībhya ā* as expressing the freeing of the *odanám* from the mountains (pāda b), but it could also be read with pāda a with the sense of *ā* + abl. “all the way to,” though in that sense the ablative usually follows (see Gr s.v. *ā*), hence “He pierced the boar all the way to/through the mountains.”

As noted ad vs. 5, *bundá-* is reminiscent of (*a*)*budhná-* in the immediately preceding mysterious Gandharva verse.

VIII.77.7: *bradhna-* is otherwise a color term (‘coppery, ruddy’) or a substance characterized by that color (soma, in nearby VIII.69.7), but in this hapax bahuvrīhi, *śatá-bradhna-* it must refer to something capable of being counted, hence my ‘ruddy glints’. Gr’s ‘hundert Metallspitzen habend’, Ge’s ‘mit hundert Spitzen’ seem to stray too far from the color term. The appearance of this word here may be owing to its phonological similarity to *bundá-* (and (*a*)*budhná-*).

VIII.77.8: As indicated in the publ. intro., I take this verse as the speech of Indra's mother, picking up from the dialogue in vss. 1-2 that began (1a) *jajñānó nú* "just born," which is echoed here by *sadyó jātāḥ* ("just born right now"). In VIII.45.4 Indra took the Bunda bow just before his dialogue with his mother, and in VIII.69.14-15 he's a tiny child when he gets the porridge and cooks the buffalo for his mother and father.

I supply *odanám* 'rice porridge' as the object of *ā bhara* (and *āttave*). Note that in the summary verse 10 various foodstuffs, including *odanám*, are objects of *ābharat*.

The inclusion of 'ladies' (*nāribhyaḥ*) alongside superior men (*nṛbhyaḥ*) is quite rare in the RV. See I.43.6, where it seems to refer to humankind in general. Here it seems to have a more restricted sense and could actually refer to the gods and their wives: *nṛ-* is often used of divinities. For goddesses beside gods see nearby VIII.80.10, though it is attributed to a different poet.

The voc. *ṛbhuṣṭhira* is a little surprising. Both Gr and Ge take it as implicitly comparative: Gr 'stark, tüchtig wie Ṛbhu', Ge '... stark wie die Ṛbhu's'. I take it rather as parallel to *ṛbhuṣān-* 'master of the Ṛbhus', which is regularly an epithet of Indra, with an implicit gen. as 1st member.

VIII.77.10–11: On these verses as possible explanatory additions to the Emuṣa version given earlier in the hymn, see publ. intro.

VIII.77.10: Old and Ge (see his n. 10d) read loc. *indre* contra the Pp. nom. *indraḥ* and interpret the verse as meaning that Viṣṇu brought Emuṣa to Indra, along with the food named in pāda c. But this seems unlikely: the central fact of the myth is that *Indra pierced the boar*. Cf. I.61.7d *vídhyad varāhām tiró ādrim āstā* "He pierced the boar through the stone, (Indra) the archer." This last pāda in our vs. contains both Indra and the boar and ends with the boar's name as if as the solution of a riddle (remember that this is the only occurrence of the name in the RV), and it would seem rhetorically anticlimactic for the image merely to be one of Viṣṇu lugging the corpse of the boar, along with some food, *to Indra*. Instead it seems the encapsulation of the myth, and I would further argue that it finally closes the incomplete syntactic circle begun in verse 6. In 6a we find *nír āvidhyad giribhya ā* "(he) pierced from/to/through the mountains," with the signature verb and the signature locale (see *ādrim* in I.61.7 just quoted), but neither subject nor object. But in 10d we have both subject (reading nom. *indraḥ* with the Pp.) and object, but no verb. This seems a clever variant on ring composition, where a structure begun at the beginning of a section is completed at the end. Even if, as I suggest in the intro., vs. 10 is a tacked-on addition to the original Viṣṇu-less version of the myth found in the rest of this hymn (and other mentions in VIII), the poet has cleverly made use of the underdefined treatment in 6a to attach vs. 10 more closely to vss. 6–9 by supplying the missing pieces in 10d.

VIII.77.11: *sūmāya-* is generally analyzed as having the adverbial prefix *su-* 'good', hence 'aus gutem Stoff' (Ge). However, AiG II.2.770 reports a suggestion of Thieme's (apparently only reported in AiG, not publ.) that it's 'aus Eber(-zahn) verfertigt', with an unextended root noun *sū-* '(wild) pig, boar', which is the basis of *sūkará-* 'boar' (already RV VII.55.4) and which has numerous IE cognates. Although Mayrhofer explicitly rejects this suggestion (KEWA, s.v. *sūkará-*; EWA, s.vv. *MA Y*¹, *sūkará-*), context favors Thieme's suggestion. The boar Emuṣa was clearly a formidable opponent of Indra's, and

the use of a weapon made from the same animal to defeat it makes good sense from the point of view of sympathetic magic. Consider also the association of boars with ritual of kingship, and note, in particular, that using parts of the boar for the armor and weaponry of warriors is found elsewhere (cf. Odysseus's boar's tusk helmet and the general disc. in Jamison 1999 [Penelope and the Pigs], *ClAnt.* 18: 258–70). The unextended root noun *sū-* could be preserved in this old myth, esp. since it could be assimilated to the prefix *su-*.

My interpretation of pāda d essentially follows Scar (301, 516); see also EWA, s.v. *ARD*.

VIII.78 Indra

VIII.78.1: There seems no alternative to the problem posed by the ungoverned nouns in pāda a than Ge's – to supply a verb, probably a form of \sqrt{jus} 'take pleasure' (perhaps mid. part. *juṣānāḥ*). This verb seems particularly suitable since it can take both acc. (*puroḷāśam*) and gen. (*ándhasaḥ*). Ge, however, seems to be taking *ándhasa* as a dative (*ándhase*), contra Pp.: "(Koste) unseren Reiskuchen zum Somatrank." The nominals in pāda a cannot be the object of *ā bhara* because Indra doesn't *bring* the cake or the stalk, but enjoys them and brings objects in return to those who provided them.

VIII.78.3: *vaso* is a predicated vocative; the tr. renders the predication rather than the vocative, since the combination doesn't work in Engl.

VIII.78.4: The first pāda is somewhat puzzling, though I may have made more of the puzzles in the tr. than was necessary. The issue is the hapax *vr̥dhīkā-*. The standard tr. and comm. take this, with the Pp., as nom. *vr̥dhīkāḥ* and interpret it as an agent noun: Ge, AiG II.2.428, EWA (s.v. *VARDH*), JSK (DGRV I.350, 353), Scar (211, 584) 'Bereicherer' (though cf. Gr 'gewachsen'), parallel to the nominatives in b and c. But uncompounded *-īkā-* stems are often neuters and sometimes used in the loc., which would be possible here (*vr̥dhīké*), contra Pp. Cf. VIII.48.12 *mṛīké asya sumataú syāma* "May we be in his mercy and good grace." I was also troubled by three other facts: 1) Taking the whole verse as a single clause, as Ge does, runs into the problem that *te* in pāda a is coreferential with *tvát* in c, and the two pronouns should, in my opinion, have two different functions. (Ge, n., says *te* is pleonastic.) 2) I would prefer that *nákīm* (a) and *nānyāḥ* (c) not simply be conflated, as Ge seems to do. 3) The next verse also begins with *nákīm* (the only two occurrences of this form in the RV), which is followed by a nominal in an oblique case, in that case a datival infinitive *nīkartave* (and its parallel in b, *párisaktave*), and I would prefer that 4a have a structure that at least also involves an oblique case. A similar impulse may account for Re's apparent derivation of *vr̥dhīkā-* from the infinitive **vr̥dhé*, as reported in AiG II.2.418 (BSL 38: 80 n. 1 ["Infinitifs et dérivés nominaux dans le Ṛgveda"]). Putting all this together, I take *vr̥dhīka* as loc. *vr̥dhīké*, somewhat in the sense of *mṛīké* in the passage quoted above ("in the sphere of your increase," that is, in the abundance of your giving), with *te* dependent on it. However, on re-examination of the passage I think I may have overthought it, and an interpretation more like Ge/JSK/Scar may be less fussy – though the reservations expressed above remain. I would thus put forward an alt. tr. "No one is an increaser, nor a

good winner, not a good giver, other than you.” I must also admit that my publ. tr. requires *anyāḥ* of c to be read also with a. In my newly suggested tr., *nākīm* functions as a nominative, not merely a strong negative. See a similar use of *mākīm* in VI.54.7.

VIII.78.7: I consider the genitives in pāda b, *turāsya ... vidhataḥ* to modify Indra, whereas Ge takes them with the ‘resolve’ (*krátvaḥ*), which he considers to be the soma, of pāda a. The problem, in his view, is that *vidhánt-* doesn’t easily qualify Indra (*turá-* regularly does), but since the root *√vidh* ‘honor’ is an old derivative of *ví√dhā* ‘apportion’, taking it in its etymological sense allows it to modify the god.

VIII.79 Soma

VIII.79.1: Both *kṛtnú-* and *udbhíd-* appear to be gambling terms here. For *kṛtnú-* in a gambling context see I.92.10, for *udbhíd-* X.116.9. *udbhíd-* means literally ‘bursting/breaking out [up], effusive’ and is so attested a number of times in non-gambling passages (e.g. I.89.1, 102.9; see also the single verbal form of this lexeme in X.45.10). The semantic development here may be something like “break out of the pack / burst to the finish” → my “lucky break.” The lexeme was treated extensively by Falk (Brüderschaft 169–74) with disc. of earlier lit.; see also Arlo Griffiths, AVP 6 + 7, 114 ad AVP VI.9.5. *viśvajít-* ‘all-conquering’ can also fit the gambling scenario, as, arguably, can *ágrbhīta-* ‘ungraspable’ -- that is, who is too far ahead to be caught or caught up to.

The hymn is ascribed to Kṛtnu Bhārgava; Bhārgava is of course a fairly common patronymic, but Kṛtnu appears only here, clearly lifted from the hymn’s first pāda.

The final pāda consists entirely of the three most resonant words for poet/poetic activity: *īṣi-* ‘seer’, *vīpra-* ‘inspired poet’, *kāvya-* (standing for *kaví-* ‘sage poet’). The juxtaposition of the gambling focus of the first two pādas with the poetic lexicon of the last is striking, but sets the tone for the rest of the hymn, which catalogues the variety of Soma’s skills.

VIII.79.2: In c *īm* seems functionless. Though technically it could serve as object to *prá ... khyat* (“the blind man sees it/them”), it is much more likely that the verb is used in absolute function, to indicate the blind man’s recovery of his vision, not his sight of some particular (but unspecified) object(s). Vs. 6c also begins *prém a-VOWEL*, though there the *īm* could double the object *āyuh*. However, in both cases I think *īm* is simply introduced to avoid hiatus.

VIII.79.3: By my interpr. (and Ge’s), pādas ab contain a series of adjacent *-bhyah* plural nominals, which by sense must be sorted into dative pl. *tanūkṛdbhyah* (“for the body-makers”) and ablative pl. *dvēṣobhyo anyākṛtebhyah* (“from hateful things done by others”). The pāda break assists in splitting up these formally identical forms. A different interpr., going back to the MS (see Ge’s n. 3a) and followed by Re, however, takes *tanūkṛd-* in passive sense ‘done by oneself’ and contrastively parallel to *anyākṛta-* ‘done by others’; in this case, *tanūkṛdbhyah* is also ablative. The deliberate contrast between the root noun *-kṛt-* in the first compound and the past passive participle *-kṛta-* in the second and the usual active, transitive sense of *-kṛt-* in compounds (including the other occurrence of *tanūkṛt-*) make this interpr. unlikely. See Old for disc.; he opts for the

active sense, but considers the *tanū-* in question to belong to the doers/makers referred to by *-kṛt-*: “(den Frommen), die tätig sind sich die eigne *tanū* zu schaffen.” (Scar weakly favors this.) This seems unnecessarily complex, though the usual polarity between *tanū-* ‘self’ and *anyā-* ‘other’ is an argument in its favor.

VIII.79.4: This vs. flips the syntactic roles found in the preceding vs. In 3 Soma produces a defense (acc.) *from* (abl.) hateful things (*dvēṣobhyaḥ*); here he keeps the hateful thing (*dvēṣaḥ*, acc.) *from* (abl.) the entities protected (heaven and earth). The producer of the hateful thing is in the gen. (*aghāsyā*), whereas in 3b he (/they) were the first member of a compound, *anyā(-kṛta-)*.

The adj. *ṛjīśín-* ‘possessing the silvery drink’ is overwhelmingly an Indra word, applied to soma only once elsewhere (X.89.5, in a bait-and-switch ploy where Indra is the apparent referent until the poet springs Soma on his audience).

VIII.79.5: The most difficult verse in the hymn by far and perhaps not accidentally the middle verse. It is striking among other things for its use of indicative (*yánti*), subjunctive (*gáchān*), and optative (*vavṛjyuh*) in the same sentence, and for the juxtaposition of the two roots \sqrt{i} and \sqrt{gam} with the same subject in an if-then construction. For the latter, see Re’s disc.: he suggests persuasively that \sqrt{i} with acc. indicates the goal towards which one is proceeding, but \sqrt{gam} with acc. the attainment of the goal, though I am not at all sure this functional division holds throughout the uses of these presents in the RV.

I interpr. the verse within Ge’s general scheme: that the subject throughout is the soma priests and the thirsting man (*tṛṣyataḥ*) of c is a competing priest -- or at least someone who covets the largesse of the giver (*dadúṣaḥ*) in b that rightly belongs to the hard-working priests named in a (*arthínah*).

The sense of the pf. opt. *vavṛjyuh* in c is a bit difficult to grasp, primarily because the root \sqrt{vrj} ‘twist’, etc., so seldom appears without a preverb. I think ‘deflect’ or ‘thwart’ is what is intended. As usual, I do not think that the fact that the optative is built to the perfect stem adds any particular “perfect” nuance, though I do have to admit in this case that there are optative forms built to another tense/aspect stem, namely the root aor. (*vrjyām* 1x, *vrjyās* 3x, *vrjyāma* 1x), all in the idiom with *pári*.

VIII.79.7: With Gr I take *avātá-* as the negated ppl. of $\sqrt{vā}$ ‘become extinguished’, in the sense ‘unextinguishable, unquenchable’, also in I.38.7, 52.4, and 62.10. It is separate from the homonymous *avātá-* ‘without wind, windless’ in VI.64.4 and X.129.2 and also from differently accented *ávāta-* (\sqrt{van} ‘win’) ‘unvanquished’. Ge takes the *avātá-* forms here and in I.38.7 as ‘windless’ (as well as those in VI.64.4 and X.129.2) and in I.52.4 and 62.10 as ‘unvanquishable’. Re takes this occurrence as ‘invincible’; see his disc. ad loc. My interpr. rests partly on semantic, partly on formal grounds. On the one hand, “windless Soma” (or, as Ge has it, “ohne Wind zu machen”) makes no sense to me; on the other, though ‘invincible’ does make sense, I prefer to respect the accent otherwise found with that form, noting also that occurrences of that stem almost always appear with the participle *vanván* belonging to the same root. As for the occurrences in Maṇḍala I, *avātá-* once modifies mist (*mīh-* I.38.2), once ‘streams’ (*avánīḥ* I.62.10, with phonological play), and once Indra’s *śúṣmāḥ* (I.52.4, there tr. ‘gusts’). In all cases (even, or esp., the last) ‘windless’ does not work; the point in all three cases is, I think, that the

entity does not “go out” -- dissipate or disappear. Exactly how this applies to Soma here is less clear, but I assume that the point is that Soma is reliably present and available.

VIII.79.9: Ge’s tr. is very different: he takes *áva* not as a preverb in tmesis but as the 2nd sg. impv. to \sqrt{av} ‘help’ and *íkše* as the 2nd sg. med. pres. to \sqrt{is} ‘be master of’ rather than the 1st sg. to $\sqrt{ikṣ}$ ‘see’, hence “Hilf ... wenn du ... vermagst.” His n. 9ab allows for the possibility of the other tr., however -- the interpr. favored by Old and found in Re and in the publ. tr.

VIII.80 Indra

VIII.80.1: The particle *bád* seems to mean ‘in truth, for certain, yes indeed’ and, despite appearances, may have Avestan cognates. *baḷā* here is clearly based on it. Hoffmann (Aufs. II.355) takes the expression here as a kind of internal quotation: “nicht habe ich ja zu einem anderen gesagt: *bád*, du bist ein Erbarmer,” though the direct speech is only represented by the particle and then only indirectly. My tr. is an attempt to capture Hoffmann’s sense while sticking closer to the grammar.

VIII.80.2: Ge takes b in semi-independence of a: “... für die Lohngewinnung nicht gering zu schätzen.” This seems to be because of VII.67.5, which, however, doesn’t seem to be parallel enough to require this interpretation here.

Note the phonological similarity of the value-heavy words *marditāram* (1b), *mṛṭaya* (1c, 2c), belonging to $\sqrt{mṛḍ}$ ‘have mercy’, and *ámṛdhrah* ‘not shirking, not neglectful’.

VIII.80.3: Ge takes c as a statement “Gewiss wirst du, Indra, es für uns doch möglich machen,” while I think it continues the questions of ab. The status of *kuvíd* clauses is somewhat murky, in that *kuvíd* is clearly built to an interrogative stem, but it also generally conditions accent on the verb (as here, *śákaḥ*) giving it also the appearance of a subordinator. See Delbrück (AiS 550–51), Hettrich (*Hypotaxe*, 142–55), Etter (*Fragesätze*, 219–30). An interpretation, like Etter’s, that *kuvíd* marks an implicit indirect question such as “is it not the case that...?” seeks to capture these two somewhat contradictory features of the particle’s syntax, though a full rendering of this in tr. is often too heavy (as it would be here). For further on *kuvíd* and verbal accentuation see comm. ad II.35.1.

VIII.80.5: The emphatic interjection *hánta* is presumably originally the 2nd pl. imperative to \sqrt{han} ‘smite’ (flg. Thieme, *Fremdl.* 2–3, though EWA s.v. expresses doubts) with full-grade root – hence my tr. ‘blast it!’ It occurs only 3x in the RV, the other two in X, in direct speech contexts and in hymns identified by Arnold (*Ved. Metre*) as popular. Here it continues the slangy tone set by *baḍā* (1) and the questions in 3.

Ge supplies a verb in c: “(uns bring) ... Ruhm,” while I take the acc. neuter phrase there as a loose goal: “put ... first for ... fame.” Note that the *vājayú* qualifying *śrávaḥ* reappears in the next verse as a masc. modifying *rátham*.

VIII.80.6: The abrupt commands and almost insolent asides addressed to the great god continue the tone established in the earlier verses. Again the tr. is meant to capture this tone.

VIII.80.7: A clever image that modulates from b to c. In b a lucky female is going to an assignation with Indra, playing on Indra's known character as a hyper-virile pursuer of women. But in c this female is identified as a *dhî-* a visionary thought (embodied as a poem), a word that is of course feminine. The adj. *ṛtvīyāvatī* is suitable for both the woman in b ('conforming to her menstrual cycle') and the poem in c ('conforming to the ritual sequence'). This adjective is also found at VIII.12.10 with the same double application (though with *dhītī-* rather than *dhî-*).

VIII.80.8: The referent of *sīm* in pāda a is not made clear, and the fact that *sīm* can stand for all genders and numbers doesn't help. Given the racing theme of b (and in my interpretation c), I assume that it is our chariot, about which we have been worrying previously (vss. 4–6), though it could possibly be the *dhî-* of the immediately preceding verse.

The lexeme *apa-ā√vrj* is attested only here, and the interpretation of the pāda is made more difficult by the noun to which it is applied, *aratnī-*, lit. 'elbow', but potentially also 'corner' or 'barrier' (Schranken, see Old and Ge n.) or a unit of measure (like Engl. ell). I take it to be the body part (as does Ge tr.) and interpret it as a driving posture, with elbows turned out, indicating that the chariot racers are ready to start. For other suggestions see Ge n. and Old.

VIII.80.9: For speculation about the meaning of the "names," see publ. intro.

VIII.81 Indra

VIII.81.1: The apparent etymological play between 'handful' and 'hand' is unfortunately only found in the English: 'handful' is *grābhām*, 'hand' is (*mahā*)*hasṭī*. The phraseology seems to belong to dicing; see Lüders (Würfelspiel, 49–50). though curiously Falk (Bruderschaft u. Würfelspiel) does not discuss this passage. See also IX.106.3.

VIII.81.2: Despite Ge's appealing "an Gnaden Reichbemessenen" for *tuvimātrām āvobhiḥ*, *tuvimātrā-* is a bahuvrīhi built to *mātrā-* 'mass, size', with accent shift to final syllable (see AiG II.1.297). Ge's tr. also breaks the pattern of *tuvi-* compounds.

VIII.81.4: On the accent on *stāvāma* see disc. ad VIII.29.14.

VIII.81.5: Ge suggests that the verbs in pāda a (*prā stoṣat* and *ūpa gāṣiṣat* respectively) show that Indra is acting as Prastotar (the first assistant to the Udgātar, responsible for chanting the prastāva) and *Upagātar* (subordinate chanter, at least four of whom sing "ho" continuously in a low tone), priestly titles not found in the RV, though their functions may be. Both roles would connect him with the Sāma Veda, as does his listening to the sāman in pāda b. Old thinks rather that the priest is the subject of pāda a, but this seems unlikely in this strong Indra context.

VIII.81.6: The verbs $\tilde{a}\sqrt{bhr}$ and $(abh\tilde{i})\text{ }pr\acute{a}\sqrt{mṛś}$ are also paired in VIII.21.16 $dṛḍhā\ cid\ aryāḥ\ pr\acute{a}\ mṛśābhy\ \tilde{a}\ bhara$ “Seize hold of even the firmly fixed (goods) of the stranger and bring them here.”

VIII.81.8: I make $sānitvaḥ$ the predicate of a main clause (b) on which the relative clause (a) is dependent, because I am reluctant to take $\acute{ast}\tilde{i}$ as a mere auxiliary with the gerundive. This requires taking c as a separate sentence. Ge takes ab as a single dependent clause, with c as the main clause.

VIII.81.9: Ge, Mayr (PN), followed by Klein (DGRV I.104) and Scar (175), take $vāsaiḥ$ as a PN (“by the Vāsas”). This is possible but not necessary; as Ge (n.) reports, Sāy takes it in its usual sense, as I do.

The verb $jarante$ is taken by Gotō (150) to ‘awaken’, an interpretation I follow. Although the notion of prizes “awakening” may seem strange, since the Dakṣiṇā is distributed at the dawn sacrifice, it makes ritual sense. Others (Ge, Klein, Scar) take it rather to ‘sing’, but this requires the form to be passive (Klein “and in the morning are sung of by the Vāsas”; Ge’s tr. is actually a “‘Kompromiss’-Übersetzung,” in Gotō’s phrase [150 n. 226] “... werden ... wachgesungen,” incorporating both ‘wake’ and ‘sing’, but still as a passive). However, $járate$ ‘sing’ is always active in value.

I take ca in c as inverse “X ca Y” connecting the two adverbials; Ge, Klein as connecting the two clauses, ab and c.

VIII.82 Indra

VIII.82.4: My “here, come here!” is meant to capture the doubled preverb \tilde{a} in the sequence $\tilde{a}\ tv\ \acute{a}satrav\ \tilde{a}\ gahi$. Dunkel (1997: 21–22) claims that the first \tilde{a} is an example of “the asservative, sentence-initial * eh_1 ‘hey!’,” but the doubling nicely reflects poet’s insistent demand that Indra come here. Dunkel’s asservative particle is the null hypothesis, since it can never be disproven. See also IV.32.1.

The ca in b is baffling both as to position and function. Ge seems to take it as conjoining the imperatival clause in a with the present indicative clause in b (“Komm ... und du wirst ... gerufen...”); Klein (DGRV I.233) is disturbed by the “illocutionary difference” between the moods of the two clauses and suggests, “Perhaps the particle is merely a weak, untranslatable transitional element,” which, I’m afraid, is no help at all. Even if it is supposed to be conjoining the clauses, it is positioned wrong for this function. My instinct is that, in this hymn built of clichés, we are dealing with a truncated formula: X $ukth\tilde{a}(ni)\ ca$ (“X and hymns”). Cf. VIII.2.30 $gíras\ ca\ \dots\ ukth\tilde{a}\ ca$, VIII.33.13 $bráhmokth\tilde{a}\ ca\ \dots$ (and the converse VIII.63.2 $ukth\tilde{a}\ bráhma\ ca$), as well as the overfull VI.38.4 $bráhma\ gíra\ ukth\tilde{a}\ ca\ mánma$. Note that VIII.1.1 $múhur\ ukth\tilde{a}\ ca\ śamsata$ also contains $ukth\tilde{a}\ ca$ with ca in the wrong position and not clearly conjoining anything, though there it is easier to interpret it as conjoining two modally harmonious clauses.

VIII.82.4–5: $(n\tilde{i})\ \dots\ hūyase$ (4b) and $(pr\acute{a})\ \dots\ hūyate$ (5c), though built to identical stems, belong to the roots $\sqrt{hvā/hū}$ ‘call’ and \sqrt{hu} ‘pour’ respectively.

VIII.82.9: On *ásprta-* and the stealing of Soma, see comm. ad IX.3.8.

VIII.83 All Gods

VIII.83.2: *viṣpitá-* occurs only twice in Skt., here and in VII.60.7. In both occurrences it is the obj. of \sqrt{pr} ‘carry across, deliver’, and in both cases there is watery/nautical imagery. Its general value is clear -- a danger that is conceptually like a perilous water crossing -- but it has no good etymology. See EWA s.v.

VIII.83.5: Pādas ab appear to be a single clause with the middle part. *īśānāsaḥ* predicated to function as main verb. [Note in passing that Aufr’s typo *īśānāśo* with palatal, pointed out by Old, has been taken over uncorrected into the HvN text.]

My tr. of c roughly follows Ge’s, though I have rendered *īm* (“it”). He supplies a form of $\sqrt{naś}$ ‘reach’, on the basis of VIII.47.1 ... *ném aghám naśat* “evil will not reach him.” I am hesitant about this interpr. because it requires supplying a main verb with no support in context, but I don’t see a viable alternative. Re takes c as contrastive with ab, with *aghāsyā* parallel to *vāmāsyā* (“vous êtes...les régisseurs de la grace / non point ... ceux du maléfice”), but he doesn’t explain the syntax, esp. what he does with *yāt*, which certainly shouldn’t represent his “ceux.”

VIII.83.9: I do not understand the position of *utá* here. Although Klein cites this passage several times, he doesn’t comment on the position of *utá* except implicitly, by pointing to its interaction with *ádhā* (DGRV II.97–98).

VIII.84 Agni

VIII.84.1: I take *védyam* to \sqrt{vid} ‘find, acquire’ rather than \sqrt{vid} ‘know’, contra the standard view. I think it more likely that Vedic people (read, men) wanted to *get* a chariot rather than just know about it, and the renderings of the adj. show translators’ discomfort with the root assignment: Ge “wie ein Streitwagen denkwürdig,” Re “reconnaissable comme un char,” Klein (DGRV II.122) “conspicuous like a chariot.” None of these senses is really proper to \sqrt{vid} ‘know’. For the image, see II.2.3 and VIII.19.8.

VIII.84.2: According to Ge (probably correctly), this vs. refers to Agni’s flight and subsequent discovery and reinstallation by the gods.

VIII.84.4: This vs. lacks a verb to govern *úpastutim*. I supply a form of (*prā*) \sqrt{bhr} ‘present, bring’, which takes *úpastutim* as object elsewhere (+*prā* IV.56.5, VIII.62.1; simplex I.148.2). There is, unfortunately, no contextual support for it within the hymn, however. Ge supplies ‘make’, which is not impossible but has no contextual support, and the putative VP *úpastutim* \sqrt{kr} is not otherwise found. Re’s tr. “(présenter)” seems to agree with mine, but in his n. he claims to be supplying *vocaḥ* on the basis of vs. 5 (where the form is actually, per Pp [and most tr., incl. Re] *voce*). Although this contextual support would be good to have, oddly enough no verbs of speaking take *úpastuti-* as obj. (and, as just noted, Re’s tr. doesn’t reflect his statement in the n.).

VIII.84.7: The standard tr. take *pārīṇasaḥ* as a partitive abl. (“from whose profusion do you quicken the thoughts”). My interpr. (“in profusion”) could support an *adverbial* ablative of this neut. noun, but I think it’s also possible that *pārīṇas-* was reinterpr. as an adjective, on the basis of expressions like *rāyā pārīṇasā* (4x), originally appositives (“with wealth, with profusion”), but reanalyzable as noun-adj. “with abundant wealth” by way of noun+instr. adv. “with wealth in profusion.” If *pārīṇasaḥ* is an adjective, it can be an acc. pl. fem. agreeing with *dhīyaḥ*.

Contra the standard interpr., I do not take *yāsya te* as coreferential, but interpret *yāsya* as coreferential with *kāsya* in the main clause and take *te* separately as either dat. or gen. My supplied “(presented)” is just there for ease of English parsing: pāda c is easily interpretable as a nominal clause, “(the man) whose hymns are for you at ...” / “... whose hymns are yours ...”

VIII.84.8: The small interpretive issue in this verse is who is the referent of *svéṣu*. Ge/Re take it as Agni, while I think it’s the unidentified pl. subjects of *marjayanta*, presumably the priests (so also Scar 417). An argument for my position might be the fact that we might expect the reflexive adjective to be controlled by the syntactic subject, but it is my *sense* that this is not a hard and fast rule in Rigvedic syntax. More to the point, in my opinion, is that 6ab ... *káro, víśvā asmābhyam sukṣītīḥ* “... you will make all dwellings lovely for us” and 9a *kṣéti kṣémebhiḥ* “he [=the favored mortal] dwells peacefully in peaceful ways ...” associate dwellings with the mortal worshipers.

VIII.85–87: The Anukramaṇī names Kṛṣṇa Āṅgīrasa as the poet of these three Aśvin hymns, and he appears by name in the first hymn, VIII.85.3–4. Kṛṣṇa Āṅgīrasa is also the supposed poet of three Indra hymns in X (X.42–44), although there are no obvious echoes that I am aware of.

VIII.85 Aśvins

VIII.85.3–4: The Anukramaṇī identifies the poet as Kṛṣṇa Āṅgīrasa, and a Kṛṣṇa is here identified as the caller / singer.

VIII.85.5: The phrase *chardīḥ ... ādābhyam* is tr. “shelter that cannot be cheated” in VIII.5.12, which rendering seems preferable to “undeceivable protection” here.

VIII.86 Aśvins

VIII.86.1: Following Kü (344) I take the pf. *babhūvātuḥ* as presential.

For the possible connection of the verb in the refrain, object-less *mumócatam*, with other appearances of Viśvaka and Viṣṇāpu in the RV, see the publ. intro.

VIII.86.2: The danger of imposing an after-the-fact narrative explanation onto a RVic hymn is shown by Ge’s tr. of *vīmanāḥ* here as “Betäubte” (distressed, afflicted). Although a negative reading of this compound is possible (“without a mind, with a mind [gone] away”), the only other occurrence of the word in the RV (X.82.2) is as a positive attribute of Viśvakarman, “vast in mind.” There is no reason that this sense cannot be found here

as well; the next pāda states that the Aśvins gave him insight (*dhíyam*), and the question in our pāda -- how (*kathā*) to praise the Aśvins -- need not be “how can someone with a disordered mind manage to praise them?” but rather “which of the many possible ways should someone with a capacious mind choose for praising them?” The questions in VIII.84.4–7, a hymn that belongs with ours though the Anukramaṇī attributes them to different poets (see remarks before VIII.81 in the publ. tr.), are similar.

VIII.86.3: The thematic connection between VIII.84 and our hymn suggested ad vs. 2 continues here: *edhatú-* ‘radiance’, only here in the RV, echoes *edhate* in VIII.84.9, which characterizes the successful devotee of Agni -- there tr. ‘thrives’, though ‘blazes brightly’ or sim. would be more vivid and literal.

VIII.86.4: Though Ge identifies the *vīrá-* ‘hero’ as Viṣṇāpu, as Re points out *ṛjīśín-* ‘possessing the silvery drink’ is almost exclusively used of Indra (and never of humans), and we are more likely to call upon this god than upon a rather vaguely defined mortal.

VIII.86.5: What the truth is doing here insistently in this final verse isn’t clear to me.

As Re points out, though the rare verb *śamāyá-* is derived from the root $\sqrt{\text{śam}}$ ‘labor’ (presumably as a deverbative from a 9th-class **śamñāti* [see, perhaps, *ścamnan* I.104.2]), it participates in a secondary word play between *śāma-* ‘hornless’ (I.32.15, 33.15) and *śṛṅga-* ‘horn’ -- hence the rather surprising appearance of the enigmatic “horn of truth” in b.

VIII.87 Aśvins

VIII.87.1: On the difficult word *krívi-*, see comm. ad I.30.1. Though *krívi-* is found in a discouraging variety of contexts, our passage is similar to I.30.1, in that the root $\sqrt{\text{sic}}$ ‘pour’ is associated with it.

This verse modulates rather cleverly from praise for the Aśvins (*stómaḥ*, pāda a) to pressed soma for them (*mádhvaḥ sutásya*, pāda c), pivoting on *séke* ‘at its outpouring’, which is literally applicable to the soma but, as is well known, metaphorically applicable to the praise.

VIII.87.1–2: The d pādas of these two vss. apparently begin with the same verb: 1d *pātám*, 2d *ní pātám*, but these two almost certainly belong to the two homonymous roots $\sqrt{\text{pā}}$ ‘drink’ and $\sqrt{\text{pā}}$ ‘protect’ respectively, *pace* Ge. Re’s arg. that the latter belongs to ‘protect’ seems pretty decisive: *ní* $\sqrt{\text{pā}}$ ‘drink’ is not found till the Rām., whereas *ní* $\sqrt{\text{pā}}$ ‘protect’ is quite well attested in the RV. I imagine the poet signaled the change of root by including this preverb while enjoying the etymological play (see also *píbatam* beginning 2a, 4a, as well as *pātám* 5d).

VIII.87.2: This is one of two passages in which Gr (fld. by Ge) interpr. *védas-* as ‘knowledge’ (rather than the ubiquitous ‘property, possessions’), but in fact ‘property’ works at least as well, arguably better, here. This leaves only III.60.1 with the ‘knowledge’ sense, which seems inescapable there (q.v.).

VIII.87.6: Note the *v*-alliteration in ab with repetition of *va/ā* at the beginning and end and *vip* in the middle.

vayāṃ hí vāṃ hávāmahe vipanyavo, viprāso vājaśātaye

VIII.88 Indra

VIII.88.3: Pāda c can be subordinate either to ab or to d; Ge chooses the former, I the latter, but there are no implications either way.

VIII.88.4: I construe *asi* in a with *abhī* in b and take *yóddhā* as part of the subject phrase, not predicated. Contra Ge, I also separate *majmánā* in b from the instrumentals in a, *krátvā śávasotá daṃsánā*, on the basis of both the pāda break and the position of *utá*. (Klein I.229 follows Ge by including *majmánā* in the conjoined NP, but three pages later [232] this NP is cited with only the first three members.) VIII.100.4b gives support to both of my decisions: *viśvā jātāni abhy āsmi mahnā*, with the finite form of *√as* adjacent to the preverb and a single instr. construed with this verb. See also in the immediately following hymn VIII.89.6 *tád viśvam abhibhūr asi, yáj jātām yác ca jántvam*.

VIII.89 Indra

As was noted in the publ. intro., every verse in this hymn, except the two anuṣṭubhs (5–6), has a form of *bṛhánt-* in it: 1a *bṛhát*, 2c *bṛhadbhāno*, 3a *bṛhaté*, 4b *bṛhát*, 7d *bṛhát*. The meters of these verses are *bṛhatī* or *satobṛhatī*. There is also some transformational phonological play based on this word: 2b *bhavat*, 2d *-bhāno*, 3b *bráhma*, 4a *bhara*.

VIII.89.1: A neuter word for a verbal product needs to be supplied with *bṛhát* in a; Ge suggests either *bráhma* (from 3b) or *sāma* (after Sāy). The latter is more likely, since *sāmans* are sung (cf. VIII.98.1 *indrāya sāma gāyata*, which is almost identical to our pāda), and since loc. *sāman* is found in the last verse, 7c, it produces an implicit ring.

VIII.89.2: The tr. of pāda a is meant to capture the etymological figure *abhíśastīr aśastihā*.

I take the verb *ābhavat* as the predicate, rather than as an auxiliary with predicated *dyumnī* as Ge does (“Indra bleib der Glanzreiche”).

VIII.89.3: Note *bṛhád indrāya* of 1a has been transformed into ... *indrāya bṛhaté*, with the adj. now qualifying Indra.

VIII.89.4–5: *jāyathā(h)* in 5a echoes *jáyā(h)* in the immediately preceding pāda (4d), though they belong to entirely different roots.

VIII.89.4: Ge’s suggestion (n.) that this verse constitutes the Maruts’ direct speech to Indra is a persuasive one.

VIII.89.6: Ge takes *haskṛti-* as qualifying the ritual fire – again a good suggestion. The fire’s crackling is the “laughter.” Unfortunately Ge bleaches the metaphor, tr. “der helle

Schein (des Opferfeuers),” which substitutes an unremarkable visual image for the striking auditory one.

VIII.90 Indra

VIII.90.1: Ge takes the loc. phrase *vísṽasu ... samátsu* with *hávyaḥ* and construes *bhūṣatu* in b with the accusatives in c. This is certainly possible and this disposition of the loc. may make better, or smoother, sense. However, because of the verse structure, I would prefer to keep *bhūṣatu* interpretationally in the first hemistich, and *ā√bhūṣ* can take the loc. (cf. VIII.66.7d, 8b, X.160.5). I then also supply *bhūṣatu* with the second hemistich, to be taken with the preverb *úpa* and the accusatives, since *úpa√bhūṣ* does take the acc. (e.g., V.75.8, VI.62.4).

VIII.90.2: I tr. *satyáḥ* separately from *īśānakṛt* on the basis of 4a.

VIII.90.3: The common trope of hymns as horses, teamed to bring Indra to the sacrifice.

VIII.90.5: For the sense of this verse, see publ. intro. Both Ge and Old (ad I.165.9 n. 1) suggest, tentatively, that Varuṇa is the referent of *carṣanīdhīt-*, and VII.85.3cd, in a hymn dedicated jointly to Indra and Varuṇa, supports this suggestion: *kṛṣṭīr anyó dhārayati prāviktā, vṛtrāny anyó apratīni hanti*. Here in a balanced “the one ... the other” construction, Indra’s characteristic deeds are described in d almost as in our passage, while Varuṇa’s activity in c, *kṛṣṭīḥ ... dhārayati* ‘sustains the peoples’, is expressed in a VP that is a variant of our compound.

VIII.90.6: The frame takes a double acc.: “beseech s.o. (*tvā*) for s.th. (*rādhah*), and I take the simile as implicitly having both roles filled: *bhāgām* ‘portion’ fills the 2nd acc. slot, but also evokes the god from which it is derived, *bhāga-*, to fill the 1st acc. However, Bhaga should properly be in parens. in the publ. tr.

Ge takes *śaraṇā* as a fem. adj. with *kṛtīḥ* “Du hast gleichsam ein ... schützendes Fell [Schild],” but this leaves nothing for the hide to be compared to. I think rather that *śaraṇā*, which is usually in the neut. sg., is a neut. pl., lacking semantic motivation (a not unusual situation), or, alternatively, that it has been attracted to the fem. sg. simile.

VIII.91 Indra (/Apālā)

VIII.91.2: Narten (Yasna Haptaṇhaiti, 146 and n. 45) identifies *vīraká-* as a word belonging to women’s language (Frauensprache) and thinks it should be tr. “mein lieber Held” rather than “Männlein.” But I don’t see why the diminutive of affection can’t be an element here; Apālā is also trying to domesticate him and make him more approachable. See also *kanīnaká-* in the Ghoṣā hymn, X.40.9.

The substances Apālā offers to Indra to accompany the soma form a ritually defined group of offerings elsewhere (III.52.1), the Savanīya-puroḍāśa-. For disc. see Jamison 1991: 162–63, 172–73. Note that, judging from *dhānāvantam karambhīnam / apūpāvantam ukthīnam* “possessing grain, possessing gruel, possessing cakes, possessing hymns” with *-vant-* and *-īn-* suffixes respectively, it is difficult to maintain the often

suggested semantic difference between *-vant-* and *-ín-*, with *-ín-* marking inherent possession and *-vant-* more contingent possession.

VIII.91.3: As noted in the publ. intro., the first hemistich contains pedagogical vocabulary, the contrastive “we wish to comprehend” (*ā ... cikitsāma*) and “we will not ‘recite’ you” (*ádhi caná tvā némasi*). The lexeme *ádhi* √ *i* lit. ‘go over’ (which goes nicely into Engl. in its idiomatic sense); in later Vedic it means ‘study (a text)’, which is an oral culture means ‘recite aloud’, and this appears to be its meaning here (contra most tr., incl. Ge and Schmidt). Followed directly by *cd*, where Apālā insistently asks the soma to flow “softly” (*śánaiḥ ... śanakaīḥ*), this hemistich indicates that Apālā wants to learn and understand Indra’s intentions, but she will not reveal his presence by announcing him aloud. (See disc. Jamison 1991: 164 and n. 43.)

VIII.91.4: The compound *patidvīṣ-* is usually tr. with passive sense (Ge: ‘vom Gatten gehasst’), but this has more to do with the scenario for the hymn constructed by the tr. and comm. than with the structure of the compound. Grammatically speaking we would expect an active sense: passive value is fairly rare in root noun compounds, and, as Scar points out (249), though he does not abandon a possible passive value, the other *-dvīṣ-* compounds are all active in sense. An interpretation guided by the compound structure would give ‘hating husbands’, a perhaps not unlikely sentiment in a pre-adolescent girl about to be married off in ancient India. The verse expresses the anxious excitement of a girl on the cusp of marriagability and adulthood (Jamison 1991: 170–71).

VIII.91.5–7: On the connection between hair growth and skin disease, see Jamison 1991: 146–70.

VIII.92 Indra

VIII.92.1: I separate the predicates of pādas a and b because √ *gā* ‘sing’ seems to be used in two different senses, with two different sets of preverbs: *ā* in a, *abhí prá* in b – the first “sing (s.o.) to (come to) X [acc.],” the second “sing to s.o.”

pāntam here belongs to the nominal stem *pānta-* ‘drink’, not the pres. part., but the coincidence of form may have led to some ambiguity.

VIII.92.3: The first two pādas contain a remarkable set of rhyming words: *puruhūtām puruṣtutām, ... śánaśrutam*.

VIII.92.2–3: 2c begins *índra í(tí)*, while 3a begins *índra í(n no)*.

VIII.92.3: What posture *abhijñú* designates is not clear. Ge thinks it involves bending the knees and sinking down, Scar (345) that Indra crouches down because he is so large. I think rather that, as in I.37.10, it indicates a slightly crouching position, with knees bent, for driving a chariot (note I.37.10 *abhijñú yātave* “*abhijñu* to drive”), in this case to bring the prizes to us. The word *nṛtúḥ* ‘dancer’ at the end of b is suggestive, so that *abhijñu* might instead, or also, be a dancing posture.

VIII.92.4: The first pāda of this new ṛca matches that of the first ṛca (1a): $\sqrt{pā}$ (*pāntam* (1a) / *ápāt* (4a) ... *āndhasaḥ*##.

īndor īndro is an example of the word play, much beloved in IX, between *īndu-* ‘drop’ and *īndra-*, but this case is particularly nice because sandhi allows the two words to be identical, save for the reversal of the final two sounds (*or* ~ *ro*).

VIII.92.5: *abhī prá* \sqrt{rc} picks up *abhī prá* $\sqrt{gā}$ of 1b.

VIII.92.6: The two gods are, of course, Soma and Indra respectively.

VIII.92.7: I’m not entirely sure of the sense of *āyatam* in b. Ge tr. “auf alle Lobreden Gespannten” (intent on / excited about), which makes nice contextual sense, but which I find difficult to reconcile with the other occurrences of $\tilde{ā} \sqrt{yam}$, including, in this hymn, $\tilde{ā} yamat$ in 3c and (*abhī*) ... $\tilde{ā} yaman$ in 31b. Elsewhere $\tilde{ā} \sqrt{yam}$ means ‘to hold (reins, etc.), hold fast, guide’. Here the sense may be that Indra is held (that is, kept) at the sacrifice by our songs, and there is then a contrast between his (temporary) immobility and the rousing we hope to give him (c: $\tilde{ā} cyāvayasi$).

VIII.92.8: This verse then showcases a different kind of immobility for Indra: *ānapacyuta-* ‘unbudgeable’; Indra here is not held, as it were, against his will, as perhaps in 7b, but because of his immense power he cannot be moved by lesser powers. Since in the immediately preceding verse (7c) the hope was to cause him to stir (\sqrt{cyu} [*cyāvayasi*]), it is striking that here it is asserted that he cannot be made to \sqrt{cyu} . (The relationship between these two forms should probably have been signaled in the Engl: perhaps “you rouse ... unrousable.”)

On the cmpd *avāryá-kratu-* ‘possessing unobstructable resolve’, see comm. ad IX.98.12.

VIII.92.11: Old and Ge take *āyāma* as expletive “let’s go!” and construe the rest of the verse with *jāyema* in c (“might we conquer the poems of the poet ...”). Although this is possible, it requires the poet (*dhīvant-*) in question to be a rival poet (so explicitly Old), and I wonder if we would flatteringly refer to a rival poet as “visionary.” I think rather that we are appropriating the visionary thoughts of our own poet and configuring them as steeds for victory in battle. For *dhī-* = *ārvant-* cf. VI.45.12 *dhībhīr ārvadbhiḥ ... jeṣma* “With visionary thoughts as our steeds might we conquer ...” Construing *āyāma* with acc. of goal is very similar to *āganma ... āśāsaḥ* “we have arrived at our hopes” in 13c.

VIII.92.12: Case disharmony between simile and frame, as discussed in Jamison 1982, facilitated by the syntactic ambivalence of *raṇāya-*, which has both causative and non-causative uses. Here the frame is causative, “we make you take pleasure in hymns” (*vayām u tvā ... ukthēṣu raṇayāmasi*), while the simile is non-causative, “as cows (do) in grain” (*gāvo ná yāvaseṣv ā*). For possible other exx. see comm. ad X.59.5, V.54.13.

VIII.92.13: Ge takes *anukāmā* as ‘in accord with *our* desires’, but it seems to me unlikely that we are claiming that everything goes as *we* want it; rather that man proposes, Indra

disposes, and in this case he has disposed as we had hoped. This is supported by vs. 14 also, where the desirous ones turn to Indra (for him to fulfill their desires, presumably).

VIII.92.20: I follow Scar (574–75) in taking *samsád-* here as an agent noun.

VIII.92.23: Following Kü (503), I take the act. pf. of \sqrt{vyac} as a presential stative.

VIII.92.24–25: On *kuksí-* as originally ‘cheek’, not ‘belly’, see Jamison 1987; also for the pun on *dhāman-* ‘foundation’, hence ‘fundament’, that is, ‘buttocks, bottom’, in vs. 24, but, in vs. 25, ‘foundation, establishment’ in the sense of ‘bestowal’; also the jocular name Śrutakakṣa in 25. For a similar jocular use of the solemn word *dhārūṇa-* in the sense of ‘belly’, see X.44.4 and comm. ad loc. It also is found in a soma-drinking context.

VIII.92.24–27: The syntagm *áram* + DAT displays surprisingly complex semantics; there is generally a relationship of benefit between the subject and the dative, but which one receives the benefit is not fixed. We can see the shift in these vss., which contain a surprising number of such constructions: 2x in 24, 3x in 25, 2x in 26, 1x in 27. In 24 the beneficiary is expressed in the dative: the soma is beneficial to these parts of Indra, but in 27 the singer, who is the subject, by his action (singing) receives the benefits expressed in the three datives. The switch is esp. clever because in 24c the dative *dhāṁmabhyaḥ* refers (by my interpr.) to a body part of Indra’s, which benefits from the soma drops, but the same dative (save for number), *índrasya dhāmane*, in 25c refers more likely (again in my interpr.) to a benefit that Indra will bestow (though the reading of 24c is also simultaneously possible). This change in focus is made clear (“repaired”) in 26c, *áram ... dāvāne* “fit(tingly) for (Indra’s) giving,” which makes explicit the implication of 25c *áram ... dhāmane*. Ge (also BI RR) supplies “we” as implicit subj. of c: “(wir sind) bereit für deine Schenkung,” but the playful parallelism with 24c seems to me to exclude this interpretation. The heavy phrase in 29 ... *rātīḥ ... dhāyī dhātṛbhiḥ* “(Indra’s) giving has been ordained by the ordainers” also establishes the link between Indra’s giving and the root $\sqrt{dhā}$. The final *áram* in 27c returns us to the situation found in 24, where the provider of benefit is the subject (“we”) and the beneficiary in the dative (“you”). I would now change the tr. to make that clearer: “We should go (to be) fit for you.” On the particular construction here, *áram* \sqrt{gam} DAT, see also comm. ad X.9.3.

VIII.92.28: Klein (318) takes *utá* as linking *śūraḥ* and *sthiráḥ* “Certainly (thou art) heroic and firm,” but this assumes that *śūra-* can be adjectival, which, *pace* Gr, I don’t. Instead, despite its position, I take the *utá* as conjoining *vīrayúḥ* and *śūraḥ ... sthiráḥ*, a variant on the complementary pairing of *vīrá-* ‘hero’ and *śūra-* ‘champion’.

VIII.92.28–29: Ge tr. *rādhyā-* as “leicht zu gewinnen,” but I take it rather as “to be realized, brought to success.” What the content of Indra’s thought is may be clarified by V.39.3 *yát te ditsú prarādhyam mánah ...* “your thought ... which is eager to give, should be realized.” The giving theme is made explicit in the next verse. His intention (the *mánas-* of 28c) is to give, and this intention will be realized, because giving (*rātí-*, 29a) has been ordained as part of his nature. Then 29c reaffirms the ritual partnership of mutual giving between Indra and his worshipers. I consider Ge’s “und doch (bist du),

Indra, bei mir” not sufficiently specific, esp. given the strong assertion of connection between us and Indra in the *tvā yujā* (31c), *tváyéd ... yujā* (32c) “with you as yokemate” found in following verses, not to mention 32c *tvām asmākaṃ táva smasi* “You are ours; we are yours.”

VIII.92.31: A difficult hemistich, whose uncertainties include the function of *abhí*, the meaning of *ā yaman*, and the grammatical identity and use of *sūrah*. Contra Gr I do not take *abhí* as another preverb with *ā√yam*. The only other example of *abhí-ā√yam* is in a gerundive in a curious idiom in an Aśvin hymn (I.34.1). Moreover, if it is a preverb, it has taken an odd position: we generally find preverbs in tmesis at the beginnings of pādas. I instead take it as governing *naḥ*. As for *ā yaman*, it needs to be considered in connection with other *ā√yam* forms in this hymn, particularly *ā yamat* in 3c (also *āyatam* 7b). In 3c the lexeme means ‘guide’, and I take it so here as well, with *naḥ* (read twice) as its object. In this interpretation *sūrah* is ablative of *svār*, rather than gen. to this stem (Gr, Old, with the latter suggesting it might be a temporal gen.) or nom. sg. to *sūra*- (Ge).

In c the referent of *tāt* is not specified. Ge thinks it’s the sun, which is certainly possible.

VIII.93 Indra

VIII.93.2: Ge (flg. Gr) takes *bāhvōjasā* as an abstract tatpuruṣa (“mit Armes Stärke”), but it has bahuvrīhi accent and the other three occurrences are clearly bahuvrīhis. I follow Old in so interpreting it and supplying *vāja*- as the head noun.

The Pp. analyses *vṛtrahāvadhīt* as containing an unaccented *avadhīt*. I prefer to read it with accented *avadhīt*, which allows the *ca* to conjoin two parallel relative clauses. Since in this interpretation the verse consists entirely of relative clauses, it must be dependent on either the preceding or following verse. Either would work, but the presence of an apparently resumptive *sā* beginning 3a favors the latter.

VIII.93.3: Slight phonetic figure: *sā ... śivāḥ sākḥā, āśvāvad ...*

VIII.93.4: The two vocatives addressed to Indra, *vṛtrahan* (a) and *indra* (c), flank that to the sun (*sūrya*, b), with the first embedded in a 2nd ps. clause with *Sūrya* as subject. Only the unambiguous reference of *vṛtrahan* to Indra saves it from being applied to *Sūrya*, but the effect is still somewhat unsettling.

The verb *udāgāḥ* reprises *úd ... eṣi* expressing the same action in vs. 1. In fact 1a *#ud ghéd abhí* is echoed by 4b *#udāgā abhí* with the actual verb *agā(h)* substituting for the intervening particles of the former.

VIII.93.4–6: I do not understand the force of the *vā* in 5a, since this verse does not seem to me a logical alternative to vs. 4. Nor do I understand the *utá-u* beginning 5c, which should not be conjoining the dependent clause of ab with the main clause of c. However Klein’s discussion (I.450) of *utá* appears to be on the right track and probably can account not only for the *utá* but also for the *vā*, if the explanation is fleshed out a bit. It seems that the three verses in this tṛca, esp. the first two, are loosely parallel to each other, esp. in their third pādas. Vss. 4 and 5 begin with a two-pāda *yād* clause (though the

two *yád*-s are functionally different), with the third-pāda main clause resuming with a *tád* that is asserted to be in Indra's domain: 4c *sárvam tád indra te váse* "all that is under your will" and 5c (*utá*) *tát satyám ít táva* "just that (comes) true for you" — with *te* matching *táva* and with *sárvam* and *satyám*, the referent and predicate respectively of the two *tád*-s, phonologically similar. Thus both the disjunctive *vā* and the conjunctive *utá* serve rhetorical purposes, marking parallel structures, even though those structures do not have parallel or contrastive content. The third verse (6) varies the structure a bit: instead of *yád* there are two *yé*-s in ab and instead of *tád* pāda c has *tān*; moreover, c is not a nominal sentence attributing all to Indra but requires Indra himself to make a move (*gachasí* 'you go'). But *sárvāms tān indra ...* semi-duplicates 4c *sárvam tád indra ...*, and the same total control is implied.

VIII.93.8: Unusual syntactically, in having three non-initial *sá*-s; what special effect is being aimed at is not entirely clear.

VIII.93.10: The contrastive *dur-gá-* ... *su-gá-* effect is not easily captured in English because "easy going" is blocked by the English idiom.

In c *ca* in the sense 'if' conditions the accent on the verb *vásah*. See Klein (DGRV I.238–56, esp. 250–51, on subordinating *ca*.

VIII.93.11: The implicitly conjoined nouns *ādís-* ('aim, intention') and *svarājya-* ('sovereignty, self-rule') do not seem to me to form a natural class. It is possible that the rendering of the former should be adjusted, to harmonize with the finite verb in 15b. The Pp. analyzes that verb as simply *adīṣṭa* without preverb, but in its sandhi situation it could also reflect *ā-(a)diṣṭa*, with the same lexeme as here. Even so, the middle voice of that verb would separate its semantics from the standard active idiom *ā √ diś* 'point to, aim at'.

VIII.93.13–15: The connection among the verses in this *trca* eludes me, though the fact that they are all set in an apparent mythic past and are joined by logical and/or temporal connectors (14a *ádha*, 15a *ād u*) suggests that they should form a thematic unit.

VIII.93.14: The positioning ... *yád ... ádha ...* is unusual, though Klein (II: 111) simply takes it as a variant of more common *ádha yád ...*

VIII.93.15: Judging from Ge's tr. of the first pāda, "Davor sei mir Bewahrung," he takes *āt* as an ablative pronoun referring to *ámah* in 14c (his "Panik," my "onslaught"), but as far as I can tell, *āt* is elsewhere only adverbial, as opposed to the fuller pronominal form *asmāt*. I also question his modal, indeed imperatival interpretation of *bhuvat* in this preterital context; thematic forms belonging originally to the root aorist stem (*ā*)*bhū-* can be either subjunctive or a secondarily thematicized injunctive. See Hoffmann 1967 passim, esp. 214–15.

VIII.93.17: The verse is syntactically incomplete, consisting of an instrumental phrase (pāda a), a vocative phrase (pāda b), and a subordinate clause with a verb in the imperfect (*ā-abhavaḥ*, so Pp.) or possibly injunctive (*ā bhavaḥ*). In order to provide a main clause

for the *yād* clause, Ge supplies “geschah es” (“it happened”). I prefer to borrow the verb of the preceding verse, *ā śuṣe*, though transposed into a past tense.

VIII.93.18: The curious hapax *bodhín-manas-*, with, per Pp., 1st member *bodhít-*, may be built on the model of semantically similar *cikitvít-* / *cikitvín-manas-*; see AiG II.2.322.

VIII.93.19: This verse presents both a conceptual difficulty (in ab) and a syntactic one (in c). As for the first, Indra should not be reaching exhilaration though his help for us, but rather through our soma. Ge sidesteps the difficulty by simply reinterpreting the lexeme *abhí prá√mand* as meaning ‘draw near’ (“ziehst du her zu uns”) without comment, but this relatively common collocation elsewhere always has the meaning expected of *√mad/mand*, a meaning that *abhí ... mandasānāḥ* in 21ab would reinforce. In order to avoid the conceptually unlikely “by what help for us do you become exhilarated?” I have supplied “coming” with the *kayā ... ūtyā* phrase – re-establishing the usual balance between what Indra bestows on his worshippers and the soma they offer him in return.

As for the syntactic problem, imperatives (here *bhara*) should not appear in interrogative sentences, and pāda c begins with interrogative *káyā*. Ge suggests that the 2nd ps. imperative here is used in analogy to the 1st ps.; in other words, since the subjunctive is perfectly at home in interrogative clauses and the 1st ps. subjunctive ultimately comes to serve as the 1st ps. imperative, its use in interrogative clauses could serve as a model for the introduction of 2nd ps. imperatives in such clauses. But I doubt that the 1st ps. subjunctive had been reinterpreted as an imperative at this era, since the full subjunctive paradigm in all three persons was still very much alive, and in fact Old comments that he does not know of other examples in the older language. To avoid the syntactic clash I assume that *káyā stoṭṭbhyaḥ*, parallel to *káyā ... na ūtyā* in a, ends the sentence, and *ā bhara* constitutes a new, abrupt imperatival clause. Old cites a similar solution, though taking *stoṭṭbhyaḥ* with the imperative not the *kayā* clause, found in Grassmann’s tr., also in Caland/Henry’s, which he dismisses as “künstliches Ueberspringen der Schwierigkeit.” This hardly seems fair, since it does in fact avoid the difficulty, and seems no more artificial than many interpretations of syntactically awkward passages. As for my division into clauses as opposed to that of Gr and Cal/Hen, although *stoṭṭbhya ā bhara* is found several times elsewhere as a syntagm (V.6.1 [and reps.], nearby VIII.77.8), pāda-final *ā bhara* is extraordinarily common and could easily be construed independently, especially since *stoṭṭbhyaḥ* would naturally pair with *naḥ* in these parallel expressions.

VIII.93.21: “Bring” can be supplied here on the basis of *ā bhara* in 19c.

VIII.93.22: Though *vītáye* is translated as if it were a loc. (“in pursuit”), it is of course a dative, and “Indra” or “you” should probably be supplied as object of the infinitive. The “wives” of the pressed drinks are, acdg. to Sāy. and followed by Ge (and me), the waters; in this soma context cows, standing for cows’ milk, are also possible, though the occurrence of waters in c supports Sāy.’s suggestion.

Pāda c is difficult, primarily because of the uncertain *nicumpunāḥ* but also because of the genitive case of *apām*. To take the latter issue first, Ge assumes the referent of the nominative phrase is Indra, as “der ... Besucher der Gewässer” (*apām*

jágmiḥ). Since *jágmi-* in the singular is ordinarily used of Indra, this identification makes sense, but *jágmi-*, like other nominals of the same formation, always takes verbal rection, and the goal is expressed in the acc. (*āhavam* II.33.11, *nṛṣādanam* VII.20.1) or loc. (*vidáttheṣu* I.89.7) – not the gen., as Ge’s tr. requires. For the baffling *nicumpuṇā* (and its mantra variants *-cuṇkunā-* and *-caṇkuna*) see EWA s.v. with lit. Mayrhofer cites there an etymological suggestion of Werba’s based on a proposed MIA form, meaning ‘always filling’. Though there is, of course, no certainty here, I have adopted this suggestion for want of anything better, though ‘gushing downward’ or Ge’s ‘sprudelnde (?)’ vel sim. would also work; consider also Old’s “vielleicht ein dem Wasser innewohnender lustrierender Genius.” In any case, meanings in this sphere do not fit Indra terribly well (as Ge’s “?” in part indicates), and, coupled with the problem of the case form of *apām*, this suggests that a different referent be sought for the nominatives in this pāda. I tentatively suggest supplying *ūrmī-* ‘wave’, regularly found with *apām*, esp. in soma contexts.

VIII.93.23: The first word of the verse, *iṣṭāḥ*, can belong either to $\sqrt{iṣ}$ ‘desire’ (or the other $\sqrt{iṣ}$ ‘send’) or \sqrt{yaj} ‘sacrifice, offer’ and should be read as a pun. With Ge the publ. tr. takes *īndram* as governed by *vṛdhāsaḥ* (“strengthening Indra” / “den Indra ... stärkend”). I took it so because *asṛkṣata* has a clear acc. goal in c and does not need another one. However, I am increasingly uncomfortable with this interpretation, since *vṛdhā-* otherwise takes the genitive (see nearby VIII.98.5 *sunvató vṛdhāḥ* and 6 *mānor vṛdhāḥ*), and I would now take *īndram* as another goal with *asṛkṣata*, hence “... libations, strengthening at the ceremony, have surged to Indra, to his down-stroke”).

The word *avabhṛthá-* in c is found only here in the RV. In classical śrauta ritual the avabhṛtha is the “final bath” taken by the sacrificer and his wife at the conclusion of the ritual, and it is interpreted thus here by Gr, and, although Ge doubts that it is the *final* bath, he still takes it as a “Reinungsbad.” I am dubious for a number of reasons, not least that no one should be bathing in libations (*hótrāḥ*) and that the participants in the final bath of later ritual are not gods (as Indra would be here) but mortals. Instead I think that the verbal lexeme *áva* $\sqrt{bhṛ}$, lit. ‘bear down’, provides the interpretational context for this noun. In the RV verbal forms of this lexeme sometimes take a weapon in the acc., depicting Indra’s bringing this weapon down on his opponent (e.g., I.32.9 *īndro asyā áva vādhar jabhāra* “Indra brought his weapon down upon her”; also *vájram* X.113.5), or, with an accusative of the opponent or one of his body parts, of Indra bringing down his enemy (e.g., II.20.6 *áva ... śíro bharad dāsāsaya* “he brought down the head of the Dāsa”). Here I think it refers concretely to Indra’s “down-stroke,” which is strengthened by the soma offered to him.

VIII.93.25–27: The c pādas of all three verses in this ṛca have the same structure: dat. pl. *stotṛbhyaḥ*, a form of *īndra-* (acc. 25–26, voc. 27), 2nd ps. imperative.

VIII.93.25: The verse begins with a 2nd sg. pronoun *túbhyam*, and the content of what follows, until the end of b, seems entirely consonant with Indra as the 2nd ps. referent. However, the vocative closing b, *vibhāvaso*, otherwise used only of Agni, and the fact that Indra is the 3rd ps. object of the imperative *ā vaha* in c, whose subject should be Agni, call the interpretation of the earlier part of the verse into question. Yet it is next to

impossible, in my view, that the announcing of the soma drinks in pāda a is made to anyone but Indra, and so we must reckon with a half verse that changed horses in midstream, as it were, without any poetic benefit accruing.

VIII.93.26: I do not understand Ge's assertion (n. to 26a), that this verse only makes sense if Agni is the speaker, a view shared by Old. I certainly agree that Agni is the subject: I take 26ab as dependent on 25c, where Agni is the 2nd ps. addressee, and take the participle *dādhat* of b with the objects found in both a and b, with slightly different senses ('diffuse' in a, 'distribute' in b, both with preverb *vī*).

The VP "diffuse your skill" refers to Agni's sending his light upward and outward; the "skill" in question is presumably his ritual skill, his ability to conduct the oblations to heaven.

The 2nd pl. impv. in c must be addressed to the whole set of ritual participants. Ge. insists (n. to 26c) that *stoṭṛbhyaḥ* must be read with pāda b, parallel to *dāśūṣe* "die Kleinode verteile für den Opfernden, für die Sänger," but the rigid parallelism of the c pādas in this ṛca suggests rather that it belongs with its pāda. Presumably the full set of participants are chanting on behalf of the subset of "praisers."

VIII.93.27: Again I read the verb *ā ... dadhāmi* with both pādas, with slightly different senses with the two different objects and with *te* read as gen. with pāda a and dat. with pāda b.

VIII.93.28–30: A variant of the final pāda of the last ṛca (27c *stoṭṛbhya indra mṛṇaya*) becomes the refrain of this ṛca (*yād indra mṛṇāyāsi nah*).

VIII.93.31–33: As noted in the publ. intro., the first pāda of the first verse of this ṛca provides its refrain, a slightly odd effect. Only in 31 is the refrain syntactically integrated into the verse. There are also echoes of previous verses: *śatakrato*, which ends 27b and 28b, appears as nom. *śatākratuḥ* at the end of 32b. The voc. *vṛtrahantama* of 30a is echoed by nom. *vṛtrahāntamaḥ* in 32a and voc. *vṛtrahan* in the same metrical position in 33a. The end of this hymn is very tightly constructed.

VIII.93.34: As noted in the publ. intro., this verse falls outside the ṛca structure and seems unconnected to the rest of the hymn. As Ge points out, it plays on two of the names of the Ṛbhus, *ṛbhú-* itself and *vāja-*. Note also the alliteration, esp. in pāda b: *ṛbhukṣānam ṛbhúm rayīm*.

VIII.94 Maruts

VIII.94.1–2: For the somewhat peculiar imagery of these vss., see the publ. intro.

VIII.94.2: Curiously, *vratā ... dhārayante* seems to be the only full VP with *vratā-* as obj. of a verbal form of *√dhr*, despite the common (nearly 20x) bahuvrīhi *dhṛtā-vrata-* 'whose commandments are upheld'.

There are several ways to construe the dual dvandva *sūryāmāsā* of c. Ge takes it as a separate obj. of *dhārāyante*, Re. as an additional subj. of the same verb, while I take it as the subj. of the purpose inf. *drśé*.

VIII.94.3: The first pāda has been subjected to a dizzying number of different interpretations, primarily because of the uncertain sense of the resonant word *aryāḥ* in context, which is complicated by its ambiguous grammatical identity: it can be gen. or abl. sg. or nom. or acc. pl. of *arí-* or even nom. sg. of *aryá-*. In addition to the standard treatments, see also Oldenberg ZDMG 54 (=KlSch. p. 79), Bl RR ad VI.45.33, Thieme Fremdling 74ff. I won't discuss the various suggested alternatives, but simply present my own. I take *aryāḥ* as abl. sg.; as for the immediately following *ā*, I give it a double interpr. On the one hand it is a postposition with *aryāḥ* in the meaning 'from'; the phrase *aryā ā* is found elsewhere and always in this sense (VIII.34.10, IX.61.11, X.191.1, in addition to the repetition of our pāda in VI.45.33). Any interpr. that requires *aryāḥ* to be some other case than abl. sg. needs to confront this formulaic evidence. But in my interpr. *ā* is also a preverb with *gr̥nanti*. I take the lexeme *ā√gr̥* to be built on the model of the common *ā√yaj* 'bring here by sacrifice' and mean 'bring here by song / sing here'. Our bards attract the Maruts away from the stranger (*aryāḥ*) to our soma-sacrifice.

"All the bards" (*vísve ... kārāvaḥ*) here contrasts with "all the gods" (*devāḥ ... vísve*) in the preceding verse, both sets of beings operating in the same territory, the ritual ground.

The publ. tr. fails to tr. *sádā* 'always'; it should read "... always sing them here ..."

VIII.94.4: The opening of this vs. seems unnecessarily over-annunciatory, with both *ásti* and *ayám*, each equivalent to "here is." One would have been enough.

There is some dissension about the referent of *svarājāḥ*, which cannot, of course, modify the (dual) Ásvins. Gr, flg. Ludwig, takes it as a gen. sg. referring to soma. The stem modifies the Maruts in V.58.1, and as a nom. pl. could match *marútaḥ* in b, except that the *utá* is then wrongly placed. Ge and Old are surely right that it refers to the Ādityas (as in VII.66.6), who appear individually in the next vs. and who are esp. associated with *vratā*'s, mentioned already in vs. 2. Klein (DGRV I.439), however, essentially rejects this solution for reasons that aren't clear to me and calls the issue "unresolved."

VIII.94.5: For the phrase *tánā pūtásya*, cf. I.3.4 *tánā pūtásah*, IX.16.8 *tánā punānāḥ*.

jāvant- is a hapax and is surely a truncation of common *prajāvant-*, likewise 'possessing/granting offspring', which occurs elsewhere in iambic cadences. In the IXth Maṇḍala Soma is asked on a number of occasions to bring or produce substances that are *prajāvant-*, e.g. *prajāvad réta ā bhara* "bring here semen producing offspring."

VIII.94.6: The "(drinks)" supplied in ab is not strictly necessary, since the genitives could be construed with *matsati* in c (so Ge/Re). I have supplied it because *√pā* 'drink' is the signature verb of this ṛca (*píbanti* 4b, 5a), but I am not wedded to it.

VIII.94.7–8: I take the initial *kád* in both verses as a question particle, introducing a rhetorical question. Ge, Re, and Etter (p. 236) take the *kád* in 8 as a neut. acc. interrogative adj. modifying *ávaḥ* (“which help?”), though they all take the *kád* in 7 as a question particle. I do not see the justification for violating the evident parallelism of the two verses, and I also wonder if we get a choice of the kind of help the gods are going to provide us.

VIII.94.9: With Ge and Old, I borrow *huve* ‘I call’ from 10 to govern pāda c. See also vs. 3 above with the same c pāda, there governed by (*ā*) ... *gṛṇanti*.

VIII.95 Indra

VIII.95.1: Though Gr identifies *rathīḥ* here as a nom. plural, thus a devī-type form beside the correct vṛkī-type *rathīyāḥ* found elsewhere, there is no reason not to take it as the nom. singular it appears to be, since number agreement in similes is not so strictly carried through in RV as in Classical poetics. So also AiG III.179 (though taking it as nom. sg. *used as nom. pl.*).

The image itself is somewhat striking: the songs mounting Indra as their chariot. Indra is usually the active charioteer figure.

VIII.95.2: HvN restore the sandhi in a (*asyāndhasa*) as *asya āndhasa*, but *asyá* should surely be accented, with the Pp., because it modifies *āndhasaḥ* rather than being used pronominally.

I follow Ge in supplying *vikṣú* with the fem. *viśvāsu* in c, on the basis of 3d. But other nouns are possible: just in nearby hymns *viśvāsu* is found with *samātsu* (‘battles’, VIII.90.2), *gṛṣú* (‘hymns’, VIII.92.7), and *kṛṣṭiṣu* (‘communities’, VIII.92.18), and a semantic case could be made for each of these, even the first.

VIII.95.4: Tiraścī Āṅgiraśa is the poet of VIII.95-103, according to the Anukramaṇī.

VIII.95.5: The verse consists entirely of a relative clause with no main clause, but the referent of the relative must be Tiraścī of 4a, despite the intervening matter in 4c, as the similar structures of 4b and 5a indicate: # *indra yás tvā* and # *indra yás te* respectively.

Note the interplay of *nāvīyasam* ‘newer’ and *pratnām* ‘age-old’, expressing the standard RVic poetic trope of making an old song new again. So also Ge (n. to 5cd).

VIII.95.7–9: See the intro. for the curious density in this tṛca of the ppl. *śuddhá-* ‘cleansed’, which is not normal soma vocabulary. I do not understand what ritual or conceptual feature is at issue. Ge cites Sāy’s story about the purification of Indra after his killing of Vṛtra. This may be relevant, but there is no reference to Indra’s deeds or activities in this tṛca, save for the final hemistich in vs. 9, where we find *vṛtrāṇi jighnase* “you keep smashing obstacles” – an allusion to Vṛtra but couched in present time and plural number.

VIII.95.7: Instead of HvN’s restoration *nu indram* (for *nv indram*), *nú* should of course be accented.

VIII.95.7-8: These two vss. contain successive occurrences of the pf. act. impv. built to \sqrt{mad} . 3rd sg. *mamattu* (7d), 2nd sg. *mamaddhi* (8d). Despite their apparently parallel formation, they have distinct transitivity values: the 3rd sg. is transitive, the 2nd sg. not. This difference is consistent in the usage of the two forms: the other instance of *mamaddhi* (X.96.13) is also intransitive, 10 of the other 11 occurrences of *mamáttu* are transitive (save for late X.59.2) The difference may have arisen from the fact that, while *mamáttu* is a properly formed impv. to the pf. of \sqrt{mad} with expected full grade of the root syllable, in the 2nd sg. we should expect zero grade, hence **ma-md-dhi*, which would probably simplify to **mandhi*, with the superficially unredupl. weak perfect stem *mand-*, which is reinterpreted as a secondary root. Hence *mamaddhi* must be secondarily formed. I do not understand why this would affect its valency, though.

VIII.96 Indra

VIII.96.1: I read *ātiranta* as preverb *ā* plus injunctive *tiranta* (and so better transcribed as *ā tiranta*), contra Pp. and Gr. This allows a presential, general reading for the injunctive, which will match the pf. *tasthuḥ* in c (usually presential, acdg. to Kü), and describes the general cosmic obedience to Indra, rather than a particular historical event. With Ge I take this verb as providing the framework for pāda b as well, though I consider *nāktam* adverbial, rather than the object of the verb, as Ge and Old take it.

VIII.96.2: In d “deeds” needs to be supplied, to account for the number differential between *tād* (c) and *yāni* (d).

VIII.96.3: The Pp. reads *śrútyai* in d (so also Ge, Schmidt *B+I*), but I follow Gr in taking it as *śrútyāḥ*, agreeing with *krátavaḥ* in c. Ol considers both interpretations possible and does not make a determination.

VIII.96.4: Since *yajñīyam* is not a superlative, the “the most” of the publ. tr. should be in parentheses.

VIII.96.5: The verbal counterpart to 2nd sg. *dhatsé* in the relative cl. (ab) is augmented *ānavanta* in the main clause (cd). I would therefore prefer to take *dhatsé* as a medial, preterital perfect, rather than as a present. Gr and Lu identify it as present, Ge translates it as one, and Kü (p. 275) explicitly claims that *-i*-liaison forms belong to the perfect, while those without the *-i* are presents. Nonetheless, I think we can interpret *dhatsé*, the only such 2nd sg., as a perfect, next to very common *dadhiṣé*, esp. as only this form would fit in a Triṣṭubh cadence.

The accent on main-clause *ānavanta* must result from its membership in the repeated *prá* subclauses.

I take the formulators in d as the Maruts; Ge suggests either Aṅgirasas or Maruts. Since the next *ṛca* (vss. 7–9) clearly contains the 1st ps. speech of the Maruts, and the next verse (6) has 1st ps. speech that can reasonably attributed to the Maruts, their introduction here would not be surprising.

VIII.96.6: Ge (so also Gr) takes *ávarāṇy asmāt* as temporal: “die nach ihm kommen,” whereas I interpret it spatially. Though “later than him” is possible, it seems pleonastic, in that if Indra begat them, they would *have* to be later than him. The idea is rather that they exist here on earth, below him,, and also that he begot them as subordinates. Cf. *vr̥jānemāvarāṇi* “these communities here below” (IX.96.7) and *bāndhūṁ imām āvarān* “these bonds here below” (IX.97.17), which both seem spatial, not temporal, also.

VIII.96.8: Although the med. pf. of *√ vr̥dh* is ordinarily intransitive or reflexive, *vāvr̥dhānāḥ* is here best interpreted as transitive in the frame (“increasing you,” with *tvā* in a as obj.) but intransitive in the simile (“as ruddy throngs increase,” with the nominative NP *usrā iva rāsāyaḥ*). See X.78.8 for a similar example of case disharmony.

VIII.96.9: However tempting it might be, the juxtaposed phrase *ásurā adevāḥ* is most likely not to be interpreted as an early instantiation of the Asura/Deva conflict of middle Vedic times. Instead it probably refers to human or semi-divine lords (for the former see W. E. Hale, 1986: 83) who do not have the gods on their side. Hale points out that *adevā-* is the only form in the RV so accented (contrasting with *ádeva-*), and it must be a bahuvrīhi meaning “not having gods, without gods.”

VIII.96.10: In d *tanvè* might be more comfortably rendered “for his own person” with Ge (“für seine Person”), but *tanvi* in the following verse seems to require a ‘body’ reading.

VIII.96.13–15: As indicated in the intro., the identity of the ‘droplet’ (*drapsá-*) and the purport of this *ṛca* are quite unclear. Ge takes both *drapsá-* and *kṛṣṇá-* (‘black’) as PNs and the *ṛca* as their “saga.” Since such a saga is otherwise unknown and both words have lexical meaning, such an approach does not seem to gain us much. Old’s discussion is, as usual, very sharp, but his own interpretation, that Indra is helping an embryonic version of Bṛhaspati, in the form of a drop of semen, to come to birth, also does not convince. Schmidt (1968: 112-13) rejects Old’s interpretation and suggests that it describes in mystical fashion the freeing of the soma-drop in the form of the sun, but declines to tr. the *ṛca* because of the many uncertainties. I am inclined to see it as a treatment of the ritual step of rinsing the soma in water, as I said in the publ. intro., though much remains murky.

VIII.96.16–18: These three vss. begin *tvám ha tyád*. As elsewhere with this configuration (2ND SG. PRN *ha tyád*), with a neut. *tyád* without a neut. referent, *ha tyád* seems to be strongly emphatic (see a similar sequence in I.63.4–7 and comm. ad loc. as well as ad VI.18.3). I would now be inclined to change the tr. of the three vss. here to “It was just you who ...”

VIII.96.16: The identity of the “seven” is unclear; ordinarily that number refers to rivers or priestly offices, but neither makes sense here. However, Ge (n. to 16a) points to seven enemies destroyed by Indra in X.49.8, 120.6.

Ge takes *vibhu-mánt-* (only here) as ‘die in dir einen Gebieter hatten’; this might be plausible, because Indra is characterized as *vibhū* in 11 and so creatures associated with him might possess him as *vibhú-*. But the problem is that *vibhú-/ū-* is only

adjectival, as far as I can tell, and does not have the ‘lord, master’ meaning presupposed here. Though possessive *-vant-/mant-* stems should be built to nouns, Debrunner (AiG II.2.877–78) allows for pleonastic use of the suffix with adjectives in this and a number of other cases.

VIII.96.18: Noteworthy here is the variant on the expression of Indra’s standard deed, *ṛtrám √han* and esp. his epithet *ṛtrahán-* in the phrase *ghanó ṛtrāṇām* “the bane of obstacles,” with the nominal *ghaná-* from *√han* and a pl. of *ṛtrá-*.

On *√stambh* with the waters as obj. see comm. ad II.11.5.

VIII.96.19: As indicated in the publ. intro., I interpret this verse as containing a riddle (a-c) and its answer (d), an interpretation at odds with Ge (flg. Sāy), who takes all of the verse until its last word as part of a single description of Indra. His rendering of d, “der *Ṛtratöter* ist (jedem) anderen gewachsen, so sagen sie” is grammatically impossible because *āhuḥ* ought then to be accented; *prātīd anyām āhuḥ* must be a separate clause (as Old also takes it, though with implausible semantics). In my interpretation the first three pādas present several different descriptions of Indra’s characteristics and activities. Although these descriptions are fairly transparent, they do not name Indra, whereas the first two words of pāda d, *sá ṛtrahā*, names him by his standing epithet and serves as answer to the implicit riddle posed by the first three pādas. Although this interpretation is more complex than Ge’s, it allows us to account for the odd finale of d and especially for the *anyām*, which by my rules (Fs. Beekes, 1997) should have a definite reading, “the other.” I take this “other” to be the poser of the riddle, and the unidentified speakers of d triumphantly respond to him with the solution. That the first two words of the final two verses of the *ṛca* (and the hymn) repeat *sá ṛtrahā* of 19d, followed by the actual name of the god, lends support to my interpretation of vs. 19.

I tr. loc. *sutésu* in a as if it were a genitive; “enjoyer at the pressings” would be possible, but just a little less parsable in English.

I am somewhat puzzled by the simile of b: *yó áheva revān*. Ge takes the *áhā* (so Pp.) as the comparandum with Indra and *revān* as the shared quality (“der wie die (neuen) Tage prangend ist”), but *revānt-* doesn’t mean ‘resplendent’; rather, as a derivative of *rayí-* ‘wealth’, it means ‘rich, wealthy’. Moreover, in similes, *áhā*, marked by *iva*, several times precedes the actual comparandum and serves as adverbial qualifier – e.g., I.130.2 *áhā víśveva sūryam* “like the sun through all the days” (cf. also *áheva* in VI.61.9), and so I interpret it here, though I admit it is still not a compelling image.

In c the *Samhitā* text reads *náryāpāṃsi* (as also in I.85.9), with five syllables, suggesting a word separation *nári āpāṃsi* and so analyzed by Pp. (followed by Aufrecht and HvN). But this must represent, one way or another, the collocation *náryā + āpāṃsi*, found in opposite order even in this same *ṛca* (21c *āpāṃsi náryā*, see also IV.19.10, as well as *āpāṃsi ... náryāni* VII.21.4; also the *bahuvrīhi* *náryāpas-* in nearby VIII.93.1). Grassmann suggests reading **náryāpāṃsi*, as does Old (ad I.85.9) (see also Macdonell *Vedic Reader* ad I.85.9), and this “slight emendation” (Macdonell’s words) not only fixes the morphology but also restores a more standard break (_ _ _) for the three shorts (_ _ _) found (though the latter break is by no means uncommon). However, Lubotsky apparently takes *nári* here as the loc. to the noun *ní-* (the *náryāpāṃsi* passages would contain the only locatives to this stem in the RV), and Ge adduces the somewhat parallel

case of *vṛṣṇi ... śávaḥ* (V.35.4, VIII.3.10), *vṛṣṇi paúṃsyam* (VIII.7.23). Like our *nári ápāṃsi* / *ápāṃsi náryā*, the former collocation exists alongside one with a properly formed *-iya*-adjective, *vṛṣṇ(i)yaṃ śávaḥ* (VIII.3.8 [same hymn as one of the truncated occurrences], VIII.51.10 IX.64.2). But the easy fix available to the *nári ápāṃsi* case (lengthening the vowel of *ápāṃsi*) is not available for the *vṛṣṇi* examples.

I do not know quite what to do with all this. The *vṛṣṇi* case looks to me like an artificial truncation that nonetheless was original to the text, while I'm inclined to see *nári* as a redactional change, perhaps on the model of *vṛṣṇi*. I am thus willing to follow Gr, Old, and Macdonell in emending to **náryāpāṃsi*. However, these are, to say the least, quite subjective criteria, and I am not at all convinced these views are correct. It is nonetheless possible to sketch a possible but problematic scenario for these developments. The two examples of *vṛṣṇi te śávaḥ* are nominal clauses. Cf. VIII.3.10 *tád indra vṛṣṇi te śávaḥ*, rendered in the publ. tr. "that is your bullish vast power, Indra," with *vṛṣṇi* nominally a neut. sg. to an otherwise non-existent *i*-stem adj. But it might be possible instead to take it as the loc. sg. of *vṛṣan-*, with *vṛṣṇi ... śávaḥ* "the power is in the bull." Though in a cursory look I have found no *śávaḥ* + LOC. constructions in the RV, other abstract words for power do figure in such syntagms (including in our hymn, VIII.96.3). See, e.g., V.33.6 *paprksényam indra tvé hí ójah, ṇṛmṇāni ca ...* "For, Indra, in you are strength to be nurtured and manly powers." There are two fundamental problems with this suggestion: 1) the zero-grade loc. *-ni* to *-an*-stems is not found in the RV; we find only full-grade *-anī*; 2) it is hard to construe the *te*, since the bull and 2nd ps. Indra are coreferential. "This power of yours is in (you,) the bull" is awkward and unlikely. A bolder hypothesis – bolder than I would venture – would link these two problems and reconstruct an underlying syntagm **vṛṣaṇi śávaḥ* with full-grade loc. and no enclitic pronoun. When the posited *vṛṣaṇi* reduced to *vṛṣṇi* (perhaps because of association with adjectival *vṛṣṇ(i)ya-*), *te* was introduced to maintain the metrical shape. There are no other attested examples of the loc. sg. of *vṛṣan-* in the RV to support the trisyllabic reading. In any case, in this scenario the old loc. would be reinterpreted as an endingless adjectival or adverbial element in this collocation, alternating with syntactically impeccable *vṛṣṇ(i)yaṃ śávaḥ*. With this set up, we can get *nári* on this model:

vṛṣṇ(i)yaṃ śávaḥ : *vṛṣṇi ... śávaḥ*
ápāṃsi náryā : *nári ápāṃsi*

I believe this development was redactional rather than found in the ur-text. First because *vṛṣṇi ... śávaḥ* is a plausible neut. sg. phrase, but with the pl. *ápāṃsi* an endingless *nári* is more difficult. Moreover, an abstract quality located in a being (like "strength is in the bull") is a much more likely notion than "labors are in the man." And the metrical evidence strongly favors an original **náryāpāṃsi*, though it does not entirely rule out the short vowel.

But I lay out this scenario very skeptically, primarily because of the wrong grade in the posited loc. sg. Here I would point out that the same trouble would afflict any attempt to explain *vṛṣṇ(i)ya-* as a thematic descasulative derivative from a locative by pointing to the two synchronically alternating syntagms here. Such a derivation for **(i)yo*-possessive adjectives in general has been proposed (see Balles, *Sprache* 39 [1997 (2000)] 141-67, cited from Meier-Brügger, *Indo-European Linguistics*, 283-84, for which ref. I thank JL). I do not believe that the last word has been said about this issue.

VIII.96.21: Note the full syntagm *ápāmsi náryā* responding to the *náryápāmsi* in 19c.

Gerundives occasionally take dative agents, like *sákhibhyaḥ* here. Cf., e.g., I.33.2 *stotṛbhyo hávyah*.

VIII.97 Indra

VIII.97.1–3, 4–6: All three verses of the first ṛca begin with a form of rel. *yá-* followed by voc. *indra*. Pāda 2c mimics this opening with *yá(jamāne)*. The first two verses of the following ṛca (4-6) continue this pattern, if somewhat raggedly: 4a *yác cakra*, 5a *yád*, 5c *yát*.

VIII.97.1: The relative phrase *yāḥ ... bhújaḥ* “which delightful things” has no obvious correlative expression in the main clause of cd. Ge supplies “(mit denen),” which is certainly possible and perhaps the default option. But following a suggestion of Old’s, I take the *asya* of c, otherwise unaccounted for, as the functional correlative, despite the difference in number and gender. Because it is unaccented, *asya* should be pronominal and refer to something already present in the discourse, and there are few candidates, esp. because *stotār-* doesn’t seem to take a genitive. It would not be surprising to resume the fem. expression “delightful things” simply with “that (stuff).” The masc. singular referring to the goods Indra has acquired continues in vs. 2, with the *yám ... tām* pair. I tr. *asya* “from that” rather than “of that,” since the latter doesn’t parse well in English.

In cd *stotāram ... yé ca ... vṛktābarhiṣaḥ* is a nice example of the “X and which Y” construction.

VIII.97.2: Ge tr. *ávyayam* as ‘ohne Einbusse’ (loss), rather than ‘ovine, belonging to sheep’ (contra Gr, etc.), presumably because of its initial accent (against the normal accent in *avyāya-* ‘ovine’). This seems unnecessary. The other occurrence of *ávyaya-* (IX.86.34) modifies the soma filter and Ge renders it “aus Schafwolle” without comment. In our passage he is following Sāy’s *vyayarahitam*, but *vyaya-* ‘disappearance, loss, outlay’ is not attested until the epic/Classical language, as far as I know. Furthermore, sheep fit nicely into this equine and bovine context, with the three terms *ásvaṃ gām bhāgām ávyayam* displaying a classic Behagel’s Law configuration. As for the aberrant accent, Debrunner (AiG II.2.213) attributes it to the influence of semantically identical *ávya-*.

Ge takes the locative phrase in c with ab, “Welches Ross und Rind du ... als Anteil ... bestimmt hat für den Opfernden ...” Again this seems odd and unnecessary. The locatives of c are summarized by *tásmin* in d, and contrast with *paṇaú* at the end of that pāda. Moreover the middle voice of *dadhiṣé* in the relative clause contrasts functionally with the act. imperative *dhehi* in the main clause. First Indra acquires goods *for himself*, then confers them *on others*. By placing the recipient in the rel. clause with the middle verb, Ge erases this neat voice contrast. Pāda c then seems to represent a heavy preposed NP picked up by initial *tásmin* in d.

VIII.97.3: Note the doubling of pres. *sásti* ‘sleeps’ with the adverbial gerund *anuṣvāpam*. In Jamison 1982/83 I argue that the gerund is used here because the poet wanted to use a

pres. tense of \sqrt{svap} but didn't really know one, since the various presents to this root are secondary and to some extent improvisational.

The end of the verse ... *dhehi táṃ tátaḥ* with its two final pronominals is striking, but clearly constructed as the mirror image of 2d *tásminn táṃ dhehi*. The good sacrificer of 2cd is contrasted with the godless, vowless man of 3, and it may not be entirely fanciful to suggest that the unusual word order — *tá*-forms ordinarily occurring at the beginning of clauses — is a syntactic expression of his perverse nature.

VIII.97.4: Following Ge I take *keśibhiḥ* “hairy-maned (horses)” as an appositional simile with *gṛbhīḥ*: the hymns serve as the team that brings Indra to us along “heaven’s way.”

This latter form, *dyugát* ‘heaven-going’ vel sim., is extensively discussed by Scar (106–7), who ultimately concludes that it is “unklar,” though he favors taking it as a nom. sg. modifying the soma presser (*sutāṁvān*). This seems odd: the soma-presser is the one element in this verse who is likely to stay put. I take it, with Gr and (implicitly) Old, as adverbial, referring to the movement of the hymns, as metaphorical horses, through heaven. In his note Ge endorses Sāy’s interpretation of it is a shortening of *dyugádbhiḥ*, which (as Wolff’s suggestion) Old dismisses without argument. This explanation by truncation certainly does not seem necessary, since a neuter adverb works well enough.

VIII.97.7–9: The da capo-like structure of the verses in this ṛca, with the first pāda repeated verbatim as the last one, is quite unusual.

VIII.97.7: I have chosen to read the impv. *bhāvā* in b with the two small clauses in c as well, though it is certainly possible to interpret those with Ge as straight indicative nominal clauses: “you (are) there with help ...; you (are) friendship ...”

VIII.97.10: Although they belong to different ṛcas, 10ab responds to vs. 9: in both Indra is characterized by the lexeme *abhí√bhū* ‘dominate, surmount’ (9c *abhibhūḥ*, 10a *abhibhūtaram*), with each governing an NP beginning with *vísva-*. Moreover, in vs. 9 it is said that gods (as well as mortals) have not attained (*āśata*) Indra, while in 10ab the gods appear to be the implied subject of the verbs *tataḥsuḥ* and *jajanuḥ* “fashioned and begot” – in other words, paradoxically, though they do not attain him they are credited with creating him.

The b pāda is metrically disturbed. Although vs. 10 is identified by the Anukr. as an Atijagatī (13 13 / 13 13), in fact, as HvN point out, the other three pādas are standard 12-syl. Jagatī lines, and b has 14 syllables, not 13. It also contains the 3rd pl. pf. *jajanuḥ* ($\sqrt{jān}$) with distracted root syllable, rather than expected (and attested) *jajñuḥ*. Although it might be possible to consider this form an archaic reflex of **ǵe-ǵnH-V*, the metrical problem makes this less likely – even though reading **jajñuś* does not fix the meter. Assuming the form, and the pāda, are transmitted correctly, I would suggest that *jajanur* was based on the subjunctive stem *jajana-*, found in several YV mantras in early Vedic prose (see Kü 186), and/or created to disambiguate the 3rd pl. pf. to this root from the identical *jajñur* of $\sqrt{jñā}$ ‘know’. For a passage where the confusion between the two forms reigns, see X.28.7 and comm. there.

In c there is pseudo-etymological play between *vāriṣṭhaṃ vāre*, which not only are unrelated but also belong to two different NPs, despite their adjacency. There is some

uncertainty about the position of *utá* or even what it is conjoining. Klein (DGRV I.346, 349) considers the pāda an XY *utá* construction, joining the two complex NPs that precede it, with the adjectives in d “merely strung on to the basical phrasal syntagm” (346).

The etymological figure *ugrām ójīṣṭham*, with a positive and its superlative, is reminiscent of the simplex followed by comparative in 9c / 10a *abhibhūḥ ... abhibhūtaram*. The rest of pāda d, *tavásam tarasvīnam*, almost mimics an etymological figure via phonological scrambling, although the words are of course unrelated.

VIII.97.11: There is phonetic play between *asvaran* (a; see also *abhīsvārā* 1b) to \sqrt{svar} ‘sound’ and *s’var(-pati)*(c) containing the ‘sun’ word, although the latter of course has a distracted *sv* cluster.

VIII.97.12: I use two different English tr. for *namanti*, ‘bend’ and ‘bow’, depending on the object; this is merely an English problem, as the passage adduced by Ge shows:

VII.23.20 *ā ... índram ... name girā, nemīm tāṣṭeva*.

In cd I supply ‘cry out’ (\sqrt{svar}) on the basis of 11a *sám ... asvaran* (note the *sám* in 12d) and 12b (*abhi*)*svārā*.

Ge takes *tarasvīnaḥ* as nom. pl., which is grammatically possible, but I prefer Old’s gen. sg. (an alternative also for Gr), since the same adj. modifies Indra in 10d.

VIII.97.13: The *ca* in c is one of the rare examples of subordinating *ca* in the RV, as shown by the accent induced on the verb *vavártat*; see Klein DGRV I.240–41. Its position, about which Klein does not comment, is peculiar, but it can probably be accounted for metrically. In this particular Atijagatī line (13 syl.), there is a natural break after the first two words (5 syllables), *mámhiṣṭho gīrbhūr*, and the rest of the line behaves as if it were a dimeter (8-syl.) line, *ā ca yajñīyo vavártat*, with initial preverb followed by the enclitic conjunction.

VIII.97.14: The final word in a, *enā*, is taken as *enāḥ* by the Pp., a reading followed by Gr, Ge, Old, and Lub; in this interpretation it modifies or doubles (since *ena-* is a pronominal, not an adjectival demonstrative stem) fem. acc. pl. *púrah* earlier in the pāda. I do not rule this out, but wonder whether it can be the enclitic instr. sg. *enā* to *ayám* in the meaning ‘in that way, i.e., how’. See *enā* ‘thereby’ in V.2.11, in addition to personal uses (‘with him’) in IX.96.2, X.108.3.

Pāda b collects several words that have been prominent in the characterization of Indra earlier in the hymn: *ójasā* (*ójīṣṭham* 10d), *śaviṣṭha* (*śavasas pate* 6b, *śávasā* 9c), and *śakra* (*śakra* 4a). It is esp. clever that the grammatical identities of the first two terms have been switched: *s*-stem instr. to superlative and vice versa.

Note that though cd forms a single clause with two different subjects (“all the worlds” and “heaven and earth”), the dual verb *rejete* agrees with the nearer one, the decomposed dual dvandva *dyāvā ... pṛthivī ca*.

VIII.97.14–15: Both Lü (Var. 20, 506) and Schlerath (Kö. 139) consider this sequence to be a satyakriya. I can see the point, but if it is a truth-formulation, it is a muted one. The concept is clearest in 15a “Let this truth be protective of me,” esp. since this is the last verse of the hymn. The truth-formulation itself could be either the preceding verse (so

Lüders) or the whole hymn (Schlerath allows both possibilities). In the absence of the standard instrumental *ṛtēṇa* (later *satyena*) that signals a satyakriya I am reluctant to label it as such, though certainly it is akin. Schlerath also point out that the last word of the hymn is *rājan*.

VIII.97.15: “The distillate of all mother’s milk” for *viśvāpsnya-* assumes the etymological connection between *-psnya-* and *stāna-* ‘breast’, which is now standard doctrine. See EWA s.v. *stāna-*.

VIII.98 Indra

VIII.98.2–3: Parts of these two verses reappear, verbatim or slightly modified, in X.170.4, a hymn to Sūrya: 3ab = X.170.4ab, while the first two words of 2c nom. sg. *viśvākarmā viśvādevaḥ* correspond to the inst. sg. phrase *viśvākarmaṇā viśvādevyāvatā* in X.170.4d. In our hymn the subject of 3ab is Indra, who is also the referent of the nom. sg. phrase in 2c; in X.170.4 the referent in both cases is Sūrya. Because of the verbatim correspondence of 3ab and X.170.4ab save for the identity of the subject, I think they should be translated in the same way. I therefore take *svār* in a as nominative and an implicit simile and *rocanām* in b as an accusative of goal. Ge by contrast takes *svār* in our 3a also as an accusative of goal, parallel to *rocanām*: “Im Licht erstrahlend gingst du zur Sonne, zum Himmelslicht,” whereas in X.170.4 he takes them both as nominatives: “Im Licht erstahlend kamst du als Sonne als Himmelslicht...” Although of course nothing forbids different interpretations of identical phraseology in different contexts, in situations where identical interpretations are possible (as here) it seems best not to vary the translations.

The bahuvrīhi epithet of Indra *viśvākarmā* (2c) is of course a play on the divine figure of the same name, whereas the bahuvrīhi *viśvādeva-* (also 2c) makes reference to the corporate entity the All Gods (*viśve devāḥ*). The former is simply applied directly to Sūrya in X.170.4d, whereas *viśvādeva-* has gone through some derivational shenanigans, producing a doubly (or triply) marked *viśvādevyā-vant-*.

VIII.98.4: The impv. *gadhi* is a hapax, beside *gahi*, which occurs 84 times (per Lub.). The latter is almost always pāda-final and, when internal, never occupies this precise metrical position (4th and 3rd syllables from end), but although this slight indication of complementary distribution might ordinarily not be sufficient to account for the different endings, the distribution of the two forms fits a more general pattern. The *gahi* / *gadhi* question is obviously part of a larger phenomenon, or rather two: 1) the distribution of *-hi* vs. *-dhi* in the 2nd sg. imperative, 2) the conditioning for the general loss of occlusion in voiced aspirates, esp. **dh > h*. As for the former question, various generalizations work for various defined groups of forms – e.g., that *-dhi* occurs after consonants – but other groups show fluctuation, particularly disyllabic imperatives. Re (GLV §58) suggests that in this class *-hi* should be the preference after long vowel and *-dhi* after short vowel, but that the forms “usées,” *stuhi*, *ihi*, and *gahi*, have generalized *-hi* “mieux propre évidemment à l’elocution rapide.” This is not particularly satisfactory.

The most recent discussion of the whole phenomenon that I know of is Lubotsky’s “Sanskrit *h < *dh, bh*” (*Sthāpakaśrāddham*, Professor G.A. Zograph

Commemorative Volume, ed. N. V. Gurov and Ya. V. Vasil'kov. Pp. 124-44. St. Petersburg: Orientalia, 1995 [1997], available at <http://hdl.handle.net/1887/14207>), showing his characteristic thoroughness and clarity of presentation. Dismissing previous claims that the phenomenon is dialectal since the **dh > h* change is found in grammatical forms and unlikely to be due to borrowing, he suggests that it must be due to a conditioned sound law and that apparent exceptions to this sound law must be explained on a case-to-case basis. The sound law he proposes is **-VdhV# > -VhV#*. I will not discuss how he handles exceptions to this rule in other grammatical and lexical categories, but obviously the rule defines forms like *śrudhi*, *kṛdhi*, and our *gadhi* as exceptions. Again, I will not treat all his explanations of non-conforming *-dhi* imperatives, but concentrate on disyllables with *-dhi* after short vowel. For *kṛdhī* and other forms in *-ṛ* (*vṛdhi*, *spṛdhi*), he assumes that *ṛ* blocks the application of the rule, on the assumption that the older pronunciation of *ṛ* was [əṛ] (p. 136), while for *śrudhi* he examines distributional factors. Most important for him is the fact that *śrudhi* most often shows up in the formula *śrudhī hāvam* (with lengthened final vowel) and therefore the phonological conditions for **-dh > h* are not met, because the imperative “formed a whole with the following word” and “does not normally stand *in pausa*” (p. 134). He also notes that *gadhi* “stands in the interior of a pāda” (p. 134), while *gahi* is overwhelmingly pāda-final, and that *stuhi* is also often pāda-final. (I would add that, in addition to a number of initial *stuhī*, the pāda-internal examples of *stuhi* never occupy the 4th-3rd position.)

I am in agreement with Lub that the metrical position of the form shows a strong correlation with the *-dhi* vs. *-hi* alternate and also that *kṛdhī* and other forms in *ṛ* are a special case (whatever the reason: I am not convinced that the older pronunciation was [əṛ]), since the metrical distribution of *kṛdhi* tracks that of *gahi* and other forms in *-hi*, not *śrudhi* and since a cluster **ər-dh-* should produce a metrically heavy syllable. He does, however, shift his explanatory ground for *śrudhi* and company without signaling the change. For *śrudhi* the most important factor for him at first appears to be the formulaic evidence, that it forms a phonological phrase with *hāvam*, that this phonological bonding is demonstrated by the lengthened final vowel of the imperative, and that therefore the imperative was not really in *pausa* and therefore not subject to the **dh > h* rule. But later in the same paragraph he seems to argue that its position internal to the pāda, in contrast to pāda-final *-hi* forms like *stuhi* and *gahi*, provides the conditioning and the formulaic argument is no longer foremost. Although the *śrudhī hāvam* formula is certainly pervasive, I would contend that it is the metrical position, not the formation of a formulaic phonological phrase, that is the key factor and, moreover, that the lengthening of the final vowel before *hāvam* (also *gírah*) is the low-level result of metrical factors, to avoid four shorts in the cadence. Certainly our *gadhi* is not formulaically or syntactically connected with the word that follows it: ... *gadhi priyāḥ* (“come, as dear one”). If we do want to claim that bonding with a following element kept the *-dhi* from final position, it would surely be better to focus on sequences involving enclitics (e.g. VIII.66.12 ... *śrudhī me hāvam*), which would create a phonological word ending with the enclitic. Unfortunately, such sequences are rare, compared to the *śrudhī hāvam* type.

Pāda-internal position also appears to condition the occurrence of another *-dhi* imperative, *bodhi* to *√bhū*, as I discussed some time ago (“Syntactic Constraints on Morphological Change: The Vedic Imperatives *bodhi*, *dehi*, and *dhehi*,” in *Syntaxe des*

langues indo-iraniennes anciennes, ed. E. Pirart. Pp. 63–80, esp. 69–75. Barcelona: Editorial Ausa, 1997). The parallel imperatives *bodhi* and *bháva* are almost in complementary distribution, with *bodhi* once again standing internal in the pāda and *bháva* either initial or final.

The last word has not been said about this complex issue.

VIII.98.5: As in the previous hymn (VIII.97.9c, 10a), this one deploys two forms of the lexeme *abhí*√*bhū* ‘dominate’ to describe Indra – here 2a *abhibhūr asi* and 5ab *abhí ... babhūtha* – although the two hymns are ascribed to different poets from different lineages.

As for the perfect form here, Kü (344–45) remarks that the perfect of √*bhū*, both as simplex and with *abhí* and *pári*, is generally presential in value, and such a value works well here. There is another issue with this perfect. This verse contains the 2nd sg. *babhūtha* without *i*-liaison, but 11b has *babhūvitha* with the liaison. It is striking to encounter both forms in the same hymn, esp. since, as Kü points out (344 n. 618), *babhūtha* is the older, *babhūvitha* the younger form, found only once elsewhere in the RV, while *babhūtha* is quite common. Metrics must have encouraged the use of younger *babhūvitha* here, since it is final in a 12-syllable line, where the older form would not fit. The other *babhūvitha* (VIII.33.19) occurs in an Anuṣṭubh cadence, where iambic rhythm is also favored. It is worth noting that thirteen of the twenty-one occurrences of *babhūtha* are final in Triṣṭubh lines, so the insertion of the *i*-liaison simply converts this common cadential form into one appropriate to Jagatī.

VIII.98.7: With Ge I take *udā* in c as the acc. pl. neut. of *udán-*, rather than instr. sg. to a root noun *úd-* with Gr, despite Old’s championing of the latter analysis and explicit rejection of the former. See also AiG III.316 and Schindler (*Das Wurzelnomen im Arischen und Griechischen* [unpubl. diss., Würzburg 1972], pp. 12–13), which both affirm the nom.-acc. pl. -*n*-stem interpretation.

VIII.98.8: The simile *vār ná ... yavyābhiḥ* is syntactically ambiguous, in that *vār* can be the comparandum of either subject or object, though it probably makes better sense as an object, as Ge takes it: (a body of) water growing with floods of (tributary?) water. However, a nominative interpretation is by no means excluded, as waters not infrequently swell things and make them grow; cf., e.g., I.65.4 *vārdhantīm āpaḥ ... súsíśvīm* “The waters strengthen the lovely child.” For an overelaborate interpretation see Oberlies (*Relig.* I.521).

VIII.98.9: This verse may refer to the “Fallow-bay yoking libation,” which serves as the occasion for the first-maṇḍala Indra hymns I.61–63, 82. However, this libation is ordinarily the final act in a ritual, but is not final here.

VIII.99 Indra

VIII.99.1: The redupl. form *ápīpyan* is implicitly assigned by Ge to √*pā* ‘drink’ as a redupl. (causative) aorist: “Dich haben ... die ... Männer getränkt,” an analysis I follow. However, the majority opinion is that it belongs to √*pī* ‘swell’, which is not out of the

question. The competing claims and morphological possibilities are discussed above ad VIII.66.7 with regard to *apīpema*. Our form here could have the expected zero-grade to an athematic stem (*ápīpy-an*), and the long reduplication could be correct for a causative reduplicated aorist, although since the cluster *-py-* is undistracted here, a short reduplication might be expected (type AV *atitrasan*). However, since most of the forms of the act. redupl. aorist paradigm would not have such a cluster (**ápīpet*, etc.), the long reduplication would surely be generalized. For further disc. of the proposed formation see VIII.66.7.

VIII.99.3: The simile in the first pāda of this verse is quite problematic: not only is the image intended quite unclear, but the verbal stem *śrāya-* in participial *śrāyanta(h)* (so Pp., Gr. rather *śrāyante*) is a near hapax (only here in the RV, other instances in MS I.8.2, TĀr. IV.2.5 = ĀpŚS XV.3.7). Most tr. take it as transitive ‘cooking’ (so Ge, e.g.); Old argues that *sūryam* should be the object: “like those cooking the sun, as it were,” while Ge takes *bhākṣata* as the governing verb (“As [people] cooking use [nutzen] the sun, they enjoy [geniessen] all [the goods] of Indra” – ‘nutzen’ and ‘geniessen’ must be his alternative tr. of *abhākṣata* depending on the object). However, Narten (“Vedic *śrīṇāti*, gr. κρείων, κρέων,” KZ 100 [1987]: 270-96 = *KI Sch* 340-66, cited after latter) points out (p. 342 n. 3) that the stem is elsewhere intrans. with the meaning ‘gar werden’ and tr. the hemistich “wie gar werdende (= sich erhitzende) Leute (Anteil) an der Sonne (haben), so haben sie Anteil an allen (Gütern) des Indra,” flg. a suggestion of Hoffmann’s. The TĀ=ĀpŚS passage explicitly connects “getting done/cooked” with the sun: *sūryasya harasā śrāya* “become cooked by the glow/heat of the sun.”

The Narten–Hoffmann interpretation is followed here, though I am still somewhat puzzled both about the content of the simile and about its relevance to the frame. For the first, getting cooked does not usually require the mediation of the sun but rather of fire, so literally “having a share in the sun” at best ought to mean the “share” of the sun that is actually fire. This is not terribly satisfactory, so, with Narten we must therefore interpret “getting cooked” metaphorically (but not *too* metaphorically), as indicating heated or excited people whose state is likened to heating by the sun. But even with this interpretation of the simile, there seem far less tortuous ways to indicate that people share in Indra’s goods than to compare this to heated-up people sharing in the sun. However, the transitive interpretations do not improve the sense: Old’s cooking the sun would require quite a lot of metaphor to rescue it, and the same problem with Narten’s interpretation – that cooking doesn’t require the sun – affects Ge’s transitive version.

The only reason I can see for the sun to make this distinctly odd appearance in the simile of pāda a is to prepare us for its implicit appearance in the second hemistich. With Ge I assume that the subject of the loc. absol. in c is the sun, which is born every day, and whose “birth” at dawn sets the early morning ritual in motion, the rite at which the dakṣiṇās are distributed. Ge suggests that *jāté jānamāne* is metri causa for an āmreḍita *jāté-jāte*, but this seems unlikely. This is the only occurrence of the middle participle to *jāna-* and indeed one of the only middle forms of this rare 1st class pres. stem (most of the others are *-anta* 3rd plurals that are re-marked actives; see Jamison “Voice Fluctuation in the Rig Veda: Medial 3rd plural *-anta* in Active Paradigms”, *IIIJ* 21 [1979] 146-69). I would hesitate to suppose that a Rigvedic poet would create a new participial stem simply to avoid a metrical problem. Instead I think he is making a temporal point: the sun has

been born previous (*jāté*) and when he is *being* born again, that is, at the moment the ritual commences, we think about the goods that will come to us in the ritual.

Note that *bhākṣata* of the first hemistich is reprised by a nominal derivative of \sqrt{bhaj} , *bhāgām*, in the second, and that the “goods” that need to be supplied in ab are present as *vāsūni* in c. This interdependence of the two half-verses supports the notion that the *sūryam* of a is a pretaste of the unexpressed sun of c. The next pragātha, vss. 5–6, may show the same covert interdependence; see disc. ad 5c.

VIII.99.4: The meaning and root etymology of the first compound member *ánarśa-* are very uncertain; see EWA s.v. *arśasānā-*. It is here translated as if it belongs to a putative root $\sqrt{arś} / \sqrt{rś}$ ‘harm’; see the disc. of *ánarśani* ad VIII.32.2. By contrast, Ge’s “der seine Gaben nicht verschliesst” rests on his tentative connection of it with Lat. *arceō* ‘keep close, confine’. A contrastive pair qualifying *rātí-* ‘present’ as ‘not harmful’ (pāda a) (but) ‘beneficial’ (*bhadrá-*, pāda b) is rhetorically more satisfying than ‘not shut, closed’ / ‘beneficial’, though I confess that “not harmful (but) beneficial” seems somewhat flat-footedly obvious for a Rigvedic poet.

Whose mind is being bestirred to give in pāda d? I assume that it is Indra’s, whose gifts are celebrated in the first hemistich, as well as in the previous verse (3), with which this verse is paired in the pragātha. But Ge, followed by Gotō (1987: 276), takes it as the patron’s, supplying “(des Gönners).” Although for my interpretation I might prefer a middle form rather than the act. part. *codāyan* and although I.48.4 (not adduced by Ge) ... *yuñjáte máno dānāya sūrāyaḥ* gives some support for his tr., most instances of *dānāya* involve gods (esp. Indra) as giver, esp. in VIII, but also, e.g., I.55.7 *dānāya mánah somapāvan astu te* “Let your [=Indra’s] mind be on giving, soma-drinker.”

VIII.99.5–6: This pragātha is tightly bound lexically. Note first *vīśvāḥ spṛdhaḥ* in both 5a and 6c. But more striking are the six occurrences of the root \sqrt{tar} : *prātūrṭiṣu* (5a), (*vīśva-*)*tūr* (5c), *tūrya taruṣyataḥ* (5d), *turāyantam* (6a), *tūrvasi* (6d). In this group not a single stem is repeated: there are two different nominal stems and four different verbal stems. (See also *átūrtam* in 7d, to yet another stem.) On the formulaic use of this root and its Indo-European background, see Watkins, *Dragon* 344–46.

VIII.99.5: The lexeme *abhí* $\sqrt{bhū}$ ‘dominate’, in play in the previous two hymns (VIII.97.9c, 10a, 98.2a, 5ab), is matched by synonymous *abhí* \sqrt{as} here. See also VIII.100.4 in the next hymn.

Ge renders the phrase *aśastihā janitā* as “der die Hohnreden niederschlägt und hervorruft”; that is, he construes the 1st compound member *aśasti-* also with *janitā*, flg. Sāy’s gloss of *janitā* as *asurebhyo ‘śastīnām janayitā*, and also ascribes an aberrant meaning to \sqrt{jan} , ‘call out, evoke’. It is certainly true that the normal value of \sqrt{jan} , ‘beget’, seems somewhat out of place in this otherwise hostile context, but I am reluctant to push both the syntax and the semantics as far as Ge’s interpretation requires. I think rather that Indra’s general positive role as cosmic begetter is being alluded to, in addition to his specific role as all-victorious dominator. In fact, the paired verse in this pragātha may give us the clue. In 6ab Heaven and Earth (the underlying referents of the dual *kṣoṇī*) run after Indra “like two parents after their child” (*śísuṃ ná mātārā*), which reverses an image found elsewhere of Indra as the begetter of Heaven and Earth, as in

VIII.36.4 *janitā divó janitā prthivyāḥ*. In other words, I think we should read *janitā* in 5c pregnantly, as “begetter (of Heaven and Earth)” in opposition to 6ab, where Indra is the child and Heaven and Earth the parents. Alternatively, the pregnant usage might be “begetter (of all),” with *viśva-* borrowed from the first member of the following compound *viśvatūr*. Watkins (*Dragon*, 345) roughly follows the Ge interpretation, though with more persuasive semantics: “you smash the un-song (for the loser) and engender (it for the winner)”; presumably the parenthetic “it” should be not the “un-song,” but its denegated counterpart, *śastī-* ‘laud, praise’.

I tr. *taruṣyant-* as a pseudo-desiderative, contra Ge (Wettstreiter, sim. Gr). The stem is a hapax, and its formation isn’t entirely clear. But the most orthodox way to explain it is as a denominative to *tárus-*, ‘power/desire to overcome’; since ‘seeking’ is a standard sense associated with *-yá-*denominatives, a desiderative sense is certainly possible.

VIII.99.6: Following Thieme (KZ 92 [1978] 46), *kṣoni-* is literally a ‘shout’ or ‘war-cry’. But in the dual it evolves to refer to Heaven and Earth, presumably by way of the long semantic chain ‘(two) opposing war-cries’ → ‘opponents’ → complementary pair → the archetypal complementary pair, i.e. Heaven and Earth.

Though both duals, *pítārā* and *mātārā*, can refer to both parents, it is surely no accident that in this tender image of childhood it’s literally “the two mothers” rather than “the two fathers” who pursue the errant toddler.

With Gr and Old I read **śrathayanta* for *śnathayanta* (√ *śnath* ‘pierce’), flg. Sāy and the Kashmir ms; see Old ad loc. Although Ge retains *śnathayanta*, in his note he allows for the possibility of the variant reading. As Old points out, the rhyming *śnath* form could have been introduced because of the mention of enemies.

VIII.99.7–8: The verb *havāmahe* of 8c must be read with both verses (so also Ge) and is a mark of the unity of the pragātha. This pragātha is, furthermore, cunningly constructed, with a number of rhetorical pairs: variants on “X and non-X” are found in 7b *prahetāraṃ āprahitam* and 8a *iṣkartāraṃ āniṣkṛtam*, both pairs with the same morphological structure; adjacent rhyming agent nouns *jētāraṃ* and *hētāraṃ* in 7c join the other two agent nouns just cited, though with different accent; the negated ppl. *ātūrtam* in 7d (whose root links it to vss. 5–6) matches previously cited *āprahitam* and *āniṣkṛtam*; there are several pairs of adjacent compounds with one identical member: *āniṣkṛtaṃ sáhaskṛtam* (8a) and *śatāmūtiṃ śatákratum* (8b), as well as the pair *vásavānaṃ vasūjívam* (8d) with the first an *-āna-*formation built to *vasu-* with full-grade of the suffix (for which type see AiG II.2.275); and the second member of *śatām-ūtim* (8b) picks up *ūtī* (7a), whatever the source of the latter (see below). It may also be that the sequence in 7c ... *jētāraṃ hētāraṃ rathītāmam* playfully evokes a sequence of two comparatives in *-tara-* culminating in a superlative.

The phrase *itá ūtī* (also, as *itá ūtīḥ* I.119.8, I.130.5) cannot be separated from the compound *itáūti-* (6x). The latter has an apparent Old Avestan cognate *utaiiūiti-* ‘youthfulness’, probably containing a **yūti-* related to *yúvan-* ‘youth’. The Vedic compound clearly lost its transparency and has undergone some deformation, resulting, finally, in the folk-etymology “help from here / from then on” represented by the phrasal *itá ūtī-*. Both the compound and the phrase can co-occur with *ajāra-* ‘unaging’ as here; see

also I.146.2, X.31.7. For disc. and lit. see EWA s.v. *itáūti-*. Here in this Anhangslied it is likely that *ūtī-* ‘help’ has captured the de-compounded phrase, but that the phrase is still associated with the notion of constancy, hence my compromise “with enduring help.” Ge tr. “zu eurem unmittelbaren (immediate) Beistand,” but in n. allows “den durch Fortdauer (oder Verjüngung) Alterlosen.”

VIII.100 Indra

On the hymn in general see the publ. intro., as well as Old (*Noten* ad loc. and “Indra, Vāyu, der Vṛtrakampf und die Erschaffung der Sprache” [pp. 54–60 in “Ākhyāna Hymnen im Ṛigveda,” *ZDMG* 39 (1885): 52–90 = *KISch.* 474–512]) and Ge’s long and rather despairing intro.

VIII.100.1–2: As I argue in the publ. intro., the heavy emphasis on Indra’s designating a portion of soma at the beginning of the sacrifice for “you,” the speaker of vs. 1, points strongly at Vāyu as this speaker, rather than Viṣṇu, as Ge suggests. Old also considers it an Indra-Vāyu dialogue.

VIII.100.1: I take *ḍīdharah* as the subjunctive of the redupl. aor., whose indicative forms are generally athematic (*ḍīdhar*, etc., though cf. augmented thematic *ádīdharat* in the very late hymn X.173.3). The sequence *yadā ... ḍīdharah ..., ād íd ... kṛṇavaḥ* with aorist subjunctive in the protasis and present subjunctive in the apodosis seems a rough-and-ready attempt to express anteriority (“when you will [have] ..., only after that will you ...”) in a language that does not, as far as I can see, have either a formalized system of sequence of tense in conditionals or a standard way to express anteriority with *finite* verb forms (as opposed to participles and, somewhat later, the gerund).

VIII.100.2: Ge (followed by Klein, DGRV I.242, II.108) takes pāda c as a subordinated conditional clause with d, with the subordination marked by *ca* (i.e., “if you will be my comrade, then we will ...”). This is certainly possible, but it is impossible to tell formally if c is subordinated to d or coordinated with b (as I take it) because the accent on the verb *āsaḥ* can result from its initial position. Perhaps in favor of the Ge/Klein interpretation is the fact that both c and d contain subjunctives, while b has an imperative. On the other hand, in a related passage (also adduced by Ge), the two expressions are parallel, not in a subordinate/main clause relation: X.83.7 ... *dakṣiṇatō bhavā me, ādhā vṛtrāṇi jaṅghanāva bhūri* “Be on my right side. Then we two will keep smiting obstacles in abundance.”

VIII.100.3: Despite the gender, I take the second *satyām* in pāda b as equated with Indra, contrary to Ge, who interprets it implicitly as referring to the true praise (*stómam ... satyām*) earlier in the hemistich or to truth in general: “... ein Loblied ..., ein wahrhaftes, wenn es Wahrheit ist.” Lüders (*Varuṇa*, 639) argues convincingly that the second hemistich supports the reference of the conditional clause in b, *yádi satyām ásti*, to Indra and tr. “wenn er wirklich ist” (somewhat different tr. p. 566).

VIII.100.4: Indra clearly announces his epiphany, after the doubts expressed in vs. 3.

The opening *ayám asmi* echoes the opening words of the hymn (1a) *ayám ta emi*.

vīśvā jātāny abhy āsmi is reminiscent of vs. 5 in the preceding hymn, VIII.99.5b *abhī vīśvā asi spṛdhaḥ*, and belongs to the formula *abhī√bhū/as* found in this group of hymns. See disc. add VIII.99.5.

On *ṛtāsya ... pradīśaḥ* see Lü (Varuṇa, 566–67), who considers them to be *Lieder*.

The duplication of intensive forms in nominal *ādardirāḥ ... dardarīmi* is taken by Ge (also Lü, 566–67) as merely an etymological figure (esp. clear in Lü’s “zerschmetternd zerschmetterte ich...”). This is of course possible, but I wonder if the preverb of the nominal form does not signal more. The lexeme *ā√dṛ* is often used for breaking open cowpens and tearing out the cattle, esp. in the Vala myth (cf., e.g., III.30.21), and so Indra may be not only announcing his current actions but also alluding to his regular mythological role as opener of the Vala cave full of cows.

VIII.100.5: For my view of the complexities of the participants in this verse, see the publ. intro. I take the speaker to be Indra, the immediate addressee to be the singer (speaker of vs. 3), and the addressees of the speech recounted in pāda d to be the Maruts.

One of the first difficulties in this verse is the perennial mystery word *venā-*, which I render ‘tracker, seeker’. The word is esp. associated with X.123, to which the Anukramaṇī assigns Vena as both poet and deity. There *venā-* is singular, not plural as here. In the singular Vena appears to be identified with the sun and/or Soma; in the plural (see esp. IX.85.10–11) the word often seems to refer to poets or their hymns. That seems to be the case here: the trackers of truth are poets or their products, then probably further identified with the Maruts, who are also the referents of *sākhāyaḥ* in pāda d, in my view. The use of *venā-* to refer both to the deity and his/its praisers presumably rests in part on the reciprocal relationship between them and also perhaps on the notion that just as the deity is sought by those below him, so he also is pursuing something higher.

Both in the singular and the plural *venā-* is associated with heights. Here the trackers “mounted” (*āruhan*) to Indra; cf. the same root in I.56.2 *girīm nā venā ādhi roha téjasā*. The heights are indicated in various ways. In IX.85.9–10 a bull mounts heaven and then the Venas milk him, who is standing on a mountain (*giriṣṭhām*) in the vault of heaven (*divó nāke*), and this vault is mentioned in the remaining two verses of the Vena section of this hymn (IX.85.11–12). The vault recurs in the Vena hymn (X.123.6, 7), probably also as “the highest distant heaven” (*paramé vyòman* 5b), and there are other indications of a high position: some female figures bestride “the back of truth” (*ṛtāsya sánau* 3c, also 2c) while poets mount on the stream (*síndhum* 4c). In particular in X.123.2b we find the same phrase *prṣṭhām haryatāsya* “the back of the delightful one” as in our 5b, where Indra is seated thereon.

The question is who or what is the “delightful one.” Ge supplies “heaven,” Lü (567) simply tr. *haryatāsya* as “Himmel,” and Old (1885: 56–57) as “Weltall.” I am dubious about this rendering; although *divāḥ* is found with *prṣṭhā-* on a number of occasions, *haryatā-* never qualifies ‘heaven’, but is regularly used of soma, and in fact in X.123.2 Ge thinks that soma is the referent. However, it is perhaps difficult to imagine Indra sitting on soma’s (or Soma’s) back (such is apparently Ge’s objection in his n.), and so it is possible that this is a reference to one of Indra’s fallow bay horses *hāri-*. In V.61.2 *prṣṭhé sádah* “the seat on the back” refers to the Maruts’ seat on the back of their horses. Hence the tentative bracketed identifications in the publ. tr. “[=fallow bay / soma?].” Perhaps best is to combine these two possibilities – the real referent is soma, as signalled

by *haryatá-*, but since sitting on a liquid is hard to envision, the soma is made conceptually solid by configuring it as a horse, mediated through the common use of the color term *hári-* for soma; cf., e.g., IX.65.25 *haryató háriḥ*.

In c the Pp. reads dat. *hrdé*, followed by Ge., but I prefer the ablative since *hrdá ā* with underlying ablative is an idiom and used in similar contexts with verbs of speaking (cf. II.35.2 *imām sv āsmai hrdá ā sūtaṣṭam, mántram vocema ...* “This well-crafted spell we would speak to him from our heart”).

The possessive adj. *śísūmantah* appears to introduce a child or children that seem to have no place here. I follow Lü’s (567 n. 3) idea that the *-mant-* suffix functions here as the neut. sg. *-vát* sometimes does, as a simile marker “my comrades *like* children,” not “my comrades along with their children.” The *-mant-* for *-vant-* would of course be by rule after a stem ending in *-u-*. Considerably more problematic is the precise form: ordinarily these *-vant-* simile forms are adverbial neuters and show accent shift to the suffix, so *-vát* (e.g., *manuṣvát* ‘like Manu’, *jamadagnivát* ‘like Jamadagni’). Here we have a case form (nom. pl.) and no accent shift. However, Whitney (§1233f) allows for a sense ‘like to, resembling’ for some *-vant-* stems, and therefore, though Lü’s interpretation may be a bit over-tricky, I follow it since I think it gives better sense. Support for this interpretation is found in the parallel IX.74.1 *śísur ná ... cakradat* “like a child he has cried out” with a verb built to the same stem as in our passage *ácikradañ chíśūmantah ...*

VIII.100.6: Here the singer of vs. 3 seems to be convinced by Indra’s assertions in vss. 4–5 and promises a proper recital of Indra’s deeds, in contrast to the conditional praise of vs. 3.

I take *pārāvataṁ* in c as a vṛddhi adjective derived from *parāvát-* ‘distance’, rather than as a PN as Ge does (flg. Sāy, followed tentatively by Mayrhofer, *Personennamen* s.v.). As an adj. it works nicely with *purusambhṛtām* ‘brought together by many’, and there is no other mention of human opponents in this hymn.

VIII.100.7–9: I take these three Anuṣṭubh verses as the singer’s performance of the recital of deeds promised in 6ab, but cast in the language of dramatic immediacy – almost “you are there” – with the singer himself as the supposed witness, addressing the waters in 7ab. Ge (in his intro.) also seems to assign the verses to the singer, while Old (1885: 57 n. 2) refuses to speculate.

VIII.100.8: The stealing of the soma treated here logically precedes the outcome of the Vṛtra battle treated in 7 and 9, since Indra needed to drink the soma in order to fight Vṛtra, as is well known. I suggest that the theft is intercalated here, between two hemistichs about the *vájra-* (7cd, 9ab), not only because Rigvedic narratives are famously shattered chronologically, but also to play a trick. The *vájra-* was let fly (a in 7d (*apīpataḥ*); in the next half-verse (8ab) the unspecified subject goes at the speed of thought. The default assumption would be that it is the flying mace, but cd disappoints our expectations by introducing the bird and the familiar soma-theft.

VIII.100.9: The poet now plays another trick. The first pāda “within the sea he/it lies” (*samudré antāḥ śayate*) returns us to the Vṛtra myth and, we would think, to Vṛtra, who,

in the most famous treatment of the myth, I.32, lies ($\sqrt{śi}$, Vṛtra's signature verb there) submerged in water after his smiting (e.g., I.32.8 ... *amuyā śāyānam ... āti yanty āpaḥ* "The waters go across him lying in that way"). Here we have both the signature verb and the water – but it's the *vāja* that is lying in the water, not Vṛtra, as we discover in the next pāda. Moreover, in that pāda the mace is 'covered' (*abhīṣṭaḥ*) with water, using the same root (at least synchronically, whatever its source) as the transitive verb expressing Vṛtra's obstruction of the waters in 7b (*āvīvarīt*). Both forms of course also evoke Vṛtra himself, "obstruction" embodied. As far as I know, this image of the submerged mace receiving tribute from the waters is found nowhere else in the Vṛtra myth complex, and seems to have been invented here for the purpose of verbal trickery.

VIII.100.10–11: For the possible mythological background of these verses, as adumbrated by Old, see the publ. intro.

VIII.100.10: Ge is understandably reluctant to construe *avicetanāni* with *vādantī*, since this attributes unintelligible speech to Speech herself, but his solution, to construe the neut. pl. loosely with *niṣasāda* ("... sich bei den unvernünftigen (Geschöpfen) niederliess"), does not work syntactically. Old's mythological explanation is preferable.

VIII.100.12: For my hypothesis about the relevance of this verse to the rest of the hymn see the publ. intro. The verse is consciously modeled on vs. 2: the voc. *sákhe* in a picks up *sákhā* of 2c; *hánāva vṛtrám* in c echoes *vṛtrāṇi jañghanāva bhūri*. But, at least in my view and Old's (though not Ge's), the two addressees are not the same: Vāyu in 2 and Viṣṇu in 12. As I argued in the publ. intro. Viṣṇu may have been introduced here because his association with three may allow him to represent the Third Pressing in this hymn-length sketch of the ritual day. And, also presented in the intro., the apparent superimposition of Viṣṇu on Vāyu via the close similarity of vss. 2 and 12 may have been an attempt to integrate the newly ascendant god Viṣṇu into the older inherited religion in which Vāyu is prominent.

VIII.101 Various gods

VIII.101.1: The first word of the hymn, *īdhak* 'separately, one by one', may be stationed there to indicate that the hymn (or hymn collection; see publ. intro.) to follow praises a number of gods individually, who collectively are summed up in *devātātaye* 'for the conclave of the gods' at the end of the same hemistich.

VIII.101.2: The abstract *bāhūtā* 'arm-ness' or 'collectivity of arms' occurs twice in the RV (otherwise in I.41.2). I think it must refer to the quintessential quality of arms, namely strength (see *bāhv-ōjas* 'having the strength of arms, armstrong'). Here, in the simile I think the point is that Mitra and Varuṇa guide the chariot with their supernatural skill (*daṃsānā*) as if with physical arms, the tools that less exalted charioteers would use. The arms of the two gods are found in the next pragātha, 4d.

VIII.101.4: I take *tāsmāt* as referring to the unnamed weapon, coreferential with *yāḥ* in the rel. cl., and ascribe its ablative form to case attraction to infinitival *sāmṛteḥ*. The

weapon is probably the *śāru-* ‘arrow’ associated with the Ādityas in VIII.18.11, 67.15, 20, as Ge notes. It might therefore have been better to tr. *yāḥ* in pāda a as ‘which one’ not the animatized ‘who’.

As disc. ad IV.18.2, I would now render *sām* √*prch* as ‘consult with’ and change the tr. accordingly: “to consult.”

VIII.101.5: This verse contains two minor disharmonies: 1) the recipients of the praise song are in the dat. in pāda a (*mitrāya ... aryamṇé*) but the loc. in cd (*vāruṇe ... rājasu*); 2) the verb is 2nd plural (*prā ... gāyata*) but paired with a vocative in the singular, the hapax *ṛtāvasaḥ*. Ge separates the vs. into abc and d, supplying a verb (“(trage) ... vor”) with the former. This solves the number problem, by isolating the plural verb in a separate clause, but not the case problem. Moreover, since the hymn is composed in pragāthas, I would prefer to construe the doubled *prā* in a with the impv. *gāyata* in d, for a meta-pun on the name of the verse pairing. Chopping the verse into two clauses is not appealing, particularly since it only addresses one of the disharmonies, in my opinion the lesser one.

As for *ṛtāvaso*, Re suggests that *ṛtāvasu* [*sic*] is a simple variant of *ṛtāvan-* (or, better formulated, voc. *ṛtāvaso* is a simple variant of voc. *ṛtāvaḥ* (/ -vo) to the stem *ṛtāvan-*). This seems somewhat convincing. As a 2nd member of bahuvrīhis of the shape X-*vasu-*, the noun *vāsu-* can become semantically bleached, from ‘having X as goods’ to ‘rich in X’ and even further to just ‘having X’. Cf. the pair *vibhāvan-* / *vibhāvasu-*. The Vedic voc. in -*vas* to -*van*-stems makes the singular vocatives even more similar; to the just-cited pair, compare *vibhāvo* [before vd. sounds] and *vibhāvaso*, with the latter offering a convenient way to generate a Jagatī/iambic cadence from a Triṣṭubh. This does not solve our number problem, however; it is unfortunately altogether too artificial to suggest that a singular vocative to the -*van*- stem, *ṛtāvaḥ* (<-*vas*), was reinterpreted as belonging to a real *s*-stem and a plural voc. in *-*vasas* (/ -vaso) was built to it. The existence of clearly singular *vibhā-vaso* (4x) beside singular *vibhāvo* (1x) shows that the morphology was still intact. I would point out, however, that there is no way to produce a plural voc. to either the -*van*- stem or the -*vasu*- stem that will fit in a cadence, either Triṣṭubh or Jagatī: *ṛtāvānaḥ* and *ṛtāvasavaḥ* are both out. It is therefore possible that the hapax *ṛtāvaso* was a quick-and-dirty fix for the metrical problem. Or else it represents the not rare situation of a poet addressing himself in the singular but his fellow singers in the plural. I would also point out that *vāsu* occurs pāda-final in the next verse (6a) and du. voc. *vājīnīvasū* pāda-final in 8b. Ge, by the way, tr. *ṛtāvaso* as a PN (though allowing for the lexical value in his n.); this doesn’t help one way or the other and can, I think, be dismissed.

I do not understand the change in case from dat. to loc. either. The verb √*gā* (+/-*prā*) elsewhere takes only dat., never loc., as far as I know. It might be possible to take the locatives as functionally different from the datives -- “chez or bei Varuṇa (and) the kings.” But since Mitra, Varuṇa, and Aryaman are an almost inseparable trio and Mitra and Aryaman are in the dative in pāda a, it is highly unlikely that Varuṇa would be functionally separate from them in this verse. And it is insulting to the grammatical knowledge of our poet even to suggest that *vāruṇe* owes its ending to a superficial matching with *aryamṇé* two pādas before, particularly since *rājasu* with a non-rhyming loc. ending follows soon after. I think the poet changed cases just because he thought he could and craved a bit of novelty. For another tricky problem of case, see 8ab below.

VIII.101.6: The identity of the three mothers of Agni, the likely referent of the acc. phrases in ab, isn't clear. Ge suggests the three Opfergöttinnen (Idā, Sarasvatī, Bharatī) of the Āprī hymns. Agni is called *trimātār-* in III.56.5, but the three are not identified there either. Since our vs. is the 2nd vs. in a pragātha whose 1st vs. concerns the Ādityas, esp. Varuṇa, Mitra, and Aryaman, I am inclined to think that these three male deities have been slotted into the “three mothers” role just here because of the coincidence of the numbers.

The Pp reads masc. nom. pl. *amṛtāḥ* in c, and Ge so tr. (“Die unbetörten Unsterblichen beobachten das Tun der Sterblichen”). Against the Pp I take it as neut. pl. *amṛtā*; the sandhi situation allows either, of course. Ge's tr. assumes that the *dhāmāni* belong to mortals, but wherever it's possible to tell, *dhāman-* is something belonging to gods. Cf. also III.55.10 *dhāmāni amṛtā*.

VIII.101.8: The apparent doubling of the du. pronouns *vām ... yuvābhyām* is complicated by the fact that at least the second one violates the usual case frame of the verb. Pāda a contains the verb *hāvāmahe* and an undoubted acc. obj., the inanimate *rātīm* ‘giving’, as well as an animate pronoun *vām*, which could be acc., gen., or dat. This 2nd du enclitic is matched by tonic 2nd du *yuvābhyām* in pāda b, which can be instr. or dat. (Note in passing that Macdonell [VGS, p. 105; VG p. 300] only allows instr. for this form, but there is at least one undoubted dat. example elsewhere, I.109.4, as well as several of nearly identical *yuvābhyām*. Cf. AiG III.464, which points out that the older instr. form was *yuvā*, which is preserved in cmpds like *yuvā-datta*.)

The only case intersection between *vām* and *yuvābhyām* is dative, but there is no standard case-frame idiom with $\sqrt{hvā}$ with the structure “call for (s.o. dat.) for (s.th. acc).” Gr classifies the passage under his no. 8, “etwas [A] erbitten,” thus eliding the pronoun(s) entirely under this rubric, though in the lemma he cites it as *rātīm vām*, including the enclitic but not the more intractable tonic form. Ge. takes *vām* as gen., and declares in his n. 8ab that *yuvābhyām* is also “in Sinn des Gen.,” which would be convenient but is remarkably cavalier about morphology. A further complication is that pāda b is a repeated pāda (=VIII.5.3 -- not registered in Bloomfield's Rig-Veda Repetitions). The case value of *yuvābhyām* in VIII.5.3 isn't entirely clear, but the context is probably compatible with a dative, but not with either instr. or gen. -- an acc. might be the best.

I confess I don't entirely know what to make of this. There are no standard uses of $\sqrt{hvā}$ that take a personal dative, though inanimate datives abound. I am inclined to take pāda a as containing a double acc. (with *vām* in acc. function): “call you two for giving.” The *yuvābhyām* in the next pāda could be the result of repeating this short pāda from elsewhere without integrating it into the syntactic frame of the rest, or show the case variation (what we might call “case creep”) observed also in vs. 5, with the poet inventing an idiom “call for s.o. (dat.)” based on other verbs of speaking, like \sqrt{vac} , which can take either acc. or dat. of the addressee.

Another slight oddity in the first pāda is the characterization of the gods' giving as *arakṣās-* ‘undemonic’. I have softened this somewhat to ‘without animus’; Ge tr. ‘ohne Falsch’, which seems more distant from the literal sense of the stem.

VIII.101.9: With Gr I take *sumánmabhiḥ* as a bahuvrīhi, contra Ge’s karmadhāraya “mit guten Gedanken” (though he allows the other alternative in n. 9b). This stem is attested in the nom. sg. masc. in VII.68.9 and therefore must be a bahuvrīhi, since *mánman-* is neut., and the parallel *durmánas-* (2x) is found only in the masc. and so must be a bahuvrīhi as well.

Against Ge, I take the second hemistich as referring to two different soma drinks, the one mixed with milk in c, the pure one in d. The offering of two types of soma is made clear in 10cd; note esp. the ‘both’ of c, *ubháyasya naḥ piba* “drink of both of ours,” which is immediately followed by the definitional d, *śúcim* [matching *śukráḥ* in our 9d] *sómaḥ gávāśīram* [matching *śrīṇānāḥ* in our 9c] “the pure soma (and) the one mixed with milk.” In 9c the present participle *śrīṇānāḥ* “*is being mixed*” (my italics) makes it clear that it is not yet ready to be offered, whereas the pure soma (in d) has just that moment been offered, as the passive aor. *ayāmi* indicates. This reflects the ritual procedure whereby Vāyu is first offered pure soma.

Assuming that my separation of c and d is correct, this adds another ex. of a predicated non-past participle to the dossier.

Note the phonetic figure *ayām ... ayāmi*.

VIII.101.11–12: As noted in the publ. intro., the banality of these vss. is a surprising aberration in RVic style. I will note that pāda-final *mahāṁ asi* “you are great,” found 5x in these two vss. (once mid-pāda), is something of a signature of the late VIIIth Maṇḍala (60.6, 19; 64.2, 95.4, 98.2), though it’s found occasionally elsewhere.

VIII.101.12: Presumably the sun’s light is ‘undeceivable’ (*adābhyām*) because the sun is witness to everything.

VIII.101.13: The referent of the fem. sgs. in this vs. is not entirely clear. Ge interprets it as the offering spoon or the butter offering, Old as the cow. I think Ge’s 2nd alternative is correct, with *āhuti-* or a similar fem. noun as the word underlying. Pāda b, “her form is created by a/the ruddy (cow),” because butter is a milk product. (Ge supplies ‘flame’ rather than ‘cow’ with *róhinyā*, but *róhiṇī* elsewhere refers to cows [see nearby VIII.93.13].) Pāda c is more or less VII.81.1a *práty u adarśy āyatī*, and since the referent there is Dawn, the simile *citréva* (i.e., *citrā iva*) must be comparing the bright butter offering (bright because it is whitish yellow or because it makes the fire brighter) to Dawn. As for the ten arms, Old and Ge both suggest that these are the arms of the five Adhvaryus. However, it seems possible to me that we’re dealing with body-part inflation, and the ten “arms” are the ten fingers (of a single priest) regularly referred to in ritual contexts.

VIII.101.14: This difficult and enigmatic vs. is found in slightly variant form in the AV in the mystical skambha hymn X.8.3, is repeated in other Vedic texts, and receives an explanation in ŚB II.5.1.4–5. The interpr. of the verse in this context here has been influenced by its later deployments, esp. the ŚB exegesis — in my opinion misleadingly. The ŚB takes it to refer to the passing of generations or races, expressed by the *prajāḥ ... tisráḥ* of pāda a, and this basic understanding is reproduced by Ge and by Re (Hymnes

spéculatifs 165, though of AV X.8.3, not the RVic passage). Old sensibly disdains tr. and explanation (“Erklärung dieser Mystik versuche ich nicht.”).

I think the vs. must be taken within its RVic context, which is ritualistic; it is paired in its pragātha with vs. 13, a depiction of the butter offering. Although in the first 3 pādas the wording is obscure, the final pāda seems to suggest the solution to the mystery, in that its first word *pāvamānaḥ* ‘self-purifying’ can hardly refer to anything but soma. (It is probably not an accident that in the reuse of this verse in the AV pāda d is quite different [*hārīto hārīṇīr ā viveśa*] and does not contain the telltale word.) The identity of the *harītaḥ* is less secure. In the publ. tr. I follow Ge in supply ‘flames’, but this is ritually problematic: soma doesn’t seem to be offered into the fire. Maṇḍala IX twice refers to *harīto dāśa* “ten tawny ones” (IX.63.9, 69.9), which appear to be the fingers of the ritual officiant. I would now emend the translation to “has entered within the tawny (fingers),” pointing out that “with the ten arms” of 13d may refer to the same phenomenon.

Guided by the clinching word *pāvamānaḥ* in pāda d, an interpr. grounded in soma ritual fits pāda a very well. The most important clue is the compound VP *atyāyam īyuh* “have made their traversal”; the lexeme *āti √ i* ‘go across’ is regularly used of soma’s trip across the filter (IX.85.9 *pāvitrām āty eti*, etc.). The three *prajāḥ* can be the three soma pressings (or perhaps the soma for the first three soma cups); soma drinks are called *prajā divyāsya rétasah* “the offspring of the heavenly semen” in IX.86.28, a hymn that contains several passages (IX.86.14, 39, 45) in which soma is “fitted into among the worlds/creatures” (*bhúvaneṣv árpitaḥ*), similarly to our pāda c *bhúvaneṣv antāḥ*.

The relevance of pāda b to the soma theme is less clear to me. By my rules, *anyāḥ* should be definite “the others” (contrary to the standard rendering “others”) and contrastive to the three offspring of pāda a. I am not sure what “the others” would be (though presumably some other set of soma drinks), nor what “settling down around the chant” would involve. As for pāda c, I’ve already pointed out soma’s position *bhúvaneṣu* elsewhere, and the towering quality of cosmic soma is also emphasized elsewhere.

I do not feel I have solved all the problems with this verse, but the lexical clues of pādas a and d seem to me to anchor it in a soma context, with this ritual context reinforced by its pragātha twin.

VIII.101.15: Note the phonetic figure in pāda d *mā gām (á)nāgām*.

VIII.101.16: According to the transmitted text, this hymn ends on a downbeat: the small-witted man (*dabhrācetāḥ*), the last word of the hymn, has taken possession (*avṛkta*) of the cow that has been so extravagantly praised in vss. 15–16, whose right to safety was proclaimed to “observant people” or “the observant man” (*cikítuṣe jánāya* 15c), the opposite of the small-witted man of 16d. This sad finale seems unlikely to me, and a small emendation to the text will change the tone entirely. Instead of *ā māṁvṛkta* at the beginning of pāda d, I suggest reading **mā mā vṛkta*. The second part, *mā vṛkta*, instead of the Pp. *mā avṛkta*, does not alter the Saṃhitā text. As for reading the prohibitive negative *mā* for preverb *ā*, note that the preceding pāda ends with *gām*, and in the sequence ... *gām mā* the pāda-spanning -m m- could well have been degeminated. The posited **mā* may or may not also contain the preverb *ā*. Since *√ vṛj* generally appears with a preverb, it probably does. Restoring **mā* also makes the pāda more parallel to 15d *mā gām* ..., which also contains a *mā* prohibitive with a cow as obj.

VIII.102 Agni

VIII.102.2: The standard interpr. are agreed that the referent of the fem. instr. phrase *īlānayā ... duvasyuvā* is some form of speech. This makes sense and is certainly not excluded. However, the only other fem. form of the participle *īlāna-* in V.28.1 refers to the ghee-filled offering ladle, and I therefore prefer that interpr.

VIII.102.7: This vs. consists of two ungoverned sentence fragments, both referring to Agni: an accusative phrase in ab, a dative phrase in c. The former could continue the syntax of the preceding vss., although the intervening *ṛca* boundary makes some difficulties. The dative phrase is entirely untethered except that it adjoins *āchā*, which ordinarily takes the accusative, and the next vs. makes a fresh syntactic start with Agni in the nominative. Ge suggests that there are two Agnis in question in this verse, but this seems to be overthinking it. I think we're dealing with two false starts, with the first perhaps simply carrying on from the previous vs.

VIII.102.8: The lexeme *ā√bhū* generally means 'stand by, be at hand'; this works fine for pāda a, but not so well for pāda b. Neither Ge's "eingehe ... in" nor Re's "s'intègre à" seems to work any better.

VIII.102.11: My construction of this vs. follows Ge's. Re by contrast takes b as a nominal rel. clause and c as the main clause. Since the verb *dīdāya* is initial in its pāda and, as a main-clause verb, could owe its accent to this position, there is no way to tell and no semantic implications. In slight favor of Ge is the fact that *√dī* is frequently construed with the loc., as it would be with *dāmeṣu ā* in b.

VIII.102.13: The standard interpr. take *jāmāyo gīraḥ* as a nominative NP (Ge "die verschwisterten Lobreden"), modified by the intens. part. *dēdīsatīḥ*. Although I see the advantages of this, it leaves the participle with little to do (Ge "die dich herausstreichen," Re "indiquant avec force (leur intention)," Scar (82) "die immer wieder auf dich hinweisen"). I separate *gīraḥ* from *jāmāyaḥ* and take it as the acc. obj. of the intens. participle. The question then is the referent of *jāmāyaḥ* 'kindred, siblings'. I tentatively suggest it is the waters, who appear in the next vs. as ritual actors. The waters are called *jāmī-* elsewhere (I.23.16). Because waters are always gurgling, they can be considered to be the deliverers of hymns.

VIII.102.14: I don't really understand this verse, but it seems to conjoin technical ritual references with an allusion to the myth of Agni's flight and his concealment in the waters -- and these two interpretive strains are somewhat at cross purposes. According to the śrauta sūtras, the darbha grass, that is, the barhis, is gathered into three or more bundles (cf., e.g., MŚS I.1.1.42, ĀpŚS I.4.10, BŚS I.2) in preparation for the sacrifice; hence pādas ab seem to depict a situation in which the preliminaries for the sacrifice have not been performed. This may well be because Agni has fled and so the regular ritual procedures have not been carried out. In c the waters in which Agni hides are said to have set down/deposited his footprint; in other words they have established him within

themselves to hide him. Agni is regularly the obj. of *ní√dhā*, for his *pādam* being set down, see VIII.72.19, III.7.7, I.72.6, etc., and for *ní√dhā* in the context of Agni's concealment X.32.6a *nīdhīyāmānam āpagūlham apsú*. But in ritual context the water's setting down Agni's footprint may refer to the sprinkling of the fire with water after it has been surrounded by barhis (see Ge's n. 14c and Hillebrandt, Rit. Lit. 110), and therefore from a ritual point of view the preparations are proceeding smoothly. The next verse gives support to this alternative.

VIII.102.16: Although the other occurrence of the med. part. *tepāná-* (VIII.60.19) is transitive, a passive interpr. works better here.

The gen. *ghṛtāsya* is best construed with *dhītūbhiḥ* "with visions/thoughts of ghee." Both Ge and Old suggest that this refers to what we would now call "virtual ghee," not the real physical substance -- anticipating the purely mental sacrifice of the last ṛca (19–21). But this ṛca (vss. 16–18) seems otherwise to depict a more standard ritual, and I think it more likely that "with visions of ghee" is a shorthand way of referring both to the physical stimulus of Agni's flame, namely melted butter, and the mental one, the hymns accompanying the libation.

VIII.102.17: It is not clear who the mothers are and whether they are, with Sāy, identified with the gods mentioned in pāda b. Re's "(tels) des mères" seems to follow this interpr., but in his n. he suggests that the mothers are the waters. The mention of the waters in vs. 14 might support this latter alternative, but given the "three (mothers)" of Agni in the preceding hymn, VIII.101.6, which I take to be the (male) gods Mitra, Varuṇa, and Aryaman (see comm. ad loc.), I am inclined towards Sāy's interpr., though it is not clearly reflected in my publ. tr.

VIII.102.19–22: See publ. intro. for my general interpr. of these verses.

VIII.103 Agni

VIII.103.2: Ge takes the verb of ab to be *prá ... tasthau*, with the *tasthau* long postponed to pāda d and pāda c (which has its own verb) parenthetical. This seems too fussy. It is perfectly easy to supply a verb of motion with *prá* in a (so also Re, Kü 464).

VIII.103.3–4: In both these vss. *tmānā* 'by himself' contrasts with the vast number (thousands) that the action of this sole individual wins or prospers.

VIII.103.5: HvN split the hemistich between *vājam* and *ārvatā*, producing two pādas of 11 syllables each. But since the b pāda then has a bad cadence and since the pāda, minus initial *ārvatā*, is found also at I.40.4, where the iambic cadence is fine in a dimeter line, it seems best to follow the standard view that *ārvatā* belongs with pāda a, which is then hypermetric (so Old).

The famous formula "imperishable fame" (*ākṣiti śrávaḥ*) ends the second pāda.

VIII.103.7: Ge/Re take *rathyām* as an adjective with *áśvam* in the simile (e.g., Ge "Wie ein Wagenross ..."). This is possible, if it is derived from the thematic stem *rathyā-*,

rather than *rathī-*, where Gr classifies it. However, the interposition of *gīrbhīḥ* distances it from the simile, and I prefer to take it as the acc. of *rathī-* ‘charioteer’. Agni is often called the charioteer of the sacrifice (etc.), e.g., I.44.2 *ágne rathīr adhvarāṇām*, and his description as “controller of chariots” (*rāthānām yāmam*) a few vss. later (10c) seems like a paraphrase of such a formula. In that case the poetic figures are more complex than the standard interpr.: there is a metaphor (Agni as charioteer), and this metaphorical identification is then compared explicitly in a simile to a horse, which is closely connected conceptually with the charioteer -- a kind of figurative chaining.

The words *toká-* and *tánaya-* regularly appear together; cf., with the same verb as here, the acc. sg. pairing VI.48.10 *pārṣi tokām tánayam*. When ending with *-e* they are typically locatives, as shown by other parallel locatives; cf., e.g., VI.25.4 *toké vā góṣu tánaye yád apsú* (also I.114.8, VI.31.1, 66.8, X.147.3). Here, however, I think they are dual accusatives, as if elliptical duals from a dual dvandva. (That is, *toké tánaye* doesn’t mean “two progenies and two prosperities.”) The presence of *ubhé* ‘both’ serves to mark them as duals (see also I.147.1), since, given the passages just cited, the usual expectation for *toké tánaye* is locative. So also Old and Re, while Ge takes *toké* as du and *tánaye* as loc.: “(Erhalte) beiderlei Samen in der Nachkommenschaft,” a splitting of the usually conjoined phrase that seems very unlikely.

Taking *pārṣi* as the verb governing both *ubhé toké tánaye* (as VI.48.10 strongly encourages us to do) and *rādhah* in d requires slightly different interpretations of the verb. Re, almost predictably, calls it a zeugma.

VIII.103.10: I follow Old, Ge, and Re in taking *āsāva* as the voc. of a (hapax) PN, though it could be simply ‘o presser’ (*ā√su*) as Gr takes it (and perhaps implicitly Mayrhofer, since it does not appear in his PN book). There are no implications either way.

VIII.103.11: Note the playful *úditā ... nīditā veditā*, already pointed to by Old, in which the three rhyming words are grammatically entirely different: fem. loc. sg., neut. acc. pl., and masc. nom. sg. agent noun respectively. The contrastive similarity is underlined by the polarization of the preverbs *úd* and *nī*.

What is being compared to the waves (*ūrmāyaḥ*) in c? Ge supplies “Absichten” (intentions), presumably on the basis of *dhiyā* in d, but the *dhī-* of Agni should not be considered negative or hostile. Re’s suggestion, “flames,” is far more persuasive, but I think this idea should be combined with Old’s view that *ūrmāyaḥ* belongs with both simile and frame. That is, Agni’s flames are already metaphorically waves and then can be compared with real waves. Cf. the cmpd descriptor of Agni in I.58.45 *rúṣad-ūrmi-* ‘possessing gleaming waves’.

VIII.103.12: The *mā* prohibitive here takes an apparent impv. *hṛṇītām* rather than the expected injunctive **hṛṇīta*. KH (94–95) explains this as having an underlying pluti form *hṛṇītā3*, with nasalization in hiatus, hence **hṛṇītā3m̃*, which was misunderstood by the redactors and normalized to *hṛṇītām*. Although I find this explan. rather ad hoc and over-complex, I have nothing better to suggest. I do not, however, subscribe to his notion that because it is built to a pres. stem, it has inhibitive (“let him stop being angry”) rather than prohibitive (“let him not be angry”) value. There is nothing in the hymn up to this point

that would indicate that Agni has anything but benevolent feelings towards us. See IH's work, which refutes Hoffmann's assumption of inhibitive value for pres. injunc. with *mā*.

Pāda-final *eṣāḥ* is less rare than I would have predicted, though the usual position of nom. sg. *eṣā(h)* is pāda initial.

VIII.103.12–13: Both vss. end identically with *svadhvarāḥ*, but in 12c it refers to Agni, in 13d to the weakling (*kīrī-*) who is offering homage to Agni. The use of the same term for both of course implicitly spreads the power and prestige of Agni to his worshiper.

VIII.103.14: On the fem. form *sóbharyāḥ* referring to the poet, see comm. ad VIII.22.15.

Commentary IX

Since all hymns in this maṇḍala are dedicated to Soma Pavamāna, the dedicand will not be identified for each hymn.

In both the publ. tr. and in the comm., I have tried to use lower case soma for the substance and capped Soma for the god, but of course much of the point of the Soma Maṇḍala is that the two cannot be separated. So this convention is not fully workable.

IX.1–67

All hymns in Gāyatrī meter.

IX.1

IX.1.1–2: After establishing the Soma Pavamāna theme in the 2nd pāda of the 1st vs., with the command *pāvasva soma* “purify yourself, Soma,” in the 2nd vs. the poet presents Soma in an expansive role, as demon-smasher (*raṣṣohān-*) and belonging to all domains (*viśvācarṣani-*), while at the same time precisely locating him in his seat on the ritual ground. This juxtaposition of hyper-local, ritually defined technical details and the grandiosely universal is typical of the entire IXth Maṇḍala.

IX.1.2: The adj. *āyohata-* ‘metal-hammered’ occurs twice in the RV (also IX.80.2), both qualifying *yóni-* ‘womb’ and referring to something that contains soma. Old suggests that it refers to a wooden vessel that has been hewn out by a metal blade.

What the instr. *drúṇā* is doing here is unclear to me. This instr. appears 5x in the RV; in the two passages outside of the Soma maṇḍala (V.86.3, VIII.96.11) it appears to refer to an implement with which one accomplishes something -- in the latter passage a paddle to propel a boat to reach the far shore. Of the two other passages in IX, IX.65.6 *drúṇā sadhāsthām āsnuse* is quite similar to this one: “you attain to your seat *drúṇā*,” and in IX.98.2 *īndur abhī drúṇā hitāḥ*, which lacks an overt ‘seat’, the interpr. depends on which root *hitāḥ* is assigned to: $\sqrt{dhā}$ ‘place’ or \sqrt{hi} ‘impel’. In all three soma passages I take *drúṇā* as an implement (a wooden vessel or even a pusher, a paddle) that allows soma to attain its place or (in 98.2, taking *hitā-* to \sqrt{hi}) to be impelled on its way. This is not the standard interpr.; most (see, e.g., Old’s disc.) take it as referring to the wooden cup or vessel that constitutes soma’s “seat” (e.g., Ge “an seinen Platz aus Holz”), but the instr. in such an interpr. is troubling. Re remarks “Instr. un peu rude pour *d° kṛtām*” and renders (ad IX.1.2) IX.65.6 as “placé (sur la cuve faite) en bois.” Though he further remarks “on ne peut parler qu’avec réserve de l’Instr. de matière en véd.,” an instr. of material is essentially the standard interpr. of *drúṇā* in this passage -- one that I would prefer to avoid, though perhaps at the expense of inventing another implement in the soma ritual.

IX.1.3: The aggrandizing of Soma’s role continues here, with 3 superlatives: *varivo-dhātama-* ‘best establisher of the wide realm’, *māmhiṣtha-* ‘most munificent’, and *vṛtra-hāntama-* ‘best smasher of obstacles’ -- the last of course borrowing Indra’s signature epithet, while *māmhiṣtha-* also regularly characterizes Indra. Re suggests that the three represent the three (Dumézilian) functions, but this does not seem particularly

compelling. Vs. 1 also began with two superlatives, *svādiṣṭha*- ‘sweetest’ and *mādiṣṭha*- ‘most exhilarating’, but these are restricted to soma’s ritual role, whereas the three in this vs. attribute universal powers to him.

Pāda c is identical to VIII.103.7d, found in the very last hymn of Maṇḍala VIII, just as this is found in the first hymn of Maṇḍala IX -- so they are adjacent in the Saṃhitā arrangement. But I don’t know what, if anything, to make of this. If this is more than just accident, it would suggest that the compilers selected this particular Gāyatrī hymn to begin IX on the basis of this verbal correspondence.

IX.1.6: As indicated in the publ. intro., the standard clichés of the soma maṇḍala gave way here to more novel material. The involvement of the Daughter of the Sun as purifier of soma is puzzling. Ge suggests (n. 6b) that the Daughter of the Sun, also found in this maṇḍala at IX.72.3, 113.3, is the “Dicht- oder Gesangeskunst,” on what seem to me slender grounds (mostly III.53.15, which is not at all clear). Oberlies’s notion (Relig. RV I.241, 282; II.60) that this locution indicates that Soma comes from heaven to earth at dawn is more plausible -- though it should be kept in mind that Sūryā, the daughter of the Sun, is not the same as Uṣas, Dawn. I would rather suggest that the presence of this figure in this vs., which immediately precedes two vss. metaphorically concerning ‘maidens’ (*yóṣanah*) and ‘unwed girls’ (*agrúvah*), is meant to showcase the mythological marriageable maiden par excellence: Sūryā exists essentially only to get married. Her appearance in this vs. serves as a positive model for the maidens that follow. However, this interpr. does not fit well with my interpr. of the other passages in which she appears in this maṇḍala; see esp. disc. ad IX.72.3.

The referent of *te* has occasioned some discussion. In this hymn the 2nd ps. referent is otherwise always soma, but the acc. *sómam* already appears in the vs. as obj. of *punāti*. The solution adopted by most (see Old’s disc.), which I also subscribe to, is that *te* does refer to soma, but to Soma the god, distinguishing him from soma the liquid, the ritual substance represented by the acc. *sómam*. Ge (n. 6) cites other possibilities that have been suggested -- the ritual patron or Indra -- though he himself accepts the Soma the god hypothesis.

IX.1.7: The adj. *ánu*- ‘delicate, fine’, always in the fem., is used several times of the fingers in their task of pressing soma. Because fingers are, of course, joined in the hand they are also called sisters, as here.

The ‘clash’ (*samaryé*) presumably refers to the pounding of the pressing stones.

IX.1.8: The ‘unwed girls’ are also the fingers alluded to in the preceding vs.: the pl. *agrúvah* is always so used.

In b they are clearly blowing into a musical instrument: *bākura*- is a hapax, a vṛddhi deriv. of *bákura*- also a hapax (I.117.21), used of a musical instrument one blows (*√dham*), as here. Both show non-Indo-Aryan phonology. But what does this have to do with soma preparation? and how can fingers “blow” into a pipe? Ge, ad I.117.21, suggests that the skin pipe is the “bildlicher Ausdruck für die Somapflanze”; perhaps the reference is to the stalk, and perhaps the fingers pressing on the stalk produce a noise similar to a pipe. Or -- perhaps the poet has simply gotten carried away by a picture of festivity, with unmarried girls celebrating at a gathering.

The next question is what to do with the acc. phrase in c. I find it unlikely that the “wild honey” is in apposition to the bag-pipe of b, though Ge seems to take it that way. Re supplies another verb “(elles traient),” whereas I take it as a return to the object of *hinvantī* in pāda a, with b loosely parenthetical. It is “threefold” (*tridhātu*) perhaps in reference to the three soma pressings, or to some other ritual triplet (see Ge’s suggestions n. 8c). For further discussion of *tridhātu ... mādhu* see comm. ad IX.70.8.

IX.1.9: Note the openings of vss. 7–9: 7 *tām īm* / 8 *tām īm* / 9 *abhīm(ām)*.

Pāda c is a slight variant on 1c and sketches a ring.

IX.1.10: As just noted, the last pāda of vs. 9 seems to bring the hymn to a conclusion with a reprise of the end of the 1st vs., even though another vs. follows. Indeed vs. 10 does seem to stand apart from the rest of the hymn, while picking up various elements from it. First, note that though Indra was mentioned in the ring- compositional pādas, 1c *īndrāya pātave sutāḥ*, 9c *sómam īndrāya pātave*, he was absent from the rest of the hymn and his characteristics and deeds assigned to Soma instead. But here he reasserts his role as *vṛtrá*-smasher (b *viśvā vṛtrāṇi jighnate*), posited of Soma in 3b *vṛtrahántamaḥ*, and as giver of bounties (c *maghā ... māmhate*), also posited of Soma in 3b *māmhiṣṭhaḥ*. The superlative *mādiṣṭha*- ‘most exhilarating’, describing the stream of soma in the first pāda of the hymn (1a), returns as the exhilarations of soma (*asyā ... mádeṣu*)(10a) that spur Indra on to his exploits, the signature root *√mad* having been absent for all the rest of the hymn. (This particular ring-compositional effect is obscured in the publ. tr. by my use of ‘raptures’ for *mádeṣu* in 10a.)

IX.2

For the sequence of ideas and actions in this hymn, see publ. intro.

IX.2.1: As noted in the publ. intro., this hymn begins with the quintessential command of the Soma maṇḍala: *pávasva* ‘purify yourself’, found in the previous hymn at the beginning of the 2nd pāda (IX.1.1b).

The 2nd word *devavīḥ* ‘pursuing the gods’ also matches up with the previous hymn: IX.1.4 *devānām vītīm*.

The expression “across the filter” is iconically split across the pāda break: *āti, pavítram*.

The last pāda consists of a neat double figure *īndram indo vṛśā viśa*. The play between *īndra*- and *īndu*- ‘drop’ is ubiquitous in the IXth Maṇḍala and is in fact reprised in 9a *indav indrayúḥ*.

IX.2.2: The standard tr. of (*ā*) *vacyasva* (*√vañc*) here is ‘gallop’ (Ge, Re), but the root itself means something like ‘move crookedly’ (see comm. ad III.39.1 *inter alia*). Kulikov (Vedic -*ya*-presents) devotes considerable space to this -*yá*-pres. (218–24), rather desperately attempting to account for its apparent passive accentuation (*vacyáte*). He concludes that the subject of this pres. “always refers to beings set in motion and directed by someone else, not moving on its [*sic*] own,” and was originally the passive counterpart of a posited transitive redupl. pres. ***vívankti* [double star is Kulikov’s]. I find this over-elaborate -- and since the subjects are generally horses, or entities configured as horses,

and since RVic horses have considerable agency of their own with regard to movement -- not terribly convincing. In this particular case, the verb is in the imperative, and it is difficult to see how something incapable of moving on its own could be commanded to do so. Four of the ten occurrences of this pres. stem are imperatival, three of them 2nd sg. as here. (the fourth is 3rd pl.). As discussed ad III.39.1, etc., I consider one of the nuances of this verb to be ‘coil, twist’, and here I see the soma circling and twisting its way into the cup; the preverb *pári* ‘around’ is a regular part of the description of soma’s movements around the filter and into the vessels.

I take the injunc. *sadaḥ* in the sense of an impv.; see KH (Injunk. 263) for this usage of this particular form.

On the *sa*-aor. *ádhuḥṣa-*, here in 3rd sg. mid. *adhukṣata*, see Narten (Sig.Aor. 143–44).

IX.2.3–4: These two vss. introduce the trope of “clothing,” a metaphor for mixing the soma juice with various substances: after the pressing proper the soma is mixed first with water (vs. 3) and then with milk (vs. 4), the latter accounting for the ubiquitous “cows” of the IXth Maṇḍala. Thus, though an expression “clothe himself with cows” initially strikes the inexperienced reader as ludicrous, it makes perfect sense in the tightly constructed verbal realm of the Soma hymns: clothing = mixing and cows = waters.

IX.2.4: What I don’t quite understand is why we have the rather exotic form, a causative future reflexive middle in 4c, *vāsayīsyāse* (lit. ‘you will cause yourself to be clothed’), in contrast to the straightforward *-iṣ*-aor. middle *vasiṣṭa* (‘he has clothed himself’) that corresponds to it in 3c. The need or desire to use the future must have triggered the creation of this baroque form. In this connection it is worth noting that √*vas* ‘clothe’ lacks a standard future in Vedic and, acdg. to Wh Roots, has only one occurrence in ClSk. of a future *vatsyati* -- so perhaps the causative allowed a transparent future to be built more easily. This form (repeated in the identical pāda in IX.66.13) is also the only medial form of the caus. to √*vas* ‘clothe’ in the RV. The question then arises – why is the future so desirable in this context that such morphological shenanigans had to be performed? The clue to the usage may lie in part in the sequencing of the verbs: both b and c are repeated in IX.66.13 (likewise as bc), and so the two clauses form a larger unit and must be evaluated together. The b pāda contains a pres. indic., *āpo arṣanti sīndhavaḥ* “The waters, the rivers rush,” while c contains the causative future under discussion. On the one hand, the future may be signaling that the second action (clothing in milk) will follow the first (clothing in waters); this is of course the normal ritual order. But we should also remember that the future, esp. the finite future, is relatively rare in the RV, and, curiously, it tends to have a more volitional nuance than the subjunctive, with which it competes. A good ex. of this is found in the famous and well-trodden Agni hymn I.1, where in vs. 6 *yád ... dāśúṣe ... bhadraṃ kariṣyāsi* should be rendered “what good thing you *will* do for the pious man,” indicating Agni’s deliberate choice to favor that man. Here I would suggest that Soma is bound and determined to clothe himself with milk at this point in the ritual proceedings; it is not just the next event on the menu.

IX.2.5: This vs. contains several striking paradoxes, once they have been “unpacked.” First, “the sea has been groomed in the waters,” which seems to reverse volume relations:

we would expect “the sea” (*samudrá-*) to be more larger and more extensive than the waters, but evidently the former can be contained and “groomed” (*māmṛje*) in the latter. The “sea” is of course soma, which is presumably so called on the basis of the usual aggrandizement of Soma’s cosmic associations.

Then, without transition, soma goes from being “the sea” to “the prop and buttress of heaven” -- that is, from something fluid, unstable, and in constant motion to its exact opposite: solid, fixed, steady enough to support heaven itself. Another paradox and another indication that Soma’s cosmic ambitions cannot be contained.

It is tempting to supply “earth” in b, on the basis of IX.87.2 = 89.6 *viṣtambhó divó dharúṇaḥ pṛthivyāḥ*: “the prop of heaven and buttress of the earth,” but perhaps it is better to stick with the text as we have it.

After the two cosmic identifications in a and b, in c we return to the focused reality of the ritual: the soma in the filter -- the usual toggling between the universal and the hyper-particular.

IX.2.6: Another cosmic association: Soma shines along with the sun, implying that Soma is just as bright -- though this may also be a reference to the timing of the morning pressing, at sunrise.

IX.2.7: Finite forms of the intens. -*yá*-pres. *marmṛjyá-* are ordinarily transitive, as in IX.38.3 *etám tyám ... marmṛjyánte apasyúvaḥ* “This very one [=soma] do the industrious (fingers) groom,” with the same adj. qualifying the subject as here. Though the transitivity of the verb in 38.3 is quite clear, our passage is more ambiguous -- and has been discussed at some length by Ge (n. 7), Bl (RReps ad loc.), and Re. If we wish the verb to be tr., we can supply ‘you’, as Bl suggests (also Re as an alternative). Or we can take *gíraḥ* as acc., rather than nom., and tr. “the industrious ones constantly groom the songs ...” However, I prefer to take the verb as passive (as two of the three forms of the pres. part. *marmṛjyámāna-* are) and see the vs. as an expression of ritual reciprocity: the songs are groomed by the power of Soma -- that is, the hymns recited at the Soma Sacrifice are refined and perfected by the inspiration given to the poets by Soma -- while those perfected hymns in turn adorn and beautify the soma offering.

IX.2.8: The expression *mádāya ghṛṣvaya* in the Saṃhitā text may be deliberately ambiguous. The Pp. reads dat. *ghṛṣvaye*, which is supported by IX.16.1 as well as VIII.64.12, but IX.101.8 has ... *mádāya ghṛṣvayaḥ* “(cows) avid for exhilaration,” which would allow a tr. here “we, avid for exhilaration ...” Although the publ. tr. follows the Pp. (as do Ge and Re), I think both readings may be intended.

IX.3

As discussed in the publ. intro., this hymn is unified by a simple device, the nom. sg. m. prn/pronominal adj. *eṣá* ‘this (one)’ that opens each vs. The first three vss. (and vs. 5) begin *eṣá deváḥ*; in a further two vss. (7, 8) the 2nd word *divám* is, of course, etymologically related to *devá-* and a phonological variant (*i* for *e* in the initial syllable). Only vss. 4, 6, 9, and 10 stand aside from this pattern -- and 6 and 9 have *deváḥ* in their 2nd pādas. The final vs., 10, opens *eṣá u syá* “this one here, this very one,” producing an emphatic summary with the addition of a 2nd prn.

As was also noted in the publ. intro., the maṇḍala's signature word 'purify oneself' is also omnipresent in this hymn, esp. the nom. sg. pres. part. *pávamāna-* 'purifying himself', which opens the pāda in vss. 2(c), 3(b), 4(c), 5(b), 7(c), 8(c); *pavítre* is found (mid-pāda) in 9, and once again vs. 10 marks a change and a summary, by using the finite form *pavate* (mid-c). Only vss. 1 and 6 lack a form of $\sqrt{pū}$. It might be worthy of note (if we understood how this maṇḍala had been assembled) that this flurry of repetitions is the first appearance of the part. *pávamāna-* in this maṇḍala. The overabundance of forms of $\sqrt{pū}$ may balance the lack of any overt mention of *sóma-*.

It can also be noted that the hymn is entirely in the 3rd ps.

IX.3.1: The non-literal tr. "bird on the wing" for *parṇavī-* conceals the problematic analysis of this hapax. Although Re (unconvincingly) suggests that *-vī-* is a simple doublet suffix of *-yú-*, the most likely (and generally accepted) analysis on formal grounds is as a root noun cmpd. to $\sqrt{vī}$ 'pursue', like *deva-vī-* 'pursuing the gods' in the preceding hymn (IX.2.1, itself recalling *devānām vītí-* in IX.1.3). However, on the basis of well-attested *deva-vī-* (cf. also *pada-vī-*), we expect the 1st member to express the object of pursuit -- and 'pursuing the/its wings/feathers' makes little sense. The best we can construct is an instr. relationship, 'pursuing with its wings'; see Scar 499. The situation is further muddled by the fact that the 2nd member bears a distinct resemblance to *vī-* 'bird', which finds textual expression elsewhere: cf. I.183.1 adduced by Scar, *tridhātunā patatho vīr ná parṇavī* "You [=Aśvins] fly with the tripartite (chariot) like a bird with its feathers." Scar (499–500) sketches a complex scenario whereby *pada-vī-* 'pursuing the track' was reinterp. to an instr. **padā-vī-* 'pursuing with the foot', giving rise to our cmpd., with a different body part. But I think it's simpler to assume that our poet was pursuing an imperfect pun with *vī-* 'bird', perhaps encouraged by *deva-vī-* in the 1st vs. of the preceding hymn (though we have no know way to know how these Gāyatrī hymns were ordered or by whom) and the extreme frequency of that lexeme in the IXth Maṇḍala.

IX.3.2: The expression *vipā kṛtāḥ* 'created by poetic inspiration' may seem a bit extreme -- after all soma/Soma exists and previously existed independently of the poets. But the usual RVic power attributed to the word is in play here: poetry brings to realization the gods and divine forces on the ritual ground.

The *s*-stem *hvāras-* belongs to the root $\sqrt{hvṛ}$ 'go crookedly, swerve'; in a soma context it refers to the curls and tufts of the wool on the sheepskin that serves as the soma filter, trapping the impurities in the just pressed juice. This physical reading seems preferable to the "obstacle" interpr. of Ge, Re, etc. In this regard, I would point out that the smooth, fluffy, brushed sheepskins available commercially now are misleading: sheep on the hoof, particularly the shaggy mountain breeds presumably familiar to the Vedic people, have much more rugged and irregular wool.

IX.3.3: Because of their position in the vs., the instr. *vīpanyúbhiḥ ... ṛtāyúbhiḥ* appear to be construed with *pávamānaḥ*, which is nestled between them. However, with Ge and Re I take them with pass. *mṛjyate* 'is groomed' at the end of pāda c. The medial them. pres. *pávate* is always reflexive ('purifies oneself'), not passive; when a pass. sense is required, the middle of the IXth Cl. present is used, esp. the part. *punāná-*. Or, to put it another

way, the *pávate* stem, esp. part. *pávamāna-*, is syntactically inert; as Re says (ad vs. 2), “Le mot *pávamāna* semble partout étranger à la syntaxe du v. et se distingue à cet égard de *punāná*, *pūyāmāna*, *pūtá*; les exceptions sont de pure apparence.”

IX.3.4: As often, the simile particle *iva* is “late,” following the first two words: *śūro yānn iva sátvabhiḥ*.

IX.3.7–8: These two vss. are paired; their first two pādas are almost identical:

7ab *eṣá dívam ví dhāvati, tiró rájāmsi dhārayā*

8ab *eṣá dívam vy āsarat, tiró rájāmsi āsprītaḥ*

I think this close match actually conceals an important difference in intent. Vs. 7 describes the ritual journey of the just pressed soma in the standard grandiose cosmic style -- the journey from filter to cup configured as a journey through the vast realms of heaven and the midspace. The verb *dhāvati* is pres. indicative. The vs. picks up from vs. 6, which describes the mixing of the pressed juice with water.

But vs. 8 has an augmented aorist *āsarat* (*ā asarat*, so Pp; it could technically be an injunc. *ā sarat*). I do not think this simply indicates the endpoint of the journey depicted in 7. Instead it alludes to the origin myth of soma, the bold stealing of Soma from heaven treated esp. in IV.26-27. The clue is the adj. *āsprīta-*. Although this stem is glossed as ‘invincible’ by Gr, reflected also in Re’s tr., *√spr* means rather ‘gain, win’ and even ‘recover, regain’. The other occurrence of this privative past part. is found in an Indra hymn in VIII, in a pāda almost identical to our b (acc. *āsprītam*, not nom. as here). There it also concerns Soma’s journey, but in that passage it is clear that the Somaraub is referred to: VIII.82.9 *yām te śyenāḥ padābharat tiró rájāmsi āsprītam* “That which the falcon brought to you [=Indra] with his foot across the airy realms -- the one that could not be recaptured ...” The adj. *āsprīta-* ‘not to be recaptured’ economically encapsulates Kṛṣṇānu’s vain fight against the robber *śyenā* to keep the bird from making off with the Soma confined in heaven. In our passage here the poet is identifying the (humdrum) ritual journey of soma the juice in vs. 7 with the first journey of Soma from heaven in the foundational myth of the Soma Sacrifice, making the two journeys seem as identical as possible by nearly verbatim repetition and thus investing the ritual progress with the glamour and significance of myth. Thus, although the nearly identical vss. 7 and 8 might seem evidence that the poet was spinning his wheels, in fact the repetition is doing something quite different.

IX.3.9: The mythic resonance in vs. 8 is echoed in *pratnéna jánmanā* “in the way of his ancient birth.”

IX.3.10: An elementary passive / active figure: *jajñānó janáyan* “giving birth while he is being born,” somewhat reminiscent of the reciprocal figure in IX.2.7.

IX.4

On the formal constraints in this hymn, see publ. intro.

IX.4.1: The double *ca* construction especially emphasizes the imperatival function of the *-si* form *jéśi*, conjoined as it is with a standard impv. *sánā*.

IX.4.4: This vs. stands apart from the rest of the hymn, which is otherwise addressed in the 2nd ps. to Soma. Here we have a ref. to the (human) ritual participants (*pāvītārah* ‘purifiers’), and though soma appears in the vs., it is as the substance not the god, and in the 3rd ps.

On *pāvītārah* see comm. ad IX.83.2. Note in passing that this is a voc. with retracted accent; the form given by Gr for this passage, *-āras*, is incorrect.

IX.4.5–6: These two vss. share not only the refrain pāda (c) found throughout the hymn, but another one (5b = 6a), as well as a common focus on the sun.

IX.4.9: Loc. *vidharman* lit. ‘in spreading apart / in expansion’ is underspecified and its application unclear -- deliberately so, in my opinion. Once again, the ambiguity allows a blurring of the ritual and the cosmic. In ritual terms the expansion may refer to soma’s spreading across the filter or, as Ge sees it (n. 9b), in the water with which it is mixed; in cosmic terms, it would refer to the spreading of Soma across space (see, e.g., Ober [RR II.152] and VI.71.1 *rājaso vidharmanī*), becoming as extensive as heaven. Re suggests rather that it refers to Soma’s (transitive) spreading (that is, giving) of goods, but I find this less likely. For further disc. see comm. ad IX.64.9.

IX.5 Āprī

On the interaction of the genre of Āprī hymns with the Soma Pavamāna focus, see the publ. intro.

IX.5.1: The part. *prīṇān* may signal the Āprī theme, as Old suggests.

IX.5.6: The placement of the simile marker *nā* seems to make *nāktoṣāsā* ‘Night and Dawn’ part of the simile itself, rather than the frame, but, esp. given the rigid structure of Āprī hymns, where the pair Night and Dawn is one of the key words, this is not possible. We must just assume that the tendency to put *nā* after the first word of the phrase has taken over here.

IX.5.7: My interpr. of this vs., esp. pāda c, differs from the standard. I assume that *pāvamānaḥ* and *īndro vṛṣā* are two separate entities: Soma Pavamāna and Indra the bull -- and that they are identified with the two divine Hotars (*hótārā daívyā*) of b. Old, Ge, and Re all take c as an equational clause: Soma Pavamāna = Indra the bull; there is just one figure, and it has nothing to do with the two Hotars. In their favor is the fact that pāda c has reverted to nominative, whereas the duals are acc. in ab. However, I find it difficult to assume that mentioning the two major divine figures in the Soma Maṇḍala, Soma and Indra, in conjunction with a dual, is utterly unconnected with the dual divine figures in ab. Otherwise pāda c is a non sequitur. (On 9c and IX.6.2 see below.) As for the reversion to the nominative, I find this somewhat troubling, but it is enabled by the fact that in duals nom. = acc.

IX.5.9: The listing of figures in cd is puzzling. The publ. tr. follows Ge/Re, with Indra identified as the drop in c and Prajāpati as the self-purifying one in d, but I now very

much doubt that this is correct. For one thing, Prajāpati as a separate god is found at best only in X (3x); this is the only occurrence of the stem in IX, and in the only other occurrence outside of X (IV.53.2) it is an epithet of Savitar. This two-pāda sequence (9cd), *īndur īndro vṛṣā hāriḥ, pāvamānaḥ prajāpatiḥ* is a variant and expansion of 7c *pāvamāna īndro vṛṣā*, and as in 7 I think it refers to two gods, Soma and Indra. As in 7c the two gods are first identified: here the drop (rather than *pāvamāna-*) and Indra. The next word *vṛṣā* ‘bull’ appeared to qualify Indra in 7c, but could (and often does) qualify either one, and here it’s placed between Indra and *hāri-* ‘tawny’, a soma descriptor, suggesting affiliation to both. The opening of the next pāda, *pāvamānaḥ*, reasserts the Soma figure. As for *prajāpatiḥ*, I think it’s possible that it again refers to both, though I have no idea why this stem appears here. As in vs. 7c I take these pādas as listing other gods to be summoned along with Tvaṣṭar here (*tvāṣṭāram ... ā huve*, like 7b *hótārā ... huve*), with slippage into a free-standing nominative phrase. It anticipates the somewhat random listing of even more gods in 11cd. I don’t find any of this very satisfactory, but I resist the supposed identification of Indra and Soma, who are the two poles of the Soma Maṇḍala.

IX.6

IX.6.2: Pāda b *īndav īndra īti kṣara* “o drop, flow as ‘Indra’” is the strongest piece of evidence for the identification of Indra and Soma in the previous hymn (IX.5.7, 9) and is so cited by Ge (n. 7c to IX.5). As noted ad locc., I do not believe that those vss. equate the two gods; I do, however, believe that there is a (partial) equation here, on the basis of the mystical phonological near-identity of the two stems ‘drop’ (*īndu-*) and ‘Indra’ (*īndra-*), a similarity that is frequently exploited in this maṇḍala, as we have already noted. The identification of the two here also depends on the ambiguity of the goal of *kṣara* ‘flow’, namely *mādam* in pāda a. The stem *māda-* often refers to the ‘exhilarating drink’, namely soma itself, as well as to the abstract state of exhilaration. With Soma flowing to *mādam*, the former, concrete meaning is more or less excluded: S/soma can’t flow to itself. But the concrete goal is certainly available to the god Indra; cf. III.42.2 *tām īndra mādam ā gahi, barhiṣṭhām grāvabhiḥ sutām* “Come, Indra, to the exhilarating drink, stationed on the ritual grass, pressed by stones,” where the second pāda makes it clear that the concrete substance, not the abstract state, is meant. So if “Indra” substitutes for the drop here, *mādam* as concrete goal is possible. See also 9b and comm. thereon.

IX.6.4: As noted ad IX.3.3, in contrast to *pāvamāna-* ‘purifying oneself’, I consider other medial participles to *√pū* to be passive and have so tr. *punānā-* here, though there is no overt sign of passive value and both Ge and Re tr. as reflexive (also in 9a).

IX.6.5: This is a rel. cl. without a main cl., but it is easily attached to vs. 6 (relative / correlative 5a *yām ...* 6a *tām ...*). So also Re.

IX.6.7: This vs. reestablishes the line of demarcation between Soma and Indra that was blurred in vs. 2, by means of the reciprocal figure *devó devāya* “the god for the god,” with the dat. further specified as *īndrāya*.

The stem *pīpāya-* is ambiguous; it can be both intrans. and trans. (and at least once mixed: I.63.8; see comm. ad loc.). In this passage Ge takes it as intrans. (“wann seine Milch quillt”). The ambiguity is in part the result of the partial coincidence of the pf. subjunctive and the redupl. aor. injunctive (or subj.) (see Kü 301–3), and in this passage we appear to have the trans. redupl. aor. (Kü 302). Partly on the basis of VIII.1.19, Old takes Indra as the subj. of trans. *pīpāyat*. Re also considers the form “probably” transitive, though he does not specify the subject.

IX.6.8–9: As noted in the publ. intro., the theme of poetry appears in these last two vss., and I think it likely that Soma’s actions of “protecting poetic skill” and “making the hidden hymns his own” refer to the inspiration Soma, and the soma sacrifice, provide to the poets. What it means to “protect” *kāvya* (8c) is not entirely clear to me, but the preverb *ní* with *pāti* may suggest protection that involves hiding or depositing the thing in question, thus matching the hidden hymns in 9c. (*pāti* may also pun on $\sqrt{pā}$ ‘drink’, of much more common occurrence in the Soma maṇḍala.) As I suggested in the publ. intro., I think the hymns are “hidden” deep within the poets and are stimulated and evoked by Soma and the ritual in his honor. Note also that in the next hymn (IX.7.4a) Soma the poet clothes himself (*vāsānaḥ*) in (pl.) *kāvya*.

IX.6.9: This vs. picks up various expressions from the hymn: *īndrayúḥ* (pāda a) matches up with *devayúḥ* (1b) and *asmayúḥ* (1c), thus forming a slight ring. In b *mādam ... vītāye* “(for Indra) to pursue exhilaration / the exhilarating drink” “repairs” the slightly anomalous *mādam ... kṣara* in 2ab (see comm. there) and also echoes 6b *mādāya devāvītāye*. I might therefore alter the tr. to “for him to pursue the exhilarating drink.” See also *punānāḥ* in pāda a, repeating the same part. in 4c.

IX.7

As noted in the publ. intro., the word *sóma-* does not appear in this hymn. The word is also absent from IX.3, though there the omnipresence of *pāvamāna-* and other forms of $\sqrt{pū}$ takes up the slack. In this hymn *pāvamāna-* is found only once, in vs. 5.

IX.7.1: Lü (600–601) sees this vs. as representing the heavenly ascent of Soma, but those not subscribing to all of Lü’s presuppositions will find it difficult to see that. My own interpr. is far more earthbound: the filter is both the path of the soma and its foundation. The referent of *asya* in c is probably the soma, esp. given the near match of 1c *vidānā asya yójanam* and 8c *vidānā asya śákmabhiḥ*: the *asya* in 8c must be the soma. Even though in both passages the subject of the sentence is plural and refers to drops bzw. waves of soma, the sg. *asya* must be a constructio ad sensum.

On the distribution of the 3rd pl. mid. ending *-ram* versus *-ran* see the extensive disc. by Old. Essentially *-ran* is found pāda-final and pāda-internal before consonant; *-ram* pāda-internal before vowel – but see Old for further refinements

IX.7.2: In keeping with his interpr. of vs. 1, Lü (238) sees the “great waters” (*mahīr apāḥ*) here as the celestial waters -- again not necessary, since the ritual soma is mixed with water after it traverses the filter.

mādhvaḥ could in principle be construed either with *dhārā* (“stream of honey”) or *agriyāḥ*, as in the publ. tr. Though both Ge and Re opt for the former, *mādhvo agriyām* in VII.92.2 suggests the latter, as does the parallel expression *vācō agriyāḥ* in the next vs. (3a; also IX.62.25). So Lü (238). Both Ge and Lü take *dhārā* as instr. sg. (Ge: “Mit dem Strome ...”). (Old hesitates but slightly favors instr.) This is certainly possible, though not necessary: nom. *dhārā* and nom. *agriyāḥ* can have different genders because they belong to two different NPs in apposition to each other. In any case, none of these minor differences in interpr. have any real implications.

IX.7.2–3: A verb of motion needs to be supplied with *prā* in the initial pādas of both vss.

IX.7.3: The phrase *satyō adhvarāḥ*, which I take as a separate nominal cl., but which can simply be another appositional nominative as most take it, must identify soma as, as it were, the embodiment of the ritual, the substance that must be present for the *adhvarāḥ* to occur.

IX.7.4: In principle, *kāvya* (and/or indeed *ṇṛmṇā*) could be instr. sg. (“... by his poetic skill ...”), though the standard renderings (incl. Lü 265) take it as acc. pl. There is no real way to tell, but in the similarly structured IX.94.3 *pāri yāt kavīḥ kāvya bhārate* (cf. our *pāri yāt kāvya kavīḥ*) *kāvya* should be acc. pl. because it is the frame that matches a clear acc. pl. simile in the next pāda. This is suggestive but hardly decisive.

On pāda c *svār vājī śiṣāsati* “The race horse strives to win the sun,” see comm. ad IX.74.1, 76.2. In these passages I think that the sun, with its gleaming light, represents the milk towards which the soma is aiming.

IX.7.6: On *rebhā*- see comm. ad VI.3.6.

IX.7.7: Gr takes *rāṇā* as impv. to *√ran* (them. pres. *rāṇati*), on the basis of the Pp. reading *rāṇa*, but it is better to interpr. it as instr. sg. to the root noun *rān-*, against the Pp. So already Old ZDMG 63 [1909]: 289 = KISch 305; see also Ge (n. 7c), Schindler (Rt. Nouns, s.v. *rān-*). With Ge I take it as the referent of the rel. prn. *yāḥ* that immediately follows, forming a nominal cl. (“with the joy that is ...”). The drawback to this is that the new cl. would not coincide with a metrical break -- but nominal, izafe-like clauses are not infrequently so positioned. Re also takes *rāṇā* as an instr. sg., but because he expects such a root noun to have fem. gender (see Schindler, who simply says that the gender of this noun can’t be determined), he construes it as part of the rel. cl.: “(ivresse [referring back to *mādena* in b]) qui est joyeusement [= *rāṇā*] (présente) dans ces comportements.” Although this allows clause and metrical boundary to coincide, it otherwise seems too fussy to me.

IX.7.8: As disc. in the publ. intro. and above ad vs. 1, the c pāda of this vs. forms a ring with that of vs. 1; the final vs., 9, is addressed to the two world-halves and seems extra-hymnic. As in vs. 1 the *asya* of c must refer to soma, although the subj. of the sentence is plural.

Medial forms of $\sqrt{pū}$ when construed with \tilde{a} mean ‘attract / bring here through purification’ and take the acc.; similar is $\tilde{a} \sqrt{yaj}$ ‘win / attract by sacrifice’. $\tilde{a} \sqrt{pū}$ is extremely common in IX. See also remarks on $\tilde{a} \acute{síkṣa-$ ad I.112.19.

IX.8

IX.8.1: Pāda c, *vārdhanto asya vīryām*, is structured like 1c and 8c in the immediately preceding hymn, IX.7, though here *asya* must refer to Indra, not Soma.

IX.8.2: As noted in the publ. intro., the gods Vāyu and the Áśvins, along with Indra, who was mentioned in the previous vs., are also the gods mentioned as the goal of the soma in IX.7.7.

IX.8.4: Why do the thoughts number seven (*saptá dhītáyah*)? Ge (n. 4ab) links them with the seven *dhātars* in nearby IX.10.3, while Re adds the seven *dhāman* of IX.102.2. These suggestions are reasonably plausible, though they simply displace the numerical problem. We should also note that the seven thoughts recur in the next hymn (IX.9.4), and another, unidentified, group of seven entities is found two vss. later (IX.9.6). IX.8–10 are attributed to the same poet, Asita Kāśyapa or Devala Kāśyapa (responsible indeed for IX.5–24), and he may simply have a penchant for the number seven; in our passage it would be a complement to the ten fingers (a number that of course makes sense). For *saptá dhītáyah* and ten fingers in a hemistich almost identical to this one, see IX.15.8; for further occurrences of “seven inspired thoughts” see IX.62.17 and possibly IX.66.8.

IX.8.7: The “comrade” (*sákhī-*) whom the soma is urged to enter is most likely Indra. The juxtaposition of the voc. *índo* with *sákhāyam* might be meant to evoke the phonological twin *índram*.

IX.9

On the structure and often puzzling content of this hymn, see publ. intro.

IX.9.1: Some of the uncertainties in this vs. are illuminated by parallel passages, esp. IX.10.2 in the adjacent hymn. Note that Soma is identified as a poet both in pāda a, where he is in fact “the poet of heaven” (*diváh kavíḥ*), and in c in the bahuvrīhi *kaví-kratu-* ‘having a poet’s purpose’. See also below ad 6c.

The expression *pári ... váyāmsi ... yāti* (split over 3 pādas) is reminiscent of IX.111.1 *vísṣvā yád rūpā pariyāti* “when he makes the circuit of all his forms ...,” as Ge points out (n. 1b). The journey around the filter must be meant.

The two ‘granddaughters [/nieces]’ (loc. du. *naptyòḥ*) are, in the ritual context, most likely either the two pressing boards (Sāy, Ge) or the two hands of the priest (Re). Because of the similarity between this vs. and 10.2, I favor the latter because of the *gābhastyoḥ* ‘in the two hands’ of 10.2b. In a cosmic context, the dual could refer to Heaven and Earth, who are identified as Soma’s two mothers (by most interpr.) in 3. The kinship flip -- Soma and his two granddaughters [/nieces] here, Soma and his two mothers in 3 -- would not doom this identification, given the RVic poets’ love of paradox, esp. the paradox of generations.

The ppl. *hitāḥ* with which *nāptyòḥ* is construed is ambiguous, between \sqrt{hi} ‘impel’ and $\sqrt{dhā}$ ‘place’. Though both Ge and Re favor the latter, I opt for the former on the basis of *hitāḥ* in 4a and *hinṡānāsaḥ* in the parallel vs. 10.2a, both clearly belonging to ‘impel’. Either is possible, however; ‘placed’ would weakly favor the ‘pressing boards’ interpr. of *nāptyòḥ*.

IX.9.2: The parallel but oddly assorted dative phrases *kṣāyāya pānyase* “to/for the praiseworthy dwelling place” and *jānāya ... adrúhe* “to/for the race without deceit” I take as a possible elaboration on the disjunctive pair “men and gods.” Although Re wants the latter to refer to “l’être-humain,” he himself points out that *adrúh-* is generally an epithet of the gods (though see *adrúhaḥ* with ‘rivers’ in 4b). By contrast to “the race without deceit [= gods],” *kṣāya-* may refer to the ritual ground as the ‘dwelling place’ and by extension to the humans who create and inhabit it.

IX.9.3: The referent of the fem. du. here is generally taken as Heaven and Earth.

IX.9.4–6: As noted in the publ. intro., I consider this an omphalos hymn, with vss. 4 and 6 with their repetition of “7” defining vs. 5 as the omphalos. The omphalos effect is muted however, since the “message” of vs. 5 is hardly a deep mystery. For further on this sequence of vss., see publ. intro.

IX.9.4: On the “seven insightful thoughts” see also 8.4.

The subj. of *vāṡṡdhúḥ* in c must be feminine, on the basis of *yā(h)*, but the choice between the “insightful thoughts” (*dhīṡ-*) of a and the rivers (*nadī-*) of b is not clear.

IX.9.5: This vs. presents the same problem as 4c: because of init. *tāḥ*, nom. pl. fem., the subject of *ā dadhuḥ* has to be feminine, and there are several pl. feminines in play: the “insightful thoughts” (*dhīṡ-*) of 4a and the rivers (*nadī-*) of 4b. But which one (or both)? In any case, presumably the subjects of 4c and 5 are the same -- though Sāy opts for “fingers” in this vs. but “rivers” in 4c.

The unspecified dat. (or with Re loc.) *mahé* ‘for/in great ...’ has too many possibilities for its referent, and I have made no effort to choose one.

IX.9.6: The problem of the fem. referent continues here. In ab Soma, as the draught-horse (*vāhniḥ*) “sees the seven” (*saptā paśyati*); we have just had “seven thoughts” (4a), and “seven” is the canonical number of rivers, which we also encountered in vs. 4 -- so either referent (or a conflation of both) is possible here. A fem. acc. pl. *devīḥ* ‘goddesses’ is the obj. of the verb ‘satisfied’ (*atarpayat*) in the next pāda c. Unfortunately this does not clarify the reference: the pl. of *devī-* is frequently used of waters and at least once elsewhere (VII.50.4) of rivers, but at least in the singular it is quite commonly used of *dhī-* and similar words.

On the hapax *vāṡvahi-* see AiG II.2.292–93.

On the always ghastly *krívi-* see comm. ad I.30.1 and V.44.4. Esp. in the latter passage I argue that the word often seems to be used of an equine *and* that it might be a deformation or hyper-Sanskritization of *kaví-*. Both factors are present here: the first two pādas of this vs. depict Soma as a draught horse drawing (*vāhniḥ ... vāṡvahiḥ*), but we also

had occasion to note ad vs. 1 above that Soma was twice identified as a *kaví*- there. In the publ. tr. I default to a PN, but I do in fact think that the word has richer semantics, derived from both just mentioned uses, here. I do not see any way to convey that in a single tr. of the word, however.

IX.9.7: The voc. *pumas* ‘o male’ is rather stark. It is in fact the only occurrence of the voc. of this stem in the RV and the only place where the stem is used of Soma. I ascribe its use here to the contrast being drawn with the feminines in vss. 4–6 (as well, perhaps, as the two mothers in 3) and to the martial content of the vs.

As I argued already in my dissertation and the *-áya*-monograph based upon it, I consider the supposed root $\sqrt{k\bar{l}p}$ to have been extracted from the *-áya*-transitive *kalpáyati*, itself (in my view) a *-p*-formation to $\sqrt{k\bar{r}}$ with “popular” *l*. The early rarity of the thematic noun *kálpa-*, very common later but found in the RV only here and in the privative form *akalpá-* (I.102.6), supports this view. In the publ. tr. I followed the standard interpr. of *kálpa-* in this passage as ‘ritual work’ (Ge “bei den heiligen Bräuchen,” Re “les rite”), based in part on its later usage. I still think this is a possible reading. However, on the basis of my interpr. of *akalpá-* in I.102.6 (see comm. ad loc.) and the rest of the vs. here, I wonder now if they are not rather (or in addition) *martial* arrangements: the address to Soma as ‘male’ (pāda a), the statement that darkness must be fought (*yódhyā*)(b), and the intensive subjunctive of \sqrt{han} , *jañghanah* (c) all favor a more bellicose interpr.

IX.9.8: The duplication of comparatives with slightly different shapes, introduced by the particle *nū*, produces a nice phonetic figure, *nū nāvīyase nāvīyase*.

IX.9.9: As was noted in the publ. intro., ‘sun’ (*svāh*) is the last word of the hymn, resonating with the themes of shining and brightness earlier in the hymn (see esp. 3ab and 8c, as well as the darkness to be combatted in 7b).

IX.10

For the poetic structure of the hymn, see publ. intro.

IX.10.1: *svānāśah* can be both the nom. pl. masc. of the adj. *svānā-* ‘resounding’ (\sqrt{svan}) and the med. rt. aor. part. to \sqrt{su} ‘press’, in passive usage as is usual for this part. I consider the ambiguity intentional and render it twice (“while being pressed ... resounding”), but although both Ge (n. 1a) and Re (with more fuss) recognize the double identity, they render only the ‘resound’ sense that is appropriate to the simile.

IX.10.2: With Ge I take c as an independent nominal cl. Re takes c as a continuation of ab, but as Ge points out (n. 2c) c is the Fortsetzung of the image in ab: in ab the chariots are presumably competing for prizes; the prizes or “takings” (*bhāra-*) in c are what these chariots win. For the phrase in c see IX.16.5 *mahé bhārāya kārīṇah* “for the great taking of the decisive victor.”

IX.10.3: The first hemistich contains a simile embedded, as it were, in a metaphor: kings are only metaphorically “anointed” (that is, decorated, adorned) with praises; the soma

juices are somewhat less metaphorically “anointed,” since “the cows” are actually milk, which is liquid enough to anoint.

In c the poet seems silently to switch instrumental functions, while holding the structure constant: NOM. INSTR. *añjate*. In both a and b the INSTR. expresses the instrument of anointment, either metaphorical or real, but in c the INSTR. expresses the agents who perform the anointing. The “seven ordainers” (*saptá dhātár-*) are presumably the priests; the priests reappear as Hotars in vs. 7 with “seven siblings,” probably their insightful thoughts or else simply seven other priests. See below.

The relationship between kings and the genre of *prásasti-*, which I discuss in my *RV between Two Worlds* (pp. 146–48), is very clear here.

IX.10.4: The pun on *svānāsaḥ* in 1a recurs here; this time Ge and Re render it only as ‘pressed’.

IX.10.5: On my view of the sense of this vs., see publ. intro. With Ge, I supply *bhāgam* with the gen. *vivāsvataḥ* in a, as well as with gen. *uśasaḥ* in b; unlike Ge I take *bhāga-* to mean ‘portion’ (not “das Glück”) and interpr. it as referring to the radiance of the two divinities, by which Soma transforms himself into the sun (or rather a set of suns -- the radiating golden color on the sheep’s fleece filter). Re’s interpr. is quite different: he supplies “la région” with *vivāsvataḥ*, and takes *uśasaḥ* as an acc. pl., parallel to *bhāgam* and both as names of divinities (“engendrant les Aurores (et) Bhaga”). For the former he must be thinking of the common expression *sādane vivāsvataḥ* “in the seat of V,” but that expression is only in the loc. and never found in IX. As for the latter, even with his explanatory n. I don’t how this improves the sense of the vs.

IX.10.6: “The raging of the bull” must refer to the headlong journey of the soma as it is being purified, which is set in motion and accompanied by the recitation of ritual poetry -- hence the violent opening of “the doors of poetic thoughts” (*dvārā matīnām*). The continuity of the poetic tradition from the *pratnāḥ* (‘ancient’) bards to the current ones is suggested by the use of the pres. *ṛṇvanti*. I do not think, with Ge (n. 6ab), that *pratnā-* gives the present tense verb a preterital sense, and indeed in IX.73.3 *pītā ... pratnó abhī rakṣati* Ge tr. the pres. *rakṣati* with the pres. “wacht,” not a preterite.

IX.10.7: Ge and Re take the seven siblings here as the seven *dhītí-* of 8.4 and 9.4, which is quite likely -- though the priests themselves are also a possibility. Ge adduces IX.66.8 *sám u tvā dhībhir asvaran ... saptá jāmāyāḥ* “Together the seven siblings cried out to you with insightful thoughts,” which has both the 7 siblings and the thoughts -- but the referent of the siblings in that vs. is not clear. Ge there takes it as the fingers, which seems somewhat perverse, given that seven is not a canonical number for fingers -- and fingers don’t cry out. I prefer rivers, since the “seven streams” were mentioned in the previous vs.

IX.10.8: *ā dade* belongs to *√dā* ‘bind’, not ‘give’; see, e.g., Kü 242. On the idiom see comm. ad I.139.1, IX.79.4.

Ge, Re, and Kü all take b as a simile (“wie das Auge an die Sonne”), presumably with *cīd* as the simile particle. But, as I have stated elsewhere (see, e.g., comm. ad

I.173.7), I am not at all convinced that *cid* is ever so used. Here, the point is the real identification of Soma, or his eye, with the sun, not a comparison to Soma's kinship with me; see *ékam ákṣi* in 9.4, the transformation of Soma into sun(s) in our vs. 5c, and esp. the transformation of the sun's eye into Soma's eye in the next vs. (9c).

Gr identifies *duhe* in c as a 1st ps.; Ge and Re take it as 3rd sg. passive with *ápatyam* as subj. (e.g., “Die Nachkommenschaft des Sehers wird herausgemolken”), interpr. *kaví-* as a reference to Soma and *ápatyam* as the soma juice. But medial forms of $\sqrt{\text{duh}}$ are generally transitive, with the sense ‘give X as milk’, and I follow that interpr. here, with Soma the unexpressed subject/agent. I suggest that c explains a: “binding his navel to our navel” means that he makes himself our kin and indeed takes responsibility for providing us with offspring. I take *kavéḥ* as referring to the (human) poet. Soma repays our devotion and care (see esp. vs. 7) with the usual ritual rewards, including sons.

IX.10.9: Ge takes *priyā* as nom. sg. fem., with gapped “Daughter of the Sun” -- but it seems unlikely that a new character would be introduced at this point, and it makes more sense for Soma to be the one doing the looking. Better to interpr. *priyā* as a neut. pl. with gapped *padā(ni)*, as in nearby IX.12.8 *abhí priyā divás padā*. Ge (n. 9a) also allows the possibility of a neut. pl., but wants to construe it with sg. *pādam*, which he takes as a “collective singular,” a concept that I think we can do without but that seems to be encouraged by Old's remarks. (See comm. ad VI.17.1 for another such ex. proposed by Ge.) I think rather that there are two (sets of) *padā-* (sim. Re).

Ge also suggests that in this instance of INSTR. *gúhā hitám*, the phrase means “hidden *from*,” not “hidden *by*.” Without a better sense of what this vs. is intended to tell us, I prefer not to contravene the usual agentive value of the instr. For my own speculation on the hidden track, see publ. intro., which may be supported by IX.102.2, where the hidden track that soma follows seems to be in the filter.

IX.11

IX.11.1: *asmai* is only the second word in the hymn and is unaccented; therefore it should technically refer to something already mentioned in the discourse. But since soma is the topic of *all* discourse in this ritual context, no prior verbal mention is necessary. Sim. IX.70.1; see also *asya* in IX.29.1a, IX.30.1a.

IX.11.2: Pāda c consists entirely of a rudimentary etymological figure, *devám devāya devayú*. The acc. *devám* is of course Soma as god, coreferential with *páyah* ‘milk’, a metaphor for soma the substance, in pāda a; the dative *devāya* is Indra. I take *devayú* as an adverb; so also Re. It is also possible (see, e.g., Re's n.) to take it as a neut. modifying *páyah*, as Gr does -- and, it seems, Ge. In that case, *devám* would need to be a neut. adj. ‘divine’ (Ge's “die göttliche”), but the number of clearly adjectival uses of *devá-* is very low. See, however, IX.13.5 and VII.21.1.

IX.11.4: DAT *gāthám arcata* can be seen as a paraphrase of *úpa* DAT *gāyatā* in 1a, with etymological matching.

The epithet *divispṛś-* ‘touching heaven’ is almost the only departure in this hymn from the tight, earthbound focus on the ritual.

IX.11.6: Pāda c *īndum īndre* paraphrases *devām devāya* in 2c, though with a loc., not dat.

IX.11.7: Pāda b is almost identical with 3a.

IX.11.9: The *īndo- īndra-* figure appears yet again, in different cases (voc., instr.).

IX.12

Lü tr. and comm. on vss. 1–6 of this hymn (706–7), with his usual, often overblown, emphasis on the heavenly location of the elements and actions. By contrast, I tend to attribute the heavenly references to the poet’s attempt to project a cosmic dimension on the ritual confined to a small portion of the earth’s surface.

IX.12.3: On *madacyút-* and *vipaścít-* see, e.g., Scar (128 and 122 respectively).

gaurī is the loc. sg. to the *vrkī*-stem *gaurī-*, not a dual (per Gr); see AiG III.170 and comm. ad VII.103.2 (*sarasī*) and I.135.9 (*nadī*). As indicated in the publ. intro., of the possible referents for this buffalo cow, with Ge and Re (see esp. Re’s n.) I favor the hide on which the pressing apparatus is placed -- as opposed to Sāy’s ‘speech’, or Lü’s more complex speech-identified-with-the-heavenly-waters.

IX.12.5: This vs. seems to posit a distinction between two somas: one, called *sóma-*, that is in containers and on the filter and another, called *īndu-* ‘drop’, that embraces / surrounds (*pári śasvaje*) the first. What distinguishes them is difficult to discern; Ge suggests that the “nachrinnende” Soma is taken in by the pressed juice, but this doesn’t seem to make ritual sense, since the soma in the tubs and on the filter would already have been pressed as well. Lü, predictably, thinks the heavenly soma incorporates the earthly soma. Say identifies *īndu-* as the god Soma (*somo devaḥ*). Of the various possibilities, Sāy’s seems the most plausible -- that is, Soma the god encompasses all the forms that soma the substance takes in the course of ritual processing, though physically that substance is somewhat different at every stage. I also considered the possibility -- given the occasional identification and frequent juxtaposition of *īndu-* and *īndra-* -- that *īndu-* here refers to Indra, and “embrace” is a metaphor for “drink, consume.” But I’d prefer to keep *īndu-* separate from Indra.

IX.12.6: The *īndu-* here “sends forth his speech” (*prá vācam ... iṣyati*), which supports an animate reading of *īndu-* in the previous vs. Needless to say, Lü has a heavenly interpr.: *īndu* is the heavenly soma, the sea is the heavenly sea, and the *kóśa-* is the “Urquell im Himmel.” In the publ. intro. I interpr. the sea as the soma in the vessel or the mixing water. And the speech is presumably the speech of the ritual participants, prompted by the action of pressing the soma.

IX.12.7: This vs. has no finite verb; I take it as a preamble to 8, in order to capture the play between the two forms of *hinvānāḥ* (7c, 8b).

When *vānaspāti-* (lit. ‘lord of the forest’) does not mean simply ‘tree’, it generally refers to the sacrificial post in the animal sacrifice, particularly when found in the Āprī hymns. The word is not found elsewhere in IX, except in the Āprī hymn IX.5.10, where it

seems to have that reference. But here it must refer to soma. Since essentially all the plants that have been suggested as the source of soma are fairly insignificant physically, the use of *vānaspāti-* to refer to it must have seemed slightly comic (like calling a dandelion Lord of the Forest), but also a way of capturing the towering importance of the apparently lowly plant. The word is used of soma once elsewhere, I.91.6 (a soma hymn), in the phrase *priyástotro vānaspátīḥ*, almost identical to *nītyastotro vānaspátīḥ*, esp. because *nītya-* ‘own’ and *priyá-* ‘dear, own’ are near synonyms in some usages. The point, I think, is that Soma has first claim to praise.

On *sabar-* as ‘juice’, see EWA s.v. *sabardúh-* and Narten (YH 212). I construe the gen. pl. *dhīnām* with the first member of the cmpd. *sabar-dúgha-*: “... juice of insights.” I supply *pavítre* with *antár* on the basis of 5b *antáh pavítre* (cf. VIII.101.9). Ge’s “unter Liedern” does not work because *antár* doesn’t take the gen., and though Re’s “Arbres des intuitions” sounds imposing, it doesn’t make much sense. Old’s first interpr. of this pāda is close to mine, with *dhīnām* dependent on *sabar-*, though he takes *antár* as an adverb. However, he considers the obvious solution to be to take *dhīnām* with *antár*, since the gen. is possible with *antár* in the later language. Since “within/amid the thoughts” isn’t a particularly compelling addition to the passage, I prefer my own (and Old’s first) solution.

The common med. part. *hinvānā-* can be both transitive and passive, in approx. equal numbers. In this vs. it is transitive, but in the next passive.

IX.12.8: As noted just above, *hinvānā-* is used passively here, in contrast to the same form in 7c -- here referring to the priestly impulsion given to the soma on its journey of purification.

The “tracks of heaven” are, in my view, the traces of the soma on the filter; see 10.9.

Pāda c is identical to IX.44.2c, where I do not construe *vīprasya* with *dhārayā* but with something earlier in the vs. My reason there is that the *dhārā-* ‘stream’ is always otherwise only Soma’s, and so should not belong to the/a *vīpra-*. But in our passage there is nowhere to construe *vīprasya* but with *dhārayā*. I consider ad IX.44.2 the possibility that the pāda was borrowed thoughtlessly here. But there are several ways to make sense of our passage. If the *dhārā-* is Soma’s, the point may be that he is a *kaví-*, a sage, but he also has the fluency of an inspired poet, who simply pours out verbal eloquence, thus identifying Soma with both types of poet. This suggestion is supported by the next hymn, IX.13.2, where Soma is explicitly identified as a *vīpra-*, as well as his parallel identification as *vīpra* and *kaví* in IX.18.2. Or *dhārā-* can be used here metaphorically to refer to a stream of words.

IX.12.9: The impv. *dhāraya* is almost identical to the instr. *dhārayā* in 8c, though their morphology is entirely different.

IX.13

This hymn is dominated by forms of med. *pávate* (vss. 2-4, 8-9), with the first vs. containing instead med. *punānāḥ*. Only vss. 6-7 lack such forms. Perhaps coincidentally, these two vss. are the only ones containing similes.

The hymn is also constructed from bricolage and ready-made phrases, many found verbatim in other hymns. There is a certain amount of chaining between vss.; it is difficult to know if this is just a result of the assembly process (a word in one vs. suggests to the poet another such phrase, which he then attaches) or was meant as a unifying poetic device.

IX.13.1: As noted in the publ. intro., the mention of Vāyu and Indra identifies the occasion as the Morning Pressing, since those two gods receive the first soma offering of the pressing day.

IX.13.2: The publ. tr. does not make this clear, but the addressees are pl., presumably the priests.

The identification of Soma as a *vípra-* supports the suggestion ad IX.12.8 in the preceding hymn that *vípra-* refers to Soma there as well.

IX.13.3: Pāda c, with a medial part. characterizing the soma (*gr̥ṇānāḥ*), followed by the infinitival dat. *devāvītaye*, matches 2c *suṣvāṇām devāvītaye*. The pattern is reinforced by the infinitival dat. *vājasātaye* ending pāda a.

IX.13.4: The chaining continues, with *vājasātaye* likewise ending pāda a of this vs.; see also 6b.

√*pū* + ACC (here *pávasva ... íṣaḥ* [etc.]) should rightly have the preverb *ā* in the idiom ‘bring through purification’; see esp. Re’s n. In tr. I have supplied it, partly on the assumption that since this hymn is constructed of ready-made phrases, this pāda may have been adapted from a context where the previous pāda contained the *ā* in tmesis. Re also points out that the construction here can be under the influence of *pávantām ā* in 5b. I do *not* follow Re in seeing √*pū* without preverb as becoming indiscriminately transitive in IX, with the sense ‘couler’.

IX.13.5: It is difficult not to take *devá-* here as adjectival, modifying *índavaḥ*. See my reluctance to so interpr. this stem in IX.11.2, and see comm. ad VII.21.1.

IX.13.6: The inf. *vājasātaye* is found here a 3rd time (after 3a, 4a).

IX.13.8–9: The impv. *ápa ... jahi* of 8c is converted into the part. *apaghnántaḥ* in 9a. The sg. subj. of 8 is also replaced by a pl., but sg. *sómaḥ / indo* and pl. *sómāḥ / índavaḥ* alternate throughout the hymn.

IX.14

IX.14.1: The ‘decisive act’ (*kārā-*) in question is presumably the purification itself. See Re’s n. on the need to preserve this sense here, rather than giving in to Ge’s convenient “Kampfpreis” (presumably *vāja-*), which Re pronounces “un peu loin.”

IX.14.2: As noted in the publ. intro., the subjects here are the fingers, troops of five (on each hand).

The subord. *yádī* is best taken as an example of my *yád ī* -- hence “when him/it ...,” not “if.”

IX.14.3: I am disturbed by the sequence of tense -- or lack of it: the augmented aor. *amatsata* in the main, *ād*, clause does not fit well with the pres. *parīkṛvānti* in the preceding *yád* clause (vs. 2) or the pres. *vasāyāte* in the following (3c). I am tempted to make the *ād* clause the follow-up to vs. 1: “the poet flowed around and forth ...; after that the gods found exhilaration.” In that case, 3ab would interrupt the sequence of the subordinated present clauses in vs. 2, 3c, but I don’t know of other examples of this kind of alternating structure. Perhaps vss. 2 and 3 should be reversed: the *ād* clause of 3ab would then follow directly after vs. 1, and the parallel subordinate clauses in 3c and vs. 2 would be picked up by the main clause of 4ab, which also has a pres. tense verb.

IX.14.5: As disc. in the publ. intro., in this hymn the poet provides several different metaphorical versions of the same ritual act. This vs. contains two of those alternatives: in ab Soma is groomed “by the granddaughters of Viviasvant,” a reference to the fingers, which were characterized as “troops of five kinsmen” in 2ab; in c Soma makes cows like a garment (*gāḥ kṛvānó nā nirñījam*), a variant of 3c “clothes himself with cows” (*góbhir vasāyāte*). For the exact phrase see IX.107.26 and for variants without the simile particle IX.86.26, 95.1.

IX.14.6: *śrītī-* is a hapax, on which see Old. It is here an instr. sg. fem., referring to the fine fleece filter, and echoing *śrītāḥ* in 1b.

With Old and Ge I take *gavyā* as instr. to *gavyā-* ‘longing for cows’, rather than neut. pl. with Gr and Lub. Re sits on the fence.

Although *vidé* is ordinarily passive, there are a few precedents for ‘know (as) one’s own’; see VII.40.5, VIII.62.9.

IX.14.7: Here the fingers (*kṣīpaḥ*) are named directly, after the metaphors of 2ab and 5a; the verb *√mṛj* ‘groom’ recurs from 5b.

IX.15

On the structuring principle of the hymn, see publ. intro.

IX.15.1: Pāda c, *gáchann índrasya niṣkṛtām*, echoes IX.13.1c *vāyór índrasya niṣkṛtām*. It is not clear to me whether a different ritual occasion is meant, or it’s simply a variant.

IX.15.2: The phrase *dhiyā yāty* (with non-vocalic -y in *yāty*) “drives with insight” in 1a is echoed by the verb *dhiyāyate* “exercises his insight” in 2a, though in different metrical positions. *dhiyāyate* also participates in another phonetic figure, with the final word of b: (*dhi*)yāyate / (*devā*)tātaye, with the same vowel pattern, but crossed consonants (*y y t / t t y*). Denom. *dhiyāyāte* is of odd formation, presumably built to the instr., which makes it seem context-generated (from *dhiyā* in 1a), but there is unfortunately another form to the stem (dat. part. I.155.1 *dhiyāyaté*), as well as a related -yú-adjective, *dhiyāyú-* (I.8.6). Still I think generation in this context is likely.

Pāda c contains another mirror-image phonetic figure: (*amṛ*)tāsa āsat(e).

IX.15.3: The ppl. *hitá-* is potentially a pun, both ‘propelled’ (\sqrt{hi}) and ‘placed’ ($\sqrt{dhā}$), though in this case the former is dominant, given the journey theme of the rest of the vs. (and hymn).

In c *yádī* is best read *yád ī*, see also IX.14.2.

IX.15.5: The *aṃśú-* here is in the first instance the shoots of the soma plant, the usual sense of this stem, but I think a possible secondary sense is the tufts of wool on the fleece filter, which can resemble shoots of vegetation. In the former case the instr. expresses accompaniment, in the latter instr. of path-along-which. See the instr. in 1a (*āṇvyā*), 2b (*pathā*), and 6b (*pāruṣā*), which all refer to the fleece along which soma journeys.

IX.15.6: In contrast to the relative simplicity of the rest of this hymn, this vs. presents a number of lexical puzzles / unusual usages.

On *pibdanā-* see comm. ad VI.46.6. As indicated there, I take the underlying verb as ‘go step-by-step, plod, trudge’. In our passage I think *pibdanā vásūni*, lit. “plodding goods,” is a jocular way to refer to cattle -- the “cows” [=milk] that Soma is rushing towards. Others (Ge, Re) simply see these as the material goods Soma is on his way to gain.

A *pārus-* is a link(age), joint, or juncture; see EWA s.v. *pārvan-* with considerable lit. as well as comm. ad IV.22.2. In this instance I think it’s abstract ‘articulation’ and refers to the 3-D patterns on the fleece filter. As indicated in the comm. to the preceding vs., I take it as an instr. of the path here. Others (esp. Ge and Re) think it refers to the knots or nodules of the soma plant that remain in the filter when the juice has flown out, but then both the singular and the instrumental are hard to explain. Note that in IV.22.2 Indra wraps himself in the *pārvāni* of a river, which I take there as tufts of foam that resemble tufts of wool.

śāda- is a hapax in the RV, but related words are found elsewhere, if rarely, in Vedic: YV texts (VS, MS, KS, ŚB, etc; see Bloomfield Conc.) contain a mantra *śādam* [*śādam* in accented texts] *dadbhiḥ* “*śād(a)* with the teeth,” in a litany listing the disposition of the parts of the sacrificed horse. There is no strong contextual evidence for its identification with a plant, much less with grass or fresh grass. However, in later Skt. *śādvala-* means ‘grassy’ and matches the fairly widespread MIA word *saddala-* ‘id.’ (Pāli etc.), and ‘grass’ is certainly compatible here, since horses crop grass with their teeth. It is also not possible to tell from the mantra whether the stem is thematic (as in our RVic passage) or a root noun. The JB contains two occurrences in a single passage of what is clearly a root noun and which is somewhat more helpful semantically than the YV exx. It is in a passage that lists several plant substitutes to press in place of soma, of which *śād* is the first: JB I.355 *śuklās śādo ‘bhiṣunuyuḥ / somo vai rājā yad imaṃ lokam ājagāma sa śātsv eva tad uvāsa / sa evāsyā saṃnyaṅgaḥ / tam eva tad abhiṣunvanti* “They should press white/bright *śād*-s. When Soma the king came to this world, he dwelled then in *śād*-s. That is his mark. Thus they press him in this way.” On this basis Soma seems to have an affinity with *śād(a)-*. However, it is not possible to tell whether the JB passage is an independent witness to this association or was constructed on the basis of the RV passage. In any case, I have no idea what aspect of the soma ritual *śāda-* is meant to refer to. I assume the descent here should be into some type of soma vessel (see *drōṇeṣu* in the

next vs., 7b). I considered the possibility that *śāda-* is meant to evoke some noun meaning ‘seat’, to \sqrt{sad} , with the MIA loss of distinction among sibilants enabling such a pun. But there is no appropriate nominal counterpart belonging to \sqrt{sad} . Another possibility, starting with ‘in / among the grasses’, is that the image is of a worn-out racehorse put out to pasture. But none of these possibilities is particularly compelling, and I’m afraid the reference must remain a mystery.

IX.15.8: The insights of b form a bit of a ring with the insight of 1a. Furthermore, ab with ten fingers and seven *dhītí-* grooming Soma is almost identical to IX.8.4.

IX.16

IX.16.1: On *oní-* see comm. ad VI.20.4, where I am unsatisfied by the current consensus that it means ‘arm’ (see EWA s.v.) but offer nothing to take its place. Here ‘arm’ works perfectly well.

Etaśa is the sun’s horse, so he would be traveling through the air. On \sqrt{tac} as referring generally to birds’ movements, see IX.32.4.

IX.16.2: Ge and Re construe *dákṣasya* with preceding *krátvā*, which is certainly possible: *krātu-* and *dákṣa-* are often associated, and Ge adduces several passages containing *krátvā dákṣasya* (III.2.3, V.10.2 -- though in both cases JPB plausibly construed *dákṣasya* with something else). But since *rathī-* ‘charioteer’ is regularly construed with a gen. (incl. *dákṣasya* IV.10.2, VI.51.6) and since *krátvā* appears without gen. in nearby 4c, I take *dákṣasya* with *rathī-*. Better might be the course suggested (but not followed) by Ge in his n. 2a: “*dákṣasya* wohl nach beiden Seiten zu verbinden.” This would yield the tr. “with the resolve of skill we accompany the charioteer of skill ...,” which seems a bit heavy.

IX.16.3: As noted in the publ. intro., the hapax *ánapta-* is difficult. Insofar as there is a standard view, it is taken as ‘unwatered, undiluted’ (Gr ‘nicht wässrig’, Ge ‘nicht verwässert’; EWA s.v. with lit.), while Re prefers ‘inaccessible’. Although the connection with ‘water’ makes the most superficial sense, esp. given its juxtaposition with immediately following *apsú* ‘in the waters’, it doesn’t make ritual sense, in that the soma *is* watered during these steps in the sacrifice, and in this very pāda the soma is depicted as being “in the waters.” My own desperate suggestion is not appreciably better, that it is formed to *napítī-* ‘granddaughter, niece’, used of the fingers that prepare the soma. Two of the six forms of this word are found in hymns by just this poet (Asita Kāśyapa or Devala Kāśyapa), IX.9.1, 14.5). The word would mean ‘without the granddaughters’ (for the accent, cf. words like *áprajā-* ‘without offspring’ and AiG II.1.239–40), that is, without their ritual ministrations. The point would be (if there is a point) that the soma speeds through the waters and would do so, even if it had not received these ministrations. I do not, however, set much stock in this suggestion, esp. since the morphology is dicey to say the least.

The phrase *apsú duṣṭára-* is found also in nearby IX.20.6, so this must be the constituency here -- and *apsú* is therefore not to be construed with *ánaptam*. As Re points out, Soma is several times called *ap-túr-* ‘crossing the waters’ (e.g., IX.63.5, 21), and the expression here redistributes the elements.

IX.16.4: In the publ. tr. I construe *punānāsya* with *pavítre*, not with adjacent *cétasā*, as Ge and Re do. I would now emend my tr. to the standard: “with the attention of the one being purified [that is, himself].” Ge comments (n. 4a), “Er weiss von selbst, was er zu tun hat,” and although I’m not entirely sure that this is what the phrase means, my publ. tr. doesn’t make much sense either and overlooks the fact that pāda b, which contains the noun, *pavítre*, on which I hang the gen. *punānāsya*, is found identically in the next hymn (17.3), as well as in IX.37.1, both times without a gen.

IX.16.5: The vs. begins *prá tvā*, reminiscent of the hymn opening *prá te* (1a), and the audience would surely assume -- not least because 2nd ps. is generally restricted to Soma in the IXth Maṇḍala (see Re’s comm. here) -- that *tvā* refers to Soma. But this expectation is repaired (or dis-repaired) by the voc. *índra* that opens pāda b. See vs. 8 below.

I take the referent of gen. *kārīṇaḥ* in c to be Indra.

IX.16.6: In c the loc. *góṣu* can be shared by simile and frame: in the frame it refers to the milk into which the soma has entered, in the simile to the cows that a champion wins in the raid or battle.

IX.16.8: Soma is addressed here in the 2nd ps., the first time since the uninsistent *te* in the first pāda of the hymn (1a *prá te* ...) and thus sketches a sort of referential ring. Throughout the rest of the hymn soma is always in the 3rd ps., and the only 2nd ps. reference is found in vs. 5, where the referent is Indra (see comm. there).

Pāda a is troublingly incomplete, with a nom. subj. (*tvám*) and an acc. *vipaścítam* but nothing to govern the acc. The pāda is identical to IX.64.25a, whose b pāda, *punāno vācam iṣyasi*, provides both a transitive verb and a referent for the acc., “being purified, you send forth speech attentive to poetic inspiration.” Although supplying a full pāda is something I would prefer not to do, I see no alternative to doing so (nor does Ge; see his n. 8a, where he expresses his reluctance; Bl, RR ad loc., as well). It is made somewhat more plausible by the appearance in nearby 12.6, by the same poet, of the relevant VP, *vācam ... iṣyati*. (See also *iṣṇán* in the next hymn, 17.5, where I supply ‘speech’ as the obj. [contra Ge, but in agreement with Re].) This is certainly a better solution than Re’s: he simply treats the acc. as a nom. and uses it as a modifier of Soma (“Toi, ô *soma*, qui comprends les mots-inspirés ...”).

IX.17

IX.17.3: The hapax *áty-ūrmi-* must be modelled on *áty-avi-* ‘beyond the sheep(’s fleece)’, 4x, including twice in the hymns of this poet: IX.6.5 and 13.1. I assume the image is, roughly, of a wave breaking on the shore, with the liquid now beyond the wave-forms on the body of water.

IX.17.5: The *áti-* in cmpd. found in 3a here gives rise to a phrasal expression with cosmic reach: *áti trī ... rocanā* “beyond the three luminous realms.”

I supply ‘speech’ as the obj. of *iṣṇán*; see comm. ad 16.8.

IX.17.8: Both Ge and Re take *ánu kṣara* as transitive (“Lass ... fließen,” “Laisse couler ...”), but forms of $\sqrt{kṣar}$ are otherwise intransitive, and here the acc. *dhāṛām* must be governed by the preverb *ánu*.

IX.18

On the structure of this hymn, see publ. intro.

IX.18.2: The identification of Soma as both *vípra-* and *kaví-* is quite explicit here; see disc. ad 12.8.

In b Ge takes the *prá* as standing for the predicate “hat den Vorzug” and construes it separately from the *jātām*, presumably because of its separate accent. I am sympathetic, but still assume that it is loosely construed with *jātām*. The tr. should perhaps be slightly altered to “born forth from ...” On *jātām ándhasaḥ* see further ad IX.55.2.

IX.18.3–4: Note the two occurrences of *vísva-* (3a, 4a), which contrast with the *sarva-* in the refrain.

IX.18.4–7: Vss. 4–6 all (save for the refrain pāda) consist of rel. clauses headed by *yáh* and couched in the 3rd ps.; the main clause appears to be vs. 7, with the resumptive prn. *sá* and 3rd ps. verb.

IX.18.5: Both Ge and Re take *ródasī mahī* as acc. obj. of the frame, with *mātārā* as subj. (Re) or obj. (Ge) in the simile: e.g., “qui trait ces Deux grands Mondes ensemble, comme deux (vaches) mères.” In favor of this view is the fact that in VIII.6.17a, identical to our a-pāda, the dual is acc. (though in a very different context); furthermore, the position of *iva* in b might suggest that the simile consists only of the preceding word *mātārā*. However, I prefer to take both duals as part of the simile, parallel nominatives corresponding to the unexpressed subj. of the frame, Soma. Cows (or their correspondants) are the standard subjects of med. forms of \sqrt{duh} , with the obj. being the milk (or milk substitute), and therefore the accusatives of Re and Ge would be semantically and functionally anomalous. For Heaven and Earth (i.e., the two world-halves represented by *ródasī* here) as subject of medial \sqrt{duh} , see VI.70.2 *ghṛtām duhāte* “the two yield ghee as milk,” in a hymn to Heaven and Earth, which are the default referent of the many duals in the hymn.

IX.18.7: Because of the rel. cl. / main cl. structure of vss. 4–7 (see above), I would lightly emend to the tr. to “he/that one, tempestuous in the tubs, kept roaring ...,” to display this structure more clearly.

IX.19

On the imagery in the hymn, see publ. intro.

IX.19.2: Note the reverse vāyav indraś ca construction, *indraś ca soma*.

IX.19.3: With Ge (but not Re), I take the pres. part. *sán* as concessive, as the nom. forms of this participle generally are -- although I'm not sure what the concession is. The most likely possibility is that "sitting down on the womb" is an odd action for a horse. The most common simile with "sit" is "like a falcon," e.g., IX.82.1 *śyenó ná yónim ... āśadam*, with the same lexical material as here. Or perhaps horses don't thunder.

IX.19.4: I am not entirely certain of the force of *ādhi*: my 'over' does not parse very well in Engl. tr. But the point is probably that the verbal part of the ritual, embodied by the fem. *dhītī*- 'insightful thought/speech' and therefore conceived of as female, is produced at the same time as the "semen" of Soma, namely the juice itself. This semen is attributed both to a bull, Soma as hypervirile adult male animal, and, if we supply *rétasi* in c for the genitives to depend on (so also Ge and Re), to a calf, presumably not yet sexually mature, who is further the son of these mothers (the words, at least by my interpr.). Ge (n. 4) calls the verse "ein Paradoxon," though he doesn't bother to explain what he thinks the paradox is. I assume that it is the identification of Soma as both bull and calf.

I further assume that the "mothers" (*mātārah*) of c are co-referential with the *dhītāyah* of a, though it might be possible to separate them -- with the mothers being the milk-mixture or some other ritual substance. Lü (247) considers the mothers distinct from the *dhītāyah* and referring to the heavenly streams, but this is a predictable result of his *idée fixe*.

IX.19.5: As disc. in the publ. intro., this vs. metaphorically expresses the complex interaction between poetry, the thoughts (*dhī*- 2c, *dhītī*- 4a, both fem.) recited at the Soma pressing, and the Soma/soma him-/itself. The (female) thoughts "yearn for the/a bull" (*vr̥ṣanyā*-) to swell (*√pi* 2c) and impregnate (*gārbhaṃ* *√dhā* 5b) them with his semen/juice, while at the same time they are Soma's mothers (4c) and themselves "give the gleaming milk" (*śukrām duhaté páyah* 5c) -- *śukrām páyah* being often a kenning for both soma juice and semen (see Gr, nos. 3 and 7 s.v. *śukrá*). So they both produce the soma/semen and become pregnant by it.

IX.19.6: Re identifies this vs. as displaying the three functions -- an interpr. that utterly escapes me.

The lexeme *āpa* *√sthā* is quite rare in the RV with a fairly late distribution: besides this passage I have found only VIII.48.11 (a "popular" hymn acdg. to Arnold), X.106.2, and X.124.8. It means 'stay/keep away'; in this context, where those who *āpa* *√sthā* are to be courted by Soma, in contrast to the *sātru*-, in whom he is urged to strike fear, it seems to refer to potential allies or members of our group who are currently staying neutral, sitting on the fence, as it were. It nicely contrasts with *úpa śikṣa* 'seek to win over, seek to entice (here)', on which see I.112.19, I.173.10.

As in II.28.6, the transmitted *bhiyásam* should be read *bhyásam*.

I take *vidā* as 2nd sg. impv., with lengthened ending, contra the standard interpr. (Pp, Gr, Old, Lub) as 2nd sg. subj. *vidās*. (Ge and Re tr. as an impv. and do not comment, but it's quite possible that they are so tr. what they consider a subjunctive.) The form is parallel to 2 impvs. in the same vs., *úpa śikṣa* (a), *ā dhehi* (b), which support an impv. reading; the pāda is repeated twice (IX.43.4, 63.11), but those vss. lack other verb forms that would support one reading or the other. Other occurrences of *vidā* are generally

better taken as impv. (I.36.14, VI.48.9, VIII.61.7) or are syntactically and semantically indifferent (I.71.7). (I take the form in V.45.1 as the instr. of a root noun.) The only clear ex. of a subj. is in IX.40.4, where sandhi preserves the final cons.: *vidāḥ sahasrīṇīr* ... I assume the almost universal embrace of the Pp subjunctive readings results from the fact that there are no unambiguous imperative forms to this them. aor. stem -- that is, forms where the sandhi does not allow a -*ās* reading -- whereas there are several other subjunctives (e.g., *vidāsi* IX.35.1). But I do not see why an impv. would be excluded on principle; Macd (VedGr §512) gives several exx. of *a*-aorist imperatives, though he states that the mood is “of rare occurrence” -- a statement he also makes (§509) about the subjunctive to the same formation, however. It’s also worth noting that KH (Injunk. 263) takes *vidó śú* ... in X.113.10 as impv. *vidá* + *u*, a reading supported by the sandhi of *śú*. On imperatival use of injunc. *vidaḥ* see comm. ad IX.20.3.

IX.20

IX.20.1: *vārebhiḥ*, lit. ‘along the hairs/fleece’ is an instr. of the path-along-which; see comm. ad IX.15.5.

IX.20.3: The sense of the injunc. *vidaḥ* here is uncertain, but my rendering in the publ. tr. as if it were a subjunctive is almost surely wrong. In general, 2nd sg. injunctives to thematic aorists have been taken as modal (see KH, Injunk. 263), and certainly Ge and Re both tr. this form as an impv. The *sá* opening the pāda supports the interpr. as an imperative substitute, since, by my rules (“Vedic ‘sá figé’: An Inherited Sentence Connective?,” *Historische Sprachforschung* 105 [1992]: 213–39), *sá* (and other nominative forms of this pronoun) are found with 2nd ps. ref. almost exclusively with imperatives. Hoffmann (loc. cit.), however, says that modal use of the various occurrences of *vidaḥ* is “nicht durchweg sicher.” Nonetheless I would now change the tr. to an imperatival “find fame for us,” because of the *sá*. I do not think that this calls my interpr. of *vidā* as an impv. in the preceding hymn (19.8) into question. See comm. there. For other occurrences of the form *vidaḥ*, see comm. ad I.42.7–9.

IX.20.5: Both Ge and Re take ab together, but I do not understand how the simile “like a king” (*rājeva*) would work with the VP (“you have entered the songs” *gírah* ... *viveśitha*). I have therefore taken the two pādas as separate clauses. The simile in pāda a then works well, since it makes perfect sense that a king should “possess good commandments” (*suvratāḥ*). The splitting of the two pādas gains further support from IX.57.3b, a pāda closely corresponding to our pāda a: *ibho rājeva suvratāḥ*, where there is no question of entering songs or any similar action and the shared quality of simile and frame must be *suvratā-*.

For further on the expression “enter songs” in pāda b, see publ. intro.

IX.20.6: On *apsú duṣṭārah* see comm. ad 16.3.

IX.20.7: On the double sense of *makhá-* see comm. ad I.18.9; in our passage the ‘bounteous’ sense prevails, though it could also be making a subtle ring with vs. 1. In 1c

Soma conquers all opponents, and here he could be secondarily called a battler as well as bounteous.

IX.21

IX.21.2: This vs. lacks a finite verb and can go either with vs. 1 or vs. 3 (or both): they all have as subj. the plural soma juices.

The lexeme *prā√vṛ* is rare and generally means ‘cover [with INSTR.]’ (e.g., X.16.7). However, here and in VII.82.6 it must mean ‘ward off’ (< ‘obstruct forward’?) vel sim.

IX.21.4: As often in the Soma hymns (see, e.g., comm. ad IX.9.1), *hitá-* is ambiguous, belonging either to *√dhā*, hence ‘placed’, or to *√hi*, hence ‘impelled’. Both Ge and Re opt for ‘placed’, and I admit that this works better with the loc. *rátthe*. But if they are merely “placed” at/on the chariot, we do not learn how they obtained the desirable things, and I therefore think ‘propelled’ is a necessary part of the scenario. Of course, it might be meant to be read both ways: “when placed at the chariot (and) propelled.”

IX.21.5: On my interpr. of this vs., see publ. tr. Both Ge and Re have quite different views. Ge takes the *asmin* to be the sacrificer (flg. Sāy.), with the *piśāṅgam ... venám* (my “tawny tracker,” his “den goldenen Seher”) “ein innerer Mahner” of this would-be stingy man. This anticipation of an Upaniṣadic-type Inner Controller seems anachronistic to me. Re simply -- in my opinion over-simplistically -- takes all elements to be soma in one form or another: the soma drops are urged to put “le (Soma) Veilleur à couleur-d’or” into the soma liquid. This endless loop doesn’t seem to get us anywhere. I do agree with Re that soma/Soma is represented by two of the elements: the drops that are addressed (*indavaḥ*) are soma the substance and the “tawny tracker” is Soma the god. The drops are urged to put Soma the god into Indra (my interpr. of the referent of *asmin*); cf., from the same poet, IX.11.6 *índum índre dadhātana*.

The subj. of the infin. *ādiśe* is, in my view, the tawny tracker (i.e., Soma), though the act of placing this Soma in Indra may be part of the instruction. On the constr. see comm. on the almost identical expression in 6b.

Loc. *asmin* is unaccented and should therefore refer to something already present in the discourse, but that does not eliminate any of the just-given interpr.: Ge’s sacrificer, in the person of the ‘presser’ (*súṣvi-*), is found in 2, my Indra in 1, and Re’s soma is ubiquitous. In fact even without the mentions in vss. 1 and 2, the sacrificer and Indra are expected personnel on the scene in any Soma hymn.

IX.21.6: The adj. *ráthya-* generally modifies either chariot horses or chariot wheels; here, with the presence of a craftsman, the latter is most likely. So also Gr, Ge, and Re.

As was just noted, pāda b *dádthātā kētam ādiśe* is almost identical to 5b *dádthātā venám ādiśe*. Nonetheless, Ge and Re unaccountably (at least to me) take the VP entirely differently here from 5b: they take *návam*, *dádthātā* as a phrasal verb “renew, make new,” with *ādiśe* filling a different syntactic role. E.g., “Erneuet, um (ihn) zu mahnen, seinen Vorsatz ...” (Sim. Keydana, Inf., 318, who shows no awareness of the parallel in the immed. preceding vs.) First, I know of no other exx. of *náva-√dhā* in the sense ‘make

new', a sense expressed rather by *náva-* √ *kṛ* (e.g., X.143.1). But, more important, the close parallelism between 5b and 6b strongly suggests that they should be interpr. the same way, with the acc. the subj. of the infinitive.

By the Ge/Re (/Keydana) interpr., in the simile the craftsman is “renewing” the wheel; by mine, he is “setting/placing” it on the chariot, with a slightly different sense of √ *dhā* than in the frame.

IX.21.7: *satáh* in c is somewhat puzzling. Both Ge and Re take it as adverbial: “in gleicher Weise,” “pareillement.” Ge makes no comment; Re adduces *sató-mahant-*, -*vīra-*. For this 1st cmpd member see comm. ad VII.104.21. As I point out there, though I think the cmpds in question contain this adverbial element, I do not think it exists as an independent word. Supposed exx. of it belong instead to the pres. part. of √ *as*, either gen./abl. sg. or acc. pl. Here I take it as the gen. sg., dependent on *matīm*. Genitives appearing with this stem generally refer to the poet (e.g., IX.64.10 *kavīnām matī*). Forms of √ *as*, incl. the pres. part., can have the extended sense ‘be real / really present’, and that is how I take it here. Cf. for a similar use in a nearby hymn IX.19.7 *dūré vā sató ánti vā* “whether he be in the distance or nearby” (used of an enemy); also IX.31.6 (of Soma).

IX.22

On the structure and thematics of this hymn, see publ. intro. Note also that the first 5 vss. begin *eté*, while the 2nd hemistichs of vss. 5 and 6 begin *utédám*. Further local chainings are discussed below.

IX.22.1: The preverb *prá*, which must be in tmesis from the verb *ahēṣata* that ends the vs., is very oddly positioned -- in the middle of a pāda (one that doesn’t even contain the verb), not adjoining a metrical boundary. I have no explanation, though it may be based on a pāda like IX.64.4 *ásṛkṣata prá vājīnaḥ*, also ending *prá vājīnaḥ*, where the preverb immediately follows its verb, a permitted position.

IX.22.2: As in the immed. preceding hymn (21.2), this vs. lacks a finite verb and can be attached either to vs. 1 or vs. 3 or both.

My supplied “(surging)” isn’t strictly necessary -- neither Ge nor Re supplies anything at all -- but it seemed to me that something dynamic was needed here, for wind, rain, and fire.

IX.22.3, 5: Note *vy ānaśuḥ* in both vss. (3c, 5b), implicitly connecting Soma’s pervasion of poetry with his pervasion of cosmic space. This repetition could also define vs. 4, the middle vs. of the hymn, as an omphalos, but that vs. doesn’t seem to do much if so. For further exx. of √ *(n)as* see ad 4–6.

IX.22.4: With Ge/Re I take *ná* as neg. with pf. *śaśramuḥ*. In contrast, Kü (524, 551) takes it as the simile particle: “... sind wie [Rennpferde], die gelaufen sind, ermüdet ...” He cites (551 n. 1141) Delbrück (Altind. Syn. 376) for this interpr., but Delbrück in fact takes the *ná* as neg.: “... sind nicht müde geworden, obgleich sie gelaufen sind.” I assume that Kü so interpr. because of the position of *ná* after the participle, but in a Gāyatrī pāda the position before the verb is also the position after the NP -- there’s not a lot of space. I

think it unlikely that the poets would ever say that the ever-running soma could get tired. Moreover, \sqrt{sram} almost always appears with neg.

IX.22.5: See remarks ad vs. 3.

The part. *vīprayāntaḥ* presumably belongs to the lexeme *vī-prā* \sqrt{i} , but note that it could also be interpr. as belonging to a denom. **vīpra-yā-* ‘behave like [/seek] an inspired poet’, which would connect this vs. further with the poetic pervasion of vs. 3. The suggested denom. stem is not attested but could of course be easily formed, and I’m tolerably sure this pun was meant. Note *vīpāscītaḥ* and *vīpā*, both in the matching vs. 3. I would now slightly alter the tr. to “going forth widely [/behaving like inspired poets].”

IX.22.4–6: More chaining: vss. 4 and 6 end with *rājāḥ*; the exact phrase in 5c is *uttamām rājāḥ*, whose *uttamām* is then picked up in 6a and augmented with *uttamāyyam* in 6c. Meanwhile, 3rd pl. pf. (vy) *ānaśuḥ* of 3c, 5b morphs into 3rd pl. root aor. *āśata* in 6b. As Old points out, $\sqrt{(n)aś}$ is also represented by the desid. *īyakṣantaḥ* in 4c.

My “that is to be higher still” is meant to capture the pseudo-gerundive form of the nonce *uttamāyīya-*.

IX.22.6–7: As noted in the publ. intro., vs. 7 stands somewhat apart from the rest of the hymn, but there is chaining here as well: 6a *tāntum tanvānām* ... is echoed by 7c *tatām tāntum* ...

IX.22.7: Both Ge and Re take *acikradaḥ* as transitive/causative (e.g., “tu l’as fait crier”), but although (*ā*)*cikrada-* looks like a typical redupl. aor. to an *-āya-* transitive, it is not so used. On the problem of this redupl. aor., see my 1983 *-āya-* book (pp. 110–11) (though I would now disavow a second \sqrt{krand} ‘race’, beside ‘roar’).

IX.23

IX.23.4: On the identification of the soma juices with the *Āyus*, see publ. intro. Both Ge and Re take *āyāvaḥ* here as adjectival (“lebengebend” and “vivaces” respectively), but this loses the connection with the *Āyus* in vs. 2.

IX.24

IX.24.1–3: The first 3 vss. are united by the use of the (secondary) root \sqrt{dhanv} ‘run’, with the 3rd pl. *-iṣ-* aor. *adhanviṣuḥ* (found only here in the RV) in vss. 1 and 2, with the complementary subjects soma drops (1) and cows (2) (or so I think: see below), and the 2nd sg. pres. *dhanvasi* in 3.

IX.24.2: Old discusses this vs. at some length and disputes the cows as subject. The problems he sees are that 1) it makes more sense for the soma drops to run than the cows (though he admits that there are some undoubted passages with the latter); 2) the shared verb would more naturally have the same subject than diff. subjects (this is not a stylistic given in soma hymns, where substances swap identities all the time); 3) the part. *punānāḥ* ‘being purified’ is better applied to soma drops than cows (though again he recognizes at

least one passage in which the part. is so used). On the basis of these arguments he suggests that *gāvaḥ* here should be interpr. as accusative rather than as the nominative it overwhelming is, with *abhī gāvaḥ* substituted for *abhī gāḥ* on metrical grounds and the soma drops again the subj. This seems both uncharacteristic and unworthy of Oldenberg. Positing “metrical” motivation for RVic anomalies is rarely successful, because the poets are flexible enough to avoid situations where they would be forced to use the wrong grammatical form because of meter. Moreover, the construction of the a-pādas of the two vss. -- PREVERB PL.NOUN *adhanviṣuḥ* -- imposes the subject role on the second noun (*gāvaḥ*, 2a), which is in the same position as *sómāsaḥ* in 1a. The only of his arguments that seems at all worth considering is the one about *punānāḥ*, though given the tendency to identify the substances, esp. the liquid substances, in the soma ritual with each other, I do not find it particularly cogent -- and as Old himself points out, c could be a separate clause with the soma drops supplied as subj. there. (Another possible argument, not brought up by Old, is that this is the only vs. in the hymn where soma [sg. or pl.] is not the subject, but I do not think that is strong enough to contravene the grammar.) He cites another possible ex. of acc. *gāvaḥ*, in VIII.41.6, where the form is easily interpr. as nom. (see comm. ad loc.). Re follows Old’s interpr; Ge does not, though in his n. 2b he suggests that the poet meant the soma drops as subject, but reversed the construction (“... er hat aber die Konstruktion umgekehrt,” whatever he means by that).

IX.24.4: Although in the publ. tr. pāda c is unequivocally applied to Soma (“you who are ...”), the text is ambiguous: the rel. cl. of pāda c, *sásnir yó anumādyaḥ*, could have either Soma or Indra (under the epithet *carṣaṇīsāh-*, which ends the preceding pāda) as antecedent. In IX *anumādya-* is otherwise used of Soma, including two vss. later (24.6) as well as 76.1, 107.11, but it applies to Indra in VI.34.2. Since Indra was just called “conquerer of territories,” the use of *sásni-* ‘winner’ for the subj. of *anumādya-* makes Indra a distinct possibility. I think the ambiguity is meant; this is another ex. of the trade-off of identities discussed ad vs. 2. See further below.

IX.24.5: The tr. of this vs. needs to be emended: because *paridhāvasi* has an accented verb, it must belong to the *yád* clause, and pāda c must be the main clause. I would now add to the tr. of c “(you are) fit ...” Alternatively, the vs. could be entirely a subordinate clause and dependent on either 4 or 6, hence, e.g., “purify yourself ... (4), when pressed by the stones you run around the filter, fit for the fundament of Indra (5),” with no alternation of the transl. of 5, but a comma, not a period, at the end of 4.

What *dhāmane* is meant to convey here is unclear, and numerous incompatible suggestions have been made -- e.g., Ge “(Eigen)art,” Re “vocation” (and see his n.). I long ago (Ged. Cowgill) suggested that this is a somewhat heavy-handed pun, with “fundament” both referring to Indra’s fundamental being and to his physical foundation, his bottom.

IX.24.6: As noted in the publ. intro., Indra’s most characteristic epithet, “Vṛtra/obstacle-smasher,” is here applied to Soma instead -- another ex. of identity trading. The gerundive *anumādya-*, which was ambiguously used in 4c for either Soma or Indra or both, may signal the blurring of identity between them here.

IX.24.7: Because of the blurring of identity just discussed, I take the predicate of *ucyate* ‘is called’ to be *sómah*, a re-assertion of the name of the god being celebrated in this hymn after the equation with Indra in vss. 4 and 6 (and with the cows in vs. 2). This re-assertion is esp. appropriate in the final vs. of the hymn. Ge/Re take *súciḥ pāvakāḥ* as the predicate instead, but this pair of adjectives already characterized the substance identically in 6c. I think the point is that “the gleaming and purified one” has the name / is called “Soma.” In favor of their interpr. is the variant in VIII.13.19 *súciḥ pāvakā ucyate só ádbhutaḥ* (which also incorporates all 3 adjectives from our vs. 6c). In that passage the adjectives do seem to serve as predicate with *ucyate*, but with a twist -- these soma-epithets are applied to the praiser (*stotár-*) there. I therefore do not think that the two similar pādas need to be construed identically -- rather that one poet (probably the one responsible for VIII.13.19) is playing with the phrase.

IX.25

IX.25.2: *hitáḥ* here fairly clearly belongs to \sqrt{hi} ‘impel’, given the expressions of movement and goal in the rest of the vs. But the ambiguity between *hitá-* ‘impelled’ and ‘placed’ is common in this maṇḍala, as we’ve already seen (e.g., IX.1.2).

Both Ge and Re take *dhármaṇā* to be Soma’s: “nach deiner Bestimmung” and “selon (ta) nature” respectively. However, I take it to refer to the statute or ordinance of the *ritual*, in particular that which establishes Vāyu as the first recipient of the soma drink: *dhármaṇā* is used in this exact sense here as well as in IX.63.22 and I.134.5; see disc. ad the latter passage.

IX.25.3: Soma is given Indra’s epithet *vṛtrahán-* as in vs. 6 of the preceding hymn (IX.24).

IX.25.4: There is disagreement about what it means for Soma to “enter all forms” (*vísṁvā rūpāṇy āviśán*): Ge thinks that it refers to the various stages of soma preparation, while Re that it refers to the divine forms, that is the gods, whom Soma enters when he is drunk. I slightly favor Ge’s explanation, since Soma only reaches the gods in the last pāda.

IX.25.6: On *ā pavasva ... pavítram* see disc. ad IX.70.10.

IX.26

On the rhetorical structure of this hymn, see publ. intro. The tr. replicates the fronting of the acc. pronoun ‘him’ throughout, though in vs. 6 *tám tvā* is represented just by “you,” not “that you.”

IX.26.2: The phrase *dhartár- diváḥ* (also in opposite order) “supporter of heaven” is well established and used elsewhere in IX of Soma (IX.76.1, 109.6); it is of course the default interpr. here, shared by Gr, Ge, Re, and the publ. tr. inter alia. However, the *ā* in the middle of the phrase (*dhartāram ā diváḥ*) is troubling. It should not be a preverb in tmesis, since it is not adjacent to a metrical boundary and is not in a pāda with a finite verb (nor is there an appropriate verb anywhere in the vs.). The standard use of *ā* in such positions

is as an adposition, and in particular, in the position before an abl., with the meaning ‘all the way to’. Cf. for this exact expression *ā divāḥ* I.92.17 “all the way to heaven,” of a *ślóka*- ‘signal call’ whose noise goes to heaven. I therefore think there is a syntactic and semantic pun in this vs.: the first reading is “supporter of heaven” with a gen. *divāḥ* (and the *ā* essentially elided), but the second is “all the way to heaven” with an abl. *divāḥ* governed by *ā*. This latter reading indicates that the lowing of the cows found in pāda a (*gāvo abhy ānūṣata*) goes not only to Soma on the ritual ground but also to heaven, where the heavenly Soma is found -- as is made clear in the next vs. That the material going to heaven is noise reminds us of I.92.17 with the same expression.

IX.26.3: On the anomalous acc. sg. *vedhām* to *vedhās*- see Old ad loc.; AiG II.2.225, 725, III.283, 285. Re’s suggestion that it may recall “l’origine lointaine *vī-dhā*” is best ignored, since Aves. *vazdah-* rules out a vrddhi of *-i-* in the initial syllable of *vedhās*- (as Re surely knew). Note that the correct pl. to the *-as*-stem, *vedhāsaḥ*, is found in vs. 6.

For the relationship between *ādhi dyāvī* here and *ā divāḥ* in 2c, see immed. above.

IX.26.4: On this vs., and esp. pāda b, see Old’s detailed and sensible disc.

The rare and curiously formed word *bhurīj-* (4x), without clear etymology, is always dual, and the gloss ‘arm’ (flg. Sāy’s *bāhu-*), or perhaps better ‘hand’, works reasonably well in the various contexts. In IV.2.14 it appears in a vs. with other body parts and in a context where artisans are at work; in VIII.4.16 a razor is being sharpened; in IX.71.5 it qualifies the fingers, which are assembling a chariot. Here the context is rather like IX.10.2, which has du. *gābhastyoḥ*, belonging to a stem unambiguously meaning ‘hand’. In this passage it’s important to note that *bhurī(joḥ)* is in the same metrical position as *bhūri(-)* in 3c and 5c and that *bhurījor dhiyā* is close to a phonological approximation of *bhūridhāyasam* (3c).

There is some difference of opinion on how to construe *vivāsvataḥ*. Re supplies “(dans le domaine),” presumably on the basis of the fairly common phrase *vivāsvataḥ sādane*. Old’s interpr (flg. Pischel), that it depends on *dhiyā*, is the one I adopt: it has the merit of not requiring anything to be supplied, and *vivāsvataḥ* depends on *dhī-* in IX.99.2 *vivāsvato dhīyaḥ*, where the thoughts themselves are impelling soma (*hinvánti*, like our *ahyan*). Ge’s interpr. is more complex: he takes *dhiyā* independently with *ahyan* in pāda a (“Ihn haben sie ... durch ihre Kunst zur Eile getrieben”), but with *vivāsvataḥ* dependent on it with *saṃvāsānam* in b (“der sich (in die Dichtung) des Vivasvant kleidet”), thus reading *dhiyā* twice (see his n. 4b). I think this double reading is essentially correct -- though I see no reason to put the second “in die Dichtung” in parens, nor do I think that the *dhiyā* construed with *ahyan* in pāda a should lack the dependent genitive.

Though Gr classifies *saṃvāsāna-* (2x) with *√vas* ‘dwell’, the later consensus (in addition to the usual, see Gotō, 1st Kl., 295 n. 698), patently correct in my view, is that it belongs with *√vas* ‘wear’, which has a well-attested med. root pres., whose med. participle is esp. common. On ‘hymns’ etc. as garments, see the passages cited by Old.

IX.26.6: With Old I take *girāvīdh-* as a pun, with the first member both instr. sg. of *gír-* ‘song’ and loc. sg. of *gírī-* ‘mountain’ -- both meanings being entirely appropriate to soma. Ge opts for the 1st in his tr. (though he recognizes the 2nd in n. 6b); Re for the 2nd. Scar (516–17) tentatively accepts Old’s double interpr.

IX.27

As noted in the publ. intro., this hymn, like the immediately preceding one, is unified by the simple device of a pronoun (here *eṣā* ‘this one’) repeated at the beginning of each vs. and rendered as such in English. Unlike the preceding hymn there is no switch of person at the end.

IX.27.1: On the meaning of the root $\sqrt{tuś}$ see comm. ad VIII.38.2.

IX.27.3: The root-noun cmpd *viśva-víd-* is ambiguous, between ‘all-knowing’ and ‘all-acquiring’ (see Scar 489). In this context, given *svar-jít-* ‘winning the sun’ (2b) and *satrā-jít-* ‘winning completely’ (4c), ‘acquiring all’ seems to work better; however, the very next hymn contains two instances of the same cmpd (IX.28.1, 5), where ‘knowing all’ is favored.

IX.27.5: This vs. rather subtly contrasts the cosmic Soma, who is in heaven (*ádhi dyávi*)(ab), with the ritual substance in the filter (*pavítre*, c). See comm. ad IX.26.2, 3 in the preceding hymn.

On the formation and sense of *hāsate* see Narten (Sig.Aor. 285–86).

IX.27.6: The last vs. of the hymn splits the locational difference found in vs. 5: Soma here flows in the midspace (*antárikṣe*), between the heavenly Soma and the soma on earth on the ritual ground.

On *śuśmī* see comm. ad 29.6.

IX.28

Like the last hymn, this one has *eṣā* beginning every vs. Although the hymns share some vocabulary and themes (as which Soma hymns do not?), they are not twinned.

IX.28.1: *hitáh* is taken by all standard interpr. (Gr, Ge, Re) to \sqrt{hi} ‘impel’, as also by me, presumably because of the verb of motion, *ví dhāvati*, that provides the finite verb in the vs. But it could, of course, belong to $\sqrt{dhā}$ ‘place’. This alternative interpr. is almost encouraged by vs. 4bc *daśábhīr jāmbhīr yatáh | abhī dróṇani dhāvati* “(Soma,) held by the ten siblings, runs to the wooden cups,” where a ppl. of static position (*yatáh*) precedes the same verb of motion.

On *viśva-víd-* see comm. ad 27.3. Because of *mānasas pátiḥ* (note close sandhi) “lord of mind,” I interpr. the cmpd as ‘all-knowing’ here.

IX.28.2: For c *viśvā dhāmāny āviśán* Ge reasonably cfs. (n. 2c) IX.25.4a *viśvā rūpāny āviśán*, but then goes the further step to “*dhāman = rūpā*” and tr. our passage “alle seine Formen annehmend,” for which I see little or no justification. Yes, the stems in the RV with well-established distinct meanings, and I see no reason to erase that distinction. Ge’s interpr. has implications for vs. 5, for which see below.

IX.28.5: The c pāda, *viśvā dhāmāni viśvavít*, has the same neut. pl. acc. NP as 2c and the third word is phonologically similar to 2c *āviśán*. There are in principle three ways to

construe *viśvā dhāmāni*: 1) as a 2nd object to *arocayat* in a (“made the sun shine (and) all the domains”); 2) as the goal of *āviśān*, supplied from 2c (“entering all domains”); 3) as the object of the root noun *-víd-* extracted the cmpd. *viśva-víd-* or as further specification of the 1st member of that cmpd. (so, either “all-knowing, (knowing) the domains” as in the publ. tr., or “knowing all, (viz.) all the domains”). Like the publ. tr., Re chooses the first version of 3), and this seems the most rhetorically satisfying, while Ge opts for a variant of the second version of 3, while being forced to the further step of interpr. *dhāmāni* as “forms” (“all Formen vollständig kennend”) on the basis of his interpr. of 2c.

IX.28.6: On *śuṣmī* see comm. ad 29.6.

IX.29

IX.29.1: The metrical structure encourages construing *ójasā* with *sutásya* -- so Ge “wenn der Bull mit Kraft ausgepresst ist.” However, I think it likely that the *ójas-* expressions are otherwise identical, but *dhāman-* and *rūpā-* are both well-established belongs to Soma, rather than the pressers, and have therefore taken it with the participial VP in c. Re seems to take it with the verb of pāda a: “Ses jets ont coulé en avant ... d’une force-formidable.”

Note the unaccented *asya* in the first pāda, allowable because the referent is unmistakable. Cf. *asmai* in IX.11.1a and IX.70.1a.

IX.29.3: The construction in pāda a is clarified by IX.94.5 *viśvāni hí suṣāhā tāni túbhyam* “for all these things are easy to conquer for you,” with a full dative prn. rather than our ambig. enclitic *te*. The *tāni* is clearly specified by *viśvā vásūni* in 4a, anticipated by the voc. *prabhū-vaso* in our b.

IX.29.5: *áraruṣaḥ* in pāda a can be gen. or abl. sg. Either of them can fit the syntax: as abl. it can be construed directly with *rākṣā* (“protect from ...”) and be parallel to *svanāt* in b; as gen., it can be dependent on *svanāt* and part of the gen. NP *samasya kásya cit*. Ge follows the 2nd path (“vor dem Schnauben eines jeden Geizhalses”), while Re (and I) the 1st. I do so partly because an abl. simply gives more oomph -- protection from a non-giver seems more critical than simply from the sound of one -- but primarily because of the word order: the audience hearing a form that could be abl. immediately after *√rakṣ* would naturally take it as an abl. It’s possible that they would revise their opinion on encountering a 2nd abl. followed by a gen. sg. to which *áraruṣaḥ* could belong, but it’s also possible (likely even) that they would see no reason to reinterpret. *áraruṣaḥ*.

The subordinate cl. in c does not fit with the main cl. very well, as the awkwardness of the publ. tr. shows. The problem is the verb: what is wanted in context is a modal in a purpose-type clause (“so that we will/may become free of insult”); this would work well with protection from the “sound” in pāda b. But *mumucmāhe* is resolutely pf. indicative (or redupl. pres. indic.; see Kü 380 and nn. 677, 678). Both Ge and Re supply material to smooth the transition, Re with a pres. part. attached to ab: “(nous plaçant) là où nous soyons à l’abri de la nocivité” -- thus also sneaking in the desirable modality. Ge starts a new sentence with c, supplying as main cl. “da wollen wir sein.” Kü avoids supplying anything, but sneaks in futurity in parens: “da wir von der

Schmach befreit (worden) sind.” I don’t have a good solution and so stick with the awk. publ. tr.

IX.29.6: This is the 3rd hymn in a row, all attributed to Āṅgīrasa poets, with a form of *śuṣmín-*, *śuṣma-* in the final vs. Also in the next hymn IX.30, also an Āṅgīrasa hymn, vss. 1 (*śuṣmín-*) and 3 (*śuṣma-*). As noted in the publ. intro. to IX.30, the word is not characteristic of Āṅgīrasa poets elsewhere, even in the IXth Maṇḍala, although there are numerous hymns attributed to them in this maṇḍala (besides our IX.27–30): IX.4, 35–36, 37–38, 39–40, 44–46, 50–52, 61, 67 [part], 69, 72, 73, 83, parts of 97 and 108, 112). Of these, only IX.50.1, 52.4, attributed to Ucātha Āṅgīrasa, contain members of this word family. In hymns attributed to Āṅgīrasa poets outside of IX, the words are found only in X.43.3 (Kṛṣṇa Āṅgīrasa), VIII.96.8 (Tiraṣci Āṅgīrasa), and -- most noteworthy -- VIII.98.12, 99.6, the only two hymns outside of IX attributed exclusively to Nṛmedha Āṅgīrasa, the poet of our IX.27, 29.

IX.30

On *śuṣma-* (vs. 3) and *śuṣmín-* (vs. 1), see ad IX.39.6.

IX.30.1: Unaccented *asya* in the first pāda of the hymn is exactly like that in IX.29.1a.

IX.30.2: It is not clear how to interpr. *indriyám* in the phrase *vagnúm indriyám*, as also in similar expressions: I.92.1 *ślókam indriyám*, VIII.52.7 *hāvanam ... indriyám*. Most take it to mean “Indra-like,” that is, presumably, loud, powerful (e.g., Ge “ein indrahafte Geschrei”). I think it more likely that it identifies the cry as “destined for Indra, appropriate to Indra.” Indra is always the special target of invocation in the Soma maṇḍala and VIII.52 is an Indra hymn. Of course, both senses could be meant.

IX.30.3: The idiom *ā√pū* ‘attract (X) through purification’ is found here in tmesis (see also 29.6). Here the *ā* opening the first two pādas is immediately followed by the accusatives that it, as it were, licenses, while the impv. *pavasva* appears in the 3rd pāda with *dhārayā*, which is also appropriate in the intrans./reflex. usage of *pāvate* without preverb (see 4ab).

Re points to the contrast (or at least juxtaposition) of *nṛ-* (*nṛ-sāhyā-*) and *vīrā-* (*vīrā-vant-*) here, though I would not follow him in seeing them as expressions of two of the Three Functions.

IX.31

IX.31.1: The phrasal verb *cétanam √kṛ* ‘make manifest’ may be a means of avoiding the problematically ambiguous *cetáyati*.

IX.31.3: Both Ge and Re (also Scar, 336) supply a verb (“blow”) for the winds in pāda a. This seems unnec. to me: although *√ṛṣ* generally has liquids as subj., it can have a broader sense ‘rush’, and even “flowing winds” would be well within the RVic metaphorical domain. It might, however, better capture the word order to tr. “For you the favoring winds, for you the rivers rush.”

IX.31.5: The accent on the main verb *duduhré* results from the fact that it follows the voc. *bábhro* that opens the pāda and is thus the first real word in the pāda.

IX.32

IX.32.2–3: The *ād* that begins both these vss. does not seem to have its usual “(just) after that” sense.

IX.32.2: On Trita as the archetypal soma-presser and his “maidens” (*yóṣanaḥ*) as the fingers, see disc. ad IX.37.4.

IX.32.3: This vs. contains two similes (ab and c respectively), each a bit trickily constructed. In the first, the caus. redupl. aor. *avīvaśat* has two slightly different senses in simile and frame: ‘makes bellow’ in the simile: it is the flock (*gaṇām*) that is making the noise, stimulated by its lead goose (*haṃsāḥ*); ‘makes bellow(ed)’ in the frame: it is the thought/prayer (*matīm*) of someone else (*vīśvasya*) that Soma causes to be heard. This double sense is the counterpart to that of the caus. to *√śru*, both ‘make hear’ and ‘makes heard’. My interpr. here is different from that of Re, who takes both acc. as goal of the sound (“... vers (sa) troupe, ... vers la prière ...”); Ge’s is close to mine, though he doesn’t seem to recognize the slight difference in the function of the object. On this aor. stem, see my *-āya-Formations*, 111, 166. Another ex. with the same sense is found in nearby IX.34.6; see comm. ad loc.

In the second simile, in c, it is not syntactic variation but a pun on the root of the passive *ajyate* that is at issue: this form can belong either to *√añj* ‘anoint’ or to *√aj* ‘drive’, and both are appropriate to the context. Soma can be “anointed” by cows’ milk or driven together with the cows (that is, the milk). The ‘steed’ to which Soma is compared could likewise be both anointed (/groomed) and driven.

IX.32.4: Although *mṛgá-* generally refers to a wild beast in general in the RV and in later Skt. comes to mean specifically ‘deer’, here it seems close to the meaning of Aves. *māraṇa-* ‘(large) bird, bird of prey’. Cf. the almost identical pāda IX.67.15 *śyenó ná taktó arṣati* “Like a falcon launched in flight, it rushes.” The participle *avacākaśat* ‘looking down’ also fits a bird better than an earth-bound beast; cf. esp. X.136.4 *antárikṣeṇa patati vīśvā rūpāvacākaśat* “He flies through the midspace, gazing down on all forms,” in the famous Muni hymn, which also contains an instance of *mṛgá-* as ‘bird’ (X.136.6). See also comm. on *takva-vī-* ad I.134.5, 151.5. It must be admitted, however, that it is not only birds that *√tac*; see X.28.4 *kroṣṭā varāhām nír atakta kákṣāt* “The jackal sprang on the boar from out of the underbrush.” However, there the attack is presumably an airborne pounce, so bird-like. Images on the web of jackals pouncing support this notion.

As for what the *mṛgá-* is looking down on, it is surely the two worlds, a notion going back to Sāy., which would fit the bird’s-eye view. Ge suggests other possibilities in n. 4a, but not with great conviction.

IX.32.5: Both Ge and Re seem to make heavier weather of *hitām* than seems called for. Ge (n. 5c) suggests that the acc. is attraction from nom. **hitāḥ* and tr. “Er ist wie ein

angesporntes (Rennpferd) in das Wettrennen gegangen.” Re allows it to be acc. but not to modify *ājīm*, requiring him to invent a second acc. phrase: “Elles sont allées [Re seems to have nodded on the number of the verb *āgan*; it cannot be the 3rd pl. of the root aor. to $\sqrt{gā}$, which is (*ā*)*gur*, but must be 3rd sg. to the root aor. of \sqrt{gam}] dans l’arène comme (pour rejoindre le *soma*) mis en branle (par les prières).” I don’t understand the fuss: *ājī-* is masc. (the supposed fem. ex. in I.116.15 is not), so *hitām* is grammatically fine. And I see no reason why a contest can’t be set, as a prize is. Perhaps it is their apparent conviction that *hitām* has to belong to \sqrt{hi} ‘impel’ that impelled them to these unconvincing makeshifts, or perhaps they believe that *yāthā* as a simile marker does not behave like *nā* and *iva* but requires a pseudo-clausal structure. But see the exx. in Gr’s no. 4 s.v. *yāthā* (col. 1083).

IX.33

IX.33.1: *vānāni* must be read with both frame (wooden [cups]) and simile (woods / forest, into which the buffalo go).

IX.33.2: A different word for wooden vessel (*drōṇa-*) substitutes for *vāna-* here.

IX.33.4: On the three voices, see publ. intro.

IX.33.5: Fem. *brāhmī-* is found only here (fortunately!). It is generally taken as a word play based on *yahvīh* in the next pāda (see Old with lit.; AiG II.2.412), which is surely correct. But it seems further assumed that it is derived from the adj. *brahmān-* and is adjectival (AiG II.2.421; cf. Gr ‘heilig, andächtig’, Re ‘vouées à la Formule’; Ge’s ‘Beterstimmen’ is less clear). Given its accent I think it’s more likely a nonce fem. form of the noun *brāhman-* ‘formulation’, in order to assimilate its gender to the cows. It might even be based on a putative **brāhmnī-*, like *rājan-* / *rājñī-*, with simplification of the impossible cluster **-hmn-*.

IX.33.6: See comm. ad IX.40.3 on the repeated pāda b. I might now consider tr. “for us all around” rather than “for us ... from every direction.”

IX.34

IX.34.2: As noted in the publ. intro., this vs. is almost identical to IX.33.3; the only difference is that the soma is plural (*sutāḥ ... sōmāḥ*) in 33.3 and sg. (*sutāḥ ... sōmah*) here, which also necessitates a sg. verb (*arṣati* for the pl. *arṣanti* in 33.3).

IX.34.3: Acc. *vīṣāṇam* is one of the two forms (also X.89.9) of this stem with suffixal *-ā-* in the strong stem, against the overwhelming prevalence of *-an-*. See Old. Assimilation to the dominant pattern of *-n-*stems (*rājāṇam* type) is not surprising; what is perhaps surprising is how well *vīṣan-* resisted the analogic pressure.

IX.34.4: On Trita, see comm. ad IX.37.4.

Ge interpr. the *rūpañh* with which the soma is anointed as its colors (“mit seinen Farben”). However, (*sám*) $\sqrt{a}ñj$ is specialized in IX for cows (that is, their milk). Cf. IX.86.47 *yád góbhiḥ ... samajyāse*, IX.72.1 *sám dhenúbhiḥ ... ajyate*; without *sám* there are multiple passages, e.g., *góbhir añjānāḥ ...* (IX.50.5, etc.), *góbhir ajyase* (IX.85.5), and, esp., nearby IX.32.3 *átyo ná góbhir ajyate*. I therefore think that our passage must refer to “forms” of milk; so also Re in his n., though unusually for him he does not supply it in tr. (which is simply “de formes-concrètes”). That this vs. is sandwiched between two vss. that contain the verb ‘milk’, 3c *duhanti*, 5b *duhaté*, further supports this interpr., though in both 3 and 5 the milk is not literal milk, but soma itself.

The publ. tr. does not reflect the possible pun on *sám ... ajyate* that was noted in IX.32.3 just cited, where *ajyate* could also belong to \sqrt{aj} ‘drive’, hence a 2nd reading “is driven together with the forms (of milk).”

IX.34.4–5: The final words of these two vss. are the phonologically similar *háriḥ* and *havīḥ*, both referring to soma -- though one is masc. nom. and the other neut. acc.

IX.34.5: On the sense of this vs., see publ. intro. Needless to say, this vs. is catnip for Lü; see his disc. p. 606.

IX.34.6: I take *avīvaśat* here as trans./caus, as in nearby IX.32.3 -- an interpr. shared by Ge and Re (“... a fait mugir ...”), though Re takes the same form in 32.3 as non-caus. with acc. of goal. See comm. there.

IX.35

IX.35.2: Two heavy cmpds in the voc., each with a 2nd member apparently derived from an *-áya-* trans./caus. governing the first member in the acc.: *samudram-īñkhaya* ‘setting the sea to swaying’, *viśvam-ejaya* ‘setting all in motion’. Of course the final *-m-* of the 1st member also serves to break the hiatus between the vocalic stem-final of the 1st member and the vowel-initial verb stem. It’s also notable that verbal forms of *ejaya-* are not found in the RV; they first appear in KS (XI.6 [prose], XXXV.14 [mantra]). (My statement in the *-áya-* monograph, p. 108, that the first attestation is in ŚB is wrong, relying on the notation in Whitney’s Roots.)

IX.35.3: I take *vāryam* as an Inhaltsakk.

IX.35.4: The first pāda contains a notable word play. Judging from the number of parallels, the default obj. of \sqrt{is} ‘send’ in IX is ‘speech’; cf. IX.30.1, 64.9, 25, 95.5, and esp. IX.12.6 *prá vācam índur isyati*, a pāda identical to ours, save for one consonant: *vācam* versus *vājam*. Although an emendation to **vācam* has been suggested here (see Old, who rejects it), a word play is far more likely. The poet knew (and knew his audience knew) the idiom *vācam* \sqrt{is} , but substituted the nearly identical *vājam*, which is to be construed with *sīśāsan* ‘desiring to win’ later in the vs. -- *vājam* being a common obj. to forms of \sqrt{san} ‘win’ and in fact found in the root noun cmpd *vāja-sā* in b, immediately after the desid. part. This root noun cmpd “repairs” the apparent *vājam*

problem, and in the next vs. the poet provides the expected *vācam*, 5a *vācam-īṅkhayām*, a 2nd repair strategy.

Ge assigns *vidānāḥ* to √ *vid* ‘know’ (“der sich auf die Vorschriften, auf die Waffen versteht”), while Re (though see his n.) and the publ. tr. take it to √ *vid* ‘find’ (as a root aor. part.). I now think either (or both) is/are possible, but that in either case *vratā* and *āyudhā* are not separate objects as Ge/Re take them, but an equational phrase (as in the publ. tr.). That is, Soma’s commandments *are* his weapons. On the formidable nature of Soma’s *vratā*-s, cf., e.g., IX.53.3 *āsya vratāni nādhīṣe* “The commandments of this one cannot be ventured against.” As an alt. tr. here I would add “knowing his commandments to be his weapons.”

IX.35.5: Reprise of the *-īṅkhayā-* cmpd from 2a. *vācam-īṅkhayā-* occurs once elsewhere, in IX.101.6, where it modifies *samudrāḥ*, which is the first member of the cmpd in our vs. 2, a small web of formulaic associations.

IX.35.6: *dādhāra* here is the only intransitive form of this perfect; see Re’s n. and Kü (261). The root √ *dhṛ* is prominent here (see the immed. following phrase *dhārmṇas pāteḥ* ‘master of support’) and echoes *rāyó dhartā* in 2c.

The last word of the hymn, *prabhūvasoḥ* (“of the one who brings outstanding gifts”) is the gen. of the name of the supposed poet of this hymn, Prabhūvasu Āṅgīrasa, who is also assigned the next hymn, IX.36. Of course the name in the Anukramaṇī could well have been generated from the final word of this hymn.

IX.36

As noted in the publ. intro., every vs. but the final one has a form of √ *pū* ‘purify’ beginning a pāda (though, interestingly, never the vs.), with each one different: 1b *pavītre*, 2b *pāvasva*, 3b *pāvamāna*, 4c *pāvate*, 5c *pāvatām*. This pattern is reminiscent of the “versified paradigm” of the first hymn in the RV, I.1. And the abrupt cessation of the pattern in the last vs. is of course also typical of RVic style.

IX.37

For the rhetorical structure of the hymn, see publ. intro.

IX.37.3: Note the slight reversed phonetic figure: a ... *divāḥ*## b ... *vi dhāv(ati)*.

IX.37.4: On the sense of this vs., see publ. intro. As indicated there, there is much disagreement about the referents. To my disc. there I will only add a few comments. Relevant for the whole vs. is IX.26.5 *tām sānāv ādhi jāmayo, hārim hinvanti ādribhiḥ* “Him do the siblings [=fingers] impel with the stones on the back (of the filter),” which contains both *jāmayāḥ* and *sānu-* as here, with the ‘siblings’ being the fingers and the ‘back’ the filter. The ‘back’ (*sānu-*) in soma hymns is basically always the filter, whatever else it may cosmically represent. Moreover, Trita is an archetypal soma-preparer; for this role see, inter alia, Ge’s n. to IX.34.4 and Ober I.197–98, esp. on the similar role that Ōrita fulfills atq the haoma pressing in the Hom Yašt. In at least two other places in IX his ‘maidens’ (*yōṣanaḥ*), the fingers, are involved: see in the next hymn. IX.38.2 *etām trītasya yōṣanaḥ, hārim hinvanti ādribhiḥ* “This tawny one do the

maidens of Trita [=fingers] impel with the stones” and almost identical IX.32.2. That the b pāda in these vss. with “Trita’s maidens” as subj. (in pāda a) is identical to the one in IX.26.5 just quoted with *jāmāyaḥ* as subj. (in pāda a) imposes the chain of identifications “Trita’s maidens” = “siblings” = “fingers.” Therefore, though it may be Trita’s back in some sense [he owns and deploys the filter] it’s surely also his fingers, here called *jāmī-*, not Soma’s or anyone else’s (as has been suggested by others), and though they may stand for various things (Dawns, heavenly rivers, whatever -- again based on various scholars’ suggestions), they start out as fingers.

IX.38

Like IX.37 with *sá* opening every vs., every vs. in this hymn begins with a form of the *eṣá-* pronoun. The pattern here is both more complex and more emphatic: there is case variation (vss. 2 and 3 have acc. sg. *etám*, the rest nom. sg. *eṣá*), and in all vss. but vs. 2 the initial pronoun is followed by the appropriate form of *syá-/tyá-*: *eṣá (u) syá*, *etám tyám*, a phrase that means ‘this very (one)’.

IX.38.1: The two nominatives *vṛṣā* ‘bull’ and *ráthah* ‘chariot’ are juxtaposed, each qualifying Soma. I consider them separate characterizations, with Soma as both bull and chariot; so also Oberlies (RelRV II.71, 229). Ge takes *vṛṣā* as modifying *ráthah* (“Dieser bullenhafte Wagen”), while Re sneaks in a parenthesis to avoid identifying Soma with a chariot: “le-célèbre (*soma*), taureau, (cheval attelé au) char.” If taking them as independent seems too radical, Ge’s solution takes fewer liberties with the text than Re’s.

IX.38.2: As noted above, this is the only vs. where the initial pronoun is not followed by a form of *syá-/tyá-*, though *tritásya* starts promisingly, with *tR*, and ends with *-sya*. See further on this vs. ad IX.37.4.

IX.38.3: The phrase “ten tawny ones” (*haríto dáśa*) helps define the “maidens of Trita” (*tritásya yóṣanaḥ*) in the previous vs. as the fingers: “ten” is the giveaway.

IX.38.4: It may be that the adj. *mānuṣa-* here should be rendered more restrictively as “stemming from Manu,” referring to only those clans that participate in Ārya sacrificial culture.

IX.38.5: It is tempting to read *diváh* as abl. with *áva caṣṭe*: “looks down from heaven”; however, *diváh síśuḥ* “child of heaven” is found elsewhere (IV.15.6, VI.49.2). It is certainly possible, however, to read *diváh* with both: “the child of heaven looks down from heaven.” The word is well positioned to look both left and right.

IX.39

IX.39.1: The hymn opens with a mirror-image phonetic figure: *āśúr arṣa*.

The voc. *bṛhanmate* ‘having lofty thought’ puns on the name of the poet given in the Anukramaṇī, Bṛhanmati Āṅgīrasa -- or more likely provided the name.

On the direct speech in pāda c of this vs., see publ. intro. The speech itself consists only of the word *devāḥ*. The place identified by this speech is soma's goal, where the gods will partake of it.

IX.39.2: The phrase *pariṣkṛṇvānn āniṣkṛtam* is not as much of an etymological figure as it first appears: in the 1st word, the preverb *pari* is cmpd with the *s*-mobile form of $\sqrt{kṛ}$, while the 2nd is the negated form of the somewhat enigmatic lexeme $\acute{i}ṣ + \sqrt{kṛ}$ (the latter without *s*-mobile), on which see comm. ad VII.76.2. As disc. there, the pseudo-preverb $\acute{i}ṣ$ may derive from the root noun $\acute{i}ṣ$ - 'refreshment', and our passage here contains that noun. The phrase *yātáyann iṣaḥ* "arranging refreshments" in b functions almost like a paraphrase, or repair, of the putative phrase $\acute{i}ṣ$ - $\sqrt{kṛ}$ "prepare refreshment" → "put in order, set to rights."

IX.39.3: The med. root pres. part. *cákṣāṇa*- cmpd with *ví* is found only here. By contrast the bahuvrīhi *vicakṣaṇá*- 'having a wide gaze, wide-gazing' occurs nearly 20x in Maṇḍala IX alone (including nearby IX.37.2). The two words are distinguished only by the length of the penultimate syllable (and accent). The cmpd is found almost entirely pāda-final (either in Gāyatrī or in Jāgati), whereas the part. here opens the pāda. However, nothing would prevent *vicakṣaṇáḥ* from taking that position, as it indeed does in IX.97.2 (Triṣṭubh), so the distribution cannot be purely metrical. See also Re.

IX.39.5: The suppressed object of *āvívāsan* is probably the gods (so already Sāy) or Indra in particular (supported by pāda c), but there is no reason to supply this obj. in tr.

IX.39.6: As disc. in the publ. intro., this vs. forms a notional ring with vs. 1, with both containing direct speech in a ritual setting in their respective pāda c's. The speech is more clearly marked in vs. 1, with *íti brávan*, than it is here. Both the speaker(s) and the addressees are also unclear here. It is likely that the former are the officiating priests, the subjects of the 3rd pl. *hinvanti* in b and quite possibly of *anūṣata* in a (so Ge, Lü 602), though Re thinks rather of the soma drinks. As for the addressees of the 2nd pl. impv. *sīdata*, I think the soma drinks are most likely, as in the identical pāda in IX.13.9, which is preceded by a nom. pl. *pávamānāḥ* identifying the subject. However, the soma referent in our b pāda is sg. (*hárīm*) -- though this is not really problematic, given the ubiquitous variation between sg. and pl. soma(s) in these hymns. However, it could also be addressed to the gods arriving at the ritual ground (so Sāy), the gods whose location was specified in 1c.

IX.40

IX.40.2: Both Ge and Re treat *ruhat* as modal, parallel to the clear aor. subj. *gámat* in the following pāda (e.g., "... soll ... besteigen, ... soll ... gehen"). But *ruhat* belongs to a clear them. aor. *áruhat*, and its zero-grade root syll. would preclude a subjunctive in any case; formally it must be an injunc. I take the sequence of verbs as referring to different stages of the ritual process, one that has just occurred, one that will now occur. KH (Injunk. 222) in fact suggests that the transmitted injunc. *ruhat* might represent a redactional error for *'ruhat*, an augmented aor. in this sandhi context. Hoffmann's suggestion of course

results from his idiosyncratic and restrictive views on the function of the injunctive; in my opinion injunc. *ruhat* would work fine here as an immed. past, preceding soma's departure for Indra. (Maur's tr. [84] is sim. to mine.)

IX.40.3: The expression *asmábhyam ... víśvataḥ* "for us all around" in b I take as a heavy specification of enclitic *naḥ* in Wackernagel's position in pāda a. Most take *víśvataḥ* as qualifying "wealth." The fact that this pāda (*asmábhyam soma víśvataḥ*) appears 3x (also IX.33.6, 65.21) suggests that *víśvataḥ* goes with 'us'; on the other hand, that all three occurrences involve the acquisition of wealth or other good things somewhat undercuts that argument.

On *mahām* see AiG III.251.

IX.40.4: On subj. 2nd sg. *vidāḥ* see comm. ad IX.19.6. As noted there, I think this is the only actual example of *vidāḥ*. The other supposed exx. are actually 2nd sg. impv. *vidā* with lengthened final; their sandhi position is ambiguous and so the forms could represent *-āḥ* as well as *-ā*, and the Pp. analyses them as the former. It is in fact not beyond the realm of possibility that the original reading here was also **vidā*. An impv. would fit the context better, with immediately preceding (4b) and following (5a) impv. *ā bhara*. It is possible that the original sequence **vidā sahasrīṇīḥ* was interpr. as having a degeminated double *-s s-* (**vidās s...*), which was then restored. The meter would be unaffected. The almost identical pāda, IX.61.3 *kṣārā sahasrīṇīr īṣaḥ, īs* transmitted with an impv. with lengthened final. Note also impv. *vardhayā* in 5c. An alt. tr. here would then be "find refreshments ..." Curiously, both Ge and Re tr. as impv., though they register no discomfort with the subjunctive.

IX.41

IX.41.1–2: These two vss. are somewhat illuminated by IX.73.4–5, containing some very similar expressions: 73.4d *padé-pade pāśīnaḥ santi sétavaḥ* "At every step there are snares that bind"; 73.5bcd ... *saṃdāhanto avratān / ... āpa dhamanti ... tvācam āsīknīm* "...burning up those who follow no commandment, they blow away ... the black skin." Cf. also *bhūrṇayaḥ* in 73.4b, corresponding to *bhūrṇayaḥ* in our 1a, and note also that *āpa dhamanti* in 73.5c with "black skin" as its obj. resembles *ghnāntaḥ ... āpa* in our 1c, also with "black skin" as object.

IX.41.1: This vs., consisting entirely of a rel. cl., is not resumed by a main cl. Vs. 2, which might be configured as the main cl., is couched in the 1st pl., not the 3rd pl. like vs. 1, and it also has a very different tone. There is no reason, with Re, to supply an anodyne introductory cl. "(Je chante les *soma*)" to provide a main cl. -- in fact, the abruptness of the expression and its incompleteness enhance the sense of violence.

As I indicated in the publ. intro., I think the unexpressed subj. is the soma juices. Many soma hymns begin with the soma rushing forth after its pressing, often compared to a horse or a bull charging; here the soma drinks are also likened to cattle, but stampeding cattle, and this uncontrollable mob tramples the enemy. So the poet has taken a standard opening trope and "weaponized" it, as it were.

This enemy is identified as the “black skin” (*kṛṣṇām ... tvācam*). For this phrase as a designation of non-Ārya “without commandments” (*avratā-*) see I.130.8 and IX.73.5 (in the latter *tvācam āsīknīm*; see above). The term *avratā-* is found in the next vs. (2c).

IX.41.2: As was just noted, *avratām* in c suggests that this vs. belongs conceptually and rhetorically with vs. 1, because *avratā-* elsewhere qualifies those “with black skin.” However, as I also indicated ad vs. 1, I do not think vs. 2 is the main clause on which the rel. cl. of vs. 1 is dependent: “we” are not likened to stampeding cattle in vs. 1, but rather the soma juices are. HPS (*Ved. vratā*, 94 n. 193) rather trickily suggests taking 2ab as parenthetic, with c returning to the soma juices of vs. 1, modified by the part. *sāhvāṃsaḥ*. I see no reason for this: the victory of the soma juices in 1a is reconfigured as *our* victory.

With Old, Ge, Re I take the gen. *suvitāsya* as the gen. obj. of *manāmahe* and construe *āti* with *sétum* (contra Gr, who takes it with *manāmahe*). In IX *āti* regularly refers to the journey of the soma “beyond” the filter, which here is represented by *sétum*. Re cites other passages containing \sqrt{man} with gen., but it must be admitted that this particular form, *manāmahe*, otherwise resolutely takes the acc.

sétu- is found 5x in the RV; its only two occurrences in IX are here and in IX.73.4 cited above. The word does not yet have its later meaning ‘bridge’, but a sense closer to its root etym. to $\sqrt{sā}$ / *sí* ‘bind’ (with 2ndary full-grade *se* built to the zero-grade): ‘fetter, bond, (or here) snare’. Ge and Re instead take it as a dyke or dam (Damm and digue respectively), but these seem to be an attempt to split the difference between the root etymology and the later sense ‘bridge’. Certainly in other RVic passages the sense ‘fetter’ vel sim. is inescapable, e.g. VIII.67.8 *mā naḥ sétuḥ siṣed ayām* “Let this fetter here not bind us,” with cognate verb, where Ge tr. “Fessel.” As for what physical object the *sétu-* refers to here, I think it is an image of the twisty curls of a sheep’s fleece, which can be seen as fetters or nooses.

durāvyām, modifying *sétum*, is assigned to a stem *dur-āvyā* / *durāvia* by Gr, misrepresenting the accent, inter alia. As Old points out, however, the stem is really *durāvī-*, a root noun cmpd. (see now Scar 497), and it must mean ‘difficult to pursue / follow’. Since *sétu-* here refers to the curls of the sheep’s fleece (in my view), these curls can be conceived of as the tracks that the liquid would follow as it’s being strained through the fleece, tracks that can be difficult to pursue. So the acc. phrase *sétum durāvyām* jams two different but evocative images into one. Note also that *suvitāsya ... durāv(i)yam* is something of a phonetic figure, with the semantically contrastive adverbial prefixes *su* and *dus*, but different verbal roots (\sqrt{i} and $\sqrt{vī}$) -- though internal sandhi provides \sqrt{i} with an apparent initial *v* matching *vī*.

IX.41.5: Old takes *uṣāḥ* as acc. pl. (so also AiG III.283) and the object of *ā ... pṛṇa* in the simile (so presumably “as the sun [fills] the dawns with its rays”; cf Oberlies Rel.RV I.238). Although an acc. pl. *uṣāḥ* is morphologically possible (like rare gen. sg. *uṣāḥ*), the simile thus produced does not make sense to me, and despite the parade of citations of supposed parallels that Old provides, no passage has anything remotely like that. I follow Ge in taking *uṣāḥ* and *sūryaḥ* as parallel nom. sg., both participating in the simile. Re seems to take as nom., but pl., for no obvious reason.

IX.41.6: The last pāda begins with a mirror-image figure: *sārā rasā*, though the last vowel is obscured in sandhi: *rasēva*.

IX.42

IX.42.1: Like the 1st vs. of the last hymn, also by Medhyātithi Kāṇva, this vs. is syntactically incomplete -- unless we want to take the pres. participles (*janāyan* a, b; *vāsānaḥ* c) as predicated, which in this case I don't. In this case, vs. 2 can easily pick up the participial vs. 1 and provide a predicate.

IX.42.3: Acdg. to Kü (471), the medial part. of the pf. of √ *vṛdh* is always presential, though both Ge and Re tr. as preterital. My “ever-increasing” makes it sound like an inten., but of course the heavy redupl. *vā-* simply belongs to the pf. of this root.

Note the *v*-alliteration in ab: *vāvṛdhānāya tūrvaye pāvante vājasātaye*.

IX.42.4: The adj. *pratnā-* ‘age-old’ is repeated here from 2a, linking the “age-old thought” (= hymn) with soma’s “age-old milk.”

p-alliteration in ab: ... *pratnām it pāyaḥ pavitre pāri* ...

IX.42.5: Somewhat less insistent *v*-alliteration: *viśvāni vāryā ... devām ṛtāvṛdhah*.

IX.42.6: This vs. contains almost the same elements as IX.41.4. Our desired rewards are *gómat*, *vīrávat*, *ásvāvat*, *vājavat*, which match 41.4 except that *híranyavat* substitutes for *vīrávat* there. We also want *bṛhatīr īṣaḥ*, like the *mahīm īṣam* of 41.4. The soma is described as *sutāḥ* in both, though the vocatives are different: *indo* versus *soma*. But the big difference is that 41.4 has the preverb *ā* with *pavasva*, which licenses the accusative complements, while our passage does not. We must simply supply it here, I’m afraid.

IX.43

IX.43.1: The phonological near-identity of instr. pl. *góbhiḥ* and *gīrbhiḥ* allows them to be conceptually assimilated to each other, and note that *vāsāya-* ‘clothe’ is frequently also used with *góbhiḥ*: e.g., IX.8.5 *sām góbhir vāsayāmasi* (also IX.2.4, 14.3, 66.13).

IX.43.2: *gīraḥ ... pūrvāthā* “hymns in the ancient way” is reminiscent of 42.2 *pratnéna mánmanā* “with the age-old thought.”

IX.43.3: Medhyātithi’s signature. Mention of the poet’s name is a relative rarity in the Gāyatrī hymns of IX, acdg. to Oberlies (Rel.RV I.549).

IX.43.4: On *vidā* versus *vidā(h)*, see comm. ad IX.19.6.

IX.44

IX.44.1: *mahé táne* “for great extension” is found also in VIII.26.2, 46.25, where it appears to refer to the extension of the family line. This is possible here, esp. if *naḥ* is

construed with it, as in the publ. tr. Ge suggests that it refers to the extension of lifetime (“zu grosser Lebensdauer(?)”) and Re to the ritual continuum, but as Re points out in his n., it could also simply describe, physically, the extension of the stream of soma. If that interpr. is chosen, the tr. should de-couple *naḥ* from the phrase: “... rush forth for us for (your) great extension.”

The referent of the simile *ūrmīm ná bíbhrat* is suggested by IX.96.7 *ūrmīm ná síndhuḥ*.

IX.44.2: The stem *júṣṭá-* with expected ppl. accent occurs only here in the RV, beside well-attested *júṣṭa-* with unexpected root accent. The latter form is generally construed with the dative of the beneficiary (“enjoyable to X”), save for the late X.125.5 (Vāc) *júṣṭam devébhir utá mānuṣebhiḥ* (though this phrase has a traditional ring), with instr. as here.

The usual uncertainty about the root affiliation of *hitá-* in IX: to \sqrt{hi} ‘impel’ or $\sqrt{dhā}$ ‘place’? See disc. ad IX.1.2, etc. On the basis of finite *hínve* in the next pāda, undeniably belonging to \sqrt{hi} , one could argue either way: as a root repetition or as a pun. Both Ge and Re take it to \sqrt{hi} , the latter with some disc. in his n.; I concur, primarily because of phrases like *dhiyēṣitá-* (I.3.5, III.12.1, 60.5, 62.12) ‘sent by the thought’, *dhiyā jūtá-* (IX.64.16) ‘sped by the thought’, even though the doubling of ‘impelled’ seems crude for a RVic poet.

Ge and Re also construe *víprasya* with *dhārayā* (e.g., “grâce à la coulée du (prêtre)-inspiré”). In the publ. tr. I instead take it with the two types of speech in pāda a, *matī-* and *dhī-* and assume that it has been displaced to c in order to contrast with *kavīḥ*, referring to Soma there. In favor of this interpr. is the fact that the very common instr. *dhārayā* generally appears alone and refers to the physical stream of the soma liquid, not metaphorically to words or the like. However, the identical pāda IX.12.8c gives me pause, as in that vs. there is no alternative way of construing *víprasya* except with *dhārayā*. I think it possible that IX.12.8 is a clumsy borrowing of this pāda, but see comm. ad loc., where I consider the possibility that there is a way to interpret *víprasya dhārayā* phrasally.

IX.44.4: In b I take the mid. part. *cakrāṇāḥ* with a self-beneficial / reflexive sense, contra Ge and Re.

With Ge I take the subj. of c to be the priest, not Soma with Re.

IX.44.5: The first hemistich has no finite verb. Ge somewhat arbitrarily supplies a verb (“empfehlen”) with which to construe the two datives *bhāgāya vāyāve*. If we are to supply a verb, it seems best to be guided by the context in which pāda a is repeated, in IX.61.9a, where the following pāda contains *pavasva*. Re’s “(qu’il se clarifie)” seems to reflect this, though he does not mention the repeated pāda in his n., where he suggests other possibilities. (That *pavasva* appears in the immediately preceding vs. 4 in our hymn might also support supplying it here.) The publ. tr. simply takes ab as a nominal expression, with the datives of pāda a construed with *sadāvṛdhaḥ* ‘growing ever stronger’. The drawback to my interpr. (and to Re’s) is that there’s no clear function for *naḥ*, which both Re and I fail to tr. in its hemistich (Ge uses it as object of “empfehlen”). I take *naḥ*

as the fronted Wackernagel-position obj. of *ā yamat* in c, assuming that the whole vs. is a single clause.

Ge's rendering of *vīpravīra-* as "der die Männer beredt macht" cavalierly ignores both accent and the morphology of the first member. It must rather be a *bahuvrīhi*, as the publ. tr. and Re's "qui a pour hommes-utiles les orateurs" recognize.

IX.45

IX.45.1: As noted in the publ. intro., *nṛcākṣā* in b may form a ring with *vicākṣase* in 6b, the last vs. of the hymn. For similar phraseology within a single vs., cf. IX.86.23 *tvām nṛcākṣā abhavo vicākṣaṇa*. *nṛcākṣā* also resonates thematically with the following *devāvītaye*, with the *nṛ-* *devā-* contrast.

IX.45.2: The word order in this vs. is quite jumbled, and there are several alternative ways to try to fix it. The one taken by the publ. tr. follows Ge in taking pāda b as parenthetic. Unlike Ge's tr. (though it is the 2nd alt. in his n. 2c), the publ. tr. uses this strategy to allow *devān* in c to be the goal of the verb in a (*aṛṣābhī*); cf. nearby IX.42.5 *abhī viśvāni vāryā, abhī devān ... aṛṣati* and in the immed. preceding hymn IX.44.1bc ... *aṛṣasi / abhī devān*, where the verb ends the hemistich and the preverb begins the next pāda, both reasonable positions for those elements. The latter passage (by the same poet as ours) might help explain the postposed preverb in the middle of the pāda here: *sā no aṛṣābhī ...*, which is otherwise odd.

However, taking *devān* as goal still leaves the rest of pāda c, ... *sākhibhya ā vāram*, unaccounted for. In the publ. tr. I take the *sākhibhyaḥ* as dat. doubling *naḥ* in a, with an independent adverbial *ā vāram* "at will" (which, however, is usually in the opposite order *vāram ā*). But this ignores the striking parallel cited by both Ge and Re, I.4.4 *yās te sākhibhya ā vāram* (and cf. II.5.5 ... *tiṣṭbhya ā vāram*), rendered in the publ. tr. as "who is your choice from among your comrades." Although it is always possible that the parallel is a false one, I now think I cannot ignore it and I suggest that this phrase provides a second goal to *aṛṣābhī*, with *sākhibhya ā vāram* to be construed together (as in I.4.4) referring to Indra, who was mentioned in the parenthetic pāda b. (Indra is also the referent in I.4.4.) Indra is of course soma's particular target among the gods, the best drinker of soma. I would now take this phrase as specifying soma's goal of choice: the juice rushes to the gods, but esp. to Indra – and would alter the tr. to "rush to the gods, to your choice [=Indra] from among the comrades," with *sākhibhyaḥ* referring to the gods in general. Although *sākhi-* in IX generally refers to poets or hymans in general (cf., e.g., IX.97.43), the ABL *ā vāram* idiom could overrule this. This interpr. unfortunately requires (or at least suggests) that *sākhāyaḥ* in vs. 5 has a different referent.

IX.45.4: I am not certain what the simile depicts, what it means for a horse to "step beyond the chariot-pole (*dhūr-*)." Re suggests that the *dhūr-* is being used here as a pole to mark the limit of the racecourse, but I do not know of another example of *dhūr-* in this sense. It's possible that the simile depicts the moment when, as a horse is starting to pull a chariot, it's been hanging back from its tackle and now it pulls on it and pushes beyond it, but my ignorance about the interaction between horses and their tackle makes this interpr. uncertain. Note also that *dhūram* here phonetically echoes *dūrah* 'doors' in 3c.

IX.45.5: As noted ad 2c, if we take *sākhibhyaḥ* there as referring to the gods, *sākhāyaḥ* here is probably not picking up that referent, but likely refers to the human poets.

IX.45.6: Both Ge and Re take *vicākṣase* as transitive ‘reveal’, but as Re notes, *vī√cakṣ* is ordinarily intransitive, and I see no reason to willfully ignore this usage. As noted in the publ. intro., the verb forms a ring with *nṛcākṣāḥ* in 1b.

IX.46

IX.46.1: Note the unusual position of *iva* after the full simile, not its first word.

IX.46.2: The simile “adorned like a maiden with her patrimony” (*pāriṣkṛtāsaḥ ... yóseva pítṛyāvatī*) is presumably the first mention in Sanskrit of the major source of *strīdhana* or ‘women’s property’ listed in the dharma lit., namely what a bride receives at her wedding, esp. from “mother, brother(s), and father” (see Manu IX.194, though there the wedding is divided into two phases and the property from her three types of natal relatives is counted separately, adding up to five of the six types of *strīdhana*). Since these gifts would take the form of jewelry – and since the bride would be especially dressed up for her wedding -- the simile here highlights the special sparkling appearance of the soma juices. Alternatively this might be a reference to the institution of the *putrikā* or “appointed daughter,” who in the absence of sons is made the virtual son and heir of her father, with any children she bears owing their ancestral offerings to him rather than to their paternal grandfather. Oberlies (Relig. RV I.522) calls the maiden in this passage an Erbtochter and seems to be thinking of this institution, and Re may be as well, though his comment (“le **pítṛya* ou héritage paternel pouvait donc revenir à la fille”) is vague and may reflect a lack of knowledge of the standard sources on *strīdhana*. I think the “adorned bride” interpr. is far more likely and fits the ritual situation better. This view goes back to Wackernagel (1916 = KISch [1953]: 464–65) and is also championed by H-P Schmidt (Women’s Rites and Rights, 1987: 32).

IX.46.3: With Ge and Re, I take *kārmabhiḥ* as referring to the various ritual acts at the Soma Sacrifice. Oberlies (Relig. RV I.534) instead sees these as Indra’s deeds, after the weakened god has been reinvigorated by soma: “... lassen den Indra mit [=zu] seinen Taten wachsen.” This seems farfetched to me, given how frequently forms of *√kṛ* are used for ritual activity.

IX.46.4: Old is inclined, flg. BR, to emend voc. *suhasṭīyaḥ* to **suhasṭīyāḥ*, derived from the stem *suhasṭīya-*, hence a masc. nom. pl. referring to the priestly officiants. Re follows him, remarking rather scornfully “il est peu probable que l’auteur ait voulu désigner par ce Voc. ... des entités féminines, à la rigueur toutefois les « doigts ».” But see Ge’s quite sensible n. suggesting that the fem. refers to the fingers, which are frequently assigned ritual agency in the IXth Maṇḍala. Note that the ten fingers (*dāśa kṣīpaḥ*) explicitly occur two vss. later (6b).

śukrā ... manthínā is a discontinuous dual dvandva. The phraseology matches III.32.2 *gāvāśīram manthīnam ... śukrām ... sómam*; cf. *góbhiḥ śrīṇīta* in c.

IX.47

IX.47.1: Both Ge and Re take *mahāḥ* as a nom. sg. masc. to them. *mahā-* (so also Gr), referring to Soma. With immed. flg. *cīd* the phrase is taken as “already great” (“schon so grosse,” “si grand (fût-il déjà)”), as an implicit contrast with the verb, (*abhy*) *āvardhata*, which indicates that he has grown (further) despite his already large size. This if of course possible. By contrast I take *mahāḥ* as acc. pl. m. to *māh-*. My reason for this is the preverb *abhī-* in the few occurrences of *abhī√vṛdh*, the lexeme takes an acc. complement even in the middle. Cf. II.17.4 *vīśvā bhūvanābhī ... abhy āvardhata* “he [=Indra] grew strong over all the worlds.” As to who or what these great ones are, perhaps the gods, since the phrase *mahó devān* is not uncommon. Given that Soma here is being assimilated to Indra – who is the standard subject of both *mandānā-* (I.80.6, etc. etc.) and *vṛṣāyāte* (cf., e.g., IX.108.2) – asserting his mastery over the (other) gods wouldn’t be surprising.

IX.47.4: On the disputed interpr. of *vidhartāri*, see comm. ad VIII.70.2. As I disc. there, I interpr. the form not as an infinitive (with many), but as the loc. of the agent noun that it is morphologically. Here I envisage Soma in the role of a facilitator: he wants the *vīpra* (presumably the human poet) to get a dakṣiṇā from the patron (/apportioner: *vidhartār-*), and sets about making that happen.

In c *yādī* is much better read *yād ī*, with the enclitic acc. prn. *ī* doubling the obj. *dhīyah*. It is difficult to construct an “if” reading.

The subj. of *marmṛjyāte* is unspecified and unclear; it could either be Soma as *kavī* or the human *vīpra* – or both.

IX.47.5: This vs. has a number of difficulties, both morphologically and syntactically. The most immediate is the first word *śiśāsātū* (Pp. rightly *śiśāsātuḥ*). Gr takes it as a nom. sg. m. adj. built to the desid. (so already Sāy.; cf. AiG II.2.667), fld by Old, Re, and the publ tr.; the alternative solution is to interpr. it as a 3rd dual perfect-like form built to the desid., as suggested by Ludwig, fld. by Ge (see his n. 5a), Ober. (Relig. RV I.537), and Heenen (Desid. 239 + n. 264). I would be more sympathetic to the du. pf. interpr. if there were a clear way to get a dual subject. But the only indication of a subject in this vs. is contained in the 2nd sg. *asī* at the end of the vs., and the attempt of Ge et al. to invent a dual subject is exceptionally clumsy: by their interpr. Soma, the 2nd sg. referent in *asī*, is on one side or faction, and there is another side that ought implicitly to contrast with Soma’s side, but somehow doesn’t in his tr. Acdg to Ge, the two sides are racehorses (*ārvant-* in b) and “Beutemacher” (the victors in raids in c). Since the putative desiderative pf. is already anomalous, the contextual melt-down and the multiplying of invisible actors make this an unattractive solution. So, better to deal with the alternative morphological anomaly, a desiderative adj. in *-tu-* apparently formed to the desid. verbal stem; this adj., as a singular, can easily qualify the sg. subj. of *asī*. Debrunner (II.2.666–67) cites a few such forms in *-tu-* that could be associated with a them. pres. stem (though all with suffixal accent, i.e., *-tū-*). He suggests that our form is an Ersatz for the *-u-*adj. *śiśāsū-* (1x I.102.6), and this seems to me the right path to take, though the details aren’t clear. I would tentatively suggest that it is a blend – or, perhaps better, a remarking – of

the two verbal adj. suffixes available to desiderative stems: the normal pres. part. act. in -*ant-*, well attested to this stem (*śiṣāsant-*, -*at-*), and the verbal adj. suffix -*u-* specific to the desid. (as in *śiṣāsú-* just cited). It might be possible to image the addition of the -*u-* suffix to the weak form of the pres. part. *śiṣāsat-*. Unfortunately this founders on the accent, which cannot easily be explained; this is the only advantage of the pf. du. explanation, which would have the correct accent.

Even assuming that *śiṣāsátuḥ* is a desiderative adj., construed with gen. *rayīṇām* in the same pāda, we are not out of the woods, and I am not satisfied with the publ. tr. or with the suggested tr. of Old and Re. The three pādas of the vs. have an apparently parallel structure, esp. the last two. All three contain a gen. pl. – *rayīṇām* ‘of riches’ (a), *árvatām* ‘of chargers’ (b), and *jigyúṣām* ‘of winners’ (c); the last two pādas also contain loc. pls., *vājeṣu* ‘at prize contests’ (b) and *bhāreṣu* ‘at raids’ (c). Pāda b is also marked as a simile, with the simile marker *iva* following the whole simile, not the first word (as also in the last hymn, IX.46.1b). Are all three pādas truly parallel – and in particular should *śiṣāsátuḥ* be understood in b and c, as in a, where it governs *rayīṇām*? Both Old and Re understand *śiṣāsátuḥ* with all three pādas, but take the genitives of b and c in dative function (identifying the groups for which Soma wishes to win riches), not parallel to *rayīṇām*. Cf. “Du bist der Erstreber von Reichtümern, wie für die Renner beim Gewinn der Preise, (so) für die Sieger in den *bhāra*.” This neatly solves the problem that the gen. pls. of b and c refer not to a substance (wealth) one might strive to win, but to animate beings that might be striving to win it themselves, so the morphologically parallel forms do not seem to be semantically or functionally parallel. My own solution in the publ. tr. is, I now see, considerably inferior to the Old/Re one: I take b with a, but not c, making ‘chargers’ a substance Soma seeks to win and also eliding the simile. I would now reject this interpr. For c in the publ. tr. I made the gen. pl. a partitive: “you are among those / (one) of those who are victorious ...” Although this interpr. seems a little artificial, I think it’s possible, and I would now interpr. b in the same way – with the whole vs. meaning “Desirous of winning riches, you are (one) of those who are victorious in the raids, as if (you were one) of the chargers at prize-contests.” Alternatively, I would substitute a version of Old/Re: “You seek to win riches for those who are victorious at raids, as if for coursers at prize-contests,” though this seems more awkward.

In any case, the vs. is problematic on several counts and I doubt that any of the suggested interpr. captures the poet’s intent.

IX.48

As noted in the publ. intro., vss. 3–4 concern the stealing of Soma from heaven (“Somaraub”), a story not otherwise characteristic of IX but treated in detail in IV.26–27. I now think it possible that vss. 1–2 also allude to the same myth, though very obliquely. Details in the comm. to the relevant vss. Our poet, Kavi Bhārgava, also treats this myth in IX.77, one of his Jagatī hymns.

IX.48.1: Ge and Re take *cārum* as referring to Soma, as it, admittedly, often does. I interpr. it rather as a 2nd obj. of *īmahe* ($\sqrt{yā}/ī$ ‘implore, beg for’. (Ge takes the verb to $\sqrt{yā}$ ‘go’ [“nahen wir”], while Re takes it to ‘implore’, but with a single obj.) Either interpr. is possible; I find myself more sympathetic to that of Ge/Re than I originally was, though I am far from disavowing the publ. tr.

The possible allusion to the Somaraub in this vs. is quite muted, but I wonder if the depiction of Soma “bearing his manly powers among the seats of great heaven” (*sadhástheṣu mahó diváh*) could refer to Soma when he is being kept captive in heaven in the myth. A very slight piece of evidence for this is that Kṛṣānu, the archer in the Somaraub story (see IV.27.3), is located *sadhástha ā* “in the seat” in X.64.8, but I would put little or no weight on this.

IX.48.2: This vs. is couched in the acc. and entirely dependent on vs. 1, qualifying Soma.

Contra Gr, the cmpd *sāmvr̥kta-dhr̥ṣṇu-* must be a bahuvr̥hi; cf. esp. Old and Scar (504).

The cmpd *mahāmahivrata-* is unusual in having three members, esp. since the first two are etym. identical. With AiG II.1.236 it’s best to take *mahā* as ‘very’ (cf. also Schmidt, *vrata* p. 100).

There is somewhat stronger evidence for a Somaraub connection in this vs. than in vs. 1. In particular Soma is said to be “eager to break a hundred strongholds” (*śatām pūro ruruḥṣāṇim*); in IV.27.1 these same (or similar) strongholds guarded him (*śatām mā pūra āyasīr arakṣan*) before he was rescued, and so he would be eager to break out of them. Note the phonological similarity between *arakṣan* and *ruruḥṣāṇim*; the latter is a hapax, with in fact no other desid. forms built to the root *√ruj* elsewhere in Skt., so the echo may have been deliberately constructed.

If pāda c refers to Soma’s desire to break out of confinement, it’s possible that *sāmvr̥kta-dhr̥ṣṇu-* also refers to this confinement: ‘having his bold(ness) encoiled’, with *dhr̥ṣṇu-* a quality of Soma – rather than my original interpr., that Soma had encoiled the *dhr̥ṣṇu-* of another. Note that Soma is qualified by *dhr̥ṣṇu-* in the immediately preceding hymn (IX.47.2). The use of the idiom *sāmvr̥kta-* ‘encoiled, encircled’ could reflect the circular fortresses.

A connection between the 100 strongholds in this vs. and the explicit Somaraub allusion in the next vs. was suggested by Hillebrandt, but unfortunately rejected by Old—too fastidiously I think.

IX.48.3: The *ātaḥ* ‘from there’ that begins this vs. was used by Hillebrandt as evidence for the mythological connection between vss. 2 and 3, persuasively in my view, contra Old.

IX.48.3–4: The phrases *suparṇāḥ ... bharat* (3c) “the falcon brought” and *vīr bharat* (4c) “the bird brought” are directly reminiscent of IV.26, where the 3rd sg. (*a*)*bharat* occurs 4x in 4 vss. (4–7), incl. 4cd *suparṇāḥ ... bhārat* and 5a *bhārat ... vīḥ*, with the same subjects as here.

IX.49

IX.49.1: The first pāda of this vs. (*pāvasva vr̥ṣṭīm ā sú naḥ*) seems syntactically backward, in that we might expect *ā sú naḥ* to open the clause. A cursory glance through the *sú* passages in Lub does not turn up a similarly egregious deviation from left periphery behavior. The solution arises from reading the expression in light of 3c, *asmābhyam vr̥ṣṭīm ā pava*, which is an exact paraphrase with flipped word order. The full

dative pronoun *asmābhyam* takes initial position there, while its enclitic equivalent *naḥ* is final in our pāda; the verbs occupy the opposite positions: initial in 1a, final in 3c. The obj. *vr̥ṣṭīm* is identically positioned in the center of the two verses. In 3c the preverb *ā* is more normally positioned than here, right before the verb (... *ā pava*), but, on the other hand, the verb there is morphologically quite anomalous. Thus both pādas have something wrong with them, but their aberrancies can be understood with reference to each other.

IX.49.2: The intent of this vs. is pretty clear, though the expression is a bit contorted: presumably our offering of soma will bring cows as a reward, but how the cows will come “by a stream” of purified soma is unclear. I imagine them in single file, but I don’t think that’s what’s meant.

The adj. qualifying cows, *jānya-*, is generally interpr. as pregnantly ‘belonging to other people’ (Ge “die Rinder anderer Leute,” Re “les vaches de l’étranger,” enshrined in Gr’s gloss 2a ‘fremden Leuten ausgehend’), but as I disc. ad IV.55.5, in all clear passages *jānya-* means ‘stemming from one’s own people’. Here it may be proleptic: cows will come here that will by virtue of coming here belong to us.

Note that *ūpa naḥ* is somewhat displaced, though not as much as *ā sú naḥ* in 1a.

IX.49.3: On c see the disc. ad vs. 1. The verb here, 2nd sg. impv. (*ā*) *pava*, is the *only* act. form to this extraordinarily well-attested Class 1 pres. stem and is obviously truncated from *pávasva*, in order to fit this exact paraphrase of 1a (see comm. above) into the allotted syllables (*asmābhyam* being a syllable-hog compared to *naḥ*). It may help that *dhāva* in 4b is almost a rhyme. Like many morphological anomalies, *pava* can be accounted for through sensitivity to the larger context.

IX.49.5: *rocāyan rúcaḥ* is a nice cognate acc. construction.

IX.50

IX.50.1: The b pāda consists of a single simile; as in nearby IX.46.1b and IX.47.5b, the simile particle *iva* occurs after the 2nd word in the simile, not the 1st – though here the simile consists of 3 words and so *iva* is non-final.

The c pāda contains a bold image: “spur on the wheelrim of the music” (*vāṇāsya codayā pavīm*). Perhaps not surprisingly, both Ge and Re flatten the image by redefining the verb and one or both of the nouns. Ge’s “Schärfe die Spitze der Rede (des Pfeils)” takes *paví-* as ‘point’, though in all clear cases it refers to a part of a chariot wheel (see EWA s.v. and Sparreboom, Chariot p. 131 with lit.), the tire or wheel rim, while the verb *codayā* means ‘impel, spur on’, not ‘sharpen’. His alternative ‘Pfeil’ assumes that *vāṇá-* is a variant of *bāṇá-* ‘dart’. Re’s “Aiguise la pointe de la parole-rhythmé” follows Ge; he justifies ‘sharpen’ with ref. to IX.17.5, but the verb there also means ‘spur on’ and has (in my view) speech as obj. Old is having none of this: he sensibly and firmly says that *√cud* is esp. common of the impelling of a chariot [this is not entirely true] and he sees no reason to take *paví-* in anything but its usual sense. To explain the image he suggests that the operation (that is, presumably the playing) of the *vāṇá-*, which he takes as a musical instrument, is conceived of like the driving of a chariot, whose wheel is therefore being

metaphorically impelled. This seems correct in its main outlines. The image blends the concrete (the chariot) and the metaphorical (music), both potential objects of \sqrt{cud} , in a phrase with the latter as dependent genitive. For \sqrt{cud} + ‘chariot’, cf. X.29.8 *rátham ... yám .. codáyāse*; the substitution of *paví-* is simply part for the whole. As for \sqrt{cud} + ‘speech’ (vel sim.), cf., e.g., III.62.10 *dhíyo yó naḥ pracodáyāt*.

IX.50.2: The first two pādas of this vs. vary and further specify the opening image in vs. 1 *út te súṣmāsa īrate*, with the same verbal lexeme though no longer in tmesis (*prasavé ta úd īrate*##) and the identification of the sound that rises as “three voices” (*tisró vācaḥ*). The loc. *prasavé* ‘at your stimulus’ can also be seen as a semantic version of *codayā* ‘spur on’ in 1c.

The three voices, found also in this same context in IX.33.4, are either the voices of the three priests, Hotar, Adhvaryu, and Udgātar, or their three types of ritual speech, ṛc, yajus, and sāman.

Both Ge and Re take *makhasyú-* in the realm of gifts and bounty: “eine Gabe heischend” and “généreuses” respectively. I consider it a pun, referring both to combat and to bounty. Interestingly, for the most part within IX, derivatives of *makhá-* are associated with *vāc-*: besides this one, IX.64.26 *vācam ... makhasyúvam* and IX.101.5 *vācás pátir makhasyate*. Here it could refer to some sort of competition among the three voices/priests in addition to the association of ritual activity with bounties.

IX.50.3: Just as vs. 2 picks up and varies vs. 1, vs. 3 chains with vs. 2: the loc. “on the sheep’s back” (*ávye ... sānavi*) of 2c is immediately followed by “on the sheep’s fleece” (*ávyo vāre*). Given the sandhi of the first ‘sheep’ (*ávya éṣi*) and the juxtaposition of the two phrases, one might at first consider going against the Pp in 2c to read *ávyaḥ*, matching the same apparent form in 3a. However, it is a curious fact of the morphology of these formulae that the loc. phrase containing ‘back’ (*sānavi*, *sāno*) always has the loc. *ávye* to the ‘sheep’ adj. *ávya-*, while the phrase containing *vāra-* ‘fleece’ always has the gen. *ávyaḥ* to the ‘sheep’ noun *ávi-*. To capture this the tr. of the two phrases in vss. 2-3 should be switched: “on the sheep’s back” and “on the fleece of the sheep” – though this is hardly a momentous change.

IX.50.4: It is possible to see 4 as chaining with 3: 3c *pávamānam*, 4a *ā pavasva*, though the ubiquity of the *páva-* stem makes this unremarkable even if true.

On *ā pavasva ... pavítram* see disc. ad IX.70.10.

IX.50.5: The first pāda, *sá pavasva madintama*, is almost identical to 4a *ā pavasva madintama*. This is somewhat reminiscent of the near identity of 1a and 2a.

As noted in the publ. intro., I consider *aktúbhiḥ* a pun. The first reading would be as etym. figure with *añjānáḥ* ‘being anointed’; cf. III.17.1 *aktúbhir aṇyate*, VI.69.3 *añjantv aktúbhiḥ*. But well-attested *aktúbhiḥ* is otherwise a temporal designation, ‘with/through the nights’, e.g., I.50.7 *áhā mímāno aktúbhiḥ* “measuring the days with the nights.” In this case perhaps it would refer to the Atirātra soma sacrifice.

IX.51

IX.51.2: The ritual impv. here, *sunótā* ‘press!’, is in the 2nd plural and therefore contrasts with the singular *punīhi* ‘purify!’ in 1c, though they occupy the same slot in the vs. The subj. of the impv. in vs. 1 is the Adhvaryu (voc. *ādhvaryo*), while the priestly subjects here are unspecified.

IX.51.3: I assume the gods in b are a different and more inclusive group than the Maruts in c, though *devāḥ* could just anticipate *marútaḥ*.

IX.51.4: The publ. tr. takes the pres. part. *vardháyan* as the predicate of the vs., though it might be possible to take *sutáḥ* instead (“You, the strengthening one, are pressed ...”). Although a predicated ppl. *sutáḥ* would better conform to RVic syntactic patterns, predicating the pres. part. seems to produce better sense: it provides the reason why the gods (and) the Maruts consume soma in vs. 3.

IX.52

IX.52.1: As was pointed out in the publ. intro., two parallel governing compounds, *sanád-rayiḥ* ‘gaining wealth’ (1a) and *maṃhayád-rayiḥ* ‘readying wealth’ (5c), open and close the hymn. The former also resonates with the adjacent expression across the pāda boundary, *bhārad vājam*. This phrase cannot help but remind us of the personal name *bharādvāja-*, which is of course in form also a governing compd. This stem is primarily confined to Maṇḍala VI, which is attributed to this ṛṣi and his family, but it would surely be known throughout RVic circles. Note also that some vss. and hymns in IX are attributed by the Anukramaṇī to Bharadvāja or a Bhāradvāja: Bharadvāja IX.67.1–3, Vasu Bhāradvāja IX.80–82, Rjīśvan Bhāradvāja IX.98 (jointly with Ambarīṣa Vārṣāṅgira), 108.6–7.

The grammatical identify of the *bhārat* part of this phrase can be questioned. The standard view (Gr, Ge, Re, Lub, KH [Injunk. 123], Lowe [Partic. 281]) is that it is a 3rd sg. injunc., with Soma as its subj. This requires a shift of ps. from 3rd (ab) to 2nd (c), given the 2nd sg. impv. *arṣa* in c. Of course such switches, even within a vs., are common. But it is made somewhat more difficult by the preverb *pāri*, which opens the vs. and would most naturally be construed with *arṣa*, a point also made by Old. Of the numerous *pāri* √ṛṣ passages in IX, cf., e.g., IX.69.2 ... *pāri vāram arṣati*. By contrast *pāri* is barely attested with √*bhṛ* and then only with middle forms, as far as I can see. If *pāri* (in a) is in tmesis with *arṣa* (in c), a finite verb in between (that is, putative *bhārat* in b) would have to be parenthetical at best. Re’s attempt to have it both ways (“*pāri* porte sur *arṣa* ... à travers *bhārat*”) simply shows the desperation required. I therefore follow Old, as well as AiG II.2.164, in taking *bhārat* as a form of the pres. part. *bhārant-*. Both Old and AiG consider it a neut. sg. (which it is of course in form) used adverbially, but as Old acutely remarks, an adverb taking an object is problematic (and we might expect accent shift to **bharát*, though adverbial accent shift is controversial). I would analyze it slightly differently: in order to produce a phrase modeled on the compd *bharād-vāja-* (AiG also evokes the PN here), the poet used the weak (neut.) form to stand for the nom. sg. masc. (expected **bhāran*). In this he would be supported by the well-attested nom. sg. of the redupl. pres. *bībharti*, namely *bībhrat* built to the weak stem of the participle, which serves for both masc. and neut. Maṇḍala IX contains several occurrences of this form; cf.

for the phraseology here IX.44.1 ... *bībhrad arṣasi*. I also find suggestive the two exx. of *bībhrad vājram* (VI.20.9, 23.1) “bearing the mace,” with *vājram* a phonological multiform of *vājam*; since these are both in the Bharadvāja maṇḍala, they are likely meant to evoke that name. See comm. ad VI.20.9.

IX.52.2: The apparent 2nd ps. / 3rd ps. switch recurs in more acute form here. The vs. opens with 2nd ps. *táva*, which surely refers to Soma, but the finite verb in this single-clause vs. is (apparently) *yāt*, a 3rd sg. One solution is to substitute a slightly different subj. in place of Soma – so Ge, flg. Sāy., who suggests *rāsaḥ* ‘sap’ (sim. Ober. II.231). Another is simply to ignore the problem, as Re and the publ. tr. do. I don’t have a solution (beyond the just mentioned avoidance of the issue), but I somehow think that the isolated and minimalist *yāt*, the only supposed injunctive to this well-attested root pres., is perhaps the artificial result of formulaic cut-and-paste. As Ge (2c) points out, our pāda *sahásradhāro yāt tánā* is reminiscent of IX.34.1 (*prá svānó dhārayā tánā*, and in fact *tánā* quite often follows *-ā*. If our pāda was somehow based on one containing the very well-attested instr. *dhārayā*, but with the substitution of the nom. bahuvrīhi *sahásra-dhāra-*, the final *-yā* of the underlying instr. would get detached: x x x **dhārayā tánā* → *sahásradhāro *yā tánā*, and then this truncated form could have been given morphological identity by extruding (geminating) a *t* from the initial of *tánā* (**yā tánā* → *yāt tánā*), with no metrical implications. On geminations and degeminations in the RV, see my several forthcoming articles. However, even I find this explanation overly tricky, and it also deprives the vs. of a verb (though *arṣa* could be supplied from the preceding vs.), so I do not push this possibility strongly.

IX.52.3: As noted in the publ. intro., the “pot” that is to be kicked is mostly likely an stingy patron, as Ge suggests. The whole vs. has a slangy and informal feel.

The problematic pāda is b. On the one hand, if we take the voc. *indo* seriously, this leaves *ná* badly positioned for a simile marker: it should follow *dānam*. But if *dānam* is supposed to be a simile, the expression is pretty slack: if *dānam* is ‘gift’, we want Soma to push the gift itself, not something compared to a gift. For both reasons Ge suggests that *ná* marks not a standard simile but an Utprekṣā, and, even so, that *ná* is in the wrong position. Re’s tr. seems to follow this view, though it’s somewhat hard to square with his comm. Old suggests emending *indo* to *indro*, which allows *ná* to be properly positioned for a simile and also produces a reasonable, if not particularly interesting simile, “give (him/it) a shove, as Indra (does) a gift.” My solution is quite different and, once again, perhaps over-tricky, but I think it captures the tone of the vs. better. I take *dāna-* not as ‘gift’, but rather as the med. root aor. participle to √*dā* ‘give’. The immediate problem with this is, of course, that that form should rather be accented **dānā-*. But given that the RV attests both *dāna-* and *dānā-* meaning ‘gift, giving’, sometimes in parallel formations (e.g., VI.53.3 *dānāya codaya* versus VIII.99.4 *dānāya codāyan*), it would not be surprising if the accent had been changed redactionally to match *dāna-*, which stem accounts for most of the acc. sg. forms (cf. esp. *dānam invati* I.128.5, *dānam invan* V.30.7). As for the sense, although medial forms of √*dā* are rare outside of the idiom *ā* √*dā* ‘take’, those that occur seem to mean ‘give of oneself / one’s own store’; cf. V.33.9 *sahásrā me cyāvatāno dādānaḥ* “(when) Cyavatāna was giving a thousand of his own to

me.” Taking *dānam* as a participle referring to the stingy patron of pāda a allows *nā* to be a negative and therefore properly positioned.

IX.52.4: The main cl. of ab lacks a finite verb; the preverb *ní* suggests several possibilities. Ge supplies *tira* on the basis of IX.19.7 *ní súṣmam ... tira* (his “halte,” my “undermine”), which is certainly possible. However, on the basis of *nijaghní-* in the next hymn, IX.53.2, as well as the two forms of \sqrt{vadh} in the immediately preceding vs. (52.3 *vadhaír vadhasno*), I prefer a form of *ní√han* (/ \sqrt{vadh}). Nothing depends on the choice, as long as the intent is hostile.

Ge construes *jānānām* in b with voc. *púruhūta* “du vielgerufener der Menschen,” which may be correct, given IX.64.27 as well as the nom. phrase *puruhūtó jānānām* in IX.87.6. (I therefore entertain the alt. tr. “o much invoked of the people.”) But on that basis he should construe *eṣām* in a with the same voc., since IX.64.27 has the same phrase, ... *eṣām, púruhūta jānānām*, where there is no other obvious way to interpret it and Ge takes the *eṣām* with *jānānām*. But here he construes *eṣām* separately, with *súṣmam*. Both Re and I take both genitives with that noun, IX.64.27 notwithstanding.

All of us must face the problem that the rel. cl. in c, which most naturally refers to the blustering people of ab, is in the sg. (*yáḥ ... ādīdeṣati*). This must simply be a constructio ad sensum, or rather the picking out of a particular referent in the group of hostile men mentioned in ab.

IX.52.5: The two numbers in ab, *śatām* and *sahásram*, participate in meaningless syntactic variation. Both must ultimately express an instrumental relationship to the verb; in the first the instr. is directly expressed by *ūtíbhīḥ*, but in the 2nd the instr. must be assumed (“[with] a thousand”) and the enumerated substance is expressed by a partitive genitive. It’s a clever little slippage and barely noticeable. See Old’s disc.

IX.53-60

The next 8 hymns, the last ones before the lengthy hymns assembled from *ṛcas* (IX.61–68) that end the dimeter collection, are attributed to Avatsāra Kāśyapa. All of them contain four vss., and a number of them are structured such that the first three vss. form a unity, with the last vs. stylistically or thematically contrastive or completive. See esp. IX.53–57. Old tends to analyze them as a *ṛca* with *Schlussvers*, which is strictly accurate, but I think the point is the interplay of 3+1.

IX.53

On the rhetorical indirection in this hymn, see publ. intro. as well as more detailed comments below.

IX.53.1: The first pāda of this vs. lacks a syllable. It is also identical, save for the last word, the verb, with nearby IX.50.1a *út te súṣmāso īrate* (attributed to a different poet, Ucathya Āṅgīrasa) -- with the disyllabic *asthuḥ* here replacing the *īrate* of IX.50.1 and thus responsible for the metrical truncation. The sense of the two verbs *úd īrate* and *úd asthuḥ* are essentially identical: ‘arise/have arisen’. One can speculate that either Avatsāra Kāśyapa, a tricky poet, is calling attention to the opening of his poem by the manipulation and metrical truncation of the unimpeachable phrase found in IX.50.1, or

that he wanted an aorist and there is no aor. clearly related to the pres. *īrte*, *īrate* (though of course there are aor. forms to its ultimate root \sqrt{r}). Given the near identity of the two pādas, it might have been better had the publ. tr. rendered *śúsmāsaḥ* in the same way in both instances, although the two different tr. work better contextually.

As was noted in the publ. intro. and as Ge also points out, this vs. might be more appropriate to Indra, and in particular the voc. *adrivāḥ* ‘possessor of the stone’ in b is otherwise used almost exclusively of Indra: there are nearly 50 occurrences, of which only one, besides this one, is addressed to anyone but Indra (Varuṇa in VII.89.2). There is in fact nothing in this vs. that imposes or even invites the identification of the 2nd ps. referent as Soma; we only assume it (correctly in my view) because this is a soma hymn.

The syntax of c is slightly unusual, in that the obj. of *nudāsva* is a nominal relative cl. *yāḥ parispṛdhaḥ* “(those) who are the challengers all around,” with the main cl. referent (**tāḥ* ‘those’) gapped. (See also 3c below.) Generally the gapping of the antecedent to nominal relative clauses is found in “X and which Y” constructions, not when the rel. cl. is not conjoined. It’s worth noting that this pāda is very close semantically to IX.52.3a in the immediately preceding hymn: *carúr ná yás tám īñkhaya* “Who is like a pot, give him a shove,” but there the nom. rel. clause *carúr ná yāḥ* that defines the obj. of the main verb does have an expressed antecedent *tám* in the main cl. Note that, IX.52 is also attributed to Ucathya, like IX.50, and both hymns contain expressions on which Avatsāra seems to be ringing changes.

On *parispṛdh-* see Scar 666.

IX.53.2: This vs. sits somewhat oddly in a soma hymn, and its subject, and indeed its general aim, are not clear until the 3rd pāda.

It begins with a fem. instr. demonstr. *ayā* without expressed referent, and as Re points out, a number of fem. referents are possible. However, the verb that begins c, *stávai* ‘I will praise’, makes *dhī-* ‘insightful thought’ (or some other reference to a verbal product) quite likely, and the phrase *ayā dhiyā* is in fact fairly common (I.166.13, V.45.11 [2x] [in the hymn adjacent to Avatsāra’s V.44 though V.45 is not attributed to him], VI.71.6, VIII.13.8, 93.17). The supplying of *dhī-* here is supported by the contrastive cmpd *dūdḥī-* ‘having bad insight’ in the next vs. (3b). On the basis of the Avestan parallel, fem. instr. *vācā* ‘with speech’ is also a possibility; see below.

Between *ayā* and *stávai*, however, is an image of conflict and contest, with the nom. verbal noun *nijaghnīḥ* ‘slamming down’, the instr. *ójasā* ‘with strength’, and the loc. phrase *rathasaṃgé dhāne hité* “when chariots clash and a prize is set” – all contributing to a picture of violence seemingly inappropriate to a ritual context. It would be most applicable to Indra, who is the usual subj. of *ní√han* (e.g., VII.18.18 *ní jahi vájram indra*), or perhaps to a militant Soma. So the 1st ps. verb *stávai* ‘I will praise’ that opens the next pāda is a surprise: it is instead the inoffensive poet who has been assimilated to an aggressive warrior or contestant, and it is his act of praising that is implicitly compared to smiting down a rival on the field of conflict. Again Avatsāra seems to have deliberately misled us.

However, the situation is more complex. Ge (n. 2a) tellingly cites a strikingly similar Avestan passage from the Hom Yašt, Y 10.2 *uparəmcit tē hauuanəm / vaca upa.staomi huxratuuō / yahmi niyne narš aojanḥa* “The upper (part of the) mortar I praise with speech, o you of good insight [=Haoma], in which it [=haoma] is pounded down

with the strength of a man.” This passage clearly refers to the pressing of the haoma, using the lexeme *ni√gan*, exact cognate to our *ní√han*, and also contains the instr. *aojaṇha* ‘with strength’, identical to our *ójasā*, as well as the 1st sg. verb ‘I praise’ (*staomi* to the same root as our 1st sg. *stávaṇ*) and an instr. of speech *vaca* (instead of our proposed **dhiyā*, though in fact fem. instr. *vācā* could fit in our passage just as well). This Avestan parallel must indirectly provide the solution to our puzzle: why is the mild-mannered priest-poet depicted in a scene of such violence? Because the pressing of soma is inherently an act of violence. Our b pāda provides a metaphorical scenario of contest, but *nijaghnír ójasā* in pāda a simply describes, with the same vocabulary as the Avestan passage, the powerful pounding of the soma stalks. To enhance this interpr., ‘pounding down’ would be better than ‘slamming down’ for *nijaghnīḥ*.

IX.53.3: Because ‘commandments’ (*vratá-*) are especially associated with Varuṇa and Mitra, the beginning of this vs. might also direct the audience to the wrong referent for initial *ásya*. However, commandments are the property of a number of gods, and nothing else about the phraseology strongly suggests a referent other than Soma. In any case any doubt about the referent is settled by the beginning of b, *pávamānasya*.

Pāda c is constructed almost exactly like 1c, with a rel. clause serving as obj. of the main clause imperative, here *rujá*, without expressed antecedent in the main cl. In this case, however, the rel. clause is not nominal but has a full SOV structure: *yás tvā pr̥tanyáti*.

IX.53.4: As indicated in the publ. intro., this final vs. is characterized by specifically somic vocabulary (*madacyútam*, *índum*, *matsarám*), in contrast to the more equivocal vss. that precede it.

IX.54

On the riddling structure of this hymn, see publ. intro. Each of the first three vss. begins with a form of *ayám*, with implicit reference to soma.

IX.54.1: Unfortunately it is difficult to render in tr. the initial position of *asyá*, matching that of *ayám* in vss. 2, 3, which therefore makes the overall structure of the hymn less clear in English. Perhaps “Of this one – following his age-old brilliance ...”

áhrayaḥ in b is assigned to a stem *áhrī-* by Gr and taken as a nom. pl.; so also Ge “die nicht Schlüchtern” as subj. of *duduhre* (referring to the fingers or the soma-pressing priests). This stem is otherwise unattested, and the root from which it is presumably derived is set *√hrī*, which attests a root noun *hrī-* (VS+), whose nom. pl. should properly be **-hriyaḥ*. AiG III.187 suggests that the form is an old error for **áhrayāḥ*, nom. pl. to the well-established them. stem *áhraya-*, shortened to match *páyah*, which immediately follows across the hemistich boundary. I instead follow Re’s suggestion, that it actually belongs to an *s*-stem *áhrayas-* (see also EWA s.v. *HRAV*⁴) and, as a neut. acc. sg., modifies *páyah*. Although the underlying *s*-stem **hráyas-* is not attested, neither is the supposed underlying *i*-stem **hrí-*, and as an *s*-stem neut. the form would be morphologically impeccable and require no emendation (unlike Wackernagel’s suggestion). The accent would match that of the likewise bahuvrīhi *án-āgas-*, though it must be admitted that such cmpds generally have suffixal accent (e.g., *a-cetás-*, *a-rādhás-*); however, the existence of

better attested *áhraya-* and *áhrayāṇa-* could have induced initial accent. Another ex. of *áhrayas-* is probably found in X.93.9, q.v. As for sense, $\sqrt{hrī}$ means ‘be modest, shy’, and the negated *áhraya-* ‘unrestrained, immodest, immoderate’; the primary use of that adj. is with *rādhas-* ‘bounty’ (V.79.5, 6, VIII.8.13, 54.8, 56.1), to express a desire for large, that is immoderate, quantities of it. Cf. also VII.67.6 *réto áhrayam*, also adduced by Re, with *rétas-* ‘seed, semen’, a substance rather like *páyas-*. In our passage the point would be that a more than satisfying abundance of (soma-)milk was milked. If *áhrayaḥ* is not a nom. pl., the subj. of *duduhre* is not expressed, but priestly officiants would be the obvious subj., often not overtly expressed in Soma hymns.

IX.54.2: Ge takes *dhāvati* as transitive, with *sārāṃsi* and *pravátaḥ* as obj. (“dieser lässt Seen, sieben Ströme zum Himmel fließen”), but the thematic pres. to $\sqrt{dhāv}$ ‘run’ (as opposed to $\sqrt{dhāv}$ ‘rinse’) is only a verb of motion with acc. of goal, not a causative. Ge’s interpr. is not shared by others: besides Re, cf. Lü (153), Gotō (1st Kl. 183), Scar (229), all of whose interpr. are very like mine.

IX.55

The first three vss. of this hymn all contain a form of the stem *ándhas-* ‘stalk’. On this word see comm. ad IV.1.19; the tr. of Ge (“Trank”) and Re (“jus”) are misleading.

IX.55.1: As noted in the publ. intro., this vs. is unusual in its reference to agriculture (see Ober RdR II.118), in particular to ‘grain, barley’ (*yáva-*) in pāda a. Perhaps the fact that soma is a plant, and that its stalk (*ándhas-*) is prominent in this hymn, accounts for the implication that Soma has the ability to provide us with grain and its accompanying fruitfulness (*puṣṭá-*). It may also be an oblique ref. to the occasional mixing of soma with grain; see the enigmatic expression in IX.68.4.

IX.55.2: According to the opinio communis (Ge, Re, Lü 204 [of IX.61.10], Klein DGRV I.402), *jātām ándhasaḥ* in pāda b (and the same expression in IX.61.10) contains a substantivized neut. ppl. *jātām* ‘birth’ with dep. gen. (e.g., Ge “die Geburt deines Tranks”). However, IX.18.2 *mádhu prá jātām ándhasaḥ* “the honey born from the stalk” suggests that ‘honey’ (vel sim.) should be supplied here as well, with *ándhasaḥ* an abl. of source, though Re specifically rejects IX.18.2 as relevant for this passage.

The function of the two *yáthā* clauses is not altogether clear. I assume that they refer to the two prerequisites for the soma sacrifice: the verbal portion with its praise of the god Soma and the physical production of the ritual substance soma. With both accomplished, the god Soma can take his place on the ritual ground.

On injunc. *sadaḥ* as a functional impv. see comm. ad IX.2.2 and KH (Injunk. 263).

IX.55.4: As Re points out, *jīnāti* must belong to $\sqrt{jyā}$, so *jīyate*, which is ambig. between $\sqrt{jī}$ and $\sqrt{jyā}$, surely belongs to the latter as well. The tr. should be slightly emended to “who overpowers but is not overpowered.”

The standard interpr. of the syntactic structure of the passage (Ge, Re, Ober RdR II.168, as well as the publ. tr.) takes pādas a and b as all part of the rel. cl. introduced by initial *yáḥ*, with c as the main cl. and Soma as the subject both of ab and of c. This

involves a shift in person, from 3rd (ab *jināti ... jīyate ... hānti*) to 2nd (c *pavasva*). Of course such shifts are commonplace in the RV, and in this case the *sá* introducing c is used by most tr. as a pivot (“as such”). However, the presence of *sá* is fully explained by its regular use with 2nd sg. impvs. (see my “*sá*figé” article) and need have nothing to do with the shift of person. I do think the standard interpr. of the vs. is probably right (even without the *sá* pivot), but I would point out that it’s not the only syntactically possible analysis: the rel. cl. could encompass only pāda a, with b as the main cl. The accent on the verb in b, *hānti*, would be accounted for by its initial position in the pāda. The vs. could then be rendered “Who overpowers and is not overpowered, he smashes his rival on just confronting him. Purify yourself ...” The referent of the 3rd ps. in ab could still be Soma, but it could instead be the person for whom Soma purifies himself, with the happy results on the battlefield that arise from possessing the purified soma.

IX.56

IX.56.1: The problem in this vs. is how to construe neut. *ṛtām brhāt*. Is it an acc., and if so, is it a goal, like *vājam* in the next vs. (“rushes to the lofty truth”), or an expression of the way loosely construed with *pāri* (“rushes around the lofty truth”)”? Or is it a nom. and therefore appositional to *sómaḥ*. Ge (and to some extent Re) seem to follow the “way” interpr., as does Lü (582) in his first rendering. But he then rejects this (on somewhat contorted grounds) and, flg. Ludwig, goes for a nom. apposition (or nominal predicate). On the basis of IX.107.17, 108.8 (see also 66.24), I also opt for the appositional interpr. Vs. 2 also contains a nominal apposition, *dhārā apasyúvaḥ*, at least by my analysis.

IX.56.2: This vs. consists entirely of a dependent cl. and can most conveniently be attached to the preceding vs.

As noted above I take pl. *dhārā apasyúvaḥ* as a nom. in apposition to sg. *sómaḥ*. Re explicitly calls it an “Acc. interne,” tr. “(en) cent jets actifs,” but internal to what? Ge’s tr. is similar to Re’s, but he doesn’t commit himself as to case. That *dhārāḥ* is definitely nom. in the next hymn, IX.57.1, also with *vājam* as goal, gives some support to my interpr. here.

āvisán in c is most likely the nom. sg. pres. part. it is universally interpr. as (incl. in the publ. tr.), modifying *sómaḥ* in a. However, it is technically possible that it is a 3rd pl. injunc. *ā-visán* with the pl. *dhārāḥ* of b as its subj. It would be accented on the verb stem because it is still part of the *yád* clause. This would anchor *dhārāḥ* as nom. and produce a tr. “When Soma rushes towards the prize (and) (his) hundred hardworking streams enter fellowship with Indra.” I do not advocate for this interpr., which seems too fussy, but I do point out that nothing in the grammar of the vs. precludes it.

IX.56.3: Note that *yósan-* and *kanyā-* appear together in the same vs. and in fact the latter is explicitly compared to the former. It is not clear to me whether they are meant here to refer to different types or lifestages of a young girl / maiden.

IX.56.4: An elementary type of variant ring composition, with *pāri srava* responding to *pāri ... arṣati* in vs. 1.

IX.57

IX.57.1: On the similarity of this vs. to IX.56.2 in the preceding hymn, see comm. ad loc.

IX.57.2: The neut. pls. of ab, *priyāṇi kāvya*, *viśvā* offer several different possibilities for construal. The publ. tr. takes *priyāṇi kāvya* in pāda a separately from *viśvā* in b, with the former the goal of *abhī ... arṣati* and the latter the obj. of *cākṣāṇaḥ*. The oft-repeated pāda *abhī viśvāni kāvya* (IX.23.1, 62.25, 63.25, 66.1), identical to our pāda a with *priyāṇi* substituting for *viśvāni*, supports my interpr. of the phrase in our pāda a as goal. As for the interpr. of *viśvā* in b as obj. of *cākṣāṇaḥ*, this rests on slightly shakier grounds: the *viśvāni* in the repeated pāda might suggest that our *viśvā* belongs with pāda a, and it is also not clear that the participle *cākṣāṇa-* when uncompounded can take an obj. On the one hand we have cmpd *praticākṣāṇa-* with obj. in IX.85.12 *viśvā rūpā praticākṣāṇaḥ* “gazing upon all his forms” (cf. II.40.5 with *abhī* and *viśvam*); on the other, in I.128.3 uncompd *cākṣāṇa-* is used absolutely (cf. also X.74.2). I am therefore open to the possibility that all three neut. pls. serve as goal, producing an alt. tr. “towards all the dear (products) of poetic skill does he rush, being observant.” However, I am tolerably certain that both Ge and Re are wrong, in their different ways. Ge takes the whole acc. phrase as obj. of *cākṣāṇaḥ* (“auf alle lieben Dichterwerke achtend”), thus ignoring the evidence of the repeated pāda and opting for the participle as the governing element, despite the uncertainty of its ability to take objects. Re seems to take *abhī* in tmesis with the part. *cākṣāṇa-*, not with *arṣati*, thus taking the acc. phrase with *abhī*, as the repeated pāda strongly supports, but making *abhī* the preverb to $\sqrt{cakṣ}$: “Regardant en direction de tous les arts-poétique.” But, though *abhī* does occur regularly with $\sqrt{cakṣ}$, it is also extremely common with $\sqrt{ṛṣ}$, esp. in IX. Since tmesis of preverb and participle is quite rare, given a choice between construing a preverb in tmesis with a participle or with a finite verb, the latter must be preferred unless there are serious semantic drawbacks.

IX.57.3: Pāda b has been variously interpr., primarily because of *ibha-*. On this word see comm. ad VI.20.8, IV.4.1 and Old’s detailed refutation of the Pischel-Geldner gloss ‘elephant’ (reflected in Ge’s unlikely tr. here ‘Königselefant’) in his n. on this passage. Gr, flg. BR, suggests reading **ibhe* for *ibho*, an emendation that Old considers possible, and Re suggests *ibho rājā* is a “composé ouvert” for **ibharāja-* ‘roi possédant des vassaux’. I do not think we need to change the text, however. Working with the meaning ‘vassal’ for *ibha-* (as is now generally accepted), we can first note that *ibha-* and *rājan-* are a complementary pairing (cf. I.65.7, IV.4.1) expressing a power differential: the king has power over his vassals, who give their fealty to him. This type of relationship between unequal parties is one governed by *vratā-s*, command(ment)s issued by superiors and binding on inferiors (see Brereton 1981). The adj. *svratā-* ‘having good commandments, keeping commandments well’ can therefore technically apply to either side of the equation: the superior issuing the *vratā* or the inferior following it. Elsewhere in the RV the word is only applied to the superior (who is more apt to draw the interest of the RVic poet than the inferior): the Ādityas (VI.49.1), patrons (*sūrī-* I.125.7, 180.6), and in this same phrase *rājeva svratāḥ* (IX.20.5) of Soma compared to a king. In our passage I suggest that the other pole, the inferior, is included in a disjunctive choice “vassal (or) king.” The vassal is *svratā-* because he obediently follows the *vratā-* imposed by the

king. My only hesitancy about this interpr. is that it implicitly compares Soma not merely to a king, as is standard, but also to a vassal. I can only suggest that the poet was too pleased about tapping into the inherent ambiguity of *suvratá-* to worry about a potentially unflattering comparison, or that the manipulation of soma by the priests, here represented by the Āyus in pāda a, entails a kind of vassalage and domination.

The simile particle comes only after the 2nd word. This is in part because the simile has been adapted from IX.20.5 (not to mention the numerous other exx. of *rājeva*), where the *iva* is properly positioned. But note also that we have encountered a number of other examples of “late” simile particles in this maṇḍala (see comm. ad IX.3.4, 46.1, 47.5, 50.1).

IX.58

On the curious structure and contents of this hymn, see the publ. intro.

IX.58.1–3: The first word of the refrain, *tárat*, is grammatically ambiguous. It can be a 3rd sg. injunc. and is so taken by, e.g., Gr, Ge, Lub, and Lowe (Part. 281); certainly the same form in the same position in IX.107.15 *tárat samudráṁ* “he crosses the sea” is most probably a finite injunc. However, flg. one of Old’s possibilities, with AiG II.2.164 and apparently Re (judging from his tr. “en traversant”) I prefer to take it as a neut. sg. pres. part. in adverbial usage, in part because beginning and ending this short pāda-length refrain with two finite verbs, one injunc., one pres. indic., seems clunky: *tárat śá mandī dhāvati*. For another pāda-initial form in *-at* that I take as a participle see disc. of *bhārat* ad IX.52.1.

As to what Soma is crossing, it is most likely the waters (cf. *ap-túr-* IX.61.13, 63.5, 21), as suggested by Ge, Re, et al. – in this case perhaps the waters with which the stalk is swelled. Or, given IX.59.3b *viśvāni duritā tara* in the immediately following hymn, it could be “all difficult passages.”

IX.59

IX.59.1: The first hemistich is notable for its sequence of four root noun cmpds in *-jít-* ‘winning, winner’. For their possible structural role in the hymn, see comm. ad vs. 4.

IX.59.2; As noted in the publ. intro., this vs. contains three occurrences of the impv. *pávasva*, each pāda init. Each of these is construed with a dat. pl. (or abl., acdg. to Sāy.; but see the parallel Ge cites [n. 2] that speaks for the dat.). This tight repetitive syntactic structure suggests that the three datives should form a semantic set. The first two are waters (*adbhyáḥ*) and plants (*ósadhībhyáḥ*). As for the third, *dhiśánābhyah*, Ge interpr. it as “die (priestlichen) Werke” (and see his extensive n. on the word, n.2c), Re as “les inspirations (des humains).” However, in part flg. Pinault (Vedic Workshop, 2007), I take the orig. sense of *dhiśánā-* to be ‘holy place’, and in this context I think it likely that it refers to the hearths holding the ritual fires. If so, the trio of datives would refer to three vital physical elements of the soma sacrifice: “the waters” for swelling the soma stalk and for mixing the pressed soma, “the plants” representing the soma plant itself, and “the Holy Places / hearths” representing the fire into which the soma is offered. The more

attenuated interpr. of Ge and Re are not impossible, but are not as tightly bound to the substances in ab as the fires/hearths would be.

Re notes the phonetic play (*pávasv*)*ādbhyó ádābhyah* in a.

IX.59.4: The injunc. *vidaḥ* in pāda a is interpr. by both Ge and Re as imperatival, while in the publ. tr. it's taken as a general statement in the present. I am now somewhat inclined to follow the imperatival interpr. of Ge/Re ("find the sun"). On *vidaḥ* in impv. use, see comm. ad IX.20.3, I.42.7–9. What may indirectly support my original interpr., however, is a potential ring-compositional relationship with vs. 1. As noted above, vs. 1 contains a remarkably pile-up of root noun cmpds in *-jít-* 'X-winning'. There exists a very well-attested root noun cmpd *svar-víd-* 'sun-finding', which is semantically very close to the X-winning cmpds (and cf. also *svar-jít-* 4x, incl. 2x of Soma in IX). Indeed, *svar-víd-* is commonly used of Soma (13x in IX) and in a number of passages occupies this same metrical slot, the last four syllables of a dimeter pāda (in the acc. sg. *svar-vídām*, nom/acc. pl. *svar-vídaḥ*; e.g., IX.8.9), as our finite VP *svâr vidaḥ*. This slot is, of course, not available for the nom. sg. *svar-víd*, but the 2nd sg. VP here *svâr vidaḥ* is a reasonable simulacrum, with *vidaḥ* incorporating the nominative subject. Now in vs. 1 the cmpds in *-jít-* are descriptors of Soma, without modal value. If *svâr vidaḥ* here is meant as a ring-compositional variant, evoking the cmpd *svar-víd-* and reprising the X-*jít-* cmpds of vs. 1, the general meaning I assigned it in the publ. tr. may correctly capture this structural feature.

The finite verb in b presents its own problems. The Pp. reads *abhavaḥ*, though the putative augment has to be elided after *jāyamāno* in order to produce the proper number of syllables. As is well known (see, e.g., Old, Proleg. 389ff.), this elision, i.e., Abhinihita sandhi, is fairly rare in the RV, and therefore the orig. text may have had not the impf. *abhavaḥ*, but an injunc. *bhavaḥ*, which was then wrongly analyzed by the Pp. In that case *bhavaḥ* could express the same general sense as I just suggested *vidaḥ* might: "being born, you become great." However, as both Old (Noten ad loc.) and KH (Inj. 150) point out, the injunctives *bhavaḥ* and *bhavat* are not otherwise found in the RV, and therefore both scholars assume that the augmented *abhavaḥ* is the underlying form here – 'you became great', as rendered in the publ. tr.

IX.60

On the structure of this hymn, see publ. intro.

IX.60.1: The tr. "sing forth with a song" is meant to capture the etymological relationship of *gāyatrēṇa gāyata*, but *gāyatrā-* of course refers more technically to a hymn in Gāyatrī meter – as this one indeed is.

IX.60.1–2: The chaining described in the publ. intro. here involves repeating *sahāsracakṣasam* from 1c in 2a in the same metrical position.

IX.60.2: The deriv. *-bharṇas-* in *sahāśra-bharṇas-* is somewhat puzzling: it is difficult to see what motivated its formation and indeed to fix its meaning. It is found 4x (once as a repetition), only in IX, always in the acc. sg. occupying the last 6 syllables of a dimeter line (here, IX.64.25 [=98.1], 64.26), modifying Soma (here), *vāc-* (IX.64.25, 26), *rayí-*

(IX.98.1), though the referent never appears in the pāda with the adj. and so the adj. is loosely connected with its referent at best. Here it is obviously meant to match *sahāsra-cakṣas-* ‘having a thousand eyes’ in the same metrical position in the preceding pāda, and for this reason I think it possible that this passage is the locus for its creation. But the match is not very good: though both are *-as-* stems, the suffixes (*-nas-* versus *-as-*) aren’t superimposable. The semantic match is also quite imperfect: whatever *-bharṇas-* means, it is certainly not a body part like *cakṣas-*. Since many nominal derivatives of √*bhr̥* fall in the semantic domain of ‘present, offering’ and such a meaning fits a ritual context, that seems a safe bet and would work with *rayí-*, though it fits *vāc-* somewhat less well. With a confidence whose basis is not clear, Re rejects the notion of ‘offrande’ and asserts that “le suffix *-nas-* fait décider pour «bénéfice (qu’on tire du culte sômique)»,” for reasons he fails to give. Ge by contrast tr. “Tausendaufwiegenden” with a question mark, which he then glosses (n. 2b) with “Tausendwertigen.” Insofar as the suffix *-nas-* tells us anything (and the *-n-* is not there just to supply the heavy syllable that a straight *-as-* stem *sahāsra-*bharas-* would lack), it suggests a meaning in the realm of “stuff,” material substance, esp. with regard to substances of value: cf. *rékṇas-* ‘inheritance, legacy’, *drávinas-* ‘material goods, chattels’, *ápnas-* ‘property’, all with Aves. cognates – so that ‘bringing a thousand (material) presents’ would fit reasonably in this group. AiG II.2.738 glosses *-bharṇas-* with ‘Darbringung’ and considers it probably inherited, despite the lack of non-Indic correspondents. Given its extremely limited distribution, indeed the strong possibility that it was originally created in one passage, I consider inheritance unlikely; rather, it was probably formed as a near nonce on the basis of the inherited words just cited.

IX.60.2–3: Here the chaining is slightly inexact: 2c *átí vāram* / 3a *átí vārān*, each followed by a verbal form of √*pū*.

IX.60.3: This vs. is in Puraüṣṇih meter (12 8 / 8), i.e., a Gāyatrī with an extended first pāda. This pāda is almost at the exact center of the hymn, preceded by 6 pādas, followed by 5. The positioning seems deliberate.

IX.60.3–4: Here the chaining involves only the first word *índrasya*.

IX.60.4: In addition to the chaining with the previous vs. (on which see immediately above), this vs. participates in other verbal echoes, as noted in the publ. intro. The end of the 2nd pāda *vīcarṣaṇe* forms a ring with *vīcarṣanim* at the end of the 2nd pāda of vs. 1, and the last pāda, *prajāvad réta ā bhara*, is identical to the last pāda of the first vs. of the immediately preceding hymn, IX.59.1 *prajāvad rátnam ā bhara*, with the substitution of *rétaḥ* for *rátnam*. In our case the semen (*rétaḥ*) would be both the actual semen that produces offspring and the liquid soma that mimics it.

IX.61–67

On the place of these long hymns in the structure of the maṇḍala, see publ. intro. to IX.61. All of these hymns consist of collections of *ṛcas* of varying degrees of cohesion. In fact, it is surprising how few *ṛcas* display a real attempt at thematic or lexical unity, and what they do show is often simply the byproduct of the fact that both

the lexicon and thematic preoccupations of Maṇḍala IX are comparatively limited and so similar words and themes are not unlikely to show up in adjacent verses. This lack of unity contrasts, I think (this is my unsystematic and anecdotal impression) with collections of *ṛcas* in other maṇḍalas, notably VIII.

IX.61

IX.61.1–3: This *ṛca* shows some signs of unity. The 1st two vss. are a syntactic unit, with the objects of the verb in 1c partly postponed to 2ab. The third vs. has as its verb *pári ... kṣārā*, which echoes *pári srava* in 1a.

IX.61.1: The publ. tr. fails to render the demon. *ayā* that opens the hymn; more literal would be “flow around in this pursuit (of him) ...” Ge (n. 1) considers *ayā* a kind of attraction from **asya* ‘of him’, the missing antecedent to *yāḥ* in b, but the prominent position of *ayā* should be registered. Presumably *ayā vītī* is gesturing towards the physical ritual activity happening right now.

The unnamed referent in the rel. cl. of bc is of course Indra; the “nine and ninety” are fortresses / strongholds, as in IV.26.3 ... *púraḥ ... náva sākāṃ navatīḥ śámbarasya*. This referent is postponed to the 2nd vs.: *púraḥ* opens vs. 2.

IX.61.2: As was just noted, *púraḥ* completes the acc. phrase *navatīḥ náva* that serves as obj. to *avāhan* in 1c, as the parallel IV.26.3 just cited demonstrates. But *avāhan* has another object in vs. 2, namely *śámbaram* in b, as shown by a different passage in the Indra cycle of Maṇḍala IV, IV.30.14 *āvāhann indra śámbaram*.

The third pāda of this vs. is radically incomplete, consisting only of a particle, a demon., and two acc. PNs: *ádha tyāṃ turvāsāṃ yádum*. On purely structural grounds, it would make sense to make these parallel to *śámbaram* in b, as objects of *avāhan* (in 1c). However, this structural argument runs into problems of mythological content. Although Turvaśa and Yadu *are* sometimes enemies of Indra (see, e.g., VII.19.2), at other times they are under Indra’s protection. In particular, in the Indra cycle from which IV.26.3 and IV.30.14, the parallels to our vss. 1–2ab, were cited above, T + Y are rescued by Indra: IV.30.17 *utá tyā turvāsāyádū, ... / índraḥ ... apārayat* “And Indra brought these two, T + Y, to the far shore,” just three vss. later than the smiting of Śambara. Note further that IV.30.17a is very like our pāda, a dimeter line with an intro. disyllabic connective, a form of the demonstr. *syá-* / *tyá-*, and the two names, though with a dual dvandva *turvāsāyádū* rather than two individual acc. sgs. On this basis, I’m afraid the simple solution of taking T + Y as further victims of Indra should be abandoned, in favor of supplying (or at least assuming) a positive verb to govern them, such as Ge’s (n. 2c) “errettete” or Re’s “sauva.”

IX.61.3: The Inhaltsakk. with *pári ... kṣārā* are disharmonious in formation, with the sg. noun *ásvam* (rendered in the publ. tr. as the mass noun ‘horseflesh’, perhaps a bit too vividly) in pāda a followed by two possessive adj. *gómat* and *híraṇyavat* ‘possessing / consisting of cattle (and) gold’ in pāda b, followed by a pl. NP *sahasríṇīḥ íṣaḥ* ‘thousandfold refreshments’ in c. In a we might have expected *ásvāvat* ‘possessing / consisting of horses’, to match the adjectival forms in b, but the phonologically similar

and adjacent *aśvavid* ‘horse-finding’ may have blocked it (to avoid **āśvāvad aśvavid* [though some RVic poets would have loved that phrase]).

IX.61.4–6: There are faint signs of unity in this *ṛca*: the word *pavītram* ‘filter’ is found in vss. 4 and 5, and both 4 and 6 have pres. mid. participles derived from $\sqrt{pū}$ ‘purify’ (*pāvamāna*- 4a, *punānā*- 6a), but since this is a Soma Pavamāna hymn, this is hardly remarkable.

IX.61.4: Both Ge and Re render *pāvamānasya* as simply the epithet Pavamāna, but this loses the parallelism between the two gen. sg. pres. participles that open and close the hemistich: *pāvamānasya ... abhyundatāḥ*. I render these participles as “while” clauses, to avoid the awkward “we choose the companionship of you who are Xing.”

IX.61.5: We might fault the poet for a certain laxness of phraseology: how exactly is Soma meant to be gracious / merciful to us “with his waves”?

IX.61.6: Note the echo across the b-c pāda boundary: ... *īṣam / īśānaḥ* ...

IX.61.7–9: The *ṛca* is characterized by the mention of gods in all three vss. The Ādityas frame it (*ādityébhiḥ* 7c, *mitré vāruṇe ca* 9c), with a more miscellaneous group in between. It is also marked by initial repetition: *sām* opens pādas 7c, 8a, and 8c. This is imperfectly echoed by *sā n(o)* opening 9a.

IX.61.10–12: It is difficult to discern any particular unity in this *ṛca*.

IX.61.10: The topic of the verse seems to be heavenly versus earthly soma. See Lü 204.

On *jātām* as an adj., rather than (with Ge, Re, Lü 204, Ober II.16) the noun ‘birth’, see comm. ad IX.55.2. Another arg. for taking it as adjectival here is that the same form is clearly an adj. in 13a. As in IX.55.2, I take the missing referent to be ‘honey’ (*mādhu*) on the basis of IX.18.2.

Pāda b contains several forms requiring disc., esp. what appears in the Saṃhitā text as *bhūmy*. This is analyzed, irregularly, by the Pp as *bhūmiḥ*. Gr gives the form as *bhūmī* but identifies it as a nom. sg. to *bhūmi*-. Old refers to the considerable lit. on the form, opting for a loc. interpr. (as do all the standard tr.). Wackernagel has a curiously split opinion: in AiG I.337 (1896) he identifies it as a loc., while in AiG III.136–37 (1930) he decides instead for the nom., though referring to his former opinion – and in the same vol. (III.155) he says the same form doesn’t *have* to be a loc. (“... muss nicht notwendig as Lok. *bhūmī* gefasst werden”), but could alternatively be either a nom. *bhūmī* or an instr. *bhūmyā*. The context, with the contrast *divī śāt* “though being in heaven” with loc. *divī*, certainly favors a loc. interpr. for the form, even though taking ‘earth’ as the subject of the clause is possible: “earth took it, though it was in heaven.” In sum, I think the loc. interpr. is most likely, with an *-ī* (or *-i*) loc, to a fem. *i*-stem, like *védī* (or *vēdī*) in II.3.4 (see comm. ad loc.). A *bhūmi* with short final vowel is metrically better here (as *vēdī* is in II.3.4), but it may result from shortening in hiatus.

The neut. part. *sāt* has, in my opinion, the concessive value often found with the pres. part. to *√as*, though most tr. don't render it as such (and Re rejects this interpr.). It modifies the unexpressed *mádhu* in my view, but the neut. *ándhas-* acdg. to most others.

ā dade is another ambig. form.: it can be either a 1st or a 3rd sg. mid. pf. (or a 1st sg. mid. pres.). Gr takes it as a 1st sg. pf., as does Ge (“Den im Himmel befindlichen (Trank) nehme ich auf der Erde zu mich”), but a 3rd sg., with the soma (represented by *mádhu* or *ándhaḥ*) as subject (with Re, Lü, Ober) allows pāda c to serve as obj. of *ā dade* – Ge has to take it as an independent nominal clause – and the Gr/Ge interpr. also introduces a 1st sg. that has no other place in the context, where the 1st pl. reigns.

IX.61.11: On *dyumnāni mānuṣāṇām* see comm. ad X.42.6, as well as VI.19.6. I would now alter the tr. here slightly to “the brilliant things of the sons of Manu,” since, as I discuss ad X.42.6, I think the rivalry over *dyumná-* (pl.) is confined to the larger Ārya community.

IX.61.13–15: Again no signs of *ṛca* unity, unless the presence of cows in all three verses counts (13b *góbhiḥ*, 14b *vatsām saṃśísvarīḥ iva*, 15a *gāve*, 15b *dhukṣāsva*).

IX.61.14: The hapax tatpuruṣa *hṛdaṃsāni-* ‘gaining the heart’ is curious, in having an apparent acc. in *-am* to the neut. root noun *hṛd-*, as if to a masc. or fem. stem or to a thematic **hṛda-* (see, e.g., AiG II.1.208).

IX.61.16–18: This *ṛca* is unified by the simple device of stationing a form of *pávamāna-* at the beginning of each vs. (16a, 17a, 18a). Note also the two forms of *rása-* ‘sap’ in 17a and 18a (the two pādas are scramblings of each other: 17a *pávamānasya te rásaḥ*, 18a *pávamāna rásas táva*, with different case forms of *pávamāna-* and enclitic versus full form of the gen. sg. 2nd ps. prn.). And 16c *jyótir vaiśvānarām ...* matched by 18c *jyótir víśvam ...*

IX.61.16: The question in this vs. is how to interpr. the simile in pāda b, *divás citrām ná tanyatúm*. It has been variously rendered. Note first that in none of the available interpr. (that I know of) is the simile particle *ná* positioned in the expected 2nd position, so that conforming to the usual structure of the simile cannot be used as a criterion to decide which interpr. is correct. We have had occasion to note this issue before in Maṇḍala IX; see disc. ad IX.57.3. Re takes the whole of b as a simile, with the “thunder” matching “light” (c) in the frame; in addition he supplies a different subject for the simile: “Pavamāna a engendré la haute lumière propre à (Agni) Vaiśvānara, / comme (les dieux ont engendré) le tonnerre éclatante du ciel.” This is not impossible, of course, but introducing the gods seems unnecessary, and are they the usual creators of thunder anyway? Lü’s (266) interpr. is similar, though he allows Pavamāna as subj. of both the simile and the frame. I find Ge’s interpr. more appealing: he considers *tanyatúm* part of the frame, with the simile restricted to *divás citrām*. “Sich läuternd hat er den Donner, grell wie den des Himmels, hervorgebracht.” The c pāda provides a parallel object, rather than constituting the frame as in the Re/Lü interpr. My tr. essentially follows Ge. The “thunder” that Soma engendered is the noise produced by the pressing, esp. by the pressing stones, which is constantly remarked on. It is comparable to the thunder of

heaven. All interpr. must silently reckon with the synaesthesia introduced by the point of the comparison in the simile, *citrá-* ‘bright, brilliant, glittering, dazzling’, an adj. that ordinarily characterizes visual phenomena not auditory ones (though it’s a not uncommon transfer; cf. Engl. “brilliant tone,” etc., used of voices and musical instruments). For a similar ex. cf. VI.6.2 *śvītānas tanyatúḥ* “brightening thunder.” This synaesthetic comparison provides a lead-in to the second object, the “light belonging to all men.”

Both Ge and Re take *jyótir vaiśvānarām* as referring to Agni Vaiśvānara specifically. This is certainly possible, though it is not the soma pressing that ordinarily kindles the ritual fire. I prefer to take it more generally as shared light, perhaps localized as the sun, which would continue the heavenly theme of pāda b. Alternatively, this pāda, which is entirely in the neuter, may be nominative not accusative and refer to Soma himself. This interpr. may be favored by the matching pāda at the end of the ṛca, 18c *jyótir víśvam svār dṛśé* “(as) light for everyone to see the sun,” where the soma sap—that is, soma itself—is identified as this light. I would therefore suggest an alternative tr. of pāda c here: “(he) the lofty light belonging to all men.”

IX.61.18: I am, reluctantly, taking *dākṣa-* as an adj. here (as in IX.62.4), with Ge and Re, though it is generally a masc. noun. Alternatively a noun interpr. is possible (cf. Ober I.457 “dein Saft ist Fähigkeit”): “your sap shines forth brilliant as skill” or “... shines as brilliant skill,” though I still prefer the adjectival interpr. See Re’s disc.

Scar (237) takes *vī rājati* as ‘rules’ (“dein Saft herrscht weithin als König ...” A pun is certainly possible here, but the insistent light imagery (*dyumān* in b and the whole c pāda) suggests that the ‘shine’ sense is the dominant one.

In c Ge takes *víśvam* as the modifier of *jyótiḥ* (“... ist alles licht”); so also Scar (237). This is certainly possible, and *jyótir vaiśvānarām* in 16c might support it. But “for everyone / all to see the sun” is a locution encountered elsewhere (I.15.1, 5, VIII.49.8, X.136.1), incl. nearby IX.48.4. My interpr. is shared with Re and Ober (I.457).

IX.61.19–21: Little evidence of unity, though 19 and 20 share ‘smashing’ and 20 and 21 cows.

IX.61.21: As in 16b, the simile in b seems to consist only of what precedes the *ná*, namely *sūpasthābhiḥ*, while *dhenúbhiḥ* constitutes the frame. So also Ge, Re.

IX.61.22–24: The ṛca has something of an emphasis on combat and winning, and the Vṛtra topic introduced in 22 is reprised via phonological deformation by *vratéṣu* in 24c.

IX.61.22: A nice example where surface grammar clashes with mythological content and the latter wins. Pāda b, the complex object of *āvitha* ‘you helped’ in a, consists of an infinitival phrase with the obj. of the inf. “attracted” into the dative, while its subject remains acc.: *índram vṛtrāya hántave* “you helped Indra to smite Vṛtra.” But c, a further specification of this obj., contains an acc. sg. masc. participial phrase *vavrivāṃsam mahūr apāḥ* “obstructing the great waters.” On the surface, the only noun this can modify is *índram* because this is the only available acc. sg. masc., but of course it is Vṛtra who obstructed the waters. Though *vṛtrāya* appears in the dative, it must be the referent of the acc. participle – thus suggesting that “attraction” in infinitival phrases is a very late and

superficial phenomenon. Unless with Re we want simply to denominate it a “formule morphologiquement non adaptée au contexte.” I prefer to think that the poet enjoyed producing the syntactic misdirection.

IX.61.23: Pāda c ... *vardha no gírah* “strengthen our hymns” is the reciprocal to vs. 14a *tán íd vardhantu no gírah* “let our hymns strengthen just him.”

IX.61.24: Pāda a consists of the etymologically identical phrases *tvótāsaḥ* ‘aided by you’ and *távāvasā* ‘with your help’, both containing forms of the 2nd sg. prn. and nominal forms of \sqrt{av} ‘help, aid’.

Pāda b contains a curious verbal periphrasis, *syāma vanvāntaḥ* “may we be combatting,” with opt. to \sqrt{as} as aux. plus the pres. act, part. to *vanóti*. This expression does not seem to be conveying anything different from the opt. to the same pres. stem, *vanuyāma* (5x), e.g., X.38.3 *tváyā vayāṃ tām [śátrūn] vanuyāma* “With you might we combat those (rivals).”

As noted above, *vratá-* in this pāda may have been chosen to recall *vṛtrá-* phonologically, forming a faint ring with the $\sqrt{vṛ}$ forms in 22 *vṛtrāya ... vavrivāṃsam*. It may even be that *jāgrhi* ‘be watchful’ evokes a form of \sqrt{han} , as in 20a *jāghnir vṛtrám*; see also *jahī* in 26b.

IX.61.25–27: This *ṛca* focuses even more strongly on combat, with forms of \sqrt{han} in 25 and 26 and ‘do battle’ (*makhasyá-*) in 27. Generosity is also a topic.

IX.61.27: This vs. is rather cleverer than the two that precede it. In pāda a the nom. pl. root noun *hrútaḥ* is, in my opinion, a pun. It belongs to the root \sqrt{hvr} ‘go crookedly, curve’, and its sense was disc., e.g., by KH (Fs. Thieme [1980] = Aufs. III.753–54). He suggests that here it refers to unevennesses (Unebenheiten) in the fleece sieve (i.e., as I see it, the curvy tufts of wool), just as, in the other occurrence of this root noun (VI.4.5), it refers to the curves of a race course (see comm. ad loc.). The literal sense here then is that though the soma must navigate around the tufts on the sieve, they will not keep it from completing the course. The second sense is one referring to unscrupulous enemies—Engl. ‘crook’ is an exact semantic match—and the point is that when Soma wishes to dispense goods to us, our crooked enemies can’t divert him.

The word family that includes *makhá-* and the denom. *makhasyá-* found here displays both ‘combat’ and ‘generosity’ senses; see comm. ad I.18.9 and, for the verb, III.31.7. Here I think both are at play, and this double sense is encouraged by the context: as noted, this *ṛca* focuses on combatting enemies, and the first hemistich of this vs. states that these enemies cannot stop Soma. But the *ṛca* also concerns Soma’s giving, esp. in the last two vss.: 26a “bring wealth ... 26c “give” ... 27b “eager to give largesse.”

IX.61.28–30: The last *ṛca* continues the concentration on combat and victory.

IX.61.29: The first two pādas open with somewhat emphatic 2nd sg. genitives, the first with a fronted initially accented demonstr. + enclitic (*ásya te*), the second with a more conventional full form of the prn. (*táva*). See disc. ad IX.66.14.

IX.61.30: The nominal rel. cl. in ab has no resumptive prn. in the main cl. of c, though “with these/them” is clearly the intent.

On the construction of *dhūrvane* here, see Keydana, Infin. 247, though the arbitrary line he tends to draw between “true” infinitives and datival purpose nouns seems over-strict here.

As is shown by IX.29.5 *rākṣa ... svanāt samasya kāsya cit* (cited by Ge), *nidāh* must be an abl. (as we would expect in any case with a form of $\sqrt{rakṣ}$) with a dependent gen., the indefinite *samasya*.

IX.62

IX.62.1–3: No particular sign of unity in this *ṛca*, though all three vss. concern the journey of the soma drops across the filter and towards the milk mixture and the rest of the ritual (as do vast numbers of other vss. in IX, of course). Vss. 2 and 3 also both contain the pres. part. *kṛṇvāntaḥ* and datives of benefit.

IX.62.2: This vs. has no finite verb, just two nom. pl. participles. With its nom. pl. subj. it can be dependent on vs. 1 or vs. 3 (or both); I prefer anticipatory dependence on vs. 3 because of the repetition of *kṛṇvāntaḥ* and the parallel datives.

Note the juxtaposition of the opposites *duritā* lit. ‘ill-goings’ (pāda a) and *sugā* lit. ‘good-goings’ (pāda b), formed with two different verbs of motion (\sqrt{i} , $\sqrt{gā}$). It is difficult to capture this relationship in Engl. without awkwardness, as the literal tr. just given demonstrate.

My tr. follows Ge in taking *ārvate* parallel to *tokāya* “for our offspring and for our steed”; I am somewhat tempted to take *ārvate* as an anticipatory parallel to *gāve* in 3a, with which it forms a more natural class (“making wide space for our steed and for our cow”), but I can’t see how to do that without brutally splitting up 2c, since *kṛṇvāntaḥ* is required to govern *sugā* in 2b.

IX.62.4–6: Again no obvious signs of unity, beyond the progress through the preparation of soma. Note, however, that 4b and 5b both begin *apsú* and the opening of 6b, *āsū(śubhan)* echoes that opening phonologically.

IX.62.4: As in IX.61.18 I take *dākṣa*- adjectivally (so also Ge, Re); even more than in that passage, a noun interpr. is difficult: “... the skill, abiding on a mountain”?

The loc. *apsú* and the locatively used stem *giri*- implicitly contrast.

IX.62.5: The fluent Engl. of the tr. conceals a syntactic problem: soma should be the obj. of the verb *svádanti* in c, and the first pāda, which is entirely in the neuter, with the NP led by *āndhas*-, allows such an acc. interpr. However, the intermediate pāda (b) is stubbornly in the masc. nominative (*dhūtāḥ ... sutāḥ*). We must either take b as a parenthetical nominal clause, as Ge and I do, or take ab as entirely in the nominative (as Re may do – his structure is not entirely clear) as a separate nominal clause, and supply a resumptive pronominal acc. for c.

IX.62.7–9: The *ṛca* shows no strong signs of internal unity, save for the “sitting” found in both 7 and 8, but it does echo some of the material earlier in the hymn: *āsṛgram* in 7b matches the same verb in 1a; *āsadaḥ* in 7c recalls *āsadat* in 4c, while *sīdan yónā* (8c) is a different echo of 4c *yónim āsadat*; *arṣa* (8a) picks up *arṣanti* (3b); *svādiṣṭhaḥ* in 9b expresses the result of *svádanti* in 5c; and *varivo-víd* in 9c is a paraphrase of *kṛṇvānto várivaḥ* in 2c. It may also be worth noting that this is the first place in the hymn that the divine recipients of soma are mentioned: *indrāya* 8a, *āngirobhyaḥ* 9b.

IX.62.9: The metaphorical universe of the soma hymns makes it difficult to interpr. the phrase *ghṛtām páyaḥ*, lit. “ghee (and) milk.” In the publ. tr. I take the phrase as the ultimate goal of *pári srava*, referring to the milk with which the soma will be mixed after its trip across the filter. See the esp. explicit IX.31.5 *túbhyaṃ gāvo ghṛtām páyaḥ ... dudhré* “For you the cows have milked out ghee and milk,” which identifies the phrase as referring to substance(s) that the cows produce for soma, real dairy products. But soma is also sometimes *compared* to milk and to ghee (e.g., IX.74.4), and so the phrase can also be an appositive metaphorically characterizing the subject soma, accounting for Ge’s “Laufe du ... als Schmalz und Milch.” However, our 5c *svádanti gāvo páyobhiḥ* “the cows sweeten (soma) with their milk” suggests that the milk and ghee in this vs. are likewise firmly bovine – though see 20b below.

IX.62.10–12: In this *ṛca* all three vss. have a form of med. *páva-*: *pávamānaḥ* 10b, 11b, (*ā*) *pavasva* 12a. This is scarcely surprising in the Soma Pavamāna maṇḍala, but in fact this stem has not yet appeared in the hymn.

IX.62.10: Several items in this vs. present choices of interpr., none of which are strongly either favored or disfavored.

The first issue is *hitāḥ*: as often in this maṇḍala (cf. comm. ad IX.1.2, 44.2, etc.), it could belong either to $\sqrt{dhā}$ or to \sqrt{hi} . The presence of a verb form belonging undeniably to the latter, *hinvánāḥ* in c, cuts both ways, as the poet could either be reinforcing the sense by duplicate forms of the same root or making a pun utilizing two different roots. In a similar situation in IX.44.2, with *hitāḥ ... hinve*, I opted to take both to \sqrt{hi} (though not with any emphatic feeling about it), while here I take *hitā-* to $\sqrt{dhā}$, as a pun (again, not emphatically). The deciding factor here for me is the deictic demon. *ayám* ‘right here’, which may point to the current location of the soma, expressed by ‘established, placed’. Re also takes it to $\sqrt{dhā}$, but Ge to \sqrt{hi} .

The other uncertainty in the vs. is how to construe *āpyam brhāt* “lofty friendship”: is it the complement of *cetati* or of *hinvánāḥ* -- which brings up the further question of the function of the latter participle. Med. *hinváte*, etc., can either take an obj. or be passive; in particular the part. *hinvánā-* is about evenly split. For a nearby pass. form, see, e.g., IX.64.9; for a nearby transitive form, see IX.63.7 *hinvánó mānuṣīr apāḥ*. Both Ge and Re take it as tr. here (e.g., “die hohe Freundschaft zur eile treibend”), while I have chosen to take it as passive and to construe the acc. with *cetati*, on the grounds that I don’t know what it would mean to “impel friendship” (though such an image is well within the potential range of a RVic poet). Gotō (1st class, 139) takes it as I do.

IX.62.11: The nom. *pávamānaḥ* in b is helpful in identifying the referent as Soma, in that both *vṛṣā* ‘bull’ (and related *vṛṣa-vrataḥ*) and *aśastihā* could be (and are) just as well used of Indra.

IX.62.13–15: The first two vss. contain forms of *kaví-*. The epithet “wide-going” (*urugāyá-* 13c) may be further specified in the phrase *vīmāno rájasah* “measurer of the airy realm” (14b) -- in both cases probably a way of giving a cosmic dimension to the journey across the filter. The third vs. (15) does not participate in these commonalities.

IX.62.15: *girā jātāḥ* “born on a mountain” is in the first instance a phrasal variant of *giri-ṣthāḥ* ‘mountain-abiding’ in 4b, with *girā* showing the *i*-stem loc. in *-ā* regular before consonants (see, e.g., Lanman, Noun Inflect, 385). This interpr. is followed by Ge and Re in their tr. (see also Ober II.13). However, *girā* can also be, as Old and Ge (n. 15a) point out, the instr. sg. of *gír-* ‘hymn’; in fact Gr puts it there. The alt. given in the publ. tr. “[/begotten by a hymn]” reflects this other possible analysis; that soma is produced to the accompaniment of hymns would make this statement true in ritual logic. It is also possible that *girā* ‘by a hymn’ could be construed with *stutāḥ* ‘praised’ later in the pāda. And to make things even more complex, *stutāḥ* might also evoke *sutāḥ* ‘pressed’.

The pass. *dhīyate* in b might weakly support taking *hitāḥ* in 10a to $\sqrt{dhā}$ as well.

Pāda c is the third instantiation (always in the c pāda) of the image comparing soma installed in the wooden cups to a bird on a *yóni-*: 4c *śyenó ná yónim āśadat*, 8c *sīdan yónā váneṣv ā*, our 15c *vír yónā vasatāv iva* – and cf. in the preceding hymn IX.61.21c *sīdañ chyenó ná yónim ā*. Judging from the position of *ivā* in our vs., both the bird and the *yóni-* have become so much part of the identity of soma that only the ‘nest’ (*vasatí-*) is considered part of the simile proper – though we must keep in mind the multiple disturbances in the position of simile particles in Maṇḍala IX as disc. passim above.

IX.62.16–18: Several elements link at least two of the vss. in the trīca: the presence of *vāja-* in 16 and 18 (*vājam* 16b, *vājāya* 18b, *vājīnam* 18c) and the dat. inf. *yāṭave* in 17b and 18b.

IX.62.17: See publ. intro. for the ritual specificity of the images in this vs.

The participle “yoking” in the publ. tr. of c should properly be in parens., since it’s simply generated from the finite *yuñjanti* in b.

The uninflected numeral ‘seven’ (*saptá*) is stationed between two pl. nouns, gen. *ṛṣīṇām* ‘of the seers’ and instr. *dhītībhiḥ* ‘with visionary thoughts’. Of course seven is the canonical number of seers throughout Indian religious history, starting with the RV, but ‘seven’ is also used of *dhītí-* in IX.9.4 *sá saptá dhītībhir hitāḥ* and passages cited there. Most tr. choose to construe it with one or the other (Ge, Ober [II.72] *ṛṣi-*; Re, Lü [710], Ober [II.222] *dhītí-*), with, surprisingly (to me), more going for *dhītí-* than *ṛṣi-*. But surely its position helps signal that it should be construed with both (as Re in his n. and Ober in his 2nd tr. indicate).

IX.62.18: This vs. is notable for its 2nd ps. address to the priests (*sotāraḥ ... hinota* “o pressers, impel ...”), also found in vss. 21, 29. Ordinarily 2nd ps. in soma hymns is reserved for Soma (sg.) and his drops (etc.) (pl.).

IX.62.19–21: There is some chaining between vss. (cows/milk in 19, 20; *mádhu* in 20, 21 and two mentions of gods in pāda c in 20, 21, incl. dat. pl. *devébhyaḥ* in each). In addition, all three vss. begin with the preverb *ā* (univerbated and therefore accentless in 19a).

IX.62.20: With Ge and Re, the publ. tr. interpr. *páyo duhanti* as “they milk *your* milk” (or more emphatically, Re “traient *de toi* le lait” [my ital.]); that is, they assume that milk (*páyah*) here refers to the soma juice. See above, comm. ad vs. 9, on the ambiguous ref. of this word in the soma maṇḍala. It is also possible here that *páyah* refers to cows’ milk (see the cows in 19c), and the passage should be interpr. “they milk milk *for you* for exhilaration.”

IX.62.22–24: *gr̥ṇāná-* is found in the first and last vs. (22b, 24c); vss. 23 and 24 contain forms of *árṣa-*, *pári-*, and cows. In addition vs. 22 seems to chain with the final vs. of the previous ṛca, 21: 22a *asrkṣata* picks up 21b *sr̥játā*, and 22b *śrávase* echoes (*deva*)*śrút(tamam)* in 21c, while *madíntama-* (22b) contains the same splv. suffix as *mádhumattama* (21b), (*deva*)*śrúttama-* (21c).

IX.62.24: For some disc. of this passage see Scar 641 with n. 906. He gives *pariṣṭúbh-* an active value (“ringsum jubelnd, rauschend”) in this passage: “... zu allen, die ringsum Töne von sich geben,” in contrast to my passive “encircled with rhythm,” which follows Re’s “environnées de rythmes.” Since the cmpd modifies *īṣaḥ* ‘refreshments’, it is hard to see how they could actively produce noise, though Scar (n. 906) suggests it might refer to the cows likewise characterizing the refreshments (*gómatīr īṣaḥ*), in the form of bellowing milk streams. This seems a bit farfetched, though it does allow the form to be semantically united with its other occurrence, in I.166.11, where it modifies the Maruts, who are actively making noise. For the idiom see I.80.9 *pári ṣṭobhata* “encircle (him) with rhythm!” where it is parallel to *arcata* “chant!” See also nearby IX.64.28 *pariṣṭóbhant-*. Ge takes *pariṣṭubhaḥ* as a noun ‘lauter Loblieder’, also with active sense.

IX.62.25–27: This ṛca shows more signs of unity than others in this hymn, esp. in the 1st two vss. Both 25 and 26 contain pāda-initial *pávasva* (25a, 26c) and the variant phrases *vācó agriyáḥ* (25a) / *agriyó vācaḥ* (26b), as well as forms of *vísva-* (25c *vísṽāni*, 26c *vísṽam(ejaya)*). In 27a Soma is addressed by the voc. *kave*, while 25c contains the phrase *vísṽāni kāvya*.

IX.62.25: Both Ge and Re supply an intermediate infinitive to govern *vísṽāni kāvya*: “um alle Sehergabe zu gewinnen” and “en vue de (nous procurer) tous pouvoirs-poétiques” respectively – on what basis is completely unclear to me. I see no reason why it can’t simply be a goal, as I’ve taken it. See also comm. ad IX.75.1.

IX.62.26: Because of the accentual difference between *vācāḥ* in 25a and *vācaḥ* in 26b, we must construe the two superficially near-identical phrases *vācō agriyāḥ* and *agriyō vācaḥ* quite differently. The first is a single constituent with dependent gen. *vācāḥ*, but in the 2nd *agriyāḥ* and acc pl. *vācaḥ* belong to different constituents, despite their adjacency: *vācaḥ* is the (or rather, an) obj. of *īrāyan*.

IX.62.28–30: No overt signs of unity.

IX.62.28: The first two pādas are simply a word-order variant of IX.57.1ab *prá te dhārā asaścāto, divó ná yanti vṛṣṭāyāḥ*.

IX.62.29: Although it may not be clear from the Engl. tr., the phrase beginning “the strong one ... the lord” refer to Soma (in the acc.), not Indra (in the dat.).

IX.62.30: On the masc. *ṛtāḥ* and the phrase *ṛtāḥ kavīḥ* see comm. ad VIII.60.5, which contains the same phrase, save for sandhi variation.

IX.63

IX.63.1–3: No particular signs of unity, though the dat. *īndrāya* in 2b anticipates the three datives *īndrāya víṣṇave ... vāyāve* in vs. 3.

IX.63.4–6: Thematically somewhat unified by the journey theme.

IX.63.4: Its opening *eté asṛgram āśávaḥ* is reminiscent of the beginning of the previous hymn IX.62.1ab *eté asṛgram ... āśávaḥ*.

On *hvāras*- see comm. ad IX.3.2.

IX.63.5: The phrase *kṛṇvānto víśvam āryam* “making it all Ārya,” esp. in conjunction with *aptúraḥ* “crossing the waters,” most likely alludes to the Ārya expansion in their migration into the northern part of the subcontinent, specifically to crossing frontier rivers and laying claim to the land on the other side. This territorial expansion is implicitly compared here to Soma’s ritual journey. Since, as Ge notes (n. 5b), the Soma cult is specifically Ārya, importing this practice into new lands would be a key part of the process of Arya-ization.

IX.63.7–9: On this *ṛca* see publ. intro. In these vss. Soma is compared to the sun, and his ritual journey compared to the Sun’s daily journey across the sky. At the same time the purification of the soma is linked with Manu, the first sacrificer (vss. 7–8), and so the cosmic and the ritual are connected.

IX.63.7: It is specifically stated here that the stream of soma “made the sun shine” (*sūryam ārocayāḥ*), in other words that the ritual activity produced cosmic effects.

IX.63.8: Soma goes from affecting the sun in vs. 7 to identity with the sun in this vs, since he yokes Etaśa, the sun’s horse, and travels through the midspace as if on the sun’s

daily journey – at least in my interpr. and that of Ge. But the vs. can be interpr. in a number of diff. ways, in part because the *sūra* of the Saṃhitā text is multiply ambiguous. If its underlying form is *sūrah*, per the Pp., it can be either gen./abl. to *svâr-* (so Sāy., as well as Ge and the publ. tr.) or nom. sg. to *sūra-*; however, it could also be underlying *sūre* and a loc. to *sūra-*. (Re also allows the dat., presumably to *svâr-*, but the only clear dat. to this stem is accented *sūrē* [IV.3.8]; *sūre duhitā* [I.34.5] is actually an old gen. with close sandhi effect before dental, likewise in IX.97.38; see my Fs. Melchert article, “Sūre Duhitār’s Brother, the ‘Placer of the Sun’: Another Example of -e <*-as in Rigvedic Phrasal Sandhi,” 2010.). In any case, an underlying *sūrah* is more likely than *sūre* because of the *sūro* in the next vs. (9b), which repeats much of the verbal material in this one.

Lü (215–16) objects to Ge’s interpr. of the vs., on the basis that the sun always travels through heaven, and here the travel is through the midspace (*antārikṣena*). So in his view this cannot refer to heavenly Soma identified with the sun, but must refer to the earthly Soma, who takes the name Sūra (hence *sūrah* is a nominative for him) and yokes a horse named Etaśa after the Sun’s horse, and journeys towards heaven through the midspace. In other words, his Soma seems as if he’s trying to steal the sun’s identity by stealing his names. I confess that the subtleties of Lü’s distinctions escape me, depending as they do on his strict separation of earthly and heavenly elements throughout his *Varuṇa* vols. Re seems to adopt some version of the Lü interpr., judging from his tr. of bc “... pour qu’il aille du (domaine de) Manu (au ciel) à travers l’espace-médian,” interpr. *manāv ādhi* as if it contained an abl. *manór* before *ādhi*. (He interpr. the same two pādas two hymns later [IX.65.16bc] quite differently.) I do see the point about the midspace, however, and am willing to concede that Soma-as-Sun is not quite as high a flyer as the Sun himself. Bl (RReps ad loc.) also considers *sūrah* a nom., but in his view this expresses “the complete assimilation of Soma Pavamāna to the sun,” which is a different conclusion from Lü’s. The point is surely not whether Soma is literally in heaven, but that he has acquired and displays the salient characteristics of the Sun and is therefore identified with the Sun despite remaining in the ritual arena.

IX.63.9: Pāda b of this vs., *sūro ayukta yāṭave*, consists entirely of words repeated from the previous vs.; in addition, substituting for *étaśam* in 8a, we find an expanded horse term, *tyā harīto dāśa* “these ten tawny mares” as obj. of *ayukta*. Again Soma is being identified with the sun and his ritual journey identified with the sun’s transit; again the cosmic and the ritual are intertwined, for the ten mares are probably both the Sun’s horses (as Lü points out, p. 216 n. 4, the Sun is credited with ten yoked horses in I.164.14; cf. also *sūryasya harītaḥ* in V.29.5) and the ten fingers of the priests that press the soma, exactly so called (*harīto dāśa*) in IX.38.3.

The third pāda (*īndur īndra īti bruván*) presents another set of problems: how much of what precedes *īti* is part of the direct speech and what is the content of the speech? See Old’s clear formulation of these questions. The standard solution is to take the speech as including both words preceding *īti* and to take it as a statement of identity; e.g., Ge’s “Der Saft ist Indra” (sim. Old, Lü 216 n. 4, Klein DGRV I.407), in part on the basis of a similar TB statement (see Ge n. 9c), though I don’t think this late parallel should be given much weight. Moreover, IX.6.2 *īndav īndra īti ...*, with voc. *īndo* outside of the quotation, shows that the ‘drop’ word does not have to be included in the quotation here. In addition, the sandhi of *īndra īti* is ambig.: it can represent nom. *īndrah* with the

Pp (and the standard interpr.), but it could also be loc. *indre*, the choice made by Re (“... en disant « c’est bien (pour aller) à Indra »”). In conjunction with the journey theme of this ṛca, I find this interpr. quite appealing and have adopted it.

IX.63.10–12: No particular unity, though vss. 11–12 are concerned with wealth.

IX.63.10: The datives *vāyāve ... indrāya* of course identify this as a ref. to the morning soma pressing, where both those gods receive the soma, and also echo the same datives (in diff. order) in vs. 3.

If *gírah* opening pāda b is an acc. pl. (as seems likely), it is somewhat awkwardly placed between two reff. to soma, *sutām* and *matsarām*, ending their respective pādas (a and b). All the acc.s should be objects of *pāri ... siñcata* ‘pour in circles’, which obviously fits the soma liquid better than the songs. Probably for this reason Gr identifies the form as a voc., the only voc. to the stem, but this certainly does not improve the sense: commanding the songs to pour the soma is appreciably worse than ordering unidentified priests to pour songs as well as soma. Elizarenkova’s tr. (*Language and Style of the Vedic R̥sis*, p. 85) exemplifies this awkwardness however unintentionally: “From here make libation rounds for Vāyu, for Indra, of the pressed intoxication, *O eulogies* (or: *O eulogizers*), onto the sheep strainer!” She claims that the root noun *gír-* can be used as an agent (hence her “O eulogizers”; Sāy. and Ludwig also take it as agentive: see Ge n. 10b), but I know of no such usage of this extremely common noun. On the other hand, the trope of “pouring prayers” is not rare in the RV, though pouring them onto the fleece strainer is a bit extreme. Re solves the problem by supplying a separate verb to govern *gírah* (“émettez”), but this seems a typical cop-out on his part.

As in the previous hymn (see comm. ad IX.62.18), the priests are addressed in the 2nd pl. here (*pāri ... siñcata*). See also vs. 19, with the same verb.

IX.63.11: On *vidā* as lengthened impv. rather than subjunctive *vidā(h)*, see comm. ad IX.19.6. It is accented because it is preceded by a voc. in zero-position.

IX.63.13–15: Again no particular signs of unity. The unmixed (“clear” *śukrá-*) soma in 14 is contrasted with the soma mixed with curds (*dādhyāśír-*) in 15.

IX.63.13: As in the ṛca vss. 7–9, Soma is again compared to the Sun – but curiously no clear point of comparison between them appears in the vs. The actions attributed to Soma here – purifying himself, being pressed by stones, putting his sap in the tub – are exclusive to him and certainly not characteristic of the Sun.

IX.63.14: In vs. 5 during his journey Soma “made it all Ārya”; here he crosses these Ārya domains (*dhāmāny āryā*) on his journey to the cows’ milk. My interpr. takes this first acc. phrase as an acc. of extent, of space traversed, while the acc. in pāda c, *vājam gómantam* I take as the goal of *akṣaran*. In the next vs., 15c, *pavītram āti* “across the filter” has the same function I see for *dhāmāny āryā* here, and in fact the filter may be identified as the Ārya domains. By contrast Ge takes *dhāmāny āryā* as parallel goal to *vājam gómantam*, while Re characteristically supplies a separate participle (*āviśántaḥ* “ont occupé”) to govern *dhāmāny āryā*. The parallels he cites in the n. do not seem sufficient to me.

IX.63.16–18: No evidence of unity, beyond *vājīnam* (17b), *vājam* (18c), and the vss. are quite hackneyed, even for Soma Gāyatrī hymns.

IX.63.19–21: This ṛca has more internal unity, as well as connection to the preceding ṛca, than usual. For its external connections, see 19a *vāje ná vājayúm* picking up the *vājī*-forms just noted, *mādhumattamam* in 19c matching the same word (in the nom.) in 16a, and 20a *kavīm mṛjanti* echoing 17a *tām ī mṛjanti* (note the identical vowel pattern in *kavīm / tām ī*). As for internal connections, see *dhībhīh* (20b, 21a), *vīprāh* (20b, 21c), and *vīṣā* (20c), *vīṣanam* (221a).

IX.63.19: This vs. contains a fairly clever double meaning: the verb *pāri* √ *sic* means ‘sprinkle around / in circles’. When soma is the object, as it generally is, it refers to the sprinkling of the drops of soma; in other words, the acc. expresses the material that is being sprinkled. But here in the simile *vāje ná vājayúm*, the acc. *vājayúm* ‘prize-seeking’ refers to a horse in a race or contest, which would be the target or the goal of the sprinkling, with some type of liquid being sprinkled upon it. The word play is cleverer still, in that *vājayúm* should be read twice, both as referring to the horse in the simile and to soma, which is elsewhere modified by this word (e.g., IX.44.4 *sá naḥ pavasva vājayúh*), in the frame.

Both Ge and Re construe *vāje* in the simile rather loosely; I take it as a unmarked loc. absol. of the *dhāne hité* (“when the prize is set,” e.g., IX.53.2) type, though without overt ppl. It adds to the somewhat slant syntax of the simile versus the frame that both contain a loc. (*avyo vāreṣu* in the frame), but the locc. have different functions. In fact *avyo vāreṣu* “onto the sheep’s fleece” expresses the goal of the sprinkling and is functionally parallel to *vājayúm* in the simile.

IX.63.20: Note *kavīm* (of Soma) contrasting with *vīprāh*, the human poets who groom him.

IX.63.22–24: A form of *páva-* in each vs.: 22a *pavasva*, 23a *pavamāna*, 24a *pavase*, a pattern that is repeated in the next ṛca.

IX.63.22: As in vs. 10, the joint appearance of Indra and Vāyu signals the morning soma pressing.

On *āyuṣāk* (also IX.25.5) see the sensible disc. of Scar (589–90). Note the presence of the Āyus grooming the soma in vs. 17.

IX.63.23: On *(nī) √ tuś* see comm. ad VIII.38.2.

IX.63.25–27: This ṛca shows clear signs of unity, indeed of a monotonous sort. Like the previous ṛca, each vs. in this one contains a form of *páva-*, but in this ṛca all three are the nom. pl. part. *pavamānā(sā)h*, always opening the vs. Each vs. also contains one finite verb, an augmented form of √ *srj* (*asṛkṣata* 25a, 27b; *asṛgram* 26b). The first two vss. also contain nom. pl. *īndavaḥ* in the same metrical position (final in the b pāda). The lexeme

āpa √ *han* found in the previous ṛca (*apaghnán* 24a) also reappears here (26c *ghnántaḥ* ... *āpa*) (and in the next ṛca).

IX.63.28–30: The *páva-* sequence found in the last two ṛcas is brought to an end with the alternative pres. part. *punānāḥ* ‘becoming purified’, which opens this last ṛca. The lexeme *āpa* √ *han* also found in once each in the last two ṛcas (24a, 26c) occurs in the first two vss.: *āpa* ... *jahí* (28b, c), *apaghnán* (29a).

IX.63.30: The first pāda of this, the final vs., echoes the last pāda of the first vs.: 1c *asmé śrávāṃsi dhāraya*, 30a *asmé vāsūni dhāraya*. It is also worth noting that this 2nd sg. impv. *dhāraya* ‘secure’ is phonologically almost identical to the instr. sg. *dhārayā* ‘with/in a stream’, which ends the first pāda of this ṛca (28a) and which is found four other times in the hymn (4c, 7a, 14b, 21b), always in the same metrical position.

IX.64

IX.64.1–3: As noted in the publ. intro., this opening ṛca is marked by the identification of Soma and his attributes with a bull (*vṛṣan-*). This theme is especially dominant in vss. 1 and 2: all three pādas of vs. 1 open *vṛṣā*, with the bahuvrīhi *vṛṣa-vrataḥ* ending the first hemistich; vs. 2 is even more insistent, with two forms of the stem (or deriv. *vṛṣṇya-*) in each of the three pādas. By contrast, vs. 3 only nods at the theme: *vṛṣā* appears once in 3a, though the final word of the vs., *vṛdhi*, may be meant to echo the word phonologically.

IX.64.1: Old’s interpr. of *vṛṣā* in c as a neut. pl. adj. with *dhārmāṇi* seems both unnecessary and unlikely. I know of no other neut. forms of *vṛṣan-* (the few cited by Old are not convincing), which suggests to me that, despite its widely accepted classification as an adj., the stem is synchronically a masc. noun, which, however, can be used as an adjunct strengthener of another noun, hence “bull X” as the equivalent of “bullish X” – a usage similar to English ‘horse’ as an augmentative, meaning ‘strong, large, coarse’ (as in, for ex., horseradish). See <https://www.etymonline.com/word/horseradish> Moreover, since nom. sg. *vṛṣā* opens the two previous pādas of this vs., it seems unlikely that a morphologically different, and at the least very rare, phonologically identical form would open the third – esp. since, when a neut. adj. is required in the next vs. (2a), the deriv. *vṛṣṇya-* is employed.

IX.64.3: As noted above, the bull theme gets suddenly muted in this vs.; in compensation, as it were, other animals are introduced: a horse (a), cows and steeds (b).

Opinions vary on how to render the first two pādas, in part because of uncertainty about the verb *cakradāḥ*. Given the immediately preceding simile *ásvo ná*, the verb should be intransitive in the sense ‘roar, whinny’; this matches the usage of the simple thematic (aor.?) *krada-* in passages like IX.97.28 *ásvo ná krado vṛṣabhir yujānāḥ* “Like a horse you whinny on being yoked by the bulls.” However, the b pāda, *sám gāḥ ... sám árvataḥ*, with two acc. pl.s makes problems. Ge jury-rigs what we might call a semi-transitive usage of the verb with *sám*, “zusammenbrüllen” (‘roar [smtg] together’)(see also Ober I.518), while registering the intransitive usage in the simile parenthetically:

“Wie ein Ross (wiehernd) sollst du, der Bulle, uns Rinder und Rennpferde zusammen brüllen (brausen).” Despite the precarious nature of this solution, it may be the best one available, and I would entertain an alternative tr. “You the bull roar like a horse, (roaring) together cows and steeds.” I adopt a similar one in the publ. tr. for the very similar passage IX.90.4 *sám cikrado mahó asmábhyaṃ vājān*, with the variant stem *cikrada-*, also cited by Ge and Re, though I am not certain I subscribe to that now (see comm. ad loc.). By contrast, Re clearly takes *cakradaḥ* as a trans./caus. redupl. aor.: “Tel un cheval, fais mugir ensemble ... les vaches ... ensemble (fais hennir) les coursiers.” However, the clear intrans. sense of *krada-* with the simile in the parallel passage cited above speaks against the caus. usage; moreover, as disc. at length in my *-āya*-book (110–11), neither *cakrada-* nor the redupl. aor. *cikrada-* with apparent “caus.” redupl. shows true transitive usage until the late RV; they also seem to be essentially interchangeable.

I have a different solution for this passage (though it won’t work for IX.90.4): it is of course a commonplace that the preverbs *sám* and *ví* form a complementary pair. Here I suggest that the standard lexeme *ví√vṛ* ‘uncover, open up’ found in c has given rise situationally to an opposing expression *sám√vṛ* ‘cover, surround’ in b, with the verb gapped (or rather anticipated: *vṛdhi* at the end of c). The bull is urged to deliver cows and horses to us by confining them. The proposed lexeme *sám√vṛ* does marginally exist; see I.121.15, with *sám ... varanta* in intrans. value, as well as ppl. *sámvr̥ta-* (VIII.17.7). I thus read the verb *cakradaḥ* only with pāda a.

IX.64.4–6: No strong signs of unity. Vs. 4 does link to vs. 3 in the preceding *ṛca* through the mention of cows and horses. The c pādas of 5 and 6 both begin with a finite form of *páva-*.

IX.64.4: In addition to the link to vs. 3 just mentioned, pāda c contains a clever echo of 2a. That earlier pāda ends with the neut. *s*-stem *śávaḥ* ‘strength’; 4c ends *vīrayāśśávaḥ*, to be analyzed as two words *vīrayā āśśávaḥ* “with a yen for heroes the swift ones,” the latter being the nom. pl. m. of the adj. *āśú-*. But the final + initial vowels have entirely coalesced, and given the accentuation of both words and the underlying long final vowel of the first word, they could have been split *vīrayā *śávaḥ* with the latter entirely matching the independent *s*-stem form in 2a.

IX.64.6: The preverb *ā* that turns *páva-* into a quasi-transitive “bring by purifying oneself” immediately follows the verb, allowing *pavantām* to take a position matching that of *pávante* in 5c and *pavamānasya* in 7a.

IX.64.7–9: As just noted, *pavamānasya* in 7a chains with forms to the same stem in vss. 5 and 6. 7b *prá ... asṛkṣata* also echoes *ásṛkṣata prá*, which opens the previous *ṛca* (4a). The *ṛca* is unified by the similes comparing Soma to the Sun in vss. 7 and 9, possibly found also in the beacon (*ketú-*) of vs. 8.

IX.64.7: The root noun cmpd *viśva-víd-*, like other *-víd-* cmpds, is completely ambiguous between ‘knowing all’ and ‘finding all’ (for *viśvavíd-* itself see Scar 489 and more generally 480–93). In this context, given Soma’s bestowal of “all goods” (*viśvā ... vāsu*)

in the previous vs. (6a), as well as Soma's journey to all forms in 8b, 'all-finding' seems preferable.

The simile in c, *sūryasyeva ná rāśmayah*, is redundantly marked, with adjacent simile particles *iva ná*. There is no structural reason for this; it must result from the attempt to fit the simile *sūryasyeva rāśmayah* found elsewhere in trimeter verse (see nearby IX.69.6, also I.135.9, V.55.3, X.91.4) into a dimeter line. Or, to be more precise, to accommodate the fact that when a form of *sūrya-* opens a vs. line, it does not show distraction to *sūr'ya-*, in order to avoid placing a light syllable in 2nd position. In a dimeter line, in which this simile has to occupy the whole pāda, the failure to distract produces a 7-syllable line, and so *ná* was presumably added to fill the gap in the line. In a trimeter line that has the simile in initial position (with undistracted *sūryasyeva*), further material can be added at the end (so I.135.9, IX.69.6), and in a trimeter line where the simile follows the caesura, *sūryasyeva* can be distracted (so V.55.3, X.91.4) in that position.

IX.64.8: As noted above, it's quite possible, even likely, that the beacon in pāda a is a reference to the sun and therefore another assimilation of Soma to the Sun, as is more explicit in vss. 7 and 9. For the association between *ketú-* and the sun, cf., e.g., VII.63.2 *ketúh ... sūryasya*. Lü (702) suggests rather that the *ketú-* is lightning, without argument.

Ge renders b as "... rinnst du ... alle Farben annehmend"; similar Lü (702) "strömst du vom Himmel her in alle Erscheinungsformen." But the acc. with *abhí√ṛṣ* is always a goal (to choose just one example, cf. nearby IX.62.3 *abhy āṛṣanti suṣṭutīm* "they rush towards the lovely praise-hymn"), and I don't see where (or why) they get their alternative interpr. By my interpr. the "all forms" to which the soma rushes could be the materials the soma will be mixed with (water, milk), or everything found on the ritual ground, or indeed everything on earth and in the midspace, the "all goods" of vs. 6.

IX.64.9: Pāda b, *pavamāna vídharmaṇi*, is found three times (here, IX.4.9, and IX.100.7) in three different syntactic contexts, so this has to be the constituency: the voc. plus the loc. Re takes the 'speech' (*vācam*) from pāda a as the implicit subject of *vídharmaṇi* ("pour qu'elle se répande au loin"), but because speech is lacking in the other occurrences of the pāda, this cannot be correct. Most helpful for the interpr. is the fuller expression in IX.86.30 (also adduced by Ober II.152) *tvám pavítre rájaso vídharmaṇi ... pavamāna pūyase* "You, self-purifying soma, are purified in the filter, in the spreading expanse of space ...," where the spread of the soma liquid across the fleece filter is compared to the spread (probably of light) in cosmic space (*rájas-*).

The simile in the third pāda, *ákrān devó ná sūryah* "you have roared like the Sun-god," is abrupt in its imagery, in that roaring is not the first quality we associate with the sun. There are several ways to account for the phraseology. In Old's view (fld by Lü 258), the shared quality of Soma and Sun is not expressed by the verb, which is independent of the simile. This independence would be comparable to that found in the preceding hymn, IX.63.13, where the same simile (*sómo devó ná sūryah*) is found, with a different but equally incompatible verb phrase *ádribhiḥ ... sutáh* "pressed by stones," which is certainly not true of the Sun. This is the easiest solution. Ge (n. 9c) suggests rather that it's a condensed comparison to the Sun's horse (sim. Ober I.224). In my view, Old's interpr. is strictly correct, but I think the poet, by juxtaposing the simile with an

apparently inappropriate verb, is forcing the striking image of a roaring Sun, which both works as a kind of synaesthesia (the intense brightness of the sun is experienced as intense noise) and imposes a third intermediate term, a horse or bull, to which both the Sun and Soma are compared.

IX.64.10–12: There are some unifying features in this *ṛca*. Although this is hardly striking in the IXth Maṇḍala, all three vs. contain a form of $\sqrt{pū}$, with those in vss. 11, 12 being the identical phrase *pavitra ā* “in the filter. The word *indu-* opens the first and last pādas of the *ṛca* (10a, 12c). The cmpd *devā-vī-* ‘pursuing the gods’ in 11b is echoed by its splv. *deva-vītama-* in 12b. More subtly, the missing obj. of *srjāt* in 10c is most likely ‘wave’, found in the resumptive rel. cl. opening vs. 11, *ūrmīr yāḥ* ... For the VP *ūrmīm* \sqrt{srj} see VI.17.12 *asrja ūrmīm apām* adduced by Old.

IX.64.11: This vs. is entirely a rel. cl. and most comfortably adjoins vs. 10 (see comm. immed. above) – *pace* Lü (603–4), who attaches 11 to 12.

IX.64.13–15: Again, each vs. has a form of $\sqrt{pū}$, for what that’s worth (*pavasva* 13a, *punānāḥ* 14a, 15a). In 15a *devā-vītaye* links to the rt. noun cmpd *devā-vī-* (*deva-vītama-* in the previous *ṛca*, 11b, 12b).

IX.64.16–18: The first two vss. of this *ṛca* both contain nom. ‘drops’ (*indavaḥ*) and their acc. goal, the sea (*samudrām*); their first pādas also both contain nom. pl. pres. middle athem. participles with the extended ending *-āsaḥ*, *hinvānāsaḥ* and *marmṛjānāsaḥ* respectively. The third vs. stands apart.

IX.64.18: The opening of pāda a *#pāri no yāhi* gets remixed into c *#pāhi naḥ*.

IX.64.19–21: The undiscerning (*āpracetasah*) in 20c are contrasted with the discerning (*prācetasah* 21b) and the indiscriminating (*āvicetasah* 21c). The first vs. (19) of the *ṛca* does not participate.

IX.64.19: Etaśa, the Sun’s horse, who figured in the previous hymn (IX.63.8), reappears here. In the previous passage Soma yoked Etaśa; here he is identified as Etaśa and is himself yoked.

The interpr. of this vs. is considerably complicated by the universal (Sāy., Gr, Ge, Re, Lü 216, 269) assignment of the main clause verb *mīmāti* to $\sqrt{mā}$ ‘bellow’. This leaves *padām* in b with nothing to do. In Lü’s 2nd tr. (269) it is the place towards which Etaśa bellows (“... weihert das Etaśa-Ross dem Orte zu”), a transl. that at least does not violate the syntactic structure of the vs. Otherwise the solutions involve on the one hand plucking *padām* out of the b pāda, which remains part of the main clause, and construing it loosely in the dependent clause of c – an egregious violation of RVic syntax. So Ge: “Es brüllt das Zugross von den Sängern angeschirrt, wenn er in den Ozean gesetzt den Schritt vorwärts (tut).” And even with this trick Ge needs to supply a verb (“tut”) with which to construe *padām*. The other solutions violate RVic syntax less dramatically, but violate it they do – by making the b pāda part of the *yād* clause with c, though this would place the *yād* unacceptably deep into its clause. Lü’s 1st solution (216) is almost identical

to Ge's (including the crucial "den Schritt vorwärts (tut)") except that he takes b with c, not a. Re deals with *padām* differently, but still takes b with c: "Il hennit ... quand, attelé par les chantres, il a été placé en avant, en (son) séjour, (à savoir) sur l'océan." In addition to sweeping b into the c clause, his interpr. requires *āhitah* to take an acc. of place, *padām* ("placé ... en (son) séjour"), which is resumed by a loc., *samudré* ("(à savoir) sur l'océan"). This supposed acc. usage with *ā*√*dhā* is unparalleled.

The interpr. of the vs. is almost magically simplified by assigning *mīmāti* to a different root, √*mā* 'measure', which builds a homonymous redupl. pres. *mīmāti*, which is in fact far better attested than the one to √*mā* 'bellow'. Although many of its forms are medial, there are a considerable number of act. forms, particularly the impv. *mimīhi*. I suggest that we have here an idiom "measure (its) pace (<step)," a reasonable activity for a draught horse. I suggest a similar interpr. of the cmpd *mitā-dru-* (see comm. ad IV.6.5), where I take the 1st member as the ppl. of √*mā* 'measure'. This interpr. allows *padām* to be the obj. of the verb in the main cl. and keeps the two clauses separate. And it certainly makes as much sense for the Sun's horse to be moving at measured pace through the sky as for it to be bellowing.

IX.64.21: On *venā-* see comm. ad VIII.100.5.

IX.64.22–24: The mention of the divine recipients of the soma in vss. 22 and 24 marks this *ṛca*, though the middle vs. lacks this feature. The (human) inspired poets (*vīprāḥ*) in 23 implicitly contrast with the *kavī-* Soma, addressed in the voc. in 24. Note also that this is the third *ṛca* in a row that refers to sitting on (or coming to) "the womb of truth" (17c, 20ab, 22c), a trope found also in 11c; all four expressions are slightly different, though containing the same basic elements: 11c *sīdann ṛtasya yónim ā*, 17c *āgmān ṛtasya yónim ā*, 20ab *ā ... yónim hiranyāyam ... ṛtasya sīdati*, 22c *ṛtasya yónim āsādam*. For further on this trope see comm. ad vs. 30 below.

IX.64.23: A minor poetic echo, the rhyming openings of pāda a *tām tvā* and c *sām tvā*.

IX.64.25–27: The unusual acc. expression *vācam ... sahāsrabharnasam* is found in both 25 and 26 (in different order). For *sahāśra-bharnas-* see comm. ad IX.60.2. All three vss. contain the nom. sg. masc. *punānāḥ*.

IX.64.28–30: The contrast between the two types of soma drinks, pure and mixed with milk, are highlighted in this *ṛca*, at least in my view: 28c *sómāḥ śukrā gāvāśirah* describes them straightforwardly, while 30ab *rdhāk ... samjagmānāḥ* "separately (and) uniting (with milk)" is more cryptic.

IX.64.28: On *pari*√*stubbh* see nearby IX.62.24. It is not entirely clear to me how the *kṛp-* (form, body) of Soma would 'encircle with chant/rhythm', since its physical form should not be producing noise. More common is the association of *kṛp-* with light (esp. the light of Agni), as Re points out (cf. VI.2.6 *kṛpā ... rocase*, VII.3.9 *svāyā kṛpā tanvā rōcamānāḥ*), but in our passage *rucā* and *kṛpā* are parallel and independent. A passive sense 'encircled with chant/rhythm' (so Re) would work better in context, but that seems precluded by the use of the act. stem *stóbha-*.

IX.64.29: Pāda a contains what appears to be an etymological figure, but I consider it somewhat trickier than that. The first two words, *hinvānó hetṛbhiḥ*, are transparently related and easy to construe together, and IX.13.6 *hiyānā ná hetṛbhiḥ* “like (horses) being driven by their drivers” displays the same apparent configuration. However, the instr. in our passage is followed by a ppl. *yatāḥ* ‘held, guided’, which is regularly preceded by an instr. agent, often *nṛbhiḥ* (approx. 10x in IX), or in this very hymn, vs. 15 *vājībhīr yatāḥ* “guided by the prize-seekers.” So I suggest that *hetṛbhiḥ* is actually the agent for following *yatāḥ*, though also adjacent to its etymological kin – a fine twist on the RVic poetic trick of positioning a word between two words both of which it could be (or indeed is) connected to. A more literal rendering of the pāda would be “... impelled, by the impellers held.”

The simile in c is problematic for several reasons. To begin with, the subject of ab is singular, but the simile must be couched in the plural, given the pres. part. *śīdantaḥ*. This is less of a problem than it appears: first, this hymn and soma hymns in general regularly switch back and forth between sg. (soma) and pl. (soma drinks / drops, etc.) referring to the same substance, and this could easily be a unmarked case of that. Moreover, if the target of the simile is in the pl., it can have attracted the participle into the pl.

This raises the question: what *is* soma being compared to? and the related but more technical question: is *vanúṣaḥ* nom. pl. (and therefore the simile target) or some other case (acc. pl., abl./gen. sg.)? Because we need something to license the pl. of *śīdantaḥ* and because we need something to compare the soma to, taking *vanúṣaḥ* as nom. pl. seems the most economical solution – although this requires discounting the attractive parallel adduced by Ge, I.26.3 *śīdantu mānuṣo yathā*. In that passage *mānuṣaḥ*, which rhymes with our *vanúṣaḥ*, is gen. sg. (and the pl. impv. *śīdantu* simply agrees with the pl. subject in ab). That *vanúṣaḥ* is nom. pl. is also the judgment of Ge and Re, though with vastly different semantics. Ge “wie die wetteifernden Reiter(?)” (I have no idea where he gets the “riders,” and his question mark shows his uncertainty about it; nonetheless it was taken up by Ober [II.245] as evidence for horseback riding in the RV!); Re “(s’)asseyant au séjour du Ṛta) comme les dévots qui s’(y) asseoient.” Re seems closer to the mark, though still pretty far from it. Because of the repetition noted above (ad 22–24) of the trope “sit on the womb of truth” (4x in this hymn), it seems likely that *śīdant-* here would evoke this recurrent expression, which is certainly appropriate to the soma (drinks) that are the subject of the simile. It is more difficult to identify who or what *vanúṣaḥ* refers to. This stem, and the associated denom. verb, can have both positive and negative values, expressing various types of eagerness and craving: “striving, eager, zealous, etc.” on the one hand (hence Re’s dévots), “over-zealous, covetous, rapacious, etc.” on the other. Before identifying its usage in this particular passage, I’d like to introduce a third term into the simile. In similes involving sitting, the comparandum is often a bird – e.g., *śyenāḥ* in nearby IX.61.21 = IX.65.19 *śīdañ chyenó ná yónim ā*, as well as IX.96.23 *śakunāḥ ná pátvā* and with the pl. VIII.21.5 *śīdantas te váyo yathā* “sitting like birds” very similar to our passage. I suggest that birds are the underlying comparandum here as well, and that this underlying target is qualified by *vanúṣaḥ* ‘rapacious’, or, as I render it “raptor (birds).” This produces a more satisfying, or at least more interesting, simile than

Re's "like devotées," and it is constructed from readily available elements – though it does require more machinery.

IX.64.30: As indicated above (ad 28–30), I believe that the unmixed and mixed soma drinks are referred to here, though no interpr. I know of shares this opinion. The adv. *īdhak* (so accented) means 'separately, apart'; the form *rdhák* with final accent is found only here, and it is difficult to assess what the accentual difference means: is it just a mistake or meaningless variant? or is it meant to signal some change in grammatical function or meaning? If we can fancifully imagine an internal derivation of adverbs quasi-parallel to that of *bráhman-* → *brahmán-*, *yásas-* → *yaśás-*, perhaps *rdhák* refers to something characterized by separateness. With a further flight of fancy, we can suggest that this would be the unmixed soma, referred to unequivocally two vss. earlier as *śukrá-* (28c), and contrasting with the soma that "unites" (*saṃjagmāná-*) with milk, again straightforwardly referred to in 28c as *gāvāśir-*. Although neither of the terms in vs. 30 is elsewhere used of a type of soma, at least as far as I know, the contrastive pairing was set up at the beginning of the *trca* and could, I would assert, have been decoded by a RVic audience and applied to the more opaque expressions here. I will not discuss the alternative interpr. (Ge, Re, Lü 259, Ober I.457, II.143), which differ wildly from mine and from each other and, in the case of Ge and Re, depend on an out-of-date interpr. of *īdhak*.

IX.65

On the qualities of this hymn as a whole, see publ. intro.

IX.65.1–3: No particular signs of unity. Vss. 2 and 3 have forms of the pres. part. *pávamāna-* and 3 also the impv. *ā ... pavasva*, but esp. in this hymn, the appearance of these forms is hardly noteworthy. Vss. 2 and 3 also have *devébhyaḥ* in their b pādas, but in different cases.

IX.65.1: The identification of Soma with the Sun, noted passim above in the last two hymns, here begins the hymn.

The tr. "rosy (fingers)" is of course an unauthorized allusion to Homer's "rosy-fingered dawn" – though it is more legitimate than it might first appear. The word tr. 'rosy', *ūsri-*, is ultimately derived from the 'dawn' word; cf. the related *usrá-*, *usríya-*, both of which are color terms representing the light of dawn ('ruddy') generally applied to bovines. The next pāda, with its fem. subj. *svásāro jāmāyaḥ* "kindred sisters" is a standard way of referring to the fingers of the priests that prepare the soma (cf., e.g., IX.89.4). Thus the first two pādas superimpose two images: the ruddy Dawn(s) impelling the sun, the fingers impelling the soma – allowing each to participate in the imagery of the other. Because of the erotic relationship sometimes depicted between Dawn and the Sun, it would be better to tr. *pátim* in b as "their husband" (with Ge, Re), not 'lord' as in the publ. tr. – making one more link between the imagery of pādas a and b.

Note that Ge nodded (slightly) in tr. *mahān índum* as "den grossen Indra," enabled by the constant association between those two words in IX.

IX.65.2: The āmreḍita *rucā-rucā* evokes the single instr. *rucā* at the end of the preceding hymn, IX.64.28 (also vs. 13 of the same hymn and vs. 27 of this one).

Pāda c is characterized by alliteration of an unremarkable type: *viśvā vāsūny ā viśa*.

IX.65.3: Both Ge and Re take *devébhyaḥ* as dat. with *dúvaḥ*: “Eifer für die Götter,” “l’hommage aux dieux,” whereas in the publ. tr. I take it as an abl., “friendship from the gods.” The issue is the multivalence of *dúvas-* and its derivatives; in the meaning ‘friendship’ it generally refers to the mutually agreeable relationship between men and gods. In this context it seemed to me odd to order Soma to “bring [us] through purification” friendship *for* the gods, hence my ablatival interpr. However, a more detailed examination of the usage of *dúvas-* and the denom. *duvasyá-* shows that the offering / seeking of *dúvas-* generally goes from men *to* gods (or Agni, as the god closest to men, to gods). E.g., *devéṣu kṛṇuto dúvaḥ* “The two [= married couple] do friendly service to the gods”; III.3.1 *agnír hí devāṁ amṛto duvasyati* “For Agni the immortal does friendly service to / befriends the gods.” I therefore would emend the tr. to datival “bring ... friendship for the gods.” Like the parallel obj. *suṣṭutīm* ‘good praise’, *dúvas-* is then something that we mortals offer to the gods, but, though it originates from us, it is Soma who stimulates our production of these offerings, hence *ā ... pavasva* “bring by purifying yourself.”

IX.65.4–6: No obvious signs of unity

IX.65.6: On *druṇā* see comm. ad IX.1.2.

IX.65.7–9: Again no signs of unity.

IX.65.7: The vs. contains an address (in pl.) to priest-singers to sing (*gāyata*), with comparison to a previous singer Vyaśva (*vyaśvavát* ‘like Vyaśva’) who did the same. Why Vyaśva appears here is something of a mystery. Aside from a bare mention in an Aśvin list hymn (I.112.15), Vyaśva is found only in VIII, where he is identified as a ṛṣi (VIII.9.10, 23.10) and his descendants receive the dakṣiṇā at the end of the sacrifice (VIII.24.28–29). The adv. *vyaśvavát* ‘like Vyaśva’ is found 3x in that little group of hymns in VIII (23–26), attributed in the Anukramaṇī to one of his descendents, Viśvamanas Vaiyaśva. I don’t know why he should surface once in IX; our hymn is not attributed to him or any of his obvious relatives (rather to Bhṛgu Vāruṇi or Jamadagni Bhārgava), and there is nothing particularly somic about his appearances in VIII – though his descendents may once be called *somín-* ‘having or providing soma’ (VIII.24.29; see comm. ad loc.). He is more closely associated with the Aśvins (I.112.15 just mentioned; VIII.9.10, 26.9 [both Aśvin hymns]).

IX.65.8: The construction of the first hemistich is somewhat tricky. The rel. *yásya* must refer to soma, with the rel. cl. hanging off vs. 7. In pāda a the *yásya* qualifies *várṇam* ‘color’, which serves as obj. of *hinvánti* in b. “They impel his color” is a slightly odd locution, and it becomes odder in b, with the acc. *hárīm*. The stem *hári-* is a color term and could qualify *várṇa-* (“tawny color”), but it also is regularly applied directly to soma

(e.g., in vss. 12 and 25 of this hymn) and also identifies Indra's horse(s). Ge (n. 8b) cleverly suggests that *hári-* is to be read twice, with the second reading an unmarked simile referring to a horse of the appropriate color. This provides a more appropriate obj. for *hinvánti* ("they impel (like) a fallow bay (horse)"), while connecting the putative horse with the "tawny color" (*várṇam ... hárīm*) that is the 1st obj. of the verb.

IX.65.10–12: Again, no particular signs of unity.

IX.65.10: The function of the *ca* in b is unclear. Klein (DGRV I.256–57) discusses three possible explanations – Ge's, Re's, and one of his own – of which he prefers Re's: that *marútvate ca* conceals an ellipsis "(for the Maruts) and (for Indra) accompanied by the Maruts," which seems by far the least likely and the most cumbersome. Among other things, the Maruts barely figure in IX (though cf. vs. 20 below), and I also know of no passages containing *marútvant-* that also contain a free form of *marút-*. My solution is admittedly makeshift but simpler, that *ca* conjoins the disharmonious *dhārayā* "in a stream" and *marútvate ... matsaráḥ* "exhilarating drink for Indra." This is closest to Ge's, criticized by Klein as assuming "a harsh conjunction in pādas a and b."

IX.65.11: With Ge (n. 11a) I tentatively assume that the arms (*onyòḥ*) are Indra's, since he was mentioned in the preceding vs. But as in IX.16.1 they might belong to the officiant.

IX.65.13–15: Again, no signs of unity.

IX.65.15: A rare sign of hostility (*abhimāti-hán-* 'smasher of hostility') in these anodyne Gāyatrī assemblages.

IX.65.16–18: The *ṛca* is thematically unified by the journey of Soma and, in vss. 17–18 his conveying good things to us on that journey. Cf. esp. 17 *ā naḥ ... vāhā* and 18 *ā naḥ ... bhara*. All three vss. end in a purpose dative / dative infinitive: 16 *yāṭave*, 17 *ūtāye*, 18 *devāvītaye*.

IX.65.16: *īyate* is assigned to $\sqrt{yālī}$ 'implore, beseech' by numerous scholars, incl. Gr, Lub, and Lü (214–15: "Der König wird mit Liedern gebeten"), though Ge, Re and the publ. tr. take it to $\sqrt{yālī}$ 'speed' (so also Sāy., who glosses *gacchatī*). In favor of the latter, Re declares that *īyate* is always "il s'avance" in IX. I would also point out 1) the king is definitely traveling in pāda c (*yāṭave*, to the same root) and 2) the 'is sped' interpr. is supported by a passage like IX.26.3 *tām vedhām medháyāḥyan* "They impelled the ritual adept with their wisdom" also containing an instr. of *medhā-* with a clear indication of movement (*ahyan*). Kulikov (495–96) discusses both root possibilities without seeming to decide, though the fact that he lists it with 2yā (\tilde{y}) 'implore, request' probably indicates his choice.

śatagvīnam gāvām pōṣam, lit. "thriving of cattle that possesses hundredfold cattle" (vel sim.), redundantly codes the cattle twice (*-gvīnam gāvām*).

IX.65.18: The *s*-stem neut. *júvas-* is a hapax, contrasting with the more conventionally formed and somewhat better attested *jávas-*. The zero-gr. root syllable is of course anomalous (see AiG II.2.232, without explanation), though see nearby *dúvaḥ* (vs. 3b), whatever its source. It may owe its form (or have been encouraged in maintaining its form) by the properly formed homonymous root noun pl. (*vayo-*)*júvaḥ* (to *-jũ-*) in the same metrical position in 26a below, as well as the aforementioned *dúvaḥ* also in the same position in 3b (cf. also *ābhúvaḥ* 27a, *mayobhúvam* 28a). A somewhat similar explan. is given by Re. Given the contextual triggers in this passage, it is probably wise not to invest too much in a deep diachronic account of the anomalous root syllable.

The simile in b, *rūpām ná* (or *rūpām ná várcase*), is difficult to interpr. Ge simply renders it literally “wie Schönheit unserem Aussehen,” but it is unclear to me what the basis of comparison is. Re’s rendering goes to the opposite extreme, with a flurry of parentheses: “comme (on ajoute) la forme-concrète pour (donner) l’éclat (à une idée).” My own interpr. arises from the parallelism between vss. 17 and 18. In the former we ask Soma to bring material goods, esp. livestock. Here in pāda a we request abstract qualities, “strength and speed,” and I suggest that *rūpām ná* “as if (in) physical form” is assimilating them to the material goods of the previous vs. Re’s alt. interpr., given at the end of his n., “apporte-nous force et vitesse, tel un objet-concret,” is similar and preferable to his more elaborate first interpr.

IX.65.19–21: No clear cohesion, though vss. 19 and 20 both contain a form of $\sqrt{ṛṣ}$.

IX.65.22–24: As noted in the publ. intro., this *ṛca* is thematically unified by a listing of the many place in which soma can be pressed in 22–23; all these clauses share a single verb *sunviré* in 22b. The two vss. are followed by a summary vs. (24) expressing the hope that all these diverse soma types will bring good things to us. The *ṛca* also shows signs of formal cohesion that are rare in these Gāyatrī assemblages: vss. 22–23 consist of six pāda-length rel. cl., all introduced by *yé*, with disjunctive *vā* found in both c pādas, while 24 begins with the resumptive and summarizing correlative *té*.

IX.65.22: The first two pādas contain antonymic locations.

The location in c is taken by Ge/Re as a place name, “in Śaryaṇāvat,” but a place descriptor seems preferable, given the other locative expressions in these vss. On the word see comm. ad VIII.6.39 and Thieme, *Unters.* p. 40 n. 2.

IX.65.23: Ge and Re (see also Mayr. PN s.vv.) take *ārjīkéṣu* and *kṛtvasu* as referring to peoples. On *ārjīká-* see comm. ad VIII.7.29 and Thieme, *Unters.* p. 40 n. 2. As for *kṛtvan-*, since in its other two occurrences in the RV (VIII.24.25, X.144.3) it is adjectival, in the meaning ‘active, enterprising’, I see no reason why it should be a proper noun only here. I was tempted to tr. it “ritually active,” but this came uncomfortably close to “sexually active.”

As for *pastyā-* as ‘dwelling place’, rather than ‘river’ (Ge, Re, etc.), see comm. ad I.40.7 and IX.97.18.

IX.65.25–27: All three vss. in this *ṛca* contain a middle form of \sqrt{hi} ‘impel’ (25c *hinvānaḥ*, 26b *hinvānāsaḥ*, 27b *hinvire*, the first two passive, the third transitive. In addition the *ṛca* opens and closes with a form of *páva-* (25a *pávate*, 27c *pavasva*).

IX.65.25: *haryatō hāriḥ* “delightful tawny one” is a word play, with two semantically different stems. This same word play is the focus of a whole hymn, III.44, and obviously was a staple of RVic phraseology.

IX.65.26: On the relationship of *vayojúvaḥ* in pāda a and *sáho júvaḥ* in 18a, see comm. ad 18 above. Scar (174) hesitates between act. and pass. meaning for this hapax rt. noun cmpd *vayo-jū-*: “die Lebenskraft fördenden” / “von Kraft beschleunigten.” In the publ. tr. I opt for an intrans. + instr. value: “speeding with vigor,” though I now think passive “sped by vigor” would be even better, on the basis of the clear pass. forms in context (*hinvānāsaḥ ... śrīṇānāḥ ... mṛñjata*) as well as a passage in the immediately preceding hymn, IX.64.16 *prá hinvānāsaḥ ... dhiyā jūtāḥ* “Being impelled forth ... sped by insightful thoughts,” with the passive ppl. *jūtá-*.

IX.65.27: The pāda-final dat. *devātātaye* echoes *devāvītaye* in 18c.

IX.65.28–30: As if to make up for scanting *ṛca* cohesion earlier in the hymn, this *ṛca* is bound by bonds of iron: 13 occurrences of $\sqrt{ā}$, most construed with an acc. of a desirable object, all sharing a single verb ($\sqrt{ā}$) *vṛṇīmahe* (28b). In addition the three c pādas are identical. This refrain contains the nom. stem *pānta-* ‘drink’, not the pres. part.

IX.66

This is the second to the last of the composite Gāyatrī hymns in this maṇḍala; the last (IX.67) is attributed to a variety of named poets, while the Anukramaṇī assigns this one to *śataṃ vaikhānasaḥ* “100 Vaikhānases.” Both attributions seems to acknowledge the composite nature of these compositions, as opposed to the previous ones, which have a single poet named for the whole hymn. Still, we would be hard-pressed to assemble 100 Vaikhānases: only one, Vamra, is named in the Anukramaṇī, as the author of X.99, a hymn to Indra, and the patronymic (and its underlying base) are both absent from the RVic text.

IX.66.1–3: The *ṛca* shows clear signs of unity, esp. lexically. Not only do all three vss. contain a form of *páva-* (*pávasva* 1a, voc. *pa/ávamāna* 2b, 3c), but the stem *viśva-* is found 4x (1a, b, 2a, 3b), *kave* (3c) echoes *kāvya* (1b), and pl. *dhāmāni* in 3a echoes du. *dhāmāni* in 2b. These “domains” of vss 2–3 are thematically connected to the voc. *viśvacarṣaṇe* ‘common to all the separate peoples’, in defining the spaces over which Soma holds sway.

IX.66.1: The b pāda lacks a verb: Ge supplies (silently) “zu gewinnen,” Re parenthetically “pour (atteindre).” The pāda is found 3x elsewhere (IX.23.1, 62.25, 63.25); in two the vs. contains a form of \sqrt{srj} ‘surge’ (*asṛgram* 23.1, *asṛkṣata* 63.25) and I therefore supply that verb here.

IX.66.2: The issue in this vs. is the identify of the two *dhāmanī*, dependent on the answer to that is the function of the du. pronoun *tābhyām*, which could be instr., dat., or abl. Answering the first question is made difficult by the fact that this is the only du. form of *dhāman-* in the RV. Ge tr. “Formen” (likewise Re “formes”) and in n. 2–3 explains these as the different stages (Stadien) the soma goes through in its preparation. This interpr. fails to explain the difference between the du. of vs. 2 and the pl. of 3; nor does it account for how Soma “rules with” these forms (taking *tābhyām* as instr. as he does). Re’s interpr. of *dhāmanī* in 2 as the pure and mixed forms of soma provides a satisfactory account of the dual, but does not explain the transition to the pl. in 3 and again fails to explain how Soma rules with them. I take the term quite differently, as ‘domains’ (rather than ‘forms’). In vs. 2 the dual refers to Heaven and Earth and alludes to the split of Soma into heavenly and earthly forms, a common trope in IX: he has a home in both places. Taking *tābhyām* as abl., I see Soma as ruling from both those polarized spaces, which together contain everything. This interpr. gives *praticī* in c more content than the fairly empty renderings of Ge (“die sich (uns) darbieten”) and Re (“qui se tiennent face (à nous)”): Heaven and Earth as the two cosmic halves face each other.

IX.66.3: My interpr. of the du. *dhāmanī* in 2 as the two cosmic domains allows the contrast between that form and the pl. *dhāmāni* to make sense. We have moved from the cosmic, to the ritual, in particular to the ritual ground – and here the pl. ‘domains’ are the ritual spaces that Soma traverses and encloses. This change of venue and focus is signalled esp. by *ṛtūbhiḥ* ‘according to the ritual sequences’. Thus the themes of space and the cosmic reach of Soma that I identified as characteristic of this hymn find economical expression in the transition from the cosmic Soma in vs. 2 to the ritual Soma of vs. 3.

The main verb of this clause is *pāri ... asi*, in the formula *viśvātaḥ pāri √as* ‘surround entirely’ (on which see my 1998 “Rigvedic *viśvātaḥ sīm*, Or, Why Syntax Needs Poetics,” Fs. Watkins). Within this phrase we seem to have an embedded rel. cl. *yāni te* “which are yours,” dependent on the obj. *dhāmāni*, and embedded relatives are generally blocked in the RV. But as we have noted elsewhere (see, e.g., comm. ad VI.21.2, 22.5), nominal rel. clauses are an exception to this rule, and here the *yāni* seems to be displaying (proto-)izafe behavior. See my forthcoming “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian.”

IX.66.4–6: This ṛca does not show particular internal cohesion, but it has striking echoes of the preceding ṛca. Like vs. 1, vs. 4 begins *pāvasva*; 4b begins *abhī viśvāni* like 1b, with a different acc. pl. following; 4c *sākhā sākhibhya ūtāye* is identical to 1c, save for the final word. Vs. 5 contains *dhāmabhiḥ* echoing the two forms of *dhāman-* in vss. 2–3. Only vs. 3 is free of links to the 1st ṛca.

IX.66.4: As in 1b, I supply ‘surging’ with 4b, on the basis of their identical construction.

IX.66.5: This vs. seems to unite Soma’s two theatres of operation, as laid out in vss. 2–3, the cosmic and the ritual. His “gleaming rays” (reminiscent of the sun) spread both “on the back of heaven” (*divās pṛsthé*) and across the ritual filter (*pavítram*); the instr.

dhāmabhiḥ “through your domains” can make reference both to this combining of cosmic and ritual and also, more specifically, to the limited ritual domains expressed by the pl. *dhāmāni* in vs. 3. Re’s characterization in his n. – “Soma-soleil ...; en fait, l’image rituelle se combine avec l’image solaire” – expresses this rather nicely, though it’s hard to get it from his tr. On the likening of the soma liquid on the filter to the sun, see IX.10.5 and comm. thereon.

IX.66.7–9: No particular sign of cohesion either internal or external.

IX.66.7: This vs. contains the famous phrase *ākṣiti śrávaḥ* (or a minor variant of it) “imperishable fame,” interestingly acquired not by a human, but by Soma himself.

IX.66.8: It may not be clear in the publ. tr. that “you” and “the inspired poet” are identical.

The referent of the “seven siblings” (*saptá jāmāyaḥ*) is disputed. Ge identifies them as the fingers – and certainly *jāmī-* is regularly used of the fingers of the officiants in IX. But 1) do fingers “cry out”? and more important, 2) why then “seven”? It seems unlikely that the poet would deliberately evoke an image of disfigurement or, at the very least, incompleteness. Ober (II.73; see II.71) tries to rescue this identification by suggesting that seven and ten are “equivalent” indications of totality. But as he himself notes, a number of other groups of seven are mentioned in IX. A reference to one of these in this vs. would save us from positing an defective set of fingers. The most likely referent in my view are the seven streams, *saptá síndhavaḥ* found two vss. earlier (6a). Rivers regularly make noise in the RV, and the proximity of that very phrase in vs. 6 tips the scales for me. Another feminine group of seven is the seven insightful thoughts, *saptá dhītáyāḥ* (IX.8.4, 9.4, 15.8, 62.17). *dhīti-* also make noise, and they also (though not explicitly numbered 7) appear several vss. later doing just that: 11c *āvāśanta dhītáyāḥ* “the insightful thoughts have bellowed.” However, supplying *dhītáyāḥ* here would lead to a poetically clumsy near-redundancy: the related *dhī-*, also ‘insightful thought’, is found in the same clause, and “the seven (inspired thoughts) cried out to you with inspired thoughts” would be, to say the least, awkward. (rather than being a pleasing etymological echo, at least to my mind). Lü (246) also goes for streams, and Re, citing his treatment, seems silently to endorse it. Lü claims that Ge identifies the seven as *dhītáyāḥ*, despite Ge’s clear n. 1 “Die Finger.” I don’t see where Lü got this – I assume it’s simply a lapse.

In IX the figure Vivasvant seems to be the prototype sacrificer (see Old ad IX.99.2), perhaps in his role as father of Manu. For further on Vivasvant see publ. intro. to I.139 as well as comm. to IX.99.2, X.14.5.

IX.66.9: Since they are grooming (*√mṛj*) him, the ‘unwed ones’ (*agrúvaḥ*) are probably here the fingers, continuing the fem. pl. agent but modulating from streams to fingers (whose number is not specified here).

In b the phrase *ádhi śvāni* is problematic. It is generally taken as a root noun loc. to *√svan* ‘sound’: Gr, apparently Ge (see his n. 9b and his locative tr. “unter Gebräuse”), apparently Re (but see his hesitations in his n.), Schindler (Rt. Noun p. 51, but see below), Ober (II.73)—though Lub lists it under a stem *svāni-*, so presumably interpr. it as a nom./acc. sg. neut. Schindler’s disc. suggests a slight variation on the root noun interpr.,

with the possibility that it is used here as an adj. ‘rauschend’ modifying *jīráu*, as Gr takes it. In that case the independent *sváni*- was extracted from the compd *tuvi-sván-* ‘powerfully sounding’, an interpr. that seems over-elaborate.

Whether as root noun or an *-i*-stem, our form is equated with *sváni* in the similar pāda-final phrase *ānu śvāni* in VI.46.14. However, I have demonstrated that *svāni* in that phrase must be a verb form, a 3rd sg. passive aor., as Old suggests. See comm. ad loc. Scar, in a detailed disc. of the two *svāni* forms (676–77), suggests that our phrase, too, might contain a verb form. By his analysis pāda b is an (unsignalled) dependent cl., parallel to the *yād* clause of c, and so the accent on 3rd sg. *svāni* would be correct for a finite verb. He tr. “es putzen dich ..., während es über der Wollseihe, unter dem fließenden Wasser raschelt [und] während du ... gesalbt wirst.” This is clever, but I am disturbed by marking only one – and only the second – subordinate clause overtly. Moreover, this interpr. also must assume that there is a gapped subject to *svāni* or that it is used impersonally (both possibilities floated by Scar). None of this is impossible, but the required assumptions and syntactic twists pile up.

I am drawn rather to an old suggestion of Aufrecht’s, endorsed by Old (but rejected explicitly by Schindler and Scar) that *ādhi śvāni* rests on *ādhi *śnāvi* “on (the sheep’s) back.” Because of the morphological difficulties (the nonexistence of a loc. **snāvi* to begin with), I would not posit Aufrecht’s intermediate form, but simply assume a reduction and metathetic scrambling of *sānavi*, which occurs several times in the pāda-final phrase *ādhi sānavi* (VI.48.5, IX.31.5, 37.4, 63.27); *ādhi* is the standard post-(/pre-)position in this expression; cf. also *ādhi sāno avyāye* IX.86.3, 91.1, 96.13, 97.40 and numerous variants. The presence of *avye* at the beg. of the pāda would set the audience’s expectation for “on the back of the sheep.” The presence of the “noise” root \sqrt{svar} in the preceding vs. (8a *asvaran*) may have facilitated the metathesis, to produce a form appearing to belong to the phonologically and semantically similar root \sqrt{svan} , reinforced by *rebhā-* in the flg. pāda.

In c I take *rebhāḥ ... ajyāse* as a pun, dependent on the literal sense of \sqrt{ribh} , which, rather than being ‘sing’ as it generally is glossed, is really ‘creak, rasp’. See comm. ad VI.3.6. Here Soma is as usual ‘anointed’ (*ajyase*) with milk, and in that regard he is identified as a *rebhā-*, a ritual officiant with a particular voice quality. But as disc. ad VI.3.6, in a TS passage \sqrt{ribh} is used for a squeaky wheel, and of course the way to fix such a wheel is to “grease” it ($\sqrt{añj}$). So the unmarked comparison here is “(as) a squeaky (wheel) is greased.”

IX.66.10–12: This *ṭṛca* is thematically unified by the journey theme, reinforced by two forms of \sqrt{srj} in vss. 10 (*asṛkṣata*) and 11 (*ásrgram*), the former in an etym. figure. Note the juxtaposition of the newer *s*-aor. 3rd pl. middle and the older root aorist, with no apparent functional or semantic difference. On these two formations see Narten (*Sig.Aor.* 270–71); she claims that they were originally differentiated functionally and still are occasionally (see IX.86.4), but in almost all occurrences this difference has been lost.

IX.66.10: Soma’s acquisition of “imperishable fame” in 7c is anticipated, as it were, by his streams, likened to horses, “seeking fame” (*śravasyāvah*).

IX.66.13–15: No signs of cohesion.

IX.66.13: On pādas bc and esp. the remarkable causative future reflexive form *vāsayiṣyase* ‘you will cause yourself to be clothed’, see disc. in the comm. to the parallel passage IX.2.4.

IX.66.14: It is difficult to render the vs.-initial *āsya te* lit. “of this here you”; the demon. essentially exists as a prop for the enclitic *te* and a way to emphasize the 2nd ps. pronoun.

I do not know what the difference is between *sakhyā-* and *sakhitvā-*, or if any difference is meant. The former is far better attested and has a fuller paradigm, well distributed across cases and numbers (sg. and pl.); the latter is almost confined to the nom./acc. sg. (with 2 occurrences of the loc. sg.). In any case the vs. comes out a little flat: we want your comradeship because it will benefit us. The poet may have been trying to distract attention from this flatness by varying the derivational realization. It’s also worth noting that pāda a is also found in IX.61.29 without *sakhitvā-* in context and pāda c is found in IX.31.6 without *sakhyā-* in context.

In his endearingly crusty way, Bloomfield (RR ad IX.31.6) pronounces our vs. “arrant nonsense”: “pādas a and c, borrowed from good quarters, show that the stanza is irresponsible patchwork.” This seems rather harsh, but probably results in part from his interpr. of *īyakṣantaḥ* as the desid. of \sqrt{yaj} , rather than the now generally accepted derivation from $\sqrt{(n)aś}$; see comm. ad VI.21.3. Attributing it to \sqrt{yaj} produces a participial phrase in b that has nothing to do with *sakhyé* in a: “In thy friendship we, sacrificing with thy help, do we, O Indu, thy friendship crave” (Bl’s tr., which justifies his “arrant nonsense” judgment). Whereas a connection with $\sqrt{(n)aś}$ sets out the reason we want your comradeship—we stand to gain from it—and makes ab a unified expression.

IX.66.15: The usually idiomatic *ā pavasva* lacks the usual acc. object (“bring [X] by purifying yourself”). Perhaps the *ā* anticipates the *ā* in c, in the idiom *ā ... viśa* ‘enter’.

The question in b are whether the two datives *mahé ... nṛcākṣase* belong together and what the referent(s) is/are. Ge takes them together and identifies the referent as Indra, who appears by name in the next pāda, which would support Ge’s solution. However, as Re points out, *nṛcākṣas-* is never used of Indra, but generally of Agni or Soma. Re himself separates the datives, supplying *rāṇe* with *mahé* from the beginning of the *ṛca* (13a) and identifying the referent of *nṛcākṣase* as “le dieu Soma.” Although the first choice seems possible and even reasonable, the second is awkward: it seems odd to order Soma to purify himself for himself, even if the addressee is the substance soma (which shouldn’t actually have such agency) as distinct from the god. Given that the next *ṛca* but one (vss. 19–21) is addressed to Agni, that god seems a more likely choice. Re’s motivation in separating the two datives in b seems to be to wring the three (Dumézilian) functions out of the vs. (or, I gather, ab), but I don’t see how they would match up. In any case, a modified tr. à la Re, without reference to the three functions, is conceivable: “... for the quest for cattle, for great (joy), for the one of manly eye [=Agni].”

IX.66.16–18: The first two vss. are linked lexically and by their investment in grammatical comparison. The third is unconnected, but 18c echoes vs. 14 in the previous *ṛca*.

IX.66.16: As Re points out, *sán* here is non-concessive. Instead it seems to have a function rather like the one I identified in III.30.5 (see comm. ad loc.), namely a definitional one: where, on the basis of the description of the god's activities or qualities, he is assigned an agentive title.

IX.66.17: This vs. expands on the etymological figure and superlative phrase in 16b, *ugrānām ... ójīsthaḥ*, but with three pairs of comparatives, beginning with the *ugrēbhyaḥ ... ójīyān*, lexically identical to the splv. phrase but morphologically different. The second is also an etym. figure, of less interest than the first because it lacks morphological variation: *sūrebhyaḥ ... sūratarah*. While the third substitutes a synonymic cmpd. for the abl. term: *bhūridābhyaḥ ... māmhīyān* "more generous than those who give much." A low-key but pleasing set of variations on a phrasal theme.

IX.66.18: The sole Anuṣṭubh verse in a sea of Gāyatrīs. Note that it is the last vs. before the Agni ṛca, and so it may function as a closing or pseudo-closing vs., dividing the larger hymn into parts.

The first hemistich has received a variety of interpr., splitting into two major camps dependent in great part on the identity of *sūrah*. Ge (see his n. 18ab), Re, Ober (I.494) take it as a gen. sg. of *svār-*, one of a string of gen. dependent on *sātā* 'at the winning' – hence, "at the winning of the sun, refreshment, offspring, and bodies." There are several arguments against this interpr., however: 1) *sūrah* has to be nom. sg. to *sūra-* in 22c, and so consistency would be nice (if not entirely necessary); 2) *īsaḥ* has the wrong accent for gen. sg. (expect *īśāḥ*); 3) the standard interpr. of the sequence *ésaḥ* is *ā īsaḥ* (already Pp., though see other poss. in Ge's n. 18ab), but the mid-pāda location of *ā*, between two supposedly parallel genitives, is an odd position for a preverb / adposition / adverb, and it has no obvious function in the clause. In fact the clause has no verb and no obvious one to supply – witness the variety of suggestions: Ge "(stehst uns)," Re "(qui t'es préparé)," Ober "(hilfst uns)." I therefore follow the path generally sketched by Old (see also Lü 267 n. 4): a nominal equational cl. with nom. sg. *sūrah* to *sūra-* (note that both Gr and Lub so list the form), *tvām soma sūrah* "you, Soma, are the sun"; followed by a 2nd cl. beginning with *ā*. Though *ā* remains mid-pāda, it is initial in its clause, as we would expect. An imperative of bringing / giving / supplying needs to be supplied, with acc. pl. *īsaḥ* (properly accented) as obj. Cf. expressions like III.53.1 ... *īsa ā vahatam* ..., VI.52.16 ... *īsa ā dhattam*, and, with specifically Somian vocab., nearby IX.65.13 *ā ... īsam pávasva* "By purifying yourself, bring refreshment here." More to the point, perhaps, the immediately following vs., 19b, *ā suvórajam īsam ca naḥ* "impel hither nourishment and refreshment to us," is quite similar and could provide the missing verb.

A structurally less crucial question is the relationship between the two genitives in b, *tokásya ... tanūnām*. As indicated above, Ge takes them as parallel; Re by contrast takes *tanūnām* as a beneficial "pour nous-mêmes," independent of the genitives dependent on *sātā*. In the publ. tr. I take them as nested, with *tanūnām* dependent on *tokásya*, though I have no particular objection to the parallel interpr.

As noted above, *vṛṇímáhe sakhyāya* is a permutation of 14c *sakhitvām uśmasi*.

On *vṛṇímáhe yújyāya*, see comm. ad IX.88.1. Given the other exx. of this lexeme, I would now alter the tr. to "we choose you for yoking [/use]."

IX.66.19–21: On this *ṛca* see publ. intro. It is so insistently Agni-focused (all three vss. begin with a form of that stem, two as voc.) that the Anukramaṇī lists Agni as the deity of the three vss. But it is of course far more likely that Soma is being *identified* with Agni here. The equation and poetic merging of these two ritual gods is found elsewhere, most notably in “the hardest hymn in the RV” (V.44), which is simultaneously applicable to both gods throughout its length. Their blending is shown here by the use of both Somian and Agnian vocab.: for the latter, see esp. *puróhitaḥ* (20b); for the former, the three forms of *páva-*, one each in each vs.: 19a *pavase*, 20a *pávamānaḥ*, 21a *pavasva*. Note that after this Agni *ṛca* the word *sóma-* doesn’t appear until vs. 29 and a likely identification with Indra (as well as comparison with the sun) intervenes.

IX.66.19: Since *pavase* has an obj. *āyūṁṣi*, it would be desirable to have the preverb *ā-* which has transitivity function with this root. This is easily done: *āyūṁṣi* can be decomposed into *ā āyūṁṣi* without change to the Saṃhitā text, though it is contra to the Pp. This preverb in tmesis shows up apparently 2nd in the clause because it follows the zero-position voc. *āgne*.

IX.66.21: Here, despite the obj. phrase in b, *pavasva* lacks the expected *ā-*. It would technically be possible to take b with c: “establishing luster and an abundance of heroes for/in us, wealth and thriving in me,” which would leave *pavasva* intransitive. However, this seems artificial, and the existence of two 1st ps. pronouns in b and c, in different numbers, would be awkward. Moreover, 27c, with an independent *dádhat* clause, speaks in favor of separating b and c here.

IX.66.22–24: No strong signs of unity, though a form of *pávamāna-* opens vss. 22 and 24, but Soma as the sun in 22c returns in the theme of light and the defeat of darkness in 24bc. The adj. *vicakṣaṇáḥ* ‘visible afar’ in 23c also participates in this imagery, partly matching *viśvadarśataḥ* ‘visible to all’ in the same position in 22c -- though the Engl. tr. ‘visible’ suggests a closer connection than exists in the Skt., which has $\sqrt{dṛś}$ in 22 but $\sqrt{cakṣ}$ in 23. The light imagery in this *ṛca* may pick up on the identification with Agni in the previous *ṛca*, while the verb *jáñghanat* that closes the *ṛca* (24c) may modulate towards an identification with Indra, probably found in the following *ṛca*.

IX.66.23: *hitáḥ* in b could of course belong to \sqrt{hi} ‘impel’, though little would change if did. As it happens both Ge and Re also opt for $\sqrt{dhā}$ here.

IX.66.24: With Lü (266), I take *ṛtām bṛhāt* as a nom. in apposition to Soma, rather than another acc. obj. to *ajījanat* as Ge/Re do. Either of course is possible; there are several passages in which an identification of Soma with *ṛtā* seems likely. See comm. ad IX.56.1. But I would certainly accept an acc. interpr. as alternative.

IX.66.25–27: Each vs. opens with a form of *pávamāna-*, which also connects it with the preceding *ṛca* (see above). An even stronger link to the previous *ṛca* is the gen. intens. part. *jáñghnataḥ* in 25a, which picks up the same stem (in the nom. *jáñghanat*) at the end of the immediately preceding pāda, 24c. As for internal unity, note the free phrase *háres candráḥ* in 25b, which is transformed into the cmpd. *háriscandra-* (only here in the RV,

though prominent as a PN beginning in the Br.) in 26c. Superlatives also figure in the last two vss.: *rathītama-* 26a, *śubhrāśastamaḥ* 26b, *vājasātama-* 27b.

IX.66.25: With Ge and Re, I supply ‘darkness(es)’ (*tāmāṃsi*) as obj. of *jānghanataḥ* on the basis of 24c.

I supply ‘drops’ with *candrāḥ* on the basis of III.40.4 *candrāsa índavaḥ*, though Ge’s “Güsse” and Re’s “coulées de *soma*” certainly fit the context, too. My “drops” is indirectly supported by the additional descriptor *jīrāḥ* ‘lively’, which is most commonly found in the cmpd. *jīrā-dānu-* ‘having lively drops’, with a different word for drop.

Note the play *jīrā ajirā-*. The cmpd *ajirā-śocis-* is a bit difficult to fit into context. The 1st member *ajirā-* means ‘quick, nimble, agile’, and the whole bahuvrīhi occurs once elsewhere of Agni, VIII.19.13, where I tr. “of nimble flame.” How this would apply to drops is not entirely clear; I assume it refers to the propensity of drops, esp. moving drops, to catch the light. It is also possible that *ajirāśociṣaḥ* is gen. sg. and modifies Soma, rather than nom. pl. modifying the drops. This would not appreciably change the image.

IX.66.26: The Indraic cast of this vs. is quite clear, and I therefore think that Soma is being identified with Indra here (as he was with Agni in the trca 19–21). To begin with, the splv. *rathītama-* is generally used of Indra (e.g., VIII.45.7); *marúd-gaṇa-* ‘having the Maruts as his flock’ is of course characteristic of Indra (e.g., VIII.89.2) and also expressed by other, similar but better-attested epithets like *marút-vant-*. Moreover, the stem *śubhrā-* ‘resplendent’ in the masc. pl., here in the instr. pl. *śubhrébhiḥ*, is almost always used of the Maruts (e.g., I.167.4).

The problem in the vs. is the splv. *śubhrāśastamaḥ* in b. The interpr. reflected by Ge and Re stems from Old, who sees it as a haplology from **śubhrā-śasta-tama-*, i.e., the splv. to a ppl. cmpd. Old himself doesn’t provide a gloss, but on the basis of a cmpd. like *kavi-śastá-* ‘praised by poets’ it should presumably be something like ‘most praised by the resplendent’, though neither Ge’s “über die anderen Schönen als der Schönste gepriesen” nor Re’s “par rapport aux (êtres) beaux, il est le plus célébré (quant à son fait d’être) beau” reflects this presumption; that is, they do not take the 1st member as agent. Nor does the accent of the cmpd (either reconstructed or as attested) match that of *kavi-śastá-*, though admittedly it does match the standard *devá-hita-* type. And the instr. *śubhrébhiḥ* seems an odd choice – we would expect a gen. pl. with the splv. of course; the anomalous instr. is surely responsible for the knots that Ge and Re tie themselves into, as well as Ge’s cryptic (or disingenuous) n. 26b “*śubhrébhiḥ* Instr. = Ablat. in Verbindung mit Superl. = Komparat.” The publ. tr. represents a very different analysis, which I now think must be wrong: as the splv. to a root-noun cmpd. ‘proclaiming splendor’, but, as I realized all along, the accent is wrong (expect **śubhra-śás-(tama-)*), and it is difficult to argue that the accent got misplaced because the word structure was misunderstood, esp. given the root noun cmpd splv. in the next vs., *vāja-sā-tama-* with correct accent. In addition, *śubhrā-* is an adj., ‘resplendent’, not a noun ‘splendour’, and √*śams* doesn’t take any form derived from √*śubh* as obj. So I now would reject the publ. tr. and return to Old’s haplology – though with a semantic interpr. different from the Ge/Re complex. I would take the 1st member in agentive value, as is usual in such cmpds: “most praised by the resplendent (ones),” with the usual number neutralization. The reference is to the

Maruts. What then of the independent instr. *śubhrébhiḥ*? Either it doubles the 1st cmpd member, whose function in the cmpd may have become unclear because of the haplogy – hence “most praised by the resplendent (ones), by the resplendent ones.” Or it may be an instr. of accompaniment: “most praised by the resplendent (ones), *along with* the resplendent ones.” This would reflect the fact that the Maruts both praise Indra and receive praise themselves. This dual role of the Maruts, both praising and praised, is the subject of “poetic repair” in V.52, the first of Śyāvāśva’s Marut hymns. See comm. ad loc and reff. given there. Although I slightly favor the former explanation, English is better served by the latter, and I would now substitute the 2nd tr. just given; “most praised” should also receive an asterisk.

Unfortunately “gold-glittering” for *hāriścandra*- obscures its relationship to *hāreś candrāḥ* in 25b “of the tawny one, the glittering (drops).”

IX.66.27: In this vs. we seem to have returned to the identification of Soma with the sun, as shown esp. by *raśmībhiḥ* “with his rays” – this instr. pl. being reserved almost exclusively for the sun’s rays (see, e.g., nearby IX.61.8 *sūryasya raśmībhiḥ*). The image is of the sun / Soma pervading space, with Soma’s rays being the traces of the golden liquid as it spreads across the filter.

IX.66.28–30: No particular evidence of unity, except for an emphasis in the 1st two vss. on the technicalities of soma-preparation.

IX.66.28: This vs. has two passively used participles, *suvānāḥ* ‘being pressed’ and *punānāḥ* ‘being purified’, which contrast with the agency implicitly accorded to Soma Pavamāna, “self-purifying” Soma. This more agentive participle returns in the final vs. (30b), just before we ask Soma for his favor.

The repetition of *īnduḥ* (pādas a and c) is somewhat clumsy, but the 2nd occurrences enables the usual word play with adjacent *īndram*.

IX.67

On the structure and authorship of this hymn and their implications for RVic studies more generally, see publ. intro. as well as Old.

IX.67.1–3: Attributed to Bharadvāja, the *ṛca* shows elementary unity by positioning *tvām* at the beginning of each vs.

IX.67.1: Gr derives *dhārayú-* from *dhārā-* ‘stream’ and glosses ‘strömen’, an idea that goes back to Sāy. Ge follows suit (“der hervorsprudelnde”), though in n. 1a he entertains a derivation from $\sqrt{dhṛ}$, which underlies Re’s “le mainteneur” (see his n.) I also think that $\sqrt{dhṛ}$ is the correct etymon. There would be no reason to shorten the final of *dhārā-* (though *dhāra-pūta-* ‘purified by streams’ (?) and *dhāra-vākā-* ‘recitation for the streams’ (?) do give me pause), while there is a well-established relationship between *-ā-yā-(ti)* verbs and *-ā-yū-* adjectives (type *devayā-* / *devayū-*). Though it has a different accent and a different functional profile, *dhārāyati* is a very common verb, and it is easy to imagine the creation of a *-yū-* nominal to that stem. However, if it is derived from *dhārā-* ‘stream’, the sense should not be of the type given by Gr and Ge, but rather ‘seeking streams’, as is

standard with *-yu-*formations to nouns. The idea would be that the soma, once pressed, goes forth to seek the ritual waters.

IX.67.4–6: The Kaśyapa ṛca: it lacks cohesion across all 3 vss., though 4 and 5 share “rushing across the fleece”; ‘rush’ (*ārṣa-*) also provides a link to the last vs. of the preceding ṛca, 3b, as does the verb *acikradat* (4c), which echoes *kánikradat* (3b).

IX.67.5: The preverb/preposition *ví-* is insistent, with 4 occurrences in the vs.
Re sees the three functions here, but that seems something of a stretch.

IX.67.7–9: Elementary sign of cohesion in the Gotama ṛca: a form of *páva-* in every vs.

IX.67.9: On *úsrayaḥ* as ‘rosy (fingers)’ see comm. ad IV.65.1.

The publ. tr. contains a grammatical error: *asvaran* should of course be ‘they cried’ not ‘they cry’.

IX.67.10–12: This, the Atri ṛca, shows very tight cohesion. To begin with, Pūṣan, under his name (vs. 10) or characteristic epithets (*kapardín-* vs. 11, *āghṛṇi-* vs. 12), appears in every vs., in particular as the recipient of the pressed and purified soma in vss. 11–12. Since, as noted in the publ. intro., Pūṣan is rarely found in IX, devoting a ṛca to him here is striking, and the assumption that he wants soma is esp. anomalous, since in the hymn devoted to Indra and Pūṣan (VI.57) Indra’s desire for soma is explicitly contrasted with Pūṣan’s for porridge (VI.57.2).

More evidence for strong cohesion: the third pāda of each vs. is a refrain: *ā bhakṣat kanyāsu naḥ* “He [=Pūṣan] will give us a share in maidens.” The connection of this refrain with soma is, to say the least, not straightforward. Ge (n. 10–12) suggests that the idea is that Pūṣan, as a thank-you for the soma, will give maidens as compensation for the poet (Dichtersold) or as a guest-gift (Gastgeschenk). This is certainly possible, though the quid pro quo isn’t evident to me in the text; nonetheless it conforms to the dānastuti concept. Ober refines this somewhat by identifying the maidens as brides (e.g., I.320), but at least in his vol. II he takes *Soma* as the subject of the refrain (“[D]er [Soma] gewähre uns Anteil an den Jungfrauen”; II.51 n. 240). Simply on the basis of rhetorical structure, this seems unlikely: in the vs. containing the first appearance of the refrain (10) there is not even indirect reference to Soma; the only possible subject is Pūṣan, and there is unlikely to be a switch in subject in the refrain in the following two vss. By contrast, Gr identifies the maidens here as daughters, presumably implying that this expression is a twist on the “give us sons” wish so often expressed. Though I appreciate Gr’s attempt to save Pūṣan from being a pimp, I doubt that any Rigvedin would wish [at least out loud] for a passel of daughters

The last two vss. of the ṛca are simple variants of each other. Both begin with *ayām* referring to soma; both contain a dative expression identifying Pūṣan as the recipient of the soma; their b pādas both begin *ghṛtām ná pavate*, with a disyllable qualifying *ghṛtām* following.

IX.67.10: The publ. tr. presents the journeys as ours, reading *naḥ* with both *avitā* and *yāmani-yāmani*. Ge and Re instead assume the journeys are Pūṣan’s: e.g., “Unser Gönner

ist Pūṣan, der auf jeder Ausfahrt Böcke als Rosse hat.” Since one hymn devoted to Pūṣan, I.42, is almost entirely devoted to Pūṣan’s protection of us on the journey and on the path and in the short Pūṣan cycle in VI (VI.53–58) the god is several times asked to lead or direct us (e.g., VI.53.2) and to clear paths for us (VI.53.4, 54.1–2), I think it likely that the focus here is on *our* journeys.

IX.67.11: *kapardín-* is used of Pūṣan in VI.55.2, though it is also applied to a few other gods in the RV, notably Rudra (I.114.1, 5).

IX.67.12: *āghṛṇi-* is an epithet exclusive to Pūṣan. On the word, see comm. ad VI.53.3.

That Pūṣan is addressed in the 2nd ps. here, while the refrain remains in the 3rd ps., might be taken as evidence for Ober’s identification of Soma as the subject of the refrain – since soma is in the 3rd ps. in this vs. However, refrains tend to operate in syntactic independence from their vss., and, as I argued above, once the refrain is set, it is unlikely to change referents.

IX.67.13–15: Little evidence of unity in the Viśvāmitra ṛca, though the falcon (*śyená-*) as image of Soma occurs in both 14 and 15. More generally, both 14 and 15 depict the rapid and dramatic movement of soma into the ritual receptacles.

IX.67.13: Soma is obviously “child of the speech of the poets” (*vācó jantúḥ kavīnām*) because ritual speech sets in motion the preparation of soma.

IX.67.14: What is the “armor” (*várma*) that soma “plunges through” (*ví gāhate*)? Ge (n. 14ab) suggests that the image is of a warrior clothing himself in armor, that is, the wooden cup, but he doesn’t construe *várma* with the verb, but takes it as loosely descriptive with a verb used absolutely (“er taucht in seinen Panzer unter”). Re also thinks the *várma* refers to the cup (“la paroi [wall] de la cuve” acdg. to his n.), but has the courage to construe it with the verb: “il plonge dans (le récipient, sa) cuirasse.” But *ví* is not “dans.” I think it refers instead to the filter, whose fleece both represents his armor and a substance that soma must get *through*, hence the slightly off-balance image. Note first of all that the same verb, though with different preverb, is used precisely with the filter a few vss. later in this hymn: IX.67.20 *pavítram áti gāhate* / ... *vāram avyáyam* “he plunges across the filter, the sheep’s fleece.” As for the fleece as Soma’s armor, see the very full expression in IX.98.2 *pári śyá svānó avyáyam ráthe ná vármāvyata* “This one, being pressed, has engirded himself in the sheep’s fleece, as a man on a chariot does in armor.” Ober (II.77) also considers the armor to be the fleece. The same identification, though with a different word for armor/sheathing is found in X.101.7 *āṃsatra-kośa-*.

IX.67.16–18: This ṛca, ascribed to Jamadagni, is unified first and foremost by its meter, Dvipadā Gāyatrī, the only representative of this meter in the hymn – and in fact in all of the RV (see Arnold p. 244). There is no particular unity in lexicon (though note *mandāyan* 16a and *madántamaḥ* 18a), but the ṛca does mention the two gods who receive the first soma oblation, Indra (16) and Vāyu (18).

IX.67.19–21: This is the last *tr̥ca* of the hymn, attributed to Vasiṣṭha. The 1st two vss. are variants of each other, couched in 2nd and 3rd ps. respectively: their first pādas differ only in their initial disyllable, with the rest identical: ... *tunnó abhīṣṭutaḥ*; their second pādas both depict the journey to and across the filter, both beginning *pavíttram*. The third vs. stands apart, though the identification of Soma as ‘demon-smasher’ in 20c is thematically linked to the plea in 21 that Soma “smash away” peril.

IX.67.22–27: As noted in the publ. intro., these vss. are a self-contained purificatory spell, with all vss. ending with an act. impv. belonging to the pres. *punāti*: all 2nd sg. *punīhi* (*naḥ*) except 22c *punātu* (*naḥ*). The means of purification is, in the first instance, the filter (*pavíttra-*), which of course literally means ‘instrument (*-tra-*) of purification’. The *pavíttra-* is mentioned in vss. 22–25, with other, non-physical means of purification added (e.g., the sacred formulation vss. 23–24), with these means appropriate to the gods who wield them (Savitar’s ‘impulsion’ [*savá-*] vs. 25). The first agent of purification is Soma Pavamāna himself (22), then Agni (23–24), then Savitar (25). The three – Soma, Agni, and Savitar – then appear together in 26, and in the final vs. (27) it opens out to all the divinities. The rhetoric is pretty flat, but the structure is a pleasing example of repetitive variation.

IX.67.22: The nominal rel. cl. *yáḥ potā* seems to be another ex. of the embedded, pseudo-izafe construction discussed elsewhere, though in this case there is a resumptive pronoun beginning the continuation of the main cl. The structure is: ab beg. of main cl. marked by *sáḥ*, no verb; c rel. cl. *yáḥ potā*, followed by rest of main cl., with verb, but introduced by a repetition of *sáḥ*: *sá punātu naḥ*, or, more schematically:

ab *sá* NOMINATIVE NP /

c. *yáḥ* NOM. NP, *sá* VERB

with the two *sá* hunks together forming the main cl. A sort of hybrid construction.

In the publ. tr. I take *pavítreṇa* in b with *pávamānaḥ* in a, unlike Ge and Re, who construe it with *punātu* in c (e.g., “qu’il nous clarifie avec le filtre”). Their interpr. is supported by the INSTR. *punīhi naḥ* constr. in 23–24, 26 (and variant in 25), and since I no longer consider *yáḥ potā* an embedded rel. clause and therefore have no need to consider ab entirely separate from the resumptive *sá* phrase in c, there is no syntactic obstacle to this interpr. I’d be inclined, however, to read *pavítreṇa* with both: “The one who purifies himself through our filter (/purifier) today, the limitless one who is the purifier, with the filter (/purifier) let him purify us.”

The agent noun *potár-* (also *pótar-*) as if to an aniṭ root is surprising, esp. in juxtaposition to the instrument noun *pavíttra-* and, a few vss. later, the god *savítár-* to the parallel root $\sqrt{sū}$. We would of course expect **pavítár-* -- a form we almost get in RVic *pavītár-* and do get in AV *pavítár-*. The problem is identical to that posed by the priestly title *hótar-*, derived from $\sqrt{hvā}$ / *hū* ‘invoke’, so we expect **hávítár-* -- although in that instance interference from the likewise ritual verb \sqrt{hu} ‘pour, libate’, whose agent noun should properly be *hótar-*, helps explain the discrepancy. AiG II.2. 672 explains *pótar-* by suggesting that it is an inherited word and no longer closely tied to the verb from which it was originally derived. This seems backwards to me – wouldn’t inherited and isolated words be more likely to maintain their expected phonological shape? And, judging from this passage, *potár-* (so accented) has not lost its connection with $\sqrt{pū}$. However, a few

pp. later (AiG II.2.676) the much more plausible scenario is proposed, that *potár-* / *pótar-* has followed *hótar-*, which owes its shape to the interference just noted, and *stotár-* ‘praiser’. Sim. EWA s.v. *pótar-*.

IX.67.23: The image of the filter stretched out in Agni’s flame is striking, but I don’t know exactly what the picture is meant to be – in contemplating the fire do we have a vision of a purifying apparatus? Or is the expression simply a fancy way of saying “the purifier that is your flame”? The beginning of the next vs., with *pavítram arcivát*, would support the latter suggestions.

Ge takes *bráhma* as obj. of *punīhi*: “... mit der [=pavítram] läutere unsere feierliche Rede.” But 1) this would break the pattern of *punātu* / *punīhi nah* “purify us” in vss. 22, 24, 26) by demoting *nah* from object; 2) *bráhma* as a means of purification is found in the next vs. in the cmpd *brahmasavañh*. The fairly strict rhetorical patterning of these vss. therefore imposes (at least to my view) an instrument-of-means reading on *bráhma*, and I see no reason why it can’t be part of the definitional preposed rel. cl. *yád te* “what is your ...,” parallel to *pavítram*. *yád* would be appropriate to both, since they are both neut., and they are then both picked up by instr. *téna* in c. That *bráhma* has been postponed till the beginning of c is not surprising, given the long NP containing *pavítram*. The new cl. begins mid-pāda with *téna*, since *sāl tām* forms regularly take init. position in pāda / clause, the mid-pāda position here suggests that it begins a new cl. and *bráhma* is not part of it. Like Ge, Re makes *bráhma* somehow oblique, but I don’t really understand what he’s trying to convey: “clarifies en notre Formule.”

IX.67.24: This vs. has both physical and conceptual purifying instruments: the flame-sieve of 23 and the *bráhman-* also introduced in 23, which, in the cmpd *brahma-savá-*, also provides a transition to Savitar and his impulsions in vs. 25.

IX.67.25: In addition to the introduction of Savitar, we also get a slight rearrangement in word order. The conjoined phrase *pavítrena savéna ca* would not fit in the slot right before the impv. in c, a position it occupies in 23c, 24b, 24c, 26c, so the final enclitic *nah* is converted to a full prn. *mām* and placed in initial position. This prn. also has to be read as distracted *māām* to achieve 8 syllables. I wonder why the poet didn’t just use *asmān*, which would fit the meter and better match *nah*. One of the only instances in which I think I could compose the vs. better than the poet – though “me” (both tonic *mām* and enclitic *mā*) serves as insistent obj. in vs. 27.

IX.67.26: Initial *tribhīh* matches initial *ubhābhyām* in 25a. Since *ubhābhyām* was further specified by a bipartite NP *pavítrena savéna ca* (25b), I would like to see three instr. in this vs., each correlated with one of the three gods mentioned. And this is how I have rendered it, with *várṣiṣṭhaih* connected to Savitar (and Soma), *dhāmabhih* with Soma, and *dákṣaiḥ* with Agni. By contrast, Ge and Re construe *várṣiṣṭhaiḥ* with *dhāmabhih*, which they consider to be of three types (that is, “with the three highest *dhāmans* ...”; Re “avec les trois positions les plus éminentes”) – although in their notes both come close to espousing a position close to mine. Possibly in their favor is the fact that *soma* is unaccented in b, and if *várṣiṣṭhaiḥ* is followed by a sub-clausal break, the voc. *might* (or might not) have been accented. In the publ. tr. I read *várṣiṣṭhaiḥ* both with Savitar’s

savañh, which has to be supplied, and with Soma's *dhāmabhiñ*, and tr. the latter slightly differently: "through Soma's domains."

IX.67.27: This last vs. of the purificatory spell is in a different meter (Anuṣṭubh) and makes reference to a larger variety of personnel – both often signs of finality.

IX.67.28–29: It's not clear why we return to purely Soma vss. at this point, but the aoristic summary in 29 (*úpa ... áganma bíbhrato námañ* "up to him have we come bearing homage") is another typical hymn-ender, summarizing the hymn that precedes.

IX.67.29: The hapax *āhutī-vṛdh-* could be either passive (as in the publ. tr., also Ge) or act. 'strengthening the oblation' (Re). Scar (514) considers both possibilities and opts, weakly, for the former. Either could certainly work in context. The long final vowel *-tī-* is found only here, versus the standard *āhuti-*. This can either be a metrical lengthening of the stem vowel, since **āhutī-vṛdham*, with 3 (or actually 4) light syllables in a row, would produce an unacceptable cadence. Or it can be an instr. sg. to the *-tī-* stem (see inconclusive disc. in Scar.), which would clinch the interpr. of the cmpd as passive 'strengthened by the oblation'. I weakly favor the latter.

IX.67.30: As noted in the publ. intro., this vs. is extremely puzzling and my tr. and interpr. are at best speculative. Old's comments are useful in clearing away the detritus of the more fanciful interpr., but neither he nor the other standard comm. have cracked the code: see Ge's n. 30a with lit. The syntax and the sequence of events are quite straightforward: someone's axe has disappeared (contra Gr, *nanāśa* must belong to 'disappear', not 'reach'; the 'disappear' association is now generally agreed upon), and Soma is asked to bring it back through his purification (the common idiom *ā√pū*). But whose axe? and why an axe in this context? and what does a rat have to do with it?

To begin with the 1st question: most take *alāyyasya* as a PN ("the axe of Alāyya"), which saves trouble but doesn't help us in deciphering the verse. Gr derives it from *√lī* and tr. 'sich nicht duckend'; Mayr (EWA s.v.) simply pronounces it "unklar." I suggest that it belongs to *√rā* 'come to / be at rest', with an *l*-form like *ilāyati* (see Narten, "Ved. *ilāyati* ...," 1968; Jamison, *-āya-*, 48–49, EWA s.v. *RĀ*³). I would interpr. it as a gerundive like *-pāyya-* (*√pā* both 'drink' and 'protect'), as well as the more numerous extended stems of the type *śravāyya-*, whose *-ā-* does not belong to the root. A parallel negated form (though again not to a *ā*-root) may be found in *atasāyya-* 'unshakeable'; see comm. ad I.63.6. I suggest that *alāyya-* means 'not able to be brought to rest, not to be stilled'.

This may not seem to advance us very far, but this word must be evaluated in conjunction with *paraśúñ*, on which it depends. The *paraśú-* is frequently associated with Agni; cf., e.g., I.127.3, IV.6.8, and VI.3.4, in all of which Agni is compared to an axe. The other common word for axe, *vāśī-*, is also characteristic of Agni: he carries it (VIII.19.23) and possesses it (*vāśīmant-* X.20.6). Agni's axe must be his flame, and of course fire is always in motion, never still. I therefore suggest that *alāyya-* refers to Agni, the axe to his flame, and the pāda declares that his flame has disappeared or been lost. This may refer to the famous myth in which Agni runs away from his ritual duties and has to be coaxed back by offering him a better deal – or it may simply record a ritual

disaster: the sacrificial fire has gone out. In any event Soma is taxed with bringing him back in pāda b.

If my interpr. of the first pāda is anywhere near correct, it pleases me to fancy that this is the first (very indirect) textual evidence to Paraśu Rāma.

The real puzzle in this vs. is pāda c, which presents *ākhúm* as an apparently parallel object to the *paraśú-* that Soma is supposed to bring back. Both Ge and Re find this relatively easy to deal with because they take it as a simile, marked with *cid*. But as I have noted in a number of places, there are no clear instances of *cid* as a simile marker, and here it is also not clear what similarity the poet might be trying to point to (that moles live hidden seems to be the best guess). My own suggestion is hardly better than this (if that). The *ākhú-* is probably a ‘mole-like rat’ since there are no true moles in the subcontinent (see Katz, JAOS 122 [2002], “How the Mole and Mongoose Got Their Names,” esp. 301–2). The word is found only here in the RV, which complicates the interpr., but it has become fairly common by middle Vedic. In particular, the *ākhú-* is associated with Rudra; already in VS III.57, TS I.8.6.1 the *ākhú-* is Rudra’s victim / portion at the Tryambaka ritual. I therefore think it is *possible* (no more than that) that Soma is being asked also to bring Rudra back, in the form of his totem animal. Of the few hymns dedicated in full or in part to Rudra (there are only 3 dedicated to him alone), 2 (I.43, VI.47) are Soma-Rudra hymns, so there is some association between the two gods, whose rationale unfortunately escapes me.

Why this vs. ended up in this hymn I have no idea – except as a composite hymn it may have attracted various vss. that were floating around, and since it addresses Soma and uses a standard Somian verb (*ā√pū*), the hymn may have seemed as good a place as any to stash this vs. It clearly has nothing to do with the two Soma vss. that preceded nor with the added summary vss. that follow. It also appears to be a younger vs., given the *-l-* form and the non-RVic word *ākhu-*.

IX.67.31–32: On the import of these two vss., see publ. intro. They are obviously secondary additions to the hymn, promising great benefits to anyone who studies the previous vss. of the hymn.

Commentary IX.68–114

IX.68–86

The trimeter portion of the IXth Maṇḍala begins with IX.68, and the Jagatī section goes through IX.86.

IX.68–70: The theme of these three hymns, particularly insistent in the first and last, is the difference between and ultimate unity of earthly and heavenly Soma.

IX.68

On the architecture and thematics of this hymn, see publ. intro.

IX.68.1: The position of *ā* in b is distinctly odd, breaking up the simile *gāvaḥ ... nā dhenāvaḥ* and not even placed at a metrical boundary; indeed, the pāda has an unusual break (˘ / – ˘) after late caesura. It is all the more puzzling because *ā* has no apparent function in the vs.: *√syand* does not otherwise appear with *ā*, and the usual nominal cases to which *ā* serves as adposition are absent. Perhaps it's a clumsy attempt to convert the simile *gāvo nā dhenāvaḥ*, which fits well at the end of a dimeter line (see VI.45.28 and nearby IX.66.12), into a Jagatī cadence. It's also worth noting that a more conventional order ... / **ā gāva nā dhenāvaḥ*, with *ā* at the metrical boundary and the simile unbroken, would produce both a worse break and an impossible cadence. So perhaps this was the best the poet could do – though why does he need an *ā* in the first place?

Old suggests (ad II.3.3) reading **barhiṣ-śādaḥ* with restored sibilant cluster. However, of the six occurrences of this cmpd a heavy second syllable would make the meter worse in II.3.3, V.44.1 (bad breaks), though admittedly the other 4, which open the vs., might be somewhat improved by a heavy 2nd syllable. However, the evidence of the break should weigh more heavily than that of the opening. See Scar's disc. p. 570 and esp. n. 806.

The mirror-image sequence (*par*)*isrú(tam) usrí(yā)* is rather nice.

usríyāḥ in d can be either nom. or acc. pl. (see Old, who doesn't decide). Flg. Ge and Re, I take it as an acc. pl. fem., taking part in a double acc. construction with *nirníjam* *√dhā* "assume X as garment." As Ge points out (n. 1d) this is a paradox: the (masc.) soma drops are likened to cows (b) and provided with udders (c), but clothe themselves in cows(' milk) in d. By contrast, Scar (675) takes it as nom. pl., which is certainly possible, but less poetically fruitful.

IX.68.2: *ā váram* "at will" may recall *vāram* (in the common Somian phrase *ávyo váram*, etc. "sheep's fleece") referring to the filter.

IX.68.3: As indicated in the publ. intro., this vs. significantly enlarges Soma's domain: in vs. 2 he circles around the filter at the ritual; in vs. 3 he journeys across the two world halves, Heaven and Earth -- and in fact makes them swell up with his "imperishable milk" (the soma juice itself, presumably).

ākṣitā is most likely instr. sg. with *pāyasā*, on the basis of IX.31.5 *pāyaḥ ... duduhré ākṣitam*, though Old suggests the possibility that it would be dual nom./acc. Although this would make reasonable contextual sense -- the two imperishable worlds --

it would need to be fem. and therefore **ākṣite*. Old floats the possibility that the preceding dual adj. *sākaṃvīdhā* could have influenced the ending. But on the whole, since *pāyas-ākṣita-* is found elsewhere, it seems best to stick with that grammatically acceptable alternative.

The root affiliation of the intens. part. *vivēvidat* is disputed. Though Gr assigns it to √*vid* ‘find’, Ge, Re (explicitly in his n.), Lü (228–29) take it to √*vid* ‘know’ (“Der ... genau kennt”; “qui discernes”). I follow Schaef (183–84) (and Gr) in taking it to √*vid* ‘find’; the point, I think, is that at every soma-pressing Soma re-finds and re-defines the domain he crosses, here encompassing the whole universe. It should be noted that the middle part. to this same intens. stem also governs *rājasī* in I.72.4 *ā rōdasī bṛhatī vēvidānāḥ*, though I tr. it ‘ever possessing’ there. See comm. ad loc.

IX.68.4: As indicated in the publ. intro., this vs. carries on and develops the themes of vs. 3. In that vs. Soma moves across the two worlds, implying a horizontal axis, while here, in my view, we shift to the vertical -- with Soma’s head in heaven and his foot(print) on earth. This vs. is much discussed by Lü (228–32), who also emphasizes the cosmic, but because he always strictly separates the heavenly and the earthly soma, I think in a way he misses the point.

My image of the vertical Soma depends on taking *padām* in b as his ‘footprint’, but this is not the standard interpr. in this passage, where *padām* is generally taken simply as ‘place’ vel sim. (Ge Stätte, Re séjour), with Ge further specifying it as the cup. His identification of the *padá-* with the cup then leads Ge to a somewhat aberrant tr. of *pinvate* (‘overflow’: “... macht ... seine Stätte überquellen”). But the middle voice of *pinvate*, contrasting with act. *pinvat* in the previous vs. (3b), encourages a self-beneficial (*/*-involved) interpr. of the verb, as does the instr. *svadháyā* ‘by his independent power’ -- which supports my interpr. of *padām* as referring to Soma’s own footprint.

And what does it mean that he “swells his own footprint”? I connect this with *vājáyann apáh* “stirring the waters” in pāda a. Here I would agree with Lü that these are the heavenly waters, and I further suggest that these waters, stirred up by the heavenly Soma and fallen from heaven as rain, are what swells his footprint and the earth on which it’s emplaced. This rain may also be indirectly alluded to in pāda c. The grain that ornaments the soma plant is probably, on the one hand, a reference to the variety of soma drink into which grain is mixed (see IX.55.1 and comm.; also Ober II.55), but I think it also likely alludes to the fecundating power of rain and the vegetation it produces.

There are two finite verbs in d, both accented (adjacent ... *násate rákṣate* ...), with no overt mark of subordination. With most interpr. I take the *násate* clause as implicitly subordinated, with *rákṣate* beginning the main cl., but contrastive verbal accent of adjacent verbs could as easily be invoked (and would make little diff. in interpr.: “he joins ... he guards ...”). Lü makes much of the last clause, and in fact takes *śírah* as subj. of *rákṣate* (which seems unlikely on rhetorical grounds), but I think the sense is fairly straightforward: even while soma is being pressed by the fingers at the earthly ritual, he keeps his head safe in heaven.

IX.68.5: As disc. in the publ. intro., this is an omphalos vs., which provides the solution to the paradoxes set up in the earlier vss. of the hymn, albeit in veiled form -- veiling that has kept its actual contents obscure (and may still do).

The first half is fairly clear, until almost the end: it refers to the birth of Soma, here called both a *kaví* and “the embryo of truth” (*ṛtásya gárbhaḥ*) (see further below). This embryo was deposited, presumably at its birth or even its conception, “beyond the twins” (*yamá parāḥ*). Given the two previous vss., which contain duals that refer to the two world-halves, Heaven and Earth (so identified by Ge and Re, e.g.), the most sensible interpr. of “the twins” here is as a reference to the same pair -- esp. since H+E were referred to by the fem. of the ‘twin’ word in 3a (*yamyā*) (in addition to 3c *mahī apāre rājasī* and 4a *mātārā*). But this interpr. is somewhat clouded by the fact that the next pāda (5c) contains both a dual phrase *yūnā ... śántā* and a dual verb *ví jajñatuḥ*. It is of course the default interpr. that all three of these duals (the two NPs and the verb) should refer to the same pair. What is somewhat baffling to me is that Ge (followed by Re) decides that this pair is the Aśvins (see esp. his n. 5bc). The Aśvins do not otherwise appear in this hymn, and indeed Re outlines firm grounds to reject this identification in his hesitant n.: “la participation des Aśvin au cycle du Soma étant faible et le contexte cd insuffisamment précis.” (Curiously, though Ge’s more overreaching mythological interventions often stem from Sāy., Sāy. in this case provides the far more sensible interpr. of the two as Soma and Sūrya.) I think the Aśvins can safely be dismissed as candidates for the dual reference (so also Lü 275). Let us then return to the more likely referent for *yamá* in b: Heaven and Earth. Pāda b seems simply to be saying that Soma (or part of Soma) was deposited as an embryo beyond Heaven and Earth, giving him cosmic reach indeed.

The trickier pāda is c. The presence of a dual nom./acc. and a dual verb of course invites the former to be taken as subject of the latter, and the standard interpr. understandably follow this path, with the sg. subj. of ab supplied as obj. of the verb -- e.g., Ge “Als Jünglinge haben sie ihn zuerst ausfindig gemacht.” This is obviously possible, and it need not involve identifying the two youths as the Aśvins; Heaven and Earth could be the pair in question. However, the dual NP raises several questions. For one thing, are Heaven and Earth really young? And even if so, what does this have to do with the action in question. Further: why *śántā*? The pres. part. of *√as* in the nominative is usually concessive, but “although being young” doesn’t make much sense here. I assume Ge’s “Als” is his only recognition of the participle; Re’s “jeunes encores” must be his (see also Lü’s “Als sie jung waren,” 275). But none of these renderings really accounts for why the participle is there, or for why H+E are identified as youths.

I have a less straightforward interpr. of this pāda -- inspired in great part by Ge’s interpr. of pāda d, which he takes (n. 5d) as depicting the two births of Soma, the heavenly and the earthly. I think these two forms of Soma are already present in pāda c, in the *accusative* phrase *yūnā ... śántā*, and the subj. of the dual verb *ví jajñatuḥ* is Heaven and Earth, not overtly present but referred to as the *yamá* in b (as well as in vss. 3–4). Under this interpr. the participle *śántā* has a reason to be there: it is an existential in a predicated proposition after *ví√jñā* ‘recognize’ -- rendered in the publ. tr. by “that there were two youths.” And of course it makes sense that Heaven and Earth would be the first to notice this, because the two births were located in those two places. It also makes sense that the two forms of Soma would be identified as ‘youths’, since they were recently born.

Following Ge on pāda d, the first mentioned birth “deposited in secret” (*gúhā hitām*) is the heavenly one (picking up *nīhito yamá parāḥ* in b), while a bit paradoxically

(because of the *úd* ‘up’), the one “held aloft” (*údyatam*) is the earthly one, referring to the ritual presentation of the soma.

Given this interpr. of the 2nd hemistich, it is quite possible that pādas a and b refer to these two different births: the poet born with skill and mind (a) would be the earthly Soma, equipped for his ritual role, while the one deposited beyond the twins (b) would obviously be the heavenly one.

IX.68.6: The famous Somaraub, i.e., the stealing of Soma from heaven effected by a falcon and treated esp. (though obscurely) in IV.26–27, is rarely mentioned in Maṇḍala IX, as Ober (II.162) points out. Here it serves to bring the heavenly Soma to earth, to join with and super-charge the earthly, ritual Soma—the difference between the two Somas having been treated in vs. 5.

As noted in the publ. intro., the omphalos vs. 5 is encased in lexical rings. Here *vividuḥ* responds to *vivévidat* in 3c (and both relate semantically to *víjjñatuḥ* in the omphalos vs., 5c), *aṃśúm* (6d) and its semantic doublet *ándhas* (6b) to *aṃśúḥ* in 4c, *pariyántam* (6d) to *pariyán* (2c) (cf. also *pariprayántam* 8a), and *suvṛdham* (6c) to *sākaṃvṛdham* (3b).

In addition to lexical rings, there is chaining: 6c *marjayanta* is picked up by 7a *mṛjanti* (with no semantic or functional difference between the stems or the voices: *marjayanta* is an -*anta* replacement); 6a *manīṣīṇaḥ* ‘possessing inspired thoughts’ by 8b *manīṣāḥ* ‘inspired thoughts’.

IX.68.7: The fingers of the pressers are found both here in pāda a and in 4d, though with different lexical realizations and different functions in the vs. There is also an exact, though mirror-image, responsion: *yató nṛbhiḥ* (4d): *nṛbhir yatāḥ* (7d). On the other hand, *hitám* in 7b almost surely belongs to *√hi* ‘impel’, while *hitám* in 5d belongs to *√dhā* ‘place, deposit’.

IX.68.8: Ge (see his n. 8a) takes *vayyām* as the PN of a hero aided by Indra to whom Soma is compared: “(einem zweiten) Vayya.” Although a hero of that name does exist, his presence seems limited to passages where he is mentioned with the better attested Turvīti (I.54.6, II.13.12, I.19.6) or, once, in a list of clients of the Aśvins (I.112.6). The du. form in II.3.6 *vayyè* (or *vayyā*; see comm. ad loc.) belongs to a separate stem *vayī-* ‘weaver’. Despite Ge’s energetic attempt to justify it, the introduction of a minor hero from the Indra cycle makes no sense here (any more than his introduction of the Aśvins in vs. 5). I therefore adopt Re’s suggestion (disc. in detail in his n.) that *vayyā-* here is a deriv. of *vayā-* ‘branch, twig’, which could easily describe the soma, esp. as the pressed juice is circling the filter (see immed. preceding *paiprayántam*) and leaving its twigs behind.

On the other hand, Ge’s explan. of *susamsādam* ‘keeping good company’ is persuasive; it refers either to the gods and priests or to the water and the milk (or, I would add, both).

The standard tr. (not, however, Scar [608]) construe *divāḥ* in c with *vācam* in d; cf., e.g., Re “... lance la voix (venue) du ciel,” which is then further interpr. as thunder (see Ge’s n. 8d, Ober II.209). But I prefer to take *divāḥ* with immed. preceding *ūrmīnā* for several reasons: 1) a pāda boundary and the verb intervene between *divāḥ* and *vācam*;

2) the *ūrmí-* from heaven is found in IX.49.1 *apām ūrmīm divás pári*; 3) the formulaic VP *íyarti vācam* (II.42.1, III.8.5, 34.2, IV.21.5, etc.) does not otherwise appear with a source of the speech specified. Surely the point here is that when the soma is being ritually prepared he/it inspires ritual speech.

IX.68.9: Here again the standard tr. supply ‘speech’ as obj. of the chained *íyarti*, as is very probable, but make *diváh* dependent on this gapped obj. (e.g., Ge “(die Stimme) des Himmels”); again I construe *diváh* elsewhere, here with *rājāḥ* ‘realm’. For the phrase cf. *divó rājāḥ* I.62.5, 110.6. The further point here is that the ritual speech inspired by Soma is impelled all the way to heaven.

The VP *várivo vidat* “finds wide space” (d) responds in sense (and partially etymologically) to *urú jrāyaḥ* “wide expanse” in 2c.

IX.68.10: As noted in the publ. intro., this vs. functions as an extra-hymnic summary vs., signalled by the initial *evā*, which often begins summary vss. It is distinguished from the rest of the hymn by being in Triṣṭubh not Jagatī. Its 2nd hemistich also reaches beyond Soma: in c we call on Heaven and Earth, and d is addressed in the 2nd pl. to the gods in general, not to Soma. This pāda has the feel of a refrain, though it is found only once elsewhere, at X.45.12. However, its major elements are found in various permutations in other passages, e.g., I.85.12 *rayīm no dhatta vṛṣaṇaḥ suvīram*. For a similar finale see the next hymn, IX.69.10. On the reason for the focus on Heaven and Earth see comm. on that vs. and on IX.70 passim.

IX.69

IX.69.1: The first pāda of this vs. has an overt subject, *matīḥ* ‘thought’, as does the last, *sómaḥ*. The intervening pādas have only similes to which the missing subject is compared. In my view both the thought and the soma are possible in b and c, and the double reading is deliberate. Ge (1b) suggests that Indra is another possibility in b, but introducing Indra seems gratuitous.

The referent of init. *ásya* in d is uncertain. Since *sómaḥ* is the overt subject of the pāda and is performing his action “under the commandments of this one” (*ásya vratéṣu*), it might seem that soma is excluded as a referent. Re suggests a priest, Ge the singer or the sacrificer, or perhaps soma, Old (fld by Schmidt, *vrata* 76) soma, with the *ásya* reflexive. Since most forms of *vratá-* in IX are specifically Soma’s (e.g., IX.53.3 *ásya vratāni nādhīṣe, pávamānasya* ... “The commandments of this self-purifying one cannot be ventured against”), that seems the likeliest solution here, esp. as no ritual personnel have been mentioned as yet. However, I think it likely that we’re dealing once again with the double identity of soma/Soma: heavenly Soma the god has *vratá-*; earthly, ritual soma obeys them.

The verb of d, *ísyate*, is assigned by Ge (fld. by Kulikov 459), to \sqrt{is} ‘desire’; among other things this requires interpr. *vratéṣu* in a very forced manner, as ‘work’: “Zu den Werken dieses ist der Soma erwünscht.” Better is the ascription to \sqrt{is} ‘send’ (e.g., Gr, Re, Lub). The verb is unaccented, but (*pace* Gr, Wh Rts, Lub) it probably does not belong to the same stem as the act. transitive *-ya*-pres. *ísyati* (once 1st sg. mid. *ísyē*

IV.33.1, also transitive), but rather to a separate pass. stem with underlying accent **iṣyáte*. It is functionally parallel with *úpa sarji* ‘is/has been released’ in b.

IX.69.2: The accent of the two adjacent verbs *prcyáte sicyáte* suggests that the first clause is implicitly subordinate. The two subjects of vs. 1, the thought (*matí-*) and soma, are both found here (soma as ‘honey’ [*mádhū*]), but each as subj. of one of the verbs, rather than, as in vs. 1, as simultaneous subjects of verbs without overt subjects. Most tr. take *úpa ... prcyáte* as ‘is fertilized, impregnated’ vel sim; see the full treatment in Kulikov 152 and n. 372. Because the actions of the two verbs in the pāda are presented as complementary, I prefer the more physically explicit ‘is engorged’: as the thought is filling up and swelling with eloquence, as if with liquid, the liquid soma is being disgorged, poured out.

With the Pp as well as most tr. (see inter alia Ge’s n. 2b), I take *mandrājanī* as a karmadhāraya, *mandra-ājanī-*, rather than the equally possible bahuvrīhi *mandrá-ajanī*. But its sense, as a metaphorical reference to the tongue, is best illuminated by the bahuvrīhi (obviously based on a karmadh) *mandrá-jihva-* ‘having a gladdening tongue’.

The stem *saṃtaní-* is found 3x in the RV (here, V.73.7, IX.97.14), always with regard to loud noise. It seems generally to be assumed that it’s derived from $\sqrt{\text{tan}}$ ‘stretch’ (though Gr [s.v.] ascribes it to his 2 *tan* ‘thunder’ not 1 *tan* ‘stretch’, that seems to be a mistake: see his comment under 1 *tan* + *sám*) – hence tr. like Re’s “concert.” It is true that the ppl. *saṃtata-* to $\sqrt{\text{tan}}$ ‘stretch’ is a later (ŚS) tech. term describing “stretched and continuous recitation” (see Re’s Vocabulaire, Sen’s Dictionary of the Vedic Rituals, both s.v.), hence applied to sound, and ‘a stretching together’ for *saṃtaní-* could perhaps refer to strings sounded in unison. But a more likely root is ready to hand: $\sqrt{\text{tan}}$ ‘thunder’, the *s*-less form of $\sqrt{\text{stan}}$ ‘id.’, which can be used metaphorically of the sound of ritual speech, etc. (e.g., VI.38.2). I therefore render *saṃtaní-* as ‘thunder, thundering’ in all three occurrences. The preverb *saṃ* probably contributes its frequent intensifying sense ‘entirely’.

The sense of the simile *praghnatām iva* is not entirely clear. *prá√han* occurs only three times in the RV: here; in the enigmatic hymn, X.27.1, where, however, it has the fairly clear violent meaning ‘smite, smite off’, as it does in a number of passages in the AV; and in the negated root noun cmpd *áprahan-* (VI.44.4) also meaning ‘not smiting’. But here it must refer to the noise (“thundering,” *saṃtanīḥ*) produced by the action of *prá√han*, not the associated violence (*pace* Scar 689, who places it in the ‘zuschlagend, losschlagend, kämpfend’ realm). Perhaps *prá√han* here refers to the beating of drums, or perhaps it is an early reference to the practice of hunting with “beaters” driving the game in the direction of the shooters. On the whole, the former is more likely; we know essentially nothing about hunting practices in ancient India, and furthermore it’s not clear to me that the beaters themselves would make much noise, though the flushed game might, in combination with any dogs the beaters had with them.

IX.69.3: Ge plausibly suggests that the wives Soma is seeking (*vadhūyúḥ*) are the waters and the milk.

The ritual action referred to in b is quite clear, but the referent of the metaphorical subject is harder to decode. The act in question is the sluffing off of the twigs and other detritus as the juice runs across the filter, as is clear from the more explicit passage in the

immediately preceding hymn, IX.68.2 *upāruhaḥ śrathāyan svādate hāriḥ* “loosening his shoots, the tawny one becomes sweet,” whose verb *śrathāya-* is of course derivationally related to our verb *śrathnīté*. The problem is that the subject is feminine, *napṭīr āditeḥ* “the granddaughter (/niece/descendant) of Aditi.” As Ge (flg. Sāy.) notes, the actual referent is most likely the soma plant. But the words for soma plant (*aṃśū-*) and soma stalk (*āndhas-*) are m. and n. respectively. The best gender match would be *śadhi-* ‘plant’, but the soma plant is never so called, as far as I know, and the word is very rare in IX, where the few occurrences do not refer to the soma plant. I can only suggest that the sexualized image of the plant loosening its garments, combined with the surrounding feminine imagery (esp. 3a, 4ab) encouraged the use of an explicitly female subject – and perhaps an underlying fem. *śadhi-* was conjured up. But I am not particularly satisfied with this. Old suggests instead that the referent is the cow, “die ... ihren Verschluss locker macht d. h. Milch gibt.” Though this would solve the gender problem, it would distance the passage from the parallel in IX.68.2.

The subject is all the more puzzling because the female in question is (possibly – see below) identified as the descendant of Aditi. Now Aditi is of course famous for her motherhood, but her children are also famously sons. Brereton (*Ādityas*, 234–35) thinks that Aditi is here because of the reference to ‘truth’ (*ṛtā-*), with which she is associated elsewhere, but does not address the question of the gender of Aditi’s offspring here. Again I have no good explanation, but see below for another way of construing *āditeḥ*.

The referent of the dat. part. in the phrase *ṛtām yaté* is also disputed. Ge, I think plausibly, takes it as the soma juice, which, having shed the detritus of the plant in the filter, can flow to its goal. Lü (484 n. 1), fld. by Re, thinks rather of the mortal offerer, which is certainly possible. The issue is made more complex by the parallel in IX.74.3, whose b pāda ends, like here, *āditer ṛtām yaté*. One troubling feature is that in both cases the standard interpr. (incl. the publ. tr.) construes *āditeḥ* with what precedes, although it is found in the repeated phrase and therefore might be expected to belong with what follows. Moreover, the referent of *ṛtām yaté* in IX.74.3 is no more – indeed less – clear than it is here. It could be soma or it could be the mortal worshiper. In IX.74.3 I suggest, somewhat unsatisfactorily, that it could be read both ways; here I think soma as referent makes better sense. In IX.74.3 I also suggest that we should take the repeated phrase seriously and construe *āditeḥ* to the right, not the left, yielding “for him who goes to the truth of Aditi.” If we do that here as well, we are spared the problem of why the plant is the descendant of Aditi, though without a genitive of relationship, “granddaughter” is oddly underdefined. Nonetheless I suggest a possible alternative tr.: “The granddaughter loosens (her garment [=shoots of the soma plant]) for him who goes to the truth of Aditi.” Of course it would be possible to read *āditeḥ* twice, both with what precedes and with what follows.

IX.69.4–5: There is considerable chaining between these two vss.: *pāri ... avyata* (4d), *pāri vyata* (5b); *niktām* (4d), *nirṇijānāḥ* (5b), *nirṇīje* (5c), all referring to Soma’s clothing himself in milk. On the connections with the next hymn, see comm. ad IX.70.1.

IX.69.5: The 2nd half of this vs. once again portrays Soma as reaching through the midspace to heaven. On the technicalities see Ge’s long n. 5cd.

IX.69.6: The form *prasúpaḥ* to the hapax root noun cmpd *prasúp-* is potentially multivalent; it has been analyzed as a nom. pl., modifying the soma juices, an acc. pl. obj. of *drāvayitnávaḥ* ‘causing to run’, or as an abl. infinitive (see Ge, Re, Old; Gr takes it as nom. pl.). Although most interpr. think it has to be one or the other, I see no reason why this ambig. form can’t be read twice in the passage: I take it as both acc. pl. and abl. sg. Re’s view is similar to mine, in that he wants it to serve as acc. pl. with the causative adj. as well as nom. pl., but he suggests this is the result of “haplologie à distance,” which seems unnec. to me. There are numerous examples of poets exploiting morphological ambiguity to allow a word to have two (or more) different functions in a clause.

With Ge I take the “stretched string” as a reference to the filter.

The final pāda is uncertain. Both Ge and Re take *dhāma* as the subj. of *pavate*, though with different interpr. of the resonant word *dhāman-*: “Ohne Indra läutert sich kein Ding”; “Sans Indra, nulle structure (sômique) ne se clarifie (valablement).” However, I find it unlikely that a *dhāman-*, whatever it refers to, can purify itself, and I am reluctant to take *pavate*, which in its overwhelming number of uses is reflexive, as a passive. Instead I take Soma as subject, as he essentially always is (incl. in vs. 3), with *dhāma* as the object of a transitive self-beneficial, a slight expansion of the usual reflexive usage. The sense (whatever the interpr. of *pavate*) is of course that the ritual soma-pressing is pointless without Indra, the archetypal soma-drinker, to consume the product. I think it possible that *dhāman-* ‘domain’ here refers to the filter, as in IX.63.14.

IX.69.7: The “bulls” of b (*vīṣa-cyuta-*) are generally and persuasively taken as the pressing stones (Ge, Re), but it is also possible that it’s a reference to Indra, given 6d. The presence of Indra gives impetus to the ritual preparation, just as his absence robs it of motivation.

IX.69.8: The *naḥ* in pāda a was omitted in tr.; it should read “bring us (wealth) ...”

Soma is addressed in the sg. (voc. *soma*), but the rest of the clause is couched in the pl. (“you [pl.] are ...”: *yūyám ... sthana*), with the common vacillation between the sg. substance / god and the pl. juices / pressings.

IX.69.10: The last pāda of this vs., like the 2nd half of the final vs. of the previous hymn (IX.68.10cd), enlarges the divine range beyond Soma (and Indra). It is addressed to Heaven and Earth, along with the (other) gods – the same set of divine personnel found in X.68.10cd. The focus on Heaven and Earth in both IX.68.10, and this vs. may have to do with the theme of heavenly versus earthly soma explored in these two hymns, esp. IX.68. The theme is continued in IX.70, which focuses even more on Heaven and Earth in the hymn itself, not merely the summary vs.

IX.70

On some of the difficulties in the hymn see publ. intro. Much of the problem lies in the fact that the referents of many of the crucial elements are not identified and are not easily supplied from context; it is worth noting, for example, that the word *sóma-* does not appear till vs. 7c. Framing the whole as an extended treatment of the relationship between the earthly and the heavenly soma aids in interpr. The insistence on the word *ubhé* ‘both’ (vss. 2-5) noted by Ge (n. 2–5) may underline this double vision.

IX.70.1: The opening pāda of this hymn shows the power of the ritual *hic et nunc*: the 2nd word, *asmai*, is unaccented, which indicates that the referent is something already in the discourse. This “something” is of course soma/Soma, both present on the ritual ground and the acknowledged dedicand of the hymn. There is no need for a prior mention. See also IX.11.1a and with *asya* IX.29.1a and IX.30.1a.

The first pāda has 11 syllables and a Triṣṭubh cadence, though the rest of the hymn (until the final vs. 10) is Jagatī. The SV parallel reads *duduhrire*, which would provide the extra syllable and the Jagatī cadence. Nonetheless Old cautions against adopting this reading too hastily, as the SV arrangers may have corrected the original RV reading (Noten ad loc., and esp. Prol. 278). See also X.44.7.

As noted in the publ. intro. (and see Ge’s n. 1), this vs. surely concerns the heavenly soma, whose real (*satyām*) milk mixture is produced for him in distant heaven. I do not think this necessarily requires the cows of pāda a to be the celestial rivers, as Lü predictably does (250); it may involve the interplay between earthly cows and heavenly milk.

The making of Soma’s garments was something of a preoccupation of the previous hymn, IX.69, esp. vss. 4–5, using some of the same phraseology, though the hymns are attributed to different poets from different lineages. Note esp. IX.69.5c *divás pṛsthām ... nirñije kṛta* “he has made the back of heaven for his raiment” and our 1c *catvāri anyā bhūvanāni nirñije, cārūṇi cakre* “he made the four other dear worlds for his raiment” (in my tr.), both with ACC *nirñije* √ *kṛ*. Both Ge and Lü (438, 566) take *bhūvanāni* here as “beings” (Wesen), while Re attenuates it to “essences,” but given the cosmic imagery of IX.69.5, I think that it more likely refers to Soma’s clothing himself in “worlds.” Furthermore, I am not at all sure that the substances that Ge (n. 1c, partially flg. Sāy.) considers the referent of *bhūvanāni*, namely (various) water(s) and milk, would be called *bhūvana-* in Vedic. Although German *Wesen* can cover ‘nature, essence’ in addition to ‘being’, I doubt that *bhūvana-* has the same semantic range. It does give me pause, however, that in the next vs. (2c) Soma wraps himself in the waters.

There is another problem in this little phrase – one of my own making. By my rules (“Vedic *anyā-* ‘another, the other’: Syntactic disambiguation,” in *Sound Law and Analogy* [Fs. Beekes], ed. A. Lubotsky, 1997: 111–18), 2nd position *anyā-*, the position *anyā* takes here, should be definite. I have so translated it (“the four other ... worlds”), though I cannot identify which four other worlds these would be. Neither five (1+4) or four is a standard number for cosmic divisions in the RV. The standard tr. take it as indefinite (e.g., Ge “vier andere schöne Wesen”), and I admit that an indefinite reading is less problematic (though scarcely *un*problematic). Perhaps the presence of a numeral in first position may displace *anyā-* to the right, or perhaps it even performs a quasi-definitizing function. The quantifier *viśva-* always occurs with non-initial *anyā-*, though usually pāda-final (1997: 112, 114). In any case I would now favor an alternative tr. “He made four other dear worlds to be his raiment,” though in the absence of an understanding of what the “four” are—no good solutions have so far been suggested—a definite interpr. remains a possibility.

Though Ge renders *ṛtāḥ* as “nach den Regeln,” Lü (438, 566) is surely right that *ṛtā-* here refers to hymns (Kultlieder), which are in some sense true speech. Re points out the presence of both *satyā-* (b) and *ṛtā-* (d) in the vs.

IX.70.2: The phrase *amṛtasya cāruṇaḥ* recurs in the same position in vs. 4 and must have the same referent. (See also IX.108.4, 110.4.) What that referent is is disputed. Unlikely is Lü's interpr. (237), fld. by Re, that it refers to a celestial seat: Soma separates Heaven and Earth in order to make a place for himself, from which he can create the heavenly streams. Ge tr. "Göttertrank," and (n. 2a) equates this with the heavenly Soma. In this I think he is correct, with *amṛta*- here the nominalized neut. '(drink) of immortality', hence the neut. form of the adj. *cāruṇaḥ*. (On supposed masc. *cāruṇaḥ* in VIII.5.14, see comm. ad loc.). The subject who seeks the share of the heavenly Soma is of course earthly Soma. He has the power to separate H+E because of his *kāvya*- 'poetic skill'; recall that earthly Soma was born as a *kavī*- in IX.68.5a, and it may be that what earthly Soma has going for him that heavenly Soma does not is his way with words and kinship with the human poet.

The lexeme used to express the separation, lit. the "loosening," of Heaven and Earth is *ví√śrath*. The same root is used in IX.68 and IX.69 to characterize Soma's sluffing off of his stems and twigs on his journey across the filter (IX.68.2b *śrathāyan*, IX.69.3b *śrathnīte*). Although the action here is very different from that in those two passages, it is worth noting that the same root, a not particularly common one, is used.

The instr. *maṃhānā* is a bit difficult to fit into context. The stem ordinarily means 'liberality, generosity'. Ge (Lü) tr. "bereitwillig," following Gr's gloss, Re "avec majesté." If we stick with the base meaning 'liberality', I think it's possible to extend it to 'lavishly' – as in "sprinkle liberally with salt," etc. Here it would refer to the generous amount of Soma's covering.

In d *yādī* must surely be decoupled into *yād ī*, as seems to be tacitly recognized by all the standard tr. "If" would not work in context.

I do not really understand the last pāda, in part because it is unclear who the subj. of *vidūḥ* is. Ge (n. 2d) tentatively suggests either the waters or the gods, Sāy. (fld. by Lü) the priests; Re's tr. implies the waters, but he alternatively suggests priests in his n. Since no priests and no gods have been mentioned so far, and the waters are found in the main cl. to which this subordinate cl. is attached, the waters seem the most likely candidate. But what is the point? Does Soma get to appropriate the waters as his garment when they come near because they know he's there (because of his fame) and recognize his seat? And which Soma are we talking about – earthly (which I weakly favor, because the waters are likely to be the ritual waters) or heavenly? The problem is compounded by the verb: the pf. *véda* is generally stative ('know'), but my tr. (and those of others) implicitly assumes a dynamic change of state, 'recognize' vel sim.; see Ge's "in Erfahrung bringen," Re's "elles eurent (re)connu (son) siège." A more stative interpr. would be possible if *yād* is rendered 'since', not 'when'. I confess to puzzlement.

IX.70.3: The dichotomy between the earthly and the heavenly continues here, with Heaven and Earth being replaced by their proxies, gods and men – implied in b by "both races" (*janúṣī ubhé*) and explicit in c in *ṇṛmṇā ca devyā ca*. The *ketú*- in pāda a also has double reference in my view: on the one hand, *ketú*- can be used of the beacon(s), that is, the ray(s), of the sun (e.g., I.50.3, VII.63.2); on the other hand, in two of the very few other occurrences of this stem in IX (IX.86.5–6) Soma's *ketávaḥ* circle around the filter, an apparent reference to the glinting soma drops. So we have a joint reference to the heavenly Soma as sun's rays and the earthly soma sparkling in its ritual progress; the two

together can pervade the two races of gods and men (b) and purify what is associated with them (c).

In d *manánāḥ* is problematic. It is a hapax, and assuming it is an *-ana*-stem, it shows aberrant accent, since such stems either have root or final accent (on the accentuation of such stems in general see AiG II.2.180–82 and on the rarity of this accent pattern 182; cf. 187 for neut. nouns with this accent). It's generally taken as a primary deriv. of \sqrt{man} in the meaning 'thoughtful'. My 'zealous' rests on an invented connection with *manā-* 'zeal', which in fact rests on nothing beyond my feeling that 'thoughtful' doesn't particularly fit the context, and in any case there are many ways to express 'thoughtful' that would not involve creating a nonce stem with a peculiar accent. But I hold no brief for my own stab in the dark and simply think that we are all missing something. On the other hand, it's likely that there is a primary or secondary connection to \sqrt{man} 'think', so most tr. fall within acceptable limits.

IX.70.4: In the first pāda we are firmly in the realm of earthly ritual soma: the grooming by ten is a clear reference (clear to those familiar with soma rhetoric) to the fingers of the presser at their task.

The question is what is happening in pāda b, and determining this depends in part on the analysis of *pramé*. This is almost universally taken as a dative infinitive or quasi-infinitive to *prá* $\sqrt{mā}$ 'measure forth'. Cf., e.g., Ge "... (fließt er), um unter den mittleren Müttern als Richtschnur zu dienen" and see, in addition to Old and Re, Lü (242–43), Scar (377–78), Keydana (Inf. 201). There are several problems with the dominant analysis: 1) the lexeme *prá* $\sqrt{mā}$ 'measure forth' is not otherwise found in the RV, except in the late X.130.3, 7, where it has been generated to *pratimā-*; 2) it is not at all clear what the pāda is supposed to mean or refer to. The standard view is that "the middle mothers" are the rains (e.g., Ge, Re; middle because they are in the midspace), but this doesn't actually help with the sense – nor does Lü's interpr. as (guess what!) die Himmelsflüsse. In fact plural "mothers" in IX, and mostly elsewhere, generally refers either to cows or to waters. None of those who favor 'rains' provides evidence for mothers=rains in the RV, and rain would be out of place in this context. Nor do I see what the "measuring" would consist of.

I suggest instead that *pramé* belongs to $\sqrt{mā}$ 'bellow' (a possibility considered, but not favored, by Scar). Although *prá* does not appear with this root in the RV, it is attested with other verbs of roaring; cf. nearby IX.77.1 *eṣá prá kóṣe ... acikradat* "This one has cried out in the bucket." Soma's propensity for noisemaking is often highlighted, indeed in this very hymn; see in the next few vss. 6b *nānadat* 'roaring again and again', 7a *ruvāti* 'bellows' (and by implication 5c *śúṣmeṇa* 'with his blustering'). Under this analysis of *pramé* the pāda can make sense in the ritual context established by pāda a: the *prá* opening b invites a verb of motion to be supplied ("[goes] forth"), depicting the journey of Soma after his pressing, which was treated in pāda a. He bellows on this journey, as he passes first among the waters and then the cows [=milk]. The "midmost mothers" are, in my view, the waters with which he mixes before reaching the milk – "midmost" because of their position between filter and milk.

As for *sácā*, as disc. ad IV.31.5 *sácā* is generally a pleonastic marker of a loc. absol. Here though I do not interpr. *madhyamāsu mātṛṣu* as an absol. construction, I would still consider *sácā* essentially functionless, just pleonastically accompanying the

loc. phrase. If we want to assign lexical value to it, however, it could express Soma's bellowing *in company* with the mothers: waters also frequently make noise.

In c the earthly soma is still at issue – here protecting the commandments (*vratāni pānāḥ*) of the heavenly Soma, once again designated *amṛtasya cāruṇaḥ* as in 2a; see comm. ad loc. A similar relationship between the earthly soma and the commandments of the heavenly Soma is found in the previous hymn, IX.69.1d.

IX.70.5: The repetition of a passively used part. to \sqrt{mrj} , intens. *marmṛjānā-*, matching *mṛjyāmāna-* in the opening pāda of the previous vs. 4a, situates us in the same ritual context as that vs. Again Soma sets out on his journey beyond the filter, through the territory that here is configured as “between the two worlds” (*ubhé antā ródasī*).

Forms of the root $\sqrt{hr̥s}$ sometimes take dat. infinitives; cf. VIII.19.19 *āgne hār̥sasva dātave* “O Agni, be roused to give” (sim. IV.21.9). Contrary to the standard tr., I therefore construe *indriyāya dhāyase* with *har̥sate*. The adj. *indriyā-* lit. ‘Indriyan, relating / appropriate to Indra’ has personal reference here (as also in the same phrase in IX.86.3): “for Indra’s suckling.”

On *śurúdh-* see, inter alia, KEWA, EWA both s.v., Thieme 1941 (=KISch 338–49), Scar 63, 464. The etymology is disputed, in part because the segmentation of this disyllable is unclear: *śur-údh* or *śu-rúdh-*. The former is supposed to be parallel to a putative **iṣ-údh-* found in the denom. *iṣudhyá-*, but I have suggested a different etym. for that word: see comm. ad I.128.6 and my 2020 “Vedic *iṣudhyá-* and Old Avestan *išud-*, *išūdiia-*: The Aim of Praise” (Fs. Lamberterie). The latter segmentation is favored by Thieme, who derives it from **(p)śu-rúdh-* ‘das Vieh mehrend’. Scar (464) objects that we would then expect **sū-rúdh-* (like *anū-rúdh-*, *vī-rúdh-*), but that is precisely what needs to be read here (see already Gr); otherwise the cadence is the very bad – ~ ~ ~ x. No other forms of the stem occur in the cadence; of the other 9 attestations, 5 are found after an early caesura, where a heavy first syllable would change the standard break ~ ~ ~ to a still very common – ~ ~; the other 4 occur after a late caesura ending with a heavy syllable, where – / ~ ~ would definitely be less acceptable than the normal – / ~ ~ produced by reading a light first syllable. On the whole I am inclined to accept Thieme’s etymology, at least in preference to one based on a 2nd member *-udh*, and to assume an original **sū-rúdh-*, at home here and possibly in the 5 forms after early caesura, whose first syllable was ultimately shortened by analogy to compds in *su-*.

IX.70.6: Both Ge and Re assume that the *ná* in a is wrongly placed and that the simile really targets *usríyah* (though they both somehow work the two mothers into it). I think rather that *mātārā ná* is the complete simile and the “two mothers” are being compared to the gapped goal “Heaven and Earth.” Cf. IX.97.13 *nadáyann eti pr̥thivīm utá dyā́m* “roaring he goes to H+E” to our *nānadad eti*. The “two mothers” as stand-ins for H+E are found in our little group of hymns in IX.68.4 *sá mātārā vicáran*.

The 2nd hemistich is difficult to sort out because it is unclear how to distribute the series of acc. sgs. in c: *ṛtām prathamám yát s^uvar̥ṇaram*. I take all three together, with *ṛtām* modified by *prathamám* and further specified by *yát svàr̥ṇaram*, a nominal izafe-type construction, all as obj. of *jānán*. Ge (and Re) take everything up to *yát* as obj. of *jānán*, but *svàr̥ṇaram* as obj. of *avṛṇīta*. Lü (396) has *ṛtām* as obj. of *jānán*, *yát svàr̥ṇaram* as obj. of *avṛṇīta*, and *prathamám* as adv. All three take *svàr̥ṇara-* as a place name: for Ge

a place famous for its soma, for Lüders the Himmelsquell of soma. But, as disc. ad IV.21.3, *svàṇnara-* is a name only in VIII; otherwise it seems to refer to a “realm of solar glory,” different from Heaven and Earth, as shown by IV.21.3 and X.65.4, where Heaven and Earth and various other places appear parallel to *svàṇnara-*.

However we distribute the accusatives, each of us has to decide what this hemistich is trying to say, and I would not say that any of us has succeeded in this. With regard to my own interpr., I tentatively suggest that once again its subject is the earthly, ritual soma; in his cosmic journey to and through Heaven and Earth he recognizes the sun as “the first truth” and chooses it as his alter ego, his cosmic doublet, which resounds to his own glorification. In this paraphrase I realize that it is unclear why this is the “first” truth, and I therefore consider it possible that *prathamām* is adverbial, as Lü takes it – and suggest an alternate tr. “first recognizing the truth that is the realm of solar splendor ...” But all this is very sketchy.

IX.70.7: Once again the *nirṇíj-* (see above, ad vs. 1), here firmly anchored in the ritual here-and-now as the sheepskin filter. The bovine skin (*gavyáyī tvák*) either refers to the milk mixture or the cowhide on which the pressing apparatus is set up.

IX.70.8: Although the med. part. *punāná-* is generally passive or at least used absolutely, as opposed to reflexive *pávamāna-* ‘self-purifying’, here it must be reflexive-transitive, with *tanvām*. The construction is in fact proleptic: “purifying his body/himself (so that he/it is) spotless.”

On the isolated *-iṣ-*aor. *adhāviṣṭa* and its deriv. from $\sqrt{dhāv}$ ‘run’ not $\sqrt{dhāv}$ ‘rinse’, see detailed disc. by Narten (Sig.Aor. s.v. *dhāv*), also Ge n. 8b, Re n.

In the publ. tr. I interpr. “threefold” (*tridhātu*) as a reference to the soma at the three soma pressings, even though the three pressings are actually not terribly prominent in this maṇḍala. The same phrase is found in IX.1.8 and similar ones at VI.44.23, IX.86.46. However, this is not the standard, or even a standard, view. Sāy. thinks it refers to three additives with which the soma is mixed: water, sour milk/curds (*dadhi*, not an additive in the RV soma ritual), and milk (*payas*), though at IX.1.8 he suggests rather three (later) soma vessels: *droṇakalāśa*, *ādhavanīya*, and *pūtabhṛt*, none of which is found in the RV (though *dróṇa* and *kalāśa-* individually are both soma vessels). Ge in both passages (IX.1 n. 8c, IX.70 n. 8d) suggests soma juice, milk, and water. Re tr. “est fabriqué de trois manières,” but does not pronounce on what they are. Since *mádhu* ‘honey’ is normally a stand-in for *sóma-* in this maṇḍala, “the honey is made threefold” (*tridhātu mádhu kriyate*) seems to refer to a three-part division of the soma itself. However, the similar phrase in IX.86.46, *mādaḥ pári tridhātuḥ ... arṣati* “the exhilarating drinks rushes around threefold,” gives me pause, in that it seems to refer to a single incident of soma’s rushing and is difficult therefore to parcel out to the three pressings. I therefore think that Ge’s suggestion that it refers to a liquid made up of three parts—soma juice, water, and milk—is probably correct, certainly at IX.86.46 but probably here and in IX.1.8 as well. “Three-backed” (*tripṛsthá-*) in nearby IX.71.7 may belong here too and also perhaps the three heads (*trīn ... mūrdhnāḥ*) of IX.73.1.

IX.70.9: The last pāda is a nice ex. of what appears to be a semi-gnomic expression.

IX.70.10: Pāda b is oddly phrased: it contains the idiom *ā pavasva*, which ordinarily means “attract X-ACC here through your purification” (see comm. ad IX.7.8 and passim), but though it has an acc. (*jaṭhāram*), it would seem quite odd to say “attract Indra’s belly here through your purification.” It seems rather to be a variant of 9b *īndrasya hārdi ... ā viśa* “enter the heart of Indra.” And the lexeme *ā pava^{te}* does seem to have a variant construction with acc. of goal. Cf. *ā pavasva ... pavītram* IX.25.6, 50.4 “purify yourself in(to?) the filter.”

IX.71

On the structure of this hymn see publ. intro. As indicated there, it is structured as a series of more or less concentric responsions. These include *āsādam* 1a / 6b; *nī riṇīte* 2a / *ā ... riṇānti* 6c; *vārṇam ... asya tām* 2b / *vārṇo asya sá* 8a; *girā* 3c / 6c; *násate* 3c / 8d – as well as others less narrowly lexical. However, these responsions don’t seem to define an omphalos.

The hymn continues the preoccupation with the clothing and coverings that Soma assumes in the course of the ritual preparation, particularly in the first two and last two vss.

IX.71.1: The first pāda poses difficulties if *dákṣiṇā* is taken as a nominative., with Sāy, Old, and apparently Re, requiring the hemistich to be chopped up into very small clauses and across the pāda boundary (acdg. to Old, *ā dákṣiṇā sṛjyate / śuṣmy āsādam, véti / druḥāḥ rakśásah pāti jāgrviḥ*) and soma not to be the subj. of passive *ā ... sṛjyate*, against standard phraseology. The syntactic difficulty disappears if, with Ge, we take *dákṣiṇā* as an instr., leaving soma as the subject throughout. This leaves us with the question of what is meant; since *dákṣiṇā* is not otherwise found in IX (though *dákṣiṇāvant-* occurs once, IX.98.10), we are on our own. I suggest that, since *dákṣiṇās* are distributed at the Morning Pressing, this is a reference to that ritual moment.

Once again there is a question of Soma’s *nirṇīj-* as in recent hymns (see comm. ad IX.69.4–5, 70.1). The phrasing here—*nábhas páya, upastíre camvòḥ ...*—is esp. reminiscent of IX.69.5d *upastāraṇam camvòr nabhasmāyam* “... an underlayer made of cloud in the two cups” and makes it quite likely that “cloud (and) milk” (that is, cloud = milk) are the underlayer here as well. In his tr. Ge makes them both to be both the headdress (*opasām*) and the underlayer and in n. 1cd suggests that the milk is the headdress and the cloud the underlayer. But, as Old points out, the close sandhi of *nábhas páyah* speaks against separating them syntactically, and *opasā-* can simply be construed with *kṛṇute* without a second object; cf. VIII.14.5 *cakrāṇā opasām divi* “making himself a headdress in heaven” (though Old thinks this passage is not typical). My tr. is closest to Re’s; Old’s notion that the poet heaped up all the items he had to mention higgledy piggledy (not his term), without sorting them, seems unlikely.

IX.71.2: In b the question is whether he *removes* his *asuryāṃ vārṇam* (Ge, WEHale 95) or *reveals* it by letting it spill down (Old, Re, Scar 686, as well as publ. tr.). The lexeme *nī√rī* here (*nī riṇīte*) is used twice in Dawn hymns (I.124.7, V.80.6) when she “lets her breast spill over” (*nī riṇīte āpsah*), in other words, when she reveals her body. The same usage is surely found here, with even more justification for the liquid imagery, since soma is indeed a liquid. Presumably with the “covering” (*vavīm*), i.e., the twigs and the

like, removed (pāda c), the golden color of the juice shows brightly – a color that could easily be associated with lordship. As Old points out, Soma is several times identified as an *ásura*-, incl. in nearby IX.73.1, 74.7. I see that in the publ. intro. I say that “Soma shed his original form and color” in this vs.; I now no longer believe that he sheds his color.

In c *pitúḥ* has two competing analyses, each of which is grammatically possible. Ge (flg. Sāy, fld. by Hale 95, Scar 341, 686) takes it as the nom. sg. to *pitú-* ‘food’ (Ge “... kommt er als Speise”). Although grammatically impeccable, this interpr. is thematically dubious: *pitú-* is not otherwise found in IX and soma is never identified as *pitú-* elsewhere. Preferable is the analysis as gen. sg. of *pitár-* ‘father’ (Re, Lü 211, publ. tr.). As Lü points out, *niṣkṛtá-* ‘rendezvous’ generally takes a gen. of the being(s) being met, so ‘of [=with] the father’ would met the expectations for such a genitive. With Lü (though without necessarily accepting all of the Lü baggage that goes with it), I think it likely that the father here is Heaven (the standard Father Heaven), once again an indication of the cosmic ambitions of the ritual Soma.

The ‘floating’ (*upaprút-*) substance he makes into his garment is universally, and convincingly, taken to be the milk mixture.

IX.71.3: This vs. is characterized by an accumulation of finite verbs, esp. in the 2nd hemistich, which contains five: ... *modate násate sādḥate ... nenikté ... yájate*.

The cloud in b can be read in two ways, ritually as the milk mixture (see *nábhas páyaḥ* in 1c; also *nabhasmáyam* in IX.69.5d, both as ‘underlayer’; also Ge’s n. 3b), but cosmically as a rain cloud. This latter sense connects nicely with the verb *vṛṣāyáte*. Soma, as often, is depicted as acting like a bull, but this verb can also be associated etymologically or folk-etymologically (on the likely etym. connection see EWA s.v. *vṛṣan-*) with *√vṛṣ* ‘rain’ (see Re’s n.). Gr and Lub both classify this form with *vṛṣāya-* ‘(make) rain’, while Ge tr. it “... wird er wie ein Bulle” (sim. Re). I consider it a pun, like the sim. form *vṛṣāyase* in X.44.4; see comm. ad loc.

Pāda c is more intricately structured than at first appears. On the one hand all three verbs, *modate násate sādḥate*, appear to be construed with the final instr. *girā*; cf., e.g., Re’s “Il jubile, caresse, réussit grâce au chant,” as well as the publ. tr. However, only the central verb *násate* is regularly construed with an instr.; *modate* is found once (X.30.5) with an instr., while the relatively rare medial *sādḥate* ‘succeeds’ generally lacks complements. Moreover, when *násate* takes the instr., it appears with the preverb *sám* – as it does in fact in vs. 8: *sám INSTR násate sám INSTR*, with the *sám* insistently repeated. In our pāda I would suggest that there is a ghostly trace of this *sám* in the opening sequence *sá modate*, which could reflect an older or underlying **sám modate*. Though this would have metrical consequences, they would be slight, since the quantity of pāda-initial syllables is always indifferent. This posited **sám* cannot be read with the immediately following verb *modate*, since *√mud* never appears with *sám* in the RV (although the rt noun cmpd *svādú-sammud-* [so accented] is found twice in AVŚ), but “skips” to the 2nd verb in the sequence. The repeated *sám* in 8d can then be interpr. as a type of poetic repair.

The verb *nenikté* ‘washes’ is of course etym. related to *nirṇíj-*, the word for garment that figures so heavily in these hymns (incl. in the immed. preceding vs., 2d), but their developed meanings are too divergent to allow the connection to be represented in Engl.

pārīman- is a hapax, but, as is generally agreed (see EWA s.v., Re's n.), it most likely belongs to $\sqrt{p\tilde{r}}$ 'fill'. It may have been formed on the model of better attested *vārīman-* 'broadness', which ends the next vs. and occupies the same metrical slot. Both these words function in much the same way as *tānā* 'in its full measure/extent', which ends vs. 2.

IX.71.4: The first hemistich contains two untethered genitives, *sāhasaḥ* and *mādhvaḥ*. The first of course evokes the common phrase *sūnū- sāhasaḥ* "son of strength," and 'son' is easily supplied (see Old, Ge n. 4a, etc.). *mādhvaḥ* is more problematic. In fact Ge identifies it instead as a nom. pl. fem. (presumably to a stem **mādhū-*? though we might expect trisyllabic reading *mādh^uvaḥ*), referring to the Apsarases, who in IX.78.3 (which contains the other ex. of the phrase *harmyāsya sakṣāṇīm*) do prepare the soma. Despite this parallel, his suggestion has little to recommend it: the Apsarases are not otherwise called 'sweet, honied', and *mādhv-* is so typed as a synonym/descriptor for soma and its gen.-abl. *mādhvaḥ* so well attested that it is hard to image how an audience could force the fem. pl. interpr. on this word with so little to go on. In the publ. tr. I sneaked it in as parallel to *sāhasaḥ*, but this is not very satisfactory. Old suggests supplying *rāsam* 'sap' or *ūrmīm* 'wave', both of which appear with dependent *mādhvaḥ*, with *rāsa-* more common. I would now tr. "(sap) of honey" (so also Re, Scar 39).

Ge (n. 4b) plausibly suggests that the "secure house" (*harmyā-*) is the plant's husk.

The second hemistich depicts a somewhat outlandish situation: cows preparing their milk on the "head" (*mūrdhān-*) of Soma. IX.93.3 contains a similar picture: cows preparing Soma's head with milk, using both *mūrdhān-* and *śrīṇanti* as here. Both clearly refer to the mixing in of the milk; if the mixing involves pouring the milk into a vessel containing soma, the upper surface of the soma could be considered his "head."

With Ge (fld. by Scar 39), contra Pp., I read dat. *suhutāde* not *suhutādaḥ*. The dat. would refer to Indra, while the *suhutādaḥ* as nom. pl. would modify the cows, who are not typically eaters of oblations, or as abl.-gen. sg. would have no obvious referent. See Old's efforts in that direction.

On *vārīman-* see disc. of *pārīman-* in vs. 3.

IX.71.5: On *bhurīj-* see comm. ad IX.26.4.

Though chariot-making is a common trope and regular comparandum in the RV, it is not usual (at least as far as I can recall) to compare the preparation of soma with the assembling of a chariot. It may appear here because the thus-prepared Soma is about to follow the track of the cow, at least in my interpr.

The grammatical identity of *jīgāt* in c is disputed. It appears to be, and is usually taken as, an injunc. to the redupl. pres. *jīgāti* (Gr, Macd [VGr, p. 342], Lub, Hoff. [Inj. 271 n. 12, but hesitantly]; by implication Ge and Re), but Old (and by implication Lü 252) suggests that it's a nom. sg. pres. part. and, on the grounds of *pānt-* and *yānt-*, sees no difficulty with this analysis. But, of course, for a redupl. pres. the weak form of the participial suffix is expected even in "strong" forms, and is in fact found in participles to other redupl. pres. to roots in *-ā*, $\sqrt{dā}$ and $\sqrt{dhā}$, with well-attested nom. sg. m. *dādat-*, *dādhat-*. Though I accepted Old's word (as I so often do) in the publ. tr., I now think *jīgāt* is better taken as an injunc., though this need not change the actual tr.: "As he goes, he

extends ...,” with implicitly subordinated 1st verb in a two-verb sequence. “He goes, he extends ...” is of course also possible.

The interpr. of the rest of the hemistich is uncertain, due to differing opinions about the sense and syntactic position of *padám*. With regard to its sense, *padá-* is of course multivalent: ‘footprint, track, place’ and ultimately ‘word’. As for its syntax, does it belong in the main clause beginning in c, modified by *apīcyām*, with *yád* in d beginning a new cl., or does it belong to the *yád* cl. of d? Ge follows the latter tack, with two NPs, *góḥ apīcyām* and *padám*, in two separate clauses: “er stürzt sich auf das Geheimnis der Kuh, wenn die Andächtigen(?) seine Stätte bereitet haben,” with *padá-* = ‘place’. The Geheimnis der Kuh is the milk (n. 5c). There is nothing impossible here, but the adj. *apīcyā-* ‘secret’ invites association with *padá-*, on the basis of the semantics of the formulaic phrase “hidden track,” which is found in IX in IX.102.2 *gúhā padám* and IX.10.9 *divás padám ... gúhā hitám*. Both Re and Lü take *apīcyām padám* together, but Re interprets *padám* as ‘word’ (“le mot secret de la vache” – though ‘word’ for *padá-* is barely found in the RV if at all) and Lü as ‘place’, which he further specifies, in his usual style, as the “Milchflut im Himmel.” On the basis of the formula just cited, I prefer ‘track’, with the verbs of motion in c indicating that Soma is following this track (which, on the basis of 102.2 I think is the track through the filter) to his rendezvous with the milk.

matútha- is a hapax whose formation is unclear, but a derivation from \sqrt{man} ‘think’ is the default (see EWA s.v. *MAN*¹). It merits no mention in AiG (at least acdg. to the index thereto), but see Re’s plausible suggestion that it is connected to *mántu-*.

IX.71.6: Act. trans. (*ā*) *riṇanti*, with priests vel sim. as subj. and soma as obj., contrasts with medial (*nī*) *riṇīte* in 2, with soma as subj. and a self-involved, reflexive-type meaning.

I supply ‘stall’ as the goal in the simile on the basis of passages containing *āpi* \sqrt{i} with *pāthah* as goal (I.162.2, II.3.9, III.8.9, VII.47.3). It is not necessary, however.

IX.71.7: A complex vs. esp. in the 2nd hemistich.

In the publ. tr. I take *pāda* a as a nominal sentence with *pārā* as predicate: “far away is ...” I now think a verb of motion, almost surely from \sqrt{i} , should be supplied: “Away (goes) the ruddy poet ...” The lexeme *pārā* \sqrt{i} is matched by *parāyatī(ḥ)* in *pāda* c, by my analysis (for which see below). The reference is once again to Soma’s journey from the filter to the rendezvous with the milk.

“Three-backed” (*tripṛṣṭha-*) is probably to be interpr. like *tridhātū* in nearby IX.70.8. Pace Lü (708–9) I very much doubt it refers to his threefold heavenly Soma.

Pāda c lacks a syllable, which is not easily recovered. This simply adds uncertainty to an already problematic *pāda*. The subject is *yātīḥ*, taken by all (incl. me) as a *-ti*-stem deriv. to \sqrt{yam} ‘hold, control’. It should in origin be a fem. abstract ‘control’ vel sim., but like other exx. of the formation has acquired a personal agentive sense (on which transference see AiG II.2.637) – hence my ‘marshall’ (for awk. ‘holder-fast, controller’).

More puzzling is *parāyātī* (Saṃhitā), beginning with what its underlying form is. The Pp gives *parāyātīḥ*, which is accepted by all the standard interpr., but also possible in this sandhi context would be *parāyātī* and *parāyātīḥ*. The standard view is that the form is

composed of *parā* and the selfsame *-ti*-abstract *-yāti-* that immediately precedes it and that it also is a nom. sg. masc. referring to Soma – hence Ge’s “abseits lenkend(?),” Re’s “poussant en arrière,” etc. But the lexeme *parā* √*yam* doesn’t exist in the RV – or anywhere else for that matter. What does exist, and fairly commonly, is *parā* √*i* ‘go away, depart’. In fact in the pres. part. it is used once of the Dawns, the same Dawns who appear in our pāda d: I.113.8 *parāyatīnām ānu eti pāthah* “She [=current Dawn] follows the troop of those who go away [=previous Dawns].” I suggest here that we have an acc. pl. fem. pres. part. It should be accented **parāyatīs*, but it is not difficult to imagine that its accent could have been retracted redactionally to match preceding *yātiḥ*. This pres. part. then modifies *pūrvīr uṣāsaḥ* in the following pāda and is part of the simile *rebhó ná* in that pāda. I take *rebhā-* ‘hoarse-voiced (singer)’ (on which gloss see comm. ad VI.3.6) here as referring to Agni as often (incl. I.113.17, in the hymn just cited). Like Agni, Soma ‘radiates’ (√*rājati*). With Lü (708) and Gotō (1st cl., 268 n. 612) I take the verb to √*rāj* ‘shine’, not, with Gr, Ge, Re, to √*rāj* ‘rule’.

IX.71.8: On the responsions between 8a and 2b and between 8d and 3c, see comm. ad locc.

On the basis of 9b, “the glittering form” seems to be appropriated from the sun.

The sequence of tense in b is somewhat troubling. The main cl. contains a pres. *sédhati*, which seems to express a general truth. The condition on this truth is expressed by the subordinate *yātra* cl., but we should then expect either a pres. “when he lies down” or an aor. or pf. of the immed. past “when he has lain down” – as I in fact tr. *āśayat* -- but this is not a normal use of the imperfect.

Properly speaking we would expect the acc. pl. to be accented **srídhaḥ*, as it normally is. Formally this should be an oblique sg., but that analysis simply doesn’t work in context.

IX.72

In contrast to the contorted thought and metaphorical flights of the first few hymns in the trimeter group (IX.68-71), this one is relatively straightforward, with the major exception of vs. 3.

IX.72.1: The accent on *īráyati* and its juxtaposition with another finite verb, *hinváte*, marks the former as implicitly subordinate.

On the hapax *pariprī-* see Scar 337–38.

IX.72.2: The subordinating *yád* appears fairly late in its clause in b, though what precedes it all belongs to the predicate (though consisting of two NPs).

In c *yádī* must clearly be dissolved into *yád ī*, esp. given the parallelism between the subordinate clauses of b and cd.

IX.72.3: Although the major problem in this vs. is the impossible hapax *vinamgrsāḥ* in c, the puzzlement begins with b. What does it mean that Soma goes “across the dear bellow of the daughter of the Sun” (*sūryasya priyām duhitús tiró rávam*), and in particular what is the daughter of the Sun doing here? She is found twice elsewhere in IX in the full phrase *sūryasya duhitár-*: at IX.1.6, where she purifies the soma, and IX.113.3, where she

brings soma in the form of rain, as well as, most likely, named only as *duhitār-* in IX.97.47 (for which see below). Ge (see esp. n. 3b to IX.113.3) considers her “die Rede- und Gesangeskunst selbst,” on the basis of a dubious reading of III.53.15 (see comm. ad loc.), and so in our passage he interpr. her bellow as the song of the priests, which the noisy soma “übertönt” (n. 3b); Re partially follows him by supplying “au chant des prêtres” to gloss “à la chère rumeur de la Fille du soleil” in his tr., but supplies a verb of motion with *tírah*: “(passant) outre,” though without comment. But Ge’s interpr. requires that *tírah* ‘across’ when construed with a noun referring to noise can mean something like “(sing) over, drown out.” But when independent, *tírah* always governs an expression of space, e.g., in IX *tírah rájāmsi* “across the realms” (IX.3.7–8), *tírah pavítram* “across the filter” (IX.68.2, 109.16). Tellingly, *tírah* is once used with an acc. of noise, calls, but these are conceived of spatially, as the calls of other sacrificers which the Aśvins should travel across to arrive at my sacrifice: VII.68.2 ... *gantam havíṣo vītáye me / tiró aryó hávanāni* “come to pursue my offering / across the calls of the stranger.” There is, however, another, idiomatic, use of *tírah*, with the root $\sqrt{dhā}$ in the meaning ‘hide (oneself), disappear’. An example is found in the next hymn, IX.73.3 *mahāḥ samudrām vāruṇas tiró dadhe* “As great Varuṇa, (Soma) has hidden himself in the sea.” Another is found in conjunction with the word *duhitār-*, identified above as another example of daughter (of the Sun) by most (incl. Ge, Re): IX.97.47 *tíro várpāmsi duhitúr dádhānaḥ* “hiding himself in the forms of the daughter (of the Sun).” In that passage I identify the “forms of the daughter (of the Sun)” as the milk, so called because it is white and gleaming like the Sun; in other words, this is yet another version of the mixing of soma with milk. And I now further suggest that that is what we have here as well – that we should supply a form of $\sqrt{dhā}$ to produce the same idiom we find more clearly in the next hymn and in IX.97.47. The sticking point is then *rávam*: what does it mean to “hide himself in the *bellow* of the daughter of the Sun”? I would suggest that it is an example of standard RVic breviloquence as well as synaesthesia. The “bellow” refers to the characteristic sound of cows, who were already mentioned (*gāh*) in the preceding pāda, so the phrase “the bellow of the daughter of the Sun” collapses the sound and the visual appearance associated with the milk=cows. I would now tr. the hemistich “Not stopping, he goes beyond (the filter) toward the cows, hid(ing himself) in the dear “bellow” of the daughter of the Sun [=milk].”

There is comparatively little sensible to say about the hapax *vinamṛśá-*, though it is possible to indulge in speculation. Perhaps the only truly sensible thing to note is that it is a partial anagram of the patronymic of the poet (Harimanta) Āṅgīrasa: (*vin*)*amṛśa-*, and such phonological associations often drive the appearance of problematic forms. Sāy. glosses it *stotā* ‘praiser’ on the basis of context and a rather perfunctory stab at etymology. Ge renders it ‘arm’ on the basis of Naigh. 2.4 and, again, context: the mention of the fingers in the following pāda would support that interpr. But the word as we have it does not look analyzable acdg. to Indo-Aryan morphological structure: save for the initial *vi* there is no sign of internal structure, and segmenting the *vi* does not produce anything that looks promising on the surface. As Ge points out (*pace* Old), the context is erotic. The initial *ānu* certainly belongs with *jōṣam* in the standard idiom *ānu jōṣam* “according to (one’s) pleasure,” with unaccented *asmai* intervening in Wackernagel’s position. But with Ge (n. 3c) I would now also read it with *abharat* in the erotic idiom *ānu √bhr* ‘penetrate sexually, stick (one’s penis) in’, as discussed in my 1980 “A Vedic Sexual

Pun: *ástobhayat*, *anubhartrī*, and RV I.88.6” (*Acta Orientalia* 42) – though in that article (p. 59 n. 4) I more or less discounted this passage. Acdg. to this reading, *asmai* would be Soma and the recipient of the sexual act, while the *vinamgrśá-* is the sexual actor. As noted in the publ. intro., erotic contexts often contain slang and twisted expressions that we cannot access.

At this point we leave the realm of even shaky evidence and enter that of pure speculation. Although the word we have cited is *vinamgrśáh*, in its sandhi context it might also begin **dvi-*: *abharad vinamgrśáh* could be a degemination of *abharad* **dvinamgrśáh*, of the type I have recently discussed in several publications (esp. “False Segmentations and Resegmentations in the Rigveda: Geminatio and Degeminatio,” 2021, Fs. Pinault; also “Hidden in Plain Sight: Some Older Verbal Endings in the Rig Veda, 2019, Fs. Yoshida). There are no metrical implications. If we segment off *dvi-* ‘two, bi-’, *namg-* (*/ nanig-*) could be analyzed as a metathetic taboo deformation of *nagná-* ‘naked’, of a type that the ‘naked’ word has often received across Indo-Europea. A compd with the meaning ‘having two naked ...’ could refer to the arms of the presser (per Naigh. cited above, which cites *vinamgrsau* as a dual and glosses *bāhū*) or to the pressing stones, and the sexual act would be the violent pressing itself. (If there is anything to this, the phrase *nībāhubhyām coditáh* “driven by the two arms of men” in 5a might be a reparative paraphrase.) Even by this flight of fancy I cannot figure out what to do with *-rsa-*, whose lack of ruki is another peculiar, non-Indo-Aryan-looking feature. And just to throw in another off-the-wall suggestion, in my 1980 article I suggested that the *anubhartrī-* of I.88.6 was a veiled reference to the musical instrument, the *vīnā-*, and the beginning of our word *vinam(-grśa)-* could be a play on that. None of this is worth much, which is why I leave the word untransl.

Having pronounced the word uninterpretable, Re simply ignores it in his tr., though curiously provides a fem. subject, presumably the daughter of the Sun: “elle lui offrait ses charmes,” a tr. of extreme erotic delicacy.

IX.72.4–5: These two vss., in the center of the hymn, are constructed in parallel. To begin with, the post-caesura portion of 4d and 5b are identical: *pavate sóma indra te*. Both vss. also begin with a sequence of AGENT/INSTR. + past part. expressions: 4a has the compds *nī-dhūto ádri-sutáh*, while 5a has the analytic expressions *nībāhubhyām coditó dhārayā sutáh*, with the 1st member of the 1st phrase (*nī-*) and the 2nd ppl. (*sutá-*) repeated. The last of the phrases contains a non-agentive instr. *dhārayā* ‘in a stream’ that nonetheless fits the morphological template. The two vss. diverge otherwise, though the beginnings of 4c and 5c, *púram(dhivān)* and *āprāḥ* respectively have an etymological connection that would no doubt be clear to the audience. As noted in the publ. intro., no particular message seems to be conveyed by this omphalos-like structure, unless it is to put the abruptly addressed Indra in the center of the action. It is also the case that this is the first instance of $\sqrt{pū}$ ‘purify’ in the hymn, and the quintessential IXth Maṇḍala med. verb *pāvate* ‘purifies himself’ appears in these two matching phrases and in vss. 7–9 (7d *pavate*, 8a *pavasva*, 9d *pavamāna*).

IX.72.4: Although both Ge and Re tr. *-dhūta-* as ‘shaken’, I prefer the more technical soma-ritual sense ‘rinse’. On $\sqrt{dhāv}$ ($\infty \sqrt{dhav}$ $\infty \sqrt{dhū}$) ‘rinse’ as a semantic

specialization of the same root meaning ‘shake’, see EWA s.v. *DHAV*¹, Gotō [1st Cl. 186–89]). This root complex is distinct from $\sqrt{dhā}v$ ‘run’. See further ad vs. 8 below.

Both Ge and Re take *pradīvaḥ* with what precedes; this is entirely possible and impossible to determine. Not much rests on it.

IX.72.5: On 3rd sg. *ajais* and its AV replacements, see Narten (Sig.Aor. 119–20).

IX.72.6: There is a sharp split of opinion on the grammatical identity of *punarbhūvaḥ*. Gr, Scar (361), and the publ. tr. – as well as, probably, Ge (his “immer aufs neue” is not totally clear) – take it as a nom. pl. fem. with the cows and the thoughts; Re and Lü (224–25), the latter cited verbatim by Ober (II.149), as gen. sg. masc. dependent on *sādane* and referring to Soma. Not surprisingly Lü is esp. adamant and sees the whole vs. as a depiction of Soma’s “Aufstieg in den Himmel,” where he is reborn. I am open to either grammatical analysis. The word order might favor the dependence on immed. preceding *sādane* and thus the gen. sg. interpr. On the other hand, the two other attestations of *punarbhū-* are fem. (though neither is pl.), and in conjunction with *saṃyātaḥ* ‘in uninterrupted array’, it could describe the constantly new, but always similar, sequence of milk-mixtures and hymns in the soma ritual. However, it is possible to adopt the gen. sg. interpr. without subscribing to the journey to heaven: Soma can be considered reborn or regenerated because the pressing has rendered a new substance from the plant. I would therefore entertain an alt. tr. “The cows and thoughts ... go together to him in the womb of truth, in the seat of the regenerated (soma),” though I favor the fem. pl.

IX.72.7: The first pāda gives a classic description of Soma as a pillar reaching from earth (specifically the ritual ground) to heaven, as the support of the latter.

In d *cāru* is probably adverbial, although, since *cāru* in the gen. appears four times with *amṛtasya* ‘(drink of) immortality’, it’s possible that we should supply neut. *amṛtam* here and tr. “purifies himself (as the drink of immortality) dear to the heart.”

IX.72.8: This is the first time in the hymn that Soma appears in the 2nd ps.; the previous 2nd ps. address was to Indra (4d, 5d). It is also the first appearance of the 1st ps. ‘we’ of the human worshippers.

The nasal pres. *dhūnoti* is generally considered to express only the ‘shake’ meaning of the root complex $\sqrt{dhā}v$ ($\infty \sqrt{dhav} \infty \sqrt{dhū}$), on which see comm. ad vs. 4 above, while *dhāvati* is considered the only pres. to ‘rinse’. Therefore the pres. part. *ādhūnvaté* should mean ‘shaker’ here. Gotō (187) seems to see in this passage a sort of play on words with *-dhūta-* in 4a, tr. “dem Preisenden und dem ‘Schüttelnden’ hilfreich seiend,” with ‘shaker’ in quotes. But I think the nasal pres. was available in a context like this to express the specialized ‘rinse’ sense; I find it difficult to believe that *-dhūta-* in 4a and *ādhūnvaté* here are meant to belong to different roots, esp. since they both refer to humans’ ritual activity in preparing soma. Note that this is the only form of *dhūnoti* that appears with *ā*, which is the standard preverb with *dhāvati* ‘rinses’. The preverb here may be participating in a type of repair: the compd. in 4a *nī-dūta-* does not have the preverb, quite possibly because **nrādhūta-* by losing the syllabic quality of its 1st member would be hard to parse and lose the symmetry with *nībāhubhyām* in 5a. The nasal pres. may

have been used here so the root syllables of the two forms could be matched (*dhū*) and also to avoid confusion with *dhāvati* ‘runs, streams’, which is quite common in IX.

IX.73

On the key to this hymn, see publ. intro. Old argues that it is a hymn for rain, but I don’t see that (nor does Ge), despite the presence of Varuṇa. Both Ge and Old properly remark on the repeated phrase *sām asvaran*.

IX.73.1: As noted in the publ. intro., I consider it significant that the repeated phrase *sām asvaran* never has an overt subject, allowing for double ref.: the soma streams roaring as they cross the filter and the priest-poets accompanying this journey with hymns. I therefore would reject the various subjects supplied here by various tr.

I interpr. *drapsāsya dhāmataḥ* as a species of gen. absol., though it could be dependent on one of the implicit subjects of the verb, namely the soma streams.

I am not entirely sure what b is telling us. In the immediately preceding hymn (IX.72.6) as well as elsewhere in IX, the “womb of truth” (*ṛtāsya yóni-*) is the place where the soma and the milk mix; the verb *sām aranta* “have joined together” invites us to interpr. this as expressing that mixture here as well. If so, then what are the “ties of lineage” (*nābhayah*)? I would tentatively suggest that it refers to the ultimate kinship of cow and bull (that is, of milk and soma). This may be supported by a passage in the next hymn, IX.74.4, where soma, after this mixture, is referred to as “the navel of truth” (*ṛtāsya nābhiḥ*). It is also possible that it’s a reference to the unexpressed double subject that “sounded in unison” in the preceding pāda – that is, the roaring soma streams and the singing poets. Their “ties of lineage” would be based on their joint vocalization, and they meet and join together on the part of the ritual ground where the soma is readied for offering to the gods. Others of course have different opinions: for Ge it’s gods and men, for Lü (234–35, fld. by Re) the heavenly and earthly soma.

In c, acdg. to Ge and Re, the *ásura* created (*cakre*) for himself three heads, either (Ge; see also WEHale 79) so he could seize the soma (probably; see Ge’s n. 1 cd) or (Re) so he could be more easily seized. By contrast, I interpr. *cakra ārabhe* as a periphrastic caus.: “made/caused his three heads to be seized,” with the *ásura-* = Soma, as also in the next hymn, IX.74.7; note also his *asuryām vāṇam* in nearby IX.71.2. It would help, of course, to know what the “three heads” are, but I suggest that since *mūrdhán-* is often a ‘peak’, it may be the same as Soma’s three backs (see the bahuvr. *tripṛsthá-* twice nearby in IX.71.7 and 75.3). As for these expressions of triplication, see the speculations ad IX.70.8. Whatever the identity of the heads, I think the point is that, after the various stages of preparation, Soma is making himself available for ritual use, allowing himself to be “seized” and distributed into the cups. This interpr. is supported by 3d, which contains the acc. inf. *ārabham*, matching *ārabhe* here.

In d note *satyāsya* opening the pāda, which contrasts with *ṛtāsya* in the same position in b. Although I am given pause by IX.89.2 *ṛtāsya nāvam* (like our *satyāsya nāvah*), I think the two genitives must be interpr. differently. I suggest that it is Soma who is *satyá-* here: ‘trusty’ as in the publ. tr., or even ‘really present’, referring to the prepared soma on the ritual ground. Sāy’s notion that the boats are the soma cups is quite plausible, though Ge (n. 1d) prefers the hymns.

IX.73.2–4: Ge considers these vss. “doppelsinnig,” with ref. both to the priest-poets and the soma juices. This seems quite reasonable, and his individual notes are worth the attention.

IX.73.2–3: The three even-numbered pādas 2d, 3b, 3d all end with an augmented 3rd pl. redupl. aorist: *apīparan*, *avīvipan*, and *avīvrdhan* respectively.

IX.73.2: As Ge (n. 2a) points out *ahēṣata* can be either transitive (‘have propelled [soma]’) or intransitive/passive (‘have surged / been propelled’); both usages are paralleled in IX – see the passages cited by Ge. Moreover, as he also points out (and see again his cited passages), *mahiṣā-* ‘buffalo’ can refer either to soma or to the priests. Thus, to spell out the two senses: “the buffalos [=soma streams] have been propelled / the buffalos [=priests] have propelled (the soma).” The choice of both a noun subject and a verb form that allow double interpr. is unlikely to be accidental, esp. in this hymn of floating reference.

In b the subj. *venā-* can elsewhere refer either to soma (though usually in the sg.) or to priest-poets; see comm. ad VIII.100.5. The unexpressed element in the pāda is the obj. of *avīvipan* ‘have set atremble’. Both speech and soma (streams) are appropriate objects. If soma (streams) are the referent of the subject *venāḥ*, then speech is likely the object. Cf. IX.96.7 *prāvīvipad vācā ūrmīm nā sīndhur, gīraḥ sōmaḥ* “Like a river its wave, self-purifying Soma has sent the wave of speech, the hymns, pulsing forth.” If the priests are the subject, then soma is most likely the obj. Although there are no transitive forms of \sqrt{vip} that take soma as obj., note that in nearby IX.71.3 soma is the subj. of the intrans. *vēpate* ‘he trembles’.

In the 2nd hemistich again the unexpressed subj. can be priest-poets or soma streams. Both can “give birth to chant” – the priest-poets directly, soma by inspiring ritual speech -- and both can strengthen Indra’s body.

As Ge (n. 2c) appositely points out, *arkā-* can refer to the roar of the rushing soma, but it can of course also refer to the hymns of the poets. In c pāda-final *íd* seems relatively functionless: “just the chant / the chant alone” does not seem to add to the sense – unless it somehow underscores the double reading just suggested. Perhaps it’s simply there to convert a putative Triṣṭubh cadence to a Jagatī.

IX.73.3: Again, the subject of the verb in pāda a is unexpressed. On the basis of *pavītravant-* ‘provided with the filter’, one might expect that the referent is the ritual officiants, but note that the other occurrence of this -*vant-* stem in IX, at IX.101.4, modifies *sōmāḥ*. Again, I think both readings are meant.

On *tiró dadhe* see comm. ad IX.72.3. Though Ge and Old take it as transitive (Ge “... hat den Ozean verborgen (?)”), Re and Lü (268) interpr. it as reflexive ‘hid himself in x’, correctly in my view; Old explicitly rejects the reflexive interpr., but the middle voice makes this the more likely one. Old is motivated by his unconvincing interpr. of the hymn as a rain charm. In the ritual context the “hiding” refers to the post-pressing mixing of soma with water: the soma disappears into it.

In d *śekuḥ ... ārabham* “they have been able to seize” responds to 1c *cakra ārabhe* “caused to be seized.” Their connection would have been clearer in the publ. tr. if they were tr. with identical renderings of $\tilde{a}\sqrt{rabh}$, rather than “to take hold of” here. I would

therefore emend the tr. to “have been able to seize.” The questions then are what is the referent of *dharúṇeṣu* and how does it relate to *ārábham*? In the flanking hymns, IX.72.7 and 74.2 sg. *dharúṇa-* is the soma itself. I am inclined to take the pl. here as referring to the soma configured in parts – in particular to the ‘heads’ of 1c, which soma caused to be seized (by my interpr.). The shared verb *ā√rabh* certainly encourages this identification. The point would be that only the insightful know how to separate soma from the cleansing waters. This interpr. requires that *ā√rabh* can take a loc. of what is grasped, in addition to the more common acc. (as in 1c). For a passage with such a loc. see I.168.3 and comm. thereto. By contrast Ge takes the *dharúṇa-* not as parts of soma but as instruments in which to seize him, namely the soma cups (n. 3d; apparently fld. by Lü [268]). The use of the stem *dharúṇa-* in the sg. to refer to soma makes his interpr. difficult to sustain.

IX.73.4–5: See comm. on IX.41.1–2 on the similarity of phraseology in these two pairs of vss. These vss. usher in the use of ritual speech against a variety of enemies.

IX.73.4: The first hemistich seems clearly (at least to me) to contrast the ritual soma streams on earth (a) with those in heaven (b), though curiously it does not seem to have caught Lü’s attention. That pl. *asaścátāḥ* elsewhere (IX.57.1, 62.28) explicitly modifies *dhāráḥ* ‘streams’ makes that identification in b quite likely. See also IX.74.6 in the next hymn, with similar phraseology, where ‘streams’ is also the likely referent of *asaścátāḥ*, and at least one reading involves a contrast between earthly and heavenly soma.

As pointed out also by Ge and Re, the mention of spies in c extends the Varuṇa identification from the preceding vs.

The binding snares in d are surely the curls of the sheep’s wool of the filter that can obstruct the progress of the liquid.

IX.73.5–6: These two vss., almost in the center of the hymn, have a similar structure. Their first pādas are nearly identical: ABL ABL *ádhy ā yé samásvaran* “Those who sounded in unison from X X.” The second pādas simply further describe the unspecified subject of the first pādas, while their second hemistichs present what happens to evil beings as a result of the sounding in unison of the first. See also Old on the symmetry of the vss. and how this affects their interpr.

IX.73.5: With Sāy. and Re but contra Ge, I consider the father and mother of pāda a to be Heaven and Earth, matching that same pair in d. The reference is to the earthly and heavenly soma of 4a and b, which “sound in unison,” though also including the priest-poets, as disc. in the publ. intro. They marshall their joint power, embodied in the *māyā* associated with Varuṇa, against those “without commandments” (*avratān*); *vratā-* are of course esp. associated with Varuṇa, and by virtue of their presence in both heaven and earth can banish enemies from both places.

Note the return of *√dham* ‘blow’ from 1a. In its earlier occurrence this root simply expressed the action of the drop (*drapsāsya dhámataḥ*), but here the verb has been weaponized, as it were, against enemies.

IX.73.6: Ge interpr. *māna-* as “Tonweise” and then imposes a musical-mode interpr. on the whole 1st hemistich, an interpr. that infects Re as well. With Old I find this “zweifelhaft.” In the publ. tr. it is rendered ‘edifice’; for *māna-* as some sort of building see VII.88.5, where JPB tr. ‘mansion’. Because of the structural parallelism with 5a (see comm. above), I would prefer that this abl. phrase refer to a place. The “ancient edifice” can be both soma’s seat in heaven and the place, or seat, on the ritual ground where soma mixes with the milk and the priest-poets sing their hymns. For a similar phrase see I.107.5 *pratnām sadhāstham āsadat* “he [=Soma] has taken his ancient seat.”

As for *ślōka-yantra-*, in my view it simply expresses the fact that sound – both the sound of the soma streams and the sound of the hymns of the priest-poets – guides and accompanies the soma along the journey of its preparation.

I am less certain about what to do with *rabhasāsyā mātavaḥ*, in part because the exact nuance of the fairly rare word *māntu-* is not clear. (Old’s disc. here seems off the point.) Although in cmpds (*sumāntu-*, etc.) it seems to have the quasi-infinitival sense ‘... to think about / contemplate’ (see AiG II.2.663), as a free-standing noun it generally is glossed as ‘counsel, counselor’ corresponding to Old Avestan *mantu-* (e.g., Gr, AiG II.2.663). This works reasonably well for *mātavaḥ* in X.63.8 (All Gods), but the other two passages containing *māntu-* (I.152.1, X.32.4) are too obscure to shed any light – though ‘counsel, counselor’ is not entirely excluded. The poss. deriv. *mantumant* (3x, always voc., never accented) is compatible with a sense ‘possessing (wise) counsel’ in all three passages (esp. VI.56.4), though the case is not overwhelming, given the semantic independence of vocatives. Since *rabhasā-* is elsewhere used of the pressed soma drinks (I.82.6 *sutāso rabhasāḥ*), I take sg. *rabhasāsyā* as referring to soma here as well, but this leads to a possible contradiction: if the soma streams are one of the subjects of *ā ... samāsvaran*, then how can they be counselors of themselves / -ves? The phrase would work better if it applied only to the priest-poets who form the other part of the subject of the verb. Since *ślōkayantra-* also works better if it applies only to one part of the subject, namely the soma streams, I now think that pāda b involves a non-overtly conjoined NP: “those with a signalling call for their reins [=soma streams] (and) the counselors [=priest=poets] of the wild one [=Soma].” I would therefore emend the tr. to what was just suggested. This is the closest we have come to specifying who the subj. of the repeated verb is, though both NPs are so opaque that nothing much is given away.

IX.73.7: The first hemistich now begins to solve the riddle of the double reference, by situating the poets in (or at) the filter, purifying their speech like the soma streams that cross the filter.

I do not know why the Maruts appear here, esp. as spies – quite distinct from Varuṇa’s spies in 4c, as Ge (n. 7d) also asserts. Ge’s explanation for bringing in the Maruts is dependent on his musical mode interpr. of vs. 6 and therefore not helpful.

I would change the tr. of *svāñcaḥ* in d to “of lovely outlook” (from “well directed”). See comm. ad VI.15.10.

IX.73.8: The subject here is of course Soma, though tricked out with Varuṇian vocabulary (see, e.g., Lü 402–3).

It is not clear what the three filters (*trī ... pavitrā*) are; the phrase recurs in IX.97.55 with equal lack of clarity – though there all three don’t have to be fitted into the

heart. The three filters here recall the three heads of 1c, though I do not think the referents are the same.

IX.73.9: As noted in the publ. intro., this vs., esp. its first hemistich, provides the solution to the implicit riddle of the hymn, by associating “the thread of truth” (*ṛtásya tántuḥ*) both with the filter and therefore the soma streams on their ritual journey and with the tongue tip and therefore the priest-poets’ hymns. See disc. there. Note also that *ṛtásya tántuḥ* forms a slight ring with *ṛtásya yónā* in 1b.

The vs. is very similar to IX.83.1, a mystical hymn also treating the filter and attributed to the same poet.

*pavítram te vítatam brahmaṇas pate, prabhúr gātrāṇi páry eṣi víśvátaḥ
átaptatanūr ná tá āmó aśnute, śṛtāso íd váhantas tát sám āśata*

The filter is outstretched for you, o lord of the sacred formulation. Advancing,
you circle around its limbs on all sides.

A raw one, with unheated body, does not attain it [=filter]; only the cooked ones,
driving along, have attained it entirely.

Note esp. *pavítram ... vítatam* matching our *vítataḥ pavítra ā*, *prabhúr* matching our *áprabhuh*, and the emphasis on attainment, *ná ... aśnute, ... sám āśata*, matching our *anínakṣanta āśata*. For further disc. see also the publ. intro. to IX.83.

In d *padāti* must be a double marked subjunctive to the root aor, which is otherwise only middle. The model for its creation is not clear to me.

IX.74

Curiously, a much translated hymn, found in Doniger 121–24, Maurer 85–88, despite its difficulties.

IX.74.1: Contra the standard tr. (Ge, Re, Lü [265], Doniger, Maurer), I take b with c, not with a, since the logical relation between a and b is weak and there are two ostensibly different subjects, while c follows from b. In b Soma, configured as a racehorse, seeks to win the sun, which in its brightness is the cosmic equivalent of the milk that is the goal of the ritual soma’s journey (see also IX.76.2). In c he “keeps company with” (*sacate*) the semen of heaven (*dívó rétasā*). On the cosmic plane this is the rain; in the ritual it is the water with which the soma is mixed after filtering and before the mixing with milk – though here the two acts of mixture, with water and with milk, may be conflated, with rain/mixing water referred to as *payovídh-* ‘milk-strong’. For a slightly clearer passage see IX.84.5. The fact that the verbs of b and c, *síṣāsati* and *sacate*, recur in the climactic vs. 7 (see below) supports my view of the structure of this vs.

In d most tr. take *sumatí* as ours (e.g., Doniger “with kind thoughts we pray ...”), whereas I assign it to Soma. In general *sumatí-* can belong either to mortals or to gods, and very little is at stake here – though I still favor my interpr.

IX.74.2: The soma plant as pillar connecting heaven and earth and filling the midspace (ab) gives way to the plant as sacrificer (c)—an abrupt conceptual transition somewhat jarring to modern sensibilities.

In b Re supplies both the world and the filter as complement to *paryéti*. This seems reasonable, though the verb would have slightly different senses: “encompass (the world)” / “circle around (the filter).” I would now favor making this explicit in the tr.

The standard tr. take *āvītā* as instr., with a variety of interpr.: Ge “nach dem Herkommen” (sim. Scar 509), Re “par le processus-rituel” (sim. Maurer), Doniger “by tradition.” I take it rather as a fem. du. modifying *ródasī* (so Gr Nachtr.).

Pāda d contains the only ex. of *sām √ dhṛ* in the RV (and one of the few in Vedic). I would now be inclined to give it a more literal tr.: “the poet holds together ...” The poet in this case is of course Soma.

IX.74.3: Pāda b is problematic, and it shares some of its difficulties with IX.69.3, which ends identically: *āditer ṛtām yaté*. See comm. ad loc. In both cases the standard tr. (incl. my publ. tr.) take *āditeḥ* with what precedes, despite its being in the repeated phrase. The other problem is the referent of the dat. part. in the phrase *ṛtām yaté*. Is it Soma, as Ge (and the publ. tr.; also probably Maurer) take it, or the mortal worshiper (Re, flg. Lü; Doniger)? Determining this depends in part on deciding what “the wide pasture-land of Aditi” means. It is possible that it refers to the expanse on the ritual ground between the filter and the place where the soma meets the milk, in which case *ṛtām yaté* could refer to the soma traversing this expanse, as in the publ. tr. However, in the other two passages containing *gávyūti-* in IX (IX.78.5, 85.8), “wide pastureland” is the reward for mortals. See esp. IX.78.5 *urvīm gávyūtim ābhayaṃ ca nas kṛdhi* “make wide pasturage and fearlessness for us.” In the other passage, IX.85.8, the phrase occurs with *sárma sapráthaḥ* “extensive shelter/protection,” which is found exactly in our vs. 1d. I therefore now inclined to think that this pāda concerns the mortal worshiper – *but* this causes problems with the 2nd hemistich, which consists only of two rel. clauses, whose referent must be Soma. If *ṛtām yaté* does not refer to Soma, there is no antecedent in the first hemistich (or in the following vs.) for the double *yáh* of c and d. Re gets out of this by supplying “(C’est le *soma*),” which does the trick but contravenes the apparent structure of the vs.; Doniger simply tr. part of d as a main cl. I find myself torn and take refuge, as often, in double reading – suggesting that at least one referent of *ṛtām yaté* is Soma, and therefore there is at least a partial antecedent for the *yáh*-s of cd.

While fiddling with pāda b, I also wondered if we should take the pattern of repetition seriously and construe *āditeḥ* with what follows, rather than what precedes. Although *urvī- gávyūti-* is found several times elsewhere – in addition to here and the two passages in IX just cited, also V.66.3, VII.77.4 – it is nowhere else associated with Aditi. And Aditi, as mother of Varuṇa among others, is associated with *ṛtā-*, so “for him who goes to the truth of Aditi” would not be a jarring expression, though its exact sense is hard to pin down. I therefore suggest an alt. tr. “wide is the pasture-land for him who goes to the truth of Aditi.” See also IX.69.3.

As multiple comm. have remarked, Soma is both associated cosmically with rain and in the ritual preparation drips like rain from the press and off the filter.

All the standard tr. render *itāūtīḥ* with the older, now obsolete tr. ‘helping from here’ vel sim., rather than ‘eternal, ageless’, on which see comm. ad VIII.99.7 and EWA s.v. However, in this passage it certainly plays off *itáh* ‘from here’ in the previous pāda in the same metrical position; note the pattern c *itá u(sr)í(yo)* / d *itāū(t)i(r)*, with the vowels

ũ ... i replicating the 2nd half of the word. This pattern is also anticipated by (*gávy*)*ūtīr* in b (though in a different metrical slot).

IX.74.4: This vs. sets out the identification between soma and rain most clearly (which is, nonetheless, not all that clear). In pāda a the “embodied cloud” (*ātmanván nábhaḥ*) is, on the one hand, a cloud, which produces rain (called ghee and milk); on the other, it must refer to something from which soma (called ghee and milk) is produced – most likely the soma plant, with Ge (n. 4). The milk (*páyah*) here seems not to refer to the actual milk mixture.

The word *ātmanvánt-*, which I render ‘embodied’ (others ‘living, breathing’), is found only three times in the RV, once in another Kakṣīvant hymn (I.116.3 to the Aśvins) and once in another Aśvin hymn, I.182.5. In both those passages it refers to a boat, and I suggest ad I.182.5 that this describes a boat with a cockpit, a substantial body. Here it would indicate that the cloud had enough substance (“body,” as in the Engl. metaphor) to yield significant amounts of liquid, and it may also sketch the rounded contours of a cloud.

In b, with most, I take soma to be the referent of *ṛtásya nābhiḥ*. See comm. ad IX.73.1.

The subj. of cd are in the first instance the priests, but in d esp. there is a double reading, with the Maruts pissing rain, as the priests “piss” down streams of soma by their ritual activity.

On *péru-* see EWA s.v.; ‘swelling’ is based on Lü, Phil.Ind. 751ff. -- see reff. in EWA.

IX.74.5: A variety of identifications have been suggested for the various elements in this vs. See the various tr.

In pāda a *sācamāna ūrmīṇā* “keeping company with the wave” echoes 1c *divó rétasā sacate* “keeps company with the semen of heaven,” though here the presence of the subj. *aṃśúḥ* ‘plant’ seems to anchor the expression to the ritual, without cosmic dimensions. In the ritual realm it probably refers to a slightly different part of the ritual from the one depicted in 1c, despite the presence of water in both cases. There it most likely referred to the mixing of the soma juice with water, after the pressing. Here because of *aṃśúḥ* I think it refers to the initial soaking of the plant before pressing. This is supported by b, where it, namely the soaking water, swells the skin (*pínvatī tvácām*) – the skin being, in my view, the outer surface of the plant. The adj. *devāvī-* modifying ‘skin’ usually modifies soma itself (see Scar 498), referring to the juice’s journey after pressing to the place where it will be offered to the gods. Here the various moments in the ritual are collapsed: it is not the skin, but the juice pressed from the skin, that seeks the gods.

However, in b the skin may also be the waterskin=cloud from which rain is produced (see, e.g., V.83.7) and in that case the plant of a could also be a cloud, roaring with thunder.

The 2nd hemistich is bookended by verb forms of $\sqrt{dhā}$: #*dádhāti ... dhāmahe*#. This etymological connection cannot easily be captured in English because each verb has an idiomatic sense: the first for the setting of an embryo, i.e., impregnation; the 2nd in the middle in the sense of ‘acquire’. Both ritual and cosmic readings are available here.

It is not clear to me whether Aditi here has any meaningful connection with the Aditi in 3b or is simply a reference to the ritual ground.

IX.74.6: The first pāda, *sahāsradhārē ‘va tāḥ asaścatāḥ* is an abbreviated version of IX.73.4ab *sahāsradhārē ‘va té sām asvaran, ... aśaścatāḥ*. As in that vs. the earthly soma streams in the filter (a) are contrasted with (b) those in heaven (“the third realm” *ṛtīye ... rājasi*, comparable to 73.4b *divó nāke*), though the latter are also probably rain.

The interpr. of the 2nd hemistich is complicated by the unclear hapax *nābhah* in c. Numerous suggestions have been made about its meaning: clouds (von Schröder, etc.; see Schindler), openings (Old, fld. by Maurer), teats (Ge), spurts (Re), springs (Lü 285, Doniger); for disc. see Schindler, Rt Nouns, s.v. *nābh-* and EWA s.v. *NABH*. Before focusing on the sense, it’s useful to observe that *nābh* is a favorite phonological configuration for this poet: see nearly matching 4a *nābho*, in the same metrical position as our *nābho*, as well as 4b *nābhīr* likewise in that position. We can also, at least in my view, eliminate the supposed root noun *nābh-* in I.174.8 from consideration and potential connection, since I take *nābhah* there as a verb form. See comm. ad loc. With many (e.g., tentatively EWA), I connect *nābhah* here with the root \sqrt{nabh} ‘burst’, and suggest that it has the adjectival sense ‘bursting’; the underlying noun subject is surely ‘streams’ again, referring to both the heavenly soma and the rain. The union of those two with the earthly soma is described in d. Why “four” is not entirely clear. Our passage might be illuminated by IX.89.5 *cātasra īm ghṛtadūhaḥ sacante* “four, yielding ghee as their milk, accompany him” if there is any illumination to be gotten from that passage. Cf. also I.62.6, VIII.100.10, both with fem. ‘four’ and varieties of liquid nourishment. The most likely explanation for the “four” is suggested by Ge’s tr. of *nābhah* as “Zitzen(?)” (see also his n. 6c). Although I do not think that *nābh-* means ‘teat’ directly, I think the number four suggests that the streams here are likened to them: cows generally have four teats.

Another similarity between this passage and IX.89.5 leads me to alter the publ. tr. here. The four in our passage are *nīhitāḥ* ($nī\sqrt{dhā}$), which, with Re, I tr. “hidden.” But this ppl. is paralleled in IX.89.5 by the fuller phrase *samānē antār dharūṇe nīṣattāḥ* “set down within the same support,” with an almost synonymous ppl. cmpd *nī-ṣatta-*: $nī\sqrt{sad}$, also characterizing the four. There I take *nīṣatta-* in its literal sense and suggest that the “same support” might be the udder itself. I now wonder if *nīhitāḥ* should also be taken literally here and mean “the four, deposited (in the udder), bursting ...”

IX.74.7–8: These two vss. seem to resolve the situation set up in vs. 1, esp. 1bc: the racehorse that was striving to win the sun (=milk) there (1b) has achieved this goal and “keeps company” with ritual speech and labor, as it did in 1c (and 5a) with more physical features of the ritual process. The repetition of the desid. *sīṣāsati* from 1b in 7a and the resolution of the desid. into an achieved state via a pf. part. *sasavān* (8b) signal the relationship between vss. 1 and 7–8 – as does the repetition of *sacate* from 1c (/sācamānaḥ 5a) in 7c.

IX.74.7: As just noted, *yāt sīṣāsati* is identical to *yād ... sīṣāsati* in 1b, and *śvetām rūpām* “white form” seems the equivalent of *svār* ‘sun’, the obj. of *sīṣāsati* in the earlier vs. – both referring to the milk mixture. It might be possible to take *yād* here as neut. rel. with

rūpām and tr. “he makes for himself the/a white form that he is striving to win,” although I’m not sure that’s an improvement. In any case, I think the point is that Soma has attained the milk he was striving for.

Pāda b seems something of a non sequitur, and it may be that *bhūman-*, which has a range of senses, should be tr. differently (Ge tr. Natur) – although in the preceding hymn, IX.73.5, in the phrase *bhūmano divás pári* it clearly means ‘earth’. Perhaps it contrasts with *diváh* in d and should be tr. “Soma ... knows the earth” – the point being that the earthly Soma is fulfilling his ritual tasks, which will enable him to make contact with the heavenly soma and bring it as rain from heaven in d. Note that this is the first time that the word *sóma-* appears in the hymn, and the only occurrence outside of the extra-hymnic vs. 9.

As just noted, *sacate* reprises the same verb in 1c and its equivalent participle in 5a *sácamānah*. In both those cases soma was “keeping company” with a physical element of the ritual, namely water. Here the instr. express the human activity in the sacrifice: *dhī-* ‘insight’, perhaps better here ‘insightful/visionary thought’ – that is the hymn – and *śámī-* ‘ritual labor’. This acknowledgement of the human contribution to the soma sacrifice is also found in the next vs.; otherwise it is absent from the hymn, except passingly and enigmatically noted in 4cd. Through most of the hymn Soma is presented as the only actor and agent of the ritual.

The problem in this pāda is *pravát*, which has received various analyses. See esp. the possibilities laid out by Old, as well as the nn. of Ge and Re. Of the choices, I prefer the nom. sg. Since the stem *pravát-* is fem. this requires reading *sā / īm* against Pp *sāḥ / īm*, but this actually improves the reading, since with the masc. prn. we would expect *sā īm* in the Saṃhitā text (cf., e.g. IX.88.2). I take *sém abhí pravát* as a self-contained, almost parenthetical clause: it explains what precedes in the same pāda, namely that the hymns and physical ritual labor of the sacrificers are the way to approach Soma.

And this in turn will lead to his producing rain in d, by splitting open the cask of heaven. This “splitting” (*áva darṣat*) is perhaps thematically related to the “bursting” down from heaven (*nābhaḥ ... avó diváh*) in 6c, if that’s what *nābh-* means. It is difficult to render the *áva* in the lexeme *áva darṣat*, but *áva* is a Lieblingswort of this poet: see 1a, 4d, 6a, as well as *avāḥ* in 6c – all presumably in service of the “rain down from heaven” theme.

IX.74.8: This is the triumphant realization of the quest set in motion in vs. 1. The race horse (*vāḥ*) of 1b reappears here having won (*sasavān*) at the finish line (*kārṣman*) what it was seeking to win (*síṣāsati*) there – namely the milk, here given a very full expression: *śvetām* [recurring from 7a] *kalásam góbhīr aktām* “the gleaming white tub anointed with cows.”

This first hemistich plus pāda c is the actual end of the hymn, and so this successful resolution of vs. 1 provides a thematic ring. Pāda c reintroduces the human ritual personnel, who propel Soma in his guise as racehorse—thus allowing the priest-poets to take some credit for the successful conclusion of the sacrifice, after having been shut out for most of the hymn. Pāda d is a snatch of a dānastuti, and vs. 9 seems an afterthought tacked onto the hymn. Or such is my analysis; most of the other tr. attempt to link the second hemistich with the first, syntactically and thematically. Most radically Ge (fld. by Doniger), who makes d dependent on *sasavān* in b, with c a parenthetical

intrusion. Maurer, by contrast, makes d the obj. of c, which does less violence to the order of elements but is still, to my mind, unsatisfactory. Among other things soma is the usual object of \sqrt{hi} in IX, which contains multiple exx., and so making the cows (somehow) the object violates formulaic expectations. Cf. esp. IX.106.11 *hinvanti vājīnam*, with soma identified as a *vājīn* as here.

On *sasavān*, which should be read with a heavy root syllable, see comm. ad X.29.2.

It is easy to understand the attempts of others to link d with *something* else in the vs., because it consists only of a dative phrase (*kakṣīvate śatāhimāya*) and a gen. pl. (*gónām*). However, as I just remarked, this pāda seems to be an abbreviated dānastuti, with the dāna specified and no stuti given, but the poet and would-be recipient emphatically named. In such circumstances condensed phraseology is not surprising. Ge appositely cites as parallel I.126.2 *śatām kakṣīvān āsurasya gónām* “A hundred cows of the lord (have I,) Kakṣīvant, (taken).” In our passage the “hundred” is cleverly tucked into the adj. *śatāhima-*, which otherwise presumably expresses Kakṣīvant’s proleptic *wish* for a 100-year lifespan; it seems unlikely that he is already that old.

IX.74.9: As I just noted, this vs. seems to be an extra-hymnic afterthought and is stylistically and thematically detached from the rest of the hymn. It is the only one containing 2nd ps. reference, which is insistently carried here by four vocc. (a *soma*, b *pavamāna*, c *madintama*, d *pavamāna*), an enclitic prn. *te* (a), and an impv. (d *svādasva*). It also contains only the 2nd naming of soma (cf. 7b) and the only forms of the root $\sqrt{pū}$, as well as other standards of the somic lexicon (a *rāsa-*; b *āvyo vāram*, *vī√dhāv*; c \sqrt{mrj} , *madintama*; d *indrāya ... pītāye*). In other words, all the clichés – maddeningly absent from the rest of the hymn – are trotted out, like a global example of poetic repair, as if to say, “if you were too dim to figure it out, *this* is what it was about!” It is not possible to decide whether Kakṣīvant himself added this magic decoder ring or whether it was appended secondarily. IX.74 is the last of the 9-vs. trimeter hymns, so it could have originally been an 8-vs. hymn to which the clarifying vs. was added. The fact that vs. 8 is in Triṣṭubh in an otherwise Jagatī hymn might indirectly suggest that, since final vss. are sometimes in a different meter from the rest of their hymn and, if we remove vs. 9, vs. 8 would be the final vs., ending with Kakṣīvant’s plea for dāna. But it is certainly possible to imagine Kakṣīvant having his little joke by supplying the key to the hymn in an appendix vs.

IX.75–79

This next group of hymns is attributed to Kavi Bhārgava, also the poet of the Gāyatrī hymns IX.47–49. They are refreshingly free of the puzzles and contortions of the first set of trimeter hymns.

IX.75

IX.75.1: The opening *abhī priyāṇi pavate ... nāmāni* is reminiscent of IX.62.25=66.1=107.23 *pāvasva ... abhī vīśvāni kāvya* “purify yourself towards all products of poetic skill,” where in all cases I take the *abhī* ACC phrase as goal. See comm. ad IX.62.25. The point is that Soma in the course of his ritual preparation aims his

journey towards the place where the hymns are being recited – in this case the hymns mentioning his names and epithets. Like the other RVic gods (esp. Indra), Soma “grows strong” on praise. In contrast, Ge thinks that the “names” are “die Formen oder Phasen des zubereiteten Tranks”; sim. Lü (526) “Erscheinungsformen.” I don’t see why the physical needs to replace the verbal here, esp. given the emphasis on the verbal, and indeed on names, in the next vs.

On *cánohita*- see comm. ad III.2.2.

Properly speaking, *yahvāḥ* should be part of the main cl., in order for *yéśu* to take its proper place in the rel. cl. A slightly revised tr. would be “Delighted, the youthfully exuberant one purifies himself towards his own dear names, upon which he grows strong.”

The 2nd hemistich implicitly contrasts the heavenly soma with the earthly, ritual one of ab, as so often.

The adj. *vīcakṣanaḥ* ‘wide gazing’, characterizing Soma, is a partial match for acc. *vīṣvañcam* ‘facing in many directions’, used of the sun’s chariot.

IX.75.2: The publ. tr. contains a clear error — ‘father’ instead of ‘lord’, for *pātiḥ* in b — a regrettable lapse. It should be corrected to “speaker and lord,” and “father” in the publ. intro. should likewise be changed.

Old finds “tongue” as a descriptor of Soma “bizzarr,” but given how much emphasis is placed in IX on Soma’s noise-making capabilities and association with speech, I don’t see why. This vs. depicts Soma as the origin and controller of speech and name-giving, while in vs. 1 (ab) in complementary fashion he aims towards and is nourished by the names given him by others, or so I interpr. it.

As Ge points out, cd is (partially) illuminated by I.155.3cd, whose d pāda is identical to ours: *dādāhāti putró ávaram páram pitúr, nāma tṛtīyam ádhi rocané divāḥ* “The son [=Viṣṇu] sets in place the lower and the higher (names) of the father and the third name in the luminous realm of heaven.” In both cases the entities in question in the c pāda are surely Heaven and Earth (so for our passage both Ge [n. 2cd] and Re). The “luminous realm of heaven” must be the realm beyond the nearer sky; the “third realm” (*tṛtīye rājasi*) appears in the preceding hymn (IX.74.6), though the same geographical area may not be in question. In any case Soma’s ability to name these cosmic entities emphasizes his global mastery of speech, and the paradox of the son naming his parents makes the wonder all the greater.

IX.75.3: The same phrase *ṛtasya dohānāḥ* is found in I.144.3. In our passage I think it refers both to the cows=milk and to the poets.

On *tripṛṣṭhā*- see disc. ad IX.70.8, 71.7.

I take *vī rājati* with both ‘shine’ and ‘rule’.

IX.75.4: On *cánohita*- see comm. ad III.2.2.

In IX.98.9 Ge suggests that the world-halves (*ródasī*) are the jaws of the soma-press, which could account for their being called his mothers (*mātārā*) here.

On *samáyā* (*vī dhāvati*) see comm. ad I.113.10.

IX.75.5: Ge (n. 5c) insists that *āhanāso vīhāyasaḥ* is gen. sg. with *te*, rather than nom. pl. with *mādāḥ* (Gr, Re, publ. tr.). That is of course possible, but the difference is fairly minor whether the phrase modifies Soma or his exhilarating drinks.

IX.76

As noted in the publ. intro., the martial tone is reminiscent of that of another of Kavi Bhārgava's productions, IX.47, though there is little or no overlap in phraseology.

IX.76.1: On *pājas-* see comm. ad I.58.3. For a god making or assuming his *pājas-*, see, with medial forms of $\sqrt{kṛ}$, IV.4.1 *kṛṇuṣvā pājaḥ* (of Agni) as well as IX.88.5 *vṛthā pājāmsi kṛṇute nadīṣu*, identical to our passage except with a Triṣṭubh cadence, and, with $\tilde{a}\sqrt{dā}$, IX.68.3 *pāja ā dade*. Presumably in our passage and 88.5 it depicts the swelling of the soma stalks in the waters.

IX.76.2: The participial phrase *svāḥ sīśāsan* “striving to win the sun” is a match for *svāḥ yád ... sīśāsati* in nearby IX.74.1 “when he strives to win the sun” (also IX.7.4), where I suggest that the sun stands for the gleaming milk with which the Soma will unite at the end of his ritual journey. This association would be emphasized in our passage by *gāviṣṭiṣu* ‘in the cattle raids’, with cattle standing for milk, as usual. For further on sun=milk see comm. ad vs. 4.

As Ge points out (n. 2d, not reflected in his tr.), *ajyate* has a double sense, since it can be the passive both of \sqrt{aj} ‘drive’ and $\sqrt{añj}$ ‘anoint’. Both are appropriate here.

IX.76.3: The extreme dislocation of hemistich-initial *indrasya* from *jaṭharēṣu* on which it depends must result from the desire to match the initial *indrasya* of 2c.

The simile-marking particle *iva* is late here, since the simile must consist of *vidyūd abhréva*.

On the quasi-independence of *śásvataḥ* in the NP *vājān ... śásvataḥ* see comm. ad X.48.1.

IX.76.4: The hapax rt noun cmpd *ṛṣi-śāḥ* ‘vanquishing the seers’ (or, as Scar [600] suggests as an alternative, ‘unter den Ṛṣis siegreich’) is, on first glance, a surprising collocation, since we generally expect \sqrt{sah} to take more obvious enemies as object. Yet, of course, poetic competition is an important feature of RVic culture, and the rest of the vs. asserts Soma's dominance in this competition – esp. the final, decisive *āsamaṣṭa-kāvyah* ‘whose poetic skill is entirely unattainable’, but also his role as “father of thoughts” (*pītā matīnām*), and his ability to make “the vision of truth” (*ṛtāsya dhītīm*) bellow (presumably louder than the other ṛṣis can). The point of the cmpd might be clearer if tr. “vanquishing the (other) seers”; as Scar points out, Soma is elsewhere identified as *ṛṣi-*.

āsira- in c is a hapax. It is plausibly derived from \sqrt{as} ‘throw, shoot’: see, e.g., Gr., AiG II.2.361, as well as, more hesitantly, EWA s.v. *As*² — with a metaphorically transferred meaning ‘ray, beam’ < ‘missile, spear’; cf. Engl. ‘shaft’ for both shaft of a spear or similar weapon and shaft of light. Say. glosses it first with *kṣepakeṇa* to $\sqrt{kṣip}$ ‘throw’ and then with *raśminā*, the more usual (also metaphorically transferred) word for the sun's rays. Gr's gloss combines the literal and the transferred sense in

‘Strahlengeschoss’, while Ge (“Strahl”) and Re (“rayon”) render only the transferred sense. Mayrhofer (EWA 144–45) is more tentative: he questions the connection of the word to the ‘throw’ root, and his gloss also expresses doubt about the transferred meaning: “‘Strahl’ (<‘*Geschoss’ [der Sonne]?).” On both etymological and contextual grounds – what does it mean to “be groomed by the lance/ray of the sun”? – it is worth asking what this hapax is doing here. Acdg to Lü (704), the sun is the heavenly *pavitra-* and so naturally its beam(s) would perform the purification of soma. Although I agree that the sun can sometimes be equated with the filter (see, e.g., IX.83.2), I doubt if that’s what’s going on here. For one thing, the root \sqrt{mrj} is not generally used for purification across the filter (though it can be; cf. e.g., IX.86.6, 107.11), but refers rather to the ritual operations involving water (esp.) and milk; cf., e.g., IX.68.9 *adbhir góbbhir mrjyate* “he is groomed with waters, with cows.” Moreover, the parallelism with *raśmí-* is not as exact as is implied; most importantly *raśmí-* is almost always plural, whereas our form is sg., and soma is never “groomed” with/by even pl. *raśmíbhiḥ*.

Bearing in mind that I interpret “seeking to win the sun” in 2b as expressing Soma’s intention to unite with the milk mixture (metaphorically the sun), as well as the fact that \sqrt{mrj} ‘groom’ can be construed with an instr. referring to the waters and milk used to prepare the soma, we can now consider a different interpr. of *sūryasyāsireṇa*. It does not depict the sun’s (single) ray as filter, but the “sun’s shaft” (or even “sun’s shot”) as the milk infused into the soma – referring either to the sun’s light (‘shaft’) as gleaming milk or the infusing itself (‘shot’). The latter would have the merit of requiring fewer semantic steps by simply using the literal meaning of the root in an extended sense; cf. English ‘shot’ used of a small amount of usually powerful liquid, generally alcohol, also (for slightly different reasons) used of espresso. Once this interpr. is considered, the reason for the creation of the hapax becomes apparent (at least to me). The technical term for the milk mixture is *āśír-* (see nearby IX.75.5); our *ásir-* is phonologically very close, and I would suggest that it was created as a pun on the standard term. In fact the phonology might be closer still: the Samhitā text reads *sūryasyāsireṇa*, which is resolved by the Pp. into *sūryasya ásireṇa* (the extra syllable is metrically necessary); **āsireṇa* would also be possible. However, unfortunately I think this latter reading unlikely because it would convert the standard break after late caesura, two light syllables, into a far less common one with heavy - light. Another factor that may have contributed to the creation of this hapax is the presence of *ṛṣi(-ṣāḍ)* in the same metrical position in the preceding pāda, with *ṛṣi-* a scrambling of *ásir-*.

Not much changes in the tr., though I would now emend it to “He who is groomed by a “shot” [a shaft] of the sun [=milk] ...” However, this analysis shows once again that when encountering a hapax we should not just seek a plausible meaning and a plausible etymology, but try to figure out *why* the hapax was introduced in the passage, which often opens the way to better understanding of the other two questions.

IX.76.5: The *sá* in c with 2nd ps. reference (*sá ... pavase*) violates the rule that such reference is found only with imperatives. (See my “Vedic ‘sá figé’: An inherited sentence connective?,” *Historische Sprachforschung* 105 [1992] 213–39.) I think it likely that it has been modeled on the numerous *sá (...) pavaśva* exx. in IX (15 by my count, e.g., nearby IX.72.8=107.24); an imperative would in fact work better with the *yáthā* purpose cl. in d. The indic. *pavase* may have been substituted because **pavaśva* would produce a

very abnormal break. An almost identical pāda is found in IX.97.32 *sá índrāya pavase matsarāvān*, inexpertly adapted to Triṣṭubh (note the bad cadence [though see comm. ad loc.]).

The splv. *matsaríntama-* is somewhat oddly formed, with the possessive suffix *-ín-* added to an adj., with no change in sense. The stem occurs 4x (once in a repeated pāda), always at the end of a pāda. AiG II.2.340 considers it the equivalent of **matsara-tama-*, based on *madín-tama-*. Given the metrical unfavorability of the stem **matsaratama-*, this seems a plausible explan.

IX.77

The word *sóma-* is absent from this hymn, although four of the five vss. (all but c) open with a nom. sg. masc. referring to the soma and inviting that word.

As mentioned above, Kavi Bhārgava briefly treats the Somaraub here (vs. 2) and in his dimeter hymn IX.48 – a myth otherwise rarely mentioned in Maṇḍala IX.

IX.77.2: The gen. obj. of *ā yuvate, mádhvaḥ*, is hard to interpret; it certainly doesn't seem likely to be a partitive.

I don't know what to do with the particle *āha*, which is oddly positioned in the middle of a pāda interrupting an NP. Re's "d'un coeur, ah! rempli de crainte" is appealing, but *āha* doesn't ordinarily have such an exclamatory value (though see comm. ad VII.20.2), as far as I can see – and it's a little too conveniently superimposable on our (both French and English) "ah!"

IX.77.3: Both Ge and Re take *pūrvāsa úparāsaḥ* as temporal designations: the earlier and later drops. If so, it is hard to understand how we can order both types (esp. the earlier ones, which should be beyond our control) to run. I prefer to see them as spatial. For such a usage cf. V.31.11 *pūrvam karad úparam* "(what is) in front ... he will put behind."

As has long been known (see Old, citing Barth., as well as EWA s.v.), *ahī-* is etymologically identical to Aves. *azī* (OA, YA), which characterizes cows – contra Gr's 'Schlange'. It's not clear to me why Ge and Re seem so uncertain about it, esp. as Ge cites Aves. *azī* in n. 3c.

IX.77.4: As noted in the publ. intro., the vs. seems to contain a paradox, whereby the masc. Soma conceives an embryo, most likely of himself. See Ge's n. 4c.

The hapax *urubjá-* is puzzling. Gr's suggestion that it derives from a phonological deformation of **ud-ubjá-* seems reasonable, esp., as Mayrhofer points out (EWA s.v. *UBJ*), with the interference of *urú-*. Verbal forms of *úd√ubj* are found in AVŚ and TS.

IX.77.5: Soma is notably identified with Varuṇa and Mitra in this vs. – the former because he cannot be deceived by the crooked (*hurúg yaté*), the latter because (implicitly) he mediates between the ritual communities (*vijána-*).

With Mayr. (EWA s.v. *híruk*), I take *hurúk* to \sqrt{hvar} 'go crookedly' (also in a moral sense). The expression *hurúg yaté* contrasts with *rtám yaté* "going to truth" in the same metrical position in nearby IX.69.3, 74.3 and four other times.

IX.78

A remarkably straightforward hymn. Oberlies tr. it in Relig. RV II.125.

IX.78.1: Pace Gr, who identifies it as fem. nom. sg., the adj. *tānvā* is most likely acc. pl. n., parallel to *riprām*. On the basis of IX.14.4 *jāhac chāryāṇi tānvā* “leaving behind the stems that belong to his body,” *śāryāṇi* should be supplied, as indicated by Ge (n. 1c) and Re.

IX.78.2: A causal rendering of *hī* in c, as in the publ. tr., is somewhat jarring: it is hard to see how cd provides the causal basis for pāda b or for ab together. Moreover the thousand horses in d is a surprising number to be crowded into the soma cups and the identity of those horses is not clear. Although the standard tr. (Ge, Re, as well as Ober [II.125/160] and the publ. tr.) all take c and d as parallel and both under the domain of *hī*, I would now separate c and d, with d a main clause for which c supplies the causal basis. The amended tr.: “because there are many courses for you to travel, there are a thousand fallow bay horses sitting in the cups.” The point here, I think, is that the poured soma forms multiple rivulets as it crosses the filter, and these separate drippings of soma are conceived of as horses as they go into the cups.

A minor question in d is the grammatical identity of the rt. noun *camūśadaḥ*, which can be gen. sg. or nom. pl. Both Ge and Re take it as gen. sg., referring to Soma; the publ. tr. and Oberlies as nom. pl.; Scar allows either and doesn’t decide. In fact it doesn’t really matter and the other attestations, both sg. (1x) and pl. (4x) refer to soma (drinks), which in this case could be either the metaphorical horses or a supplied “you [Soma].”

IX.78.3: As noted in the publ. intro., the Apsarases, who are rarely mentioned in the RV, unusually stand here for the waters with which the soma is mixed. Although “sitting within ... have streamed” seems slightly contradictory, it must be that they first streamed and then took their seats in the cups. This could be conveyed by a tr. “The Apsarases ..., (now) sitting within, streamed towards Soma.”

On the phrase *harmyāsya sakṣāṇim* “conquerer of the secure house,” found also in IX.71.4, see comm. ad loc.

Pāda-final *sakṣāṇim* echoes *manīṣiṇam* at the end of pāda a, in addition to participating in another phonetic figure with b and d, as noted below.

In d it is unclear what *ākṣitam* modifies, since both *sumnām* and *pāvamānam* are possible. Both Ge and Re take it with the former (e.g., “une faveur impérissable”), while Ober (II.125) and I take it with the latter. Although “imperishable favor/grace” might seem closer to the famous expression “imperishable fame,” word order favors the connection with *pāvamānam*, as does an expression like IX.26.2 *sahāsradhāram ākṣitam* “the imperishable one of a thousand streams,” definitely referring to soma. I would note, however, that the word order argument may be weak, since *ākṣitam* may have been placed in final position for the phonological echo of pāda-final *akṣaran* (b) and *sakṣāṇim* (c). The stem *ākṣita-* is also almost always pāda-final (15 out of 18 occurrences). Of course, it would be possible to read the adjective with both acc.

IX.79

IX.79.1: I take the loc. *brhāddiveṣu* in b as referring to the gods, who inhabit lofty heaven (so also Ober II.60; see also alternative in Ge’s n. 1b). I take it as referring to the destined recipients of our pressed soma. The standard view is rather that it is a personal name and refers to the human pressers, to be construed with *suvānāsaḥ* (e.g., Klein DGRV I.241 “being pressed among the Bṛhaddiva’s”). But this PN is only certain in a single passage in the late RV, X.120.8–9, in the sg.; elsewhere, and esp. in the plural, the stem refers to gods or other heaven-located substances. Cf., e.g., II.2.9 *amṛteṣu ... brhāddiveṣu*. Mayr (Pers.Nam.) considers the PN possible here (“vielleicht”), but does not commit to it.

The real puzzles in this vs. are found in the 2nd hemistich, which has been much discussed, esp. by Old. See also Ge, Re, and Hoffmann (Aufs. 363). Before considering the problems of interpr., we should first note that pāda c is metrically disturbed: it has only 11 syllables in this Jagatī hymn, and in order to produce the proper Jagatī cadence the final *ó* in the pāda-final sequence *iṣó árātayaḥ* must be read long, despite its position in hiatus. (A Triṣṭubh cadence for this 11-syl. verse is excluded.) There is no obvious way to fix either the undercount or the anomalous long *o*. Note in particular that nothing can be added in the opening *ví ca náśan na(h)*, because it is an opening of 5 and the enclitic *naḥ* must be part of it, since pronominal enclitics never follow the caesura. So a potential easy fix is impossible: to read **náśan[ta] na(h)*, with the verb matching *naśanta* in b but having undergone a species of haplology. (For a different possible fix, see below.) It is therefore possible that pāda c is corrupt in some way. On the other hand, the poet may have wanted to draw attention to the similar openings—x x *náśan na(h)* and x x *naśanta*—by this metrical disturbance.

In order to approach the sense of the hemistich there are a number of clues we should note: 1) the near-coincidence of verbs: (*ví*) *náśan* / *naśanta*; 2) the accent on the first verb, which must result from the subordinating use of *ca* as ‘if’ here; 3) several parallels, which unfortunately pull in different ways. See esp. X.133.3 *ví śú víśvā árātayo, aryó naśanta no dhíyaḥ*; also II.35.6 *nārātayo ví naśan nānṛtāni*. A feature that we might expect to be a clue, the different voices of the two verbs, act. (*ví ...*) *náśan*, med. *naśanta*, does not turn out to be helpful, since *-anta* replacement is always a possibility in 3rd pl. injunctives, and *naśanta* also immediately precedes *sániṣanta* and could have adapted itself to that verb. The two passages just cited, with (*ví ...*) *náśanta* and (*ví*) *náśan* respectively and at least possible identity of meaning (see below), demonstrate the problem with using voice as a criterion.

Old’s analysis of the situation, incl. the close parallel in X.133.3, is acute, and he suggests several quite different solutions, without, however, deciding for one. His first question is whether the two verbs belong to the same root. If so, the likely one is \sqrt{nas} ‘reach, attain’, but, in his opinion, this makes trouble for pāda c; moreover, in X.133.3, which he considers an abbreviated reworking of our passage and in a way its oldest commentary, an affiliation with \sqrt{nas} ‘disappear, perish’ makes better sense for the first part of the clause (“all hostilities will disappear”). Old’s first stab at interpr. thus assumes that the two verbs belong to different roots, with ‘disappear’ in pāda c and ‘reach, attain’ in d: “Hinweg mögen schwinden von unsrer Nahrung die Kargheiten: so mögen denn die Geizigen [Akk.] treffen.” This interpr. must take *iṣáḥ* as an ablative sg., *aryáḥ* as an acc. pl., and supply *árātayaḥ* in c as the subj. not only of *ví ... náśan* in c but also of *naśanta* in d. What doesn’t seem sufficiently represented in his interpr. is the subordinating value of conditional *ca*. Old’s second alternative interpr. takes into account the missing syllable in

c (though not the problematic quantity of *o* in hiatus). He suggests remedying the undercount by inserting a negative after the caesura: *ví ca náśan *ná na ...*, which would avoid the problem of an enclitic following the caesura we noted above. In his emended pāda there would be an opening of 4; accented neg. *ná* would immediately follow and host the enclitic. Haplology would easily account for the transmitted text. The sequence with negative would be very like II.35.6 cited above: “hostilities shall not reach [him].” This solution is very clever, and it would allow both verbs to belong to the same root, ‘reach, attain’. He paraphrases (but doesn’t tr.) it as “die *árātayaḥ* sollen nicht uns treffen; wir wollen die *arí* treffen.” But the problem once again is that he does not represent the conditional *ca*. “If the hostilities do not reach us” is significantly worse than his paraphrase. He himself is disturbed by the unusual position of *ná* (though I think that could be acceptable) and the fact that X.133.3 clearly means something different, perhaps because this passage was misunderstood by the poet of X.133.

My own—quite uncertain—interpr. is that the two verb forms belong to different roots, just as I take the single verb *naśanta* in X.133.3 as a pun involving the same two roots. But, unlike Old’s first alternative, I think the *first* verb is ‘reach’ and the 2nd ‘perish’. I take *iśāḥ* as acc. pl. (as do Ge, Re, Hoffmann, Klein, and Ober, in their diff. interpr.), even though root-accented **iśaḥ* is expected (though ending-accented acc. pl. in this stem is not rare). I then supply ‘refreshments’ as subject of *naśanta* in d, with *aryáḥ* gen. sg. depending not only on this supplied subj. but also on the *árātayaḥ* of c. The point is: if the stranger’s hostilities go after our things, theirs will be destroyed as well. It is also possible that the subj. of *naśanta* in d is the same *árātayaḥ*: if their hostilities come after us, those hostilities are doomed. As I just said, I don’t have a high degree of certainty about the correctness of this interpr. Those produced by the others just named, which all assign both verbs to ‘reach, attain’, are certainly not out of the question. Unfortunately I can’t endorse either of Old’s alternatives, however.

IX.79.1–2: The opening of this vs. *prá no dhanvantv índavaḥ ...* echoes that of vs. 1 X *no dhanvantv índavaḥ, prá* but with the preverb in tmesis relocated to a more standard, pre-verbal position.

Although (*a*)*codásah* (1a) and (*mada-*)*cyútaḥ* (2a) obviously belong to different roots (\sqrt{cud} , \sqrt{cyut}), they have similar semantics, ‘impel, urge on’ and ‘arouse, set in motion’, and similar phonology. So the negated *acodás-* ‘without impulsion, without being impelled’ and positive *mada-cyút-* ‘arousing exhilaration’ (by my interpr., but see below) function as a virtual polarized pair, describing the drops as not themselves needing any impetus to move, but providing impetus to others. A pseudo-etymological figure.

IX.79.2: The rt. noun compd *mada-cyút-* (on which see also above) is taken by Ge as having passive semantics (“rauscherregt”), in contrast to the active transitive semantics of my ‘arousing exhilaration’ and Re’s “mouvant l’ivresse.” Scar (128–29) allows both for the compd in general, without deciding on particular passages. Since, all things being equal, rt noun compds to roots with transitive value tend to display that (type *vṛtra-hán-*), and most of the other *-cyút-* compds are transitive (*acyuta-cyút-* ‘shaking the unshakeable’, *parvata-cyút-* ‘shaking the mountains’), a transitive interpr. seems to me the default. For the five attestations of *madacyút-* in IX, all modifying soma or soma drops, as here, a

transitive interpr. is the more natural: soma is, after all, what produces *máda-*. However, the cmpd. elsewhere also modifies Indra or similar entities, who are more likely to *be roused* to exhilaration than to rouse it (e.g., I.51.2), and the passive value should be allowed there. Indeed in I.81.3, by my interpr., there are two potential referents (Indra / soma) and two different readings of the cmpd.

Pāda b poses problems: what is the disjunction signaled by *vā*; where does the rel. cl. with *yébhiḥ* begin; what is the referent of *yébhiḥ*; how should *dhánā* be construed? Ge starts the rel. cl. with *yébhiḥ*, leaving the disjunctive phrase *dhánā vā* in (or attached to) the main cl. Since there is nothing in that cl. with which to construe *dhánā* he must supply a verb parallel to *dhanvantu*: “... sollen rinnen ... oder die Kampfpreise (gewinnen).” Sim. Klein, DGRV II.205. There is nothing objectionable about this solution – ‘win’ regularly takes *dhána-* as obj., and in fact soma or its equivalent is sometimes the subj. Cf., e.g., IX.65.9 ... *te ... víśvā dhānāni jigyúṣah* “of you [presumably = soma] having won all the stakes” (though it’s worth noting that the exact half-vs. is found in VIII.14.6, applying to Indra). But nothing in the context invites or supports supplying a verb here. Re’s solution is more economical, in using *dhánā* as an alternative subject for *prá ... dhanvantu*, though running forth is less natural action for stakes to perform. Ober (II.248) also takes the disjunction as belonging to the main cl., but with *dhánā* as an alternate goal for the running drops: “... sollen vorwärts laufen oder hin zu den Siegespreisen.” All of them, Ge (/Klein), Re, and Ober start the rel. cl. with *yébhiḥ* and make its antecedent *dhánā*. By contrast, I take all of pāda b as the rel. cl. (the position of *yébhiḥ* is of course perfectly compatible with this), with *dhánā* a 2nd acc., of goal (rather like Ober), with *junīmāsi*. The antecedent of *yébhiḥ* is then the soma drops, which give us (and the horses) the energy to race to the prizes.

Ge, Re, and Ober take c with d. This is certainly possible, but I prefer taking it with b, to express the potential hazards and dirty-dealing facing our horses in this race.

IX.79.3: Both *ārāti-* and *arí-* return from 1cd, but given the uncertainties in that passage, the return is not terribly useful.

What is most notable here is the carefully balanced construction of ab, with double *utá* opening the pādas, the following parallel but contrastive gen.-abl. expressions *svásyā ārātyā(h) ... anyāsya ārātyā(h)*, and finally the similarly parallel but contrastive nominal clausettes *arír hí śá(h)* and *víko hí śah*. It is (almost) impossible to escape concluding that the poet was contrasting two similar but very distinct sources of hostility. Unfortunately, Thieme (Fremd. 45–46) does escape this conclusion, deciding that the two gen. phrases and the two annunciatory nominal clauses are merely a way of generalizing to “everybody.” His tr. simply ignores the signposted construction of the two pādas and jumbles the parallel phrases together. This was not Thieme’s finest hour. Without an *idée fixe* to prove (as was the case of Th), the construction imposes an analysis: a hostile person belong to our side is an *arí*, one on the other is a wolf. Now elsewhere in Indo-European and indeed elsewhere in the RV, “wolf” can be used of a human who is outside social boundaries, an outlaw (see, e.g., my “Function of Animals in the RV, 2016: 208–9). Here the outlaw is contrasted with the *arí-*; with Th. I take him as a “stranger,” but, against Th., as a stranger who belongs to the larger Ārya community, who is “one of ours.” For a clear presentation of this view of the *arí-* as a member of the same culture, see JPB, Ādityas, pp. 150–54, esp. 152, in great part flg. Dumézil contra Th. The hostile

person outside of that community, the “other,” is a wolf. With Th. again, I’d say that the ultimate intent of ab is universal, to counter the threats from any possible source, but this universality is achieved by an implicitly conjoined contrast between the two opposites that make up the whole, a merism.

By my rules (“Vedic *anyá-*, Fs. Beekes 1997), *anyá-* here should be definite because it is in non-initial position – hence “the other.” This works well with the interpr. just elaborated, that the two contrastive phrases define the whole.

One further syntactic issue: what is the gen.-abl. in *svásyā árātyā(h) ... anyásyā árātyā(h)* doing? Ge supplies “protect” to govern an abl., on the basis of VIII.71.1 *pāhí víśvasyā árāteḥ*. This is certainly possible – and is endorsed by Old. However, because of the starkness of the expression, which underlines the contrasts between each matching element, I am reluctant to introduce any extraneous words and take the two phrases as independent gen.-abl. in loosely causal/circumstantial usage. Not very satisfactory, I admit.

IX.79.4: On this vs. see publ. intro.

The first pāda is problematic. The standard interpr. is that Soma’s navel is tied either to the navel in heaven (Ge, Old, Ober [II.13], Kü [242]) or Soma’s navel in heaven is tied to our navel (Re). E.g., Ge: “Du, dessen höchster (Nabel) an den abel im Himmel geknüpft ist.” Before even considering what this would really mean, there is a simple grammatical problem: this interpr. (and those of the others) requires masc. *paramāḥ* and *yáḥ* both to refer to fem. *nābhi-*. Disc. of this gender clash is remarkably cavalier. Old suggests that *nābhi-* may be masc. here; Ge (n. 4ab) registers this suggestion but also suggests that the synonym *bāndhu-* could be supplied in substitution (not a bad idea, though *bāndhu-* is rare in the RV and doesn’t seem to show up in the vicinity of *nābhi-*). The push to have two forms of *nābhi-* in this pāda is clearly based on very similar IX.10.8 *nābhā nābhim na ā dade* “He has bound his navel to our navel” and the idiom *sám / ā √ dā* ‘tie’ with two forms of ‘navel’, on which see comm. ad I.139.1. There is another slight problem, that the rel. prn. *yá(h)* is rather too deep in its clause, if the whole pāda forms the rel. cl., as in most interpr.

I don’t have a good solution to this pāda. I would first point out that init. *diví te* matches up with init. *prthivyaś te* in b, and at least the disturbance in word order in the pāda may result from the desire to locate heaven and earth in parallel positions. Otherwise, instead of assuming a masc. *nābhi-* I supply ‘form’ with the masc. *paramó yáḥ* in the publ. tr., but there is no particular support for this, and if I was thinking of *rūpá-* at the time, this doesn’t work because *rūpá-* is neut. There are no masc. nouns that are regularly qualified by *paramá-*, while *nābhi-* is qualified as *paramā* (with a fem. form) in X.61.18. The upshot is – I’m fairly sure my rendering is wrong, or at least not right, and I’d be inclined to go with the standard, despite the distressing gender clash: “It was in heaven, to its navel, that your highest (navel) was bound.” As to what this means, presumably it is another instantiation of the “heavenly soma” trope: no matter that the physical plant is earthbound (as in pāda b), it has a heavenly analogue. One thing that is clear is that *ādadé* belongs to *√ dā* ‘bind’; see comm. ad I.139.1 and Kü 242.

Fortunately the rest of the vs. is relatively straightforward. The “fingers” that grow on the earth are the parts of the plant: if soma is ephedra intermedia (which grows in the Himalayas), it has slender upright shoots that could be conceived of as fingers.

IX.80

IX.80.1: The rhyming verbs *pavate* and *havate* take identical positions in pādas a and b respectively. See also 2d *pavase*, 3a *pavate*, 3b *śrāvase* in the same position.

Pāda c compares soma to a thunderstorm, producing a roar like Bṛhaspati's while flashing forth (*vī didyute*) like lightning.

In pāda d the value of *nā* is disputed: is it the simile particle or the negation? The problem prompted a 5-pg. digression by Old on the positioning of the two elements. He comes out strongly for the simile marker here, a view shared by Ge, Re, Kü (250, 503), and the publ. tr., while the negative is favored by Lü (99 and n. 2), Ober (II.216), and Schmidt (B+I 79)(with Ge considering it in n. 1d). Lü recognizes that the position favors the simile particle, but prefers the negative since there's no obvious element to supply to fill out the simile. Ge suggests that subj. to be supplied is either the soma vessels or the gods, with both Old and Re favoring the gods, who came on the scene in pāda b. I think instead that it is the waters with which the pressed soma is mixed; this would fit the comparison to 'seas'. Cf. I.173.8 ... *sāvanā samudré* "the pressings in the sea," which I also think refers to the mixing water. (Of course *sāvanāni* could also be the subject of *vivyacuḥ*, but this would require supplying an obj.)

On the full grade of *vivyacuḥ* (for expected **vivicuḥ*) see Kü 503 n. 1000. One might also note that the expected form would yield a terrible cadence. Acdg. to Kü, the indic. pf. to *vyac* is always a presential stative, and he considers the indic. necessary in this context to express that value. Otherwise, the full-grade 3rd pl. could belong to the plupf. (here as injunc.); cf. the augmented plupf. *avivyacuḥ* (X.56.4). Kü considers the injunc. excluded here, but in fact I think it's quite possible: "they have enveloped the pressings," parallel to *vī didyute* 'has flashed forth' in c, and might alter the tr. in to the preterital one.

IX.80.2: On *āyo-hata*- see comm. ad IX.1.2.

IX.80.3: On *kuṣī-* as 'cheek', not 'belly', see comm. ad III.36.8, VIII.92.24. Here the context is not diagnostic and might in fact slightly favor 'belly', esp. given vs. 1 of the next hymn (IX.81) by the same poet, which contains *jaṭhāram* 'belly'. However, the preponderance of evidence for 'cheek' elsewhere is pretty strong.

IX.80.4–5: Both vss. open with *tām tvā*, echoing *yām tvā* beginning vs. 2.

IX.80.4: Pādas a and b share a verb, *duhate* in b. Each pāda contains a contrastive pair: *devébhyaḥ* ... *nāraḥ* "the men for the gods" and *sahāsra(dhāram)* ... *dāśa (kṣīpaḥ)* "thousand(-streamed) ... ten (fingers)."

IX.80.5: The first two pādas have the same structure as 4ab: they share a verb form of *√duh*, *duhānti* in b, with two different subjects, *hastīnaḥ* (a) and *dāśa kṣīpaḥ* (b) again. The "stones" of 4c (*grāvabhīḥ*) return, but with different lexical realization (*ādribhīḥ*).

IX.81

IX.81.1: *īm* in c anticipates *śūram* in d.

IX.81.2: With Old I see “of gods” (*devānām*) in the phrase “the double birth of gods” as pregnant for “of gods (and men),” very much as a pregnant dual like *dyāvā* “two heavens” or *pitarā* “two fathers” implies its opposite number. As Old points out, the locational adverbs in the next pāda *amūta itás ca* “from yonder and from here” strongly suggest heaven and earth as their spheres. Ge considers “gods and men to be the sense, but, in order not to supply a 2nd gen. pl., he achieves this by way of the unlikely “(heavenly and earthly) gods,” that is, gods and men. Ober (I.391) thinks that the double birth is of Devas and Asuras, but this is anachronistic.

IX.81.3: The vs. contains a play on *vāsu*, which further puns on the poet’s name. In pāda a the acc. *vāsu* refers to the material goods we ask Soma to provide for us, while in c the dative *vāsave* appears to refer to a good person, the recipient of Soma’s aid. Since the Anukramanī attributes this hymn (along with IX.80 and 82) to Vasu Bhāradvāja, the recipient is presumably the poet himself. (Because Re has a particular, and peculiar, view of *vāsu*, his tr. does not reflect the pun.)

pārā sicaḥ ‘pour away’, which appears only here in the RV, must play on the very common soma verb *pāri √ sic* ‘pour around, pour in circles’, of the circular motion of pouring the soma juice onto the filter. See *pāri √ i / pāri √ yā* of soma’s journey around the filter in vss. 1–2 of the next hymn (IX.82), attributed to the same poet.

With Old I read **sucetúnā* (also in V.65.3) for transmitted *sú cetúnā*. The former cmpd. is pretty well attested, while *cetú-* doesn’t otherwise exist. And in both instances the phrase/cmpd. is pāda-final, which would put an independent particle *sú* in an unusual location: it otherwise generally takes Wackernagel’s position.

IX.81.4: Ge, Re, and Ober (I.526) take *surātáyah* as referring to a separate group of divinities (e.g., Re “les (divinités) aux beaux dons”), but there is no such corporate entity as far as I am aware. In other passages the stem simply modifies the gods in general (X.65.4) or the Maruts (X.78.3). Here I think it applies to the listed gods as a group, and as a summary adj. was stationed at the end of a pāda, here matching the position of **sucetúnā* at the end of 3c in the previous vs.

IX.82

IX.81.1–2: As Ge points out (nn. 1d, 2d), ghee (*ghṛtā-*) in these two vss. stands for the milk mixture.

IX.82.1: The simile in b is also found in X.43.2 *rājeva dasma* (with voc.), as Ge (n. 1b) points out. The simile is likely to be self-contained, not a necessary part of the rest of the clause, contra Ober (II.214–15), who sees it as expressing a peculiar trope, “der ‘brüllende’ König.”

IX.82.3: As noted in the publ. intro., this vs. marks a departure from the first two conventional vss., with richer imagery, esp. in the first pāda. The first hemistich must

refer to the soma plant, growing in the mountains. The god of the thunder(storm), Parjanya is his father because rain produces plants. The qualifier *parṇín-* means, in the first instance, ‘feathered’ (e.g., VIII.5.33 *váyah ... parṇínah* “feathered birds”), but of course *parṇá-* ‘feather’ has already undergone widening in the RV to mean ‘leaf’ as well, and so it must be interpr. here.

The scene shifts back to the ritual ground in cd: the two additional ingredients of prepared soma, water and milk, are found in c, with the pressing stones in d (the actual order of ritual preparation would be the reverse, of course).

In c *utá* is in an unusual position and its function is unclear. Klein (DGRV I.380–81) simply describes the situation as involving “nonparallel clauses and weak nexus,” remarking further that cd “bears little cohesive relationship to ab,” though that’s what he thinks *utá* is connecting. Ge and Re both tr. as “also,” and the publ. tr. follows this interpr., which seems more likely than Klein’s near-null hypothesis. Perhaps contributing to its unusual position is the parallelism of *abhí gā utáśaran*# and 1b *abhí gā acikradat*#, with the verbs trisyllabic *śaran* and quadrisyllabic *acikradat* respectively. The *utá* supplies the necessary extra syllable and, by coalescing with the augment, the heavy antepenult needed for the cadence.

In d “unite with the stones” may be a little strong: better “come together with.”

IX.82.4: Since *śéva* in pāda a must be a vocative morphologically, its accent is unexpected in this pāda-medial position. There are two factors that might have contributed to it, which, however, cancel each other out. On the one hand, the point of contact between the simile “like a wife to her husband” and the frame is this very adj. ‘kindly’, and so an underlying fem. nom. sg. **śévā* must also be assumed. This overlap between an expected nom. and the voc. addressed to the correspondent of the wife, namely Soma, may have led to the anomalous accentuation. On the other hand, if the simile was felt to be a self-contained clause, *śéva* would begin a new clause or at least a new syntactic unit. I’m not sure that either is sufficient, but I weakly favor the second.

The voc. phrase in b, *pájrāyā garbha*, likewise causes a problem, though not of accent: *garbha* is properly unaccented, and its dependent gen. *pájrāyā(h)* shows the expected shift to initial accent in this pāda-initial voc. phrase, from the suffixally accented stem *pajrā-*. The question is the referent of this fem. *pajrā-*. Ge, Re, Ober (I.530) take it as a PN (e.g., “O Kind der Pajrā”). It is certainly true that *pajrā-* can be a PN (see Mayr [PN], though he doesn’t include this passage in his list), but usually in the pl. of a family of poets. It is never otherwise found in the fem., and it would be very strange (in my opinion) for a named *mother* to be specified in this kind of context, unless she is a goddess. Far more likely is Sāy.’s identification of the referent as the earth. The stem *pajrā-* as an adj. means ‘sturdy, steadfast’, a reasonable description of the earth. Earth as Soma’s mother would fit nicely also with 3a, which names Parjanya as his father. The rains generate the plant, but it grows in the earth.

The standard interpr. of *prá carā* in c is as 2nd sg. impv. addressed to Soma, and this is certainly possible. But I think it is equally possible that, in this 1st ps. context, it’s a 1st sg. subjunctive, and the contents of the poet’s direct speech announced in immed. preceding *brāvīmi te*. This is how it is rendered in the publ. tr.

The *sú* in c is in an unusual position, but it is in the same position as *sú* in the preceding hymn, IX.81.3, attributed to the same poet. There Old suggested (and I

followed) reading it with the following noun as cmpd. **sucetúnā*. I follow the same path here, reading **sujīváse*, though this time without Old's imprimatur. The case here is not as strong. With regard to IX.81.3 the putative cmpd *sucetú-* exists independently, while the transmitted stem *cetú-* does not. Here the opposite is true: the infinitival dat. *jīváse* is quite well attested, whereas *sujīváś-* is not found. This gives me pause about the emendation, but even without it, I think that *sú* should be read with *jīváse* and with its lexical value, not merely as a particle: "... to live well."

IX.82.5: In b *paryáyā(h)* is the augmented impf. to $\sqrt{yā}$, so correctly Gr, Ge. But Re in a rare grammatical lapse seems in his n. to take it as a subjunctive (presumably to \sqrt{i}), but that form should be (and is) *áyah*.

IX.83

On the structure of this hymn and my interpr. of its enigmatic contents, see the publ. intro. Here I will not treat in detail the interpr. of others.

IX.83.1: As indicated in the publ. intro. and above, ad IX.73.9, this vs. is very like the last vs. of IX.73, a hymn also focused on the filter, both physical and mystical.

The identity of the 'limbs' (*gātrāṇi*) in b is not entirely clear. I take it as referring to the metaphorical limbs of the filter, though the visual picture thus conjured up is imperfect, unless the fleece filter comes not only from the back but from the legs of the sheep. I do not think it is the limbs of the soma-drinkers, with Re.

I take *tād* in c to be the filter, again both physical and mystical. As I say in the publ. intro., "raw" versus "cooked" in this hemistich refers to the transformation effected on the soma plant by its ritual preparation, even though "cooking" is not technically involved. The pl. in d is presumably the soma drops or drinks, as opposed to the mass sg. in c referring to the as-yet-unprepared plant.

IX.83.2: The identification of sun and soma, with the rays of the sun across the sky (the cosmic filter, as it were) compared to the tracks of soma across the ritual filter.

The \bar{i} of *pavītár-* is anomalous and may in fact be suspect. The stem only occurs twice in the RV, the other time at IX.4.4, where the \bar{i} is not metrically guaranteed. In our passage, as Gr. points out, the SV [also JB] reading *pavitāram* is metrically better. The stem with \bar{i} is confined to the RV, except that the repetition of IX.4.4 in SV also has the \bar{i} (as opposed to the SV rep. of our passage). The expected *pavitár-* is found in the AV and later. Given extremely common *savitár-* to the parallel root $\sqrt{sū}$, it is hard to understand how *pavītár-* acquired its unetymological \bar{i} . I tentatively suggest that it is a metrical analogy to the far more common *pavitra-*, with heavy 2nd syllable because of the cluster. As this hymn shows, *pavitra-* occurs in the same contexts as *pavītár-*. It might also be influenced by the weak forms of the associated 9th class present (suffix *nī*), which immediately follows the form in IX.4.4: *pāvītārah punītāna*.

IX.83.3: Further identification of soma and the sun. For *pṛśni-* and *ukṣán-* used of the sun, see, e.g., V.47.3; for the sun supporting the worlds, see X.170.4 (dedicated to Sūrya) *yénemā viśvā bhúvanāny ābhṛtā* "by whom all these worlds are borne."

As indicated in the publ. intro., I take the 2nd hemistich as expressing a reciprocal paradox: the forefathers were created as masters of artifice (*māyāvín-*) by the artifice (*māyā-*) of Soma/the sun, but they also engendered him. I take the pf. *mamire* as passive, with Gr. The standard tr. (and incl. HPS, B+I, 78) take the verb as transitive, supplying *bhúvanāni* from b as obj. (I do have to concede that the pf. is otherwise generally transitive.) But under their reading I don't understand how the forefathers as possessing their own *māyā* (*māyāvínah*) needed "his *māyā*" (*asya māyāyā*) to accomplish the task.

If there is any difference in meaning between *māyāvín-* (3x) and the far better attested and more orthodoxly formed *māyín-* I cannot detect it.

IX.83.4: For my view of the Gandharva as another instantiation of soma/the sun see publ. intro. This more or less agrees with Ge (n. 4a: the sun, acdg. to Sāy.) and Re (Soma-Gandharva). I do not see this vs. as referring to the Somaraub as Ober does (II.162).

As indicated in the publ. intro., with the 2nd hemistich we return to the world of ritual and to the filter specifically.

nidhā- clearly means 'snare'; see the other occurrence in X.73.11 *nidhāyeva baddhān* "bound as if by a snare." But the semantic dev. from the presumed source *ní√dhā* is not clear. That lexeme generally means 'set down, deposit, keep safe/secure'. Perhaps 'snare' develops from this last meaning: a device used to secure an object. On this problem see detailed disc. by Scar (255). It would be nice to connect it with *ní√dā* 'bind', but pesky phonology gets in the way.

IX.83.5: The garment of cloud in b is presumably the milk in ritual terms, a real cloud for the sun identified with soma.

IX.84

IX.84.1: Acg. to Ober (I.526), this vs. is concerned with the "landerobernde Funktion (König) Somas," which makes sense. Pāda c directly asks Soma to provide us with wide space, and his epithets *vīcarsaṇi-* 'unbound(ari)ed' and *apsā-* 'water-winning' in ab belong to this conceptual realm. In d *uruksitau* 'in the wide dwelling place' may as well, if it refers to our (newly acquired) dwelling, per Ober. Re takes it rather as the dwelling place of the divine folk, but given the context Ober's view is more persuasive.

IX.84.2: The territory-winning theme of vs. 1 may be continued here, but on the cosmic level, with Soma mounting all the worlds. This is also probably a reference to Soma as the sun, as Ge suggests (n. 2a).

As noted in the publ. intro., the "knotting and unknotting" probably has both a ritual and a moral reading. Ritually it presumably refers to soma's passage across the woolly tangles of the sheep's fleece filter. But Ge cites as potential parallel IX.97.18 *granthīm ná ví śya grathitām ..., ṛjūṃ ca gātūṃ vṛjīnaṃ ca ...* "Untie like a knot the straight and the crooked way (which are) knotted up, when you are being purified," which implies a moral dimension as well, since "straight" and "crooked" are often used in that sphere.

Pāda d lacks an acc. in the frame to be construed with *śiṣakti* as parallel to *uśāsam* in the simile. Perhaps the gods in general (the *daívyam jānam* of 1d and 3d), or the three

gods named in 1b, Indra, Varuṇa, and Vāyu. Re supplies Indra, and the parallel he cites, I.56.4 *īndraṃ śiṣakti uṣāsaṃ nā sūryaḥ*, supports this suggestion, esp. since Indra recurs in vss. 3 and 4.

IX.84.3: The ritual and/or real world situation depicted in pādas a and c is unclear. In particular, in pāda a what plants does soma (+ milk) pour onto? Ober (II.42) may well be right that it depicts soma as rain, though we would still lack a ritual analogue to the plants receiving rain in the real world. Rain in this pāda would fit with the lightning imagery in c. Soma him/itself flashed forth (*vī didyute*) in IX.80.1, and “ever-flashing light” (*dāvidyutātī- rūc-*) is associated with the soma drinks in IX.64.28.

The publ. tr. construed *dhārayā* with *sutāḥ*, because this expression (IX.51.5, 72.5, 100.6, 108.5) or minor variants (IX.3.10=42.2, 10.4, 97.45) are fairly common in this maṇḍala. However, both Ge and Re take it with *pavate*, parallel with *vidyūtā* (e.g., “Der ausgepresste Soma läutert sich mit Blitz (und Regen)guss”), and this may be preferable in the rainstorm context.

IX.84.4: Notice the return of the god Vāyu of 1b in the guise of the common noun ‘wind(s)’ (*vāyúbhiḥ*) in c, juxtaposed with Indra in d.

IX.84.5: The last pāda is notable for the concentration of poet words: *vīpraḥ kavīḥ kāvyaena*, a role not otherwise attributed to Soma in this hymn.

IX.85–86

On the structure of the last two hymns of the Jagatī group, see the publ. introductions to IX.85 and 86. In brief, after a series of hymns of 5 vss. (IX.75–84), these last two have 12 vss. and 48 vss. respectively. However, they are clearly composites: IX.85 consists of three groups of four vss. apiece, IX.86 of 16 ṭṛcas. The standard principles of hymn arrangement can thus be restored.

IX.85

For the four-vs. sequences and their contents, see publ. intro.

IX.85.2: In pāda c the preverbs *abhy ā* are oddly positioned, after the caesura, and, more important, the two apparent acc. objects *śātrūn* ‘rivals’ and *bhandanāyātaḥ* ‘those seeking blessings’ are antithetical, with only the first an appropriate obj. to *jahí*. The problems disappear if, with Ge, we supply a second verb to go with the preverbs and to govern the 2nd acc. A verb of motion fits well, and \sqrt{i} , \sqrt{gam} , and $\sqrt{yā}$ all appear with this combination of preverbs, whereas \sqrt{han} does not. Ge goes for slightly richer semantics: “(komm) ... zu (Hilfe)” – without specifying what verb he supplies, but note that \sqrt{av} does not appear with those preverbs.

The identities of Soma and Indra appear to bleed into each other in the course of the vs. In ab the 2nd ps. subject is clearly Soma, on the basis of voc. *pavamāna* (a) and *priyó mādah* (b). The assumption then is that the impv. *jahí* in c is also addressed to Soma. But in d we get direct address of Indra and at the end of the pāda *he* is the subj. of a second *jahi*. Therefore pāda c, which contains no lexical clue to the addressee, could be addressed either to Soma or to Indra (or both).

IX.85.3: The blending of identities in 2cd is made explicit in pāda b here, where Soma is called “the very self of Indra” (*ātméndrasya*).

On the meaning of the secondary root \sqrt{nim} s see comm. ad VIII.43.10. There I stated my preference for maintaining the older gloss ‘kiss’, against the colorless ‘seek out’, which was suggested by Gotō and adopted by EWA, etc. However, I must admit that, at least superficially, ‘seek out’ works better here than ‘kiss’ and it is reflected in the publ. tr. But a ceremonial kiss signaling fealty is certainly possible – like kissing the pope’s ring or the widespread custom of kissing someone’s feet as a gesture of respect. So Ober (I.531–32) “Sie küssen den [Fuss des] König[s] dieser Erde.” Both Ge and Re render the phrase without interposing a bodypart, e.g., “ils baisent le roi de ce monde.” I am now inclined towards the more precise and physical “they kiss the king,” rather than the publ. tr.’s “They seek out the king.” This interpr. is made the more likely because “kissing” Soma in the ritual can well indicate consuming soma by mouth, that is, drinking it.

IX.85.5: The passive *ajyase* has, as often in this maṇḍala, a double meaning, ‘is anointed’ ($\sqrt{añj}$) and ‘is driven’ (\sqrt{aj}).

On the meaning (‘all at once’, not ‘in the middle’) and the formulaic construction of *samáyā*, see comm. ad I.113.10.

IX.85.7–8: Pādas 7c and 8a have almost identical structure:

pāvamānā abhy àrṣanti su(ṣtutīm)

pāvamāno abhy àrṣā su(vīryam)

which effects the transition from 3rd pl. to 2nd sg.

IX.85.8: The somewhat awkward tr. “constricting pressure” reflects the literal, additive sense of *pāriṣūti*:- *pāri* ‘around’ + $\sqrt{sū}$ ‘impel, thrust’. Maybe something like “squeezing” would sound a bit more idiomatic, though it is hard to find any English idiom that more or less represents the etymology *and* fits with the verb. Of course, narrowness and constriction are particularly feared and avoided in the Rīg Veda. Perhaps “claustrophobia” might work, though of course the -phobia part is absent; “constriction” is probably the best choice in English. It is also not clear what threat *pāriṣūti*- poses to the ritual soma, which, after all, has been subjected to serious pressing (via the phonologically similar but unrelated root \sqrt{su}) and therefore has nothing left to fear in that regard. In real world terms it of course refers to the opposite of the “wide pasturage and great, extensive shelter” that Soma is urged to rush to in pāda b. In this regard it is similar to the words *aṃhatī*-, *āṃhas*- ‘constriction, constraint’. The other occurrence of *pāriṣūti*- (I.119.6) is found in a similar context, with a contrast between constraint and wide space: *yuvām rebhām pāriṣūter uruṣyathaḥ*. JPB tr. “You give Rebha space from being besieged,” but in my opinion the sense is more particular: “you give Rebha wide space from (/out of) constriction.”

On *īśata* see comm. ad I.23.9.

IX.85.9–12: As noted in the publ. intro., these four vss. treat the identification of Soma and the sun and are similar to the very enigmatic Vena hymn, X.123, which is attributed to the same poet, Vena Bhārgava.

IX.85.9: The double vision of both heavenly Soma/Sun and earthly ritual soma is clear here, with pādas a, b, d all having a celestial orientation, each containing a form of *div-/dyu-* ‘heaven’, while the filter of pāda c brings us back to the ritual. The subj. of d is probably, on the one hand, the ritual officiants, who perform the ritual action of milking (that is, pressing) the soma. But the substance obtained is “the beestings [colostrum, first milk] of heaven” (*pīyūṣam ... divāḥ*), and the next vs. makes clear that those performing the milking here are also the *venāḥ* ‘seekers’ in 10b, where they are located “in the vault of heaven” (*divó nāke*).

IX.85.10–11: The two tr. of *venā-* in 10b ‘seekers’ and 11b ‘trackers’ respectively should be harmonized. I would now tr. ‘seekers’ for both.

IX.85.10: The cosmic/natural and the earthly/ritual double vision is played out simultaneously throughout this vs. In ab the seekers milk the streams “in the vault of heaven” (*divó nāke*) but milk them out of “the mountain-dwelling ox” (*ukṣāṇam giristhām*), the earthly soma plant. In c the drop grows strong not only “in the waters” (*apsū*), presumably the ritual waters used to swell the plant, but also “in the sea” (*samudrá ā*); in d it is both “in the wave of the river” (*síndhor ūrmā*) and “in the filter” (*pavitra ā*).

On the basis of the shared verb (*duhate* in 9d, *duhanti* in 10b) the *venāḥ* here appear to be identical to the subjects of 9d, as suggested above.

Pāda b is identical to IX.73.4. As noted in the comm. thereon, there is good reason to supply “streams” (*dhārāḥ*) as the referent for the pl. adjs. *mādhujihvā(h)* and *asaścātaḥ*, which are therefore fem. acc. pl. Curiously Ge takes the former as nom. pl. m. here, though fem. in 73.4, while Ober (II.13149–50,) takes them both as nom. pl. m.; Re tr. as I do.

IX.85.11: I would now take the pf. part. *upapaptivāṁsam* as explicitly anterior to the impf. *akṛpanta*: “the eagle that had flown to the vault.”

IX.85.12: This final vs. is esp. close in phraseology to the Vena hymn, with pāda a identical to X.123.7a and pāda c almost identical to X.123.8c. Note also that *ādhi nāke asthāt* unites *ādhi ... asthāt* of our 9a and *nāke* of our 10a.

Ge takes the part. *praticākṣāṇaḥ* as transitive/causative “seine Farben alle offenbarend” (though he questions this in n. 12b); sim. Ober (II.13) “erscheinen lassend.” Re’s tr. is like mine (“regardant-en-face toutes les formes siennes”), although in his n. he considers the opposite possibility, citing passages with *prāti √ cakṣ* that supposedly have this transitive sense. But his exx. are not probative, and the middle voice of the participle makes it esp. unlikely to have this sense.

IX.86

As noted above, an assemblage consisting of 16 three-vs. units, attributed to a variety of poets and poetic groups and showing no particular unity of structure or special poetic merit. However, there is often patterned repetition both between *ṛcas* and within them.

IX.86.1–3: The first two vss. of this *ṛca* begin identically (*prá te*), and all three vss. concern the swift journey of the soma drinks, which is compared to that of swift animals. Vss. 1 and 3 share the same verb ($\sqrt{rṣ}$: 1b *arṣanti*, 3a *arṣa*; *āsrkṣata* in 2b is semantically similar) and the same goal, the *kóśa*- or ‘cask’, while vss. 1 and 2 both contain *āśvaḥ* ‘swift’. Of course none of these features is unusual in the soma corpus, so they are not strong evidence for *ṛca* unity.

IX.86.1: The rt noun cmpd *dhī-jū-* (also in vs. 4) could have two different readings, ‘sped by insight(s)’ and ‘speeding insights’; see Scar 170–71. The publ. tr. opts for the passive interpr., as does Re, while Ge chooses the transitive one. Either is possible in this ritual context, and parallels cut both ways. On the one hand, there is the parallel cmpd *dhī-jávana-* (3x), which must have transitive value; on the other, IX.64.16 ... *āśávaḥ / dhiyā jūtāḥ* ..., with *āśávaḥ* as here, supports the passive reading. And of course both might be meant.

The standard tr. (Ge, Re, also Scar 170) supply ‘horses’ with *raghujāḥ*, and this of course is quite possible. The adj. *raghú-* and its cmpds do modify horses elsewhere (e.g., V.30.14). However, the cmpds. *raghu-pátma-jamhas-* ‘having plumage (fit) for rapid flight’ (VI.3.5), *raghu-pátvan-* ‘rapidly flying’ (2x) reference flying, and various related forms reference birds: V.30.9 *raghúḥ śyenāḥ*, II.19.4 *váyo ná paptū raghuyā*. The specification of flight in these forms suggest to me that *raghú-* (etc.) was originally specialized for the swift flight of birds and then generalized to other fast things, and I therefore supply ‘birds’ in the simile. On the other hand, since vss. 2 and 3 both contain likely (*ráthyāsaḥ* 2b) or explicit (*átyaḥ* 3a) horses, *ṛca* unity might favor ‘horses’ in the simile here as well.

IX.86.2: It seems a little odd to say that chariot horses go “each separately,” since one would think that the horses would be attached to the same chariot and efficient movement would require them to pull together. But almost the same phrase occurs in X.91.7 ... *rathyò yáthā pṛthak*, though there referring to charioteers, and so the words must belong together. Perhaps it refers to separate chariots, each with its own set of horses—or that each horse in a chariot team has its own place in harness and each individually contributes to the speed of the whole?

IX.86.3: Pāda a is metrically disturbed, despite apparently having 12 syl. With Arnold and HvN, best to read **hyānāḥ* for *hiyānāḥ* (as sometimes elsewhere), to avoid a too early or too late caesura and a bad Jagatī cadence. The pāda is then a fine Triṣṭubh.

Although, as noted above, vss. 1 and 3 share the same goal, the *kóśa*-, the physical referent has changed between 1 and 3. In the former, the cask is presumably the soma vessel on the ritual ground, but in 3b it is characterized as *kóśam divó ádrimātaram* “the cask of heaven, whose mother is the stone”—in other words the vault of the sky (or the soma container in the sky). So the subject is the heavenly soma, not merely the earthly

ritual substance, even though the ritual details are re-asserted in cd. For the heavenly cask, see V.53.6, 59.8, IX.88.6. Old reports without enthusiasm a potential emendation to nom. *ádrimātā*, modifying soma, with *ádri-* the pressing stone. This would yield another Triṣṭubh pāda. However, since heaven (or at least the container of the heavenly soma) may be made of stone, there seems no reason to emend.

In the publ. tr. for ease of English parsing I moved the tr. of *svarvíd* from b to cd, but this mixes the levels: the sun-finding Soma is the one that reaches heaven, while the soma of cd is the substance purified in the sheep's filter. Better (if somewhat awkward): "... rush to the prize, as the sun-finder (rush) to the cask of heaven ..."

The phrase (*ádhi*) *sāno áv(ya)ye* "on the sheep's (lovine) back" occurs 9x in a fairly tight cluster in this maṇḍala (IX.86.3, 91.1, 92.4, 96.13, 97.3, 12, 16, 19, 40: all but this one in Triṣṭubh hymns). Given loc. *áv(ya)ye* and the loc. of 'back' in other variants of the formula (*áyve ... sānavi* IX.50.2, 70.8), *sāno* should be a loc., even though loc. **sāno/av* is not independently attested. See the inconclusive disc. in AiG III.153–54, which flirts with but does not explicitly endorse such a form. TY has persuasively argued that this form is a relic of an IE endingless full-grade loc.; another such relic is found in the phrase *vāsta usrāḥ*, on which see comm. ad V.49.3. Both of these formulaic expressions occur exclusively in cadences, which preserved the light syllable of prevocalic loc. *-*au* V from remodeling.

IX.86.4–6: The first vs. of the new ṭṛca is in part a distillation of the previous ṭṛca. The next two vss. end their first hemistichs identically: 5b, 6b GEN *satāḥ pári yanti ketávaḥ* "The beacons of the one being X circle around." But as in the first ṭṛca, this identity conceals a fundamental difference of reference, with both a cosmic and a ritual dimension.

IX.86.4: As just noted, this vs. seems to distill the first ṭṛca and is esp. similar to vs. 1. Like both 1 and 2 it opens *prá te*, and the 2nd hemistich also begins with *prá*, with *prāntár* echoing *prá ta*). Even more strikingly the first pāda matches 1a almost exactly:

1a *prá ta āśávaḥ pavamāna dhījávaḥ*

4a *prá ta āśvinīḥ pavamāna dhījávaḥ*

The only difference is the third word, and the two are phonological multiforms of each other – or rather, *āśvinīḥ* must have been formed as a variant of *āśávaḥ*, since the vṛddhi deriv. *āśvina-*, -ī is found only here in the RV (though it occurs elsewhere in Vedic), while *āśú-* is quite common. In addition, *asṛgran* (4b) and *asṛkṣata* (4c) reprise *āsṛkṣata* of 2b, and *páyasā* (4b) recurs from 2c.

However, these similarities once again mask conceptual differences.

The first question to confront is what the referents are for the fem. pls. *āśvinīḥ* in pāda a and *sthāvirīḥ* in c, and are they the same? Ge and Re both supply different nouns for the two – *dhārāḥ* 'streams' for the first (already Sāy.) and *gírah* 'hymns' for the second. (Sāy. supplies *dhārāḥ* for the second as well.) Although this split reference is perfectly possible – and at least *páyasā* 'with their milk' might favor a liquid interpretation in ab – I prefer to supply *gírah* for both. In the 2nd hemistich the passage adduced by Old to explain pāda c, I.181.7 *ásarjī vām sthāvīrā vedhasā gīḥ* "A substantial song has been sent surging to you, o ritual experts," resembles our passage very closely, with fem. *gīḥ* and with verb, adj., and voc. matching elements in cd. There is only one

fem. form to the adj. *sthāvira-*, namely the one just cited modifying *gír-*. The pleonastically vṛddhied adj. in our passage, fem. *sthāvirī-*, is a hapax in the RV – and in fact I would suggest that it owes its vṛddhi to an attempt to match that of *āśvinīḥ*. Moreover, I.181.7 passage is in an Aśvin hymn (the referents of *vām ... vedhasā*), and to my mind the unusual *āśvinīḥ* ‘destined for the Aśvins’ in the first hemistich invites us to supply a form of praise as the fem. pl. referent. We might also cite other exx. of the Aśvins’ association with praise hymns (not, I realize, unusual for Vedic gods!): VII.72.3 *stómāso aśvīnoḥ*, VIII.9.7 *aśvīnoḥ ... stómam*, VIII.9.16 *vācā aśvīnaḥ* (though none of these is fem. pl.). Thus in my view the entities “destined for the Aśvins” in pāda a are more likely to be hymns than streams.

In the first hemistich the fem. subj. (whatever it is) surges “into the support” (*dhārīmaṇi*), which I take to be the soma vessel. I supply the same loc. with *antár* in the 2nd hemistich. Cf. nearby IX.89.5 *samāné antár dharúṇe níṣattaḥ* “set down within the same support,” with *dharúṇe* an etymological and semantic match for *dhārīman-*.

As noted above, *asṛkṣata* in c repeats *ásṛkṣata* in 2b, but they are functional opposites: the first verb must be intrans. ‘have surged’ (or pass., ‘have been discharged’) with the soma drinks as subject, while our verb is trans. with the seers as subj. and hymns as obj. The intrans/pass.. function is taken over in vs. 4 by *asṛgran* in b. The aor. of *√sṛj* is overwhelmingly medial and overwhelmingly intrans./pass. in function, including the numerous exx. of 3rd pl. *ásṛkṣata*. There are only two transitive occurrences of this form, this one and one in V.52.6. In our case I think it likely that in this vs. *asṛkṣata* has been made to contrast functionally with likewise 3rd pl. *asṛgran*, which patterns with the aor. passive and therefore has more title to intrans./pass. function. Narten (Sig.Aor. 270–71) discusses the functional issues in the *s*-aor. paradigm of this root, but she holds the (to me) unlikely position that the medial forms should be fundamentally transitive (though she hedges here) and the intrans. use is secondary, despite the clear numerical superiority of the intrans. usage. I think it makes more sense to consider the transitive usage, at least here, as forced on a normally intrans. form by the pressure of *asṛgran*.

The formation of the hapax voc. *ṛṣiṣāṇa* is opaque. Gr’s gloss ‘dem Sänger freund’ reveals nothing about his analysis of the 2nd part; sim. Re’s ‘propre aux Prophètes’ without further comment. With Ge, the publ. tr. assigns the 2nd member to *√san* ‘gain, win’, hence ‘winning seers’. If we maintain that analysis, the sense might be compared to *ṛṣi-sāh-* in IX.76.4, which means ‘vanquishing (the other) seers’, in poetic competition or the like. However, given the set nature of *√san* and the persistent short vowel (-) *san-* in most of its nominal forms, this analysis is not entirely persuasive, esp. since the semantics are not absolutely compelling. AiG II.2.926 posits (without conviction) a suffix *-sāna-*, but also suggests a connection to the (pseudo-)part. *-asāna-* type (which is treated at AiG II.2.236–37), but it doesn’t fit the general profile of this group (on which see comm. ad IV.3.6). Perhaps *-sāna-* is better connected to *√sā* ‘bind’; cf. the noun *viṣāṇa-* V.44.11, which has the merit of existing and whose long vowel is predictable. Hence ‘binding seers’ or ‘having the binding of seers’ – that is, holding them fast, commanding their loyalty or attention, as in pāda c. But in the absence of any further information, accentual, contextual, or formulaic, we can’t get much further.

IX.86.5–6: As noted above, these two vss. have parallel structures in the crucial 2nd pāda. Although Ge notes this, his tr. does not reflect the parallelism of the two genitive

phrases with pres. part. *satāh*, nor does Re's. Although taking account of this somewhat complicates my tr., I think it must be done. Vs. 6 is the clearer one: the pres. part. to \sqrt{as} is, as often, concessive: *although* Soma stays fixed, his beacons (continue) to circle. A concessive sense is harder to excavate from vs. 5 – hence the somewhat awk. rendering in the publ. tr. – but I think it is rhetorically called for. In both vss. the GEN *satāh* phrase specifies the spatial position of Soma. In 6 he is fixed; he has completed his journey to the soma vessels, as pāda d tells us. Vs. 5 is chronologically earlier than 6: Soma is advancing (*prabhū-*) on his journey, which is still in progress, as he “reaches through” *vyānaśi-* the domains, i.e., the filter and subsequent locations. Cf., for *prabhū-*, nearby IX.83.1 *pāvitraṃ te vītatam ..., prabhūḥ ... pāry eṣi vīsvātaḥ* “The filter is outstretched for you, o lord of the sacred formulation. Advancing, you circle around it on all sides.” The lexeme *pāri√i* in soma contexts describes the movement of the soma juices around the filter. I think the point of both our vss., 5 and 6, is that, though Soma has moved on beyond the filter (5) and finally settled in the vessels (6), his beacons continue to circle around the filter. I am not entirely sure what that means in physical terms – perhaps the residual soma, caught as drops in the wool of the filter and glinting as the final drops drip down? or are the beacons pieces of ritual equipment? I think the former is more likely, given the reoccurrence of sg. *ketū-* in vs. 7 referring to Soma himself, but I am tolerably certain that the pl. in 5–6 distinguishes the vanguard of the soma, Soma proper, from the rest of the liquid that follows.

IX.86.5: As should be clear from the immed. preceding discussion, as elsewhere in IX I take *dhāmāni* ‘domains’ as referring to the filter and subsequent locales that the soma traverses, not, with Ge, Soma’s forms. (What Re means by “structures” is uninterpretable to me.) The physical locations on the ritual ground can also be viewed as the cosmic domains over which Soma has dominion – hence the hyperbolic statement in d, attributing universal rule to Soma.

On *vīsvasya bhūvanasya rājasī*, see the identical phrase in 28b.

vyānaśi- belongs with the redupl. *-i-* stem type of *cakrī-*, etc. (cf. weak pf. *vy-ānaś-* to $\sqrt{(n)as}$); see AiG II.2.292. It can therefore govern the acc., like other instances of this formation type, and we can easily supply *dhāmāni* from pāda a, strongly supported by the parallel later in the hymn: IX.86.15 *yó asya dhāma prathamām vyānaśe* “who has reached through his first domain,” with the medial perfect to *vī√(n)as*.

IX.86.6: The referent changes from 2nd ps. (vs. 5) to 3rd (vs. 6), although this is not clear until the 3rd sg. verbs in the 2nd hemistich.

“On both sides” (*ubhayātaḥ*) probably reflects the double reference just noted: the ritual and the cosmic, or the earthly and the heavenly. See Ge n. 6ab.

I read *yādī* as *yād ī* (with enclitic prn.), since “if” does not work well here.

IX.86.7–9: The beginning and end of this *ṛca* echo the preceding one: *ketūḥ* in 7a picks up the pl. *ketāvaḥ* in 5–6, and the end of vs. 9, *kalāśeṣu sīdati*, is identical to the end of 6. The *ṛca* traces a trajectory from the ritual journey—the filter and the cask in 7—to a cosmic one, with Soma as king (8a) traversing first earthly natural features (seas, rivers, streams, waves 8ab) and then bridging the distance between earth and heaven (8d, 9ab), ending back on the ritual ground (9d). Of course the equivalence of the ritual and cosmic

features is always in the foreground, as when in 8c he mounts the sheep's back (=the filter), which is immediately (8d) then identified as "the navel of the earth" (*nābhā pṛthivyāḥ*), with the same word for 'back' (*sānu*) used in 8c for the filter and in 9a for heaven.

IX.86.9: The rel. cl. of b lacks a verb. I think that whatever is supplied must be able to be construed with *dhārmabhiḥ* "according to (his) ordinances." My 'abide' is a slight elaboration on Ge's 'sind': "durch dessen Bestimmungen Himmel und Erde sind," which I think is fundamentally correct. This is another hyperbolic statement of Soma's cosmic power. Re's "lui à qui (appartiennent) le ciel et la terre avec les choses-à-maintenir" separates *yasya* from *dhārmabhiḥ* and finds little work for the instr. pl. to do. The two instances of *dhārmabhiḥ* (here and 5c) should be more or less in harmony.

IX.86.10–12: Following a pattern we've met earlier, the first vs. of the new *ṛca* echoes the previous one. In particular, the beginning of 10a *jyótir yajñāsya pavate* is almost identical to 7a *yajñāsya ketúr pavate*, with *ketú-* = *jyótis-* semantically and the order of the first two elements flipped. As for intra-*ṛca* connections, 10b *#pitā devānām* is picked up by 11b *#pātir divāḥ*. There is also a fair amount of repetition of vocabulary and even phraseology from earlier in the hymn (e.g., 6cd ... *mṛjyāte hāriḥ* ... *kalāśeṣu sīdati* and 11cd *hāriḥ* ... *sādaneṣu sīdati*, *marmṛjānāḥ*), but most of this involves material so ubiquitous in soma discourse that it doesn't mean much.

IX.86.10: Ge notes the parallels between our vs. and IX.75.2:

IX.75.2a. ... *pavate mādhu priyām*, ...
2cd *dádhāti putráḥ pitrór apīcyām*, *nāma* ...

IX.86.10a ... *pavate mādhu priyām*, ...
.10c *dádhāti rátnaṃ svadháyor apīcyām*

But he doesn't seem to take the parallelism too seriously. In particular, though both 75.2c and 86.10c have a dual gen./loc. to be construed with a VP in which the subject deposits / establishes a secret X [name in 75.2, treasure in 86.10], Ge takes the dual as loc. in 75.2 (where there's a parallel loc. sg. *rocané*), but gen. here ("Er bringt das verborgene Kleinod der beiden Eigenmächte")(sim. Re), with a somewhat forced interpr. of *dádhāti* as 'bringt'. Since the dual seems to have the same referent in both passages, Heaven and Earth (so both Ge and Re), and the passages are otherwise so similar, it seems to me very likely that they are structured in the same way. I therefore take *svadháyoḥ* as loc.

It's worth noting that this is the only du. form of the stem *svadhā-*

IX.86.11: I do not know why the seats are identified as those of Mitra. I doubt that Lü is correct that it is only because Mitra's seat is in highest heaven (210), much less that Mitra is at this stage in Vedic being identified with the sun (605).

IX.86.12: The vs. is structured by three pāda-initial forms of *āgre* + GEN, reinforced by *agriyāḥ* in b.

IX.86.13–15: This *ṛca* is characterized by increasingly larger claims for Soma’s cosmic reach. It has fewer connections to previous *ṛcas*, save for the echo in 15b *dhāma prathamām vyānaśe* of 5a and c, on which see comm. there.

IX.86.13: Ge identifies (n. 13a) and tr. *matāvān* as a real past active participle (“Nachdem er sich bedacht hatte ...”)(sim. Lü 243). This seems highly unlikely to me; Whitney’s statement (Gr. §960) should be noted: “Derivative words of this formation [= *távant-* sj] are found in RV., but without anything like a participial value. The AV. has a single example ... In the Brāhmaṇas also it is hardly met with.” See also Re’s n. The fact that the base, *matá-*, is not found independently as a ppl. in the RV, but only once (besides here) in the cmpd. *matavacas-* (voc., so unaccented, I.46.5), makes the building of a past active part. to it even less likely. Instead *-vant-* must have its usual possessive sense and in context mean ‘accompanied by thoughts’ (like *marútvant-*), referring to the praises given to Soma at the ritual. These act as a spur to set the soma in motion, hence the following simile.

The 2nd hemistich opens with a form of the 2nd sg prn., *táva*, followed at intervals by two voccs., *kave* at the end of c and *indra* in d, followed immediately by vs.-final *te*. It only becomes clear in d, with the 3rd ps. phrase *pavate sómaḥ*, that the 2nd ps. cannot be Soma, as it was earlier in the hymn (vss. 1–3, 4–5). The *kave* is a bit of a red herring, since it could, and often does, refer to Soma, and though Indra is sometimes so designated, other gods are far more commonly so called. The voc. *indra* at the end settles the matter, but our poet seems to tease us with other possibilities.

The image of Soma purifying himself “between the two world-halves” of course reflects the cosmic reach of the Soma, but it may also have a narrower ritual application. In IX.98.9 Ge suggests that the world-halves there are the jaws of the soma-press, which would fit nicely here. See also IX.75.4, where the world-halves are called the mothers of Soma.

IX.86.14: I would now tr. the pf. part. *jajñānāḥ* with past value, “once having been born.”

The standard tr. (and incl. Ober II.76; Lowe, Part. 158) take *svár* as nom. with the pf. part.: “having been born as the sun.” This is of course quite possible. But I would expect a goal with *abhí* √ *kram* and therefore take *svàr* as acc. in that function (see also Scar 330).

I take *nábhasā* as instr. of extent of space, rather than accompaniment (Ge, Lowe) or, even less likely, agent (Re “s’est élané par la nuée,” despite the absence of any verbal form that could be interpr. as passive).

The identify of the “age-old father” isn’t clear, and various candidates have been suggested: Sāy.: Indra; Ge (n. 14d): Parjanya or Heaven; Re: Heaven. I’m generally inclined towards Heaven, though of course bringing Heaven here is not physically possible.

IX.86.15: The gen. *asya* of pāda a could depend instead on *visé* – or indeed on both *visé* and *śárma*. Since I don’t know what ‘clan’ is in question, it is hard to determine if it belongs to Soma.

On *dhāma ... vyānaśe*, see comm. ad vs. 5. I do not think, with Ge, that the *dhāman-* refers to the first “form” of soma in the phases of soma-preparation.

In d note the play in the phrase *sám yāti samyátaḥ*, which belong to different roots ($\sqrt{yā}$ and \sqrt{yat} respectively). The latter has been rendered in quite different ways: Ge: “... gelangt er zu allen Stufenfolgen”; Re “il parcourt toutes les confluences”; Lü (702) “... geht er zu allen Treffpunkten”; Scar (404) Nomen act. ‘feste Aufstellung’. But *samyát-* is generally an adj., usually in the pl. of liquids (V.34.9 *āpaḥ samyátaḥ*, VIII.100.9); esp. pertinent are two passages in our own hymn: vs. 18 in the next *ṛca samyátam pipyúṣīm iṣam* “continuous, swelling refreshment” and, by implication, in vs. 47 *dhāṛāḥ ... samyátaḥ* “continuous streams.” On the basis of these passages, I supply “streams” here as well. See, e.g., vs. 8.

IX.86.16–18: The first two vss. of this *ṛca* begin with *prá* with a verb of motion, but otherwise there is little that unifies the *ṛca*. Nor is there much that connects with the rest of the hymn, save for 16a ... *ayāsīt ... índrasya niṣkṛtām* / 7b=32d ... *úpa yāti niṣkṛtām* and the repetition of *samyát-* in 18a (cf. 15d and disc. there).

IX.86.16: Pāda b strikes me as the quotation of a well-known general truth or proverb, providing the basis for the particular action of pāda a: Soma cannot let Indra down, because (of the old saw) “a comrade ...” It’s also worth noting that the other occurrence of *samgír-* (X.89.9) is also the obj. of *prá* $\sqrt{mī}$. Re also adduces IV.25.7 *ná ... sakhyám índraḥ ... sám grñīte* “Indra does not agree to companionship (with ...).”

IX.86.17: The publ. tr. does not make it clear that “your” is pl. (enclitic *vaḥ*) and must refer to the poet/officiants.

What is striking stylistically in this vs. is the sequence of three heavy nom. pl. fem. *-yu*-adjectives: *mandrayúvo vipanyúvaḥ*, *panasyúvaḥ*, the latter two derived from the same root. Though morphologically parallel, they are somewhat disharmonious: *mandrayú-* is a hapax, *vipanyú-* is reasonably well attested and generally modifies the human officiants (gods a few times), while the rather fewer occurrences of *panasyú-* (and the related verb *panasyá-*) refer to gods. Hence the “thoughts” of our vs. seem both to “express admiration,” as humans do to gods, and “invite/require admiration,” as gods do from humans – so the thoughts’ purposes seem to be various, both to praise the gods and be admired for their fine crafting?

I’m not exactly sure what *samvāsana-* (a hapax), lit. ‘dwelling together, joint dwelling’ is expressing here. Ge seems similarly puzzled, tr. “in den Sitzungen” with a question mark; Re’s “dans les sessions-rituelles” is more definite and appealing, but I don’t see where he gets it. Perhaps it doesn’t indicate that the thoughts are dwelling with each other but that they, as a group, are dwelling with something/one else – perhaps the soma, perhaps the milk and other non-verbal parts of the ritual machinery?

IX.86.18: Note the functional contrast between *ā ... pavasva* and adjacent *pávamānaḥ*.

IX.86.19–21: No obvious signs of unity. The instr. *manīṣibhiḥ* is found at the end of 19 and immediately afterwards at the beginning of 20. The dawn(s) and the rivers are found in both 19 and 21, but not in mutually reinforcing ways. As for external connections, the “partnership” (*sakhyá-*) of Indra and Vāyu in 20 is reminiscent of the companions/partners (implicitly Soma and Indra) in 16b. There are various lexical echoes

(e.g., *vicakṣaṇāḥ* 19a = 11b), but the limited vocab. of the Soma hymns makes this unremarkable.

IX.86.19: “Bull of the thoughts” (*vīṣā matīnām*) is a slightly odd expression, but it fits the pattern of IX.76.4 *pitā matīnām*, 96.5 *janitā matīnām*, 103.4 *netā matīnām*, though without obvious agentive content here —although Ge interpr. ‘bull’ as ‘Befruchter’.

The three genitives with *pratarītā* by all the standard accounts (incl. the publ. tr., also Ober II.53) consist of two temporal expressions (day, dawn) and a spatial one (heaven). It is not clear to me what “lengthening/extending heaven” would involve, and so, though gen./abl. *divāḥ* is almost always ‘heaven’ rather than ‘day’, I now wonder if it here refers to ‘day’. Other passages containing both ‘day’ words include III.56.6 *trīr ā divāḥ savitar vāryāṇi*, *divé-diva ā suva trīr no āhnaḥ* “Three times a day, every day, o Savitar, impel valuables to us, three times daily”; X.7.4 *dyúbhiḥ ... āhabhiḥ*; X.12.4 *āhā yād dyāvah ... āyan* — and, interestingly enough, two expressions in this very hymn, vss. 41 and 42, on which see further ad locc. The question is what, if anything, is the semantic distinction between the two ‘day’ words *div-* / *dyu-* and *āhar* / *āhan-*. In principle “daytime” (versus night time) could be distinguished from the 24-hour day. Which, then, would be which? Assuming that PIE **d̥ieṃ-* (and its descendents) referred esp. to the *bright* sky, we might expect the ‘day’ occurrences of *div-* / *dyu-* to refer to the *bright* day, i.e., day versus night, leaving *āhar* for the 24-hour day. And the numerous exx. of *nāktam* (...) *divā* (and reverse order) “by night and by day” (I.24.10, 12, 34.2, 98.2, etc., etc.) seem to bear out this prediction. We also find *div-* / *dyu-* contrasted with other words for ‘night’: e.g., in the instr. pl. *dyúbhir āktúbhiḥ* (I.34.8, 112.25, III.31.16), and in other case/no. pairs I.116.24 *dāśa rātrīḥ ... nāva dyūn*, VI.49.10 *rudrām divā vardhāyā rudrām aktaú*. However, *āhar* is also commonly found in these contexts. Cf. the compd. *ahorātrā-* ‘day and night’ and expressions like *rātryā āhnaḥ* (X.129.2), *tisraḥ kṣāpas trīr āhā* (I.116.4), *vy āktūn ... vy āhāni* (V.54.4), *rātrībhiḥ ... āhabhiḥ* (X.10.9), *āhobhiḥ ... āktúbhiḥ* (X.14.9), *āktúbhyaḥ ... āhabhyaḥ* (X.89.11). Also passages in which light is put into or created for *āhar* / *āhan-* — e.g., IX.92.5 *jyótir yād āhne ākṛnot*. An esp. telling example is X.68.11 *rātryāṃ támo dadhur jyótir āhan* “They put darkness in the night (and) light in the day.” I therefore find myself at something of an impasse, since both words are used contrastively with ‘night’, and in a passage containing both ‘day’ words assigning one sense to the one and the other to the other seems arbitrary. In any case, I now do think that *divāḥ* means ‘day’ here, and would substitute the tr. “... the lengthener of the day, of dawn, of the daytime” (having made the arbitrary choice).

On *krāṇā* see comm. ad I.58.3. In addition to the adv. sense (‘successfully, effectively’) discussed there, this old instr. can be used with true instr. value: ‘by the action’, as here. In his 1903 art. (cited ad I.58.3) Old (p. 35=Kl Schr. 1113) identifies *krāṇā* here as a neut. pl., not instr. sg.: “die Werke der Ströme, die Kufen hat er brüllen gemacht.” But by the time of the Noten he instead takes it as instr.: “durch das Tun der Flüsse.” This is in fact the standard interpr. of *krāṇā síndhūnām* here: Ge “Unter Mitwirkung der Ströme”; Re “Par l’action des fleuves”; Lü (254) = Ge, but with (?) inserted after “Mitwirkung.” But this pāda is regularly compared by these very same scholars with IX.102.1 *krāṇā síśur mahīnām*. And it is generally agreed that *mahīnām* in that pāda refers also to the rivers. But there is a split about where to construe this gen. Ge (and perhaps by implication Old) follows the pattern of our passage: “Unter Mitwirkung

der grossen (Ströme),” but Lü argues (239, 242), rather persuasively, that *mahînām* belongs rather with *śīśuḥ*, as “child of the great (rivers),” in part on the basis of *sīndhumātar-* (IX.61.7) ‘whose mothers are the rivers.’ He is followed by Re. In the interpr. of the two passages only Ge is consistent, in taking the gen. with *krāṇā* in both cases. Lü, Re, and the publ. tr. all construe the gen. differently in the two places. I now think this is wrong and a consistent interpr. should be made, but I make the opposite choice to Ge’s. In the passage here I would supply ‘child’ as headnoun for *sīndhūnām* and change the tr. to “Through his action, (the child) of the rivers ...” There are several reasons for my change of heart besides a desire for consistency. For one thing *krāṇā* is never elsewhere construed with a gen. For another, Soma is otherwise the sole subj. of *āvīvaśat* and doesn’t need any assistance in this action.

IX.86.20: Ge interpr. *pavate* as a passive, with *manīṣibhiḥ* as agent (“Von den Verständigen wird der allerste Seher geläutert”), but *pāvate* is so insistently reflexive in the Soma maṇḍala that I strongly resist a passive here. Re’s tr. is like mine, though he doesn’t comment.

Trita is the ur-Soma presser. See disc. ad IX.37.4. Here, as Ge (n. 20c) suggests, Soma re-creates him for the current pressing, to ensure that Indra and Vāyu will get their soma.

IX.86.21: The first three pādas of this vs. begin *ayām* ‘this one here’.

The thrice seven cows here are also found in IX.70.1, as Ge (n. 21c) points out. See the seven cows in vs. 25.

On pāda d see comm. on the identical pāda ad IX.72.7.

IX.86.22–24: The *ṛca* seems to be characterized by augmented imperfects, though three of the five could be injunctives instead: *ārohayaḥ* [maybe] 22d, *abhayaḥ* 23c, *avīṇoḥ* [maybe] 23d, *amadan* 24b, *ābharat* [maybe] 24c. It is also characterized by mythic allusions, esp. the Vala myth and the opening of the cowpen for the Aṅgirasas (23d) and the stealing of soma from heaven (24c), as well as the cosmogonic act of raising the sun into heaven (22d). Both this latter deed and the opening of the Vala cave are deeds usually attributed to Indra.

As for phraseology, in 22c and 23b the soma is “in the belly of Indra” (*indrasya jaṭhāre(su)* – sg. in 22c, pl. in 23b); *pavitra ā* is found in both 22b and 23a. With regard to external connections, 22d *nībhīr yatāḥ* is also found in 20b, and 23b *indrasya jaṭhāreṣv āviśān* echoes 19d *indrasya hārdy āviśān*, with a different body part.

It may also be that 22 continues the theme of 21: in 21a Soma made the dawns shine forth (*vī rocayat*), while in 22d he made the sun mount in heaven (*sūryam ārohaya divī*). The two verbs are not only identical in formation (both *-āya*-transitives) but phonologically similar.

IX.86.22: Although the Pp. analyzes *ārohayaḥ* as containing an augment (*ā/ arohayaḥ*), it could equally well have an injunc.: *ā/ rohayaḥ*. The latter would fit better with the injunc. *vī rocayat* in 21a, just disc.; the former with the other augmented forms of this *ṛca*.

IX.86.23: The augmented impf. *abhavaḥ* is somewhat surprising in this context, because, at least in the publ. tr., it seems to refer to the recent past, rather than to the mythic past of the following (*a*)*vṛṇoḥ*. Perhaps, however, it opens the telling of the Vala myth continued in d (and possibly 24ab; see below).

The augment in (*a*)*vṛṇoḥ* is quite insecure: the Pp restores it, but it is not found in the Saṃhitā text and is metrically de trop.

IX.86.24: Both hemistichs open with a distracted 2nd sg. acc. pronoun (*tʷvām*). The accusative of this pronoun is, of course, historically monosyllabic, though distraction is not uncommon in the RV. Here the distraction may have resulted from matching the distracted nominative sg. form that opened the 2nd hemistich of the previous vs., 23c.

The impf. *amadan* in b is wrongly tr. as a present in the publ. tr.: correct to “did ... applaud.” This may continue the account of the Vala myth, with the “very attentive poets” being the Aṅgirasas themselves. It seems unlikely that it is the first action of the soma-stealing myth found in c.

Once again the Pp. analyzes *ā* / *abharat*, but the sequence could instead be *ā* / *bharat* with an injunc.

IX.86.25–27: Cows (that is, the milk-mixture) are esp. prominent in this *ṛca*: there are seven in 25b (recalling the “thrice seven” that produced the milk-mixture in 21c), here called *dhenávaḥ*, with *gāḥ* in 26c and *góbhiḥ* in 27c. Other miscellaneous animals: the sheep’s fleece (*ávyē ... vāre* 25a), buffaloes (*mahiṣāḥ* 26d), a steed (*átyaḥ* 26d), as well as the tawny one (*hárīm* 25b, 27b), if that is specifically a tawny horse or, as in 31b (*vṛṣā ... hárīḥ*), a tawny bull.

25b and 27b both open *hárīm navante*, each followed by a diff. preverb to be construed with the verb (*abhí, áva*). In 27a *asaścātaḥ* recalls 18c *ásaścuṣī*.

IX.86.26: The two pres. participles to $\sqrt{kṛ}$, act. *kṛṇvān* (b) and med. *kṛṇvānāḥ* (c), provide almost a textbook example of the functional distribution of voices: in b Soma makes X (into) Y for someone else (dat. *yájyave*), while in c he makes X (into) his own Y.

IX.86.27: On the likely pun on *abhiśríyaḥ*, see Ge (n. 27ab), also Scar 547–48.

It is not entirely clear what “the third back” (*ṛtīye prṣṭhé*) refers to, but most likely the highest (third) realm of heaven. Cf., for the back of heaven in general, *divás prṣṭhé* in IX.66.5.

IX.86.28–30: As noted in the publ. intro., this *ṛca* shows a high degree of unity. To start with, every pāda but 2 (of 12), begins with a form of the 2nd sg. prn.: mostly nom. *tʷvām* (28b, d, 29a, c, 30a) but also gen, *táva* (28a, 29b, d), with the final hemistich breaking the pattern with a single acc. *tʷvām* (distracted; see comm. ad vs. 24 above) in c and a single dat. *túbhya* in d. Only 28c and 30b fail to open with such a form (and 28c has the enclitic *te* later in the pāda). In addition, all 3 vss. contain the voc. *pavamāna* (28c, 29d, 30b), and all three also have forms of *vísva-* 28b, d, 29a, 30d). Note also that *vísvasya bhúvanasya* in the first vs. (28b) is echoed by *vísvā bhúvanāni* in the last (30d), and that *vidharmaṇi* (29b) is taken up by better specified *rájaso vidharmaṇi* (30a); cf. also *távemāḥ* (28a, 29b) varied by *túbhyemāḥ* (30d).

In terms of contents, the *ṛca* insistently asserts Soma's universal rule over all cosmic elements.

IX.86.28: Ge and Re (also Ober II.43) construe *táva* with *rétasaḥ* (e.g., Ge “Von deinem himmlischen Samen sind diese Geschöpfe”). I am reluctant to do so because of the parallelism of *távemāḥ* (*! túbhyemāḥ*) just noted: all three expressions should be rendered in the same general way. In addition Ge's tr. essentially assumes *rétasaḥ* is abl., but its companion adj. *divyása* is stubbornly gen. I would therefore stick to my tr., though slightly modified for clarity to “Yours are these offspring of (your) heavenly semen.”

For ... *viśvasya bhúvanasya rājasi*, see 5d, which is identical, and 36d ... *viśvasya bhúvanasya rājase*, in an acc. + inf. phrase.

Pāda c is essentially a restatement of b.

Since *dhāma-dhā-* is an etymological figure, I have rendered it as one, rather than ‘establisher of domains’, vel sim.

IX.86.29: The cmpd. *viśva-vid-* is ambiguous here. Ge and Re both tr. as ‘all-knowing’, and that is favored by the context, since it is immediately followed by the voc. *kave* (‘sage poet’). But the cmpd recurs in the very similar pāda, 39c *tvām suvīro asi soma viśvavít*, and that vs. contains three similarly formed cmpds that surely belong to *√ vid* ‘find’: IX.86.39a *govít ... vasuvíd dhiranyavít*. There the context favors ‘all-finding’. (Scar treats the two roots *√ vid* together [489], so he is not forced to distinguish.) I suggest, as usual, that it's a pun.

IX.86.30: On the expression *pavítre rājaso vídharmaṇi* and its more succinct variants see comm. ad IX.64.9.

IX.86.31–33: After the tight structure of the preceding *ṛca*, we have returned to the lax stringing together of soma tropes. There is a lot of noise-making in 31 (b *cakradat*, c *vāvaśānā anūṣata*), which is slightly echoed in 33 (b *kānikradat*). Otherwise I see nothing particularly unifying.

As for external connections, GEN *niṣkṛtām* *√ yā* in 32d is found also in 7b and 16a, and of course much of the soma lexicon is repeated elsewhere.

IX.86.32: Although the standard interpr. of *yáthā vidé* here makes Soma subj. of the verb (e.g., Ge “wie er es versteht”), pāda-final *yáthā vidé* is a common tag (I.127.4, 132.2, etc.) with a passive reading of the verb: “as is known, in the way that is known.”

The “directives of truth” (*ṛtasya praśiṣaḥ*) are convincingly identified as the hymns by Lü (469–70), as the adj. *nāvīyas-*, a standard descriptor of hymns in the fem., suggests.

I assume that the “threefold thread” (*tántum ... trivṛtām*) refers to the three soma pressings.

IX.86.34–36: Nothing much in the way of internal unity or external connection, beyond the obvious soma themes.

IX.86.34: The publ. tr. does not make sufficiently clear (or clear at all) that *pávamāna* is a voc. Better tr. “Self-purifying one, as a great flood you run ...”

With Ge and Re I take *máhy áṛṇaḥ* “great flood” as a nom., coreferential with the 2nd sg. subj. The statement “you are the sea” (29a *tvám samudró asi*) gives semantic support to the coreferential reading, though the two words (*samudrá-* and *áṛṇas-*) are different. By contrast, Lü (204, 239; sim. Ober II.152 n. 111) takes it as acc. of extent, indicating the space that the soma traverses, with the “filters” of b parallel to it in a simile: “du durchläufst die grosse Flut, wie die strahlende Sonne die wollenen Seihen.” This interpr. requires that the *real* filter (the sheep’s fleece) that the *real* soma ordinarily traverses be part of the simile, expressing what the sun crosses, while the metaphorical filter (“the great flood”) is part of the frame, where the real soma is crossing it. This is either very clever poetics, with several levels of metaphor below the surface simile – or an indication that his interpr. is incorrect. I’m afraid that I incline towards the latter view.

The expression in c *gábhasti-pūto nṛbhiḥ* is somewhat curious, since it essentially provides two agents, or agent-like elements, for the *pūtá-* ppl.: the 1st cmpd member *gábhasti-* and the indep. instr. *nṛbhiḥ*. (Of course, the men are the agents whose hands are the instruments.) Without the ‘hand’ (*gábhasti-*) we would expect **nṛ-pūta-*, like *nṛ-dhūta-* (1x), *nṛ-ṣūta-* (1x) (which, oddly enough, both rhyme with our putative form). Re has a slightly different interpr., but it has the same configuration. His “pressé par les seigneurs à l’aide des pierres” construes *nṛbhiḥ* with what follows, the instr. *ádribhiḥ* and the ppl. *sutáḥ*, with the two instr. filling the agent and instrument slots respectively. Since *nṛbhiḥ* is stationed exactly in between the two instrument+ppl. expressions, there’s no way to tell – though it seems to me somewhat more elegant for *nṛbhiḥ* to double a cmpd. member rather than morphologically doubling another instrument. Note that *ádri-ṣuta-* is also attested (2x) and that the same *ádribhiḥ sutáḥ* as here is found in this hymn in 23a..

IX.86.35: The accumulation of \sqrt{mad} derivatives is striking: *mādvā mádyo mádaḥ*. The last, *máda-*, is of course extraordinarily common, and the 2nd *mádyo-* reasonably well established (13x). But *madván-* is found only twice.

IX.86.36: Who the seven sisters (bzw. mothers) are is a matter of dispute: Sāy.: the streams or rivers, Ge: thoughts, Re (flg. Lü 246): celestial streams/rivers. No one seems to cite the seven milk-cows (*saptá dhenávaḥ*) in vs. 25 of this same hymn, or their multiplied number (thrice seven) in 21. But in this hymn “cows” seems the mostly likely immediate referent, esp. given the image of maternal care, whatever those cows may otherwise represent (beyond the milk-mixture).

On the expression in the last pāda, see similar phrases in vss. 5 and 28.

IX.86.37–39: For the first time in this hymn (save for briefly in vs. 18), this *ṛca* shows some interest in what Soma might do for *us*, particularly in the 2nd two vss. Note in 38 first the enclitic *naḥ* and then the 1st pl. opt. *syāma*. The poet both asks for benefits directly and by implication, in the cmpds with 2nd member -*víd-* ‘finding’: *góvíd-*, *vasuvíd-*, *híraṇyavíd-*, *viśvavíd-* “cow-finding, goods-finding, gold-finding, all-finding” and the bahuvrīhi *suvīra-* ‘possessing good heroes’. If Soma finds or possesses these things, he can distribute them to us. The connection between vss. 38 and 39 is nicely signalled by the near identity of 38c and 39a:

38c ... *pavasva vásumad dhíraṇyavat*

39a ... *pavasva vasuvíd dhiraṇyavít*

where the suffix of possession (-*mant*-, -*vant*-) subtly gives way to the phonologically similar root-noun -*víd*-, suggesting that Soma possesses those things, which he can now find for us. The epithet *nṛ-cákṣas*- ‘having his gaze on men’, found several times previously in this hymn (vss. 23, 36), seems finally to take on its full lexical value in 38, where it is predicated of Soma (*nṛcákṣā asi*) and strengthened by *viśvātaḥ* ‘on every side’, to express Soma’s interest in us and our welfare. The reciprocal relationship between us and Soma is also expressed by the parallel pādas 38d and 39b, both containing *bhúvaneṣu* as the location of both us (38d) and Soma (39b).

IX.86.38: I take the -*mat* and -*vat* forms adverbially.

IX.86.39: On *viśvavíd*- see comm. ad vs. 29. Ge takes it as ‘all-knowing’ here, but the other -*víd*- cmpds in the vs. favor ‘all-finding’. Re, like me, ‘all-finding’ here, though ‘all-knowing’ in 29.

IX.86.40–42: The focus on our welfare found in the last *ṛca* is found here in vs. 41 but is otherwise muted.

IX.86.40: *vanánā*- is a hapax, though there seems to be general agreement that it means something like ‘desire’, derived from the set root \sqrt{van} ‘love, hold dear’. There is an Old Avestan hapax of the same shape (Y. 44.15) that seems unconnected, in that, contextually, the standard tr. ‘victory’ seems correct, and it should therefore be derived from *aniṣ* \sqrt{van} ‘win’. But Kellens-Pirart in their OA lexicon (1990) equate it directly with our *vanánā*- and gloss it ‘charme’ – which makes no contextual sense and can, I think, easily be dismissed. In any case it is easy to see how our form came to be built. It is the object of the verb *úd ... atīṣṭhipat* ‘made to stand up / raised up’. The next vs., 41a, has a very similar VP, *bhandánā úd iyarti*, where the verb is semantically equivalent to our verb and has the same preverb, and the nominal object is a fem. acc. pl. -*ánā*- form, which provided the template for *vanánā*-. Given this parallelism and given the fact that the phrase in vs. 41 has to do with granting blessings to us, I think it likely that the desires Soma raised in 40a are our own (so also Ge, Re), which he will fulfill in the next vs.

ví gāhate as in 8a; cf. also *āti gāhate* in 26a.

Soma is presumably “thousand-spiked” (*sahásrabhrṣṭi*-) because of the knobs, thorns, or similar extrusions on the plant.

IX.86.41: On the relation between the first hemistich and vs. 40 see immed. above.

The publ. tr. “... all blessings, consisting of offspring and easy to bear” is awkward and hard to parse. It might be better as “... all blessings, consisting of offspring – a light burden –,” with *subhāra*- used in almost jocular fashion. It can simultaneously also refer to “easy birth,” with ref. to *prajāvatīḥ*.

The unusually formed (pseudo-)āmreḍita *áhar-divi* ‘every day, day upon day’ is esp. interesting in light of the discussion of the two ‘day’ words ad vs. 19 above. It must be a substitute for the more orthodox āmreḍita *áhar-ahar* (6x) for metrical reasons: the

standard cmpd. is metrically awk. With three light syllables in a row, it certainly won't fit in any cadence and would be difficult anywhere in the vs. line but where it's always found, pāda-initial (which isn't all that great either – openings with light syllables in both 2 and 3, not to mention 1 and possibly 4, are quite irregular; see Arnold pp 194–95). It is puzzling, however, that the well-attested (47x) (also somewhat aberrantly formed) āmreḍita to the second 'day' stem here, namely *divé-dive*, was not used in our vs., since it would fit the cadence perfectly and is quite common in Jagatī cadences. In any case, at least *āhar-divi* suggests that there's no clearcut difference of meaning or reference between *āhar-* and the forms of *div-/dyu-* that mean 'day'.

In the 2nd hemistich, Soma is not asked directly for benefits, but rather urged to intercede with Indra – to beg him for our sake – for offspring and wealth. This displacement is made all the stranger by the use of a "future imperative," *yācatāt*, which properly should follow another impv. Perhaps the displacement in time that such an impv. represents – that is, there should be an intervening impv. before it – indirectly reflects the displacement in person – that is, Soma is the middleman, intervening between us and Indra. I suppose it is bad form to ask Indra directly in a hymn devoted to Soma.

There is further displacement here. The "sacred formulation bringing offspring" (*brāhma prajāvat*) that we want Soma to get Indra to give us is not a direct request for Indra to bestow offspring on us, but rather for him to inspire in us a formulation that we can then offer to him, which will, only then, result in offspring. It's a long and winding road to what we want!

The interpr. of the hapax bahuvr. *ásva-pastya-* is disputed. My tr. "consisting of horses in the homestead" essentially follows Gr's 'Rosse im Stalle habend', though it would be more lit. as 'having a homestead that has horses in it' – a *vāja-bāhu-* type cmpd. Ge's tr. "an vielen Rossen" seems to evade the issue, but his statement in n. 41c "wie später -*sālin-*" is more forthcoming: -*sālin-* means lit. 'having a house/room', but develops to 'abounding in'. Nonetheless, I find it hard to believe that a RVic poet would go to the trouble of using a fairly rare word as 2nd member, only in order to bleach it of its particular meaning. Re's "la richesse qui réside dans les chevaux" (and Ober's "dessen fester Wohnsitz Pferde sind" [I.537 n. 111]) employs an abstract sense of *pastyā-* to characterize where *wealth*'s dwelling is: it resides in – that is, is founded on / consists of – horses. Whereas my interpr. assumes a concrete homestead, which belongs to the speaker and/or his associates, that is stuffed, as it were, with horses. The difference between the abstract and the concrete interpr. is small but significant, and I continue to prefer the concrete one.

IX.86.42: This vs., too, contains the two 'day' words, gen. pl. *āhnām*, dependent on *āgre*, and the adverbial instr. expression *ānu dyúbhiḥ*. See comm. ad vss. 19, 41.

I take *prá ... cetayate* as a reflexive trans./caus. 'makes oneself perceived', contrary to the intrans. interpr. in my -*āya-* book (p. 163).

As is generally recognized, *nārā ca śāmsam* shows a species of tmesis, from the cmpd *nārāśāmsa-*.

On *dhartāri* as one of the few likely exx. of a loc. inf., see Keydana (Inf. 197–99).

IX.86.43–45: This tṛca seems more artful than most of the other, with metaphor layered upon metaphor (vss. 43, 45), varied by similes (vs. 44).

IX.86.43: The first hemistich is striking with its series of identical verbs in pāda a, with pāda b ending with the same verb: *añjāte vy añjate sám añjate, ... abhy añjate*. The first pāda lacks a syllable (rest at 4); as Old suggests, the metrical irregularity is most likely meant to call attention to the word play.

Ge, Re, Lü (239) take the various verbs as reflex., with Ge (n. 43ab) taking the subj. as the soma-drinking singers and Re as the waters. But though mid. $\sqrt{añj}$ is probably more often reflex./pass. than trans., it can be the latter, and that makes more sense here. Cf., e.g., IX.97.57 *sám añjate rūpām* “they jointly anoint his form,” and recall the many times in this maṇḍala in which soma “is anointed,” using the true passive *ajyāte* (-se) (often as a pun with ‘is driven’ to \sqrt{aj}). See especially in the next ṛca of this hymn 47c *góbhiḥ ... samajyāse*, in the same metrical position as *sám añjate* here. I supply the default Soma as obj. throughout the first hemistich; he is found as explicit (though metaphorical) obj. in the 2nd hemistich. As for the subj. of all these verbs, I agree with Re that it is the waters.

The “ox flying in the burbling up of the river” of pāda c is an ex. of the layers of metaphor just alluded to above: it compresses three different representations of Soma into a single image.

I take the subj. of *grbhñate* and referent of *hiranya-pāvāḥ* in d still to be the waters, with *āsu* functioning as reflexive. Re explicitly changes his subj. here to “les hommes.”

IX.86.44: Ge, Re, Ober (II.54) take *ándhaḥ* as nom., parallel to *dhārā* in the simile. But insofar as it is possible to narrow the referent of this word, it is used of the stalk of the soma (see comm. ad IV.1.19). I take it here as acc., construed with *āti*. This pāda, like the following one, depicts the soma juice leaving behind the solid parts of the plant, and *āti* ‘beyond’ is used in both pādas to express the material beyond which the soma juice has gone.

The simile in d, *átyo ná krīḷan*, is also found in 26d.

IX.86.45: In a *agre-gáh* echoes *ágre áhnām* in 42a; in our vs. *áhnām* appears in the following pāda, dependent on something else (*vimānaḥ*), though Re supplies it with *agregáh* as well.

bhúvaneṣv árpitaḥ also in 39b.

In d I construe *rāyē* with *okyàḥ*, although I cannot find any parallel usage. But on its own, *okyàḥ* is hard to fit semantically into the vs.; cf. Ge’s “gern bleibend” and Re’s “(ce dieu) domestique,” which seem like afterthoughts..

IX.86.46–48: The hymn ends with a ṛca no more unified than most of those that preceded it, repeating the same tropes oscillating between ritual and cosmic images.

IX.86.46: In pāda a *skambhó diváḥ* reminds us of 35d *divó viṣṭambháḥ* with a diff. lexical real

On *tridhātu*- see comm. ad IX.70.8.

Pāda c *aṃśúm rihanti matáyah pánipnatam* is identical to 31d, save for the first word, which in 31 is *sísūm*.

In d *yádi* would be best read *yád *ī*, both for sense and for meter, since an opening with light syllables in positions 3 and 4 before an early caesura is very rare (see Arnold 194).

Ge tr. *nirñījam ... yayúḥ* as “Staat machen” (make a show), based, he says (n. 46d), on *śúbham yā*. I see no reason to attenuate the sense of *nirñīj-*. As Scar (284–85) argues, this stem can be both a concrete noun ‘garment’ and an infin. ‘to array’. The infinitival usages he cites are mostly the dat. *nirñīje* (which, in all quoted cases, I take as a noun) and he is uncertain about the usage of this acc. ex. But since the analysis just proposed of *yád *ī* provides us with an acc. obj., infinitival usage seems best here.

IX.86.47: Pāda b is awk. in English. The sense is that the streams of the soma being purified go charging forward continuously, with *rámhayah* ‘charges, speedy forward movements’ subj. of *yanti*.

IX.86.48: The aggressively hostile command in pāda c comes as something of a surprise in this otherwise ritually and cosmically focused hymn.

The last pāda is the Gṛtsamada refrain from Maṇḍala II. This tṛca is attributed by the Anukramaṇī to Gṛtsamada, but perhaps only on the basis of the refrain.

IX.87–97

The section containing Triṣṭubh hymns

IX.87–89

These three hymns are attributed to Uśanas Kāvya, probably on the basis of the mention of his name in 87.3.

IX.87

IX.87.1: In b Soma is urged to run for the prize (*vājam*); in c he is then *compared* to a prize-winning horse (*śśvam ... vājīnam*), a nice ex. of how description shades into simile. It is made somewhat more complex by the fact that the simile (probably) surrounds the target ‘you’: *śśvam ná tvā vājīnam*, so that *vājīnam* could technically be part of the frame, not the simile (“... you, the prize-winner, like a horse”), though in fact *tvā* is in modified Wackernagel’s position. Soma is directly called a *vājīn-* in 4d.

IX.87.2: This vs. contains two links to the preceding hymn, despite their difference in meter: most of pāda c *pitā devānām janitā ...* is identical to IX.86.10b, with each closing with a word that conforms to its cadential template; the first two words of d, *viṣṭambhó divó*, are identical to IX.86.35d *divó viṣṭambhāḥ*, but in opposite order, with minimal metrical difference. (Our pāda is repeated in IX.89.6, while the order in 86.35 is repeated in IX.108.16.)

IX.87.3: The first hemistich contains three resonant words in the realm of poet / wordsmith / seer: *īśir vípraḥ ... kāvyena*, with *kavī-* represented by the vṛddhi deriv. This deriv. is similar, but not identical to the patronymic *kāvya-* associated with the immed. preceding *uśānā*, and by its difference in accent and in case, it cleverly plays on the full

name Uśanā Kāvya. (On the tricky morphology of the name, see my 2007 “Vedic Uśanā Kāvya and Avestan Kauui Usan: On the Morphology of the Names,” in *Verba Docenti* [Fs. Jasanoff].) As Ge suggests, the Anukramaṇī’s attribution of this hymn to the legendary Uśanas Kāvya is no doubt based on this vs.

The Engl. tr. does not make clear that “of theirs” is fem. (*āsām*) and must anticipate the cows (*gónām*) in the next pāda.

IX.87.5: In pāda b the HvN text reads *mahé vājāyām ṛtāya śrāvāṃsi*, with word break after putative *vājāyām*. But it should instead read *vājāyāmṛtāya* without break (as in both the devanāgarī text and the transliterated text of Aufrecht), to be analyzed, with Pp., as *vājāya / amṛtāya*. Undoing the vowel contraction at the caesura in this way produces too many syllables (12, with a Triṣṭubh cadence). Old is uncertain whether to opt for that analysis or for contraction over the caesura, which seems to be Arnold’s (not very clearly expressed) view (p. 192, §215 iii).

Given the importance of *vāja-* ‘prize’ (1a, 5b, 6d) and *vājín-* ‘prizewinner’ (1c, 4d)) in this hymn, the tr. of the dat. phrase in pāda b should be corrected to “for the great immortal prize.”

In keeping with my view that medial forms of the them. stem *pávate* are always reflexive, not passive, the tr. should be corrected to “purifying themselves through the filters” – esp. because of the contrastive undoubted passive *pūyámānaḥ* in the next vs.

IX.87.6: The gen. *jánānām* is best construed with *puruhūtáḥ* as (pseudo-)agent. See the same phrase, though with accented voc. *púruhūta*, in IX.52.4, 64.27 – though in the former passage I construe the gen. with another noun in the publ. tr. I now think that may be wrong.

The accentuation of the athem. part. *túñjāna-* is puzzling; the other ex. of this part. (IX.57.2) has the expected accent *tuñjāná-* as do finite forms like *tuñjánti*. There also exists a single form of a thematic med. part. *túñjamāna-* (III.1.16) also with unexpected accent on the root syllable. Gotō (1st Kl, 78) suggests this form is “metrical” for the athem. form, but does not treat the accent.

The finale of d, *abhí vājam arṣa*, is identical to the end of 1b.

IX.87.8: On the mixture of myth and ritual in this vs., see publ. intro. Given the fem. subj. prn. *sā*, the mythological allusion to Saramā would be available to the audience on the basis of the phrase *gā viveda* “found the cows”; cf. V.45.7 *sarāmā gā avindat*, .8 *sarāmā vidat gāḥ* -- though it must be admitted that *gāḥ* √ *vid* has other gods as subject elsewhere. See comm. ad V.29.3.

Notice that the pf. *viveda* returns here from 3c, which was also, if less clearly, about the Vala myth.

IX.87.9: The publ. tr. takes pāda c as a second complement of *pári yāsi* in pāda a, parallel to *rāsīm ... gónām*. By contrast both Ge and Re take c as the obj. (or pseudo-obj.) of *śíkṣā* in d: e.g., “Suche uns ... viele grosse Labsale zu erwirken.” But the lexicalized desid. stem *śíkṣa-* does not take an obj., but only a dative of benefit (see comm. ad VI.31.4), and so that interpr. seems blocked to me. However, it may be an independent nominal clause: “many are (your) lofty refreshments,” the interpr. I would now favor. Scar’s (636–37)

interpr. is similar, though he then sneaks c in as an understood obj. of *śīkṣā*: “Viel, gross sind die Labungen ... verhilf [zu diesen]” or “... verhilf uns [dazu],” which seems unnec.

All the standard interpr. (incl. the publ. tr.) take the last three words as a separate clause, but this short phrase poses several problems. First, *tāḥ* is a nom. (/acc.) plural fem. demonstr., but the following word, the hapax root noun *upaṣṭút*, is by all appearances singular. Several solutions have been proposed to this mismatch. Ge simply says (n. 9d) that *upaṣṭút* at the end of the hymn represents pl. *upaṣṭútaḥ*, which is not very satisfactory. He tr. “Dein sind diese Lobpreisungen.” Old has two suggestions: 1) *upaṣṭút* is adverbial: “in einer zu den *stútaḥ* gerichteten Bewegung,” citing phrases like *stutîr úpa* (I.84.2). But he gives no parallels for such adverbial formation (maybe the likewise problematic *dakṣinî*?), and it is also hard to see how this would work in context (“these are in the direction of your praise”??). 2) *upaṣṭút* is an agent noun: Soma as praiser. But he rejects this even as he suggests it. Scar (636–37) discusses previous suggestions and suggests further possibilities. Re’s solution as embodied in his tr. “Ces (avantages sont) ta louange (même),” with an equational sentence equating *tāḥ* with *upaṣṭút*, seems to me the best way to deal with the number disharmony – though in his n. Re floats several other, less compelling possibilities. The question then is what is the reference of *tāḥ*. I’m not sure what Re means by “avantages.” I think the most likely referent is the fem. pl. in the immediately preceding pāda: *īṣaḥ* ‘refreshments’, and Re’s n. gives what I consider the clue to the interpr. of the whole in his citation of the cmpd. *īṣa(h)stút*- in V.50.5 (though in fact he cites it in service of a different solution). In V.50.5 *īṣa(h)stúto manāmahe* I tr. “Let us conceive praise-songs as refreshment” (see comm. ad loc.). Here I suggest that we are announcing our praise-song as Indra’s refreshments, the counterpart to the refreshments he offers us. The publ. tr. does not convey this sense; it should be changed to “These (refreshments) are (our) praise for you.”

The retroflexion in *upaṣṭút*- is extremely puzzling, esp. given the non-retroflexed *úpastuta*- (*upastutá*-), *úpastuti*-, *upastútya*-. AiG I.237 registers the form, but simply says that sometimes -ṣ- in cmpds spreads beyond its proper domain, which isn’t terribly helpful.

IX.88

On the thematic structure of the hymn, see publ. intro. The similes that begin the middle vss. 3–5 are all further defined by the syntactic structure GOD *ná yó*. In the first two of these Soma is in the 2nd ps., but in the 3rd ps. in vs. 5.

IX.88.1: The vs. is notable for the dense repetition of the 2nd ps. sg. prn., with five exx. in the first three pādas.

The initial annunciatory *ayám* should probably be more clearly represented in the tr.: “this soma here ...”

For the metrically bad *vavṛṣé* see Kü (459) and comm. ad VI.4.7. As Kü points out, we would expect this *seṭ* root to have a pre-C weak perf. stem **vavūr*-, which would fit the cadence here much better.

The publ. tr. renders *mádāya yújyāya sómam* as “the soma to be yoked for exhilaration,” falsely giving the impression that dat. *yújyāya* modifies acc. *sómam*. I now realize that the five occurrences of dat. *yújyāya* should be taken as nouns expressing purpose, not as adjectives. Interestingly four of the five passages have as main verb a

form of \sqrt{vr} ‘choose’: VII.19.9 ... *vr̥ṇīṣva yújyāya* ..., VIII.4.15 *prá ... vr̥ṇīmahe, yújyāya* ..., IX.66.18 *vr̥ṇīmáhe yújyāya*, and our ... *vavṛṣe, ... yújyāya*. There thus appears to be a fixed syntagm X *yújyāya* \sqrt{vr} “choose/select X for yoking (/for use),” and I would now tr. this passage “... the drop, the soma, which you have chosen for yoking for exhilaration.” I would not construe it directly with the adjacent dative *mádāya*, which is a separate expression of purpose.

IX.88.2: The “yoking” theme of 1d is immediately taken up in 2a by the passive aor. *ayojí*, with concrete sense at least in the simile.

On the unexpected short vowel in the hapax *bhuri-ṣāt* (for *bhūri-*), see the not entirely satisfactory disc. by Scar (607).

nāhus- must be a PN (see Mayr. PN); it is generally, but not exclusively, found in the sg. The deriv. *nahuṣyā-* here is best interpr. in conjunction with nearby IX.91.2 *kavyaīḥ... nahuṣyèbhiḥ*, where it refers to poets. That interpr. would fit the context here as well, since the Nahusian creatures are roaring at the soma on the ritual ground. However, Nahus (and his ilk) are not only poet-ritualists, but fill a number of roles – e.g., as patron in I.122.8, 10–11. The phrase here, *nahuṣyāṇi jātāḥ* should also be compared with X.80.6 *mānuṣo nāhuṣo ví jātāḥ* and possibly with X.99.7 *nāhuṣaḥ ... sújātaḥ*, if that is the constituency (see comm. ad loc.).

IX.88.3: Both Ge and Re take *īṣṭá-* in the cmpd. *īṣṭá-yāman-* as belonging to the root \sqrt{is} ‘send’ (e.g., “[d]er seine Fahrt beeilt” and see Ge’s n. 3a). But as Old (ZDMG 62 [1908] 473–74) points out, we should then expect **īṣitá-yāman-*. (Like me, Old attributes *īṣṭá-* here to \sqrt{is} ‘seek, desire’, though his interpr. of the cmpd. differs from mine.) The parallel passages with *īṣṭáye* in conjunction with $\sqrt{yā}$ that Ge adduces in his n. (and others he doesn’t cite) all belong, in my opinion, to ‘seek, desire’, not ‘send’.

IX.88.4: In order to connect the comparison with Indra more clearly to the whole vs., I would now be inclined to tr. “Like Indra, who is the doer of great deeds, you are a stronghold-splitting smiter of obstacles,” though this now makes it less clear that Soma is being compared to Indra also in his general capacity of doer of deeds. The Sanskrit is more forgiving.

Pāda c is metrically defective; see esp. Old for disc. After suggesting, and rejecting, various fixes, he considers the possibility that the pāda ended with *hantā*, which was redactionally eliminated by word haplology, since the next pāda begins with *hantā*. This would get us the proper syllable count, though, as Old notes, the cadence would be bad, in that the antepenult would be heavy: ... *āhināmnām *hantā*#. Despite the problem of the cadence, this seems like the most attractive solution, and I would now slightly alter the tr. to “Because, like Pedu’s (horse) (you are) *the smiter of those with serpents’ names, you are the smiter of every Dasyu.”

On the serpent-smiting horse that the Aśvins gave Pedu, one of their clients, see I.117.9, 188.9. Unfortunately this is all we know about the horse’s exploits.

IX.88.5: Because the finite verb *kṛṇute* in b is unaccented, the rel. cl. must be confined to pāda a, and this in turn means that *sr̥jyāmānaḥ* is a predicated pres. participle. On the phrase in pāda b, see comm. ad IX.76.1.

The loc. *vāne* must be read twice, in both simile and frame, with different senses. Just as Agni/fire is set loose in the firewood, Soma is set loose in the wooden cup.

IX.88.6: The simile in b is somewhat odd. It is in the nom. pl., and its comparandum should therefore be the soma juices (*etē sōmāḥ*) in pāda a. But the sense of the simile, “like heavenly buckets” (*divyā ná kósāsaḥ*), doesn’t fit the soma juices, but rather the containers that hold the soma liquid. When the word *kósā-* is used in ritual context, it refers to a bucket or cask, towards which the soma is generally moving. I therefore think that the comparison here is between the heavenly *kósā-* and the sheep’s fleece filters in pāda a, from which the soma drips as if from a cloud. The third word of the simile, *abhrā-varṣāḥ* “possessing/holding the rain from clouds,” is the clue: soma is regularly compared to rain (see, e.g., Ober II.40–42) esp. as it comes off the filter, but here the comparison is to containers that are the source of rain. If this analysis is correct, a syntactic problem arises: the simile should be acc. pl. matching *vāṇy āvyā*. I suggest that pāda b is parenthetical, that it does refer to the fleece filters, and that the fact that the latter is neut. facilitated the switch to the nominative parenthesis.

The simile in c also has a slight twist, but is hardly as problematical as b. The simile particle here is positioned late, assuming that the simile consists of *samudrām sīndhavo ná nīcīḥ* “like rivers downward to the sea,” with *samudrām* corresponding to *kalāsān* in d. However, because *samudrā-* is regularly used in soma hymns as a (perhaps faded) metaphor for the waters that the soma enters, it may be that *samudrām* is not felt to be part of the simile here. Cf. the parallel passage IX.64.17 *vīthā samudrām indavaḥ / āgman* “The drops have come at will to the sea,” without overt simile marking.

IX.88.7: Ge and Re take the simile in c to be *āpo ná makṣū* (Ge: “rasch wie das Wasser”), but *makṣū* is an adverb, and so the simile would not be well formed. Re deals with this problem by supplying a participle, “(agissant) promptement comme les eaux.” I take *makṣū* rather with the imperatival clause that follows: *sumatī bhavā naḥ*. It is worth noting that *makṣū* is almost always initial, and if we detach the simile *āpo ná* it could be so here as well.

So what quality of Soma’s is being compared to that of the waters? I take it to be *sahāsrāpsāḥ*, which opens pāda b, a word whose meaning is not transparent. Sāy. glosses it *pururūpaḥ* ‘having many forms’, which is featureless enough to qualify almost anything; Ge and Re follow him. But *āpsas-* means ‘breast’, and the cmpd *dīrghāpsas-* (I.122.15), modifying a chariot, is generally rendered by ‘having a long front’ – presumably a long forward projection. Our cmpd is rendered in EWA [s.v. *āpsas-*] as ‘tausendfrontig’, but it is hard to conjure up a such a picture, particularly with reference to soma, much less the waters. More promising is the context in which the two independent forms of *āpsas-* (I.124.7, V.80.6) are found. (The third form usually grouped here, found in VIII.45.5 *girāṁ āpsaḥ*, is better segmented as *girā vāpsaḥ*; see comm. ad loc.) Both passages have a female as subject, with the VP *nī riṇīte āpsaḥ* “she lets her breast spill over,” describing a young woman (/Dawn) displaying her charms. Here the breast is conceptually a liquid, and it seems to refer to the pliant flesh, breast tissue, that spills out of her garment (a metaphor alive in 21st c. US). Starting from this picture of a liquid or liquified breast, I suggest that *-apsas-* in our cmpd. refers to forward projections,

esp. those that could appear in a liquid – in short, ripples – which fits both the waters and the soma reasonably well.

The final simile of the vs., “like a sacrifice that conquers in battle” (*ṛtanāṣāṇ ná yajñāḥ*) is unusual; the other 8 occurrences of the cmpd. *ṛtanāṣāḥ*- qualify gods, the qualities of gods, or a hero. However, the purport of the simile is not difficult to construct: if we mortals perform the sacrifice correctly, it will attract and gratify the gods, particularly Indra, who will provide the divine aid needed to prevail in battle. Note that *ṛtanāṣāt* forms a ring with *bhurīṣāt* in 2a.

The retroflex initial of *-ṣāḥ*- in this cmpd is the result of the assimilation of *-s-* to the retroflex final in the nom. sg. *-ṣāt*; see Schindler (Rt. Nouns p. 48): 5 of the 9 forms of this cmpd are nom. sg. The retroflex is then spread throughout the paradigm (acc. sg. 3x, gen. sg. 1x) and also into the deriv. *ṛtanāṣāya*- (III.37.1). On the variable length of the root syllable in the oblique (*-ṣāham* 1x, *-ṣāham*, *-as* 3x), see Scar (612–13).

IX.88.8: This vs. is identical to I.91.3, also a Soma hymn. Unfortunately the publ. tr. of the two vss. differ in pāda b. In I.91.3 I tr. “lofty and deep is your domain.” I now think this should be harmonized with the tr. here “yours is his lofty, deep domain.” The vs. attributes to Soma some of the salient characteristics of the three principal Ādityas overtly in a, c, d, and it seems unlikely that one pāda would deviate from this pattern. Both Varuṇa (I.123.8, IV.5.4) and (more often) Varuṇa + Mitra (I.152.4–5, VII.61.4, X.10.6, X.89.8) possess *dhāman*-. Here Soma’s *dhāman*- can be identified with that of just-mentioned Varuṇa (so the publ. tr.) or anticipate Mitra (pāda c) in addition to Varuṇa.

On *dakṣāyya*- see comm. ad I.91.3.

IX.89

IX.89.1: The explicitly conjoined loc. phrase *mātúr upásthe vána ā ca* “in the lap of the mother and in the wood” is a bit puzzling; the *ca* implies that the two terms belong to a natural or reasonably comprehensible constructed class. Ge (n. 1d) suggests that “mother” refers to the earth, that is, (he further specifies) the surface of the ground or the Vedi, while “wood” refers to the wooden cup. The latter is quite likely, but I prefer Ge’s 2nd suggestion for the former – that “mother” here refers to Aditi. The phrase *upásthe ādīteḥ* is found 3x in IX (26.1, 71.5, 74.5) as well as 2x in X. Although the exact referent is not entirely clear (see JPB, Ādityas 238–41), it obviously refers to something on the ritual ground or to the ritual ground itself. Aditi is of course the archetypal mother, so “of the mother” is an easy substitute “of Aditi” in the phrase. The referent would be more specific than simply “of the earth,” which could cover a lot of ground, as it were. Alternatively, if the mother = earth, this could be a reference to the soma plant growing on the earth, but the ritual setting of the vs. seems too insistent to allow that – though see 2d.

IX.89.2: Pāda a could also mean “the king has donned his garment of the rivers,” but IX.86.33, which also opens *rājā síndhūnām*, where the constituency is clear, eliminates that possibility.

Note the chiasmic *#rājā ... rájīṣthām#* opening and closing the first hemistich.

Pāda d contains one of the paradoxes beloved of RVic bards. The identities of the subj.s and obj.s of the two *duhé* are disputed. Old, for ex., thinks that Father Heaven yields Soma in the first clause, while Soma yields Dawn in the second – because *pitúr jām* in X.3.2 refers to Dawn. But this seems to take us too far afield: the strict parallelism of the two mini-clauses—*duhá īm pitā / duhá īm pitúr jām*—sketches a closed loop, and introducing an entity not already implicit in the discourse seems unlikely. Ge’s interpr. (n. 2d) seems closer. The subj. of the first *duhé* is in my opinion Heaven (*dyaúṣ pitā*), with half of his name represented by *pitā* and the other found earlier in the simile *divó ná vṛṣṭīh* “like the rain from heaven.” This simile is also the clue to the identity of the object: soma as rain. Then this soma/rain is the subject of the 2nd *duhé*; it yields soma itself, in the form of the plant whose growth is due to rain. This soma(plant) or the soma juice itself can also be reckoned as the “offspring of his father,” namely of Heaven. This could be a reference to the heavenly soma or simply to the soma juice assimilated to rain.

IX.89.3: Gr, Ge, and Old (flg. Lanman, Noun Inflec. 414) take *mádhvaḥ* as a nom. pl. Lanman and Gr (supplying *drapsās* or sim.) identify it as masc. (Old says nothing further), while Ge seemingly as a fem., since he supplies “Milchkühe.” This gender switch (and adjectival interpr.) is unnec.; in all cases of supposed masc. or fem. pl. *mádhvaḥ* (see the list in Gr) the form can be interpr. as a gen. sg. to the neut. noun. In our passage Re supplies a pl. subj. “streams” on which gen. *mádhvaḥ* depends: “(Les coulées) de miel ...” But I simply take it as a gen. of material, dependent on *siṃhám* (“lion of honey”). The compd. *mádhū-prṣṭha-* ‘honey-backed’, lit. ‘having a back of honey’ (in my interpr., contra Gr/Ge ‘having honey on his back’) supports my interpr., and note that 6d contains a *mádhvaḥ* that is universally taken as gen.

As subj. of *nasanta* I supply cows or waters, probably the former, since they appear in c and implicitly in d.

Ge seems to take *ayāsam* with *pátim* rather than *siṃhám*, but given that the adj. appears in the same pāda with the lion and given that another animal, the horse, is described as *ayāsam* in the next vs. (4a), “unbridled lion” seems more likely.

IX.89.5: The *cátasrah ... ghṛtadúhaḥ ... nīṣattāḥ* “four (fem.), yielding ghee as milk, set down ...” is highly reminiscent of IX.74.6 *cátasro nābho níhitāḥ* “four hidden (lit., ‘put down, deposited’) (streams) bursting out ...” See comm. ad loc., where, flg. Ge, I suggest that “four” is a metaphorical reference to the four teats of a cow’s udder. In our passage I don’t understand what “set down within the same support” (*samāné antár dharúṇe*) refers to, unless it’s the placement of the teats in/on the udder, which would be the *dharúṇa-* here. I also don’t know if there’s a secondary reference to some piece or pieces of ritual equipment from which (pitcher with 4 spouts? 4 pitchers?) the mixing milk is poured, or if an actual cow is stationed nearby. But here, as in IX.74.6, I think the immediate physical referent is to the streams of milk that emerge from the teats, rather than their source(s).

The *īm* in c was omitted from the tr., where it presumably expresses the goal of *aṛṣanti*. I would now tr. “They rush to him while being purified ...” The parens. around “him” in the next pāda can be erased, since that pāda also contains *īm*. The concentration of forms of *īm* in this hymn should also be noted: 2d (2x), 4c, 5a, 5c, 5d.

IX.89.6: The placement of *utá* in b is unexpected: it should not break up the NP *viśvāḥ ... kṣitāyaḥ*, which it is conjoining to the two nominal expressions in pāda a. We would expect #**utá viśvāḥ kṣitāyaḥ*. Perhaps the metrically distasteful initial two light syllables prompted a flip. Klein (DGRV I.330–31) does not discuss this placement in his treatment of the passage.

Pāda c *ásat ta útso gr̥naté niyútvān* is somewhat puzzling, at least on the literal level: “your wellspring will be possessed of a team for the singer.” Ge’s rendering, “Dein Quell sei freigebig ...,” is overly free, but it probably captures the sense fairly closely. The semantic pathway is clearer in Re’s “Que ta source ... procure un attelage (de biens).” Cf. III.49.4 ... *vásubhir niyútvān* “teamed with goods.” Perhaps the tr. should be altered to “will provide teams (of goods) ...” Although *niyútvant-* is also found in the preceding hymn (IX.88.2), its use there seems unconnected with this one.

IX.89.7: The dat. *indrāya* opening pāda b echoes the dat. *indriyāya*, which closes the preceding vs. (6d). It is also piquant that Soma adopts “Vṛtra-slayer” (*vṛtrahān-*), Indra’s own epithet, when he acts on behalf of Indra.

The two aims of Soma’s purification *abhí devāvītim* and *indrāya* “towards pursuit of the gods” and “for Indra” are grammatically non-parallel.

IX.90

IX.90.1: The fut. part. *sanīśyān* in b potentially contrasts with the desid. part. *sīśāsan* in 4c, though I have tr. them the same, and it is not clear whether they are expressing truly different nuances. Nonetheless the future part. here could be tr. “being about to win the prize.”

IX.90.2: As Re also notes, the vs. is strongly marked by *v*-alliteration, esp. in c: ... *vīṣaṇam vayodhām* (a), ... *avāvaśanta vāñīḥ* (b), *vānā vásāno váruṇo* ... (c), *ví ... vāryāñi* (d). Note also the parallel root-noun cmpds *vayo-dhām* (a) and *ratna-dhā(h)* (d), which latter also alliterates with *dayate*. For *vayo-dhā-* see also vs. 6 below.

IX.90.3: This vs. also shows alliteration, this time of sibilants, esp. in pādas a (*śūragrāmaḥ sāravīraḥ sáhāvān*) and d (*āṣālhaḥ sāhvān pṛtanāsu śátrūn*). It also contains forms from three different roots meaning (roughly) ‘conquer, win’: *√ sah* (*sáhāvān*, *āṣālhaḥ sāhvān*), *√ ji* (*jētā*), *√ san* (*sánitā*).

IX.90.4: *ābhayāni* in pāda a is the only neut. pl. to this stem. The idiom *ābhayaṃ √ kṛ* is quite common (and cf. *ābhayaṃ-kará-* 1x). This idiom is formulaically connected with “broad pastures”; see esp. VII.77.4 *urvīm gávyūtim ābhayaṃ kṛdhī naḥ* “create broad pastureland and fearlessness for us” and nearby IX.78.5 *urvīm gávyūtim ābhayaṃ ca nas kṛdhi* “Make wide pasturage and security for us.” I have supplied ‘places’ because of the association with pasturage.

The apparent transitive value of *sám cikradaḥ ... vājān* “you have roared together prizes ...” is anomalous, but hard to avoid. The idiom is similar to IX.64.3 ... *cakradaḥ ..., sám gāḥ ... sā árvataḥ*. See disc. ad loc. In that passage I found a way to avoid a transitive reading in the publ. tr., but in the comm. consider a transitive alternate. In our

passage here the publ. tr. has a transitive reading, but it would also be possible to make *mahāḥ ... vājān* another object of *sīśāsan* and tr. “Striving to win the waters, also the dawns, the sun, the cows, and great prizes, you have roared at them all together.” Note *vājam sanīṣyān* in 1b, and see the disc. ad vs. 1.

IX.90.6: Note that the VP *vāyo dhāh* “impart vitality” reprises the cmpd. *vayodhām* in 2a in the same metrical position.

In d *sūktāya* was omitted from the tr., which should be changed to “impart vitality to our well-spoken speech” or, perhaps less likely, “... to our hymn [*sūktā*], to our speech.”

IX.91

IX.91.1: As discussed in several places in the comm. (see lexical list), the root $\sqrt{vañc}$ refers to a number of types of non-linear motion: undulate, curl, coil, etc., with these meanings also distributed among the derivatives of the root, esp. *vākvān-*. Here my tr. ‘billowing’ refers to the motion of the waves of the liquid soma; cf. X.148.5 *ūrmīr nā ... vākvāḥ* “billowing like a wave.”

The publ. tr. doesn’t adequately represent the two divergent derivatives of \sqrt{man} ‘think, bring to mind’, *manótar-* and *manīṣī-*. The latter, by itself, means ‘possessing inspired thought, inspired thinker’. The former, a rarer derivative, means, in my view, someone who pays mental attention, a ‘minder’. See comm. ad II.9.4. I would emend the tr. here to “the minder, the foremost inspired thinker with his insight.” The point here, I think, is that Soma not only has inspired thoughts of his own but pays attention to those of the human celebrants.

The ten sisters are, as usual, the fingers of the officiant.

IX.91.2: The main clause of this vs., pādas ab, contains a predicated aor. part., *svānāḥ*, while the rel. cl., pādas cd, may contain a predicated intens. part., *marmṛjānāḥ*. However, given the *prā* opening c, it’s quite possible that we should supply a verb of motion “(go) forth” as the main verb, with the part. simply a modifier (“the drop [goes] forth, being groomed ...”). However, I prefer the publ. tr., which does supply ‘go’ but as an oblique expression of purpose. Alternatively *prā* may actually belong with the part. *marmṛjānāḥ*, as Gr takes it – though there’s only one other possible ex. of *prā* \sqrt{mrj} that I know of, at X.96.9.

On *nahuṣyā-* see also IX.88.2.

IX.91.3: Both Ge and Re take *īrte* as transitive (‘set in motion’, e.g., “... met en branle ... le blanc lait”), but this medial stem is standardly intrans., and the milk here can be, as so often in IX, the goal of Soma’s motion.

In c *vaco-víd-* could of course also mean ‘who finds speech’. See Scar (487), who allows both senses for the stem and tr. the occurrence here as “der die Reden findet.” In this ritual context there is little difference between ‘knowing speech’ and ‘finding speech’.

Pāda d cannot be separated from IX.10.5 *sūrā āṇvaṃ ví tanvate* “the suns stretch out across the fine (fleece).”

IX.91.4: The syntax of the 2nd hemistich, esp. pāda d, is clotted and has been variously interpreted. Ge takes the problematic *upanāyām* as obj. of *vr̥ścá* (as I do), but considers the referents of *yé ... eṣām* to be the *vājān* of b: “... der sie sich holt, mögen sie nah (oder) fern sein.” Sāy.’s interpr. (see also Ge’s n. 4d) seems a more sensible version of Ge’s: he glosses *upanāyām* as ‘master’ (*svāminam*) and takes the plurals to refer to demons. Re seems to make *upanāyām* an appositive or parallel to the pl. *yé ... eṣām*, which he (semi-)configures as the obj.: “Fends ... (les démons) qui sont près (ou) loin, le chef de ces (démons).” All of them take *ánti durāt* as a constituent, “near (or) far.” But the contrastive expression “near (or) far” generally matches cases (or adverbial equivalents thereof): ablatival *ántitaḥ (...)* *dūrāt* (II.27.13, etc.) or locative *ánti dūrē* (I.79.11, etc.; see esp. IX.19.7 *dūrē vā sató ánti vā*, IX.67.21 *yád ánti yác ca dūraké*). Our passage, by contrast, has locative *ánti* and abl. *durāt*, and I therefore separate them and assign them to different syntactic units. I take *yé ánti* as a minimalist rel. cl. “who (are) near,” while *durāt* is construed with *upanāyām*. I take the latter as meaning ‘leader’, like simplex *nāyá-* (2x: VI.24.10, 46.11), and the whole sequence *dūrād upanāyām eṣām* to mean lit. “leader of those from afar” (rendered in English as a rel. cl. “... the one who lead ...” for the sake of intelligibility). Cf. for directional *durāt* with $\sqrt{nī}$ VII.33.2 *dūrād índram anayann ā ...* “From a distance they led Indra here.” In other words, I interpret *upanāyām* as the obj. of the impv. *vr̥ścá* at the beginning of c, and it is preceded by a brief nominal rel. cl. *yé ánti*, whose referent in the main cl. is *eṣām*. Nominal rel. clauses seem to be exempt from the prohibition on embedding that is evident for full relative clauses. It may be so positioned to allow *ánti* to be adjacent to *durāt* though belonging to different clauses.

Lowe (Part. 289) claims that *tujánt-* is a Caland adj. meaning ‘eager’ rather than a participle ‘thrusting’, but the passages, esp. this one and I.61.6 (with two exx.), favor a more dynamic rendering, and in particular *tujatā vadhéna* “with your thrusting weapon” recalls IX.57.2 *tuñjāná āyudhā* “brandishing his weapons,” with an undoubted participle. I don’t actually see what is gained by reclassifying these forms as Caland adjectives.

IX.91.5: It is not entirely clear what to supply as the referent for the rel. in c; Re ‘les succès,’ Ge the *vājān* from 4b. Pāda c closely resembles IX.63.11 *yó dūṇāśo vanuṣyatā* “which is difficult to attain by one who craves it,” with instr. *vanuṣyatā* matching our *vanuṣā* and a different lexicalization of the ‘difficult to obtain’ (*duṣ-* $\sqrt{naś}$ *sah*) compd. The referent in that passage is *rayí-* ‘wealth’, and note also the compd *bṛhád-rayi-* (only 1x) and the regular use of *bṛhánt-* as a modifier of *rayí-* (e.g., nearby IX.97.21). I therefore supply a pl. form of *rayí-*, though Ge’s *vāja-* would also work.

IX.92

IX.92.1: The injunc *sarji* would probably be better tr. “has been sent surging,” per IH.

In c *āpac chlókam indriyām* seems illuminated by X.94.1 (one of the pressing stone hymns) *ślókam ghóṣam bháráthéndrāya* “you bear your signal-call, your cry to Indra.” The *ślókā-* ‘signal call’ is the audible sign to Indra that soma is being prepared for him; in our passage I assume that the noisy journey of the soma after the filtering produces this *ślókā-*, just as the noise of the pressing stones in X.94.1 serves that purpose.

The lexeme *prāti* √*juṣ* sometimes seems to mean what the simplex does: ‘enjoy’ with an acc. of the substance enjoyed, as in I.101.10 *uśán havyāni prāti no juṣasva* “(Indra,) being eager, take pleasure in our oblations” (cf. VII.34.21). But sometimes this idiom takes a personal object, with the subject giving enjoyment to the object – a reversal of the usual situation. See III.33.8, VII.54.1, 2. In the latter hymn, we find in vs. 1 the dyadic *yát tvémahe prāti tán no juṣasva* “When we entreat you, favor us in return,” which suggests that *prāti* √*juṣ* comes as a response to a request of some sort. In vs. 2 *pitēva putrān prāti no juṣasva* “Like a father his sons, favor us in return,” the acc. *putrān* in the simile shows the case of the obj. of the verb, which the enclitic *naḥ* conceals. The personal acc. is also found in our passage: *prāti devāṃ ajuṣata práyobhiḥ*. As these tr. show, I have generally tr. this idiom ‘favor in return’, but ‘favor in response’ might be better. I confess, however, that neither ‘in return’ or ‘in response’ quite works in our passage.

IX.92.2: Note that this vs. contains the three most resonant “poet” terms: *kaví*, *ṛṣi*, *vípra*-. The first applies to Soma, the other two to the seven seers who approach him.

In b I take *kavíḥ* as a pred. nominative or an embedded quotation, providing the name that Soma has acquired – though it must be admitted that we might expect an acc. Both Ge and Re take *kavíḥ* as an independent descriptor (though see Ge’s n. 2b, where he allows the possibility of my interpr.). The name Soma assumes is, for them, “Soma” itself, or so I understand it. By my interpr. Soma gets called “Kavi” because of the noise he makes on his journey; at the end of the journey he becomes (like a) “Hotar” when he sits down (/is installed) in the cups – another human ritual participant. Ge (n. 2b) suggests that he has just become the Soma-drink (by virtue of the pressing?) and thus takes on the name.

IX.93.3: The periphrasis in c *bhuvát ... rántā*, with the aor. injunc. (∞ subj.) to √*bhū* + root-accented *-tar-* stem, must be signaling some special nuance. Ge tr. “Er pflegte ... zu verweilen” (is accustomed to); Tichy (168–69) cites his tr. with apparent approbation and characterizes the use of this periphrasis as expressing “eine gewohnheitsmässig wiederholte Handlung.” Her own rendering (pp. 314, 336) is “er pflegte bei allen Darbietungen der Seher haltzumachen.” My own “is one to take his rest” is close to this view, but lays more emphasis on the agentive aspect of the *-tar-*stem.

There is also the question of which sense of √*ram* is found here, the orig. ‘(come to) rest’ or the developed ‘be content, enjoy’. Re opts for the latter (and see his n.): “qui se complaît ...,” but given the emphasis on Soma’s taking his seat (vss. 2–3), it seems best, with Ge (/Tichy), to operate with the first.

Having been called *kaví*- himself in 2b, Soma now finds himself in the midst of all *kāvya*- -- presumably mostly the poetic effusions of the ritual participants, but also the sounds that he made on his journey that afforded him the *kaví*- title. This joining of different types of *kāvya*- may account for the ‘all’.

Ge’s rendering of pāda d is quite free: “Der Kluge macht die fünf Völker zu seinem Gefolge.” Tichy’s (336) is more accurate: “überall bei den fünf Völkern nimmt der Weise seinen Platz ein.” A proper interpr. of this pāda must first recognize that the lexeme is not *ānu* √*yat*, *pace* Gr: there are no other exx. of this supposed combination in the RV (nor any other registered by Mon-Wms). Instead *ānu* must be construed with the

immediately flg. noun, not the verb: we must be dealing with the fairly common expression *jānām ānu* (I.50.3, 6, 120.11, etc.), though with flipped order, “through(out) the peoples.” The finite verb *yatate* then has its normal sense ‘take one’s place, ‘arrange oneself’; here the point is that Soma is common to the whole Ārya community, whatever limited place he occupies on the ritual ground.

I render *dhīraḥ* as ‘steadfast’ rather than ‘insightful, wise’, because of the emphasis on Soma’s taking his seat.

IX.92.4: As was suggested in the publ. intro., this vs. may constitute a weak omphalos. In particular, the purport of the first hemistich is not clear to me: what does it mean to say “the gods are in your secret”? Re supplies ‘domain’ with *nīnyé*, but doesn’t elucidate. Ge floats two possibilities in his n. 4a. The first, which he says is illuminated by IX.95.2, is that the gods are Soma’s secret, which only he can reveal. This is not quite what IX.95.2 says; there Soma reveals the hidden names (*gūhyāni nāma*) of the gods, with an acc. pl. not a loc. sg. I am more convinced by his 2nd proposal, that we supply loc. *nāmani* with *nīnyé*, and interpr. it to mean that Soma’s “secret name” is *amṛta*- ‘immortal’ (‘ambrosia’), a word indeed regularly used for soma. Since this word is also, of course, a standard descriptor for the gods, they are/exist, in the verbal sense, “in your secret (name).” Although the loc. *nāman(i)* is not found in the RV, this seems an accidental gap. The multistep mystery—1) figure out what, if anything, to supply with *nīnyá*: *nāmanī*; 2) solve for what the “secret (name)” is: *amṛta*; 3) then apply the resultant name to the gods—is worthy of an omphalos. To make the tr. clearer I would substitute “it is in your secret (name [= (drink of) immortality]) that all these gods [= the immortals] are ...”

IX.92.5: Re tr. pāda a “Que cet (acte) de Pavamāna se réalise donc ...” I would prefer this rendering of *satyām* to the “true” of Ge and the publ. tr., but it is even harder to square with the augmented impf. *ākṛnot* (c) (and probably augmented *prāvat* in d, since \sqrt{av} has no injunctives) that expresses the content of the *satyām* (“true” is bad enough). Perhaps the poet is suggesting that some have expressed doubt that Soma accomplished the deeds described in cd, even though *kārú*-s are agreed that he did, and that he (our poet) wants them to be true. This covert skepticism might well be justified, since all the deeds in cd are attributed elsewhere to other gods. On the other hand, see nearby IX.94.5, where Soma is urged to “make broad light” (*urú jyótiḥ kṛnuhi*).

Another word for poet or the equivalent, *kārú*- ‘bard’, is added to the trio in vs. 2.

I do not know if we should see a difference in nuance between the augmented impf. *ākṛnot* in c and the injunc. aor. *kar* in d; the latter is in the same clause as the (probably augmented) impf. *prāvat*.

The stem *abhīka*- ‘close quarters, face-to-face’ is elsewhere used in contrast to ‘wide(ness)’, VII.85.1 ... *uruṣyatām abhīke*, X.133.1 *abhīke cid ulokakṛt*, and this contrast is evident here as well, with the positive *ākṛnod ulokám* ending c, and the negative *kar abhīkam* in d.

As Old points out, *kar* would be better as a heavy syllable; he suggests underlying **karr* (< **kar-t*). See comm. ad VII.75.1.

IX.92.6: Pāda a contains one of the few technical references to the animal sacrifice in the RV. See the almost identical expression in IX.97.1.

Note that *satyá-* returns here, where ‘true’ or ‘actual, real’ would both work.

IX.93

This hymn is attributed to Nodhas Gautama, the skillful poet of I.58–64. This hymn does not particularly display his verbal agility, but its last pāda (5d) is his refrain, found in I.58.9, etc.

IX.93.1: Notice the alliteration in b: *dása dhīrasya dhītāyo dhānutrīḥ*.

The stem *dhānutar-* occurs 3x in the RV, twice as a fem. pl. *dhānutrīḥ* (here and III.31.16), once as a masc. du. *dhānutarau* (IV.35.5). Although it is not strictly relevant to our occurrence here, the surprising short suffixal vowel in that strong form requires comment. The form occurs after an early caesura, thus producing a break of three light syllables. Such a break is by no means uncommon (see Arnold, p. 188), but a reading **dhānutārau* would produce Arnold’s “normal” break (light light heavy). Old (Noten ad loc.) tentatively suggests that if the form is corrupt, it was altered because it was perceived as a comparative in *-tara-* or a cmpd with *-tara-* ‘crossing, overcoming’. Old’s suggestion is tentatively accepted by Wackernagel (AiG III.199), Gotō (1st cl., 179 n. 311). The misparsing of the form would of course be aided by the fact that it is built not to the root, like most agent nouns, but to an enlarged pres. stem **ghan-u/-va-*, which has spawned a secondary root √*ghanv*. See, e.g., EWA s.v. *DHAN*¹, Goto 178–80 with nn. By contrast, Tichy (*-tar-*stems, 58–59) adduces nearby IV.38.4 *sānutaraḥ*, which is not originally a *-tar-*stem, but which, like *dhānutarau*, modifies a horse. She suggests that since beside the comparative *sānutara-* (whatever its source: see my comm. ad loc.) there exists an (independent) fem. agent noun *sānutrī-* (I.123.2, X.7.4), *dhānutarau* was backformed to the parallel fem. agent *dhānutrī-*. The suggested string of causation here seems stretched too thin.

As for our fem. pl. form, both Ge and Re take *dhānutrīḥ* here as effectively transitive, with objective genitive *dhīrasya*: “die den Weisen ablaufen lassen”; “animatrices du (soma) habile.” But neither of the other occurrences of this stem have such a sense; they simply mean ‘running’; Gotō (179 and n. 313) concurs with the intrans. reading I see here. The fact that an intrans. form of the pf. to √*ghanv*, *dadghanve*, is found in the next vs. (2b) supports this interpr. Another (weak) support is the case of the supposed obj., since root-accented *tar-*stems ordinarily take acc. However, there are enough counterexamples that this is not a clinching argument.

Ge takes *dása* with *dhītāyaḥ* “die zehn Gebete,” but, despite the pāda-boundary, I think it goes with the sisters=fingers in pāda a, as usual. It has been drawn into b because of the alliteration.

Contra Old, Ge, Re, and Schindler (Rt. Nouns), I analyze *jāḥ* as a nom. sg. (with Gr), not an acc. pl. (Ge allows for the nom. sg. alternative in n. 1c). In their interpretations, “the children of the sun” refers to the insightful thoughts of b. But this is a distinctly odd way to refer to thoughts, and no convincing parallels are given. Ge’s interpr. of the phrase “daughter of the sun” as a reference to hymns I have discussed (and dismissed) ad IX.1.6 and esp. IX.72.3. Moreover, pāda c describes Soma as dashing around these children, but in IX *pāri* + VERB OF MOTION normally, perhaps exclusively, refers to Soma’s journey around the filter. I do not know what it would mean for him to “dash around” thoughts, much less “children of the sun.” As a nom. sg., *jāḥ* in the phrase

“offspring of the sun” makes perfect sense as a description of Soma; Soma’s similarity to and often identification with the sun is well attested, and the use of kinship terms to model such similarity/identification is also well known. If, nonetheless, we want to interpr. *jāḥ* as an acc. pl., I would take it as a reference to the milk; cf. comm. ad IX.72.3, where I explain “daughter of the sun” there as referring to the milk because of their shared gleaming color.

IX.93.2: In d *sām* √*gam* is of course a euphemism of sex, a theme already broached in c.

IX.93.3: The tr. “prepare” for *abhī śrīṇanti* in b does not harmonize well with the simile *vāsubhir ná niktaḥ* “as if with freshly washed goods.” Nor does the interpr. put forth by Narten (“Ved. *śrīṇāti* ...,” KZ 100 [1987] = KISch 340ff., at 349), “vollkommen machen” (complete, perfect). The developed sense of the root noun *śrī* ‘excellence, splendour, beauty’ and esp. the rt. noun cmpd *abhiśrī* ‘excelling in splendour’ (etc.) seems to have affected the meaning of the verb, and I would now tr. something like “they beautify his head ...,” which is not far from ‘bring to perfection’.

IX.93.4: Ge takes *vāvasānāḥ* in b to ‘desire’ (√*vas*), but the same form in the same metrical position in 2b to ‘bellow’ (√*vās*). Given the formal identity of the participles, I think they should be rendered in the same way (‘bellowing’; Ge’s n. 4b recognizes this alternative). But the proximity of *uśatī* ‘desiring, eager’ in our pāda c teases us with the other root, and it is quite possible that our form should be taken as a pun. For a similar conjunction see IX.95.3–4.

The hapax *rathirāyātām* (3rd sg. mid. impv., with Old, etc., not gen. pl. pres. part., with Gr) is baroque in formation. It’s worth noting that 3 of the 11 forms of its presumed base *rathirā*- ‘charioteer, chariot rider’ are found in nearby IX.97 (vss. 37, 46, 48) with a further occurrence in IX.76.2.

IX.93.5: The vs. shows a number of metrical disturbances; see Arnold p. 317, Old ad loc., HvN p. 649. Arnold suggests reading **māsvā* in pāda a, which would fix the cadence. Pāda b has an opening of 3; note, however, that the apparently bad cadence *viśvāścandram* with four heavy syllables is not in fact a problem, since all cmpds in -*ścandra*- are better read **-candra-* (see comm. ad I.165.8), yielding the light antepenult required. On the metrical shape of *vātāpyam* see immed. below and comm. ad I.121.8. Pāda c has 10 syllables. Pāda d, the Nodhas Gautama refrain (I.58.9, etc.), has an unusual break.

The adj. *vātāpyam* presents problems of both form and meaning. There are three (or more) possible scansions of this stem—*vāatāpya*- (or *vaatāpya*-), *vātaāpya*-, and *vātāpīya*—each of which has its champions. See comm. ad I.121.8. The sense of the stem is likewise in doubt. It seems obviously related to the voc. *vātāpe* ‘o friend of the wind’ in I.187.8–10, and in I.121.8 Ge tr. “... den Windbefreundeten,” in X.26.2 “die mit dem Vāta befreundet (?) ist.” However, in our passage and in X.105.1 he suggests a different analysis entirely, since (acdg. to his n. 5b to our hymn) that sense “will hier nicht passen.” His alternative involves the ppl. *vāta*- to √*varī* ‘long for, crave’ (otherwise attested only as 2nd cmpd. member), with the sense “whose friendship is desired” (dessen Freundschaft begehrt ist). The question is somewhat hard to decide (if it needs to be

decided: a pun is also possible, as displayed in the publ. tr.). On the one hand, giving up the connection with *vātāpi-* (whatever its underlying accent would have been: *vātāpe* has voc. accent) is unappealing. Moreover if the scansion should be *vāata-*, this would favor ‘wind’, which can be so scanned, whereas the root syll. of the ppl. should not be distracted. (However, that scansion is declared by Old to be the least likely one.) Ge’s certainty that “wind-befriended” wouldn’t work here is also open to question. We are asking for wealth – and “wind-befriended” wealth could be wealth that comes quickly, on a powerful gust of air. All this favors the “wind” analysis. *But* there is another consideration: accent. The cmpd is clearly an adj.; just as clearly it has a neut. noun *āpya-* ‘friendship’ as 2nd member. Therefore it should be a bahuvrīhi “having X friendship” / ‘having the friendship of X’. If the 1st member is the ppl. to \sqrt{van} , it should be accented **vātā-* (though it actually never appears accented elsewhere). This would allow an analysis *vātā-āpya-* with expected first-member bahuvrīhi accent (of the *sutā-soma-* type). But ‘wind’ is accented *vāta-*, and so, if it contains ‘wind’, the cmpd. must be analyzed with 2nd member accent, *vāta-āpya-*, which is not standard bahuvrīhi accent. Nonetheless, weighing these contravening factors, I favor ‘wind-befriended’ as the 1st reading, with Ge’s ‘whose friendship is sought’ as a 2nd punning reading—though I cannot explain the accent.

Although pāda d is the Nodhas refrain and therefore tacked onto the hymn in some sense, note that *dhiyā* responds to *dhīra- dhītī-* of 1b.

IX.94

This hymn is attributed to Kaṇva Ghaura, the poet of I.36–43.

IX.94.1: Note the unaccented *asmin* in pāda a, referring to Soma, who is the default referent even without a previous mention in the hymn.

The vs. contains three similes, each of which presents at least some interpretational challenges to the audience. The first two are in ab and match the frame “the thoughts contend over him” (... *asmin ... spārdhante dhīyaḥ*), which presumably refers to the thoughts produced by poets at different and competing rituals (see Ober I.407 and n. 64). The second simile, in b, is the easier to interpret: “like clans over the sun” (*sūrye nā vīśaḥ*). Like the competing thoughts that each seek to appropriate Soma, different clans all seek to secure their place in the sun, a symbol, acdg. to Ober (I.457), of *Leben* and *Lebenskraft*, of *Lebensraum*.

The first simile, *vājīnīva śubhaḥ*, reads slightly askew. It should mean “as adornments (contend over) a prizewinner” – but what would that really mean? The passages adduced by Ge in n. 1a are not helpful, and no one else that I know of attempts to elucidate it. I think the poet has deliberately misdirected us. To begin with, although the loc. *vājīni* appears to match *asmin* in the frame as the object of contention, I think that may not be the case or may not *only* be the case. The vs. begins with *ādhi*, which therefore appears to be in tmesis with *spārdhante* in b, but there is only one other instance of *ādhi* \sqrt{sprdh} in the RV (VI.34.1, where – I must admit – it seems to have the sense attributed to our passage: ‘contend over’ with loc. *indre* as the object of contention). The word *ādhi* is more often an adposition, most commonly with the loc., and so I think it is here. Although *ādhi* is separated from *vājīni*, what intervenes is Wackernagel’s position material: subordinating *yād*, which frequently takes 2nd position, and the enclitic *asmin*,

which would lean upon it. So effectively *ádhi ... vājīni* can be a prepositional phrase interrupted by the interpolation of those two Wackernagel's position words. Under this interpr. the prizewinner is no longer the object of contention but the locus of it. Now as to *śúbhaḥ*: this root noun is quite well attested (over 40 occurrences, incl. the common voc. *śubhás páti-*), but only two attestations are plural – our passage and V.54.11, which describes the many appurences and adornments found on the Maruts and their equipage, incl. pāda b *vákṣassu rukmā maruto ráthe śúbhaḥ* “your breasts brilliants, o Maruts, on your chariot charms” (per the publ. tr.). The *śúbhaḥ* here are ornaments of some sort, quite possibly sparkly or otherwise eye-catching, that jazz up the chariot to which they're affixed. I suggest that our loc. (*ádhi ...*) *vājīni* fulfills the same function as *ráthe* in V.54.11, and that the *śúbhaḥ* in our passage are not vying *over* or *for* the prizewinner, but, located *on* him, they are vying with each other to best catch the eye of observers.

The phrase that opens the 2nd hemistich, *apó vṛṇānāḥ* “choosing the waters,” is a little odd. The waters are surely the ubiquitous waters for mixing found regularly in IX, but why would Soma “choose” them? In a soma context we would expect rather *apó *vasānāḥ* “clothing himself in the waters”; this exact phrase opens the pāda in IX.78.1, 86.40, 96.13, 107.4, 18, 26, and with acc. sg. of the participle IX.16.2, 109.21. I suggest that our poet is knowingly playing on this standard formula, using a different root but identical formation to throw the expression off-kilter. Note that *vasāna-* (nom. pl.) is found in the same metrical position in 4c. The identical expression, *apó vṛṇānāḥ*, is, however, found in V.48.1; on this opaque passage see comm. ad loc.

Interpretation of the third simile in the vs. is complicated by the fact that it is unclear which part of the clause to construe it with. The frame consists of an acc. *mánma* ‘thought’ (→ ‘poem’), which is compared to *vrajám ná paśuvárdhanāya* “a stable for raising livestock.” But where these acc. expressions fit in the sentence is disputed: Ge (see n. 1d; also Tichy, *dvitā* 222 = KISch 213) takes *mánma* as a second obj. with *vṛṇānāḥ*. But the simile then makes little sense: although Soma might well “choose a thought,” choosing a stable is a different proposition. By this interpr. the domain of the comparison would only be the acc. *mánma*; it could not fit with the verb (despite Tichy's odd “wie (man) eine Hürde ... [wählt]”). Although such similes, detached from the syntax of the rest of the clause, do exist, syntactic integration, esp. of non-nominative similes, is more usual and desirable. By contrast, Old takes the acc. as the obj. (or semi-obj.) of *pavate*. This latter suggestion seems particularly unlikely, given the stereotyped use of *pavate* in IX, and Old's rendering shows how he struggles to make it work: “er verwirklicht durch sein Sichreinigen das *m*°, wie (man) einen Stall ... (reinigt).” Differing from both these interpr., following a remark of Re's in his n. (“*mánma* dépendant librement de *kavīyán* ...”), which is not entirely reflected in his tr., I take it with the act. denom. part. *kavīyán*. The stem *kavīyá-* occurs only twice in the RV (and nowhere else), once as an act. part. (here), once as a middle part. *kavīyámāna-* in I.164.18. Nothing therefore forbids us from assuming a direct obj. with the act. form, as I have done here. The content of the simile, which compares the building of a stable or livestock enclosure to the composing of a poem, rests on the commonality often asserted in the RV between physical and mental craftsmanship and thus fits nicely with the verb.

IX.94.2: The nom. part. *vyūṛṇvān* in pāda is sg., while the finite verb *prathanta* in b is pl. Old and Ge attribute this to anacoluthon, with the nom. of pāda a coreferential with the dat. *svarvīde* in b, while acdg. to Tichy (loc. cit., n. 35) the participle is the predicate of pāda a (“Partizip im Nominative an Stelle eines Verbum finitum”). With Re, I instead take pāda a as a continuation of vs. 1, with a new construction beginning in b.

The referent of *amṛtasya* in the phrase *amṛtasya dhāma* is not clear. Ge: the drink of immortality, Re: the immortal principle, Lü (257) and Tichy (loc. cit.): immortality. By contrast I think it may refer to the sun (as I also suggest in the nearby passage IX.97.32); the immediately following description of Soma as ‘finder of the sun’ (*svarvīd-*) supports this interpr. “Disclosing the domain of the sun” may refer to the Dawn-like behavior of Soma at the morning pressing (see Ge’s n. 2b “Wie bei Sonnenaufgang”), or to his plunging into the milk mixture that is often assimilated to the sun – probably the latter. The adv. *dvitā* ‘once again’ expresses the regular repetition of the sacrifice.

IX.94.3: This vs. does not contain a main cl., simply a subord. *yād* cl. in ab, extended by a participial expression in cd. The vs. can depend either on the previous vs. or the following one – or (though in my view less likely) the part. *bhūṣan* in c can be the predicate of the main cl.

The cadence of pāda a is bad; Gr suggests reading subj. **bharāte*, which would fix the problem, but as Old comments, this is “natürlich ganz unsicher” – esp. since both the opening and the break are likewise irregular (see HvN metrical comm. ad loc.).

Note the emphatic return of the poet, with *kavīḥ kāvya* in pāda a picking up *kavīyān* in 1a.

Pāda b and the simile it contains raise some problems. First, the nom. subject *śūro nā ráthah*. The stem *śūra-* is of course a masc. noun ‘champion’, here juxtaposed with another such noun, *rátha-* ‘chariot’. Re renders them as distinct subjects: “tel un héros, (tel) un char-de-guerre,” but I think a blended “champion chariot” works better. The phrase also presents another possibility, which Old flirts with but ultimately dismisses: *śūrah* is phonologically almost identical to *sūrah*, the gen. sg. of *svàr-* ‘sun’, and the “chariot of the Sun” (*sūrah* [...] *rátha-*) is found elsewhere (I.50.9 [see comm. ad loc.], V.31.11; also *sūrah* [...] *cakráṁ* “(chariot-)wheel of the Sun” I.174.5, VI.56.3). Although I do not propose emending *śūrah* to **sūrah*, I do think that phrase is lurking in the background, esp. given the presence of the sun in 2b (*svar-*[*vīde*]) and, if I’m correct, also 2a.

Assuming this double reading of the subject of the simile helps interpr. the rest of pāda b. Ge and Re take *bhúvanāni víśvā* “all the worlds” as belonging to the frame, as a parallel obj. to *kāvya* in pāda a (e.g., “Quand le (*soma*) poète porte autour de lui les pouvoirs-poétiques (et) tous les mondes ...”). This leaves the acc. slot of the simile unfilled: Re leaves it blank, while Ge supplies “(die Feinde?).” I instead put *bhúvanāni víśvā* in the simile, matching *kāvya* in the frame. This interpr. is facilitated by the “chariot of the *Sun” reading that I think is implied here, since the Sun’s daily chariot journey across the heaven puts all worlds in his jurisdiction. Soma’s journey across the ritual ground gives him the same kind of control over poetic skill and its products, both his own and those of the officiants. It may also be that “all the worlds” can secondarily be re-read into the frame. The *bhúvanāni* that stretched out for sun-finding Soma in 2b

(presumably both the cosmic worlds and the worlds of the ritual ground) fall into this control in 3ab.

As pointed out by Old inter alia, in c the transmitted *mártāya* is best emended to **márt'yāya*, since a four-syllable reading is called for.

The dual focus on the cosmic and the ritual continues in c, where Soma exerts himself “among the gods” (that is, in his cosmic dimension) on behalf of glory for the mortal, presumably the priest or poet. The expression (*yáso*) **márt'yāya bhūṣan*# may play off *amítāya bhūṣan*# (III.25.2, 34.2) “exerting oneself for the immortal (one).”

The rt. noun cmpd *puru-bhū(-tama)-* is otherwise used of the Aśvins (4x); I interpr. it to mean ‘appearing in many places’ (see comm. ad IV.44.4). The apparent loc. pl. occurrence here has been variously and only tentatively interpr.; see Ge, Re, Ober (II.229), Scar (362). Given the context, in a participial clause headed by *bhūṣan*, I suggest that our *purubhūṣu* does not in fact belong to *puru-bhū-* but rather to an otherwise unattested *puru-*bhūṣ-* -- hence **puru-bhūṣ-ṣu*, with the geminate sibilant simplified to -*ṣ-*. Although a root noun to the secondary root √*bhūṣ* is not found elsewhere, it would not be difficult to generate in this context.

IX.94.4: In pāda a the Pp reads *śriyé* for the Saṃhitā *śriyá ā*. Ge concurs, but Re tr. “... est issu de la gloire,” with an apparent ablative – which is how I interpr. the form. The lexeme *nír* √*i* ‘come out, come forth’ generally takes an abl., and the gesture towards a versified paradigm (*śriyé* ... *śriyás* [a], *śriyam* [b]) speak in favor of the abl.

The pl. subj. of c may be the singers, the only plural entity overt in the vs. so far. So Sāy. and by implication (see his n. 4c) Ge. However, I think that Re is correct is supplying instead “les sucs-de-soma,” since *vasānā-*, common in IX, is applied only to soma. The interchange between sg. and pl. in reference to soma and its streams/drops, etc., is of course ubiquitous in this maṇḍala.

The final pāda is quite unclear and its interpr. depends in part on identity of the ref. of the loc. *mitádrau* ‘of measured pace’. Ge and Re both take it to be Soma. Acdg, to Ge, the loc. is to be construed with *samithā* (“Die Kämpfe um ihn, der einen festen Schritt hat ...”), but as far as I am aware, *samithā-* is not found with a loc. elsewhere. Re makes this loc. into a loc. absolute, by virtue of supplying a near paragraph of extraneous matter, which has a whiff of desperation in it. My interpr. begins with the fact that of the 5 occurrences of the stem *mitádru-* the two other singular ones both refer to Agni (IV.6.5, VII.7.1). I therefore suggest that he is also the referent here. The “encounters” (*samithā*) that are to be realized (*bhāvanti satyā*) take place *at* the ritual fire; the loc. is simply recalling us firmly to the ritual ground. The encounters in question I take to be the encounter of the soma streams/drops (etc.) with the gods who are to consume them – or possibly the encounters with the water and milk mixtures.

IX.95

This hymn is attributed to Praskaṇva Kāṇva, the poet of I.44–50, the group of hymns that follow those of Kaṇva Ghaura, the poet of immediately preceding IX.94.

IX.95.1: Ge takes the participles in b (*sīdan* ... *punānāh*) as implicitly predicated (“er läutert sich und setzt sich ...”), but there seems no reason to do so. They are surely

parallel to the part. in pāda a (*srjyāmānaḥ*) and detail the various circumstances under which Soma keeps roaring.

The verb in b, 3rd sg. mid. *janayata*, seems to be a true middle with self-involvement of the subj. -- “he generates (his own) thoughts through his own powers.” – not dependent on the purely formal 3rd pl. -*anta* replacement *janáyanta* (see my “Voice fluctuation in the Rig Veda: Medial 3rd plural -*anta* in active paradigms,” *III* 21 ([1979] 146–69). The self-involvement of the subj. is even clearer in the near-twin passage I.95.4 *vatsó mātṛ janayata svadhābhiḥ* “The calf [=Agni] begets his (own) mothers with his own powers.” See comm. ad loc.

IX.95.2: The opening of this vs., *háriḥ srjānáḥ*, echoes 1a ... *hárir ā srjyāmānaḥ*#. I do not know if the root aor. part. here is meant to convey anterior value, as opposed to the pres. pass. part. in 1a, or if it’s just a variant.

For the infinitival use of the dative of this rt. noun cmpd *pravāc-* see Scar (470).

IX.95.3: Pada b *prá manīṣā īrate sómam ácha* “The inspired thoughts press forward to Soma” is the intrans. equivalent of 2b *íyarti vācam* “He [=Soma] directs his speech,” with act. transitive redupl. pres. *íyarti* corresponding to its weak form, medial intrans. *īrte*. This connection is obscured by the Engl. tr.

The deployment of *ca*, first conjoining two preverbs enfolding their joint verb (c ... *úpa ca yánti sám ca*), and then in the next pāda conjoining a new preverb, but with a different verb (d *ā ca viśanti*), is a striking effect. The contrastive preverbs in c of course account for the accent on the main-cl. verb *yánti*.

IX.95.4: The ‘back’ (*sāná*) is the back of the filter; the fuller expression is *sāno ávye* “on the sheep’s back,” as in nearby IX.97.3 *mṛjyate sāno ávye*. On this latter phrase see disc. ad IX.86.1.

Ge renders *vāvasānám* as “dem Verlangenden” (to *√ vaś* ‘desire’), in contrast to Re and the publ. tr., which take it to *√ vās* ‘bellow’. In actual fact it is probably a pun. On the one hand, in this vs. Soma is strongly typed as bovine (a: *mahiṣám* ‘buffalo’, b: *ukṣānam* ‘ox’), which favors ‘bellow’. On the other, the end of the previous vs. contains a reciprocal expression from *√ vaś*: 3d *uśatṛ uśántam* “(they) desiring, (him) desiring.” So both roots are in play here and equally applicable to Soma. For a similar situation see nearby IX.93.4 and comm. thereon.

For Trita as the archetypal soma-preparer, see comm. ad IX.37.4. Here Soma is identified with Varuṇa because of Varuṇa’s (developing) association with water and the sea. See Lü (52, 268), Ober (II.100 and n. 406).

IX.95.5: The Upavaktar priest prompts the Hotar to speak. On this priestly title and its relationship to the Maitravaruṇa priest, see Minkowski, *Priesthood in Ancient India*, 118–27. It may be no accident that this priestly title, found only 3x in the RV (IV.9.5, VI.71.5, and here), occurs directly after a mention of Varuṇa.

IX.96

On the structure of this hymn, see publ. intro. Although the larger structure involves a series of independent four-vs. hymns, there are a number of echoes across these hymns, noted below, that may have influenced their being grouped together

IX.96.2: The publ. tr. doesn't make it sufficiently clear that "without resting" qualifies the "tawny (horse)."

Ge and Re construe gen. *índrasya* with the chariot, while I take it with the comrade – and Ober vacillates (comrade II.100, chariot II.204). Since *índrasya* is positioned between chariot and comrade, word order doesn't help. In my view 'comrade' is inherently relational and generally needs to be defined with reference to another being or beings, as comrade to *someone*, hence my tr. See also nearby IX.101.6 *sákhéndrasya*, which both Ge and Re construe together.

IX.96.3: The phrase *dyām utémām* raises a number of questions. First, what is *utá* conjoining? Although it is tempting to suggest "heaven and this (earth)," this would produce the pragmatically unlikely "causing ... this (earth) to rain." Moreover, there are numerous exx. of *pr̥thivīm dyām utémām* "earth and this heaven" (III.32.8, 34.8, X.88.3, 9, 121.1). It seems that the last part of that phrase, containing only the second NP, has been extracted from the fuller expression and inserted here, with the *utá* pleonastic, or loosely conjoining the participial phrases *kṛṇvānn apáh* and *varṣāyan dyām utémām* despite its position within the NP. On the clash between the near deictic *ayám* 'this here' and heaven, which is generally qualified by the distal deictic *asaú* 'that yonder', see disc. ad VIII.40.4 – also for the fem. gender that *dyām* must show here. In all cases of fem. *dyaúh*, I think the ultimate source is the misunderstanding of dual "Heaven and Earth" / *ródasī* passages with a dual fem. adj. modifying.

Ge tr. d as implicitly comparative, "mach uns die Bahn noch breiter als breit," presumably because of the abl. *uróh*. But *ā* with preceding abl. almost always expresses the source and is not used with a comparative. The few passages, grouped in Gr's 7) "vor andern, d.h. in höherm vorzuglichern Grade als andere" (p. 169), that do show something like that sense (several in that category are best interpr. otherwise) depend on *ā váram* "the choice from among ..." Moreover, *varivasyá-* does not have a comparative sense 'make wider space' but merely 'make wide space'. In our passage the point seems to be that Soma is already positioned in a wide place, from which he can act to provide us with the same.

IX.96.4: As Old points out, *bṛhaté* is a masc./neut. form apparently modifying two (or at least one) fem. nouns, *svastáye sarvátātaye*. Re takes it as a third term: "pour ... le haut (rang)," but in his n. he acknowledges the Old/Ge acceptance of gender mismatch here, noting also that that interpr. produces two pairs of paired datives, the negated violence words in pāda a and the positive *-tí*-abstracts in b. In my view pattern may trump gender here. It's also worth noting that the cadence produced by *bṛhaté* is bad, and it would be fixed by a fem. **bṛhatyai*, so it is possible that *bṛhaté* was introduced redactionally – but why?

IX.96.6: Though the syntax is kept absolutely constant – nom. sg. + gen. pl. – there is a shifting functional relationship between the head noun and its genitive in the seven

phrases here: the first two are roles Soma performs for the group identified by the gen., the next three a particular, and superior, individual token from the group (though the third pairing, “seer for/of the inspired poets,” is ambiguous between the first type and the second), and the last is sort of a negative version of the role he plays for the group.

In the phrase *padavīḥ kavīnām* (see also vs. 18) the gen. pl. may depend on the first cmpd. member, “blazer of the poets’ trail,” as sometimes elsewhere.

IX.96.7: In pāda a, along with Ge and Re (see also Old’s comm. ad loc.) I read *ūrmīm* twice, with both simile and frame; *vācāḥ* so accented should be gen. sg., not acc. pl., and is therefore not parallel to the two acc. pls. in b, *gīraḥ ... manīṣāḥ*.

The standard tr. interpr. the *vṛjānā* phrase as obj. of *antāḥ pāsyaṇ* (e.g., Re “Regardant à l’intérieur ces sectes (de fidèles) proches”). I instead take the part. in absolute usage (“looking within”; cf. I.132.3) and construe the acc. with *ā tiṣṭhati* ‘(sur)mounts’. This makes some spatial sense: if they are ‘below’ (*āvarāṇi*) it is easy to mount them.

Re and Ober (II.211) think that pāda d refers to copulation. Cf. esp. Ober’s “Der Bulle besteigt die Kühe, [die Kopulation] kennend.” Although “mount” is a standard Engl. term for animal copulation, I am not at all sure that *ā√sthā* serves the same function, and I would esp. wonder about using the locative for the female participant(s). And I also doubt that it would need to be added that the bull knew how to do it!

IX.96.8: Ge takes *iṣanyān* in d to mean ‘desiring’ (“nach den Kühen verlangend”) as in the sim. passage he cites, III.50.3. But this verb stem always means ‘drive, send’ (see Re’s n. ad loc.) and is, one way or another, derived from *iṣṇāti* ‘impels, sends’.

IX.96.8–9: Although these two vss. belong to two different hymns within the larger structure of IX.96, it is notable that the a-pādas of both end with a form -*vātaḥ*; it is not impossible that the hymn consisting of 9–12 was attached here because of this concatenation, esp. given that the etymological figure in 8a is repeated in 11c of the other hymn. But the -*vāta*-forms belong to two different roots: 8a (/11c) *āvāta*- to *√van* ‘win, vanquish’ and 9a *devāvāta*-to *√vanī* ‘love, cherish, long for’. The root affiliation of *āvāta*-is assured by the etymological figure in which it’s found, *vanvānn āvātaḥ* “vanquishing but unvanquished” (cf. also VI.16.20, 18.1, IX.89.7 as well as the two occurrences in this hymn, 8a and 11c). But *√van* is an aniṭ root, and we might expect a ppl. *-*vata*-, which does not occur; -*vāta*- is only phonologically proper to the seṭ root *√vanī*. Gotō (1st Kl. 283–84 with n. 656), fld. by EWA (s.v. *VAN*), suggests that *āvāta*- (and, per EWA, other apparent seṭ forms of *√van*) are analogic to the synonymous, rhyming but seṭ root *√sanī* (*sātā*-, etc.). I certainly think the parallel forms of *√sanī* may well have contributed, but I think it’s a mistake to discount potential confusion and conflation of forms of *√vanī* and *√van*, esp. since under certain circumstances ‘love, long for’ and ‘win’ can shade into each other.

IX.96.9: In addition to its echoing *āvāta*- in 8, *devāvāte* is reminiscent of *devātāte* in 3a.

My “for Indra’s exhilaration” is a somewhat loose rendering of the double dative *indrāya ... mādāya* “for Indra, for exhilaration.”

IX.96.11: As Ge (see n. 11c) and Ober (I.311 with n. 791) point out, the first hemistich depicts the Vala myth, with “forefathers” (*pitáraḥ*) a reference to the Aṅgirasas – made clearer by a similar but more explicit passage in the next hymn, IX.97.39. This mythic episode – the forefathers opening the Vala cave with the help of soma – provides the model for the appeal in c, for Soma to open the *paridhī-* (*paridhīm̐r̥ āporṇu*): *paridhī-* is used explicitly of the barriers of the Vala cave in I.52.5. But as Ge suggests (n. 11c), the poet here is calling on Soma to open up the livestock pens and provide us with the animals therein.

IX.96.12: As pointed out in the publ. intro., this vs. is strongly marked as a hymn-final vs., with complementary *yáthā* ‘even as’ (ab) and *evā* ‘in just this way’ (cd) clauses, bringing this 4-versed hymn to a close. The matches between clauses are more explicit than in some such structures: the two finite verbs, impf. *āpavathāḥ* and impv. *pavasva*, match exactly save for tense/mood, and the root noun cmpd. *vayo-dhāḥ* of pāda a is recast as a syntagm *dráviṇam dádhanah* in c with the same root $\sqrt{dhā}$.

The final pāda consists of two brief clauses, both somewhat aberrant. The first contains an idiom I have not found elsewhere, *sām* $\sqrt{sthā}$ + LOC. My tr., “stand side-by-side by Indra,” is meant to capture this slightly off expression. The second clause, “beget/generate weapons,” is syntactically fine but semantically odd.

IX.96.12–13: The first vs. of the new hymn (13a) begins *pávasva* (see also *pavasva* in 14a), just as the last vs. of the previous hymn ended with *pavasva* (12c). Again, this concatenation may have led to the attachment of 13–16 at this point. Of course, *pávasva* is hardly a rare form in this maṇḍala.

IX.96.14: The *pavasva* in this vs. is construed with an acc. phrase, *vṛṣṭīm diváḥ*. Ge treats it as if it were a straight transitive: “Läutere ... den Regen ... herab,” while Re supplies a participle to govern the acc.: “clarifie toi (nous donnant) la pluie.” It is possible that something like Re’s solution is correct: that we should supply the preverb \tilde{a} to form the lexeme $\tilde{a}\sqrt{pū}$ ‘attract through purification’ (see comm. ad IX.7.8); on occasion (see, e.g., IX.13.4 and comm. ad loc.), \tilde{a} is missing, but the passage seems to require it. However, here I suggest that something different is going on: it is not that we want Soma to bring rain through his purification, but to *become*, *turn into* rain. See IX.97.44, 108.10

IX.96.15: I don’t know what *íd* contributes in b, beyond inducing accent on the verb *táratī*.

The standard tr. (Ge, Re, Ober [I.232]) take “(the milk) of Aditi” as the frame, with the simile limited to *páyo ná dugdhám*, e.g., “Tel le lait trait, (le lait) d’Aditi est fort.” I find this puzzling because Aditi has little to do with soma and has no reason to figure here. (On the phrase “in the lap of Aditi” in IX, see comm. ad IX.89.1.) Instead I think that it is soma that is being compared to the milk milked from Aditi; in other words, Aditi belongs to the simile. Since she is the archetype of motherhood, the milk of Aditi would be esp. rich and nurturing – “mother’s milk”; indeed this might be a reference to the beestings or “first milk” (*pīyūṣa-*), with which soma is often compared (see comm. ad IX.85.9).

Old, Ge, and Re all make more of the gender mismatch in the simile *urv ìva gātúḥ* than I think is justified. Since the target of the simile is milk (*páyah*), and milk is neuter, I see no problem with attributing the neut. *urú* to its “attraction” to the neut. *páyah*, even though, given the position of *ná*, the simile should rightly be “like a broad way” rather than “broad like a way.” The masc. *suyámaḥ* in the next simile may result from the more animate quality of the content of the simile itself, the draught-horse.

IX.96.16: The bahuvrīhi *sv-āyudhá-* ‘having good weapons’ echoes the odd command that ends the previous hymn in this structure, 12d *janáyāyudhāni* “beget weapons!” This echo may have contributed to the attachment of 13–16 at that point in the text.

Soma’s goal in b, “the dear hidden name” (*gúhyaṃ cāru nāma*), has a surprisingly large number of possible referents. Lü (526) suggests the sun, Ge (n. 16b) *amṛta*- the drink of immortality. I would add Soma’s own name (see IX.92.2, 4 and comm. thereon), or the cows on the basis of IX.87.3 *apīcyāṃ gúhyaṃ nāma gónām*, or the gods, as in the immed. preceding hymn IX.95.2 *devānām gúhyāni nāma*, or Indra on the basis of IX.109.14 *bībharti cārv índrasya nāma*.

IX.96.17–18: These two vss. outfit Soma with the lexicon of poetry, with 17c concentrating on *kaví-* and 18a on *ṛṣi-*, though with *kaví-* returning in pāda b

IX.96.17: I don’t know what the Maruts are doing here.

In c I have rendered the nom. pres. part. *sán* concessively, in its usual value, but it’s not exactly clear what the concession would be. Perhaps the contrast is between Soma as poet – so emphasized by *kavīḥ ... kāvyaena kavīḥ* -- and the less than melodious sound indicated by the root \sqrt{ribh} ‘squawk, rasp’ (see comm. ad VI.3.6, IX.66.9).

IX.96.18: The publ. tr. does not render the rel. *yáḥ* since the rel. cl. is entirely nominal. It is not clear how far it extends – perhaps the first hemistich, perhaps through pāda c, perhaps only the first pāda – since Soma is nominative both in the rel. cl. and in the main cl. The main cl. must constitute at least the last pāda because the finite verb *rājati* is unaccented.

The phrase *padavīḥ kavīnām* is found also in 6a.

What the referent of the “third domain” (*ṛtīyaṃ dhāma*) is is unclear. Lü (273), not surprisingly, has precisely mapped the spatial geography and considers the third domain to be heaven (1 earth, 2 midspace, 3 heaven), with the fourth, in the next vs., the *samudra-*, which is higher than heaven. I think it more likely that these are ritual references, quite possibly to locations on the ritual ground that Soma traverses on his journey (see *dhāmāni āryā* in IX.63.14 and comm. thereon). If “gaining the sun” (*svarṣāḥ*) refers to Soma’s uniting with the milk mixture (assimilated to the sun because of its gleaming whiteness), then the third domain, which comes after, might be the vessels near the ritual fire. If the *dhāman-* are not spatial but temporal, this could be a ref. to the third pressing. Ge (n. 18c) takes it as reference to the forms or phases of soma; Re tr. ‘structure’ without further elaboration.

As generally noted by tr. (Ge, Re, also Scar [72]), pāda d involves a play on the names of the Anuṣṭubh and Virāj meters. The publ. tr. fails to register the pun on *virājam*, well captured by Scar “Soma herrscht nach Art eines Grosskönigs.” I would now

substitute a fuller (if more awk.) tr.: “Soma, as rhythm [/ the Anuṣṭubh meter], rules as wide-ruling one [/regulates the Virāj (meter) according to rule].” This tr. assumes that *virājam* represents not only the acc. sg. of the rt. noun cmpd. *virāj-*, but also the nom. sg. pres. part. **virājan* to the them. pres. *rājati*. This seems preferable to trying to construe it as an acc. sg. in the sense ‘wide-ruling’, and the interchange of final nasals would be fairly trivial for a pun. Scar. (72 n. 97) notes that the lexeme *ānu* √*rāj* is used in II.43.1 also of regulating meters, there Gāyatrī and Triṣṭubh. The preverb *ānu* also has to be read with *ṣṭúp*, as a cmpd decomposed and flanking *rājati* (*ānu rājati ṣṭúp*), for the meter name. The technical references to meters here may be the culmination of the *kavī-* / *īṣi-* theme of 17–18.

IX.96.19: I follow Ge in interpr. *vibhītvān-* as ‘spreading (wings)’, an interpr. that Old finds at least possible and that Re accepts. It is noteworthy – though I’m not sure where it gets us – that the Avestan Hom Yašt in Y. 9.14 contains the phrase *vībərəθuuantəm āxtūirīm* supposedly “with pauses and repeated four times,” describing the recitation of the Ahuna Vairiia prayer, with the equivalent of our *vibhītvān-* (*-vant-*) and *turīya-*. But the contexts are so different that it is hard to know what, if anything, to make of it – though if there’s a covert reference to recitational styles here it would continue the technical poetic vocab. of 18d.

The stem *govindú-* ‘cow-finding’ is found only here in the RV and nowhere else in Skt. (though *govinda-* is of course quite common later). As Re notes, it is a play on *indu-* ‘drop’ and is immed. doubled by the synonym *drapsá-*.

The weapons of 16a (and 12d) return here.

I follow Lü (273) and Re in taking *samudrām* in c as part of a double acc. phrase with *vivakti* in d: “declares the sea to be the fourth domain” – rather than as taking it as a 2nd obj. with *sācamānaḥ* as Ge does (“... der Meerflut sich gesellend”). Accepting Lü’s interpr. of the syntax does not, however, require accepting his view that this is the heavenly ocean, higher than heaven. Again, I think it’s a ritual ref. – perhaps to the waters that accompany him in pāda c.

IX.96.20: Soma’s journey from the filter (vs. 17) and across the domains on the ritual ground (vss. 18–19) reaches its end when he enters the two cups, presumably ready for the gods to consume.

IX.96.20–21: Again these two vss. belong to separate mini-hymns, but they are clearly concatenated: *kānikradat* “constantly roaring” in 20d is repeated in the same metrical position in 21b (and cf. *krāndan* in 22d), and 20d *camvòr ā viveśa* “he has entered the two cups” is immediately echoed by 21c *camvòr ā víśa* “enter the two cups” (and cf. 22b *kalásām ā viveśa*).

IX.96.22: Given the play on names of meters in 18d, it’s quite possible that *sāman-* is a technical term here.

Although *eti* has a goal in its pāda (at least in the simile) and should therefore be read as a lexical verb of motion, it may also be functioning as an auxiliary in a periphrasis *krādann eti* “keeps roaring,” which would be an analytic expression functionally equivalent to the “intensive” (that is, iterative-repetitive) *kānikradat* in 20d, 21b.

IX.96.23: The same double reading may apply to *eṣi* in pāda a, which has a goal (again in a simile), but also could be read with the part. *apaghnán* “he keeps smiting rivals.”

śakunó ná pátvā “like a flying bird” seems closely modeled on 19a *śakunó vibhṛtvā* “a bird spreading (its wings). In itself the expression is a bit puzzling. If the bird is “flying” it should not already be “sitting” (*sīdan*), and it seems unlikely that *pátvan-* is meant to distinguish it (as ‘flightful’) from a flightless bird like a dodo.

IX.96.24: A last pāda-init. form of \sqrt{k} *rand*, *ácikradat* in d.

IX.97

On the structure of this, the longest hymn in the RV, see publ. intro. It consists of ṛcas with varying degrees of cohesion.

IX.97.1–3: No obvious cohesion in this ṛca, though it ends with a clan refrain.

IX.97.1: As Re points out, init. *asyá* is reflexive or pseudo-reflexive, referring to Soma.

Gr attributes the instr. *preṣā* to a root noun *préṣ-* (< *pra-ís-*). Scar (59–60) discusses the form extensively, pointing out that a root noun analysis is dispreferred because of the accent on the ending: root nouns generally keeping the accent on the root even in the oblique. An instr. to a putative them. stem *preṣá-* is possible (at least accentually distinct from *preṣa-* I.68.5).

Almost identical to IX.92.6a, pāda d contains one of the few technical references to animal sacrifice (other than the horse sacrifice) in the RV.

IX.97.3: The comparative (*yaśástaraḥ*) with gen. pl. (*yaśásām*) is a mixed construction: we would expect either a splv. or an abl.

On the disputed etym. of *kṣaita(-vant)*- see comm. ad VI.2.1. As was noted there, both *kṣaita-* here and *kṣaitavant-* there are associated with *yáśas-* ‘glory’.

The final pāda is the Vasiṣṭha clan refrain, and the Anukr. attributes this ṛca to Vasiṣṭha himself, rather than one of the Vasiṣṭhids responsible for vss. 4–30.

IX.97.4–6: As Re points out (ad vs. 6), the key to this ṛca is the dative of purpose: 4b *dhánāya*, 5b *mádāya*, 5d *mahaté saúbhagāya*, 6b *bhārāya*.

IX.97.5: Ge and Re take *ánu dhāma pūrvam* as referring to an earlier mode of praise (e.g., “nach der früheren Weise”), but *dhāman-* in soma hymns tends, in my view, to refer to the physical domain(s) of the ritual ground, which Soma typically travels across in the course of his ritual preparation. See, e.g., the exx. in the immediately preceding hymn IX.96.18–19 and comm. thereon).

IX.97.6: Like the first ṛca, this one ends with the Vasiṣṭha clan refrain. The ṛca is attributed not to Vasiṣṭha himself, but to one Indrapramati Vāsiṣṭha, who is not known from elsewhere.

IX.97.7–9: This *ṛca* is attributed to Vṛṣagaṇa Vāsiṣṭha, whose given name was obviously extracted from vs. 8. All three vss. contain wild (or semi-wild) animals: a boar in 7d, geese in 8a, and a “sharp-horned” (*tigmāśṛṅga-*) one in 9c, a descriptor of *vṛṣabhā-*s generally.

IX.97.7: In the expression *kāvyaṃ uśāneva* the first word is the acc. obj. of *bruvāṇāḥ*, but it is also of course a play on the patronymic of Uśanā, the differently accented *kāvya-*.

In d the publ. tr. takes *padā* as neut. pl., based on IX.12.8 *abhī priyā divās padā, ... arṣati* “Soma rushes towards the dear tracks of heaven,” adduced by Re. However, it is also possible and, I now think, desirable to interpr. it as an instr. sg. “along the track.” I would not interpr. the instr., with Ge, as “mit dem Fusse.”

On PREV *etī rébhan*# see IX.96.6=17, IX.97.1 (this hymn) and with *emi* VII.18.22; “snorting” or “grunting” would be a better rendering of *rébhan* in the boar context.

IX.97.8: My interpr. of this vs. differs from the standard because I don’t interpr. anything here as a PN, unlike Ge and to a lesser extent Re. In particular, *ṛpāla- manyú-* is taken as PN by Gr, Ge, Re, Mayr (PN); Ge and (waveringly) both Old and Mayr (PN) also so interpr. *vṛṣagaṇa-*. As for the former, *ṛpāla-* is also found in the cmpd. *ṛpāla-prabharman-* (X.89.5, where it is adjacent to *āpānta-manyu-*, with *-manyu-* as here), both adj. applying to Soma. There is no question of a PN there. It is also likely to be related to *ṛprā-* (VIII.2.5), also of Soma. See comm. ad loc., where I accept Mayr’s (EWA s.v.) suggestion that *ṛprā-* means ‘sharp’. The other part of the dyad, *manyú-*, is of course a well-attested common noun ‘battle fury’. I see no obstacle to interpr. the phrase as “sharp battle fury,” referring to Soma’s martial progress across the ritual ground.

In the standard tr. the geese of *pāda* a are in an unmarked simile, and the real subj. is *vṛṣagaṇāḥ*, which is either a PN (Ge) or a descriptor of officiants (Re: “Les (officiants formant) un groupe mâle”). But again, nothing stands in the way of taking the geese as the subj., modified by *vṛṣagaṇāḥ*; after all, geese come in flocks! In my view the geese are, metaphorically, the singers (so not too far from Re), who attend the ritual in a flock. The point of comparison is the noise they make; cf., e.g., IX.32.3 *ād īm haṃsō yāthā gaṇām, vīśvasyāvīvaśan mātīm* “just as (the lead) wild goose (sets) its flock (to honking), he has made the thought of everyone bellow.” The last two vss. here (7–8) contrast the harsh noise made by Soma (compared to a boar, 7d) with the equally harsh noise of honking geese, representing the ritual singers. This may be far from the mellifluous singing we imagine, but, as I have long argued, the root *√ribh* ‘rasp,’ etc. and its deriv. noun *rebhā-* also do not flatter the sound of the singers: they describe the squawking of birds of prey and the creaking of a wagon, inter alia (see comm. ad VI.3.6, IX.66.9). Although the principal image here is of noisily honking geese, the migratory travels of the geese (going from nearby us to their [winter?] home) provide a secondary image. Because in real life the honking of geese is generally perceived as they cross the sky in formation, the two images go together.

Ge and Re take c with ab, with *pāvamānam* another goal (beside *Ṛpāla Manyu*) of *ayāsuḥ*. I take it rather with d, and I think the 2nd hemistich softens and repairs the uncompromising tunelessness of the noise in ab, by revising the depiction of the singers. They are now “comrades,” and they speak forth (*pra √vad*, with double acc.) to Soma “songful music” (*āṅguṣyām ... vāṇām*). Ge and Re take *āṅguṣyām* as modifying

pávamānam, and in their favor the two words are adjacent. But the only other occurrence of that stem modifies *sāman*- ‘melody’ (I.62.2) and to bleach it to ‘preislichen’ (for which there are already numerous other synonyms) seems unfortunate. I would suggest that the prominent initial position of *ānguṣyām* in c, far from its head noun at the end of d, results from this intention to re-cast the harsh image of ab and do so as soon as possible.

In any case the *vāṇá*- is *durmārṣa*- ‘difficult to forget’ or, perhaps ‘to neglect’; the choice may depend on whether it’s a hauntingly appealing melody or so raucous that one can’t avoid it.

IX.97.9: This vs. presents a number of puzzles, esp. in pāda b.

The verb in pāda a, *raṁhate*, should be intransitive. I construe the acc. *jūtīm* loosely, as indicating the pace or speed at which Soma moves, which is compared to that of Viṣṇu, who is regularly modified by *urugāyá*-, though the adj. is not exclusive to him.

The phrase *vīthā krīlánt*- is also found in IX.21.3. It’s also worth noting that *vīthā* is also found with several instances of *pājas*- ‘face, dimension’ disc. below (IX.76.1=88.5, 109.21).

The problems in pāda b center on the root affiliation of the verb *mimate* and the function of *ná*. The phrase in question is *mimate ná gāvaḥ*. The pāda is incisively and persuasively discussed by Old, with whose analysis my own is in general agreement. To begin with *ná*, both Ge and Re take it as neg., but as Old points out, its position is against that. I think that it is the simile marker, but, unusually, marking the verb that precedes it as to be read in two senses, rather than marking a nominal phrase as the simile, as is its overwhelming use.

This brings us to the verb. Given the presence of cows, our first impulse is to think ‘bellow’; cf., e.g., IX.33.4 *gāvo mimanti dhenávaḥ*. But, though $\sqrt{mā}$ ‘bellow’ does have the requisite redupl. pres. stem *mīmā*-/ *mím*-, it is only active, as Old also points out. I therefore think that *ná* here signals that *mimate* is an imperfect pun: it gestures towards ‘bellow’, but cannot belong to ‘bellow’ because of the middle voice. (Old also thinks the pun is present.) This accounts for my “as they seem to bellow” in the publ. tr. The root to which the verb actually belongs is $\sqrt{mā}$ ‘measure’, which also has a redupl. pres., which, however, is generally middle. The voice of the verb in our passage thus favors $\sqrt{mā}$ ‘measure’, though $\sqrt{mā}$ ‘bellow’, at least initially, seems to fit the context better. What can ‘measure’ contribute? This question was ingeniously answered by Old: the cows, i.e., the milk mixture, “teilen ihm das Mass zu.” They “give him their measure,” that is, provide him further physical substance as he travels through the stages of his ritual preparation.

This image is continued in c, by the VP *parīṇasām kṛṇute*. Although the acc. is generally taken as a substantivized neut. to a them. adj. *parīṇasá*- derived from the noun *pārīṇas*- ‘fullness, profusion’ (so Gr; see AiG II.2.137), I consider it still an adj., with which we should supply *pājas*- ‘face, dimension’. This has good support in IX; cf. IX.76.1 = IX.88.5 *vīthā pājāmsi kṛṇute* “he deploys his full dimensions at will” and with a different medial verb IX.68.3 *pāja ādade* “he assumed his full dimension” (see also IX.109.21). The added milk allows him to expand and attain ample size or measure. On the association of cows/milk with *parīṇas(a)*- see VIII.45.24 *gó-parīṇasa*-, characterizing soma drinks. In the comm. ad VIII.45.24 I suggest that the 2nd cmpd member is *parīṇasá*- as here (hence a 2nd occurrence of that stem), not *pārīṇas*- (per Gr, etc.).

Acđg. to Ge (n. 9cd), Re, Lü (267), pāda d depicts Soma as sun and moon. This may well be, but I wonder if the source of the contrastive image is not the Overnight (*atirātrā*) soma ritual.

IX.97.10–12: This ṛca is attributed to Manyu Vāsiṣṭha, with the name possibly extracted from the previous ṛca, where *manyú-* in 8a is taken by some as part of a PN (see comm. above).

All three vss. contain a hemistich beginning *índuh* (10a, 11c, 12c); the verb *pavate* appears in all three (10a, 11b, 12a), though this is hardly unusual. In addition there is the presence of Indra (10b, 11c) or the gods in general (12b), as well as shared vocabulary: hemistich-final *mádāya* (10b, 11d), $\sqrt{p}ṛc$ ‘infuse’ (11a, 12b), $\#devó devásya$ (11d) / $\#devó devān$ (12d). The net result is an impression of unity, despite the lack of a striking shared theme and the unremarkable nature of the shared material.

IX.97.10: The sense and derivation of *gó-nyoghas-* are disputed. Ge tr. “der die Kühe würdigt” and tentatively connects the 2nd member with what he cites as *ny òhate* in V.52.11. I do not construe *ní* with *ohate* in that passage (see comm. ad loc.), in part because \sqrt{uh} does not otherwise appear with *ní*. The sense he attributes to the cmpd is also rather jarring. He is followed in both sense (“respectant les vaches”) and derivation by Re., who adds to the dossier of parallels I.180.5 *gór óheṇa*, which, however, is too riddled with uncertainties (see comm. ad loc.) to provide good evidence. By contrast Old considers BR’s conjectured emendation **gó-nyokas-* ‘accustomed to cows’ (?—he doesn’t gloss) very likely. He rejects the view that the cmpd as transmitted contains an *s*-stem *oghas-* ‘flood’, related to later Vedic *ogha-*, *aughá-* ‘flood’ (even though he states that if we stick with the transmitted text he would tr. “auf den die Kuh(milch) hernieder flutet”). This dismissal of a potential **oghas-* is shared by Mayr (EWA s.v. *ogha-*): “RV 9,97,10 *gónyoghas-* ist nicht für ein ved. **oghas-* ‘Strömung’ verwertbar.” Mayr instead tentatively follows the Ge/Re interpr. (s.v. *OH*), “vielleicht ‘die Kühe preisend’ od. dgl.” I am puzzled by this blanket rejection, esp. from Mayr, who cites (s.v. *ogha-*) with approbation Narten’s positing (YH 221) of an Indo-Iranian root $\sqrt{*uag}^h$ ‘fliessen’, found in *ogha-*, *aughá-*. Admittedly, there is no independently attested *s*-stem **óghas-*. But consider the semantically and morphologically parallel *gó-arṇas-* (4x) ‘having a flood of cows’, with the well-attested *s*-stem *árṇas-* ‘flood’. It is easy (at least for me) to imagine that an *s*-stem **óghas-* was coined in analogy to *árṇas-* for just this cmpd.

IX.97.11: The 2nd hemistich contains three pairs of phonological and (partly) etymological figures: $\#índur índrasya$, $\#devó devásya$, *matsaró mádāya*#, with the 1st two presenting matching nom.+gen. grammatical figures.

IX.97.12: The first pāda is alliterative: ... *priyāṇi pavate punānāḥ*, while opening of the 2nd is an etymological figure that matches the one opening 11d.

The referent of *priyāṇi*, the obj. or goal of *abhí ... pavate*, is uncertain. In the pub. tr. I supply ‘tracks’, on the basis of 7c *padā ... abhy èti*, as well as IX.12.8 *abhí priyā divás padā ... arṣati* “he rushes towards the dear tracks of heaven.” However, as noted above, I no longer think *padā* in vs. 7 is an acc. pl., and I am also more moved by Ge’s cited parallel, IX.75.1 *abhí priyāṇi pavate ..., nāmāni* “he purifies himself towards his

own dear names.” But cf. also IX.57.2 *abhí priyāṇi kāvya ... arṣati*. I would now be inclined to supply ‘names’ (“he purifies himself towards his own dear names”), since Soma’s progress across the ritual ground to his names is a trope (see comm. ad IX.75.1). But since there are a number of other referential possibilities for the construction *abhí priyā(ṇi)*, it might be best simply to tr. “towards his own dear (things).”

Pāda c is also puzzling: the phrase “clothing himself in his foundations” (*dhārmāṇi ... vāsānaḥ*) is not immediately interpretable, and there are no illuminating parallels (at least that I have found). The adverbial *ṛtuthā* “according to the ritual order” suggests that the process of “clothing himself” involves following the orderly steps of the sacrifice – which in turn suggests that Soma is making his progress across the ritual ground, encountering first the waters, then the milk, before arriving at his destination. I therefore think that the “foundations” here are the waters and the milk – his supports, the materials of which the soma drink is built. But this cannot be demonstrated.

IX.97.13–15: No particular signs of cohesion in this ṛca, which is a collection of soma tropes. If there is any unifying theme it is movement, with *eti* (13b), *eṣi* (14b, c), *arṣati* (13d), *arṣa* (15d); for other repeated lexical items also *pariṣicyāmānaḥ* (14d), *pāri ... siktāḥ* (15d). Also the final vs. (15) begins with *evā*, the common hymn-ending summary particle – an effect that is muted in the publ. tr.

The poet is supposed to be Upamanyu Vāsiṣṭha, presumably following up on the Manyu to whom the last ṛca was attributed.

IX.97.13: The part. *nadāyan* here (as well as the other 2 forms of this stem) is universally taken as a trans.-caus. ‘causing to resound’ with Heaven and Earth as obj. As I argue in my *-āya*-book (60–61), all 3 passages are better taken as intrans. In this vs. the focus is on the noise that Soma makes; see esp. the parallel part. *abhikānikradat* ‘constantly roaring’. And so intrans. ‘bellowing’ fits this pattern. Note also IX.70.6 *mātārā ... nānadat eti* “he goes bellowing to his two mothers [=Heaven and Earth,” with the same config. of participle to $\sqrt{nad} + eti + H+E$.

IX.97.14: On *saṃtaní-* see comm. ad IX.69.2.

IX.97.15: As was noted just above, the hymn-summary quality of the *evā* opening this vs. is not sufficiently represented. I would now alter the tr. to “Just in this way purify yourself ...”

The etym. figure *madiró mādāya* is reminiscent of *matsaró mādāya* in the previous ṛca (11d), and pāda-final *mādāya* is prominent in the first part of this hymn (5b, 10b, 11d, 15a).

The identity of the ‘water-grabber’ (*uda-grābhá-*) is unclear. The best suggestion, in my view, is Ge’s: Vṛtra. This interpr. entails an implicit identification of Soma with Indra here, but this is not unprecedented: see for ex. the passages in which Soma is called *vṛtra-hán(tama)-* (IX.1.3, 24.6), and note that in the 1st vs. of this ṛca (13c) Soma’s voice is compared to Indra’s. Sāy. suggests ‘cloud’, but why would Soma be fighting a cloud? Old has an ingenious, ritually oriented solution, whereby *udagrābhá-* does not identify the (to-be-)vanquished enemy, but rather the type of weapon Soma is using (the gen. thus depending directly on *vadhasnaḥ*) – namely the ritual ladle (Wasserschöpfer). He uses the

power of water to vanquish an unexpressed enemy, namely “die feindlichen Mächte.” Although Old rejects the possibility that *udagrābhá-* refers to Vṛtra, in part because too much would need to be supplied, in fact by his interpr. the hostile object itself would have to be supplied. His solution also does not mesh with passages like I.165.6 *vísvasya śátror ánamam vadhasnaíḥ* “I bowed with my weapons (those) of every rival,” which has the exact syntactic configuration of our passage.

The expression in pāda c, “encompassing the glistening color,” presumably refers to Soma’s incorporating the gleaming white milk – rendered clearly, if non-literally, by Ge’s “weisse Farbe annehmend.”

IX.97.16–18: This *ṛca* does seem to have a controlling theme and metaphor, esp. in 17–18 -- the passage through the filter, beginning in 16. Navigating among the curly tufts is compared on the one hand to the triumphant progress of the Aryas (vs. 17) and to a sort of moral progress in discriminating between the crooked and the straight (18). Each vs. also contains a form of the impv. *ghanva* ‘run’ (16d, 17c, 18d).

The Anukramaṇī names Vyāghrapād (‘Tigerfoot(ed)’) Vāsiṣṭha as the poet, a colorful name with no precedent in the text.

IX.97.16: The vs. contrasts easy travel (a: *supáthā sugāni*) with difficult travel (c: *duritāni*); the contrast is signaled by *su-/ duṣ-*, while two different roots for ‘go’ serve as 2nd cmpd. member, $\sqrt{gā}$ (or \sqrt{gam} ?) versus \sqrt{i} .

The part. *ḥṛṇván* in b should be supplied to govern *supáthā sugāni* in a.

Pace Ge and Re, I do not think *naḥ* should be construed with the ger. *juṣṭvṛ*; it is simply in Wackernagel’s position and goes better with *supáthā sugāni*.

For the loc. *uraú* see III.54.9 *uraú pathí*.

For *ghanéva* see comm. ad I.63.5.

IX.97.17: As Re hints, *śamgáyī-* is a species of univerbation of the common expression *śám* + DAT “weal, luck for X.”

The 2nd hemistich of this vs. is very difficult. Decoding it is made somewhat easier by recognizing the governing image: the progress of the Soma in and around the tufts of wool on the sheepskin filter. The Soma is urged to ‘pull apart’ *ví√ci* the *bándhūn* ‘bonds’; *bándhu-* is multivalent here. It refers on the one hand to the physical bonds that exist between the wool tufts, blocking Soma’s progress. It is notable that in VS 23.36 *ví cinvantu* has *lóma* ‘hair’ as object, and refers to the separation of the hair of the sacrificial horse to mark the lines along which the flaying knives are to follow. But *bándhu-* can also refer to bonds of kinship and therefore to kin-groups. Here the 2nd sense of *ví√ci*, ‘discriminate’, is probably in play, as Soma as representative of Ārya progress makes strategic alliances among these groups.

Ge follows this 2nd interpr. still further by emending the unclear (*indo*) *vāyūn* to **indav *āyūn*, tr. “indem du ... diese nächsten Freunde [= *bándhūn* sj], die Āyu’s, aussucht.” In my opinion emending to Āyus doesn’t help much, and I don’t think *vāyūn* is as hopeless as he finds it – though I don’t think the path that Old and Re follow is a convincing one either. They both take it, reasonably enough, as belonging to the extremely well-attested stem *vāyú-* ‘wind’, and Old suggests that these winds might be rain-bringing, thus relating to the *vṛṣṭi-* desired in the first hemistich. But this takes us far

from the fleece filter and the images it produces. I suggest instead that it is a nonce formation to the pseudo-root $\sqrt{vā}$ ‘weave’ (on which see, e.g., EWA s.v. *ō*, esp. p. 276), meaning ‘webs’ and again refers to the tangled non-linear paths through the fleece. In this context the ‘weave’ sense would be available to the audience. Re hints at a connection with ‘weave’ in his n., but his tr. doesn’t reflect it.

One of the curious features of this hemistich is that it is the simile that contains the word that is closest to the actual physical object under discussion – namely (*)*stúka*- ‘curl’, very close to ‘tuft’. Before discussing the meaning further, I should comment on the form. The stem of this word is generally given as fem. *stúkā*-, and there are certainly clear fem. forms (acc. *stúkām* AV VII.74.2; also by implication the poss. adj. *stukāvín*- RV VIII.74.13, although the latter could show lengthening at morpheme boundary [cf. *dvayā-vín*- and AiG II.2.917–18]). But nothing forbids us from interpr. *stúkā* here as a neut. pl. to a them. *stúka*- (so already Old), which immensely aids the interpr. of the passage, since a nom. ‘tuft, curl’ compared to the subject Soma and commanded to run is close to senseless. One can interpr. the relationship between fem. *stúkā*- and neut. *stúka*- in one of two ways. Either the neut. stem was so common in bahuvrīhis modifying females – e.g., *viṣita-stukā* ‘with unloosened curls’ of Rodasī in I.167.5 – that the 2nd member was reinterpr. as fem. Or, again because of its presence in bahuvrīhis modifying females, the originally fem. 2nd member was interpr. as *-stuka*-, with the fem. gender appropriate only when a fem. was so characterized by a bahuvrīhi containing it. Either way, I think we can confidently assume a neut. acc. pl. here, parallel to *bándhūn* and *vāyūn*. Soma is urged to pull apart the *bándhūn* “like straightened curls/tufts.” That *vītā*- means ‘straight, straightened’ is clear from IV.2.11 cited by Ge: *cīttim ācittim cinavad ví vidvān, pṛṣṭhēva vītā vṛjinā ca mātān* “Insight and lack of insight will the knowing one [=Agni] distinguish, like backs, straight and crooked, (like) mortals,” where it is contrasted with *vṛjinā*- ‘crooked’, with both acting as object of $\sqrt{vī}\sqrt{ci}$ as here. Cf. also the bahuvr. *vītā-pṛṣṭha*- ‘straight-backed’, *vītā-vāra*- ‘straight-tailed’ (though for the latter see comm. ad VIII.46.23). This adj. is likely derived from the root $\sqrt{vī}$ ‘pursue’, as Gr suggests, but seems synchronically distinct from the other uses of the ppl. to this root. Gr gives it a separate lemma. Old suggests that *stúkā ... vītā* refers to “Kammwolle” or worsted wool, that is (I learn from the internet), wool yarn that has been combed rather than carded; carded yarn is fuzzier than worsted yarn. Whether this technical interpr. is correct or not, it’s clear that the curls or tufts in question are easier to navigate than those that are not *vītā*-.

IX.97.18: The “straight versus crooked” theme is continued here, and in fact the expression *vītā vṛjinā ca* “straight and crooked” cited from IV.2.11 in the immed. preceding comm. is lexically renewed (/clarified) by *vṛjūm ca ... vṛjinām ca*, with a better attested and unambiguous word for ‘straight’, *vṛjū*-. Again, Soma’s progress across the tufted filter is the topic, made clearer by the use of *gātú*- ‘way’. Both Ge and Re (also Ober II.60) take the verb $\sqrt{vi}\sqrt{śya}$ only with pāda a and supply a new verb (‘discriminate’ or the like) with b, relying perhaps too heavily on the model of IV.2.11. I think literal unknotting is what’s at stake – finding a way between the entangled wool tufts. Ge further suggests (n. 18a) that the unknotting refers to getting rid of the stalk of the plant in the soma press, but the filter makes far more sense.

The two images in d seem oddly incoherent together: *máryaḥ ... pastiyāṁvān* “a man in his prime in possession of a dwelling place,” but a passage adduced by Ge (n. 18d) demonstrates that the young man and the house go together: I.91.13 *márya iva svá okyè* “(take pleasure) like a young man in his own home.” Perhaps the point of the house-proud *márya*- is that a man in his prime, perhaps roughly the equivalent of the later *gr̥hastha*, should have achieved the goals of a mature life: a house and household; Soma is implicitly likened to such a man after he has been purified and acquired the water and milk that make him the fully prepared ritual substance, and the *pastyā-* itself is the ritual ground. Ge’s parallel also neatly provides indirect evidence for the semantic equivalence of *pastyā-* and *okyā-* ‘home’ and therefore against the interpr. of *pastyā-* as ‘river’ (often indeed by Ge; see, e.g., IX.65.23, though he tr. it here as Haus). See comm. ad I.40.7.

X.97.19–21: Attributed to Śakti Vāsiṣṭha, who, unlike most of the other Vasiṣṭhids named by the Anukr. for this hymn, has other vss. attributed to him: VII.32.26, IX.108.3, 14–16. The ṛca is more concerned with the gods’ consumption of soma than previous ones; note the “divine conclave” (*devátāte*) in 19a, the invitation to the gods to come to the sacrifice to drink soma in 20d, and the pursuit of the gods (*devāvītim*) in 21a. The final verse of the ṛca (21) also begins with a hymn-summarizing *evā* and the type of plea for benefits that often end a hymn. The first two vss. of the ṛca also contain forms of √*dhanv*: impv. *dhanva* (19b) and *dhanvanti* (20c), thus continuing the repeated impv. *dhanva* of the previous ṛca – with this concatenation suggesting a reason for attaching this ṛca here.

IX.97.19: Pāda b *pári ṣnúṇā dhanva sāno ávye* is identical to 16d *ádhi ṣnúṇā dhanva sāno ávye* save for the preverb.

IX.97.20: The publ. tr. dispenses with the rel. prn. in pāda a, as tr. the hemistich as a rel. cl. seemed clunky.

Note the alliteration of ab *araśmāno yé arathā áyuktā, átyāso ná sasrjānāsa ājaú*.

IX.97.22–24: Karnaśrut Vāsiṣṭha, a name that has no source in the text and is not otherwise found in the Anukr. This ṛca depicts Soma as a king on a royal journey, and associates him with the resonant words *ṛtá-* (23b, 24d) and *dhárman-* (22b) / *dharmán-* (23c) and the traditional roles they imply.

IX.97.22: I read *yádī* in pāda a as *yád ī* ‘when him’. Note the parallel *īm* in pāda c, before a vowel (*īm āyan*), while our *ī* occurs before *m* (*ī mánaso*) and could in principle represent a degeminated **īm mánaso* (though I don’t think this is nec.). As Ge (n. 22ab) implies, the point of this pāda is that the ritual speech of the priest-poet essentially creates the sacral drink soma [/god Soma] from the mere juice of the soma plant.

I do not, however, follow Ge’s interpr. (in the same n.) of b, as meaning that this speech was roused by the prospect of the dakṣiṇā. I am in fact tempted to follow Old’s rather despairing comment, “Der mystischen Verbrämung dieses Gedankens in b weiss ich keine Deutung abzugewinnen.” He finds the other three pādas clear, with the sense that when speech has fashioned soma (or the milk streams, also possible in Old’s opinion), the milk streams stream to the soma. Accepting this as the overall intent of the verse, I think there is some sense – at least structural sense – that can be wrung from b.

To begin with, we must focus on the *vā*. Insofar as I can follow his rendering Ge implicitly interprets the *vā* as loosely contrasting the fashioning from the mind of the seer with that fashioning under the circumstances set out in b, but his tr. seems to me not really German (“So oft ihn die Rede aus dem Geiste des schauenden (Sehers) heraus formte oder bei der Entscheidung angesichts des besten Stückes Vieh”). Klein’s rendering (DGRV II.147), which seems to follow the structure envisioned by Ge though with somewhat different content, does not seem to me to be English either: “When speech (arising) from the mind of the seer fashioned (it., viz. soma) or in the establishment (of the worship) in the presence of the best cow.” Re at least tries to impose some parallelism between a and b, taking *dhármaṇi* in b as an infinitive that is roughly parallel to the finite verb *tákṣat* in a: “Quand la parole (née) de l’esprit du Voyant eut façonné (le soma), ou (quand il s’agissait d’) établir (le sacrifice) en présence du plus puissant bétail.”

None of these basically clausal or pseudo-clausal interpr. seems to me correct (or even parsable). I instead think that the domain of *vā* is only pāda b, and that it is conjoining two locative phrases: *jyēṣṭhasya ... dhármaṇi* and *kṣór áṇīke*. If I am correct, we are dealing with an example of inverse *vā* (X *vā* Y), rather than the standard X Y *vā* – a pattern that Klein (DGRV II.139) considers rare but existent. In our case *vā* is inserted in the middle of the first, complex member, giving a pattern X *vā* X’ Y Y’. But at least *vā* would be doing its usual job, conjoining parallel nominal expressions, each consisting of a loc. plus dependent gen. Here each would define the conditions or locations under which the fashioning of pāda a occurred. The first of the choices is “on the foundation of the preeminent one”; in the publ. tr. I suggest that the preeminent one could be either Agni or Indra, both of whom are elsewhere characterized as *jyēṣṭha*-. I now think this is incorrect. Instead I would invoke the two other expressions in IX with loc. to *dhárman*- + GEN, both *ṛtásya dhárman* (IX.7.1, 110.4) “on the foundation of truth.” Although *ṛtá*- does not seem to be qualified as *jyēṣṭha*- elsewhere, “preeminent truth” is hardly a jarring expression in RV discourse. Here “on the foundation of preeminent (truth)” would refer physically to the ritual ground and conceptually to the truth that governs the sacrificial enterprise. See also comm. on the next vs.

The other loc. expression is harder to interpr. I will start by saying that I accept the interpr. of *kṣú*- as ‘cattle’ (< **pśu*-), going back to Bloomfield (IF 25 [1909]), rejected here by Old, but reaffirmed by Thieme (ZDMG 95 [1941] 347 = KISch 51), and now generally accepted (see all tr. cited above, as well as EWA s.v.). But what does “face-to-face with the cattle” (publ. tr.) or possibly “at the forefront of cattle” / “in front of cattle” mean in context (or even, indeed, out of context)? I have two suggestions, though neither of them makes a neat disjunctive pair with the first loc. phrase. The stronger suggestion is that this is a temporal expression, referring to dawn. The stem *ánīka*- is several times used in this way; cf. VI.47.5 (with loc.) *uṣásām áṇīke* “at the forefront of the dawns,” V.76.1 *uṣásām áṇīkam* “the face of the dawns.” Esp. apposite for our passage is I.124.11 *yuníkté gávām aruṇānām áṇīkam* “She [=Dawn] yokes the forefront of the ruddy cows,” with the cows a reference to the reddish rays of dawn. Since Dawn and her rays are frequently assimilated to cows and *ánīka*- is used to indicate the moment of the appearance of dawn / dawn’s rays, a shorthand expression “at the forefront of the cattle” could, it seems to me, be a way of saying “at dawn.” This would make the two locative phrases conjoined by *vā* conceptually non-parallel (though still syntactically parallel), but

I think this looseness is within acceptable limits, as offering two alternative ways of identifying the circumstances of the fashioning of Soma by speech: “on the foundation of preeminent (truth) or at the forefront of cattle [=dawn].” I would now emend the tr. in that way. Alternatively “in front of cattle” could refer to the place on the ritual ground where Soma encounters the milk mixture – which milk then comes to him. This would more narrowly define the location than the first locative phrase, which gives the whole ritual ground as the locus. The 2nd possibility provides a better set of parallels with *vā* – both locational – but I prefer the 1st because of the use of *ánika*- with dawn elsewhere.

IX.97.23: Since $\sqrt{pū}$ does not appear with *prá*, it’s best to supply a verb of motion with the *prá* opening pāda a and take b (with *pavate*) separately. Note the alliteration in pāda a ... *dānudó divyó dānu(-pīnvāh)*.

This vs. identifies Soma as ‘truth’ (*ṛtām* b) and also contains in c the possessive internal deriv. *dharmán-* to *dhárman-*. If I am correct that *jyēṣṭhasya ... dhármaṇi* in the immed. preceding vs. 22b should be interpr. “on the foundation of preeminent (truth -- *ṛtásya*), both resonant words, *ṛtá-* and *dhárman-/dharmán-*, were already implicitly present in the previous vs. In 23 Soma is then depicted as the embodiment of these words (cf. Ge’s “das (verkörperte) Gesetz” for *ṛtām*), and they define his kingship (*rājā* in c, also in 24b). Unfortunately it does not seem possible to signal the *dhárman-/dharmán-* connection in English tr., but ‘possessor of the (royal) mandate’ may be too specialized for the latter. Perhaps better ‘founder, foundation-giver, institutor, maintainer’. On Soma as “truth” see also IX.107.15 and IX.108.8.

The ten reins are presumably the fingers of the presser, as is usual for ten anything in IX.

IX.97.23–24: These two vss. each contain the injunc. (/subj.) aor. *bhuvat*, which in both cases I tr. as an immed. past: “he has become.” After considerable disc. with IH, I now think that this particular form can also express a generic or habitual role or behavior of the subject, which IH felicitously renders with the colloquial “he be-s X.” I am therefore now inclined to alter the tr. of both vss. to “he is the king ...” / “he is, now as before, the wealth-lord ...” In the absence of a non-colloquial Engl. habitual/generic, “is” will have to do.

IX.97.24: The two words making up the VP in d, *ṛtām bharat*, appear also in vs. 23, though not together (*ṛtām ṛtāya* b, *bhāri* d). As is pointed out by KH (implicitly: Injunc. 122 and esp. n. 34) and Ober (II.121), this appears to be an Indo-Iranian phrase, and it thus invests Soma with yet more traditional dignity. The pāda thus deserves a more solemn tr. than I gave it in the publ. tr. – perhaps “the drop bears the dear truth that is well worth the bearing.”

Although the morphological means are different, the lexical duplication in both *rayipātī rayīṇām* (c) and *ṛtām bharat súbhṛtam* (d) gives the end of this ṛca a stately and archaic air.

IX.97.25–27: Like the ṛca 19–21, this one focuses in great part on the gods as drinkers of soma and the desire to bring them to the ritual; the “pursuit” (*vītīm*) of Indra and Vāyu in 25b is reprised in *devā-vī-* ‘pursuing the gods’ in 26a, while the gods are mentioned twice

in 27ab. The final vs. also begins with the typical hymn-summarizing *evā* as three times elsewhere in this hymn (vss. 13–15, 19–21, 34–36). The poet is named as Mṛḍka Vāsiṣṭha, who is also the poet of X.150. In the latter hymn his name is clearly drawn from the dat. *mṛḍikāya* found in the refrain of every vs., but there is no such basis here.

IX.97.26: The publ. tr. omits the enclitic *naḥ*; it should be revised to “Pursuing the gods for us while ...”

Ge takes *kṣāyam* in b as an Inhaltsakk. (“... sollen ... ein Haus ... herströmen” (sim. but more elaborate, Re). But a dwelling place is a particularly unlikely object to “stream,” and I prefer to see it as goal (as also Scar 398).

The hapax in d, *diviyāj-*, has (at least) two possible meanings: ‘sacrificing at day(break)’ as I take it, and ‘sacrificing (to the gods) in heaven’ (so Ge, Re). See Ge’s n. and Scar (398–99). There is nothing in the context that tips the balance one way or the other; I prefer the temporal reading because the other one requires more material to be understood. The word also appears in a metrically disturbed pāda; as it stands it has 12 syllables and a cadence (– ∼ ∼ ×) that is bad for both Triṣṭubh and Jagatī. Old suggests the possibility of reading the 1st member of *diviyāj-* as a monosyllable, either **divyājah* or **dyuyājah*, which would at least produce an 11-syl. line, and these possibilities are disc. in more detail by Scar without a firm conclusion.

IX.97.27: The summary *evā* might be more emphatically rendered as “in just this way” or sim. The “conclave of the gods” (*devātāte*) returns from 19a. As Ge points out, the whole hemistich is almost identical to IX.96.3, save for *evā* in place of *sā naḥ* and *devapānaḥ* for *indrapānaḥ*.

The ppl. in the periphrasis in d, *smāsi hitāḥ*, could belong either to √*dhā* or to √*hi* (so Sāy.). It is actually not clear to me which one Ge favors from his “denn wir sind in grossem Wettstreit begriffen” (and his n. 27c doesn’t entirely clarify). Re clear chose √*dhā*: “Avec ambition [*mahās cid?*] nous nous sommes en vérité placés dans la compétition.” I favor √*hi*: I think the point is that we are “driven” / “hard-pressed” in the hostile encounter, and we need divine help – which we will only get once they have partaken of our soma. But there are several logical steps missing in every interpr.

IX.97.28–30: Attributed to Vasukra Vāsiṣṭha, who is not otherwise known – though a Vasukra Aindra is supposedly responsible for the devilish trio of hymns X.27–29. The *ṛca* is marked by the repetition of *ā pavasva* in the 2nd hemistich of each vs. (28d, 29c, 30d) expressing the various good things we want Soma to bring us through his self-purification. The root √*srj* ‘surge’ is also prominent in the 2nd two vss. (29a, 30a).

IX.97.28: The opening of the vs., *ásvo ná kradaḥ*, is very close to 18c *átyo ná kradaḥ*. The first hemistich contains three animals, incl. the fairly rare lion. Ge, fld. by Re, identifies the bulls as the priests.

IX.97.29: I take the hapax *sanitra-* in its full lexical value, as a ‘means of winning’, rather than the bleached Spende, Gabe (Gr), Lohn (Ge), le bénéfice (Re) that prevails. On the accent of the word (and other *-tra*-stems to set roots), see AiG II.2.701–2, which also glosses the word as I do: ‘Mittel des Gewinnens’, flg. Ludwig.

IX.97.30: On *asasṛgram* see comm. ad X.31.3 and Kü 555.

I take *áhnām* as a 2nd, unmarked simile dependent on *sárgāḥ*, rather than supplying a different headnoun, as Ge and Re do. They are surely both right that “the surges of/from heaven” are the rains. As for “the surges of the days,” this could either refer to the passage of time or to an abundance of light; I favor the former.

In b *ná* should be read as both the simile particle and the negation; see Old.

Pādas b–c show a clever chaining of significant vocabulary. In b Soma is compared to a king who doesn’t violate his alliance, with *mītrá-* in its common noun usage. But d contains the part. *yatānā-* ‘taking one’s place, being put in place’, and *√yat* is an action esp. associated with the god Mitra. Cf., e.g., VII.36.2 *jānaṃ ca mītró yatati* “Mitra puts the people in their place” (sim. III.59.1). Although Mitra is not explicitly present here, the lexical continuity might evoke him. It is indeed possible that it is Mitra’s intentions (or those of the alliance itself) acdg. to which Soma takes his place, rather than “ours” as in the publ. tr.

The vs. ends with yet another term relating to social life, namely *vís-* ‘clan’; as king, Soma would exert himself on behalf of this social unit.

IX.97.31ff.: As noted in the publ. intro., the *ṛca* divisions seem to continue in this 2nd half of the composite hymn, although the Anukr. attributes the remaining vss. to just two poets, Parāśara Śāktya (31–44) and Kutsa Āṅgīrasa (45–58), an apportioning that does not conform to the presumed *ṛca* division (splitting the *ṛca* 43–45 between the two). Both poets are known from elsewhere: Parāśara Śāktya is the poet of I.65–73 and Kutsa Āṅgīrasa of I.94–98 and I.101–15.

IX.97.31–33: The first vs. of the *ṛca* contains a form of *√sṛj*, thus concatenating with the previous *ṛca*. Both the first (31) and last (33) vss. contain a reference to the sun, and I see one in the middle vs. as well; see comm. ad 32.

IX.97.31: The skeleton of pāda a, (*prá te*) *dhāṛā (mádhumatīr) asṛgran*, is identical to 29a (*śatām*) *dhāṛā (devájātā) asṛgran*.

The publ. tr. renders *pāvase* as if it were an imperative; correct to “you purify yourself.”

I take “domain of cows” (*dhāma gónām*) in c to indicate that Soma is the substance into which the milk is mixed. Since the milk is sometimes identified as the sun, his swelling of the sun in d may refer to Soma’s providing more body and amplitude to the milk.

As often, *arká-* can be read as a pun.

IX.97.32: The “domain for the cows” is echoed here by the “domain of the immortal one” (*amṛtasya dhāma*). As with the same phrase in IX.94.2 (q.v.), I suggest that the immortal one is the sun, and perhaps specifically milk as representative of the sun. The role of the sun in the surrounding vss. (31d, 33d) supports this interpr. For alternative interpr. of the phrase, see comm. ad IX.94.2. In our passage Re (sim. Lü 467) suggests that it is actually nom. and refers to Soma, but in IX.94.2 it must be an acc. obj. (also acdg. to Re).

The cadence of c is bad as transmitted, but can be easily fixed by reading **matsarā-vān* with the common lengthening of the stem vowel -a- before -vant- and -van-; see Old, in agreement with Arnold. The stem is a hapax, and it is clearly a morphological variant of *matsarín(-tama)-* (4x), with a different possessive suffix. In fact, our pāda is a nonce Triṣṭubh adaptation of the Jagatī line IX.76.5 *sá índrāya pavase matsaríntamaḥ*. For further disc. see comm. ad IX.76.5. The interchangeability of -vant- and -ín- for metrical purposes speaks against the two possessive suffixes having crucial functional differences.

The initial *sá* in both our pāda and the one on which it is based does not follow my rules for *sá* 2nd-ps. reference. On this aberrancy see comm. ad IX.76.5, where it can be motivated. That pāda was then simply borrowed (and slightly altered) here.

IX.97.33: The form *cakṣi* (also VII.3.6) is in both of its occurrences pretty clearly an impv., but its formation is something of a puzzle. It appears to be a -*si* impv. (so Baum, *Imperative*, 46, 107, with no disc.), but it has none of the standard supports for such a form. Not only does it not have an *s*-aor. subjunctive, but it has no aorist forms at all, and almost all the occurrences of its well-attested root pres. are medial. And of course, assuming it belongs to $\sqrt{cakṣ}$, the form would have to be degeminated from **cakṣ-si* (though that would not be hard). The parallel passage IX.71.9 has a medial injunc. to the marginal thematic stem (see KH 122 n. 33): *divyāḥ suparṇó 'va cakṣata kṣām*. I have no explanation for this aberrant form; it is true that the proper med. impv. to the root pres. *cakṣva* (3x) would not fit this metrical slot, but that doesn't seem reason enough to invent *cakṣi*.

IX.97.34–36: All three vss. concentrate on ritual speech and on the noisy approach of both cows and poets to Soma. This theme takes up 32d, where Soma impels his own speech in concert with the productions of the poets. The final vs., 36, begins with hymn-summarizing *evā*.

IX.97.34: On the “three voices” (*tisró vācaḥ*) see comm. ad IX.33.4, 50.2.

The parallel expressions in c and d -- ... *yanti* ... PTCLE contrast the progress of ritual substance (milk) and ritual speech (thoughts). As elsewhere, *vāvasānāḥ* could belong to both $\sqrt{vās}$ ‘bellow’ and \sqrt{vas} ‘desire, be eager’ (cf. IX.93.4, 95.4). Given the emphasis on noise in this ṛca, the former is probably primary, but both can be meant – hence my tr. “bellowing eagerly.”

IX.97.35: The first two pādas of this vs. are variants of the last two of the previous vs. (34cd), with the repeated *yanti* of 34 gapped, and redistribution of some of the lexicon: the two participles in 34cd, *prchāmānāḥ* and *vāvasānāḥ*, switch positions, with each paired with a more natural subject (cows bellowing 35a, poets asking 35b), and the thoughts of 34d are relegated to the instr. in 35b with their producers, the *viprāḥ*, taking over the subject role in 35b, again a more natural configuration. We can consider 35ab as a complex poetic repair of 34cd.

IX.97.36: The hymn-summary *evā* could once again be rendered more forcefully: “in just this way” vel sim.

IX.97.37–39: I do not see any signs of unity in this *ṛca*. All three vss. contain a participle of $\sqrt{pū}$ in passive function, *pūnānā-* in 37, 38, *pūyāmāna-* in 39, but this is hardly remarkable in the Soma maṇḍala.

IX.97.37: In pāda a *vīpraḥ ... matīnām* reprises *vīprā matībhiḥ* of 35b in concatenary fashion. For further on this phrase see below.

Gr, Ge, and Re, as well as Lü (439), take *ṛtā* as neut. pl., but this disturbs the syntax, and the tr. all must supply a verb to govern it. I suggest that it is instead the instr. sg. Re explicitly rejects this possibility on the grounds that it would be morphologically isolated. If he means that it would be the only such instr. to this stem, he seems to be correct, but given that the *-ā* instr. to them. stems is in retreat, this isolation would not be surprising. If he means that them. neuters don't have instr. in *-ā*, this is not correct: Lanman (Noun infl., 335) considers them more frequent than to the masc. and counts 77. Whether all his exx. would hold up under closer scrutiny is irrelevant: 77 would be difficult to reduce to 0.

The standard tr. also construe gen. pl. *matīnām* with *ṛtā*, whatever sense they ascribe to *ṛtā*, e.g., Ge “die rechten Wege der Gedanken,” Lü “zu den Wahrheiten der Gedanken.” They may be correct, and I could revise my tr. accordingly: “In accordance with the truth of the thoughts, Soma ...” However, the association of *vīpra-* with *matī-* is very strong – I just noted it in 35b in the previous *ṛca*, and the two words occur in the same pāda numerous times: I.82.2=VIII.25.24 *vīprā ... matī*, I.86.2 *vīprasya ... matīnām*, II.24.13 *vīpraḥ ... matī*, III.5.3 *vīpraḥ ... matīnām*, III.30.20=50.4 *matībhiḥ ... vīprāḥ*, IV.3.16 *matībhir vīpraḥ*, V.80.1 *vīprāso matībhiḥ*, VII.78.2 *vīprāso matībhiḥ*, IX.63.21 *matī vīprāḥ*, IX.85.7 *vīprāṇām matāyaḥ*, IX.107.24 *vīprāso matībhiḥ*, X.6.5 *vīprāso matībhiḥ*, X.25.10 *matīm vīprasya*, X.64.16 *matībhiḥ ... vīpraḥ*, X.123.1 *vīprā matībhiḥ*; cf. also IX.71.3, X.11.6 *vépate matī*. I therefore construe *matīnām* with *vīpraḥ* in the publ. tr., as a loosely descriptive gen.

In cd the phrase *mithunāsaḥ ... adhvaryávaḥ* is taken by Ge (fld. by Re) as referring to the pair (or presumably multiple pairs, given the pl.) of Adhvaryu and Hotar. Although at least I.83.2, which he adduces for this sense, does seem to refer to that pair of two priests, in the dual, I think the pl. here instead refers to rivalrous priests at competing sacrifices, which must be implicit in Ge's rendering, given the pl. They could be pairs of Adhvaryu and Hotar or (more likely in my opinion) just multiple Adhvaryus, each performing in a separate sacrifice.

IX.97.38: The interpr. of this vs. is fairly straightforward, except for the 2nd part of pāda a, *sūre nā dhātā*. I have treated this simile at length in my Fs. Melchert article, “Sūre Duhitár's Brother, the ‘Placer of the Sun’: Another Example of -e <*-as in Rigvedic Phrasal Sandhi,” 2010. I will not repeat the disc. here but will summarize the conclusions. The major problem in this simile is what to do with the apparent loc. *sūre* ‘in the sun’ (to *sūra-*; or possibly, but less likely, dat. to *svār*); this has led to some outlandish and unpersuasive interpr. of the phrase. I argue that *sūre* is actually the old gen. to *svār*, from **sūraz* before voiced dental stop, as in the well-known *sūre duhitā* “daughter of the sun” in I.34.5. I start with an archaic formula **sūre dhātā* “placer of the sun,” with the two words separated here by the simile particle *nā* and the true interpr. obscured. The “placer

of the sun” is most likely Indra, and Soma is being compared to him in his cosmogonic role: filling the two worlds and revealing them.

The word order in the 2nd clause of b, *ví śá āvaḥ*, is worth noting. Both preverb in tmesis and *śá* seek 1st position, and *śá* overwhelmingly occupies 1st position, as a glance at Lubotsky shows. Perhaps to maintain *śá*’s 1st position tendency, often when a clause has both a preverb and *śá*, the preverb will remain in position before the verb (e.g., I.105.4 *śá tát dūtó ví vocati*; also pāda d in this vs.: *śá ... prá yaṃsat*). But it seems from a rapid survey that when a preverb is in tmesis, it regularly wins 1st position over *śá* -- e.g., III.59.2 *prá śá ...*, VIII.20.16 *abhí śá ...* -- with Wackernagel’s position material imposed between—e.g., *prá vaḥ śá ...*, VIII.21.10 *ā tú naḥ śá ...*. Our brief clause shows this PREV *śá* order.

As Old suggests, in c *priyā* is governed either directly or indirectly by the 2nd member of the cmpd. *priya-sāsaḥ* ‘winning dear things’: “those winning dear things (win) dear things.” The effect is rather like the type *gaṇānām gaṇapati-* “troop lord of troops” (II.23.1), though the means are different. As for *priya-sāsaḥ*, its stem is given as them. *priya-sā-* by Gr., and it would have the doubled nom. pl. ending familiar from *devāsaḥ*, etc. However, it seems possible (and in my opinion desirable) to interpr. it as belonging to a root noun *-sā-*. The rt. noun nom. pl. to *-ā-* stems is ordinarily *-āḥ*, which is identical to the nom. sg. Though several cmpds in *-sā-* do have this nom. pl. (*dhanasāḥ* VIII.3.15, X.65.10; *sadāsāḥ* IV.16.21, *sahasrasāḥ* X.64.6), the nom. sg. *-sāḥ* is far more common. In a passage like this, where there are no other nom. pl. forms to support the nom. pl. interpr. (as there are in the *-sāḥ* nom. pl. passages just cited), doubly marking the nom. pl. would make sense. Scar (585) seems to be leaning in that direction, but doesn’t actually say so.

Parallel to the dative *kāriṇe ná* “as if to a victor” in the simile, we can assume “to us” vel sim. in the frame. So Ge.

IX.97.39: Pāda a contains another etymological doubling, *vardhitā vārdhanaḥ* “strengthening strengthener,” rather like the doubling of *priyā-* in 38c.

Note the allit. in c: ... *pūrve pitāraḥ padajñāḥ*.

The expression *gā ādrim uṣṇán* “burned the cows out of the rock” is, to say the least, unusual – and on those grounds disputed. A long tradition, going back to Benfey, emends the text to **muṣṇán* ‘stole’, with degemination in the sequence *ādrim (m)uṣṇán*. This emendation is accepted by, inter alia, Ge and Bloomfield (RR ad I.62.2 and Conc.). There is one strong arg. in favor of the change: $\sqrt{muṣ}$ ‘steal’ is formulaically embedded in the Vala myth (see Ge’s n. 39d and, e.g., I.93.4 *yád āmuṣṇītam ... paṇīm gāḥ* “when you two stole the cows from the niggard”). Other possible args. are inconclusive: both $\sqrt{muṣ}$ and $\sqrt{uṣ}$ have a 9th class pres., though the latter is only represented by one other form, part. *uṣṇán* in II.4.7 – but $\sqrt{uṣ}$ is a poorly attested root. The preverb *abhí* found in our passage does not appear with either root. In the end the clinching arg. seems to me to come from Old, who does not accept the emendation: the meter. The proposed change converts a good cadence into a bad one. Bl. (RR) argues “that the change from *ādrim muṣṇán* to *ādrim uṣṇán* was made by the redactor in deference to the meter.” But why would the poet have produced a bad cadence in the first place? I think it more likely that the poet was *playing* on the rhyming roots $\sqrt{muṣ}$ and $\sqrt{uṣ}$, with full knowledge that the former is the standard one in the Vala myth, and he is forcing us to invent a new and

more difficult image with the latter root. By supplying us with *jyótiṣā* he is providing us with the means to do so. Old adduces X.87.12 *jyótiṣā ... ny òṣa* “with light burn down ...,” comparable to our ... *jyótiṣā / yénā ... uṣṇán* and with a verb form of $\sqrt{uṣ}$. A poet who could deploy the “placer of the sun” formula in the manner he did in the previous vs. is surely capable of such a sly play on words.

IX.97.40–42: No particular unity detectable in the *ṛca*, though the 2nd two vss. do focus on Soma’s role in strengthening and exhilarating the gods.

IX.97.40: The verb *vāṛdhe* in d concatenates with *vardhitā vārdhanaḥ* in 39a.

Ge’s tr. of pāda a, “Der Ocean hat gebrüllt bei seiner ersten Ausbreitung,” seems to imply (though this is not a necessary interpr. of his tr.) that the *samudrá-* is a different entity from Soma himself, and his cited IX.107.23 *tvám samudráṁ prathamó ví dhārayaḥ* “You were [are] the first to to spread out the sea” (with both *samudrá-* and *ví√dhr̥*) certainly depicts them as separate. However, IX.86.29 *tvám samudró asi ..., távemāḥ pāñca pradīśo vídharmaṇi* “You are the sea, ...; yours are these five regions in your [their] expansion” (also with *samudrá-* and the *-n*-stem loc. *vídharman/-ṇi* as here) asserts the identity of Soma and the *samudrá-*. Since forms of \sqrt{krand} ‘roar’ in IX (like *ákrān* here) have Soma as their subject (incl. in vss. 13, 18, 28, 32, 33 in this hymn), the identification of Soma and the sea seems assured here.

IX.97.42: The infinitival dat. *iṣṭáye* is generally taken to mean “to hasten, for hastening” here (Ge “dass er rasch komme”; Re “afin qu’il se hâte”; Klein GDGRV I.68 “for hastening”; and cf. EWA s.v. *Eṣ²* citing Ge’s tr. for just this passage). But I am puzzled as to which root $\sqrt{iṣ}$ the sense ‘hasten’ is supposed to belong to: we have $\sqrt{iṣ}$ ‘seek, desire’ and $\sqrt{iṣ}$ ‘send, set in motion’. It is to the latter that EWA refers this form (and I assume that the others would also connect the two), but either there has to be a de-valencing of the root (from ‘set in motion’ to ‘be in motion’ – but there are no forms to this root with intrans. value) or the form has to be covertly passive (‘to be set in motion’, hence ‘to move’). I think it belongs rather to $\sqrt{iṣ}$ ‘seek, desire’ and means ‘for seeking, for the quest’. In my view all 20 exx. of *iṣṭáye* can be united under this rubric. See also comm. ad I.112.1 and VII.92.3. In this particular case Vāyu’s quest is for soma, and upon having received it, he benefits us. So the double dative *iṣṭáye rādhase ca* is a bit of a zeugma, in that these beneficial datives are for the benefit of different parties, though the satisfaction of the second depends on the success of the first.

IX.97.43–45: The *ṛca* has a superficial unity from the (over-)abundance of forms of $\sqrt{pū}$, esp. in the middle vs.: *pavasva* 43a, 44a, 44b, 44d; *pávamānaḥ* 44c; *punānāḥ* 45c (the only form of $\sqrt{pū}$ in this vs., and belonging to a different stem). Otherwise there is little to hold it together. The supposed transition between the poets Parāśara Śaktya and Kutsa Āṅgīrasa happens after vs. 44, but as noted in the publ. intro., this change of poets seems unlikely.

IX.97.43: The first hemistich introduces a note of aggression, but this quickly dissipates. The oppositional pair ‘straight’ (*ṛjū-*) and ‘crooked’ (*vṛjiná-*) recurs from vs. 18, where,

unlike here, it was a morally neutral description of the paths across the sheep's fleece filter.

I do not understand the doubling of *abhí* in pāda c, esp. since *abhí* seems to add little to this idiom.

IX.97.44: Note the (s)va repetition: *mádhvaḥ ... pavasva vásva ... pavasva ... svádasva ... pavasva*.

As in IX.96.14 (see comm. ad loc.), I take the acc. with *pavasva* as expressing a transformation of soma into the substance expressed in the acc. This use of *pavasva* with the acc. contrasts with that of *ā pavasvā* in pādas b and d, where *ā* adds the sense 'bring here by purification' and the acc. expresses the materials thus obtained.

On *sūda*- see comm. ad VII.36.3. I argue there that, contra most views, it belongs with the 'sweet' words, and in fact that in this passage *svádasva ... pávamānaḥ* in c is a virtual gloss (or poetic repair) of *sūdam pavasva* in a.

IX.97.46–48: Again very few signs of cohesion as a whole, though the 1st and last vss. have a few echoes: *rathiráḥ* (46c, 48a) and a *satyá*-X bahuvrīhi (*satyá-śuṣma*- 46c, *satyá-manman*- 48d), as well as *camū*- (46b, 48b). Also, assuming that the "daughter" in 47b is the Daughter of the Sun (as most do), both 46 and 47 have ref. to the sun.

IX.97.47: In pāda b my interpr. differs significantly from that of Ge (fld. by Re) and that favored by Old., though all of us assume that "daughter" is short for "daughter of the Sun." Ge takes *duhitúḥ* as abl. and assumes an idiom ABL X *tiráḥ* √ *dhā* "hide X from ...," an ex. of which he cites from the Kena Up., which seems a distant text from which to harvest a parallel. He takes the *vārpāṃsi* as Soma's own forms, but does not suggest why Soma would want to keep them hidden from the Sun's daughter. I instead take *duhitúḥ* as gen., dependent on *vārpāṃsi*, which Old considers the more natural construal. Since the acc. with medial *tiráḥ* √ *dhā* expresses the medium in which the subject hides himself (at least in my view: see comm. ad IX.73.3), in our passage here Soma hides himself "in the forms of the daughter (of the Sun)" – a designation of milk, since the gleaming white milk is often assimilated to the sun. I see the same idiom in IX.72.3, though more disguised: see extensive comm. there. The reference, of course, is to the mixing of soma with milk.

The following pāda provides a different but parallel image of the mixing of soma with water, with the more widespread trope of "clothing himself in."

The last pāda provides a clever multilevel play, as long as *rēbhan* is properly interpr. As I have often disc. (incl. ad vs. 8 above), √ *ribh* does not mean 'sing' as it's usually glossed, but rather expresses a variety of harsh sounds: rasp, creak, squawk, and crackle. In this pāda Soma is compared to a Hotar priest. But the quintessential Hotar is actually the god Agni, the ritual fire – and fires crackle. So the comparison is to the sound of a lively burning fire, but mediated through the priest.

IX.97.49–51: In contrast to the t̥cas with faint or no signs of cohesion, this one is over-determined. The verbal lexeme that dominates is *abhí* √ *ṛṣ*: the preverb *abhí* opens every one of the 12 pādas, and the impv. *arṣa/ā* is found in the first pāda of every vs. (49a, 50a, 51a). The part. *pūyāmānaḥ* ends the first hemistich of each vs. Most of the rest of the

material consists of acc. goals of motion. The goals in the first vs. of the *ṛca* are gods, in the first half of the 2nd vs. the substances with which Soma will be mixed, and in the rest of the *ṛca* those things that we want Soma to provide us. The result is a *ṛca* of utmost banality, enlivened by a small play of words in the last *pāda*.

IX.97.49: Old, Ge, Re identify the acc. goal in c as Pūṣan, because *dhījāvana-* ‘quickenning insightful thought’ is used in a simile comparing Soma to Pūṣan in IX.88.3 *pūṣéva dhījāvano* ‘*si soma*, which is, of course, a good arg. But Pūṣan doesn’t cut much of a figure in IX, does not really belong in this exalted company (Vāyu, Mitra+Varuṇa, Indra – though see the list in IX.81.4–5), and is not an appropriate referent for the other words in this *pāda*: *nāram ... ratheṣṭhām*. In the sg. *nṛ-* is almost always used of Indra, as are *ratheṣṭhā-* and *ratheṣṭhā-*. I am therefore certain that c, like d, refers to Indra.

IX.97.50: Ge adds “zu gewinnen” in *pādas* a and b (also d) with no textual support. And surely these garments and cows are actually references to the milk mixture, as so often in IX.

IX.97.51: Ge again supplies “zu gewinnen” in both hemistichs. I once again see no reason to do so. He also takes the rel. cl. of c (*yéna dráviṇam aśnávāma*) as dependent on *ārṣeyám*: “um ... uns den Namen eines Ṛṣi zu gewinnen, durch den wir zu Reichtum gelangen können.” This ignores the parallel *abhí*’s of cd and also assumes an embedded rel. cl. (though not all *that* embedded). Re takes *ārṣeyám* as a 2nd obj. of *aśnávāma*: “afin que nous obtenions la richesse, afin l’état de Prophète ...” This is somewhat less disruptive than Ge’s, but assumes a purpose function for *yéna* that has no good precedent, as far as I know. My own interpr. – supplying a gapped acc. ‘that’ as antecedent for *yéna* -- seems minimally disruptive and assumes that the insistent structure with *abhí arṣa* ACC continues in this *pāda*. The same interpr. is found in Hettrich (Hypotaxe, 550–51): “(fliesse uns das) zu, wodurch wir Reichtum erlangen werden.”

The interpr. of Ge and Re also minimize or ignore the only clever part of this *ṛca*, which provides a climax of sorts. With the pattern *abhí* (...) *arṣa* “rush towards ...” inescapably established, the poet produces a phonological play on this phrase in the last *pāda*: *abhy ārṣeyám*, where the acc. goal, beginning *ārṣ-*, plays on the impv. *arṣa* (the play also noted by Ge, n. 51d). *ārṣeyá-* is found only here in the RV, though it is extremely common in Vedic prose.

IX.97.52–54: The simplistic repetition of the previous *ṛca* contrasts markedly with the contents of this one, which is mind-bogglingly difficult and opaque. Old pronounces it “grösstenteils hoffnungslos.” Thematically it seems to deal with the distribution of wealth in a ritual/martial context, and it also shows signs of lexical cohesion, esp. the hapaxes *māmścatvá-* (52b) and *māmścatva-* (54b), also *vásūni* (52a, 53c), and of varied formulaic repetition: *ayā pavā pavasvainā* (52a) / *enā pavayā pavasva* (53a). My interpr. of this *ṛca*, in its many obscure details and in its entirety, is very different from the standard ones. In places it pushes the morphology, syntax, and semantics perhaps further than is warranted, and it may seem at times far-fetched. But it has, I think, a richer semantics than the other accounts, and above all it deliberately avoids the refuge taken by others, to make the difficult words into proper nouns.

IX.97.52: The *ṛca* begins deceptively straightforwardly, with a call to Soma to purify himself and bring goods. The *pāda*-final *vásūni* concatenates with the one ending 51a. Given this acc. with *pávasva* we must assume the idiom *ā pavasva* ‘bring ACC through your purification.’ The preverb *ā* may be concealed in one of the accented final long *ā*-s in the *pāda*, most likely *pavā*, which can be *pavā + ā*, putting the preverb in the standard position right before the verb, or *enā*. Or perhaps, if *enā* is adverbial in the meaning ‘here’ (so Gr, s.v. *enā*, col. 300; AiG III.524–25), it takes the function of *ā* in this lexeme. However, I am inclined, with Sāy. (see Ge’s n. 52a), to take *enā* as an aberrant neut. pl. with *vásūni* – hence ‘these goods’. See AiG III.525, which hesitatingly allows the possibility of its being neut. pl. elsewhere.

The fun begins with the next *pāda* and with the first word in that *pāda*, *māmścatvé*, as was noted above, the word appears, differently accented, in 54b, and these forms are obviously related to *māmścatóḥ* in VII.44.3. In our vss. Ge and Re take it as the loc. of a place name, coreferential with loc. *sárasī*: e.g., “dans le lac Māmścatva.” This is certainly the safest choice here, but a place name is essentially excluded for the occurrence of the related word in VII.44.3 – and of course making difficult words into otherwise unattested proper nouns is an interpretational cop-out. As discussed at length in the comm. to VII.44.3 I return to the old notion that this is a *cmpd* meaning ‘hiding the moon’. In all three passages I take it as a temporal designation, originally ‘at dawn’. This perfectly fits our *ṛca* if it depicts the beginning of the early morning soma pressing.

VII.44.3 also contains the word *bradhná-* ‘copper-colored’, found here in *pāda* c. This word can sometimes refer to soma (VIII.4.13, 14; 69.7), sometimes to Agni/fire (III.7.5, X.20.9), but sometimes, it seems, to the sun: I.6.1 and also the occurrence in VII.44.3. In our passage I think it can be all three: the sun, coppery colored at dawn, is appropriate to the early morning time period identified by *māmścatvé*, and Sūrya in X.170.1 is *vātajūta-* (like our *vāto ná jūtāḥ*). As we have often seen soma is frequently identified with the sun, and it is often urged to speed along the ritual ground (and see IX.64.16 *īndavaḥ ... jūtāḥ*). But what is most often described as *vāta-jūta-* is the fire or its flames. The ritual fire, the soma, and the sun would all necessarily be present at the dawn sacrifice. Both Ge and Re take *bradhná-* as referring to a horse, which, in my view, distorts their view of the whole vs. and indeed the *ṛca*.

In d both Ge and Re take the hapax *táku-* as referring to a horse (Renner, coursier), the same one they see as the reference of *bradhná-* in c. Ge seems to think d involves giving this horse a sort of superior groom (“ein tüchtiges Lenker”), with dat. *tákave* the indirect obj. But as was recently noted (ad vs. 49), *ní-* in the sg. is almost always used of Indra, and I think it is here as well. Soma, by virtue of being consumed by Indra at the sacrifice, brings Indra to the sacrifice and in effect bestows him upon the human worshipers, and he does so for a particular purpose. I take *tákave* as an infinitival dative of purpose: ‘to (make the) charge, to rush’ – Indra in his capacity as our supporter in conflict. Old considers, but rejects, such an infinitival interpr., in favor of what he considers the simpler indirect obj. with *√dā*.

IX.97.53: The mystery deepens in this vs.

The first *pāda* is superficially just a variant of 52a, but it poses several problems. On the one hand *pavayā* looks like an instr. sg. to a fem. *pavā*, whose more archaic instr.

pavā is found in 52a. But the accentuation is wrong: it should be **pavāyā*. AiG III.117 seems to dismiss the accent problem (sim. AiG II.2.247) and simply accept it as an instr., but Old considers other possibilities, incl. adverbial accent or analogy to *ayā* in 52a. He rejects Lanman's sugg. that it represents **pavāyā* (from **pavā* + *ayā*) on metrical grounds (bad break). I have a similar, but different suggestion that avoids the metrical problem: it represents **pavāyā*, namely instr. **pavāyā* (with the correct accent) + *ā*, the preverb we were seeking also in 52a, which again would put the preverb directly before the verb. The need for *ā* is less acute here because there's no apparent expressed obj. in the pāda, but *vāsūni* can be assumed on the basis of 52a and the 2nd hemistich of this vs. 53c. Moreover, as in 52a I suggest that *enā* may be neut. pl. and therefore there is an expressed obj.

The other problem is *enā*, which also appeared in 52a in a different position. Here, directly before *pavayā*, it appears to be an instr., filling the role of *ayā* in 52a. But *enā* should be m./n., not fem. Though Ge (n. 53a) convinces himself it is fem. (and AiG III.524 recognizes at least one possible case of a fem. *enā*), I think this is unlikely and, as in 52a, suggest that it is a neut. pl. This means that *pavayā* (*/*pavāyā*) lacks an instr. demonstr. parallel to *ayā* in 52a, but this is hardly a problem. Putting all this together, I would thus emend the tr. to “By purifying yourself with purification bring these (goods) here for us.”

The next pāda is syntactically unimpeachable: it consists of a loc. phrase governed by *ādhi* with a gen. dependent on the loc. Moreover, all the words are known and their meanings uncontroversial. The problem is what they refer to when assembled into a phrase. They specify the place (or time) that the self-purification in pāda a is to happen: “at the famous ford GEN.” Given the ritual context, it seems unlikely that a real river ford is meant; instead it must be a metaphorical place or moment in the sacrifice. Most comparable – but unhelpful – is the phrase *āpnānam tīrtham*, which I interpr. as “opulent ford,” found at X.114.7, in a mystical hymn about the sacrifice. I suggest that in our passage it refers to the place/time of the distribution of goods. I further suggest that this refers to the transfer of goods from gods to humans, hence the metaphorical “ford” for crossing the god/mortal divide. In the next hemistich I suggest that it is Indra who is distributing vast numbers of goods. The gen. *śravāyyasya* supports this view, since this adj. generally modifies *vāja*- ‘prize’ or *rayi*- ‘wealth’ (cf., e.g., IX.63.23 *rayim ... śravāyyam*), as Ge also points out (n. 53b). Ge and Re simply take *śravāyyasya* as a PN, again simply to dodge the interpretational problem. Though the publ. tr. suggests it might be the place for the distribution of dakṣiṇās, I no longer believe that the passage concerns the dakṣiṇā, since I think this is a reference to *Indra*'s distribution of goods.

The 2nd hemistich is entirely clear, except for the nom. sg. subject, the hapax *naigutāḥ*. This vṛddhi deriv. must be interpr. with ref. to its base, *nigūt-*, which occurs in the acc. pl. in the next vs., as the designation of overpowered, indeed annihilated, foes; it is also found in X.128.6 (as nom. pl.), where it refers to enemies of some sort who are repulsed and defeated by Agni. Both Ge and Re tr. as a PN in our two vss. (though Ge ‘Schwätzer(?)’ in X.128.6). EWA (s.v.) suggests an appealing interpr., as a rt noun cmpd to *√gu* (his *GAṼ*) ‘call upon’; with the preverb *nī* ‘*nieder-rufend, schmähend’ in a verbal contest. This interpr. seems to be tacitly accepted by KH (KISch 447), who tr. it in 54c as “Schmäher”; it is also presented by Scar (112–13), though hesitantly – and like Ge and Re he tr. it as a PN. (Mayr in his PN book is dubious that it's a PN.) By contrast, I find the

suggestion quite plausible; I suggest the sense ‘challenger’ for *nigūt-*. In contrast to *nigūt-*, its *vṛddhi* deriv. in our vs. designates a successful and positively viewed figure, opposed to the *nigūt-*s in the next vs. – hence my tr. ‘challengers’ challenger’ (Scar’s ‘Bezwinger der Niguts’, an interpr. that goes back to Sāy. and Ludwig [see Ge’s n. 53c]). As in 52d, I take the unnamed referent here to be Indra, though Ge (n. 53c) suggests Soma. The extravagance of the gifts and the apparent militant nature of *naigutá-* seems better suited to Indra, though a militant Soma is not out of the question.

IX.97.54: The difficulties do not let up here, esp. in the 1st hemistich. The clearest thing here is the *asya*, which presumably, because of its lack of accent, must refer to the *naigutáh* in 53cd. This same figure is also the subject of the verbs in c.

The first problem is the first word, whose very form is in question. The Pp. separates *máhīmé* into *máhi* and *imé*, with the first then a neut. sg.; Gr takes it rather as a du. *máhi*, with ? This is rejected explicitly by Old on accentual grounds: the standard du. is accented *máhi*. If it is neut. sg., it can modify *nāma*; if neut. du., *vádhatre*. I prefer the latter, despite the formal problems. Old, Ge, and Re take it as a modifier of *nāma*.

Let us now turn to *vṛṣanāma*, taken as a cmpd by Pp., despite its two accents. The simple solution here is, as has long been known, to split into two words: *vṛṣa nāma*, with *vṛṣa* a neut. agreeing with *nāma*. I take this as a naming parenthesis “‘Bull’ his name,” though I recognize that we should probably expect the masc. **vṛṣā* in that context (type *nalo nāma*). Perhaps better “‘Bullish’ is his name,” which more easily accommodates a neut. *vṛṣa*. (Before continuing I will point out that this is most likely a reference to Indra, whose presence I see also in the preceding two vss. – though Soma is possible as well.) A naming parenthesis is not the standard view, which is that “bullish name” is one member of a nominal sentence equating the dual entities (whatever they may be – see below) with this name (“these two Xs are / make up” [ausmachen] his great bullish name” – so Old, Ge, and more or less Re; Scar [112] also follows this interpr. but assumes a du. ‘great’). As that tr. shows, the standard view also has the merit of providing a head noun to the putative neut. *máhi* that opens the pāda.

Why then do I put myself in morphological difficulties, rejecting neut. sg. *máhi* and struggling with neut. *vṛṣa*? Because I don’t think that the two entities are equivalent to his name, but rather belong to him and are deployed by him under specific circumstances, as indicated in pāda b. I therefore assume a du. *máhi*, or perhaps correctly accented **máhi*, which has been redactionally changed after the passage ceased to be understood.

The next question: what are the dual entities. Ge (fld. by Scar) takes *sūṣé ... vádhatre* as a discontinuous dual dvandva: “sein Ungestüm und seine Waffe.” This is clever, but to me unconvincing. Real dual dvandvas with two dual endings that involve material or immaterial entities, rather than gods or at least animate beings, are rare. And this would contain two entities that are not associated with each other textually and do not form a natural semantic class, one of which is an immaterial power, the other a material object. If there is an alternative, we should seek it. And indeed there is: *sūṣé* can simply be the modifier of *vádhatre*. There are “two forceful weapons of death.” Old’s “diese beide *sūṣé vádhatre* implies this solution, and Re adopts it as well, though in his n. he claims that *sūṣá-* is ordinarily a masc. noun. I think rather the reverse: that it is an adj. even though its head noun is often gapped, esp. when it is the obj. of *√rc* ‘chant’ or

similar verbs and refers to a “fortifying / powerful (praise / thought – *stómam* / *mánma*, etc.).” The adjectival status of *sūṣá-* is one more reason not to assume it’s one of a pair in a dual dvandva.

The next question after this: what *are* these two weapons. I suggest that it is the two fatal activities described in c, both of which are slangy euphemisms: ‘put to sleep’ (*svāpāya-*) and ‘snow’. The caus. stem *svāpāya-* and assoc. redupl. aor. *síṣvap(a)-* are only used in this euphemistic sense of ‘put to death’, a sense that is familiar of course in the Engl. equivalent. The parallel stem *snehāya-* is found only here. It is clearly related to the IE words for ‘snow’, and, as I discuss in the *-āya*-book (91), the hostile / fatal nuance it projects in context can be derived directly from ‘snow’; the re-semanticization of the IE root to something like ‘stick together’ advocated by a number of scholars (see *-āya-*, p. 91 n. 32) is unnecessary. As I point out there, the verb ‘snow’ is also found in Engl., meaning ‘overwhelm’, though (at least decades ago) in a more or less positive sense. The verb *snehāyat* is accented presumably because it opens a new (sub-)clause.

We must now return to pāda b, which contains a disjunctive *vā ... vā* construction: *māmścatve vā pṛśane vā*. The first term, save for accent, is the same as *māmścatvé* in 52b. I confess I have no explanation of the difference in accent and treat the two as identical, as, it seems, do most interpr. – there’s too much else going on in this *ṛca* to focus on this! Since most interpr. take the form in 52b as a name, either of a place or a person (person for Scar for the form in this vs.), *pṛśane* receives the same interpr. Since I take *māmścatvé* in 52b as a temporal designation, I want to impose the same analysis on *pṛśane*. The stem *pṛśana-* is a hapax as a masc/neut., but it is at least derivationally related to the fem. *pṛśanī-* (3x: I.71.5, X.61.8, 73.2) with diff. accent (see AiG II.2.184, 197), and the adj. *pṛśanāyú-* (1x: I.84.11) is based upon it. The fem. stem is found in difficult passages, two of which (I.71.5, X.61.8) concern the cosmic incest of Heaven with his daughter, which are perhaps cryptic by design. However, all three forms seem to mean something like ‘caress, caressing’. The *-yú*-adj. is by contrast in a straightforward passage that aids the interpr. of ours: I.84.11 *tā asya pṛśanāyúvah, sómam śrīṇanti pṛśnayaḥ* “These dappled ones, eager for caresses, prepare the soma for him,” with the subject *dhenāvaḥ* ‘milk cows’. The theme is the usual one, of the erotic desire of the cows (= milk) for the bull Soma, a theme of course widely represented in IX. I therefore suggest that the loc. *pṛśane* here as a temporal designation refers to “the time of caressing” – that is, to the ritual moment in which Soma unites with the cows’ milk. Thus, pāda b names two key times in the soma sacrifice: the early morning when the sacrifice begins and the moment that the milk is mixed with the soma.

Even if my interpr. of the locc. is correct, why are these ritual times embedded in a vs. that otherwise occupies itself with deadly weapons and hostile encounters? I don’t have a totally satisfactory answer here, but if the subject is Indra, as I have suggested, he may be eliminating rival sacrificers and rival sacrifices that do not conform to the Ārya compact – or he may be deriving this strength to do battle from the sacrifice, which is simply represented by two of its temporal stages.

Pāda d displays pleasing phonological play: *cāpāmítrāṃ āpācīto acetáḥ*, where the first two sequences are mirror-images of each other: *c-ā-p-ā* vs. *a-p-ā-c*. (Note that the first *c* is actually borrowed from the end of the last pāda.) It is esp. cleverly designed because of the discontinuous verb *āpa ... aca* – the impv. *aca* needing to be extracted from *acetáḥ* (= *aca itáḥ* ‘turn away from here’). This *acetáḥ* looks superficially as if it

belongs to the stem *acetás-* ‘unperceptive’, but it does not. That sense, and the same privative+ \sqrt{cit} , is found instead in the negated rt noun cmpd. *acít-* in the acc. pl. The pāda provides an exceptionally tricky end to a dazzlingly frustrating *ṛca*.

IX.97.55–58: The rest of the hymn consists of 4 vss. Old dithers about whether this consists of an odd vs., 55, followed by a final *ṛca*, 56–58 – or a *ṛca* 55–57, with a final independent vs. 58. At least to my mind, the latter analysis is clearly superior. Vs. 58 has the “feel” of a hymn-summary vs., with the expression of “our” wish in ab, and its 2nd half consists of the Kutsa refrain. Nonetheless, there are no clear signs of cohesion in vss. 55–57, though one might point to the filters in both 55 and 56. Happily none of the vss. presents us with the desperate difficulties of the preceding *ṛca*.

IX.97.55: We meet the three filters also in IX.73.8, where their identity is not clear. Needless to say, Lü (703–4) has a cosmic explanation.

IX.97.56: Note the phonological play in d: *ví vāram ávyam samáyāti yāti*. The last bit is reminiscent of 54d, in that the phonological agreement crosscuts the word divisions: we have rhyming *-yāti yāti*, but the first *yāti* is to be segmented (*samá*)*yā áti*.

IX.97.57: The simile in b is one of the best pieces of evidence for my interpr. of \sqrt{ribh} as ‘squawk, creak,’ etc., rather than ‘sing’. The simile “like birds of prey” (*ná gṛdhrāḥ*) only makes sense if the verb that expresses the sounds of the voices of the poets (*kaváyah*) is not a mellifluous one. Both Ge and Re struggle with this. Ge reduces *rebhanti* to ‘become hearable/known’: “... werden die Seher lautbar wie die Geier” (not the first quality one thinks of for a Geier); Re simply recasts the simile: “sur sa trace ils psalmodient, comme des poètes avides (de gain).”

IX.97.58: (*bhāre*) *kr̥tām ví \sqrt{ci}* is a dicing phrase found several times in the RV. See disc. ad X.42.9 as well as Falk (Würf. 126–28).

IX.98–101

Hymns predominantly in Anuṣṭubh

IX.98

IX.98.1: On the pattern set in motion by *vāja-sātama-*, see ad vs. 12.

On *sahāśra-bharnas-* see comm. ad IX.60.2.

In the rt. noun cmpd *vibhvā-sāham* Ge, Re, and Scar (609–10) take *vibhvā-* as a PN, that of one of the R̥bhus, and also interpr. this PN as having only an indirect relationship to the 2nd member. The cmpd modifies *rayīm* (also in its other occurrence in V.10.7), and they render the phrase “wealth that surpasses that of Vibhvan” – in other words with the actual 1st member implicitly a gen. dependent on a supplied ‘wealth’ that is the implicit 1st member (suggesting a phrase **rayi-sāham rayīm* – a similar cmpd. *rayi-śāh-* does exist). Scar also suggests an alternative analysis: “unter den vorzüglichen [Schätzen] siegreich,” that is, “der beste Schatz,” as well as an even more elaborate analysis by way of the phrase *vibhvataṣṭá-rayi-* in IV.36.5 (based on Ge’s nn. to V.10.7,

IV.36.5), in which they see the Ṛbhu PN as well (but see my comm. ad V.58.4). All of this seems to me a result of over-thinking the cmpd. First of all, I think we would do well to leave the Ṛbhus out of this: they have almost no presence in the IXth Maṇḍala, and taking *vibhṽā-* here as a PN seems to complicate rather than simplify the interpr. of the cmpd. The stem *vibhvan-* is attested as an adj. meaning ‘extensive, distinguished’, and I see no reason why that meaning can’t fit this cmpd. in a more direct way than Ge/Re/Scar envision: it can either mean ‘overcoming/prevailing over (even) distinguished (wealth)’ or (more likely in my view) ‘overcoming/vanquishing (even) the distinguished (person/people)’ – that is, we want wealth so overwhelming that we can dominate our rivals.

It is possible that *vibhṽā-* does signal a pun on the Ṛbhu PN, but only as a secondary reading. One of the other Ṛbhus is named Vāja, and *vāja-* is the 1st member of a different rt. noun cmpd in this vs., also with a root meaning ‘win’ in the same semantic sphere as *√sah*: *vāja-sātama-* ‘best at winning prizes’. No one to my knowledge suggests that *vāja-* in that cmpd has the primary reading ‘PN, one of the Ṛbhus’, but *vāja-* may have enabled a pun on *vibhṽā-*. In fact, it’s worth noting that, as Scar points out (609 n. 875), *vibhṽāsāham* gives a bad cadence, and **vibhū-śāham* (as in *vibhū-vasu-* ‘having distinguished goods’) would be better. So perhaps that 1st member **vibhū-* was altered to *vibhṽā-* to allow this punning reading.

IX.98.2–3: These two vss. share vocab. and structure. Both begin *pāri śyá s(u)vānāḥ*, and both have a pāda-final *akṣāḥ* (2d, 3a), in addition to *īnduh* (2c, 3b), *dhārā(bhiḥ)* (2d, 3c). The meter in both vss. shows some disturbance, esp. in 2d and 3a, and there are several different ways to resolve these disturbances. The HvN solutions as represented by their restorations do not seem to be the most satisfactory ones. As just noted, the initial pādas of both vss. begin in the same way, but though in 2a HvN read the med. part. *svānāḥ* with contracted root syllable, in 3a they read *suvānāḥ*. It seems unlikely that in this patterned repetition in successive vss. the participles would have different metrical realizations; moreover, as Gr points out, that participle, which is quite common, is always elsewhere read *svānāḥ*. A further consideration is that by their reading 3a has a disfavored cadence: *(su)vānó akṣāḥ* (– ~ – x, with shortening of *o* in hiatus), rather than the more usual iambic cadence of dimeter vs. As for 2d they read med. part. *hiyānāḥ*; this part. appears both with and without contracted root syllable: *hyānāḥ* is found, for ex., in IX.86.3. Given contracted *svānāḥ* in 2a and (contra HvN) 3a, contraction better fits the contextual pattern. And as in 3a their reading also produces a disfavored cadence, *(dhā)rābhir akṣāḥ* (again – ~ – x). The most likely solution is given by Arnold (metrical comm., as well as p. 99 §151 (i)) and Old: distracted *akṣāḥ*, which provides the right no. of syllables even with the contracted participles and also fixes the cadence.

IX.98.2: On the instr. *drūṇā* and the phrase *drūṇā hitá-* see comm. ad IX.1.2. One of the problems with the standard interpr. of this phrase, that it refers to the wooden cup into which the Soma is poured, is that it would be out of sequence, since the vs. otherwise describes the early part of Soma’s journey across the ritual ground.

The pāda-final *avyāyam* (a) and *avyata* (b) echo each other.

The actual target of the simile in b, the nominative equivalent of Soma in the frame, is gapped, being represented only by the adjuncts *rátthe* and *várma*: “like (a man/warrior) on a chariot his armor.” In the publ. tr. “a man” should be in parens.

IX.98.3: The transmitted *akṣā* at the end of pāda a before *i-* should have appeared as *akṣār* in sandhi; the Pp. reads *akṣār íti*. Wackernagel (AiG I.1.334–35) considers it a misunderstanding of original *akṣāḥ* by the redactors.

The simile in d has the same structure as the one in 2b: gapped nominative target whose identity is signalled by an adjunct, in this case *bhrājā* ‘with flame (/flash/light)’ – most likely pointing to Agni (Ge, Re [tr.], Ober [II.56]), though possibly Sūrya, who is also associated with forms of the root $\sqrt{bhrāj}$ (alt. given by Re in his n.).

IX.98.4: The standard tr. take this vs. as a single clause, and it is certainly tempting. However, there are several problems. First, despite the *hí* the main verb *vivāsasi* is unaccented. It is true that this verb comes only at the end of the vs., while *hí* is in 2nd position in the first pāda. Old notes the problem but suggests that it’s the result of sliding into being a main clause, presumably because of distance. But the conditioning of verb accent by *hí* is a robust effect, which does not depend on proximity of the verb to the particle. Another problem is the *sá ... tvám* that opens the vs. As I have demonstrated at length (“sa figé”), *sá* (+/- *tvám*) with 2nd ps. reference is ordinarily found only with imperatives, and the desid. pres. *vivāsasi* is therefore anomalous.

On these two grounds I therefore divide the vs. into two clauses, ab and cd, with the former an equational nominal cl.: *tvám ... vásu* “you are good(s).” This may seem an outlandish or tortured expression, perhaps a cure worse than the disease. However, note that the next vs. enables just this identification: in 5b Soma is addressed as “o good one” (voc. *vaso*), of whose goods (*vásvaḥ*) we want a part. So the line between good thing(s) and a good (one) is presented as permeable, and Soma may well be both.

This interpr. solves the (lack of) verbal accent problem, but what about *sá ... tvám*. I suggest that this is a syntactically conditioned variant of **tad ... tvám ... , vásu* “you are *that*, namely good(s).” The neut. *tád* has been “attracted” to the (underlying) gender of *tvám* by the well-known syntactic rule of gender attraction of predicated pronouns in nominal equational clauses (see, e.g., Speijer, *Vedisch u. Sanskrit-Syntax*, §95b; other examples and sec. lit. citations collected in Brereton 1986: 99–191 and n. 6). On the supposed exception, which is not (*tat tvam asi* in Ch Up), see Brereton “*tat tvam asi* in Context” (ZDMG 136 [1986]).

śatātman- occurs 3x in the RV (I.149.3, X.33.9, and here); in all cases it seems to mean ‘having 100 forms or embodiments’; in X.33.9 it is almost of the “cats have 9 lives” variety. Here it presumably refers to as many varieties of wealth as we can acquire.

IX.98.5: On *vaso vásvaḥ* and its relation to vs. 4, see comm. there.

This vs. is supposed to contain the lexeme *ní√as* (#*ní ... , syāma*). Gr glosses this lexeme ‘Theil haben an [G.]’, and Ge and Re both so tr. But *ní* is found nowhere else with \sqrt{as} (in the RV or in the rest of Skt, as far as I can see), and neither the additive semantics of *ní* + \sqrt{as} nor any plausible extension of it would produce ‘have a share in’, at least to my mind. RIVELEX (I. 634, 641 n. 71) agrees with me and instead glosses it ‘jmd ist im Dienst von etw.’ (628), which would yield the not very likely “may we be in

service of your goods ... of your refreshment and favor.” I therefore think it likely that *ní* is not a part of a verbal lexeme as a preverb in tmesis. I suggest, quite tentatively, instead that it is a sort of pseudo-reduplication with the doubly marked splv. *nédiṣṭhatama-* ‘most nearest’, which it immediately precedes (#*ní nédiṣṭhatamāḥ*) or that it provides a further directional specification to that splv.: “down nearest.” I construe the various genitives with this splv. – though I recognize that this does not seem to be a standard usage. They are unlikely to go with *syāma* even in the absence of *ní*, because, as Re points out in his n. (though he tr. flg. Gr and Ge), \sqrt{as} + GEN generally means “être le lot de (qq’un),” which should produce “may we belong to your goods ...”

On *adhriḡo* see comm. ad I.61.1, VIII.22.11.

IX.98.6: This vs. is entirely a rel. cl., which is resumed by vs. 7, where *tyám* (7a) picks up *yám* (6a).

IX.98.8: This vs. presents a number of small interrelated difficulties. We can start with *pāntaḥ*. As was discussed ad I.122.1 (q.v.), forms of the shape *pānt(a)-* belong to two different stems; the better attested is the them. noun *pānta-* ‘drink’, but there are two exx. of the act. root aor. part. to $\sqrt{pā}$ ‘drink’, at I.122.4 and in our passage here. Both stems often show distraction of the root syll., and that scansion is required here. The participle is pl.; the question then is what case it’s in. Ge takes it as a voc., coreferential with *vaḥ* in pāda a, with *dakṣasādhanaṃ* the subj. of both the main cl. in ab and the rel. cl. in cd, or so I read his tr.: “Denn durch seine Gunst wird euch, ihr Trinkenden, ein kraftwirkendes Mittel, der den freigebigen Herren hohen Ruhm verschafft.” However, this is syntactically impossible: if *dakṣasādhanaṃ* is the subj. of ab, it must be neut., in which case it cannot be the antecedent of masc. *yāḥ* in c. It is also somewhat perverse not to construe *dakṣasādhanaṃ*, which always refers to soma (IX.25.1, 27.2, 101.15, 104.3), as the obj. of *pāntaḥ*. Re’s tr. suffers from a different syntactic solecism. Like Ge, he takes *pāntaḥ* as coreferential with *vaḥ*, but, it seems, as a modifier of *vaḥ* and therefore an acc. or even dat. pl.: “Pour vous en effet qui buvez (ce soma) réalisateur de la force-agissante ...”

The problems in both interpr. arise from their assumption that *pāntaḥ* must qualify *vaḥ* one way or another. But the most likely referent for the part. is “all the gods” of 7c, around which Soma circled with his *māda-* just previously, as was clearly seen (in his usual way) by Old: “(die Götter, v. 7), den *dakṣasādhana* trinkend.” If we detach *pāntaḥ* from *vaḥ*, things go more smoothly. I take *pāntaḥ* as a predicated participle with the gods as supplied subj.: “(the gods) are drinking ...”

So then, what to do with *vaḥ*? This has two possible solutions, neither of which is flawless, but both of which are better than the knots Ge and Re tie themselves in to construe it with *pāntaḥ*. In the publ. tr. I take it as referring to the poets/ritualists generally (as so often) and construe it with the rel. cl. in cd, in particular with *sūrīṣu* “among (your) patrons.” Old’s solution is similar, though he actually takes pāda a as part of the rel. cl. beginning in c, which I would prefer not to. So my publ. solution is to take *vaḥ* as being in a sort of extreme Wackernagel’s position, leapfrogging two pādas (and the main cl.) to reach its host. This seems a little extreme, but at least the main cl. is syntactically sketchy – consisting of a predicted aor. participle. A different solution is suggested by the meter of pāda a, which lacks a syllable. Old suggests reading *aś’yá*, and

Gr also lists it with this scansion. But this distracted form, if it exists at all, is extremely rare, and I think we should avoid positing it if possible. The lack of a syllable and the problem of *vah* (*vo* in sandhi) may well be connected. I suggest that the pāda hasn't been properly transmitted and *vo* is the remnant of something else entirely, though unfortunately I don't have any suggestions for what might have fallen out. The transmitted *vo* may have been modeled on *vām* in the next vs.

One remaining problem with ab: if *asyá* refers to Soma in the gen. ("with his help"), what about acc. *dakṣasādhanaṃ*, which as I just said is always used of soma. I suggest that the *māda*- 'exhilarating drink' of 7d is the referent for this adj., substituting for soma. But in fact there is no real problem even if both the gen. and the acc. refer to Soma/soma.

The 2nd hemistich is considerably more straightforward, though there is one place where I differ from the standard tr. Both Ge and Re take *svár* as nom., with the simile turning on *haryatāḥ*: "delightful like the sun" (e.g., "wie die Sonne begehrt"). I instead take *haryatāḥ* as an independent modifier of Soma and *svár* as acc., parallel to *śrávo bṛhāt*, as obj. of *dadhé*. This is another instantiation of the formula "place the sun (in heaven)," of which I saw a disguised ex. in the preceding hymn, IX.97.38. See comm. there and my 2010 Fs. Melchert article (this passage and the formula disc. pp. 163–64).

Note that since *svár* may invoke *sūrya*-, there may be indirect phonetic play between *sūrīṣu* 'in the patrons' and the 'sun' word.

IX.98.9: The referent of the 2nd ps. du. encl. *vām* is clearly the World-halves in the repeated fem. voc. phrase *mānavī ... rodasī / ... devī*. The voccs. are somewhat contradictory, identifying the World-halves as both goddesses and as related to mankind (or Manu). Ge (n. 9ab) ingeniously and persuasively suggests that the dual referent is the soma-press with its two jaws. In IX.75.4 the World-halves are called the mothers of Soma, and our passage depicts his birth as related to them. Ge supplies "son" for *vām* to depend on; Re seems to take *vām* as a dative (or datival gen.): "... est né ... pour vous deux," which loses the maternal relationship. I take the *vām* as indicating the oblique source with pass. *janiṣṭa* "was born of," which avoids Ge's need to supply a head noun. However, there is no serious semantic distinction between my interpr. and Ge's.

The final pāda lacks a verb, but contains an apparent obj. *tām* most likely referring to Soma. The negated nom. part. *ásredhan* demands a masc. sg. subj.; the adverbial neut. acc. sg. or loc. sg. *tuviṣvāni* 'very noisily / in/at the very noisy one' (?) suggests a verb of sound or speech: "I praise" (Ge) / 'he [priest] praises" (Re) would fit these conditions fine without imposing itself.

IX.98.10: The identity of "the god sitting on the seat" is unclear, though Sāy.'s suggestion (see Ge's n. 10d) that it is the Yajamāna seems unlikely. I'd suggest rather Agni, on the basis of IX.92.2 *śīdan hôteva sādane camūṣu* "taking his seat in the cups like a Hotar on his seat," since Agni is the archetypal Hotar and *√sad* is a regular part of the Agni lexicon. Of course in IX it is Soma who is regularly sitting / seated, but he cannot be the indirect object here.

IX.98.11: There is considerable phonological play, esp. in the 2nd hemistich – *apaprothantah ... prātāḥ ... āpracetasah*, but anticipated by ab *pratnāsaḥ ... pavitre ...*

The root \sqrt{pruth} uncompounded simply means ‘snort’; it is *āpa* that licenses the acc.

The rt. noun cmpd *huraś-cīt-* is found once elsewhere, in I.42.3, where the context is more diagnostic than this one. There it is parallel to *paripanthīnam muṣṭivāṇam* ‘highwayman (and) robber.’ The 1st member *huras-* belongs to the root \sqrt{hvr} ‘go crookedly’ (see, e.g., EWA s.v. *hīruk*). As often (and not only in Skt.), ‘crooked’ has moral implications; here the enemies to be banished are those who actively know/perceive the ways to go wrong *as well as* those who simply lack perception (*āpracetasah*). Since both cmpds contain a form of $\sqrt{cīt}$, it would have been better to capture this etymological play in the tr. – perhaps “those who discern the crooked ways and those who lack discernment.” Scar (123) in his disc. of this passage somehow convinces himself that the form must modify the soma drinks and is therefore not acc. pl. (as it is usually taken) but nom. pl. I don’t follow his semantic reasoning, but it did, by chance, suggest another possibility to me. Elsewhere in IX forms of \sqrt{hvr} can refer to the curly wool on the sheep’s fleece filter and the crooked path the soma must follow across the filter. So here I suggest that the morphologically ambiguous *huraścītaḥ* can be *both* nom. pl. and acc. pl. As the former, it means ‘knowing/perceiving the crooked ways (of the filter)’ and refer to the clever navigation of the soma drinks. As acc. pl. it refers to those who know morally crooked ways and deserve to be banished. I would represent this, somewhat awkwardly, in a revised tr. “discerning the crooked ways (of the filter), snorting away into the distance those who discern crooked ways and those without discernment.” Of course, since *huraścītaḥ* can serve for either, the Skt. lacks the clumsiness necessary to spell out the different Engl. readings.

IX.98.12: The hymn ends with two pāda-final cmpds whose first member is *vāja-* (*vāja-gandhīyam* [c], *vāja-pastīyam* [d]), just as its first pāda ends with the same (save for accent): 1a *vāja-sātāmam* – thus producing a satisfying ring encompassing the whole poem.

This rhetorical pattern, the pressure to produce matching 1st member *vāja-* compds, accounts for some disturbance in the cmpd formation in 12c. The cmpd in 1a is a standard rt. noun type (in the splv.). The cmpd in 12d, *vāja-pastīya-* ‘having a house with prizes in it’, is likewise properly formed: it is a bahuvrīhi of the type of *vāja-bāhu-*, *vāja-hasta* ‘having an arm/hand with a mace in it’. With this same 2nd member, see *āsva-pastya-*, *vīra-pastya-* ‘having a house with horses/heroes in it’. But the hapax *vāja-gandhīya-* in c is a different matter. Here the 2nd member appears to be a gerundive to the root \sqrt{gadh} ‘seize, secure, hold fast’, though the independent gerundive to that root is *gādhiya-* (see below). No other forms of the root have a nasal, and the source of it is unclear, since the etymology is likewise unclear (see EWA s.v. *GADH* and below). It is worth pointing out that without the nasal the cmpd (and the pāda) would end with 4 light syllables (**vājagadhīyam*) due to the distraction of the cluster *-dhy-*, and the influence of a similarly shaped root with similar meaning, $\sqrt{ba(n)dh}$ ‘bind’, might account for a nonce nasal insertion for metrical purposes.

Despite the difference in shape, it is quite clear that independent *gādhiya-* and our *-gandhiya-* are essentially identical, because the former is found primarily as a modifier of *vāja-* in the phrase ‘prize(s) to be seized’ (IV.16.11, 16, VI.10.6, 26.2). Only in IV.38.4 does it appear without *vāja-*, but in the same type of context. So our cmpd. replicates this

phrase, though with an intrusive nasal in the root syllable. Before going further, I should note the interpr. of the word(s) that prevails throughout Ge's tr. and to some extent Re's. For all attestations of the phrase *vāja-gādhyā*- Ge tr. "die deckenhohe Beute [/Gewinn]"; for the attestation of *gādhyā* in IV.38.4 without *vāja*- "bis an die Wagendecke reichende (Beute)"; and for our cmpd "der wagenhohe Lohn bringt." Re in VI.10.6 (EVP XIII ad loc.) "un prix-de-victoire emplissant le chariot" (though just "les butins" in IV.38.4 [EVP XV.162]); our cmpd. "qui a une charge de prix." To my knowledge Ge never explains how he came to this narrowly precise rendering, 'reaching to the top/roof of a cart', but Re (ad VI.10.6; XIII.131) provides us with the source for it, namely the word *gadhā* found in late Vedic (ŚSū) referring to some part of a cart, possibly the roof (see Sparreboom, *Chariots*, p. 123, with lit.). The connection seems to have been suggested in passing by Caland. See in contrast EWA s.v. *gadhā*-, where Mayr. comments "Schwerlich zu *GADH*." Given the large chronological gap in attestation between the supposed derivative (*gādhyā*- RV) and its supposed base noun (*gadhā*- Sū) and the not entirely compelling semantics, I think we can safely drop this interpr., despite its somewhat puzzling hold on Ge, and interpr. the forms as gerundives, as above.

But we must now confront the issue of the cmpd type. By accent *vāja-gandhya*- is a bahuvrīhi. Given the independent phrase "prize(s) to be seized/secured" consisting of the same two elements, we should expect the sense of the bahuvrīhi to be "possessing prizes to be secured," as in the publ. tr. "whose prizes are to be secured." But the order of the elements seems opposite to what we would expect: the 2nd member of a bv should be a noun; if there is an adj., verbal or not, it should be the 1st member. Hence we expect **gādya-vāja*-. Ge seems to ignore the problem (see his tr. above), as does Gr ('dessen Gaben zu ergreifen, festzuhalten sind'). But others try to press the cmpd into a more orthodox bv mode. See Re's "who has a load of prizes," turning *gandhya*- into a makeshift noun; differently, but responding to the same problem, Scar (457) "dessen Beute in Siegespreisen besteht (?)," interpr. *gadhya* as the noun Beute, developed from 'was es festzuhalten, zu ergreifen gilt' (n. 647). This scrupulousness about the cmpd. type is praiseworthy, but in this case I think it is misplaced. The rhetorical pattern I noted above – the ring compositional use of *vāja*- cmpds at the beginning and end of the hymn – has imposed itself, allowing a technically improper nonce bahuvrīhi to be formed with its elements in the wrong order. The cmpd with which it's paired in this final hemistich of the hymn, *vāja-pastīyam*, has the same shape: *vāja-Xⁱyam*, and though they are different types of bahuvrīhis and the 2nd member *-pastyā-* is in fact a noun, they appear superficially to be exactly parallel formations.

The formation of the hapax *vāja-gandhīya*- may have been aided by the fact that "proper" bahuvrīhis with corresponding elements are rare to non-existent. That is, examples of bahuvrīhis of the shape GRDV + NOUN are surprisingly difficult to find (at least surprising to me), though bahuvrīhis with verbal adjective 1st members are common – when the verbal adj. is a ppl. Cmpds like *sutā-soma*- 'having pressed soma', *vrktā-barhis*- 'having twisted ritual grass', *vrddhā-śavas*- 'having increased power' are ubiquitous and easily formed, but a search through Gr for bahuvrīhis with gerundive 1st members came up short. The only such cmpds I found are the hapax *avāryā-kratu*- 'possessing unobstructable resolve' (VIII.92.8), with a negated grdv., and *vāreṇya-kratu*- 'whose resolve is worthy to be chosen' (VIII.43.12) – save for *an-avadyā-rūpa*- 'possessing faultless form' (X.68.3) with the lexicalized negated grdv. *avadyā*- 'fault'.

IX.99

IX.99.1: The stem *mahīyú-* is found also in IX.65.1, also with a fem. pl. subj. There it is quite clearly the fingers of the officiants, and there is no reason why it can't refer to the fingers here as well (as indeed is the standard view). The adj. is generally rendered 'considering themselves great' vel sim., but in both passages 'seeking the great' works just as well and better fits the usual sense of *-yú-*stems (*gavyú-* 'seeking cattle', etc.). I don't see why the fingers would "pleins d'orgueil" as Re has it.

As Ge points out (n. 1c), by "glowing / bright garment" (*śukrām ... nirñījam*) the milk is meant.

"At the forefront of the inspired words" (*vipām āgre*) sets the time as the beginning of the sacrifice.

X.99.2: *kṣapā* 'by night' is somewhat surprising in the context of a soma sacrifice, since the beginning of the sacrifice is supposed to coincide with earliest morning. Sāy. deals with this problem by advancing the time into morning, glossing *ádha kṣapā* with *rātreḥ ... anantaram prātaḥkāle* "immediately following night at the time of early morning." Ober (I.405 with n. 57) suggests that sacrificers fearing the lure to the gods of their rival sacrificers get a jump on them by preparing the soma at night, but given how regulated the ritual day is, at least in middle Vedic śrauta texts but also seemingly in the RV, this premature anticipatory step seems unlikely to be ritually sanctioned. As for the soma sacrifice that does take place at night, the Atirātra, it employs previously prepared soma. I wonder if *kṣapā* should be taken not literally, but metaphorically. In the 2nd hemistich "the insightful thoughts of Vivasvant" (*vivásvato dhíyaḥ*) propel Soma on his ritual journey. Though Vivasvant seems to be the prototype Soma sacrificer (see IX.66.8 and Old on our passage), his name lit. means 'having the shining forth', and he is in some ways the image of the sun. See esp. IX.10.5, where Vivasvant is associated with the Dawns and the sun images produced by the soma poured across the filter. I suggest that here "the thoughts of Vivasvant" that give Soma a push represent the beginning of the verbal portion of the sacrifice as a metaphorical dawn, and therefore anything that happened prior to that in the ritual happened in the metaphorical night. For further on Vivasvant, see publ. intro. to I.139 and comm. ad X.14.5.

In c *yádī* ('if') should be read *yádī* ('when him').

IX.99.3: I am not certain of the referent of *asya* in pāda a. Ge and Re seems to interpr. it as Soma, implicitly dependent on *máda-*, which they take to be the referent of *tám*, on the basis of *mádo yáḥ* in b. I see the point, and it would solve the *asya* problem. But I have several objections. First, the object of \sqrt{mrj} 'groom' is unlikely to be exhilaration or the exhilarating drink (*máda-*) conceived of as separate from Soma him/itself. Moreover, in the central part of this hymn, vss. 3–5, each vs. begins with *tám*, and I find it difficult to believe that this *tám* has a different referent from the other two, which refer to Soma. And finally, vss. 6–7 each begin with *sá*, again referring to Soma, and in 7 *sá* is the subj. of *mrjyate* 'is groomed', the passive version of our *tám ... marjayāmasi* "we groom him." For all these reasons I think *tám* must be Soma, with *mádaḥ* in b equated with him. In this

case *asya* can only refer to Vivasvant, who is the only other singular entity previously mentioned.

The 2nd hemistich contains a striking conceptual reversal: the “cows” suck soma, though ordinarily it is the (conceptual) calf that sucks its mother, the cow. This may accompany another conceptual reversal: in IX “cows” are almost always a reference to the milk mixture added to the soma, but here Ge (n. 3cd) plausibly suggests that here they are the pressing stones, sucking the soma out of the plant stalks.

On the configuration of pāda d see Klein, DGRV I.95–96.

IX.99.4: The idiom *nāma* √ *bhr̥* ‘bear the name(s)’ generally means “to have that name, to be so called” (cf., e.g., I.103.4). However, I find it unlikely that the thoughts have—that is, are called by—the names of the gods (this thought is called “Indra,” that one “Agni”). Rather, I think there are two possibilities. The thoughts=hymns directed to Soma contain the names of the gods who are to drink the soma (of the type ubiquitous in IX, “O drop, flow for Indra”). A more elaborate suggestion starts from IX.109.14 *bībharti cārv indrasya nāma*, which means, in my view, not “he bears the dear name of Indra” (so, e.g., Ge), but rather “he bears the name dear to Indra,” namely “Soma.” Here, if we supply *cāru*, the passage could mean “the thoughts bear the name (dear) to the gods”; again that name is “Soma.” In this case the thoughts would not be called “Soma,” but would instead contain numerous instances of the name Soma in the hymns directed towards him. I prefer the former solution, as it does not require supplying additional material.

IX.99.5: Ge and Re (flg. Sāy.) take *ukṣāmāṇa-* to √ *ukṣ* ‘sprinkle’, not √ *vakṣ* / *ukṣ* ‘grow strong’. I prefer the latter, because even medial forms of ‘sprinkle’ are transitive (cf., e.g., V.59.1 *ukṣānte ásvān*) and this one would be passive, but ‘sprinkle’ is not excluded.

The publ. tr. of the 2nd hemistich – “Those of insightful thought hope for him to be like a messenger, (for them) to be first in his thought” – is, at the very least, awkward, but, more to the point, opaque. I now think I interpr. it wrongly. In particular, like Ge and Re (also Lü 208), I 1) take the implicit acc. obj. of *ā śāsate*, corresponding to *dūtām* ‘messenger’ in the simile, to be Soma, and 2) interpr. the verb as meaning ‘hope’. Although both interpr. can be amply justified, what they add up to is not sense. To begin with, though *ā* √ *śās* can mean ‘hope’, it can also have the more literal and additive sense ‘direct (towards)’, with a variety of objects. Particularly telling in our case is VIII.24.1 *ā śīṣāmahi bráhméndrāya* “we direct our formulation to Indra,” with a verbal product as object.

This now brings us to the simile. The skeleton of the clause means “They direct (X) like a messenger ...” Let us focus now on *dūtá-*; what can be being compared to it here? This is the only occurrence of this well-attested word or its derivatives in IX. The overwhelmingly standard referent of *dūtá-* is of course Agni; however, there is a subset of passages in which the *dūtá-* is a hymn, praise-song, vel sim. Cf. V.43.8 ... *gṛ̥ dūtó ná gantv áśvínā huvádhyai* “let the hymn come like a messenger to invoke the Áśvins”; IV.33.1 *dūtám íva vācam* “my speech like a messenger”; VI.63.1 *dūtó ná stómaḥ* “our praise-song like a messenger” (sim. VIII.26.16 *stómo dūtáḥ*). I suggest that in this hymn, so focused on the mental and verbal products of the poets, the object that “those of insightful though” (*manīśínah*) are directing is some variety of thought or hymn. Just

trolling through the previous vss. provides a number of candidates: *vīp-* ‘inspired word’ (1d), *dhī-* ‘insightful thought’ (2c), *gāthā-* ‘song’ (4a), *dhītī-* ‘insightful thought’ (4c), and *manīṣā-* ‘inspired thought’ (extracted from *manīṣín-* in our 5d). Although none of these is masc. to match *dūtā-*, the genders of simile and frame do not have to agree (note fem. *gīr-* in V.43.8, *vāc-* in IV.33.1, both cited above).

Finally, what about the purpose dat. *pūrvācittaye*? This form, occurring 8x, only in the dat., in all of its occurrences can mean “for X to be first in (s.o.’s) thoughts.” See comm. ad I.112.1. In two of its occurrences (VIII.3.9, 6.9) it is a formulation (*bráhma*) that we want to be first in Indra’s thought: e.g., VIII.3.9 *tát tvā yāmi suvīryam, tād bráhma pūrvācittaye* “I beg you for a mass of good heroes and for the sacred formulation to be first in your thought.” I suggest that this is the exact configuration we have here, *if* we supply a verbal product as the obj. of *ā sāstate*, as the parallel to *dūtām* in the simile, and as the subject of the infinitival *pūrvācittaye*. A supplied “hymn / thought / formulation” works well with all three of these nested elements and yields sense: “Those of insightful thought direct (a thought/formulation) like a messenger to be first in his thought.” I would now substitute this tr.

IX.99.6: Ge and Re (also Ober II.43) attach c to d as a new sentence, but this makes the already somewhat difficult simile in c all the more puzzling: what does depositing his seed have to do with displaying his eloquence? Whereas b and c work better together: in b “Soma sits in the cups” – that is, the liquid soma is poured into receptacles, expressed in the loc. (*camūsu*). In c this same transfer of liquid is compared to depositing seed/seed (*rēta ādādhat*) in an animal, also in the loc. (*paśaú*). So the structural parallelism between simile and frame is exact. The problem is the loc. *paśaú*, for morphologically this should be masc. or at best neut., but the image is of impregnation, and for that we want a fem. My ad hoc solution is to assume that *paśú-* here is used as a collective ‘livestock’, in reference to stock-breeding as a general practice.

IX.99.7: The sense of pāda c is not immediately apparent; its interpr. develops from an appreciation of the idiom inherent in the noun *saṃdadī-*. As discussed esp. ad I.139.1 (but see also IX.10.8, 79.4), the lexeme *sām √dā* belongs to *√dā* ‘tie’ and is used in the quite narrow idiom “tie/attach navel [ACC] to navel [LOC],” generally as a metaphor to assert or display a family tie between something human and earthly and something divine and in heaven. In Re’s words (n. to our passage): “partout dit du nombril comme point d’attache entre terre et ciel; on pourra donc ici même suppléer *nābhiḥ*” – though his tr. “quand il se reconnaît dans les (eaux que) voici, s’unissant (à elles)” reflects that interpr. only darkly, at best. The earthly/heavenly connection, in lapidary shorthand, seems to be the intent of our passage, though ‘navel’ is absent. In this particular case I would accept Lü’s constantly asserted conception of the heavenly waters and their connection to Soma. Here because Soma’s umbilical tie to the heavenly waters (represented by the prn. *āsu* fem. loc.) is well known, he plunges into the ritual waters – though Lü (23–39) identifies the two sets of waters exactly oppositely: the *āsu* are the earthly waters, and the “great waters” (*mahīr apāh*) the heavenly ones. The other occurrence of *saṃdadī-* at II.39.7 is more attenuated even than this one.

Note that *vī gāhate* here forms a ring with *prā gāhate* in 2b, which might support my view that the great waters are the ones at the ritual.

IX.100

On the structure of this hymn, or rather two twinned hymns (1–5, 4–9), see publ. intro. The hymn also has an even higher percentage of repeated and partially repeated pādas than usual in the Soma maṇḍala. See Ge’s nn. for some of them.

IX.100.1: *abhī* with lengthened final may conceal the enclitic acc. *ī*, anticipating the accs. in b. In fact, because of its position before nasal (*abhī navante*) it might represent a degeminated **īm*.

The mothers without deceit are, as noted by Ge and Re, the hymns.

IX.100.4: With Ge and Re (who follow Sāy.) I supply ‘horse’ as the headnoun on which *jigyúṣaḥ* (‘of the one having won / of a victor’) depends in the simile marked by *yathā*. This seems reasonable, even though there is little positive evidence for it. The pf. part. *jigivāms-* / *jigyúṣ-* doesn’t enter into a similar construction elsewhere, and the subj. of (*pāri*) *√dhāv* is overwhelmingly Soma. Otherwise we occasionally find cows (VIII.22.4, IX.66.6, X.145.6), but “runs like the cow of a victor” does not impose itself. In IX.87.7 we do find a steed (*ārvan-*: ... *pāri sómaḥ pavitre ... adadhāvad ārvā*), and that parallel will have to do. The simile in the 2nd hemistich, *vājīva sānasīḥ* “like a winner bringing prizes” reinforces this interpr., since *vājīn-* regularly modifies ‘horse’, but of course similes in the same vs. don’t have to have the same content.

IX.100.5: Note the matching *krátve ... kave* beginning and ending the 1st pāda.

IX.100.6–9: As noted in the publ. intro., these vss., constituting a separate hymn, echo and vary the 1st hymn, vss. 1–5.

IX.100.6: The first vs. of the new hymn matches the final vs. (5) of the previous one: 6ab *pávasva ... dhārayā sutáḥ* enlarges on 5b *pávasva soma dhārayā*, with 5c containing *sutáḥ*. The 2nd hemistichs of both vss. consist primarily of datives of the gods who will drink the soma, both beginning with Indra: 5cd *indrāya ... mitrāya váruṇāya ca*; 6cd *indrāya ... víṣṇave, devébhyaḥ* ... There is also a strong echo of vs. 4: 6a *vājasātamah* ‘best winner of prizes’ incorporates in a single word the simile in 4d *vājīva sānasīḥ* “like a winner possessing prizes.”

IX.100.7: This vs. replicates most of vs. 1 in a different order. I will cite here only the repeated elements: 1 ... *adrúhaḥ ... / vatsám ná ... jātām rihanti mātārah*
7 ... *rihanti mātārah ... adrúhaḥ / vatsám jātām ná ...*

On the repeated pāda (d) *pávamāna vídharmaṇi* see comm. ad IX.64.9 and also Ober II.152.

IX.100.8: This vs. has nothing in common with its match, vs. 2, until the end, where the two d pādas are identical: *víśvāni dāsúṣo gṛhé* “all (things) in the house of the pious man.” The two pādas are adapted to two very different themes: in 2 ‘all’ modifies *vásūni* ‘goods’ (c), which Soma will make flourish in the house of the pious, whereas in 7 the

context is darker: ‘all’ modifies *tāmāṃsi* ‘dark shades’, which Soma smashes away in the same location.

IX.100.9: The contents and phraseology of this vs. are furthest from its match, vs. 3, but as noted in the publ. tr., *dyām ca ... pṛthivīm ca* in 9ab recalls 3cd (*vāsūni*) *pārthivā divyā ca* “heavenly and earthly goods.”

IX.101

On the division of this hymn into ṛcas and the structure of the hymn in general see publ. intro. The Anukramaṇī assigns each ṛca to a different poet, in roughly reverse (conceptual) chronological order. The last ṛca plus appended vs., vss. 13–16, is credited to Prajāpati, the Middle Vedic creator god, with no patronymic. The poet of the 2nd to last ṛca, vss. 10–12, is given as Manu Sāṃvaraṇa. This poet is in fact referred to, with the patryonymic Sāṃvaraṇi, in the first Vālakhilya hymn, VIII.51.1 *yāthā mānau sāṃvaraṇau, sōmam indrāpibaḥ sutām* “Just as at Manu Sāṃvaraṇi’s you drank pressed soma, Indra ...” But even if the reference is just to a revered ancient poet, the name Manu, as the ur-man and ur-sacrificer, resonates in the context of Prajāpati. Moreover, there’s a missing step: the Anukr. attributes V.33–34 to one Saṃvaraṇa Prājāpatya, who would be the gapped generational link between Prajāpati and Manu Sāṃvaraṇa (/i). The names of the next two poets display the proper generational relationship: the third ṛca from the end (vss. 7–9) is by Nahuṣa Mānava, with his patronymic from Manu; the fourth ṛca from the end (vss. 4–6) by Yayāti Nāhuṣa, again taking his patronymic from the next poet in order. The first ṛca (vss. 1–3) does not participate in this generational chain; it is attributed to Andhīgu Śyāvāśvi, a patronymic that links him to the skilled poet of the Marut hymns of V (52–61), Śyāvāśva Ātreya (for further on this attribution see comm. ad vs. 1 below). Leaving Andhīgu aside, it seems that the Anukr. takes the hymn from a presumably contemporary poet Yayāti back through the ages (and 4–5 generations) to the primal god Prajāpati, whose primacy is signaled by his lack of patronymic.

IX.101.1–3: There is no particular unity visible in this ṛca, and vs. 1 in particular stands apart from the rest.

IX.101.1: As noted in the publ. intro. the appearance of the sacrifice-defiling dog in this vs. and vs. 13 sketches a ring. The content of the vs. and its reason for inclusion here are puzzling. Our long-tongued dog (acc. *śvānam ... dīrghajihvyām*) is clearly connected with a story widely attested in Vedic prose of an female demon, an Asurī called “Long-tongued” (*dīrghajihvī*), who licks (and thus defiles) the sacrifice. The story is found in texts belonging to all three ritual Vedas: RV: AB II.22; YV: MS III.10.6, KS XXIX.1; SV: JB I.161–63, PB XIII.6.9–10, though it is most developed in the JB, where it takes a distinctly and entertainingly sexual turn. The story is treated extensively by Oertel in a number of publs. (see reff. in O’Flaherty, JB, pp. 124–25) and tr. by Caland in *JB in Auswahl* and his ed. of PB (incl. an Engl. tr. of the JB version ad PB XIII.6.10); see also W. D. O’Flaherty, *Tales of Sex and Violence: Folklore, Sacrifice, and Danger in the Jaiminīya Brāhmaṇa* (1985), 100–103. Whether the long-tongued demoness of prose is identical with or was inspired by our long-tongued dog is unclear, but at least the JB connects its account, perhaps secondarily, with our vs. After Indra set a certain Sumitra to

seduce the demoness and get her into his power so that Indra could slay her, Sumitra calls upon Indra with our vs. (quoted in the JB text I.162), which Indra then makes into his vajra, raises as his weapon (*etām anuṣṭubham vajram udyatya*), and smites her. The same vs. then figures in the immediately following story (I.162–63), in which Śyāvāśva, rather nastily tricked by his Sattrā mates, recites the verse (now named the Śyāvāśva sāman), to get himself to heaven. And this story involving Śyāvāśva himself is followed soon after (JB I.165) by one whose main character is Andhīgu (see also PB VIII.5.8–12). So at least serially Andhīgu and Śyāvāśva connect to Dīrghajihvī – remember that the poet of this ṛca is given by the Anukr. as Andhīgu Śyāvāśva.

Unfortunately nothing in the prose narratives provides any help in interpreting our vs., esp. the hapax cmpd. *purójitī*-. Both Ge and Re take the instr. *purójitī* as expressing purpose: “auf dass euer Trank zuvörderst siegē”; “afin qu’il y ait victoire de votre jus.” I do not understand the case syntax of this (instr. of purpose?), esp. as the standard *dative* of purpose appears in the next pāda (*sutāya mādayitnāve*), and, with the omission of *vah*, a similar dat. **purojitāye* would have fit this vs. line. Old takes the instr. seriously and construes *ándhasaḥ* with *sutāya*, which is certainly possible: “Durch euren vor (in lokalem Sinn) ihm gewonnenen (und ihn so beschützenden) Sieg schlägt dem berausenden Saft des *ándhas* den langzüngigen Hund, ihr Freunde, hinweg.” My own interpr. instead takes *ándhasaḥ* with *purójitī*: the “advance victory over the stalk” is by this interpr. the priests’ initial victory *over* the stalk, by pressing it for its juice, leaving it mangled and spent. This initial victory may provide the model for the violence against the encroaching dog. But I am not at all certain of this interpr.

IX.101.2–3: These two vss. are quoted in JB I.163 just after Indra’s use of our vs. 1 to kill the demoness, and the set of vss. is prescribed for the smiting of haters, rivals, demonic power, and evil. These are the only two Gāyatrī vss. in this Anuṣṭubh hymn.

IX.101.2: Rather than making c a nominal main clause (with Ge and Re), I think it better to take the whole vs. as a rel. cl., dependent on *tām*, which opens the next vs.

IX.101.3: On the impossible word *duróṣa(s)*- see comm. ad VIII.1.13. This is the only one of its three occurrences where it qualifies soma, though in Avestan *dūraōša-* is only used of haoma. Ge refuses to tr. (though he discusses it extensively in n. 3a); Re ‘difficile à mouvoir’ (see his n. for disc.).

The lengthened *ī* of *abhī* may represent *abhī*+*ī*, the enclitic acc., as I suggest for the same form in the preceding hymn, IX.100.1. In fact, just as in 100.1, it could represent a degeminated *īm* before the nasal of *nāraḥ*.

Both Ge and Re take *yajñām* as the direct obj. of *hinvanti* rather than the goal, as I do (Ge “Soma ... als Opfer”). It is certainly true that *yajñām* √*hi* is found elsewhere (see Ge’s n. 3c) and that the dat. is more often used for goal or purpose with √*hi*. Still, the sacrifice is so often the goal of motion, the goal of motion is so often in the acc., and soma is so often the obj. of √*hi* that I prefer to keep soma and the sacrifice as separate entities.

IX.101.4–6: No particular unity in this ṛca unless the mention of Indra in each vs. counts. After the difficulties of the 1st ṛca, this one is blessedly simple.

IX.101.5: On the double sense of *makhá-* and its denom. and deriv., see I.18.9, III.31.7.

IX.101.6: The phrase *samudró vācamīṅkhayāḥ* recalls the variant compds in IX.35.2 and 5: *samudramīṅkhaya* (2a) and *vācamīṅkhayām* (5a).

Note that all 4 pādas begin with *s-*.

IX.101.7–9: Again, quite straightforward and not particularly cohesive.

IX.101.7: *bhūman-* generally means ‘earth’ (as opposed to heaven) or ‘world’. Here it seems a little outside its usual patch, as a metrical driven variant of the common phrase *vīśvasya bhūvanasya* ‘of all creation’; see esp. IX.86.5 *pātir vīśvasya bhūvanasya rājasī* matching our *pātir vīśvasya bhūmanah*, but also occurrences in I.164.21, II.27.4, 40.1, III.46.2, V.85.3, IX.86.28, 36, 97.56, X.45.6, 168.2, all but one straddling a late caesura, where the two light init. syllables of *bhuvanasya* fit well; *bhūvanasya* of course fits the cadence of no Vedic meter.

IX.101.9: Both Ge and Re supply ‘wealth’ (*rayīm*), found in d, as the referent of all the previous nom. and acc. forms. I think rather of Indra. The splv. *ōjīṣṭha-* regularly modifies Indra (and never wealth). Though Ge is correct (n. 9a) that *śravāyya-* is a “beliebtes Beiwort” of wealth, Indra is hardly *unworthy* of fame, and see V.86.2b, where du. *śravāyyā* characterizes Indra and Agni. In the same vs. (V.86.2c) both gods are described as *yā pāñca carṣanīr abhī* (though variants of this pāda are usually applied to Agni alone: IV.7.4=V.23.1, VII.15.2), exactly like our c save for the number of the rel. prn. The clinching arg. against *rayí-* as the referent seems to me to be pāda d. Ge and Re clearly take the rel. cl. there as consisting only of *yéna vānāmahai*, with pāda-init. acc. *rayīm* part of the main cl.: the referent for *tām* back in pāda a and the antecedent of immed. flg. *yéna* in its own pāda. But this would be an unusual syntactic configuration for several reasons. First, there’s a rel. cl. (in c) intervening between the acc. *tām* and its distant referent in pāda a (and acc. modifier in b). Moreover, in a pāda with the structure #X REL ..., the rel. is usually postposed and the pāda syntactically self-contained – that is, the X is part of the rel. cl. The type of intra-pāda clausal break envisioned by Ge/Re is rare. Moreover, Ge and Re are required to interpr. *vānāmahai* in absolute usage (“... wir Sieger werden”; “nous serons vainqueurs”), but √*van* ordinarily takes a direct object, on occasion, in fact, *rayīm* (e.g., VI.38.1). For all these reasons I think it’s clear that *rayīm* and *yéna* in d cannot be coreferential and we need a different referent for the *tām* and *yā-* forms – with Indra the most obvious one, for the reasons just given.

In c I supply a form of √*as* with *abhī* in the meaning ‘surmount, dominate, prevail over’.

X.101.10–12: Again no particular signs of cohesion, save for the X-*vid-* ‘finding X’ compds in 10b, 10d, and 11d.

X.101.11: This vs. shows a few minor disturbances. To begin with, the employment of the preverb / particle *vī* is unclear. Gr takes it with the pf. part. *suṣvānāśah*, which it immed. follows, but √*su* is not otherwise found with *vī*. Moreover, tmesis of preverbs

with participles is fairly rare, though at least here the two forms are adjacent. Re construes it with the aor. part. *cītānāḥ* in b; here the problem is opposite: *vī√cit* is indeed an idiom, but not only is tmesis in participles rare, but the position of *vī*, if it's a preverb in tmesis, would be anomalous: mid-pāda and not only separated from its participle, but also intrusive in a constituent: *suṣvānāsaḥ ... ādribhiḥ* “having been pressed by stones.” I don't have a real solution, but I wonder if it's meant to evoke the “through/across the sheep's fleece” expression, found, e.g., in nearby IX.100.4 ... *vy āvyāyam* (cf. also IX.13.6, 49.4, 61.17, 67.5, 85.5, 97.56, 109.16). It is also possible that *vī.. cītānāḥ* somehow anticipates *vipaścītaḥ* in the next vs. (12a), but this seems a long shot.

The part. *cītāna-* is another bit of a problem. It is the only form to this part., which seems to belong to a root aor. otherwise found mostly in the well-attested pass. aor. *āceti* / *cēti*. The semantics works fine, but for a root aor. part. its root accent is anomalous (expect **cītānā-*), and in fact a root-accented zero-grade is peculiar whatever the formation. It could of course have voc. accent – but there's no place for a voc. in this 3rd ps. context. Perhaps it received its root accent redactionally in imitation of *vipaścītaḥ* in 12a.

Both Ge and Re take the verbal idiom in cd as transitive, or at least construe *iṣām* as a species of *Inhaltsakk.* (e.g., “nous ont en résonnant assemblé de toutes parts la jouissance-rituelle”). But Re's invocation of the idiom *abhī ... sām√svar* as the basis for our *abhītaḥ*, *sām asvaran* seems quite apposite, and that idiom is intrans. with an acc. of goal. See, e.g., IX.110.8 *īndram abhī ... sām asvaran* “They cried out in unison towards Indra” (sim. IX.106.11, 67.9). The conversion of the preverb *abhī* into the adverbial *abhītaḥ* would not be responsible for transitivizing the idiom. Cf., e.g., X.27.8 *hāvā īd aryó abhītaḥ sām āyan* “The cries of the Stranger came together from all sides.” I agree that *iṣām* is an unexpected goal for this idiom, but I think we have to live with it.

IX.101.13–15: The dog returns from the first ṛca in the first vs. of this one. The ṛca is also more rhetorically ambitious than those in the middle of this hymn, with an abundance of similes (13b, d, 14b, c, d, 15b). Vss. 14 and 15 end identically.

IX.101.13: Ge takes *ná* in b as the neg. (flg. Sāy.) and asserts (n. 13), contra Old, that the presence of the mortal and the dog in this vs. (and the VS vs. Old cites) is an accident. But the position of *ná* in the pāda is that of the simile particle (though at least it would immed. precede the verb), and the wealth of similes in this ṛca supports a simile reading here as well. The point of the hemistich is that, like the human, the dog is attracted to the sound of the soma ritual, particularly the sound of the soma pressing, and invades it.

The 2nd hemistich begins like 1c: *āpa śvānam ...*

The simile in d, “as the Bhṛgus did the Battler” (*makhām ná bhīgavaḥ*), refers to what Ge calls an otherwise unknown saga. The *makhā-* is found as a defeated enemy of Indra in X.171.2, a hymn attributed to one Iṭa Bhārgava, the patronymic of the victors in our vs.. Note that the denom. verb *makhasyate* occurs in our vs. 5c.

IX.101.14: The d pāda (*varó ná yónim āśadam*) is almost identical to 15d (*vedhā ná yónim āśadam*), both expressing the endpoint of Soma's ritual journey.

IX.101.15: The isolated summary vs. The cow's hide (*gávye ádhi tvací*) closely matches *gór ádhi tvací* in 11b, but the sheep's fleece is found nowhere else in the hymn, unless the *ví* of 11a gestures towards it. See comm. ad loc.

IX.102–6: The following 5 hymns are in Uṣṇih, technically 8 8 / 12 or 8 8 / 8 4 (see Arnold, p. 8). In some hymns, esp. IX.102, the latter variant prevails; that is, there is a word break before the last 4 syllables, which can seem like a syntactic afterthought. In others, the last 4 syllables are not detachable, and we must assume a 12-syl pāda; see, e.g., IX.103.2 ... *kr̥ṇute hárīḥ*, with 5-syllable finale.

IX.102

On the structure of this hymn, see publ. intro. As just noted, the 8 8 / 8 4 variant of Uṣṇih is found throughout the hymn.

IX.102.1: On *krāṇā* as instr. see comm. ad IX.86.19. It is echoed by the instr. *krátvā* in the ring-compositional final vs., 8a. As noted ad IX.86.19, with Lü and Re (see also Tichy Kl.Sch 210) but contra Ge, I construe *mahīnām* with *síśuḥ* here.

As noted in the publ. intro., the phrase *hinvánn ṛtasya dīdhitim* in b forms a ring with the same phrase in the final vs. of the hymn, 8c. Both occurrence fill a pāda, but the repetition in 8 is followed by the 4-syl. extension *prādhavaré* (i.e., *prá adhvaré*), which needs to be integrated into the clause.

It is not entirely clear what “all the dear things” are that Soma encompasses in c, but on the basis of vs. 2 they may be Soma's domains (*dhāman-*) or places, i.e., the various stations on the ritual ground that the soma passes through.

The 4-syl. extension in this vs., *ádha dvitā*, has the look of a new syntactic unit, since *ádha* is almost always pāda/clause initial, but it also has to be integrated into what precedes.

IX.102.2–3: Trita figures in these two vss. Although the name Trita has several different referents, or at least several different roles, in the RV, in Maṇḍala IX he is the archetypal soma presser: see esp. comm. ad IX.37.4. In these two vss. there is also a play on the literal sense of *tritá-* ‘third’, which is played off against the dual *pāśyòḥ* in 2a and the numeral *trīṇi* ‘three’ in 3a. The Anukr. ascribes this hymn to Trita Āptya, a mythical figure most prominent in X.8, but this ascription is presumably based on the occurrence of *tritá-* in vss. 2–3. Trita Āptya is credited with several other hymns in the RV, incl., in this maṇḍala, IX.33–34.

IX.102.2: On *pāśī-* see comm. ad I.56.6, the only other occurrence of this stem. In both instances it is dual and seems to refer to a twinned body part. Under this analysis in this passage the body part is metaphorical, referring to the two “jaws” of the soma press, a metaphor also found in the later ritual literature. See Ge (n. 2a) on this interpr., also fld. by Re.

The syntax of the vs. as a whole is very puzzling, and the publ. tr. differs from the way Ge/Re (also Klein DGRV II.128–29) configure its parts – though I recognize the problem inherent in my old interpr. The overarching question that will govern how the details are interpr. is what to do with pāda b. In particular, is *ābhakta* the verb of the main

cl., with immed. flg. *yād gúhā padām* a self-contained nominal rel. cl. dependent on the main cl, or is *ābhakta* part of the *yād* cl., with postposed subordinator *yād*? Either of these is syntactically possible; Ge/Re opt for the former, I for the latter. Cf. for the former Re's "Entre les deux machoires de T., (le soma) a eu part au séjour (qui est) dans la cachette." Ge's tr. simply elides the *yād*: "In des Trita Kinnladen (?) hat er seine geheime Stufe erreicht."

There are several problems with this interpr. First (and perhaps least problematic): *úpa* at the beg. of the vs. then appears to be a preverb in tmesis with *ābhakta*, but *úpa* √ *bhāj* is not found anywhere else, either in the RV or elsewhere in Skt. (to judge from MonWms). For a small set of passages incl. this one, Gr allows for *úpa* with following loc. in the sense "bei, auf," and this is probably the way to go if one accepts the Ge/Re configuration—to take *úpa* as a preposition, rather than positing an otherwise unattested lexeme *úpa* √ *bhāj*. For my interpr. of *úpa* in the publ. tr., see below.

The sense that must be attributed to *ābhakta* (usually 'have a share, share in') under their interpr. is stretched. Ge simply tr. "hat ... erreicht," which is hard to reconcile with the normal usages of the root. In this he follows Gr: "(6) me. einen Ort oder Gegenstand [A.] erreichen, hingelangen," but Gr assigns this contextually generated usage to this passage alone. Re's "a eu part au séjour" is attentive to the meaning of the root, but what does the tr. actually mean?

Then there is the question of what to do with the rest of the verse after these 1st two pādas, which in Ge/Re/Klein's various renderings gets loosely attached to what precedes with no logical or syntactic connection. Cf., e.g., Klein's tr. of the whole vs.: "In the two stones of Trita (Soma) has taken for himself a place (of refuge) which is hidden, together (with) the seven orders of the worship, and dear."

My publ. interpr. starts with the other configuration of pāda b sketched above, that the pāda is a syntactic unit, a subord. cl. marked by *yād* with *ābhakta* as its verb. I further take *ābhakta ... padām* to be an instance of the rare idiom PATH + √ *bhāj* (med.) 'take to the path', found in VII.39.1 *bhejāte ... pānthām*, VII.18.16 *bhejé pathó vartaním*; see comm. ad VII.18.16. Taking *padā-* as 'track', we arrive at a tr. of b "when he took to the hidden track" – meaning, in my view, when Soma set out on his journey of ritual preparation after being pressed.

As for verse-initial *úpa*, elsewhere in IX it's almost always used with a verb of motion (usually √ *yā*) with acc. goal: cf. esp. the repeated phrase GEN *úpa yāti niṣkṛtām* "he goes the rendezvous with X." I therefore supply a verb of motion here, with the goal reached only at the end of the vs. in acc. *priyām* "his own dear (place/domain [perhaps supply *dhāma*])." The intermediate instr. phrase *yajñāsya saptá dhāṁabhiḥ* is, by this interpr., an instr. of extent of space and indicates the course of his journey, "through the seven domains of the sacrifice." The 4-syllable extension *ádha priyām*, like *ádha dvitā* in vs. 1, puts some syntactic distance between *priyām* and the rest of the vs. Here it might help indicate the arduous nature of the journey and the achievement of arriving at the goal, as my "now right to his own dear (place)" is meant to convey.

This interpr. seems to me to provide a more satisfactory account of the vs. than the other alternative. However, it has one major drawback: the *yād* clause of b is embedded within the main clause, which occupies pādas a, c (/d). If I follow this interpr., there is no way of avoiding this violation of standard practice, whereas in the Ge/Re/Klein interpr. *yād gúhā padām* is a nominal cl., which is permitted internally.

Weighing the two alternatives, I still find myself inclined to my own, though I don't have an explanation for the problematic embedding. That there appears to be a parenthetical inserted clause in the next vs. may indicate that this hymn is somewhat more lax about the combination of syntactic units than we usually meet with.

IX.102.3: This vs., too, gives the initial impression of a random series of elements strung together, which are difficult to construe with each other. Note, for ex., that ab contains five different nominal forms in four different cases, which cannot easily be connected. I take the vs. as a whole as a restatement of vs. 2, or an extension of it – describing the progress of Soma through his ritual preparation. The vs. is discussed at length by Old, in part responding to a treatment of it by Macdonell in JRAS 1893.

With *trīṇi* I supply 'filters', on the basis of IX.73.8 and IX.97.55 (see comm. ad locc.); see also the three seats (*trī śadhāsthā*) in the next hymn (IX.103.2) in the same verse with sheep's fleece filters. The same interpr. is shared by Old (tentatively) and Re, while Ge construes *trīṇi* with *yójanā* in c, which has the merit of not requiring supplied material, but the referent is fairly distant from its adj. (the basis of Old's objection to this interpr.).

The next question is on what does gen. *tritásya* depend. I take it with *pr̥sthēsu* 'on the backs' on the basis of IX.37.4 *tritasyādhi sānavi* "on the back of Trita" (with a different word for 'back'). See comm. ad IX.37.4. So also Old, while Re construes it with both *trīṇi* and *pr̥sthēsu* and Ge with *trīṇi*. The displacement of *tritásya* from its headnoun can be easily explained by the desire to juxtapose 'three' and (lit.) 'third': *trīṇi tritásya*.

The real problem in this hemistich, however, is what to do with the impv. *érayā* and the acc. *rayīm*. The verb doesn't fit easily into the ritual context nor does the acc. 'wealth'. See Old for various possibilities, none of which he particularly likes. Re makes a valiant attempt to make ab into a single cl., but the semantically and syntactically ill-suited awkwardness is apparent: "Stimule avec (ton) jet les trois (filtres) de Trita, (pour procurer) la richesse sur les (trois) dos (de Trita)." For one thing 'stimulating' or 'rousing' the filters isn't a standard (or even non-standard) action at the soma sacrifice, and his parenthetical "(pour procurer)" glosses over the fact that *rayīm* has no syntactic connection to the rest of the clause.

For this reason I reluctantly accept Ge's solution (considered but disfavored by Old), to take the impv. as part of a parenthetical clause, though I restrict that clause more than he does. He takes all of b as parenthetical: "—auf deinem Rücken bringe Reichtum her—" while I would limit it to the impv. + ACC.: "—rouse wealth!—" Although I am loath to solve syntactic problems by a wholesale positing of parentheticals, this seems the least objectionable way to deal with ab. It is not clear to me who the addressee of the impv. is, nor do any of the standard interpr. seem to worry about this question. I very much doubt that it is Soma, who is otherwise referred to only in the 3rd ps. throughout the hymn, until the final vs.; I find it unlikely that this hymn-length consistency and the dramatic contrast created by the switch in persons in the final vs. would be violated by a seemingly irrelevant impv. just here. The most likely addressee is a ritual officiant of some sort. On a possible interpr. of the short impv. phrase see comm. on the next vs.

The 2nd hemistich is, by contrast, relatively straightforward and, like 2cd, sketches the length of the territory Soma traverses, with the verb *ví√mā* 'measure out'

and *yójana-*, a measure of distance. The preverb *ví-* is in tmesis and takes its position after the verb at the beginning of the final, short pāda.

IX.102.4: The “seven mothers” (*saptā mātārah*) are presumably the rivers (contra Ge n. 4ab, who prefers *dhītī-* or ‘sisters’), which we also met in vs. 1 as the “great (fem.) ones.” Their appearance here strengthens the likelihood that *mahīnām* in 1a is dependent on *śísuḥ*; see comm. there.

On *vedhām* instead of expected *vedhāsam* see comm. ad IX.26.3.

The other two occurrences of *śriyē* in IX (IX.94.4, 104.1) are associated with birth/child: IX.94.4 *śriyē jātāḥ* and, in the next hymn, IX.104.1 *śísuṃ nā ... śriyē*. I therefore construe *jajñānām ... śriyē* together, despite their polarized positions at the two ends of the hemistich.

As Ge points out (n. 4c), *dhruvā-* can modify *rayī-* (IV.2.7 and, in this maṇḍala, IX.20.4). I therefore think *dhruvó rayīṇām* is abbreviated from *dhruvó *rayīr rayīṇām*. Unfortunately in Engl. “enduring wealth of wealths” is too awkward to be parsable, hence my “(treasure) of treasures.” Even more unfortunately the switch in the Engl. obscures the relationship of this vs. to the preceding one. In the context of this vs. the imperative clause “rouse wealth!” (*érayā rayīm*) in 3b can be reinterp. as tantamount to “rouse Soma!” since Soma here is identified as *rayī-*, in fact the best *rayī-*.

The 4-syl. addendum pāda is a self-contained subordinate clause, *cikéta yāt*, as is the identically structured *juṣānta yāt* in the next vs. (5d). The poet uses the unusual metrical pattern to his advantage in this hymn. Both Ge and Re think that ‘wealth’ is the understood complement of *cikéta*, and this would find some support in VII.95.2 *rāyās cétantī* “taking note of wealth.” However, as just disc., I consider *rayīṇām* in c as part of a phrase describing Soma. Moreover, as Ge points out (n. 4ab), *ciketa* responds to *aśāsata* ‘they instructed’ in b, and I therefore think that the point is that Soma paid attention to his mothers’ instruction.

IX.102.5: My unsignalled addition, “your,” to the nominal cl. of c is unsupported and, I’m now sure, wrong. (It mindlessly follows Ge.) As noted ad vs. 3, Soma is always in the 3rd ps. in this hymn till the final vs. And the initial *asyā* of pāda a reinforces this. I would now change the tr. to “... are his joys.”

As in the previous vs., the 4-syl. last pāda is a self-contained subord. cl., *juṣānta yāt*, with *vísve devāḥ* of b as its subj. Note that *juṣānta* picks up *sajósasaḥ* in a, which modifies *vísve devāḥ*. The etymological responsion might have been conveyed by a more literal tr., such as ‘of joint pleasure, sharing pleasure’.

IX.102.6: This vs. consists of a rel. cl., which is implicitly picked up by the following vs.

The extra four-syllable pāda here consists of a single acc. adj., which is entirely integrated into the rest of the vs., in contrast to the slight syntactic distance the metrical boundary creates in other vss. in this hymn.

IX.102.7: This vs. does not contain an overt referent for the rel. cl. of the previous vs. Ge, Re, and the publ. tr. all supply both this antecedent and a verb: “to him come.” This makes sense, but the only (indirect) support for it is *abhí* ‘towards’. I would be more comfortable if *abhí* were initial.

There are several candidates for the identity of the “two mothers of truth” *ṛtásya mātárā*. The exact phrase *yahvī ṛtásya mātárā* refers both to Night and Dawn (I.142.7, V.5.6) and to the two World Halves (VI.17.6, X.59.8). In IX.33.5 in the plural it refers to sacred formulations configured as cows. On the phrase see Lü (631), who rightly disputes Ge’s “... (Tochter) und Mütter”; Lü thinks the ref. here is to the World Halves, but gives no evidence that I could see. However, this identification is likely to be correct, in that *samīciné* in all three of its other occurrences, incl. 2 in this maṇḍala (IX.74.2, 90.4, X.44.8), is used of the World Halves.

The 2nd hemistich changes subject abruptly without a signal, beyond the change in number/gender from fem. du. (*samīciné ... yahvī ... mātárā*) to masc. pl. in cd. In fact the plural number only becomes clear with the last word, the 3rd pl. verb *añjate*; the part. *tanvānā(h)* that opens the hemistich could be du., given its sandhi position, *tanvānā yajñām* – but it would have to be masc. du. The identity of the masc. pl. is not clear, but the default, esp. given the meaning and usage of both the part. and the finite verb, would be the ritual officiants.

The fourth, short pāda superficially looks like those in vss. 4 and 5, though in opposite order—*yád añjate*—but it is not self-contained like them but belongs to the clause in c. Nonetheless, the positioning of *yád* at the beginning of the little pāda provides the same bit of distance we’ve found in most of the vss. of this hymn.

IX.102.8: As noted several times above, this is the first and only time that Soma is referred to in the 2nd ps. in this hymn, and only in the injunc, verb *ṛnór āpa* ‘you unclosed’. The switch in person is particularly noteworthy because this vs. forms a ring with vs. 1, sharing the pāda 1b, 8c—so the switch in person and the unity implied by the ring are, as it were, at odds with each other.

On *ṛnóti + āpa / ví* see comm. ad I.58.3. In our passage Soma has been made the protagonist of the Vala myth (see Ober II.217).

In the publ. tr. I tr. the verb as a preterite, but I would now be inclined to render it as a general pres. (sim. to KH’s view, Injunc. 122), as a repeated ritual action performed by Soma reenacting the Vala myth.

On the 4-syl. afterthought pāda *prādhvaré*, which is found several times in Uṣṇih or its equivalent, see comm. ad VIII.12.31–33. I argue there that it is a truncated version of the fairly widespread loc. absol. *prayaty ādhvaré* “while the ceremony is pro(ceeding).” I would now change the tr. here to “... spurring the visionary power of truth while the ceremony is pro(ceeding).” Once again the final pāda is a semi-separable unit.

IX.103

On the structure of this hymn and its relationship to the previous hymn IX.102, see publ. intro. Unlike IX.102, the variant of Uṣṇih employed here seems to be 8 8 / 12: in two of the six vss. the configuration of words makes a separable 4-syllable final pāda impossible (2c: ... *kṛṇute hárīḥ*#; 3c ... *saptá nūṣata*#), and though the other four vss. end with a 4-syllable word, only in vs. 1 does this show the syntactic distancing found throughout IX.102.

As was noted in the publ. intro., IX.102 and 103 share thematic and lexical material. A list of the most obvious includes

vs. 1: *vedhās-* / 102.4

jújoṣate / *juṣánta* 102.5

vs. 2: “three seats” reminiscent of *trīṇi* in 102.3, not to mention the two *trítá*’s in 102.2, 3.

vs. 3: *vāñīr íṣṇām saptá* / 102.4 *saptá mātáraḥ*

vs. 4b: *viśvādevo ádābhyah* / 102.5b *viśve devāso adrúhaḥ*

This pattern breaks down in the latter part of the hymn. Moreover, IX.103 is considerably more straightforward than 102, and it also possesses a different, quite salient structuring device, the fronted preverb that opens each vs.: *prá* (1), *pári* (2–6). As was also noted in the publ. intro., *pári* has less and less integral connection to the rest of the vs. as the hymn goes on.

IX.103.1: Ge takes ab as a nominal sentence, separate from c, with *vācaḥ* the nom. subj.: “... wird eine Rede angehoben.” Re takes ab independently as well, but supplies a 1st ps. verb, which introduces needless complications. Although I was tempted by Ge’s interpr., there are two problems: 1) It leaves the opening preverb *prá* orphaned. Though Gr lists a *prá úd√yam* ‘die Stimme erheben’, in fact he registers it only for this passage, which does not inspire confidence in the lexeme, and furthermore having one of two preverbs in tmesis with a ppl. might be unusual. If we do not separate ab from c, *prá* can be construed with the verb *bharā* in c in the common lexeme *prá√bhr.* 2) The *vācaḥ* in b has to be resupplied in c to provide the frame for the simile *bhṛtīm ná*, whereas if there is no break, acc. *vācaḥ* is readily available.

In c the verb *bharā* can be either 1st sg. subjunctive or 2nd sg. impv. There are no implications either way. With Ge/Re/Ober I go for the 1st ps. subj.

As noted above, it is only in this vs. that a separable 4-syl. final pāda seems likely: the 3rd sg. pf. subj. *jújoṣate* forms a single-word clause, with decisive change of subject. As also noted above, this verb echoes *juṣánta* in the 4-syl. final pāda *juṣánta yát* (5d) in the twinned hymn IX.102. This echo may account for the middle voice of *jújoṣate*; the well-attested pf. subj. *jújoṣa-* is otherwise only active, while the them. aor. *juṣā-* is overwhelmingly middle. The unexpected voice of *jújoṣate* is disc. by Old and probably accounts for why Gr (also BR; see Old) interprets it rather as a dat. sg. act. part. to an otherwise unattested pres. stem, even though we should expect a weak stem **jújuṣant-*. Not to mention that such a participle would require that the stem had been reinterpr. as a present. Though this is not a difficult leap, since the subjunctive has accent on the redupl., as opposed to the finite pf., which has standard pf. accent (*jujóṣa*, *jujuṣúḥ*), nonetheless, in the absence of unambig. present forms, it seems best to assign the subjunctive to the existing pf. stem. Ge, Re, Lub all take it as a finite verb, not a part.

IX.103.2: See IX.102.3, where it’s suggested that the *trīṇi* in that vs. corresponds to the “three seats” (*trī śadhástḥā*) here and refers to the filters.

IX.103.3: As noted above, the “seven voices” (*vāñīḥ ... saptá*) remind us of the seven mothers in IX.102.4. As Re points out, Lü (681–82) identifies the *saptá vāñīḥ* as the heavenly rivers (though not mentioning this passage). If this identification is correct, it is even closer to 102.4, where we identified the seven mothers as rivers. (Gr construes *saptá* with immediately preceding *íṣṇām* [“wo weniger gut mit vāñīs verbunden”], which of

course evokes the group of the Seven Seers, much more prominent in later texts than in the RV, where they are mentioned only four times, primarily in late hymns: *saptá řṣayah* [IV.42.8, X.130.7], *saptařṣáyah* [X.82.2, 109.4]. However, in that case we might expect overt gen. *saptānām* to modify the gen. pl. *řṣīnām*. Gr's objection to taking *saptá* with *vāñīh* does not seem to have merit, since the phrase *saptá vāñīh*, without the seers, is found elsewhere.)

IX.103.4: Starting with this vs., the *pári* has no organic connection to the rest of the vs. Here I supply *arṣatī* on the basis of vss. 2–3. So also Re, KH (133).

On *viśvādevo ādābhyaḥ* as a clever variant on IX.102.5 *viśve devāso ādruhaḥ*, see publ. intro.

Ge takes injunc. *viśat* as model (“... möge sich ... niederlassen”), but with Re and KH (133–34) I take it as a general present referring to Soma's standard ritual action.

IX.104

As with the immed. preceding hymn, the Uṣṇih here is of the 8 8 / 12 form, with some vss. not allowing a 4-syllable final because the word breaks don't coincide (1c, 3c, 5c) and the others not showing a syntactic or semantic break.

For the similarities with the flg. hymn, IX.105, see publ. intro. and comm. on 105.

IX.104.3: Pāda b seems to mix two kinds of expressions of purpose: the dative infinitive (*śārdhāya vītāye*) and a clause introduced by *yáthā*, in which we expect a subjunctive. In the absence of such a verb, the *yáthā* appears pleonastic. The next pāda begins the same way, with *yáthā* followed by a dative referring to gods (*mitrāya vāruṇāya*). The dative gods appear to be exactly parallel to *śārdhāya* in b, and we would expect *vītāye* to follow as there, or at least be supplied. But instead we find the nom. *śāmtamaḥ*, which suggests that the *yáthā* in this pāda should be taken seriously and we should supply a subjunctive: “so that he (will be) most wealful for M+V.” (The publ. tr. renders b and c as more parallel than they are and should perhaps be changed.)

IX.104.4: Pāda b, *abhí vāñīr anūṣata* is a variant on the more elaborate *abhí vāñīr řṣīnām saptá anūṣata* in the immed. preceding hymn, IX.103.3c, which occupies the long pāda of Uṣṇih, rather than one of the shorter ones, as here.

IX.104.5: Because of the 2nd ps. reference of vs.-init. *sá*, which is only appropriate with imperatives, I take *devápsarā asi* as a parenthetical insertion, with *sá* to be construed with vs.-final *bhava*. This has the advantage of allowing *naḥ* in pāda a, which would have no function in ab, to be construed with *gātuvíttamaḥ* in c, where it most naturally belongs. See *asmábhyam gātuvíttamaḥ* in two nearby hymns IX.101.10 and IX.106.6. My interpr. of b is supported by the parallel vs. in the twinned hymn, IX.105.5, which has no intermediate clause and has the same configuration #*sá naḥ* ... / *bhava*# with polarized vs.-init. and vs.-final elements as here.

The Anukr. credits this hymn to Parvata Kāṇva and Nārada Kāṇva or, alternatively, to “Kāśyapa's two Apsaras daughters Śikhāṇḍinī”: *śikhāṇḍinyāv apsarasau kāśyapyau*. It seems likely that this second – unusual – ascription is based on a misparsing of the cmpd. *devápsarā(h)*.

IX.104.6: On *sānemi* see comm. ad VII.38.7.

I do not understand why *kṛdhī* is accented.

IX.105

As noted ad IX.104, this hymn has a very palpable twinned relationship with 104, though extensive exact repetition is avoided. What follows explicitly traces the parallels and the variations.

IX.105.1: The init. voc. *sākhāyaḥ* in 104.1a is postponed in 105.1a till after *tām vaḥ*. The 2nd pāda begins with the same middle participle, *punānā-*, but in diff. case forms: 104.1b dative, 105.1b acc. The rest of b is identical save for the preverb: 104.1b *prā gāyata*, 105.1b *abhī gāyata*. The final pādas begin identically, *śísuṃ nā*, but go their own ways.

IX.105.2: Pāda a in both hymns has both the calf (acc. in 104, nom. in 105) and its mothers (both instr.), as well as the init. preverb *sām* and a simile particle (*nā* in 104, *iva* in 105). The b pādas are quite different. The c pādas begin with the same two words, *devāvī- māda-*, acc. in 104, nom. in 105. Again the rest of the c pāda diverges.

IX.105.3: The a pāda in 105 decomposes *dakṣa-sādhana-* in 104 to *dākṣāya sādhanah*. The two *yāthā*'s beginning 104.3b and c are replaced by *ayām*'s (also in a). The rest of b consists of the same dative purpose expression as in 104.3b. A superlative plus dative of benefit is found in both c pādas: 104.3c *mitrāya vāruṇāya śāmtamah*, 105.3c *devébhyo mādhumattamah*.

IX.105.4: The first two pādas of this vs. in the two hymns diverge from each other. The third pāda contains cows and color (*vārṇa-*) in both hymns and refers metaphorically to the same ritual action in both, the mixing of the soma with milk, but the metaphors differ as do the verbs. It is in this vs. that the two hymns are most distant from each other.

IX.105.5: The first pāda in each begins *sā no*, followed by a GEN.PL. + *pate* voc. expression, with deaccented gen. pl. The second pāda begins with voc. *indo*, followed by the compd. *devā-psaras-*, in the splv. in 105, but the simple nom. sg. in 104. See disc. ad 104.4 for the parenthetical nature of 104.4b. The structure of c in both is *sākheva sākhye ... bhava*. In 104.5c in between we get a splv., perhaps a delayed match to the splv. in 105.5b. The filler in 105c is different.

IX.105.6: The two versions redistribute some of the lexical material, while keeping other parts constant. Both begin the verse with *sānemi* and end it with *asmād ā*; only the two syllables in between differ. Both b pādas end *kām cid atrīnam*; 105 borrows *ādevam* from the c pāda of 104, while 104.6b begins *rakṣāsam*, not found in 105. The *āpa ... dvayūm* found at the beginning of 104.6c appears at the end of 105.6c. What precedes has no parallel in 104.6.

The sequence *pāri bādhaḥ* was emended to *paribādhaḥ*, here as well as in VIII.45.40 (see comm. there) by BR, fld. by Gr and Old, with Ge skeptical but not entirely opposed (see his n. 6c). I suggest in both passages instead to assume a haplology

of the impv. *bādhasva* in a putative sequence *pāri *bādhasva bādhaḥ*, a suggestion made also by Re on our passage here, as it turns out. In our passage we must also assume the gapping of **yuyodhi* with *āpa*, based on 104.6c *āpa ... dvayúm ... yuyodhi*.

IX.106

On the structure of the hymn, see publ. intro. See also Old's assessment of the Uṣṇih variants, by ṛca.

IX.106.1–3: All three vss. in this ṛca contain final 4-syllable sequences that could be syntactically distanced from what precedes, hence a likely 8 8 / 8 4 Uṣṇih type (so also Old). In vs. 1 this piece is *svarvídaḥ*, the signature word that recurs in the same metrical position in 4 (as *svarvídā*) and 9.

Vss. 2 and 3 are also lexically linked: *sānasí-* (2a, 3b), *jaítrasya* (2c) / *-jít* (3d).

IX.106.1: As Re points out, the exact nuance of *śruṣṭí* is hard to pinpoint, but Ge's recessive adverb "willig" does not seem sufficient. Re also adduces II.3.9 *śruṣṭí ... jāyate*, similar to our *śruṣṭí jātāsaḥ*. I interpr. both passages to mean that the right ritual birth happens because of a/the god's attention to the process (Tvaṣṭar in II.3.9, Indra here).

IX.106.2: Both Ge and Re take *jaítrasya* as a noun 'victory', but with Gr I supply Indra as the referent for this vṛddhi adj. This would provide a thematic reciprocity between vss. 1 and 2: in 1 the soma drops are born because of Indra's attentive hearing (in my interpr.), while here Soma repays Indra's attention with his own.

IX.106.3: The etym. figure *grābhám grbhñīta* seems to belong to dicing vocab.; see comm. ad VIII.81.1 and Lü (Würfelspiel, 49–50).

Ge seems to take *grbhñīta* as opt. (which, of course, it can be), but this reading makes it even less compatible with the already loosely connected injunc. *bharat* conjoined by *ca* (see Klein, DGRV I.233). The publ. tr. takes both verbs as preterital injunctives, but I would now be inclined to see them, with KH (Injunk. 124), as general presents describing a regularly recurring situation: Indra's behavior when(ever) he is under the influence of soma. Hence "he grabs ... and he carries ..."

On the phrase *sám apsujít*, which constitutes an independent 4-syl. pāda in all 3 occurrences (here, VIII.13.2, VIII.36.1–6), see comm. ad VIII.13.2 and Scar's views cited there.

IX.106.4–6: Old classifies this ṛca as a third variety of Uṣṇih in which the last four syllables are technically separable but form part of a larger Jagatī pāda with the 8 syllables that precede. Although there is not the same semantic or syntactic distance as with some Uṣṇih vss., I'm not sure that Old's distinction between the two types is nec. As for ṛca unity, all three vss. concern themselves with Soma's ritual journey and the paths he takes. See esp. *pathi-* in 5c and 6c and the deconstruction of the bahuvrīhi *sahásra-yāman-* in 5c into the VP *sahásraṃ yāhi*, with the addition of *pathibhiḥ* to substitute for the noun *yāman-*. In this figure there's a nice little phonological interchange: *sahásrayāmā* : *sahásraṃyāhi* The dat. *indrāya* is also found in both 4b and 5a.

IX.106.7–9: Because of the distribution of word boundaries, the first two vss. of this *ṛca* make a separate 4-syllable *pāda* impossible (7 ... *soma naḥ sadaḥ*; 8 ... *amṛtāya kām papuḥ*), though vs. 9 ends with the signature *svarvīdaḥ*. Therefore this must be the 8 8 / 12 Uṣṇih variety. No striking thematic unity.

IX.106.7: On imperatival *sadaḥ*, see comm. ad IX.2.2.

IX.106.9: The pair of cmpds. *vr̥ṣṭí-dyāvo rīty-āpaḥ* is found in the same order in the dual in V.68.5 *vr̥ṣṭídyāvā rītyāpā* of Mitra and Varuṇa. In our passage the 2nd cmpd is unaccented and therefore a voc.; in V.68.5 it is accented and nom. Old suspects that our form should also have the accent, but of course there's no way to tell. (In any case the publ. tr., for simplicity, renders them as if both nom.). The more pressing question is what kind of cmpds they are. There is, of course, a vast lit. on the subject, interpr. these (and others) as verbal governing cmpds with the verbal element as first member. The Paradebeispiel in Vedic is *dāti-vāra-* 'giving choice things', and the type is regularly connected with the Greek βωτι-ἀνειρα 'nourishing men' type. See comm. ad V.58.2. This is not the place to treat this topic at length (see now my forthcoming *dāti-vāra-* paper), but it's worth pointing out that the two cmpds in our passage (and V.68.5), which figure prominently on the very short list of Vedic *dāti-vāra-* cmpds., almost surely don't belong to that type or show its semantics. Although AiG II.1.320 analyzes them as having a verbal 1st member governing the second, and cites parallel transitive VPs *riṇānn apāḥ* 'making the waters flow' (e.g., IX.109.22) and *varṣāya-dyām* 'making heaven rain' (V.63.3, 6; IX.96.3) (with, note, quite different transitive verb forms), the two cmpds formulaically belong more closely to intransitive idioms. In particular, the *-tí-*stem first members *rītí-* and *vr̥ṣṭí-* are found with the genitives *apām* and *diváh* twice *in the same passage*: VI.13.1 *divó vr̥ṣṭír ... rītír apām*; IX.108.10 *vr̥ṣṭím diváh ... rītím apām*. In other words, the two cmpds. only appear together (V.68.5, IX.106.9); independent syntagms of the same two elements are also found together. These two pairs are therefore formulaically matched, and this matching strongly suggests that the cmpds should be interpr. in the context of the free phrases and do not have transitive, governing value. Scar (526) provides a plausible first-pass analysis of *vr̥ṣṭí-dyu-* as a bahuvrīhi orig. meaning 'der Himmel mit Regen hat', but I do not follow him in developing it into 'den Himmel regnen lassen'. A similar analysis would produce for the other cmpd. 'having the waters with their streaming'. In other words, a bv of more or less the *vájra-bāhu-* type, 'having an arm with a mace' (in the mode of J. Schindler). I would now emend the transl. to "having the heaven with its rain and the waters with their flowing."

IX.106.10–12: In all cases it's possible to detach the last four syllables, but Old considers this *ṛca* to belong with those in which those syllables are integrated into a Jagatī line. As for thematic unity, all three vss. concern Soma's journey (but then what vss. do not?), and the 1st two mention the sheep's fleece filter. All three also concern the role of the verbal portion of the ritual and Soma's relation to it: he is "at the forefront of speech" (*ágre vācāḥ*) in 10c and begets speech (*vācam janáyan*) in 12c, while insights (*dhī-*) are used to impel him in 11a and thoughts (*matí-*) sound towards him in 11c.

IX.106.13–14: The last two extra vss. do not allow a detached 4-syllable unit, because the word boundaries don't coincide.

IX.106.13: The well-loved pun *haryatā*- 'delightful' and *hāri*- 'tawny, fallow bay' is found here.

IX.106.14: The fem. instr. *ayā* opening this final vs. seems to fulfill the same role as *evā* in other hymn-summary vss. Both Ge and Re supply a noun with it (Laütering / clarification), but though the use of the fem. seems to invite something more than a semi-adverbial 'in this way', the model of hymn-summary vss. seems to me to outweigh that consideration.

IX.107–8: The next two hymns consist of pragāthas made up of various mixed lyric meters: in 107 mostly Br̥hatī (8 8 / 12 8) alternating with Satobr̥hatī (12 8 / 12 8), in 108 mostly Kakubh (8 12 / 8) alternating with Satobr̥hatī.

IX.107

IX.107.1–3: The first metrical unit in the hymn has a third vs. appended to the pragātha with a 2-pāda configuration of 12 8, identified by the Anukr. as Dvipadā Virāj Bhurij. Arnold (248, E72) analyses vss. 2-3 as simply an extended Satobr̥hatī (12 8 / 12 8 / 12 8). See Old (Proleg. 104–5) on the types of extensions of pragāthas, incl. this one. Since vs. 3 simply hangs off vs. 2 and need not be syntactically independent, the "extension" suggestion is quite plausible.

The vss. are knitted together by lexical repetition and variation. A sample of the lexical evidence: *apsú* is found in 1c, 2c; *uttamám* (1b) is picked up by *úttaram* (2d); the three instr. pl. *ádribhiḥ* (1d), *ávibhiḥ* (2a), *góbhiḥ* (2d) echo each other – the first two phonologically, the 2nd and 3rd semantically.

IX.107.1: The vs. begins with a most unusual sandhi: *pārītó śīñcatā*. Ge (n. 1a; cf. ZDMG 65: 307) suggests that it is Prakritizing. Old and Re, less dramatically, consider it to be based on IX.63.10 *pārīto vāyāve sutām*, where the sandhi of *itās* is correct. (Ge also cites this vs.) Re points out that that vs. ends with *śīñcata* and suggests that the unusual sandhi here "résulte de l'assemblage des extrémités du v. 63,10." Although the invocation of 63.10 seems apposite, it doesn't entirely explain the sandhi we find here. The *-o* of *pārītó* can be explained as the adoption of this word sequence from its position before vd. C in 63.10, but the retroflexion in *śīñcatā* does not follow. In fact, in 63.10, though *śīñcata* occurs after *-u* (*vāreṣu śīñcata*), there is no ruki-induced retroflexion over morpheme boundary (nor do we expect it). Instead I think we must explain the retroflexion as an effect of the preverb *pāri*. By far the greatest number of the retroflexed initials of this root occur immediately after *pāri*, esp. the passive stem (*pari*) *śicyá*- (15 exx.), but also the ppl. *pāriṣikta*- (8x); see also, in the next hymn (IX.108.7), our exact 2nd pl. act. impv. *pāri śīñcata*. There is also retroflexion after the preverb *ní* (5+), and after the particles *tū* (2x) and *hí* (1x). All of these are contact-induced, unlike our example, where the preverb is separated from the verb. Under these circumstances, there is ordinarily no retroflexion (see *pāri ... śīñcata* X.32.5, *pāri ... siktāḥ* IX.97.15). However, here I think either the

numerous exx. of *pāri* √*ṣic* in IX (15+) imposed distant retroflexion here where it was phonologically unmotivated, or an unretroflexed initial was changed redactionally under the influence of *pāri* *ṣiñcata* in the next hymn.

IX.107.2: The 2nd hemistich of this vs. is intricately interwoven with constituents overlapping; see Old's sensible treatment at loc. The initial loc. expression consists of *suté cit ... apsú*, with *tvā* interspersed in modified 2nd position. This *tvā* is not to be construed with the nearby verb *madāma* (pace Gr), because *māda-* without preverb is almost never construed with an acc.; here that verb goes with the instr. *āndhasā*. The *tvā* finally finds its governing verb form in the participle *śrīñāntaḥ* beginning pāda d; it is so distant from it, with parts of two different constituents in between, because it took Wackernagel's position in the clause. The adj. *úttaram* at the very end of the vs. modifies it: the soma is "higher" or "better" at this point presumably because the mixing with milk, the last step depicted, improves it.

IX.107.3: Both Ge and Re make this vs. a separate cl., supplying a verb ("fliesst," "coule"), generated from *pāri* *srava* in 2a, suggested by the init. *pāri* in 3a. This is certainly possible, but since this vs. is an afterthought to the pragātha, I take it as dependent on vs. 2, specifically 2ab, simply stringing together more descriptors of soma.

Note *cákṣase ... vicakṣanāḥ*.

IX.107.4–5: Both vss. describing Soma taking his seat (4c, 5b). There is also concatenation between pragāthas: the final word of 5, *vicakṣanāḥ*, matches that of vs. 3, the final word of its metrical grouping. And the first word of vs. 4, *punānāḥ*, is reprised as the beginning of 6 (and echoes the same participle in the 2nd position in 2a).

IX.107.5: Gr, Ge, Re all take *dhūtāḥ* to √*dhū* 'shake', but given *apsú dhūtā-* in IX.62.5, X.104.2, I prefer √*dhū*, *dhāv* 'rinse'.

IX.107.6–7: The c pādas of these two vss. are identically constructed: *tvām vípro* [6] / *kavír* [7] *abhavo* SPLV. Vs. 7 repeats the word *vípra-* along with *ṛṣí-* in 7b, so the pragātha seems to have a preoccupation with the varieties of poet.

IX.107.6: The impv. *mimikṣa* probably belongs to √*myakṣ* 'provide, etc'. See Kü (387–88).

IX.107.7: The two splvs ending the a and c pādas show a nice phonological relationship: (*gātu-*) *vít-tama-* and (*deva-*) *vī-tama*, with interchange between long vowel + single cons. and short vowel + geminate in otherwise identical phonetic sequences, an effect reminiscent of MIA quantitative trade-offs.

IX.107.8–9: The 2nd hemistich of vs. 8 and the first of vs. 9 have a refrain-like structure reminiscent of the echo pādas in Atyaṣṭi, which is unusual for this meter: 8cd ... *harítā yāti dhārayā, mandráyā yāti dhārayā*##; 9ab ... *góbhir akṣāḥ, ... dugdhābhir akṣāḥ*##.

IX.107.8: Since *ásvayā* is fem., the tr. should be emended to “with a golden mare.” See Ge’s disc. (n. 8cd) and dismissal of Roth’s proposed emendation (also rejected by Old), to bring out the comparison of the stream of soma to the urine stream of a horse, which, as Ge points out, is still possible without emendation.

IX.107.9: Both instances of *akṣāḥ* should probably be read with distracted 2nd syllable, to provide the right no. of syllables in b and the right cadence in both pādas. In addition, pāda a is metrically deficient, even with this distracted reading. We expect a 12-syl. pāda in the Satobṛhatī that provides the 2nd vss. of the pragāthas in this hymn; the Anukr. simply identifies the vs. instead as a Bṛhatī, which should have an 8-syl. pāda in this position. Even without distracted *akṣāḥ*, it would have 9 syllables, and with the distraction 10. Best to consider it a deficient Satobṛhatī, which is the vs.-form expected, than an over-abundant Bṛhatī. As for ways to make up the deficiency, see Old. A distracted reading of *anūpé* would provide at least one more syllable as well as a standard 4-syl. opening; however, neither etym. (**anu-Hp-á*; see EWA s.v.) nor the other occurrence of the stem (X.27.23) favors this distraction. Old rather exasperatedly suggests that the metrical disturbances in this vs. (see also the Triṣṭubh cadence of c in a 12-syl. pāda) may result from “mangelhaftes Formgefühl des Vfs.”

IX.107.10–11: Little overt cohesion. The adv. *tiráḥ* ‘across’ referring to the filter is found in both vss. (10b, 11a). And the part. *s(u)vānā-* in 10a echoes the occurrences in vss. 3 and 8.

IX.107.10: With Ge, Re, KH (133), in the publ. tr. I supply a verb in ab. I now think this may be unnec. The impetus was the apparent change of person between the first hemistich and the second: with voc. *soma* in pāda a but a 3rd ps. verb (*viśat*) with Soma as subj. in c. However, as in vs. 12 the 3rd-ps. verb may result from attraction to the simile (*jāno ná purí ... viśat* “as a man enters a fortress”), and the underlying person could be 2nd throughout; see *dadhiṣe* in d. It is hard to convey the change in Engl. but something like “O Soma, while you are being pressed by the stones here across the sheep’s fleeces, as a man enters a fortress, as tawny one (you enter) into the two cups. You have established ...” KH (133) argues that the changes of ps. mark pāda c as parenthetic, allowing it to be interpr. in his “general” sense. This sense should be possible even without branding the pāda as a parenthesis.

IX.107.12–13: No particular signs of cohesion. River(s) appear in both vss., but with different words (*síndhu-* 12b, *nadī-* 13d). *jāgrviḥ* in 12c echoes the one in 6a.

IX.107.12: The first hemistich of this vs. is structured exactly like the more expansive 10a–c above: with a vocative *soma* in the 1st pāda and a following 3rd ps. verb (*pipyē*), which owes its 3rd ps. to attraction to the simile surrounding it, *síndhur ná ... árṇasā*. Ge (n. 12b) explicitly attributes the 3rd ps. *pipyē* to “Attraktion an den Vergleich,” though he keeps the 2nd and 3rd ps. strictly separate in vs. 10. The 2nd ps. in the publ. tr., “you have swollen forth,” should, strictly speaking, be in parens.

Ge and Re make heavier weather of the 2nd hemistich than I think nec. or desirable. Because they strictly break the syntax at the end of b, they need to find

something to do with the instr. phrase that opens c, *aṃśóḥ páyasā*, which then leads them to interpr. *jāgrviḥ* as (unprecedentedly) transitive, which then leads them to supply an obj. for it – way too much machinery for something that can be far more simply interpr. The impetus for all this, the instr. phrase in c, can easily be taken as part of the simile/frame construction starting in b, with *páyasā* corresponding to *árṇasā* in the simile.

Now, as to their transitive *jāgrvi-*. To be fair, it is not only the instr. phrase at the beginning of the pāda but also the apparent ineptness of the simile *madiró ná jāgrviḥ* that lead them to their baroque interpr. The problem with the simile is that it seems to be a straight description of Soma, not a simile: the apparent meaning “wakeful like an exhilarating drink” or “like a wakeful exhilarating drink” is a fine literal (or as literal as we get in the RV) characterization of soma. Both *madirá-* and *jāgrvi-* regularly modify Soma, the latter even in vs. 6 in this same hymn. As Ge says (n. 12c), “*ná* als Vergleichswort macht Schwierigkeit.” And so both scholars search for ways to make this a *real* simile, which requires both words to be given senses they don’t ordinarily have. They take *madirá-* as referring to alcohol or some inebriating drink other than soma – even though it is never so used in the RV. And then, though *jāgrvi-* only means ‘wakeful’ in the RV as far as I can tell, including in vs. 6, they take it as expressing the effect that this other drink has on its drinkers: making wakeful, invigorating. And this all adds up to “Avec le lait de ta tige, toi (qui rends l’homme) vif comme (fait l’alcool) enivrant ...” / “Mit der Milch des Stengels munter (machend) wie der berauschende (Branntwein) ...” Although I realize that the simile is awkwardly comparing soma with a standard description of itself, the cure suggested by Ge/Re seems worse than the disease. I have several, not particularly satisfying suggestions for why we get a simile here. It may be that it is part of a simile chain: soma compared to a river, which in turn is compared to soma. See VII.103.7ab (the frog hymn), where the frogs are compared to brahmins, who are in turn compared to frogs. Or else the animatized Soma the god is compared to soma the drink. But in any case, I prefer to accept the simile at face value, however clumsy, rather than erecting a fantastic superstructure by reinterpreting standard somic descriptors.

IX.107.14–16: Like vss. 1–3, this pragātha has a two-pāda addition (vs. 16), also 12 8. Both 14 and 15 contain the part. *pávamāna-*; all three vss. contain forms of *samudrá-*, *samudríya-*, while 16 repeats the phrase *rājā devāḥ* from 15b. In 16 *haryatāḥ* recalls the same word in 13a, and *vīcakṣaṇāḥ* those in 3b, 5d. The voc. of this stem is found in vs. 24.

IX.107.15: On Soma identified as “truth” (*ṛtām*), see IX.97.23, IX.108.8, and Lü 581–82. Although *ṛtām bṛhāt* could be an acc. goal here, the parallels, esp. the identical pāda in the next hymn, IX.108.8, support a nom. identification. In IX.97.23–24 Soma is also identified as a king (*rājā* 24b) as here and as ‘possessing *dhárman*’ (*dharmā* 23c), reminiscent of *dhármaṇā* here.

The Pp. analyses *árṣan* opening c as injunc. *árṣat*, while the publ. tr. assumes a nom. sg. pres. part. *árṣan*. Either is of course possible, but the parallelism with vs. initial *tárat* may support the finite verb interpr., as Old points out. So an alt. tr. would be: “he rushes ...” See Hoffmann (117) on this vs.; he is surely right that the two injunctives

should receive the same interpr., rather than Re's indic. pres. *tárat*, modal *árṣat*, and Hoffmann's "general" pres. interpr. seems apt here for both.

IX.107.17–18: No particular internal cohesion, but a number of ties with other parts of the hymn. The Āyus are found in 17d as the groomers of Soma, while in 14a they were identified with him. The verb *arṣati* (17c) returns from 15c (see also 4b, 5c), and *avyata* (18d) from 13a. The phrase *apó vásānah* (18c) is also found in 4a, and see disc. of the rest of 18c below.

IX.107.17: The enclitic *ī* in d could stand for **īm* in this sandhi position before *mṛjanti* with degemination.

IX.107.18: Soma as *úttara-* is also found in 2d, where it is also associated with cows: *śrīṇanto góbbhir úttaram* "preparing you [*tvā* 2c] with cows as the higher (oblation)"; see comm. there. I supply 'oblation' in both instances because of 1b *sómo yá uttamám havíḥ*.

IX.107.19–20: This is the first and only place in the hymn in which the 1st person is found. The speaker's eagerness for fellowship with Soma, who is addressed directly, and his admission of his troubles give an intimate and almost confessional tone. Both vss. have the 1st sg. prn. *ahám*, a form of *sakhyá-*, a form of *dív-* 'day', and the voc. to *babhrú-* 'brown one' and are tightly connected, also structurally (see disc. ad 20).

IX.107.19: The indic. pf. of *√ran* is presential in value; see Kü (413). The form here echoes *raṇyati* in 18b.

The lexeme *ní√car* (or *ní áva√car*) is found nowhere else in the RV or later. The context clearly requires a negative sense; I've used the colloquial English idiom "get (s.o.) down," meaning 'discourage, demoralize'. There are two ways to interpr. *áva* at the end of the pāda. With Gr (and implicitly Ge and Re), I take it as a 2nd preverb with *caranti*. Since *ní* and *áva* both mean 'down', it reinforces by variation, hence my "—way down." As Ge reports (n. 19c), Ludwig takes *áva* rather as the impv. to *√av* 'help', accented because it starts a new clause. This is perfectly possible and would fit the context, but I prefer the more unusual semantic doubling of the preverbs in this emotional context.

There are various suggestions about what to supply with *purūṇi*: Sāy. *rákṣāmsi*, fld. tentatively by Ge ("böse Geister?"), Re "choses (dangereuses)." Leaving it open seems to me the better solution: the poet is besieged by multiple things he cannot even name.

In the last pāda it is Soma who is urged to "go past the barriers" (*paridhīn*); we might have expected the poet to ask Soma for help in getting past them himself (but see next vs.). For Soma's journey past the *paridhīn* Ge and Re cite IX.96.11 *paridhīm̐r āporṇu* "open up the barriers." In both passages the *paridhī-* are presumably obstacles to Soma's progress on his ritual journey, perhaps the tufts of the fleece filter.

IX.107.20: This vs. is identical in conceptual structure to 19. The first hemistich expresses the 1st-ps. speaker's constant close relationship to Soma, using the word *sakhyá-* 'fellowship' and an "every day" expression (*divé-dive* in 19b, *náktam utá ... divā*

in 20a). The 2nd iteration is more intimate than the first: in 19 the poet simply rejoices in his fellowship, but in 20 he is “at your udder for fellowship” (*sakhyāya ... ūdhani*, suggesting a mother/child suckling relationship).

As for this *ūdhanī*: because this occurrence is followed by the phrase *ghṛṇā tāpantam* “scorching with its heat” and because *ūdhar / ūdhan-* is found in V.34.3 in opposition to *ghṛaṃsá-* ‘heat’, Re suggests that the two passages need to be interpr. in conjunction with each other. For Re this means rejecting the existence of an independent (*ūdhar / ūdhan-* meaning ‘cold’ (accepted by Ge, EWA, and me), since ‘cold’ does not work in our passage. But I do subscribe to the two *ūdhan-* view—see comm. ad VIII.2.12—with the one here belonging to the dominant ‘udder’ stem. I simply consider the mention of scorching heat in the next hemistich to be coincidence.

The 2nd hemistich matches that of 19. In 19 the poet complains about his afflictions and then invites Soma to pass beyond the barriers. In this vs. the escape presumably effected by Soma in 19 provides the model for the one made by “us.” Just as Soma was to go “beyond the barriers” (*paridhīṃr āti*) so did we fly (*paptīma*) “beyond the sun” (*āti sūryam*)—far beyond it (*pārah*). The sun scorching with its heat, described in c, corresponds to the many things that got me down in 19c, and in both d pādas these troubles are overcome, passed beyond. Soma’s presumably successful journey beyond the barriers—barriers that are probably ritually related (see above)—makes it possible for us to overcome our own difficulties with triumphant flight.

IX.107.21–22: Lexical cohesion: *mṛjyāmānaḥ* opening 21a echoed by *mṛjānāḥ* opening 22a; *pāvamāna* 21d, 22a, c; *aṛṣasi* 21d, 22d.

IX.107.21: Both Ge and Re construe *samudré* with *mṛjyāmānaḥ* (e.g., “Im Meer sauber gemacht”), but surely our passage can’t be separated from IX.12.6 *prá vācam índur iṣyati, samudrásyādhī viṣṭāpi* “The drop sends forth his speech upon the surface of the sea,” a passage adduced by Ge (n. 21b) without comment.

IX.107.23–24: Both vss. contain the impv. *pāvasva* (*/ pavasva*), and the mention of the sea in 23 is balanced by the earthly and heavenly realms in 24. Still, little evidence of cohesion.

IX.107.23: The injunc. *ví dhārayaḥ* in c, in conjunction with *prathamāḥ*, invites a dual reading, both cosmogonic in the past and the ritual present. Hoffmann doesn’t cite this passage.

IX.107.24: Notice the number disharmony in *pārthivam rájo, divyā ca* “the earthly realm and the heavenly (ones).”

IX.107.25–26: No particular signs of cohesion.

IX.107.25: Pāda c is a clever twist on 17ab *índrāya ... marútvate sutāḥ* “pressed for Indra and the Maruts.” In 17 the recipients of the soma are straightforwardly expressed, but in our vs. the expression is oblique. Indra is present not directly, but in the adj. *indriyá-* ‘Indriyan, suitable for/associated with Indra (and Indra’s powers)’, which modifies the

soma drops identified as horses. The adj. *marútvantaḥ* also modifies these drops/horses. On the one hand, I think this is meant to associate the Maruts with Indra, as usual, and identify them as the prototypical recipients of soma; on the other hand, however, the drop-horses are metaphorically associated with the Maruts in full gallop on their regularly described journeys. The double sense would be better conveyed by a transl. “the exhilarating courses, accompanied by the Maruts, fit for Indra along with the Maruts ...”

The fem. stem *medhā-* of course means ‘wisdom’ and is so interpr. here by everyone (incl. me). But its explicit coordination with *práyāmsi* “pleasing offerings” (*medhām abhí práyāmsi cá*) invites, to my mind, a secondary reading associating it with *médha-* ‘ritual offering/meal’. For other possible conflation of *medhā-* and *médha-* see EWA s.v. *médha-*.

IX.107.26: *apó vásānaḥ* returns from 4b, 18c, along with the verb *árṣa-*, ubiquitous in this hymn.

gāḥ ‘cows’ needs to be read with both c and d. In the former it is the referent of the hapax *mandánāḥ* (whose sense is, however, easy to divine) and the obj. of the caus. redupl. aor. ‘causes to bellow’; in the latter it is the obj. of *kṛṇvānāḥ* and the target of the simile: “making the cows as if into his garment” (a simile that of course depends on a metaphor: cows = milk). I consider the *ná* to be displaced – we might expect **nirṇíjaṃ ná*. This pāda, in this order, is also found in IX.14.5; for variants on the phrase without simile particle see IX.86.26, 95.1, all adduced by Ge (n. 26d).

IX.108

On the structure of the hymn see publ. intro. It consists of pragāthas alternating Kakubh (8 12 / 8) with Satobṛhatī (12 8 / 12 8). The Anukr. attributes the hymn to seven different poets, but the vss. assigned to them generally violate the pragātha division, which, as the publ. intro. indicates, is often reinforced by syntactic structure. The Anukr. also identifies vs. 13 as Gāyatrī Yavamadhyā, but it can be analyzed as a reasonably well-behaved Kakubh.

IX.108.1–2: There is syntactic dependence between the two vss., at least by my reading: 2ab depends on vs. 1, while 2cd consists of a new cl., with a change of person. The Anukr. attributes the two vss. to Gaurivīti Śāktya; there is some support for this, in that V.29 (one of the three other hymns attributed to him [also X.73–74]) has an allusion to the myth involving Etaśa, the sun’s horse (V.29.5), who appears in our 2d.

IX.108.2: This vs. presents us with a syntactic trap of sorts. It appears to consist of a standard REL / COREL construction, with 2a beginning *yásya te* and 2c beg. *sá*. And indeed the rel. and the *sá* are coreferential; however, the grammatical person has changed from 2nd to 3rd. I therefore prefer (contra Ge/Re) to attach 2ab to the previous vs., in which Soma is also 2nd ps. Pāda b acts as a transition from Soma as 2nd ps. to Soma as 3rd ps., with *asyá* referring to him, but the parallelism between the two “drinking” expressions keeps it within the syntactic domain of the rel. clause.

I have silently converted *yásya* into *yád*, since “upon drinking of which – of you -” is unparsable, or at least exceptionally awk., in English.

The gerund *pītvā* in a is echoed by the *i*-stem loc. *pītā* in b.

On the unexpected accent of *suprāketa-*, as opposed to *supraketá-* (4x), see Old, who has no good explanation (nor do I).

IX.108.3–4: Vs. 4 is clearly syntactically dependent on vs. 3, with a series of three rel. cl. introduced by *yéna* referring to Soma, the 2nd ps. subj. of 3.

IX.108.4: Although pāda a treats the mythological past—the opening of the Vala cave (Navagva) and Dadhyañc’s presumably similar exploit (see his connection with cow pens in X.48.2)—the verb is present tense *aporñuté*, where we might expect an impf., a pres. injunc., or a pf. The two parallel *yéna* clauses have perfects. Hoffmann does not comment on this usage.

The pf. *āpiré* in b takes the partitive gen. *amṛtasya cāruṇaḥ* in c. As in the other occurrences of this phrase (IX.70.2, 4, 110.4) with Ge I take this as a reference to the heavenly soma, with the nominalized neut. *amṛta-* ‘(drink) of immortality’. See comm. ad IX.70.2 and, on supposed masc. *cāruṇaḥ*, VIII.5.14. Re supplies instead ‘principe’: “au beau (principe) immortel.” This is the only finite med. form of the well-attested pf. to $\sqrt{āp}$, beside two occurrences of the part. Kü. (118) asserts that the medial forms have the “inattingent” sense ‘have success’ (implicitly interpr. our form here without the partitive gen. obj.), but he does not cite this passage. Ge (n. 4c) seems to suggest something of the same thing as an alternative, but making *amṛtasya cāruṇaḥ* dependent on *sumné* as he suggests does not seem to me to work. Although it might seem circular for the poets to acquire a share of (heavenly) soma through (earthly) soma, this is exactly the point also of IX.70.2. See comm. ad loc

I cannot detect the semantic nuance between $\sqrt{āp}$ ‘acquire’ (*āpiré* b) and $\sqrt{(n)aś}$ ‘attain’ (*ānaśúḥ* d). In this passage the first has a more material object, the second an immaterial one, but this distribution does not hold elsewhere.

I take the pl. *śrávaṃsi* as distributive: each one of the pl. subj. acquires his own *śrávaḥ*.

IX.108.5–6: The 1st hemistich of vs. 6 is a relative cl. in the 3rd ps. dependent on vs. 5, also in the 3rd ps. The 2nd hemistich of 6 switches to 2nd ps.

IX.108.6: Ge suggests that pāda a concerns the Vṛtra myth and b the Vala myth, based primarily on *āpya-* ‘watery’ as a descriptor of the cows in the former. This does not seem to me sufficient evidence, esp. because *āpya-* is not elsewhere used in connection with the Vṛtra myth. In his n. (6b) Ge appears amenable to a unitary interpr. of ab, as only depicting the Vala myth, as I also take it, though why the cows are ‘watery’ isn’t clear to me. Ge’s alternative explanation, involving X.67.5, does not seem terribly strong. It suggest it may be connected with the waters used in the ritual preparation of soma; see vs. 7.

On *abhí√tan* see comm. ad VIII.6.25.

IX.108.7–8: Once again the 2nd vs. is syntactically dependent on the 1st in this pragātha: 8ab is couched in the acc., continuing the acc. phrase in 7bc, and 8cd is a rel. cl. whose antecedent is the acc. phrase.

IX.108.7: This vs. contains two sleight-of-hand manoeuvres. The first involves the simile and frame with *pári śīñcata* ‘sprinkle around’. This verb ordinarily takes an acc. of the liquid sprinkled; see for ex. the immed. preceding hymn with the same lexeme: IX.107.1 *pári ... śīñcata sutām* “sprinkle around the pressed (drink).” But the acc. in the simile, *ásvaṃ ná* is the target of the sprinkling, not the liquid. So although the cases agree (implicitly: there is no expressed acc. in the frame), they have different syntactic functions (the opposite of my “case disharmony”). So Ge explicitly (n. 7a). For horses as obj. with \sqrt{sic} , see IV.43.6 *sindhur ha vāṃ rasáyā śīñcad ásvān* “The Sindhu River sprinkles your [=Ásvins’] horses with the Rasā.”

The 2nd sleight of hand follows immediately. Both the verb and the string of acc. that follow demand the obj. **sómam*, but instead we find the near rhyme form *stómam* ‘praise’. Rather than emend this to the easier reading (as Old seems inclined to do, along with numerous others; see his comm.), it is better to accept the implicit equation of the two ritual elements: the offered liquid and the offered words. This is not the only place in the RV where this trope is found.

IX.108.8: On Soma as truth see IX.97.23, 107.15.

IX.108.9–10: These two vss. are syntactically independent but linked by the theme of rain.

IX.108.9: The impv. *didīhí* in b is accented because it follows the pāda-init. complex voc. phrase *īśas pate*. On the impv. and its twin *dīdihí* with switched quantity, see Old ad loc. The well-attested redupl. formation(s) to $\sqrt{dī}$, a perfect transitioning to a redupl. pres. (see, e.g., my “The Vedic Perfect Imperative” [Fs. Lubotsky, 2018]: 58–59), show a long \bar{i} in the root syllable only in the impv. *didīhí* (1x accented, 11x unacc.); the weak forms otherwise show only *dīdi-*, incl. the competing impv. *dīdihí* (1x accented, 17x unacc.). They are mostly distributed metrically: *dīdihí* is found almost exclusively in final position in a Jagatī or iambic dimeter line; *didīhi* regularly takes final position in a Triṣṭubh line. But a few examples of both forms are found in metrically unfavorable places. E.g., in VIII.60.6 *dīdihí* occurs after a 5-syl. opening; although HEAVY LIGHT is an attested break, LIGHT LIGHT (**dīdihí*, to an unattested stem form) would be better. Likewise, our form, found after a 4-syl. opening, presents an unusual LHL break, though neither **dīdihí* nor **dīdihí* would give the most favored break. (Old states that we would expect **dīdihí* here, but does not suggest emending because there are several other exx. of LHL breaks in this hymn.) It is also worth noting that *didīhi* is found several times in the curious phrase ... *sām īṣo didīhi (naḥ)*# “illuminate our refreshments entirely” (III.3.7, 54.22, V.4.2), and our passage contains the voc. *īśas pate* “o lord of refreshment,” so that the presence of *īśaḥ* may have triggered the *didīhi* variant here. As for the source of the variation, it’s possible that transposing the Jagatī/iambic-final *dīdihí* into a Triṣṭubh cadence may have led to an almost mechanical balancing of quantities (on the model of alternations like *vavardh-* / *vāvrđh-*), and then both forms were sometimes used outside of their original places (including *didīhi* in Jagatī/iambic cadences, with the addition of final *naḥ* [III.3.7, V.25.2]), though this seems too convenient an explanation.

The notion that “the middle bucket” (*kóśa- madhyamá-*) is the rain cloud goes back to Sāy. and makes good sense, esp. given the explicit rain in the next vs. (10c). It is

possible that the impv. *didīhí* ‘illuminate’ in the first hemistich is meant to evoke lightning in this context, although it is not otherwise found in this usage, as far as I can tell.

IX.108.10: On this usage of *ā√vañc* see comm. ad IX.2.2. This same phrase *ā vacyasva* (...) *camvòḥ* is found in IX.97.2.

I take *viśām ... viśpātiḥ* to be a syntagm like *gaṇānām ... gaṇápatim* “troop-lord of troops” (II.23.1), with the simile *váhnir ná* interposed. The expression in II.23.1 also has an interposed word, though just a Wackernagel enclitic *tvā*. Ge takes the *viś-* words as part of the simile, “wie ein zu Wagen fahrender Clanfürst” (and folds the gen. pl. *viśām* into its headnoun). He suggests an alternative (n. 10b) closer to mine, though again with the gen. elided: “wie ein Wagenross, du der Clanfürst.” And, with the aid of parentheses, Re gets three separate NPs out of it: “tel un chef de clan, (maître) des clans, conducteur (du char).”

The syntagms *vṛṣṭím diváh ... rītím apām* exactly replicate the problematic compds *vṛṣṭi-dyāvo rīty-āpaḥ* in nearby IX.106.8. See comm. there. Whether there is any direct functional relationship between the compds and the syntagms, the two sequences must be considered together. As for these two acc. phrases in context here, the publ. tr. considers them to be the self-product of soma’s purification (“purify yourself into ...”), but it’s also possible that the *ā* that opens the vs. should be understood here as well, with the meaning “attract through purification” – hence “attract through purification the rain of heaven and the streaming of waters.”

IX.108.11–12: These two vss. are syntactically independent but both concern Soma as bull (*vṛṣabhá-* 11b, *vṛṣan-* 12a).

IX.108.11: The accentuation of *diváh* poses problems. *Pace* Ge (n. 11b), who considers *diváh* a gen. sg. with unusual accent, I take it as acc. pl. (flg. Old, in turn fld. by Re and Lü 202). Given the correctly accented gen./abl. sg. *diváh* in the immediately preceding vs. (10c), it is hard to believe that the poet would get the accent wrong, esp. in this exceptionally common form. As Old suggests, *√duh* takes a double acc. here. On *diváh* as acc. pl., see also AiG III.226–27.

IX.108.12: On the “threefold” (*tridhātu*) nature of Soma’s clothing, see comm. ad IX.70.8.

IX.108.13–14: The main cl. in these two vss. consists of the first two words of 13, *sá sunve* “he is pressed,” followed by a series of rel. cl. that fill the rest of 13 (four *yáh* clauses, all nominal, with a single predicate *ānetā* and four dependent genitives) and all of 14 (three *yásya* clause, one *yéna*, with one finite verb for the *yásya* cl. and one for the *yéna*).

IX.108.14: The nom., acc., voc., and gen. pl. of *marút-* do not fit any standard RVic cadence. It is not surprising then that though instr. *marúdbhiḥ* and dat./abl. *marúdbhyaḥ* are regularly found in cadences, the other forms are almost entirely absent. Pāda b has a nom. pl. in the cadence (made worse by the fact that the word is preceded by a light

syllable, (*yá*)*syā*. VII.32.10 has the same sequence, also in a double *yásyā* construction. Most of the few other cadential forms are found in dimeter vs. (e.g., VIII.3.21, VIII.7.30).

IX.108.15–16: No particular signs of cohesion, but see the ring compositional elements connecting vs. 15 to the 1st vs. of the hymn.

IX.108.15: As pointed out in the publ. intro., the beginning of vs. 1, *pávasva mádhumattama, índrāya soma ...*, recurs here, framing the vs., which begins *índrāya soma* and ends with the pāda *pávasva mádhumattama*.

IX.109–14

These last hymns in the maṇḍala are composed in a variety of meters; the first three are assorted; the last three are in paṅkti.

IX.109

IX.109.1–3: No particular signs of cohesion, beyond the mention of Soma's divine recipients in vss. 1–2. Vs. 3 begins with a possibly summary *evā*.

IX.109.4–6: All three vss. contain the impv. *pavasva*. Vss. 5–6 both contain *śukrá-*, also found in 3. And *pīyūṣaḥ* in 6 reprises the same word at the end of 3.

IX.109.6: On Soma's expansion (*vídharman(i)*) see comm. ad IX.4.9, 64.9.

IX.109.7–9: Unlike the previous *tr̥ca* with repeated *pavasva*, each vs. of this *tr̥ca* has a different form or $\sqrt{pū}$: 7 *pávasva*, 8 *pūtaḥ*, 9 *punānáḥ*. The person switches from the 2nd sg. that has prevailed throughout the hymn to 3rd ps. in vs. 8.

IX.109.7: The morphological identity of *mahā́m* is uncertain: it could be acc. sg. (m.) (see AiG III.251, etc.) or gen. pl. to *mā́h-* (so Gr) – or, in my opinion, nom. sg. masc. to *mahā́nt-*. Most (Old, Ge, Re, Lub) take it as an acc., supplying ‘fleece’ or ‘back’, hence “along the great (fleece) of the sheep.” For detailed disc. see Old ad loc. and ad II.24.11. Although this is certainly possible, the filter is not usually so described. A similar problem arises with a gen. pl. interpr., acdg. to which it would modify *ávīnā́mi* “of the great sheep.” Since the most likely entity to be called ‘great’ in this vs. is Soma (cf., e.g., *mahā́n samudráḥ* in vs. 4, I think it likely that the form is nom. sg. In this sandhi position (before vowel) we would expect *mahā́m̐* (cf., e.g., IX.66.16 *mahā́m̐ asī*), but I suggest that the *anunāsika* was redactionally changed to *m* because the form was reinterp. as a gen. pl. modifying immed. following *ávīnā́m*.

IX.109.8: It is not certain how to construe *vísṽāni* with *kṣarat*, and how this is decided will also determine what to supply with the adj. Forms of $\sqrt{kṣar}$ ‘stream’ without preverb generally do not take an obj. or an *Inhaltsakk.* (though cf. IX.35.3, 61.3, 86.37 for the latter), though it is found with an acc. of goal or extent of space (e.g., IX.33.2, 63.14). In vss. 16, 17 in this hymn, *akṣāḥ* has intrans. value, though in vs. 16 with accusatives of the space traversed. If we take the verb in that sense, *vísṽāni* could pick up *vísṽā ... dhā́ma* in

vs. 4, with the sense “stream to/across all (domains).” However, the phrase *viśvāni drāviṇāni* “all goods” might give us pause, and suggest that *kṣārat* here takes an Inhaltsakk., “stream all (goods).” There is no way to decide, and both may be meant. Ge, Re, and KH (123) all opt for the latter.

IX.109.9: In all clear cases *urāṇá-* is passive, ‘being chosen’ (see comm. ad IV.6.3). Gr, Ge, and Re all take it as trans. with *prajāṃ* as obj., but there is no reason why this acc. can’t be taken as an obj. of *kārat*, parallel to *viśvāni drāvaṇāni*.

kārat opening the 2nd hemistich rhymes with *kṣārat* in the same position in vs. 8. Nonetheless they are morphologically divergent, with *kārat* a subjunctive and *kṣārat* an injunc. Despite their parallelism *kṣārat* is unlikely to have modal value anticipating *kārat*; KH (123 and n. 26) convincingly takes *kṣārat* in “general” sense.

IX.109.10–12: Once again, three different forms of the root $\sqrt{pū}$: 10 *pávasva*, 11 *punánti*, 12 *pavítre*, all hemistich-initial. The washing/grooming of Soma as horse is found in vss. 10 and 12. The phrase *krátve dáksāya* (10) is repeated from vs. 2, though in different metrical position.

IX.109.13–15: The adj. *cāru-* ‘dear’ occurs in 13 and 14. The gods as recipients of soma figure in 14–15.

IX.109.14: This vs. presents a double ambiguity. On the one hand *cāru índrasya nāma* can mean either “the dear name of Indra” (as Ge/Re take it) or “the name dear to Indra”; the question is whether the name Soma bears is “Indra,” as the first alternative implies, or “Soma,” with the second. I prefer the second, since constructing a plausible reason why Soma would be called Indra is difficult: Ge’s (n. 14) “er wirkt in Indra and führt so dessen Namen” doesn’t seem sufficient to me.

The second ambiguity is located in the 2nd hemistich and has two parts: what/who is the referent of *yéna* and who is the subj. of *jaghāna*? The Ge/Re interpr. seems to take the referent of *yéna* to be “the name Indra” and the subj. of the verb to be Soma (though neither is explicit about it). I recognize that this would be a pleasing paradox, since Indra is the default agent in this formula. But I wonder if instead Indra is the subj. of his signature verb, and *yéna* refers to soma, with the name equivalent to the substance.

IX.109.16–18: Vss. 16 and 17 contain the sequence *akṣāḥ sahásra(-dhāraḥ / -retaḥ)* in the same position in the vs. All 3 vss. concern Soma’s journey. The various phrases with agentive instr. in 17 and 18 reprise and reshuffle those in 15: *góbhiḥ śrītásya* (15) is echoed by *góbhiḥ śrīṇānaḥ* (17); *nṛbhiḥ sutásya* (15) gets divided and refitted into two phrases, *nṛbhiḥ yemānāḥ* and *ádribhiḥ sutáḥ* (18).

IX.109.18: On *kukṣí-* ‘cheek’ see comm. ad III.36.8, VIII.92.24.

IX.109.19–21: No particular signs of cohesion, though assembled from the usual assortment of soma clichés.

IX.109.19: This vs. repeats *vājī* from 17, *tiráḥ pavítram* from 16, and *sahásradhāraḥ* from 17.

IX.109.21: for *vīthā pájase* see comm. ad IX.76.1. The phrase here is a truncated version of what is found in IX.76.1 and IX.88.5.

IX.109.22: An extra vs. in a different meter. Old suggests either 12 8 or 8 4 8, HvN either 12 8 or 8 12. Although the opening of the vs. contains 5 syllables and could therefore be a Dvipada Virāj pāda, the following finite verb *tośate* is unaccented and cannot start a new pāda.

IX.110

On the rare meters and their deployment in the hymn see publ. intro. Likewise for its thematic structure and its connections to the previous hymn, IX.109. It is probably not an accident that the six middle verses, in a meter otherwise not found in the RV (see Old, Proleg. 130), are the conceptually challenging ones, flanked by three vss. at the beginning and three at the end that are fairly straightforward. An omphalos structure signalled by meter.

IX.110.1: As noted in the publ. intro., the opening of this hymn is a variant on the opening of the immediately preceding one, IX.109.1, adjusted to fit the meter: IX.109.1 *pári prá dhanva ...*, IX.110.1 *páry ū śú prá dhanva*

The primary reading of the verb *īyase* is, no doubt, ‘you speed’, with the standard interpr.; however it may also have a secondary reading as the passive to *√yā* ‘implore, beseech’.

IX.110.2: The b pāda consists of two words ending in -e, which are construed together by the standard interpr. (e.g., Ge “im grossen Reiche des Wettstreits”). But since -*rājya*- is thematic and a loc. sg., this requires *mahé* to belong to the rare and secondary them. stem *mahá-*, rather than the primary and very well-attested root stem *máh-*. I prefer to separate the two words and take *mahé* as the dat. to that stem. There are four other occurrences of clear dat. *mahé* in IX.108-110 (including our vs. 7), each with a different head noun: *ávase* (108.14), *kṣáyāya* (109.3), *dyumnāya* (109.11), *vājāya* (110.7). Both because that last phrase appears in our hymn and because of the *vājān* in c of our vs., I supply ‘prize’, though other datives are possible.

IX.110.3: I tr. b as if *vidhāre* has verbal rection, with *páyaḥ* as obj.: “in spreading your milk.” In this I follow Ge (“wenn du mit Kunst deine Milch verbreitest”), but I now think that this is wrong. Although *vidhāre* is a hapax and so its usage elsewhere cannot be compared, I doubt that the loc. of such a stem could be so used (and Bartholomae’s datival infinitive, mentioned by Old, seems morphologically very unlikely). Instead I think it is used in the same sense as loc. *vidharman / -ni*, found 7x in this maṇḍala (3 are identical), incl. the immed. preceding hymn (IX.109.6). In all these passages it refers to the spreading or expansion of the soma liquid as it passes across the filter, and metaphorically to other expansions through space. See comm. ad IX.64.9. If *páyaḥ* is not dependent on *vidhāre* it is most likely a 2nd object to *ājījanat* (as Re takes it, though not

in the same way I will suggest). Ge (n. 3b) adduces IX.34.3 *duhānti śákmanā páyaḥ* ‘They milk out its milk with their skill,’ where *páyaḥ* refers to the soma juice milked from the plant, not to the cows’ milk with which it is mixed. I think *páyaḥ* has the same referent here, and the hemistich means “by your skill you have begotten (your) milk as the sun in your expansion.” What this means is that the soma juice (=milk) takes on the look of the sun as it goes across the filter, golden-colored with rays (=rivulets of juice) spread across the fleece.”

The 2nd member of the hapax *gó-jīra-* is universally (Gr, Ge, Re) interpr. as transitive, governing the 1st: e.g., Gr ‘die Kühen zueilend’. But *jīrá-* both independently and as 1st cmpd member (e.g., *jīráśva-* ‘having lively horses’) is never transitive, but simply means ‘lively, nimble’. One occurrence of the independent adj. is also generally taken as transitive: I.48.3 *jīrá ráthānām* with a supposed objective gen., but see comm. ad loc. Since I do not see attributing an otherwise unattested usage to the word in just this cmpd, however convenient, we must find an alternative path to sense, made more difficult by the fact that there are no other X-*jīra-* cmpds and this one is a hapax. The cmpd modifies the somewhat shadowy goddess Puramdhi, who is associated with plenty and esp. with plentiful gifts. Cf., in this maṇḍala, IX.93.4 *rathirāyātām uśatī puramdhiḥ ... dāvāne vāsūnām* ‘Let Plenitude come eagerly on her chariot ... for the giving of goods.’ In our cmpd I suggest an instr. relationship between the first member and the second: “lively with cows,” capturing both her quickness (as indicated by her “hastening” here and the eager journey in 93.4) and the presumed accompaniment of a profusion of (living) cows as gift. This type of cmpd — NOUN + INTRANS. ADJ. — seems relatively rare and the relationship between the two members is quite variable. See AiG II.1.233–38. It is also possible, as suggested as a last-ditch alternative by Ge (n. 3c), that the cmpd is an inversion of a straightforward bahuvrīhi **jīrá-go-* ‘having lively cows’ (like *jīráśva-* cited above). Though a fem. instr. sg. **jīrá-gavā* should not have been difficult to build, it is noteworthy that there are no instr. sgs. to the ‘cow’ word in the RV (for V.30.7 see comm. ad loc.).

IX.110.4–6: A very challenging tṛca, esp. the last two vss.

IX.110.4: Though the meter changes here, vss. 3 and 4 are knit together by initial *ājījanaḥ*. Here the obj. is left unspecified and presumably re-supplies the obj. of 3.

Re notes the play between *ām̐ ṛtasya* and *amṛtasya*, which might suggest that the *anunāsika* sometimes inserted after final vowels at the end of a pāda to prevent coalescence with the following initial vowel is not merely a redactional addition, as Old (Proleg. 470) asserts.

Ge (n. 4b) identifies *amṛtasya cāruṇaḥ* as a reference to the drink of immortality, namely soma. In this I think he is correct; see comm. ad IX.70.2. However, he also wants it to be a type of partitive genitive (“eine Art von Genit. partit.”) dependent on *ājījanaḥ*; it is difficult to imagine what sort of partitive gen. could be construed with ‘beget’. I see no reason why this gen. cannot depend on *dhárman* as *ṛtasya* does (Sāy.’s solution).

IX.110.5: I don’t quite know what to do with *śrávasā*. Ge and Re bleach it into an adverb (rühmlich, glorieusement), which I am reluctant to do, but it also seems unlikely that it was Soma’s fame that enabled him to do this drilling. Perhaps it is shorthand for a

famous *deed*, referring to this very act of drilling, or it simply characterizes Soma without reference to the action at hand. It may also be a sly allusion to a well-known formula: the adj. *ákṣitam* ends the hemistich, and *śrávas ákṣitam* (in sandhi *śrávo ákṣitam*) is of course the most famous Indo-European verbal formula.

I seem to have misdistributed the elements in pāda b. Because of their proximity I construed *janapānam ákṣitam* together (“inexhaustible drink for men”), but *ákṣitam* most likely goes with *útsam* (as well as notionally with *śrávasā*; see above), because “inexhaustible wellspring” is itself a minor formula: see I.64.6 and VIII.7.16 (both polarized at beginning and end of pāda as here and both obj. of \sqrt{duh} ‘milk’, with Maruts as subj.) as well as III.26.9 *útsam ákṣīyamāṇam* “a wellspring never becoming exhausted.” In the first two quoted passages the phrase must refer to the sky or some feature in it, which the Maruts milk for rain (the third passage characterizes Agni in a somewhat opaque metaphor).

Thus the hemistich seems to compare Soma’s drilling towards the drink for men (which also must be soma) with drilling for (rain)water in the sky. Or so I would take it; Ge, Re, and Lü (384) do not separate pāda b into simile and frame, as I do, but take the whole phrase together with *ná* marking it as some sort of approximative – e.g., Ge: “gleichsam einen unversieglischen Born ..., der von Menschen getrunken wird.” I prefer to distinguish two separate entities being compared, and I suggest that the “drink for men” (*janapānam*) is the earthly ritual soma, while the inexhaustible wellspring contains the heavenly soma. How would Soma be drilling for the ritual soma? what kind of action does this involve? I suggest tentatively that it might refer to the pressing of the juice out of the plant.

But there is another factor to take into consideration: the lexeme *abhí√ṭrd*. In all clear cases (VIII.77.5 is impenetrable) the object of this verb is the Vala cave or the contents thereof, cows or “prizes” (referring to cows). There are a number of such passages: II.24.4 (where in another part of the vs. the Vala cave is referred to as an *útsa*-), III.31.5, VI.17.1–3 (on vs. 1 see comm. ad loc.), VIII.103.5 (metaphorically of Agni), X.74.4. If we plug this stable association into our passage, we need to ask another question: what could stand for the cave full of cows here? And the obvious answer is the container that holds the milk mixture.

What this adds up to is a set of overlapping and partly contradictory images: the ritual soma drink being drilled out of the plant, but also the inexhaustible wellspring standing for not only heaven which contains the heavenly soma, but also the metaphorical Vala cave containing the milk mixture (remember that *útsa*- is used of the Vala cave in II.24.4) – both of which could be drilled out for their respective contents. I would suggest that this welter of images is responsible for the oddly tentative and indefinite presentation of the action, first with the āmreḍita-ed preverb *abhy-ābhi*, which I render as “ever closer” (which I now think is not so good) and Ge as “immer wieder” (Re with “toujours” and Lü not at all). I now think it is object-distributive, as it were: there are several targets of the drilling. I do not quite know how to convey this in English. This is reinforced by the indefinitizing *kām cid* characterizing the *útsa*-. “some kind of wellspring, some wellspring or other,” which would be appropriate if *útsa*- in the simile is meant to call to mind both the heavenly holder of the heavenly soma and the Vala cave full of cows.

I would now emend the publ. tr. to “Because you with your reknown have drilled through to the drink for men as if through now to this inexhaustible wellspring [=the

container of heavenly soma], now that one [=the container of milk compared to the Vala cave].” An unfortunately awkward unpacking of a very dense couple of pādas.

And this is only the first hemistich; the final pāda poses its own difficulties, consisting of another condensed simile cum frame.

Both Ge and Re take the whole pāda as the simile, comparing Soma to an archer. Both have to supply a considerable amount of material, including an object for *bhāramāṇaḥ* and a verb and another object to construe with *śāryābhiḥ*; cf., e.g., Re’s “tel (un guerrier) tenant (l’arc) en ses deux mains (perce la cible) avec les flèches.” His “perce” and, more clearly, Ge’s supplied “das Ziel durchbohrt” pick up *abhi tatārditha* in pāda a, but ‘drill through to’ is an odd action to perform on a target, and as I just said, a lot has to be supplied. (Kü’s interpr. [216] supplies less but also connects less with the rest of the vs.: “wie einer, der mit Pfeilen etwas (=den Bogen) in seinen Händen trägt.”) My interpr. of the pāda depends on a double reading of *bhāramāṇaḥ*, as both passive (in the frame) and self-beneficial transitive (in the simile). I also read *gābhastyoḥ* in both simile and frame. Some material has to be supplied, but less than in the Ge/Re interpr., and it also has the merit of connecting the arrows and the hands: Old points to X.61.3 *śāryābhiḥ ... gābhastau* “with arrows in his hand” as a potential clue to our passage. To deal with the frame first: this participle is found in passive usage, also with soma as subj., in I.135.3, 6 *adhvaryúbhir bhāramāṇā ayaṃsata ... śukrāḥ* “the gleaming (soma drinks), being carried, have been guided by the Adhvaryus” (or “being carried by the Adhvaryus, have been guided ...”). The agents there are the priests, and here I would take the *gābhastyoḥ* in the frame as referring to the priest’s hands that bring the soma forward. In the simile I take med. *bhāramāṇaḥ* as self-beneficial and supply ‘booty’ (or some other desirable material benefit) as the object. Such a usage is found in IX.79.2, containing one of the few medial forms of $\sqrt{bhṛ}$ in IX: *vayāṃ dhānāni viśvādha bharemahī* “May we always bear away the stakes.” Here the material borne away was clearly won by the arrows in the winner’s hands. I have recast the simile as passive in English, but more literally the tr. would read “while being carried in the (priest’s) hands, as (someone) with arrows in his hands carries away (booty).” If I am correct, this is an implicit example of my “case disharmony in similes,” though neither the passive subject nor the transitive direct object is actually expressed.

IX.110.6: This vs. seems to follow from vs. 5; it begins *ād* ‘just after that, because of that’, which signals temporal or logical nexus – though what that nexus is remains unclear to me. The indefinite *ke cid* of pāda a also echoes the *kām cid* of 5b, but, again, the reasons why escape me. The vs. isn’t as desperately difficult as 5 but it has more than its share of problems.

The part. in pāda a, *pāśyamānasah*, is one of the few medial forms to this extremely well-attested pres. stem. The same phrase *pāśyamānāsa āpyam* is found in VII.83.1. In both passages it describes the subject(s) as “seeing” (that is, contemplating?) the friendship between themselves and another being or beings, in this case Soma. So much is reasonably clear. Also reasonably clear is what action they took or have taken: they (have) roared to him (*īm ... abhy ānūṣata*).

Who the subjects are is harder to determine and in part depends on the grammatical identification of the rt. noun cmpd *vasurūcaḥ*. This is ordinarily taken as a nom. pl. and either a qualifier of the other nom. pl. *divyāḥ* or as implicitly conjoined with

divyāḥ as a joint subject. For the former, cf. Re’s “certains (êtres) célestes, brillants (de l’éclat des) Vasu”; for the latter, e.g., Scar’s (457) “gewisse Leute, deren Pracht [für uns] Gut bedeutet [und auch] Himmlische (?)”

As for *vasurūcaḥ*, I prefer to take it as gen. sg., dependent on *āpyam* and referring to Soma (a possibility mentioned by Scar). The next hymn (IX.111) has several forms of *√ruc* referring to Soma: instr. sg. of the rt. noun *rucā* (IX.111.1a) and the pres. stem forms *rocate* (1d), *rócamānaḥ* (2g), and in IX.111.2a it is said of Soma *vido vāsu* “you found that good (thing).” Moreover, most of the forms of the uncmpd rt. noun *rūc-*, found here as 2nd member of our hapax cmpd., appear in IX (10 out of 13), again in connection with Soma. In other words, the default association of *-rūc-* would be with Soma, not some indefinite set of beings. (For various interpr. of the sense of this cmpd. see esp. Scar 457–58; my ‘radiant with goods’ is hardly the only one, and many involve a PN in one way or another.)

If we accept my interpr. of the grammatical identity of the cmpd., this leaves us with *ké cid ... divyāḥ* “some heavenly ones, these heavenly ones and those ones,” as the subj. of *abhy ànūṣata*. Because of the close connections between vss. 5 and 6, it would be desirable to interpr. the indefinitizers in both vss. in the same way. In vs. 5, as I argued, *kām cid* signals that there’s more than one referent for *útsam*. I think we should pursue the same interpretive strategy here. In other words, we should expect that *divyāḥ* should have several different referents appropriate to the context. Unfortunately *divyāḥ* and *abhy ànūṣata* point in different directions: the verb is generally used of cows, or entities configured as cows – primarily hymns, priestly voices, and the like. But these would not generally be qualified as ‘heavenly’ – though see IX.86.4, where I supply “hymns” with *divyāḥ*. The adj. also qualifies ‘drops’ on occasion (IX.86.1) and soma itself, so perhaps the heavenly Soma here. And another well-established referent is ‘waters’ (VII.49.2, 103.2; cf. X.98.5), “heavenly waters” being rain. These are all possible, but not particularly compelling, referents here, esp. because they would have to be contemplating friendship with Soma as well as roaring to him. What *divyā-* does not generally seem to qualify is heavenly beings in the form of gods (except possibly in contrast to *pārthivāḥ* - ‘earthly’ [=humans?]), which seems to be the default interpr. of the standard tr. (including mine); my remark in the publ. intro. about “the gods’ yearning for soma” in vs. 6 is therefore probably incorrect. I’ve reached an impasse. Although I think I’m asking the right questions, they don’t produce satisfactory answers.

My interpr. of the final pāda differs from the standard, which takes *devāḥ savitā* as solely constituting the simile: “he uncovers a desirable thing like god Savitar.” But this seems pretty flat. Moreover, the simile particle *ná* is to the left of both parts of the putative simile (... *ná devāḥ savitā*). A better constructed simile would include the portion to the left of *ná*, namely *vāram*. And I think it does: in my view *vāram* is a perfect pun; the word means both fleece (filter) and desirable object. In the frame, the first reading is the filter: Soma uncovers the fleece – that is, the juice passes beyond it; “desirable thing” is the reading in the simile, and in fact a 2nd reading in the frame. The tr. should be slightly emended to “He uncovers the fleece (/desirable thing) as the god Savitar uncovers a desirable thing.”

IX.110.7–9: Considerably clearer than the previous trca.

IX.110.7: Ge and Re take *naḥ* as the obj. of *codaya* in c, but I think rather *dhíyam* from b, with *naḥ* genitive. Cf. III.62.10 *dhíyo yó naḥ pracodáyāt*, VI.47.10 *codáya dhíyam*.

IX.110.8: The phrase *yád ukthyâm* in pāda a appears to be an izafe-like embedded attribute of the preceding accusative phrase, object of the verb *nír adhuḥṣata* in b. See my 2022 “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian: Proto-proto Izafe” (Fs. Mark Hale).

IX.110.9: On *niṣṭhā-* see comm. ad III.31.10.

IX.110.10–12: This very straightforward final ṛṇa concerning the ritual preparation of soma harps on the root $\sqrt{pū}$, with *punānāḥ* 10a, *pāvamānaḥ* 10b, *punānāḥ* 11a, *pavate* 11b, and *pavasva* 12a.

IX.110.11: Note the alliteration in c: *vājasánir varivovíd vayodhāḥ*. The first word *vājasániḥ* forms a ring with *vājasātaye* in vs. 1a.

IX.110.12: The c pāda also shows alliteration: *s^u vāyudhāḥ sāsahvān soma śátrun*.

IX.111

On the characteristics of Atyaṣṭi meter see comm. ad I.127–39, the only series of Atyaṣṭi hymns in the RV, which are attributed to our poet’s father Paruchepa.

IX.111.1: To achieve 8 syllables in pāda c we need to read *sūrah* as trisyllabic, as Old points out – a fairly rare scansion for this word.

On “all forms” see comm. ad IX.64.8.

Ge (n. 1fg) suggests that the “versifiers with their seven mouths” refers to the Aṅgirasas, since the same word *saptāśya-* is used of Bṛhaspati with ref. to the Aṅgiresas in IV.50.4 and with direct ref. to Aṅgira in IV.51.4. This is quite plausible, given that the next vs. concerns the Vala myth – but the phrase must simultaneously apply to the current ritualists.

IX.111.2: As indicated in the publ. intro., at least the 1st part of this vs. touches on the Vala myth (as did 1g), but with some twists. In pāda a “that good thing of the Paṇis” (*tyát paṇīnām ... vāsu*) must be the herd of cows concealed in the Vala cave. The only other ref. to the Paṇis in IX is IX.22.7 ... *paṇībhya ā vāsu gavyāni dhārayaḥ* “You secured from the Paṇis the good things of cattle,” which specifies the *vāsu* (there pl.) as bovine.

As indicated in the publ. intro., problems arise in pāda b, with the verb *marjayasi*. The morphology of this form is absolutely clear, as is the normal sense of this well-attested *-āya*-formation: it is transitive and active (save for a fair number of mechanical *-anta* replacements, which are also transitive). The clarity of its form collides with the expected sense: if Soma is the subject (and who else would it be?), Soma is normally the object of $\sqrt{mṛj}$ (or subj. of passive forms). We do not expect Soma to be the groomer, not the groomee (as it were). It is somewhat distressing to observe fine RVic scholars override the morphology in order to obtain their desired sense. Re simply renders it as reflexive (“tu te nettoies”) without comment; even the usually severe Old, after some

disc. of previous suggestions, simply declares that here (as, acdg. to him, often) the active “im ungefähren Sinn des Mediums steht.” Ge, however, holds the line (see his n. 2b rejecting Old’s suggestion), and tr. it as an absolute, without obj. (“mit den Müttern machst du im eigenen Haus sauber”), suggesting that it depicts a child cleaning along with its mother -- producing the somewhat comic image of Soma as an especially tidy child. He then takes back his admirably austere approach to the morphology by remarking “Natürlich ist die saubere Herstellung des Soma gemeint ...” I think it must be meant as a real transitive, and the object to supply lies ready to hand: the *vásu* (so also Gr under $\sqrt{mrj} + sām$ 4), i.e., the cattle, of the Paṇis, which can also stand for the milk to be mixed with the soma juice. Here Soma acts as agent in the preparation of this milk “in his own house,” that is, the ritual ground. He performs the grooming along with the mothers (b), immediately specified (c) as “the insights of truth” (*ṛtásya dhītibhiḥ*), the hymns accompanying the ritual.

After this preparation (/grooming) of the milk, the soma is mixed with it and acquires vitality thereby (fg). On the possible sense of *tridhātu*- see comm. ad IX.70.8. It may refer to three ingredients but exactly which ones aren’t clear; in the publ. tr. I suggest that they are identified with the three forms of ritual speech, as casually suggested by Re, although I am not sure I stand behind that view now.

As for pāda d, both Ge and Re take *sāma* as part of the frame, not the simile, which for them consists only of *parāvato ná* (e.g., “Wie aus der Ferne (kommt) dieser Gesang”). Ge (n. 2d) suggests it’s the sound of the trickling soma. By contrast I take *sāma* as part of the simile and suggest that it could refer to the song with which Brhaspati/Indra and the Aṅgirasas opened the Vala cave. The *sāman*- is not a prominent feature of the Soma maṇḍala, occurring only once elsewhere (IX.96.22).

I take *yātra* as standing for *yāsmīn*, as the loc. regularly found with \sqrt{ran} , so it need not refer to a place or time. Both for the loc. with \sqrt{ran} and for the *sāman*- as locus of pleasure, cf. I.147.1 *ṛtásya sāman raṇāyanta devāḥ* “the gods delight in the melody of truth.”

IX.110.3: There appears to be a pun on *raśmībhiḥ* in b; the word means both ‘reins’ and (metaphorically) ‘rays’, and in fact the extended meaning is more common in the RV than the original literal one. Here both Ge and Re render only the sun’s rays sense (e.g., “avec les rayons (solaires)”), and this sense is certainly there, prompted by Soma’s eastern journey in pāda a, as well as the comparison to the sun in 1c. Cf., with the same verb, V.37.1 *sām bhānúnā yatate sūryasya* “He aligns himself with the radiance of the sun.” But the repeated phrase *darśatō rāthaḥ* (b, c) “chariot lovely to see” suggests that the ‘rein’ sense is also here. But the distinction is somewhat muddled in practice, since the “heavenly chariot” of c is most likely the sun, with which Soma is being identified.

Pāda f contains a non-overt Vāyav Indraś ca construction: *vājraś ca yād bhāvathaḥ* “when (you) and the mace become ...” The 2nd du. verb *bhāvathaḥ* presupposes a 2nd ps. Soma (expect voc. *soma*), conjoined with the nom. *vājraḥ* by *ca*.

IX.112–114

On these three paṅkti hymns that close the maṇḍala, see Old (Proleg 202): “Diese Paṅkti-lieder werden durch das Versagen der Anordnung, durch ihren von den übrigen Pavamānaliedern sich weit entfernenden Inhalt und durch die Characteristica der Sprache

und des Metrums als Zusätze erwiesen.” Among other things, all share the refrain *īndrāyendo pári srava* “O drop, flow around for Indra” as the fifth pāda of every verse.

IX.112

As noted in the publ. intro., this hymn has no apparent connection with soma except for the refrain.

IX.112.1: The first word of the vs., the hapax *nānānām*, is an adjectival derivative built to the adv. *nānā* ‘various’, used as an adverb (though for simplicity I have tr. as if an adj.). As Thieme suggests (Unters. 54), it’s a rhyme form to *samānā-* ‘same’, and *nānā* and *samānā-* appear together contrastively elsewhere (cf. II.12.8, III.54.6 adduced by Thieme). In our passage it also provides a polarized mirror-image to the word ending the hemistich: *#nānānām ... jānānām#* with reversed vowel quantities (*ā ā a ... a ā ā*) but matching consonantal structure (save for the initial), though the necessary distraction of the last syllable of *jānānām* disturbs the pattern somewhat.

Pāda c provides a nice example of chiasmus, with the nom. agents at each end and the acc. goals, with similar shape, in the middle: *tákṣā riṣṭām rutām bhiṣák*.

IX.112.2: On the vs. see esp. Old’s comm. It is couched somewhat as a riddle, though the solution is included in the vs.

IX.112.3: As noted in the publ. intro., this vs. contains informal nursery words for father (*tatā-*) and mother (*nanā-*). The latter is not found elsewhere in the RV or indeed elsewhere in Skt. (though similar forms are well established in other IA lgs and in Iranian), while the former is found twice in the Apālā hymn (VIII.91.5–6) and is widespread later (also in the vṛddhi voc. *tāta*). Of course *nanā* plays off the immediately following *nānā(-dhiyaḥ)* beginning pāda c, as well as *nānānām* opening the hymn.

For *upala-prakṣīṇī* I’m afraid in the publ. tr. I gave in to my baser inclination towards an alliterative colloquialism: “pushing a pestle.” In fact, *upala* is of course not a pestle, but the upper millstone of a hand mill, and the standard tr. are more accurate at least for the first member: Ge “... füllt den Mahlstein auf”; Re “... alimente la meule”; Doniger (235) “a miller with grinding stones.” The 2nd member, *prakṣīṇī*, is obscure. The older association with $\sqrt{pṛc}$ ‘mix’ (see Gr, Old’s citation of Pischel, and AiG I Nachtr. 118) seems unlikely on both semantic and morphological grounds. Similarly the connection (see AiG II.2.346, citing but rejecting Re) with *upaprakṣé* ‘in copulation’ in V.47.6, which appears to be an *s*-enlarged form of $\sqrt{pṛc}$ and again not a good semantic fit. Thieme’s etym. (cited in EWA I.220 [s.v. *ūpara-*] and II.185–86 [s.v. *prāṣṭi-*]) connecting it with a PIE **plenk-* ‘dance’, with verb forms only in Balto-Slavic (these forms differently explained in LIV), is too gossamer to consider. I do not have a good alternative, but suggest a possible derivation from $\sqrt{kaṣ}$ ‘scratch, scrape’, a reasonable characterization of the action of manipulating the upper stone on a handmill (see YouTube). Whatever its ultimate source (see EWA s.v.), verb forms to $\sqrt{kaṣ}$ begin to appear in the AV and it is also widespread in MIA and NIA (see Turner nos. 2970–73, 2979), often associated with testing on a touchstone (perhaps requiring motions similar to manipulating a handmill). Though it does not seem to show up with *prā*, this combination would not seem surprising. We probably need to assume a zero-grade thematic noun **kṣ-*

ā- ‘scraping’ (vel sim.) from which the *-īn*-stem was derived. All of this is very tenuous, but at least provides another possible source to evaluate. In any case I would now tr. this pāda as “mama scrapes away with a millstone.”

IX.112.4: In TS (etc.) *ūpa mantrayate* means ‘summon, invite near’, but also seems to have the sense of persuading by tricky, hence ‘beguile, seduce’. I base my interpr. of *hasanā-* on the frequent transitive-causative value of the *-ana*-suffix; here something that provokes laughter, that is, a joke. Ge/Re simply laughter, Old specifically the laughter of a woman.

IX.113

On the structure and thematics of the hymn see publ. intro.

IX.113.1: Pāda a lacks a syllable – no obvious fix. Distraction to **śarīyaṇāvatī* would produce three light syllables at the beginning of the pāda, which would be highly unusual, and the stem is not otherwise found distracted. On the word see comm. ad VIII.6.39.

IX.113.2: Although in the idiom *ā pavasva* the preverb *ā* generally governs an acc., with the meaning “bring X through your purification,” here it seems identical in usage to the simplex.

On *ārjīkā-* see comm. ad VIII.7.29. The appearance of *śaryaṇāvant-* (vs. 1) and *ārjīkā-* in two successive vss. recalls their appearance in the same vs. in VIII.7.29 (see also *śaryaṇāvant-* in the preceding hymn VIII.6.39).

Note the appearance of both *ṛtā-* and *satyā-* in the phrase *ṛtavākena satyéna*. Contrary to Ge/Re, who take them as two parallel entities, I construe them as a single NP with *satyā-* as adj. The interpr. of Ge and Re may be supported by vs. 4, where *ṛtā-*, *satyā-*, and *śraddhā-* are treated separately and in series, following the order in which they are found here. I therefore propose an alternative possible tr. here “With speech of truth, with what is real, with trust ...”

IX.113.3: The buffalo (*mahiṣā-*) that is the object of all 4 clauses should be the rain, perhaps configured as the heavenly soma. It is not clear to me what the Gandharvas (c) have to do with the production of rain and its transformation into soma sap.

Pāda b has 9 syllables. Old half-heartedly suggests reading *duhitā* with slurring (Verschleifung) of the 1st two syllables, but then remarks that the author of this hymn is “kein exakter metrischer Techniker.” On the other hand, since most MIA forms of ‘daughter’ are disyllabic (Pāli *dhītā* / -tar-; Gāndhārī *dhida*, Pkt. *dhū(d)ā*, *dhī(d)ā*, etc.) and disyllabic readings are found in the AV and in several gāthās in the AB (etc.) (see AiG I Nachtr. 37 and EWA s.v. *duhitār-*), a disyllabic reading in this popular hymn seems perfectly likely.

IX.113.4: As noted ad vs. 2, the first three pādas of this vs. pick up the series *ṛta(-vākena) satyéna śraddhāyā* and devote a pāda to each – each one as obj. of *vādan* ‘speaking’ and the first two also incorporated into bahuv. vocatives: *ṛta-dyumna*, *satya-karman*.

IX.113.5: This vs. strikes me as very nearly doggerel. Although RVic poets enjoy indulging in etymological figures – and are skilled at deploying them – those in pādas b and c seem to display neither imagination nor skill: b *sām sravanti samsravāḥ* (the pāda missing a syllable, to make it worse), c ... *rasīno rāsāḥ*. Moreover, after the solemn use of *satyā-* ‘reality, what is real’ in vss. 2 and 4, the cmpd *satyāmugra-* in pāda a seems to have downgraded the word to an adverb (so AiG II.1.67, 237) in a word with the banal sense ‘really strong’ (AiG II.1.37 ‘wahrhaft kräftig’, 237 ‘wahrhaft gewaltig’; sim. Ge/Re) and that awkwardly uses the neut. adverbial acc. as first member (so AiG II.1.67), to provide a makeshift hiatus-breaker. And there is also an apparent lapse in grammatical agreement, with sg. *punānāḥ* in d modifying the plural subjects of bc, even though pl. *punānāḥ(h)* would have been metrically identical. Ge and Re rescue the poet from this lapse in different ways: Ge construes d with the refrain (as he does in other vss: 2, 4, 6), but given that the refrain serves not only for this hymn but for the previous and following hymns and is generally independent syntactically, this seems unlikely. Re implicitly takes the subj. of d from the genitive phrases of pādas a and c.

In c *rasīnaḥ* could be either gen. sg. or nom. pl., and either would fit. Gr and the standard tr. (including mine) take it as gen. sg., presumably because the other two occurrences of *rasīnaḥ* (VIII.1.26, 3.1) are. A gen. also makes the phrase less pleonastic: “the juices of the juicy one” is marginally better than “the juicy juices.”

IX.113.6–7: On the relationship between these vss. and their function in the hymn, see publ. intro.

IX.113.6: Despite the hemistich boundary and the tr. of Ge/Re, I take *grāvṇā* in c with *vādan*, immediately preceding it in b, because the *grāvan-* regularly “speaks” elsewhere (cf. VIII.34.2, X.36.4 *grāvā vādan*, V.37.2 *grāvāṇaḥ ... vādanti*). Ge and Re need to supply material in order to construe it with pāda c.

IX.113.8–11: In addition to the fifth pāda refrain found throughout the hymn (as well as IX.112 and 114), these four vss. add a refrain in the fourth pāda: *tātra mām amṛtaṁ kṛdhi* “there make me immortal,” each time serving as the main clause for a set of *yātra* clauses.

I.113.8: The standard view of *avaróḍhanam* is that it defines a closed or fortified place (Ge “der verschlossene Ort des Himmels”; Re “le rempart du ciel”; Doniger [133] “where heaven is enclosed”) – deriving *róḍhana-* from *√rudh* ‘confine, hem in’. But I take it instead to the other *√rudh* (*/ruh*) ‘grow’ and interpr. it as ‘means of ascent’, exactly like *róḥaṇaṁ divāḥ* in I.52.9 (q.v.). So my vision of heaven is a more welcoming place, that extends a ladder down for us to make the ascent.

IX.113.10: Re renders *kāmā nikāmās ca* as “les désirs (avoués) et les désirs-secrets”; although *ni-* might suggest something hidden or deposited in secret, but the related bahuvr. *nikāma-* (8x) seems just to mean ‘desirous’ without any special nuance.

The phrase *bradhñasya viṣṭāpam* is found also in VIII.69.7, where I take it to refer to the surface of the soma (see comm. ad loc.), but *bradhñá-* ‘coppery colored’ can also refer to the sun (see comm. ad VII.44.3, IX.97.52) and in fact to both simulataneously,

with soma identified with the sun. What the phrase is trying to convey here is totally unclear to me.

As Old and Ge (n. 10c) point out (see also Doniger (134 and n. 5), *svadhā-* and the root $\sqrt{t}p$ ‘satisfy’ are associated with offerings to the Pitars (dead ancestors).

IX.114

IX.114.1: Acdg to Ge, it is Soma’s *mānas* that the poet will satisfy, while Re takes the *mānas* as the poet’s. Re is no doubt correct; cf. VIII.61.9 *avīpró vā yád ávidhad, vípro vendra te vācaḥ* “If without inspiration or if inspired, someone has dedicated his speech to you, Indra ...”

IX.114.2: The Anukr. ascribes this hymn to Kaśyapa Mārīca, along with the previous one (IX.113), along with several others in IX and a few in other maṇḍalas.

Maṇḍala X

X.1-7

The first seven hymns of X are dedicated to Agni and attributed to Trita Āptya, a mythological figure regularly mentioned in the RV (on whom see, e.g., Macd., Ved.Myth. 67–69), with an Avestan counterpart Ōrita, who is closely associated with Āθβiia, a variant of our Āptya. For further disc. see publ. intro. to X.8, which really belongs to this series, despite being assigned to a different poet. All seven hymns are in Triṣṭubh and contain seven vss.

X.1 Agni

X.1.1: The well-attested 3rd (also 2nd) sg. *aprāḥ* is generally taken (correctly in my view) as belonging to an *s*-aor. (so, e.g., Wh Root, and see disc. by Narten 173). Re, however, suggests that it might be a root aor. form with the 3rd sg. *-s* borrowed from the precativum – an explanation that seems too contorted for whatever advantage the analysis might bring.

The referent of the “seats” (*sádmāni*) is disputed; see Ge’s n. 1d. It seems likely to have multiple referents: the dwelling places of gods and men (so Ge) in a cosmic sense, but the ritual hearths in a more localized sense.

X.1.2: As noted in the publ. intro., nom. sg. *jātāḥ* is the signature word of this hymn, occurring in the 1st 3 vss. and in vs. 6. In all but vs. 2 Ge and Re render it as a adjunct qualifier of Agni, not as a clause predicate, but here they both predicate it (“Du bist ... geboren”; “Tu es né ...”). I prefer to interpr. the four occurrences identically: as a temporal designation “just born / at his/your birth.”

Ge (n. 2d) takes the “mothers” of d to be the kindling sticks, but these should ordinarily be dual (though not always: see Re’s collection of exceptions). Re’s plants is probably correct: dispersed among the plants (2b) he emerges from them (2d).

The phrase ... *pári támāmsy aktūn*# reminds us teasingly of VI.4.6 ... *pári támāmsy aktāḥ* “anointed (he leads us) around the dark shades” (adduced by Ge [n. 2c]), with phonologically similar but etymologically and semantically separate final terms. In the latter passage there is a verb (*nayat*), but here I think we need to supply a minimal verb of motion.

X.1.3: Agni is here identified with Viṣṇu—the point of comparison being Viṣṇu’s three strides that take him to highest heaven. In a Viṣṇu context *pádam* ‘step’ is the obvious word to supply with *páramam*: cf. I.22.20, 21 *víṣṇoḥ (...)* *paramám pádam* (also I.154.6), though *pāṭhaḥ* ‘pen, fold’ is also possible (III.55.10 *víṣṇuḥ ... páramam pāti pāṭhaḥ*). There is no such stable lexical association with *trītya-*, though it must refer to Viṣṇu’s third step or the place where that step reached in heaven. With Re I supply ‘seat’, which can be adapted from *sádmāni* in 1d. In any case I suggest that the three strides of Viṣṇu are implicitly compared here to the three fire-hearths of Agni; his furthest is the place of the offering fire (later Āhavanīya), which is the furthest point of the ritual journey of Agni.

Although in an Agni context, instr. *āsā* would lead us to expect a statement about Agni’s eating the oblations with his mouth – or the gods eating the oblations by Agni’s mouth (see, e.g., II.1.14 *āsā devā havír adanty āhutam*), the poet has tricked us, at least acdg. to my interpr. of the passage. Instead this is the (collective) mouth of the poets, who make their poetry into milk for the infant Agni.

X.1.4: The two actions of ab and c are deliberately framed as reciprocal: ... *tvā ... prāti caranti* “they proceed towards you” and *tā īm prāty eṣi* “you go towards them.” This suggests that they are happening at the same time, and I therefore am not convinced by Ge’s explicit (n. 4c) and Re’s implicit interpr. that “having other forms” (*anyārūpāḥ*) refers to the vegetation that feeds him in ab growing up again fresh and green and affording Agni a new home. Rather I think that these “other forms” are those that the kindling wood acquires as it burns. See *anyād vārpaḥ* in I.140.7 and comm. thereon.

Note that *caranti* in 4b is a scrambling of *arcanti* in 3d in the same metrical position.

In c *īm* doubles *tāḥ*—probably to identify *tāḥ* as acc. pl., since the fem. pl. in the 1st hemistich to which it refers was nom. and the form is ambiguous.

X.1.5: The āmreḍitas *yajñāsya-yajñasya* (b) and *devāsya-devasya* (c) make it impossible to construct a pāda with a properly situated caesura; see Old.

This vs. is couched entirely in the acc. Any verb of praising or reverent approach could be supplied; the *abhy ārcanti* of 3d is a good candidate. Note that there was no expressed object to that verb there, so that this vs. can serve as deferred obj.

The 2nd hemistich contrasts Agni’s role among the gods (c) and humans (d) by virtue of contrasting qualities he possesses; the *tú* connecting the two phrases therefore seems adversative (see Ge’s “aber”), as discussed in detail by Klein (RVic *tú* and *sú*, 1982: 6).

X.1.6: Klein (DGRV II.112) takes *ádha* as connecting vss. 5 and 6, as “a weak discourse continuative ‘(and) so’,” introducing the imperative clause in 6. This seems unlikely because of the odd mid-pāda position of *ádha*—and because Klein has to *supply* the impv. for 6ab: “(let) that one, Agni, (come hither).” I don’t actually know what to do with *ádha*, but an interpr. like Re’s “de vêtements (qui sont autant de) parures” that takes account of the position seems preferable. I might suggest “donning (now) garments, now ornaments.”

The standard tr. (Ge, Re, Klein cited above) take ab as a separate clause in the 3rd ps., each tr. supplying a different verb. Then in the 2nd hemistich they switch to the 2nd ps. impv. This is not necessary, and in fact I think the poet is tricking us again: the initial *sá* invites the audience to expect a 3rd ps. clause, but of course it is also regularly found with 2nd ps. impvs., as I demonstrated at length long ago. Only when we get to the final pāda and the *si*-impv. *yakṣi* do we realize that the latter syntactic situation obtains. Ge (n. 6ab) argues that the Kasuswechsel between nom. *agnīḥ* (b) and voc. *rājan* (d) requires assuming an elliptical clause in ab, but I don’t consider this a valid argument: clauses with 2nd ps. reference regularly have nominatives referring to the 2nd ps. subject, even, I think, their own names (though I don’t have a parallel ready to hand).

X.1.7: Ge (n. 7ab) argues persuasively that *ā ... tatántha* has a double sense here: in the frame it has the intrans. sense ‘stretch through/across’ with an acc. extent-of-space (*dyāvāprthivī*), while in the simile it is transitive, referring to the propagation of the parents (*mātārā*) through their offspring.

X.2 Agni

X.2.1: The phrase *devāṃ ūsatāḥ* in pāda a reprises *ūsatāḥ ... devān* in the last hemistich of the previous hymn, X.1.7.

On *vidvān* with acc., see Re’s n.; as he points out, this pf. part. is generally used absolutely (as it is in 3c, 4c), but does occur with the acc., less often with the gen., in contrast to the finite forms of the pf.

Re separates c from d and supplies the impv. phrase “sacrifie aux dieux” (from *devān ... yaja* in ab) with *tébhiḥ*. Although the instr. fits a bit awkwardly with the d pāda, I don’t see the necessity for Re’s solution.

X.2.2: In three of its four occurrences *mandhātār-* is the name of a (legendary) poet or other ritualist (I.112.13, VIII.39.8, 40.12), but here it seems to have full lexical value as the designation of a ritual function. As disc. in the publ. intro., the elements from which this agent-noun cmpd is made, *mán(a)s* + $\sqrt{dhā}$ are the same as those in the name of the supreme god in Avestan, Ahura *Mazdā* “Lord Wisdom,” with its exact Vedic cognate *medhā* ‘wisdom’ (see here also Scar 257). What priest and/or god this figure might represent has elicited various suggestions; see Old, Ge (n. 2b), Re. It is also possible that it simply qualifies *draviṇodāḥ*; see Old, Ge (n. 2b). I will not add to the speculations.

The “wealth giver” (*draviṇodās*) has a prominent, if vaguely defined, role in the Ṛtugrāhas, where he is the recipient of 4 of the 12 cups (cups 7–10), associated with the priests Hotar, Potar, Neṣtar, and, later, Achāvāka respectively. See pub. intro. to I.15 and I.15.7–10, II.37.1–4. As indicated in the publ. intro. to I.15, he seems to have been added to the rota in order to bring the number of cups to 12.

I take *svāhā* as adverbial, rather than as a 2nd obj. to *kṛṇāvāmā* as Re does. A similar usage is found in the first vs. of the Ṛtugraha hymn II.36.1; see also I.13.12.

The verb in c, *kṛṇāvāmā* is accented because the cl. in pāda c is implicitly subordinated to d.

X.2.3: The publ. tr. renders the acc. inf. *právoḍhum* as a purpose inf. with pāda a, with *yác chaknāvāma* a rel. cl. dependent on the *tád* that follows it (for reference, the pāda reads *yác chaknāvāma tád ānu právoḍhum*). Sim. Ge and Re. But this is syntactically problematic for two reasons: 1) purpose infinitives are generally in the dat.; in fact *vólhave* is found 9x in that usage (while *právoḍhum* is found only here); 2) by this reading *yác chaknāvāma* is embedded in the matrix clause. These two issues disappear if we construe the inf. with *śaknāvāma*: $\sqrt{śak}$ regularly takes an acc. infinitive. I therefore would emend the tr. to “we have come along the paths of the gods, so that we will be able to convey (the oblation) along it.” I supply ‘oblation’ because *havyá-* is several times the obj. of the dat. inf. *vólhave* (I.45.6 = III.29.4, IV.9.6, V.14.3); in our passage *hávīṃṣi* in 2c is available to serve as obj. Thus *yád* and *tád* are not coreferential pronouns but have different functions, with *yád* a subordinating conjunction introducing a purpose cl. (for *yád* introducing purpose clauses with subjunctive, see Hettrich, Hypotaxe 386–93). A couple of minor issues to clear up. First, despite my emended tr. “along it,” *tád* cannot pick up *pánthām* directly, because of difference of gender. I take it, rather loosely, as a reversion to the neut. referring to the course of the journey. As for *ānu*, which I take as a postposition, Gr takes it as a 2nd preverb with the infinitive; Macd (VGS 464) asserts that if an infinitive has two preverbs, both are accented (citing as one ex. our *ānu právoḍhum*). However, the lexeme *ānu prá* \sqrt{vah} would occur only here, and it makes more sense to construe *ānu* independently, in the same manner as *pánthām ānu* “along the path” in the last vs. of the hymn (7c). Of more interest is

Macd’s claim (VGS 336–37) that the *-tum* infinitive “expresses the purpose with verbs of motion ...” (though he allows it also with \sqrt{arh} ‘be able’ and \sqrt{ci} ‘intend’), while it is the *-am* inf. that is found with $\sqrt{\acute{s}ak}$ (inter alia). So under this description our infinitive could be construed with pāda a, because it contains a verb of motion. However, his lack of other exx. of $\sqrt{\acute{s}ak}$ + *-tum* is likely only the result of the extreme rarity of *-tum* infinitives in the RV (on which see VGS 195). Though we do have a verb of motion in pāda a (\acute{a} ... *aganma*), it is different from Macd’s “go ... to do X” example because the verb of motion here has a different complement, “go along the path.”

X.2.4: I’m not entirely sure what \acute{a} *prṇāti* means here; ordinarily it has the literal sense ‘fill’. Both Ge and Re push it further in this passage than I think can be justified: “wieder gutmachen” and “compense” respectively. My ‘fulfill’ is meant to convey that Agni will fulfill the conditions of the *vratāni* and make up for our lapses.

X.2.4–5: These two vss. have the same structure: in the first hemistich we mortals, because of our general stupidity (*áviduṣṭarāsaḥ* 4b, *pākatrá mānasā dīnádakṣāḥ* 5a), mess up our obligations to the gods, particularly the sacrifice. The c pādas begin *agnīṣ ṭád* and end with a participle of knowing (*vidvān* 4c, *viṇān* 5c) and an assurance that Agni will put everything to rights. Ge breaks the parallelism by taking *yád* in 5a as a neut. rel. prn., picked up by *tád* in c, as obj. of *viṇān*, whereas in 4a he renders *yád* as a subordinating conj. I think the parallelism should be respected, which requires “when/if” for both *yád*s and objectless participles in c.

X.2.7: The b pāda naming Tvaṣṭar as the begetter of Agni solves the riddle implicitly posed in 6b, which contained the generic etymological figure *jānitā tvā jajāna* “the begetter begot you.” The rather pedestrian repetition in our pāda, *tváṣṭā ... tvā ... jajāna*, does not put this in the category of the best of RVic riddles.

The part. *pravidvān* here takes an acc. obj., as *vidvān* does in vs. 1, contra vss. 3 and 4.

X.3 Agni

The hymn seems to have an omphalos structure, which I had not recognized at the time of the publ. tr. The middle vs., 4, is more than sufficiently contorted and baffling to count as a central enigma. The structure is marked (though not excessively marked) by lexical rings: most importantly, *arati-* is found in the 1st two and the last two vss. (1a, 2c; 6d, 7b); the verb *ví bhāti* (1c, 2d) is matched by *ví ... bhāti* in 6d; *bhānū-* in 2c returns in 5d; *rúṣadbhiḥ* in 3d = the same in 6c.

X.3.1: Just as the first vs. of X.2 echoed the last vs. of X.1, there is concatenation with the preceding hymn here as well: *ví bhāhi* in c repeats the last words of X.2.7.

The voc. *rājan* is jarring in this 3rd ps. description of Agni, but it can hardly be addressed to anyone else (though Old flirts with the possibility of another entity), esp. given that the same voc. is definitely addressed to Agni in X.1.6 and (the next hymn) X.4.1. It is always possible in Agni contexts to imagine a bifurcation between the physical fire and the god Fire, here with the former described and the latter addressed.

In c *brhatā* produces a bad cadence, with no possible fix.

The final pāda is chiasmatically structured, with initial *ásiknīm* ‘black’ the obj. of the final participle *apājan* and the middle two words *eti rúṣatīm* to be construed together. This

configuration confounds word-order expectations: we would normally construe the elements in order, yielding “he goes to the black (*ásiknīm eti*), driving away the luminous (*rúsatīm apājan*). It is only the audience’s awareness of the standard trope about the banishment of female night by female dawn and of the usual dawn context of Agni hymns that allows them to redistribute the elements to produce a more semantically and pragmatically satisfactory result – a nice ex. of the tension between syntax and sense and of how poets learn to exploit it. Note also that the discontinuous phrase “driving away the black one” is iconic of its action, driving away or apart.

X.3.2: The first hemistich of this vs. “repairs” the last pāda of vs. 1, by depicting Agni’s adversarial relation with Night and his benevolent paternal one with Dawn, though neither of the females is named and the hemistich introduces new themes. This contrasts with the rather pedestrian repair strategy in X.2.6–7, which involves exact repetition of the riddle that needs solution, with the solution slotted in.

Pāda b is superficially self-contradictory or at least sketches a tangled parentage, in that Agni “begets” (*janāyan*) someone who is the child of a different father (*pítúr jā́m*). But of course the two fathers can be reconciled: Heaven may be the stable father of Dawn, who is regularly called *divó duhitā́*, but Agni at his daily kindling gives birth to her every day.

As Ge (n. 2cd) points out, Agni is identified with the Sun; the “spoked wheel of Heaven” (*diváh ... aratíh*) in fact is the sun; cf., e.g., II.2.2. The gen. *diváh* in d can also be seen as a sly way to resolve the identity of the “lofty father” (*bṛhatáh pítúh*) of Dawn in b, sneaking in the word Heaven (in the gen. as the father phrase is in b) in a different context.

X.3.3: The masking of identities continues in this vs. The Sun and Dawn appear only as m. *bhadrá-* and f. *bhadrá-* in pāda a and with roles suggesting incestuous relations in b (*svásar-* ‘sister’, *jārā-* ‘lover’). But finally in c we get an actual name: the first occurrence of *agní-* in this hymn.

From the publ. tr. it would appear that another name, or at least unmasked identity, is found in d, where I tr. “prevailed over the night.” But in fact the word I tr. as ‘night’, *rāmá-*, merely means ‘dark’ and is quite rare (though fem. *rāmī-*, *rāmyā-* are better attested, and also clearly refer to night). So *rāmám* here is like *ásiknīm* in 1d and *kṛṣṇām* in 2a in referring to night by a color term. (I would now emend the tr. to “prevailed over the dark.”) This pāda is a recasting of 2a (as Ge, n. 3d, also indicates), with lexical substitution: *abhí ... asthāt* for *abhí ... bhūt*, *rāmám* for *kṛṣṇām ... énīm*, *rúśadbhir várṇaiḥ* for *várpasā*. But the ‘night’ term has become more masked, by being masc., not fem. as in 1d, 2a.

X.3.4: A difficult vs. (Ge n. 4: “Dunkle, offenbar gekünstelte Strophe”). As noted above, it is properly situated to be the omphalos vs. in a hymn that is organized by that structure. Ge thinks the vs. has to do with the day-sun and the night-sun, for which he refers us to I.115.5. For my rejection of the concept of the night-sun see comm. ad I.115.4–5.

Decoding the vs. works best by considering the constituents one by one; the syntactic structure is relatively straightforward (at least as I see it – see Ge’s comm., however, and the different deployment of elements by Ge and Re). The vs. is dominated by two long gen. phrases, both referring to Agni: ab *asyá ... agnéh sákhyuh śívásya* “of this one ... Agni, our kindly companion” (I do not take *bṛhatáh* in this phrase; see below) and c *īḍyasya vṛṣṇo bṛhatáh* “of the lofty bull worthy to be invoked” (I did not take *svásah* in this phrase, though I’m more open to it now; see below). The first depends on the nom. *yāmāsaḥ* ‘journeys’ (again, as I take it). As for

the predicate of ab, I take it to be a predicated pres. part. *índhānāḥ* ‘kindling’. This participle, so accented (as opposed to *idhānā-*), is ordinarily, though not invariably, transitive, and is so interpr. by Ge, Re, and me. The expression “his journeys kindling X” is what I meant (rather loosely) by synesthesia in the publ. intro.: in the ordinary way of things journeys can’t “kindle” anything, though metaphorically it is possible even in earthbound English (e.g., “his European travels kindled his interest in architecture”). Agni’s journeys can refer to the ascent of his smoke towards heaven (this possibility supported by vs. 5 and see my interpr. below of 4cd), or perhaps the spreading of the fire over the firewood outward from its place of kindling, or the movement of the ritual fire to the east and the place of the offering fire.

What object do these journeys kindle? The only acc. in the vicinity is *vagnūn* ‘calls’, though it appears to be part of a simile. In the absence of a corresponding acc. in the frame, I originally thought (see below for revision) that the *nā* here doesn’t mark a standard simile but contributes an “as it were” sense (sim. Ge gleichsam, Re pour ainsi dire). Before trying to determine what the *vagnūn* are, we must tackle *bṛhatāḥ* in the simile complex *bṛható nā vagnūn* (assuming it’s part of the simile: neither Re nor Ge does, but how do they account for the position of *nā*?). It can be either acc. pl. masc., modifying *vagnūn*, or (abl./)gen. sg. dependent on it. There are arguments for both: *bṛhánt-* sometimes qualifies sound (*rāva-* VII.33.4, IX.97.36; *gīr* V.43.8, *gīras* III.51.1; cf. also *bṛhád-uktha-* (3x) and the Gṛtsamada refrain *bṛhád vadema*). But in order to make the comparison work we need to know who the *vagnūn* belong to / emanate from, and that suggests a gen. sg. The stem *bṛhánt-* is common in this hymn, with a number of different referents: 1c ‘beam’, 2b ‘father’ (=Heaven), 4c (also in our vs.) Agni as bull, 5b Sun=Agni. In the publ. tr. I suggest that it here refers to the pressing stone, and the *vagnūn* are the sounds of pressing. Pressing stones are regularly said to be noisy and to have voices (cf., e.g., X.76.6 and esp. X.94), and *vagnú-* is associated with the pressing stone in I.84.3; it is said to speak ‘loftily’ (*bṛhát*) in V.25.8, X.64.15=100.8, 70.7. And see its association with the kindled fire in X.70.7: *ūrdhvó grāvā bṛhád agnīḥ sámiddhaḥ*. In our passage the point would be that the kindling of the fire “kindles” (that is, signals the start of) the soma pressing and thus the noise of the pressing stone. (For the record, Ge thinks the *vagnūn* are the sounds of the burning fire, Re the voices of the human chanters. Both are also possible, but I think the pressing stone suggestion has better textual support.)

I now also see that there is a way to rescue a “real” simile interpr., by means of a double reading of the part. *índhānāḥ*. As I said above, this part. is generally transitive, but sometimes passive. For the former, cf., e.g., II.25.1 *índhāno agnīm vanavad vanuṣyatāḥ* “Kindling the fire, he will win against those who seek to win”; for the latter I.143.7 *índhānaḥ ... vidátheṣu dīdyat* “... while being kindled, shining at the rites.” If we take it as passive in the frame, the journeys themselves are being kindled (that is, set in motion), while in the simile they kindle the voices. So I suggest an alt. tr. “his journeys, being kindled, are as if kindling the voices of the lofty one [=pressing stone].” The Engl. “as it were” cannot be avoided, but the frame / simile relationship in the Skt. is better structured. This would be an extreme ex. of my “case disharmony in similes.”

So much for the first hemistich. In the 2nd one let us first turn to the gen. phrase in c. The last word of that pāda, *svāsaḥ*, is generally interpr. (Gr, Ge, Re) as a gen. sg. to a cmpd *svās-* ‘having a good mouth’, which does appear in IV.6.8 of Agni. However, I think it more likely to be the nom. pl. m. of *svá-* ‘own’, referring to the *bhāmāsaḥ* that immediately follows in the next pāda (though ‘having a good mouth’ is also possible, and I would now accept a tr. “of the lofty bull worthy to be invoked, having a good mouth”). I take the remaining gen. phrase with cd, while Ge/Re take it with the gen. phrase in ab. The journeys (*yāma-*) of ab reappear in the loc.

sg. *yāman* to a different stem, and just as the gen. phrase of ab depended on *yāmāsaḥ*, I here attach it to *yāman*.

Beyond this I am pretty baffled. The focus of this bafflement is *aktú-*. This is a well-attested word for ‘night’, though it does have or acquire a (probably secondary) association with *√añj* ‘anoint’. In our passage Re takes it as ‘ornaments-brilliants’, which makes the interpr. easier, though he admits this sense is, at best, rare. Moreover, I would add, in a hymn that has used three other words referring to ‘night’, one each in the previous three vss., it seems perverse to assume that a more common word for ‘night’ doesn’t mean that in this context (it’s also found in nearby X.1.2 in the clear meaning ‘night’). The problem posed by *aktávaḥ* is acute enough to cause Old to make what seems to me an uncharacteristic lapse in grammatical judgment: he suggests that it stands for gen. *aktóḥ*. Now it is true that the phrase *yāman aktóḥ* is found pāda-final in III.30.13 and VI.38.4 (though in neither case do I construe *aktóḥ* directly with the loc.), but making *aktávaḥ* a makeshift gen. seems a really bad idea to me, and Old doesn’t try to justify it. Ge suggests instead a word haplology of *yāman *aktór aktávaḥ*, which is slightly better but still leaves us with *aktávaḥ* to deal with. As noted above, he does so via the “night-sun”: “seine Strahlen sind bei Ankunft (der Nacht) als Dunkel erscheinen.” My publ. tr. makes little (actually, no) sense; I have no idea what I thought it meant at the time: “the nights appear as his own beams.” I would now suggest a new one, with the terms reversed, rather like Ge’s though with a different image in mind.: “his own beams appear (like) the nights.” The somewhat counterintuitive image is of the smoke arising from the fire, which, though it comes from the beaming brightness of a burning fire, turns dark as it rises. For similar passages describing the mingled brightness of the flames and darkness of smoke see II.4.5 and VI.6.4 and comm. on both.

X.3.5: This vs. consists entirely of two rel. cl.; it can easily be attached to the following vs. (or the preceding one).

The ‘beams’ (*bhāmāsaḥ*) of the previous vs. return here, but once again in unexpected form. In vs. 4 they appear like nights, that is, presumably, dark – which is not what we expect of lights (the word is after all a transparent deriv. of *√bhā* ‘shine’). Here they “purify themselves” (*pavante*), while being compared to sounds (*svanā nā*). The verb is of course the signature verb of soma preparation: the medial participle *pavamāna-* gives the functional title to the Soma of the IXth Maṇḍala (Soma Pavamāna “self-purifying Soma”). It would be impossible to use this verb in a RVic context without calling soma immediately to mind. The subj./verb combination thus already conjures up a discordant image: beams of light purifying themselves like soma liquid. But the simile adds another layer of complexity and dissonance, for the subject is being compared not to soma but to sound. So we have two incompatible entities (light and sound) identified with each other and each performing an action – purification -- that is uncharacteristic of either. Ge simply translates the phrase word-for-word (“Dessen Strahlen rein werden wie die Töne”) without comment; Re makes the connection with soma, which I think is unavoidable. The cleverness of the poet is to put the image further off-balance, comparing the beams to the sounds of soma when it is being purified. Cf. IX.41.3 *śṛṇvé vṛṣṭer iva svanāḥ, pavamānasya śuṣmīṇaḥ* “A roar like that of rain is heard -- the roar of the self-purifying tempestuous one,” where the more natural genitival relationship between the roar and the self-purifier is found. So that accounts for the simile, but what is “the beams purify themselves” meant to convey in the frame. I think it must be read in the context of the previous vs.: there the beams were dark as the nights, because surrounded with smoke; here the purification would involve getting free of the smoke

and rising up brightly, amidst the roar of the blazing fire (hence the term of comparison). This compressed expression seems to me a prime example of synesthesia, as noted in the publ. intro.

The gen. phrase that constitutes b, *rócamānasya brhatāḥ sudívaḥ* “the lofty one, shining, bringing the good day,” technically belongs with the rel. *yásya* in pāda a and therefore refers to Agni. But I think it is also a reference to the sun, or Agni identified with the sun, and that it functions almost like a gen. absol.; see Ge’s tr. as a “wenn” cl. (though without comment) as well as the “when” cl. in the publ. tr. This would be another reference to the dawn sacrifice, the overall setting of this hymn.

In cd Agni’s radiant beams, *bhānū-* (a different derivative to the same root $\sqrt{bhā}$), reach heaven and implicitly join the sun’s *bhānū-* there; cf. 2c where Agni “props up the radiance of the sun” (*bhānūṃ sūryasya*). On the connection between Agni as Svarbhānu and the sun, see my extensive treatment of the Svarbhānu myth in my 1991 book, *The Ravenous Hyenas and the Wounded Sun*.

X.3.6: The first half of this vs. continues and indeed amplifies the “sound” theme, but restores a more natural subject/verb relationship: Agni’s “snortings resound” (*śúṣmāsaḥ ... svanayan*). Note that the verb here and the noun *svanāḥ* in 5a are transparently related. We can think of this as an ex. of poetic repair. It is also worthy of note that the subj. *śúṣma-* is represented in IX.41.3 cited above concerning the roar of the self-purifying soma: *svanāḥ ... śuṣmīṇaḥ*.

The vs. also exploits the literal sense of *aratī-* (‘spoked wheel’, hence fireplace, hence ritual fire) to elaborate the journey theme found already in vs. 4, with wheel rims (*-pavi-*) and teams (*niyúdbhiḥ*). On this vs. see Thieme, Unters. 31–32, 34.

The bahuv. *dadrṣānā-pavi-* has a medial pf. part. as 1st member. On this rare type see AiG II.1.43–44 and on its accent AiG II.1.292.

In the publ. tr. I follow Ge in supplying ‘flames’ with the instrumentals of cd. I now think it should rather be ‘beams’ (*bhāma-*, 4d, 5a) or ‘radiant beams’ *bhānū-* (5d) because the somewhat incompatible adjectives *rúṣadbhiḥ ... rébhadbhiḥ* “luminous and crackling” continue the synesthetic effect associated with ‘beams’ earlier, in vss. 4 and 5. The presence of the verb *ví ... bhāti* also supports supplying a nominal derivative from the same root. Perhaps best *bhānúbhiḥ*, echoing the same instr. pl. in 5d. Cf. also X.1.1 *bhānúnā rúṣatā*.

IX.3.7: The poet then turns the journey theme to his own advantage in this final vs., but asking Agni to bring us something good when he comes.

IX.4 Agni

On the imagery in this hymn, see publ. intro.

IX.4.2: The warmth of the pen in the simile is presumably an indirect reflection of the warmth of the fire in the frame.

On *rocanéna* expressing extent of space, see comm. on identical pāda, III.55.9.

X.4.3: All the images in this vs. seem to depict natural fire in a landscape rather than the ritual fire. The ‘mother’ of ab is probably, as Re takes it, Mother Earth. In both c and d the fire ranges freely in the natural world, consuming whatever fuel it finds.

On *jénya-* see comm. ad I.128.7. Even though Agni is called *jénya-* elsewhere, here the word surely belongs to the simile, with *tvā* intervening in modified 2nd position. Cf. IX.86.36 ...

śísuṃ, nāvam jajñānām jényam ... “the new-born child of worthy birth.” Although the *śísu-* here could be a human child, the appearance of other domestic animals in the similes of 2–3 suggest that it too is an animal.

The hapax denom. *sacanasyāmāna-* receives rather bleached renderings: Gr ‘hulldreich, hülfreich sein’, Ge ‘getreulich’, or Re’s somewhat richer ‘se sentent heureuse’. But its base should mean ‘having joint delight’, and I think the point here is that the mother desires delight for both of them.

As Narten (YH, 121) persuasively argues, in both Vedic and Avestan the desid. of \sqrt{ji} ‘win, conquer’ does not have an aggressive or battle-oriented sense, but simply means ‘seek (food, livelihood)’. She tr. this passage “du wünschst (Nahrung) zu gewinnen wie losgelassenes Vieh.”

X.4.4: This vs., the middle one of the hymn, functions as a notional omphalos vs. It begins by suggesting a mystery beyond our knowledge (ab) and continues with a paradox (c), signaled by the oppositional *śáye* ‘lies still’ / *cáratī* ‘moves’. But the paradox is easily understood, and the vs. just signals where an enigma would be inserted, rather than actually presenting a challenging one.

The pres. part. to \sqrt{as} in the nominative usually functions concessively (“although being ...”), but I do not see that meaning here. “Although being the clanlord, he licks the young woman” would suggest that Agni is doing something beneath his dignity or even shameful—which would be appropriate to our contemporary attitudes (sexual politics, abuse of power, “me too”), but I doubt its application to Vedic mores. The *sán* may owe its existence here to a more mundane reason: meter. The stem *viśpāti-*, in nom., voc., and acc., regularly comes at the end of 8 or 12 syllable pādas, providing a good iambic cadence, but it does not fit a Triṣṭubh cadence. I suggest that a pleonastic *sán* was added to provide a proper finale.

X.4.5: The fem. ‘old ones’ (*sánayāsu*) are of course the plants, which, old and dessicated, easily catch fire.

The problematic pāda is c, *asnātāpo vṛṣabhó ná prá veti*. The simile / frame structure is both formally and semantically / pragmatically flawed. The standard view (i.e., Ge/Re and the publ. tr.) is that the meaning of the pāda is more or less what is found in the publ. tr.: “(Although) not a swimmer, he pursues the waters like a bull.” As Ge points out (n. 5c), the thirsty bull or buffalo is a well-known image in the RV. But this assumes that ‘waters’ is part of the simile as the shared term; yet the simile particle follows ‘bull’ (*vṛṣabhó ná*), with ‘waters’ preceding – which is not the placement we expect. Moreover the form of ‘waters’ is wrong: it should be acc. (*apáh*) but the accent tells us it must be nom. *āpah* when extracted from sandhi. There are a few occurrences of nom.-for-acc. forms to this stem, but the vast majority are properly distributed. Such are the formal problems. The semantic-pragmatic one may be worse: there is no ritual, mythological, or natural-world scenario in which Agni/fire “pursues” water. The closest we come is the myth of Agni running away from his ritual duties and hiding in the waters, but I find it hard to wring this out of this expression. Likewise Agni as Apām Napāt (vaguely suggested by Tichy, Agent nouns, 146); that figure doesn’t behave as he would need to here. There is a very minor rite of aspersion of the hearth, which Ge sees in a couple of RVic passages (VIII.39.10, 102.14), but again this does not seem a compelling explanation here. Ge in his n. suggests an alternative structure: that the waters belong only to the simile, and another object should be supplied for the frame: Agni pursues (firewood), as a bull does waters. This

solves the pragmatic problem, but makes the formal structure of the simile even worse, since the *āpaḥ* is not part of the frame at all: we really should then have *āpo *ná vṛṣabhāḥ*. Moreover, what then is the point of *asnātā* ‘no swimmer’?

I will suggest a much trickier solution, which depends on a pun made possible by the sandhi coalescence in *asnātāpaḥ*. The accepted analysis of this sequence is *asnātā āpaḥ*, going back to the Pp. But the second element could, of course, be *āpaḥ* as well – and *āpaḥ* is a perfectly good word: neut. sg. *s*-stem ‘work, task’. I suggest that in the frame we read *āpaḥ* -- “(Agni) pursues his work” – and, secondarily, in the simile *āpaḥ* -- “as a bull pursues waters.” This pun would help account for the “wrong,” nominative, form of ‘waters’, which needs the initial accent to enable the pun. Rigvedic poets are willing to tamper with morphology if it is in the service of word play. It would also put the acc. in its first reading as ‘work’ firmly in the frame, not the simile, thus accounting for the position of *ná*. The ‘no swimmer’ is a little joke: since Agni has nothing to do with the waters in the simile, he is of course no swimmer; only the bull would qualify. I would also point out that there is a fairly well-established expression *viver āpāṃsi* (I.69.8, VI.31.3, etc.; see comm. ad locc.) “you toil(ed) at your labors.” Although the two verbs belong to different roots, *√viṣ* ‘toil’ and *√vī* ‘pursue’, *prá veti* in our passage is close enough in meaning and form to *√viṣ* in that expression that they could be assimilated to each other. I realize that this interpr. is quite intricate, but it solves both formal and semantic problems. I therefore propose to emend the tr. to “No swimmer, he pursues his task, as a bull does waters.”

As Ge (n. 5d) points out, *prá √nī* seems to refer to conveying the ritual fire to its new hearth in the east.

X.4.6: For the striking image in pāda a, see publ. intro.

X.5 Agni

On the structure and contents of this mystical hymn see publ. intro.

X.5.1: My interpr. of the first hemistich differs crucially from the standard (Ge, Re, Lü [*passim*], Doniger [117], Köhler [*Kavī* in R̥gveda, 121, 319–20]) in taking pāda a as a nominal clause and assuming a change of subject in b. All the others, save for Ge, assume an identification between Agni and the sea; Ge like me considers the sea to be the sea in the heart and “der Urquell der dichterischen Erkenntnis” (n. 1a). My major reason for separating the pādas is that the sea is sometimes identified with the heart, and therefore the abl. *hṛdāḥ* in b should be, in my opinion, coreferential with nom. *samudrāḥ* in pāda a. For the identification see IV.58.5 *hṛdyāt samudrāt*, 58.11 *antāḥ samudré hṛdy āntar āyusi*; cf. also VIII.102.4–6 *agnīm samudrāvāsasam* “Agni whose garment is the sea” and X.45.3, which relates Agni’s birth/kindling in the sea. I therefore think that Agni is within the sea but distinct from it. We also see separation between the sea (of poetic inspiration) and an agent who performs *ví √cakṣ* in X.177.1 *samudré antāḥ kavāyo ví cakṣate* “The sage poets espy it within the sea.” I do have to admit, however, that the 2nd phrase in pāda a, *dharūṇo rayīṇām* “foundation of riches” is used of Agni in I.73.4, X.45.5; on the other hand this phrase is not limited to Agni, modifying Indra in X.47.2; see also VII.34.24. Interestingly, X.47.2 resembles our passage phrasally, in that it is preceded by a numeral qualifying *samudra* — there as a compd., here as a free phrase: X.47.2 *cātuḥsamudraṃ dharūṇaṃ rayīṇām* / X.5.1 *ékaḥ samudró dharūṇo rayīṇām*. I don’t quite know what to make of this, beyond the apparent use of the sea or seas as an extreme measure of wealth.

In b the two hidden ones (*nīnyóḥ*) who serve as his mothers could be the two kindling sticks, Night and Dawn, or Heaven and Earth. On this as an enigma, see Ge's n. 1c. The naming of the two world halves (*ródasī*) in nurturing roles in 4c may determine the matter, at least by the middle of the hymn.

If the gen./loc. du. *nīnyóḥ* belongs to the stem *nīn(i)yá-*, we should expect **nīnyayoh* (AiG III.99); our form would simply show haplology, with the distracted syllable maintaining the syllable count. (The stem shows distraction in some other forms, not simply the gen.-loc. du., so this can't be the only reason.) Lanman (Noun infl. 392) suggests rather a stem **nīñ-* (see also Old), but there seems no reason to multiply entities here and the formation would be distinctly odd.

As Ge (n. 1d) also thinks, the wellspring (*útsa-*) in d must be the sea of pāda a; presumably the "hidden track of the bird" (*nīhitam padām véḥ*, a phrase found elsewhere [I.164.7, III.5.5–6, 7.7; IV.5.8]) here is the trace of the mystical fire—though Lü (614), Re favor the sun. Again the intent is to locate the enigma of Agni in the sea of poetic inspiration within the poet. X.45.2–3, which treats Agni's birth (see above), also has the wellspring (2c), the sea (3a), and the udder (3b) together in a similar context.

X.5.2: As indicated in the publ. intro., the first half-vs. describes the mating of the flames of the nascent fire, configured as both male and female. So also Ge and Re.

The med. root part. *vāsānāḥ* properly must belong to the root pres. to \sqrt{vas} 'wear', and *vāvasāné* in 4c supports this association. However, in sense it seems closer to \sqrt{vas} 'dwell'. A similar conundrum is posed by *saṁvāsāna-* in IV.6.8, which is assigned by Gr (and others, e.g., Ge) to 'dwell', even though that root is otherwise active and has no root forms. There the preverb *sām* could have triggered a middle form or at least a nonce reinterpret. of a form belong to 'wear', and I take it as a pun. (See comm. ad loc.) Although the participle in our passage is not cmpd with *sām*, *saṁānām* 'same' with which it's construed, as well as the immediately following *sām* (*jagmire*), could exert the same influence. I therefore take it as a pun here as well.

The 2nd hemistich seems an elaboration on and restating of 1d.

X.5.3: This vs. revisits the birth of Agni alluded to briefly in 1c. Here again we have dual parents, here clearly identified as feminine – though this does not narrow down the possible sets of referents already noted above.

The two fem. *-ín-*stems that open the vs., *ṛtāyínī māyínī* seem designed to be contrastive. Although *māyā-* has not acquired the generally negative sense of 'illusion' that it often has later, it does refer to power derived from supernatural manipulation or tricks or some variety of artifice, the opposite of *ṛtā-*, the truth that encapsulates the real and enduring structures of the cosmos. These combined skills of Agni's mothers would endow him with an extraordinary range of powers. The twinning of these two words is clear from the fact that the hapax *ṛtāyín-* is clearly modeled on the well-attested *māyín-*; see AiG II.2.343, 842.

There is much disagreement about the meaning and the grammatical and lexical identity of the part. *vīyāntaḥ* in d. Gr assigns it to \sqrt{vi}/i with the sense 'durchwandern'; Ge to the same lexeme but with the somewhat bizarre gloss 'abschneidend' (cutting off, snipping). (He also thinks it's anacoluthon for du. fem. *vīyatī-*, on the pl. see below.) Köhler (320) agrees with the assignment of Gr/Ge but with the sense "einzeln zum Nabel ... gehen," connecting pāda c with d, rather than with ab as most do. Re calls it a "forme baroque" of *vāyantaḥ* 'weaving'. The most persuasive suggestion is Old's, though he falls short of endorsing it— that it belongs to the root

pres. of $\sqrt{v\bar{r}}$ ‘pursue’. Although the weak pre-V forms of this pres. are transmitted with initial cluster $vy-$, they are almost all to be read with distracted $v'y-$; cf. for this exact nom. pl. part. IV.5.5, VI.1.4, VII.27.5, all pāda-final as here (only the form in I.127.5 is not distracted). Old is reluctant to ignore the “transmitted spelling” (“überlieferte Schreibung”), but since the original oral version would have had distracted $v'iy-$, it is only the later redaction that imposed that form, and it can easily be the result of misunderstanding of the sense of the passage (not difficult, as the various versions demonstrate). The assignment to $\sqrt{v\bar{r}}$ is supported by the fact that this root is part of the characteristic lexicon of Trita Āptya; note X.2.2, 4.5, 6.2, 3, 8.5, 7.

Assuming that the form is indeed a nom. pl. m. pres. part. (*pace* Gr), it must be predicated, since the previous subjects were fem. dual. The most likely subject to supply here is the *kavāyaḥ* of 2c, as Old (tentatively), Re, and Köh do. They, the human poets, “pursue the thread of the poet”; this sg. *kavī-* must be Agni, and the human poets are following his lead and model in their own work. Threads and weaving are of course standard images for the materials and activity of a poet; see the famous passage VI.9.2–3, in which the apprentice poet confesses his ignorance of thread and weaving, that is, of his own craft, but he learns this craft from Agni.

X.5.4–5: Note the phonological echoes in 4c *vāvasāné*, 4d *vāvṛdhāte*, 5a *vāvasānó*. The two med. participles in 4c and 5a are in the same metrical position and (besides the ending) differ only in the identity of the sibilant.

X.5.4: The ‘over-cloak’ is interpr. by Sāy. (fld. by Ge) as plants, stars, etc.—an appealing interpr. In one of the other two occurrences of *adhīvāsá-* (I.140.9; the other in the Aśvamedha hymn, I.162.16, is irrelevant), it refers to the ‘over-cloak’ of the Earth, which Agni consumes – so vegetation there as well. However, I think it possible that it refers here (also?) to the smoke that envelops the two world-halves as the fire flares up.

My interpr. of d is entirely different from the standard; Gr, Ge, Re, Lü (469) all take *vāvṛdhāte* as intrans./reflex. – e.g., Ge “... stärkten sich.” (Doniger’s tr. [117] is like mine.) And certainly the preponderance of occurrences of the med. pf. have this sense. However, some forms of the med. pf. are transitive. Cf. esp. VII.7.5 *dyaús ca yám pṛthivī vāvṛdhāte* “whom [=Agni] Heaven and Earth have made strong,” which is exactly parallel to our passage, with the same subjects and the same object. The form is medial because of the self-involvement of the subject: they act as parents of the child in question. In our passage the point is that, whether H+E are the original parents of Agni (see 1c, 3b), they nurture him as he grows in the space between them. If the verb is taken as intrans./reflex. the connection between Agni’s birth and the self-strengthening of H+E is unclear. Ge (n. 4cd) says “Agni’s Geburt gereicht Himmel und Erde zum Segen”; Lü considers the actions of ab and cd reciprocal: H+E bring Agni hymns and refreshments (though in fact their involvement is not overt in ab), and he gives them rain in return, with honey and ghee a poetic expression of rain. But Ge’s explan. is vague and generic, and Lü’s forces an interpr. on ab that is not supported by the text.

Ge (fld. by Lü) takes the two instr. *ghṛtaír ánnaiḥ* and the gen. *mádhūnām* as parallel, while I (along with Re) construe the gen. with *ánnaiḥ*.

X.5.5: The part. *vāvasānāḥ* could belong either to \sqrt{vas} ‘desire, be eager’ or $\sqrt{vās}$ ‘bellow’, and either would work in the passage. The former is favored by most (Gr, Ge, Re, Lub), but Kü (479–80) assigns most forms of the stem to ‘bellow’.

The “seven ruddy sisters” (*saptá svásṛ āruṣīḥ*) are generally and plausibly taken as Agni’s flames, though why seven? I doubt if it has anything to do with the seven boundaries (*saptá maryādāḥ*) of the next vs. (6).

The honey from which Agni carries them up is, acdg. to Ge (n. 5ab), again plausibly, the ghee that fuels the fire. (Re’s “soma” is less plausible, even though *mádhu* is more often used of that substance.) If “honey” is what fuels Agni’s flames and that “honey” is actually ghee, this provides support for my transitive interpr. of 4d, where H+E strengthen Agni “with ghee” *ghṛtaīḥ* as well as with *ánnaiḥ ... mádghūnām* “with foods of honey(s).”

In the publ. tr. the placement of *drśé kám* makes it sound as if it’s to be construed with the abl. *mádghvaḥ* (“... from the honey to be seen”), but I meant it to go with the sisters. An emended tr. “... from the honey, to be seen” (with comma) or perhaps more explicitly “from the honey, (for them) to be seen” will disambiguate.

The 2nd hemistich is difficult, and I will emend my publ. tr. in several ways. In c the question centers on the value of the med. pf. *yeme*, but also involves the grammatical identity of *purājāḥ*. In the publ. tr. I take the latter as a fem. acc. pl. referring to the flame-sisters, which is therefore the object of a transitively used *yeme*. However, *purājāḥ* can also be a nom. sg. m., as Gr, Ge, and Re take it. Re (in a n. erroneously located in the nn. to vs. 4) points out undoubted nom. sg. *prathamajāḥ* in 7c also referring to Agni, and this seems to me good evidence for a nom. sg. here as well. The flame-sisters can still be understood as obj. of *yeme*, but need not be—and, I now think, should not be. I would now take *yeme* as intrans./reflex. ‘hold oneself in check, hold still’ and with the presential value Kü (396–97) attributes to most of the forms of this pf. (though not this one). I think the point is that, once the fire has flared up, it becomes fairly stable in that position. I would now tr. “he holds himself there within the midspace.”

Pāda d is considerably complicated by the presence of the hapax thematic gen. *pūṣanāsya*, which differs from the divine name *pūṣán-* not only in stem but also in accent. It is hard not to associate this form with the divine name, but whether it is a secondary thematization based on ambig. forms like acc. sg. *pūṣānam* (with unexplained accent shift) or a thematic *-á-* derivative of the name cannot be determined. (See Old’s sensible disc.) And context is of no help.

The word *vavṛí-* ‘cover’ appears in the preceding hymn, X.4.4, where Agni’s ‘cover’ lies still as he moves about eating it. In that passage the cover seems to be the firewood that fuels him. That interpr. does not work here, because Agni is already positioned in the midspace and so the covering he seeks should be located in that vicinity. What sort of covering could that be? I think the most likely identification is a cloud of smoke rising through the sky, assimilated to the clouds naturally found in the midspace. In V.19.1 Agni emerges from one *vavṛí-* (probably the wood) only for another to appear, quite likely smoke, and *vavṛí-* seems also to be used of actual clouds (e.g., I.164.7, 29).

So far so good. But what, if anything, is the connection to Pūṣan? Here I have only a very tentative suggestion to make, linking this enigmatic passage to an equally baffling one. In VI.56.3 Pūṣan is said to have set the golden wheel of the sun down “in(to) the gray cow” (*paruṣé gávī*). In the publ. intro. to that hymn I suggest that this may be a “a naturalistic reference to a cloudy dawn twilight, with the sun rising through it.” If Pūṣan is associated with a gray phenomenon that masks light and brightness and is found in the midspace, the same association may be alluded to here.

X.5.6: On the general purport of the vs., see publ. intro.: in the 2nd hemistich Agni, who was born in the first vss. and rose through the midspace in the subsequent ones, now reaches heaven, at least as I interpret it. However, the first hemistich is puzzling. I have no idea what the seven boundaries are, but it is of course in keeping with the theme of the hymn that they were created by the Kavis. Ge has what seems to me an overly schematic interpr. (n. 6); see Köh's disc. (322) of some of the possibilities.

I take Agni to be the referent of both the hapax *aṃhurá-* 'narrow (one)' and *skambhá-* 'pillar'. Although Ge's notion (n. 6c) that it refers to the Weltpfeiler is surely in the background, the image, I think, is of fire rising vertically as a narrow flame, to join heaven and earth.

X.5.7: See publ. intro. for the cosmogonic aspects of this vs., which contains the only occurrences of the name Agni in the hymn.

With JSK (DGRV I.171) I take the *ca* in d as an inverse *ca*.

X.6 Agni

X.6.1–3: As noted in the publ. intro., the hymn begins with annunciatory *ayám sá* "Here he is," presumably gesturing towards the offering fire on the ritual ground, and the rest of the first 3 vss. consists of rel. clauses, one per hemistich, dependent on *sá*. The meter of the hymn is unusual, in that it contains a large number of Pentad (and other 10-syllable) vss. amid the Triṣṭubhs. See Arnold 239, 318 and Old ZDMG 60 (1906): 751–52 (review of Arnold) = KISch 226–27. Because of the fluctuating meter, it is not always clear which forms we should distract – e.g., in 2d *átyo* is read distracted (*at'yo*) by Gr, Old (hesitatingly), HvN, but Arnold prefers the disyllabic reading. The first gives a Triṣṭubh, the 2nd a Pentad line. The stem *átya-* is more often disyllabic than trisyllabic, but there are undoubted exx. of the latter. In any case it is well to be wary of the distracted readings enshrined in HvN.

X.6.1: Ge (n. 1cd) considers *paryéti* 'circles around' a representation of the *paryagnikarāṇa*, the circular tour around the fire or an offering (the sacrificial beast) with a firebrand; Re rather a circuit of heaven.

A nice figure involving adjacent verbal forms combined with *pári*, *paryéti párivītaḥ*, with the first describing Agni's action of encircling, the 2nd his being encircled.

X.6.1–2: Note the concatenation: *yó bhānúbhiḥ* (1c, 2a), *vibhāvā* (1d, 2a, with the latter etymologically doubled by the immediately cognate verb *bhātī*). Perhaps to draw attention to the shifting meter, the concatenated items are in different metrical positions.

X.6.2: Ge takes *sakhyā* as a dat. on the basis of I.156.5 *ā yó vivāya sacáthāya daívyah*, without explaining how the morphology would work. Despite superficial similarity the two passages have very different structures; see comm. ad I.156.5. There *ā ... vivāya* takes a dat. inf. as complement; here it is construed as usual with a goal/obj. in the acc., the pl. *sakhyā*.

Another type of concatenation: *áparihvṛtaḥ* recalls *paryéti párivītaḥ*.

On the reading of *átyah* see above.

X.6.3: This vs. locates Agni as the controller of both the ritual and the natural world, which meet on the ritual ground at the dawn sacrifice: on the one hand, Agni controls "the pursuit of the

gods” (*devā-vīti-*, a cmpd that picks up the verb *ā ... vivāya* from the previous vs.); on the other, the kindling of the ritual fire is thought to cause Dawn to dawn. The somewhat awk. tr. “every effort to pursue the gods” for *devā-vīti-* was meant to avoid the more literal “every pursuit of the gods,” which makes it sound like the gods are pursuing their hobbies or playing cribbage or crocheting.

As indicated in the publ. tr. I take the chariot as a symbol of the sacrifice, as so often.

The root $\sqrt{\text{ska}(m)bh}$ ‘prop’ seems an odd choice in the context, and the oddness is conveyed by the publ. tr.; ‘fixes’ or ‘piles’ might be less jarring.

X.6.4: Another concatenation between vss.: *sūṣaiḥ* ending vs. 3 and *sūṣébhiḥ* opening vs. 4. In this case they are not only in different metrical positions but also exhibit different forms of the same case (instr. pl.), which is emphasized by their cross-verse-boundary juxtaposition.

Note *jigāti* (b), *jigharti* (d) – again the echoing forms are located in different metrical positions.

Both Ge and Re, in different ways, try to split *ā jigharti* from other occurrences of this verb meaning ‘sprinkle’ that have Agni as obj. Cf. esp. II.10.4 *jígharmy agnīm havīṣā ghr̥tēna*, which could hardly be clearer. Ge suggests that \sqrt{ghr} in our passage is an older form of \sqrt{hr} ‘take’; Re gives the lexeme *ā√ghr* the sense ‘attirer à soi’, with the sense of the preverb *ā* dominant. But he doesn’t say what happens to the “recessive” ‘sprinkle’ portion, which shouldn’t be entirely lost: for example, the common lexemes *ā√yaj* ‘attract here through sacrifice’, *ā√pū* ‘attract here through purification’ still maintain the sense of the base verb. Nor does he attempt to account for the two straightforward examples of *ā√ghr* with Agni as object: II.10.5, X.87.1, where ‘attirer à soi’ does not seem to be in question. (In II.10.4, 5 he tr. both verbs [+/- preverb] as ‘j’arrose’, but in X.87.1 he argues for ‘attirer à soi’ for no compelling reason.) I see no reason to decouple our *ā jigharti* here, or the other two passages that are superficially difficult to interpret with the ‘sprinkle’ meaning: IV.17.14 and V.48.3, from the standard literal usage. And in fact keeping all the passages together leads to richer semantics and produces the kind of paradoxical reversal so beloved of RVic poets. In all three of the anomalous passages, Agni is subject (undeniably here, by my interpr. in the other two passages). If in the standard usage of the verb, Agni is the object, being sprinkled with ghee by the priests, in the anomalous passages Agni switches roles: he sprinkles rather than being sprinkled. In two of the passages he is also identified as the Hotar (here) or being like the Hotar (IV.17.14), so that part of the standard model is maintained (priest sprinkles ...) even as it’s being disrupted by the promotion of the usual object to subject. But what would it mean in real-world terms for Agni to ‘sprinkle’? I suggest that he releases a stream of sparks, which could appear to be bright droplets of ghee. Notice that here he sprinkles the gods with his tongue, that is, his flame, from which the sparks would pour out. For further disc. see comm. ad IV.17.14 and V.48.3.

X.6.5: On the analogic hyper-feminization in the loc. sg. *usrām* see comm. ad VI.3.6 and AiG III.213.

The verbal configuration and pāda boundary in the sequence *índram ná réjamānam, agnīm* seem to favor an interpr. of the simile “... Agni, trembling like Indra.” But this is unlikely pragmatically: Indra is not a trembler! So with the other standard interpr. (going back to Sāy.) I take the participle only with Agni, even though it appears before the pāda boundary. The simile is off-kilter for another reason: it is not a poetic comparison but the equation of two real-world

actions: “bring Agni *as you do* Indra,” referring to Indra’s usual appearance at the dawn sacrifice. RVic similes don’t ordinarily have this function.

X.6.7: Gr reads distracted trisyllabic *mah'nā* here as in IV.2.1. Given the fluctuation between 10- and 11-syllable lines in this hymn, that distraction is not necessary, though it is possible. For discussion of the trisyllabic form see comm. ad I.123.4.

X.7 Agni

X.7.1: Ge takes the *urú- śáṃsa-* as Agni’s, but it makes more sense, with Re, to interpr. them as ours—reciprocally exchanged for the wide space given us by Agni. (This is supported by 2a.) I take the instr. as an instr. of price. The phrase corresponds to the (presumably) *bahuvr. uruśáṃsa-* ‘of wide/broad praise/pronouncement’, ‘widely praised/praising’ used of both gods and, less commonly, of singers. The phrase presumably refers to a laud that is widely disseminated.

X.7.2: In b *góbhir áśvaiḥ* is an instr. of specification with *rādhah*.

The lexeme *ánu* √(n)aś is fairly rare. In most of its occurrences it has the idiomatic sense ‘be equal to’ (II.16.3, VII.99.1, VIII.69.18, 70.5), but in some, like here (=I.163.7), I.52.13, and IX.22.6, it does not seem to differ appreciably from the simplex.

Despite my tr. “from you,” *te* is of course not an abl., but I wanted to make clear that it was a subjective, not objective genitive.

Ge interpr. *dádhānah* in d as passive, modifying Agni. This requires a change of subject in the middle of the hemistich and a predicated participle, predicated of a 2nd ps. subj. None of these interpretive moves is impossible, but the combination is unnecessarily complex, esp. since the part. *dádhāna-* is frequently transitive and since a nom. sg. subject is readily available in the *mártaḥ* of c. Re agrees with my syntactic assessment, but supplies ‘you’ as the obj. of *dádhānah*. But √*dhā* in the middle frequently means ‘appropriate, make one’s own, acquire’, and here it can take *bhógam* as obj.

The stem *matí-* and the ppl. (-)*jātá-* are found in the 1st and last pādas of the vs., emphasizing the closed loop of reciprocity depicted in these first two vss.

X.7.4: Despite its 1st member accent, the hapax *nítya-hotar-* must be a karmadhāraya; see Old and AiG II.1.189, 266, who do not explain the accent but simply stipulate it. As Ge points out (n. 4b), the free syntagm *hótā nítyaḥ* is found in nearby X.12.2, which further supports a karmadhāraya interpr. I tr. the phrase there “constant Hotar,” rather than “own Hotar” as here. The stem *nítya-* can mean both, and here the emphasis on Agni’s actions in the house of a particular man seems paramount—though “as his constant Hotar” would also work here.

Pāda c seems designed to mislead the audience. On the one hand, the *yám* (b) ... *sá* (c) construction is the standard relative / correlative one, and *sá* should therefore be coreferential with *yám*, namely the mortal worshiper. But the adjectives qualifying the subject of c are better suited to Agni than to the mortal: *ṛtāvan-* is far more often used of gods, esp. Agni, than of mortals, including in the immediately previous hymn (X.6.2); *rohíd-aśva-* occurs 5x in the RV, 4 of them clearly of Agni; *puru-kṣú-* is used several times of gods, including Agni (e.g., III.25.2), but usually modifies ‘wealth’ (*rayí-*), never humans. I think the poet is tricking us by playing syntactic expectations off against lexical ones, in the service of the reciprocal exchange of
